APPENDIX 824

GENERAL INFORMATION 868

2024 consolidated directors' report

This report was approved unanimously by our board of directors on 25 February 2025

Our approach to this document

We changed the layout of our consolidated directors' report in 2018 to include the contents previously provided in these documents, which we no longer prepare separately:

- Annual report
- Consolidated directors' report
- Annual corporate governance report (CNMV format document)
- Board committee reports
- Sustainability report
- Annual report on our directors' remuneration (CNMV format document)

The consolidated directors' report also includes all information required by Spanish Act 11/2018 on non-financial information and diversity and the information on sustainability prepared by the Group in accordance with the European Standards of Sustainability Reporting (ESRS). It can be found in the 'Sustainability statement' chapter, which constitutes the consolidated non-financial information statement and sustainability information.

Auditors' reviews

As required by law, our 2022 consolidated directors' report was subject to three reviews by our independent statutory auditors, PricewaterhouseCoopers Auditores, S.L. They can be summarized as follows:

- PricewaterhouseCoopers Auditores, S.L. verified that the information in this report is consistent with our consolidated financial statements and that its contents comply with applicable regulation. For more details, see 'Other information: Consolidated management report section of the 'Auditor's report' within 'Auditor's report and consolidated annual accounts'.
- PricewaterhouseCoopers Auditores, S.L., issued a verification report, with limited assurance, on the Consolidated Non-Financial Information statement and the information on sustainability required under Act 11/2018 and under the European Standards of Sustainability Reporting (ESRS) included in this consolidated directors' report. To read the verification report, see the 'Independent verification report' in the 'Sustainability statement' chapter.
- PricewaterhouseCoopers Auditores, S.L. issued an independent reasonable assurance report on the design and effectiveness of Banco Santander's internal control over financial reporting, which can be found in section 8.6 'External auditor report' of the 'Corporate governance' chapter.

Non-IFRS and alternative performance measures

This report contains financial information prepared according to International Financial Reporting Standards (IFRS) and taken from our consolidated financial statements, as well as alternative performance measures (APMs) as defined in the Guidelines on Alternative Performance Measures issued by the European Securities and Markets Authority (ESMA) on 5 October 2015, and other non-IFRS measures. The APMs and non-IFRS measures were calculated with information from Grupo Santander; however, they are neither defined or detailed in the applicable financial reporting framework nor audited or reviewed by our auditors.

We use the APMs and non-IFRS measures when planning, monitoring and evaluating our performance. We consider them to be useful metrics for our management and investors to compare operating performance between accounting periods.

Nonetheless, the APMs and non-IFRS measures are supplemental information; their purpose is not to substitute the IFRS measures. Furthermore, companies in our industry and others may calculate or use APMs and non-IFRS measures differently, thus making them less useful for comparison purposes. APMs using environmental, social and governance labels have not been calculated in accordance with the Taxonomy Regulation or with the indicators for principal adverse impact in SFDR.

For more details on APMs and non-IFRS measures, see section 8. 'Alternative performance measures (APMs)' of the 'Economic and financial review' chapter and section SN 9 'Alternative performance measures (APMs)' of the 'Sustainability statement' chapter.

Sustainability information

This report contains, in addition to financial information, sustainability-related information, including environmental, social and governance-related metrics, statements, goals, targets, commitments and opinions. The sustainability information can be found throughout the report but mostly in the 'Sustainability statement' chapter.

The sustainability information is provided in accordance with Directive 2022/2464 on corporate sustainability reporting (CSRD) and Law 11/2018 on non-financial and diversity reporting. Sustainability information is not audited nor, save as expressly indicated under 'Auditors' reviews', reviewed by an external auditor. Sustainability information is prepared following various external and internal frameworks, reporting guidelines and measurement, collection and verification methods and practices, which may materially differ from those applicable to financial information and are in many cases emerging and evolving. Sustainability information is based on various materiality thresholds, estimates, assumptions, judgments and underlying data derived internally and from third parties. Sustainability information is thus subject to significant measurement uncertainties, may not be comparable to sustainability information of other companies or over time or across periods and its inclusion is not meant to imply that the information is fit for any particular purpose or that it is material to us under mandatory reporting standards. The sustainability information is for informational purposes only, without any liability being accepted in connection with it except where such liability cannot be limited under overriding provisions of applicable law.

Forward-looking statements

Banco Santander hereby warns that this annual report contains 'forward-looking statements', as defined by the US Private Securities Litigation Reform Act of 1995. Such statements can be understood through words and expressions like 'expect', 'project', 'anticipate', 'should', 'intend', 'probability', 'risk', 'VaR', 'RoRAC', 'RoRWA', 'TNAV', 'target', 'goal', 'objective', 'estimate', 'future', 'ambition', 'aspiration', 'commitment', 'commit', 'focus', 'pledge' and similar expressions. They include (but are not limited to) statements on future business development, shareholder remuneration policy and NFI. However, risks, uncertainties and other important factors may lead to developments and results that differ materially from those anticipated, expected, projected or assumed in forward-looking statements.

The important factors below (and others described elsewhere in this report), as well as other unknown or unpredictable factors, could affect our future development and results and could lead to outcomes materially different from what our forward-looking statements anticipate, expect, project or assume:

- general economic or industry conditions (e.g., an economic downturn; higher volatility in the capital markets; inflation; deflation; changes in demographics, consumer spending, investment or saving habits; and the effects of the wars in Ukraine and the Middle East or the outbreak of public health emergencies in the global economy) in areas where we have significant operations or investments;
- climate-related conditions, regulations, targets and weather events;
- exposure to market risks (e.g., risks from interest rates, foreign exchange rates, equity prices and new benchmark indices);
- potential losses from early loan repayment, collateral depreciation or counterparty risk;
- political instability in Spain, the UK, other European countries, Latin America and the US;
- legislative, regulatory or tax changes (including regulatory capital and liquidity requirements), especially in view of the UK's exit from the European Union and greater regulation prompted by financial crises;
- acquisition integration and challenges arising from deviating management's resources and attention from other strategic opportunities and operational matters;
- uncertainty over the scope of actions that may be required by us, governments and other to achieve goals relating to climate, environmental and social matters, as well as the evolving nature of underlying science and industry and governmental standards and regulations;
- our own decisions and actions, including those affecting or changing our practices, operations, priorities, strategies, policies or procedures; and
- changes affecting our access to liquidity and funding on acceptable terms, especially due to credit spread shifts or credit rating downgrade for the entire group or core subsidiaries.

Forward looking statements are based on current expectations and future estimates about Santander's and third-parties' operations and businesses and address matters that are uncertain to varying degrees, including, but not limited to developing standards that may change in the future; plans, projections, expectations, targets, objectives, strategies and goals relating to environmental, social, safety and governance performance, including expectations regarding future execution of Santander's and third parties' energy and climate strategies, and the underlying assumptions and estimated impacts on Santander's and third-parties' businesses related thereto; Santander's and third-parties' approach, plans and expectations in relation to carbon use and targeted reductions of emissions; changes in operations or investments under existing or future environmental laws and regulations; and changes in government regulations and regulatory requirements, including those related to climate-related initiatives.

Forward-looking statements are aspirational, should be regarded as indicative, preliminary and for illustrative purposes only, speak only as of the date of approval of this annual report and are informed by the knowledge, information and views available on such date and are subject to change without notice. Banco Santander is not required to update or revise any forward-looking statements, regardless of new information, future events or otherwise, except as required by applicable law.

Past performance does not indicate future outcomes

Statements about historical performance or growth rates must not be construed as suggesting that future performance, share price or earnings (including earnings per share) will necessarily be the same or higher than in a previous period. Nothing in this annual report should be taken as a profit and loss forecast.

XHTML electronic format and XBRL tags

This annual report was prepared in eXtensible HyperText Markup Language (XHTML) format. The consolidated financial statements and the notes to the consolidated financial statements that it includes, have been tagged with eXtensible Business Reporting Language (XBRL), in accordance with Directive 2004/109/EC and Commission Delegated Regulation (EU) 2019/815.

To view the XBRL tags, you must open this document with an appropriate viewer. You can find this document with an XBRL viewer on Banco Santander's corporate website.

Not a securities offer

This annual report and the information it contains does not constitute an offer to sell, nor a solicitation of an offer to buy any securities.

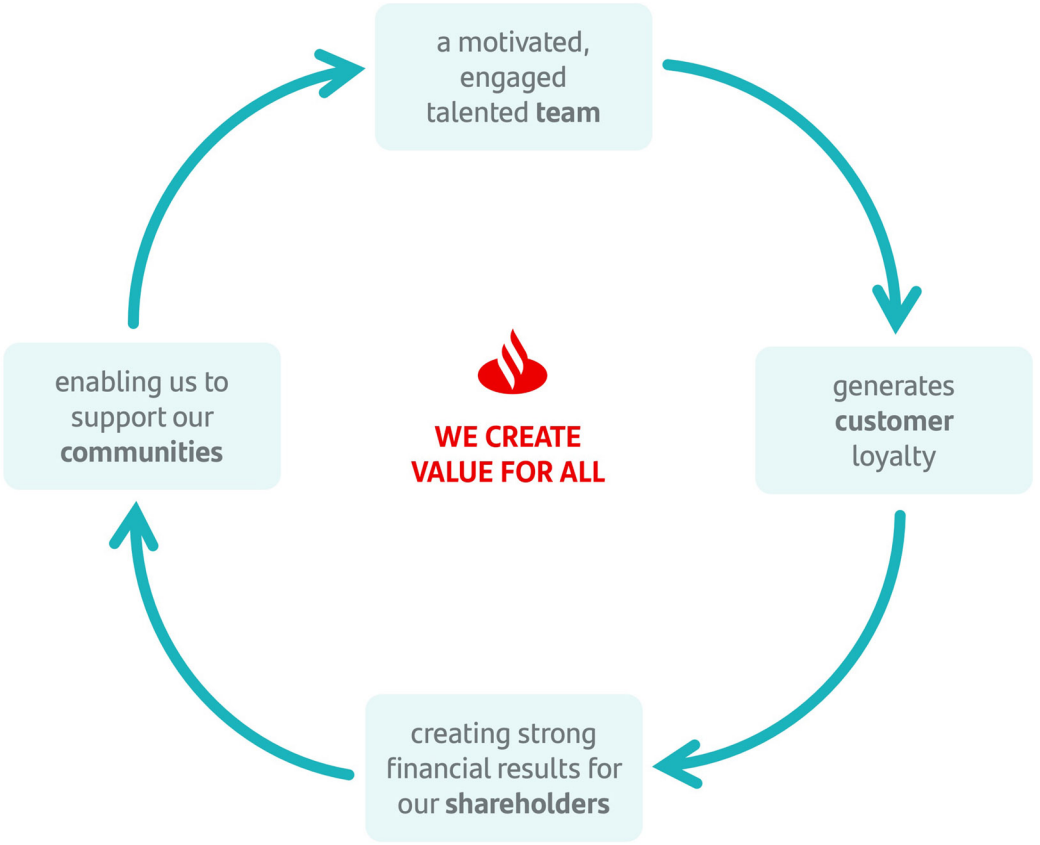
Glossary of terms, acronyms and abbreviations

To facilitate a better understanding of this annual report, a glossary of terms, acronyms and abbreviations has been included at the end of the consolidated directors' report.

BUSINESS MODEL AND STRATEGY

THE SANTANDER WAY

Our purpose



To help people and businesses prosper

Our aim

To be the best open financial services platform by acting responsibly and earning the lasting loyalty of our people, customers, shareholders and communities

Our how

Everything we do should be **Simple, Personal and Fair**

OUR BUSINESS MODEL

Generating value for our stakeholders

CUSTOMER FOCUS

Building a digital bank with branches

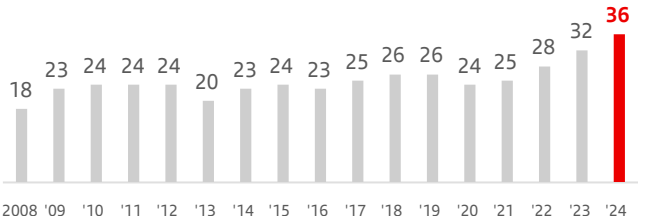
- Customer focus is the essence of our strategy. Our multichannel offering enables us to fulfil all our customers' financial needs, making us their global, trusted and responsive partner.
- Our customer growth investments are centred around three basic things: provide great products at competitive prices, a frictionless digital experience and being a trusted financial partner.
- We are building a digital bank with branches to make our customers' lives easier. By merging technology with human touch, we offer fully-digital products while ensuring our branches provide support and advice. This blend of innovation and personalization ensures our customers get the best of both worlds.

	2023	2024
Total customers (mn)	165	173
Active customers (mn)	100	103

SCALE

Global & in-market scale

- Santander has a unique combination of global scale and local leadership (top 3 in lending, deposits and mutual funds in most of our markets).
- Our activities are organized under five global businesses: Retail & Commercial Banking, Digital Consumer Bank, Corporate & Investment Banking, Wealth Management & Insurance and Payments.
- These five global businesses support value creation based on the profitable growth and operational leverage that ONE Santander provides.
- Our global approach to technology and development of global platforms is helping us to provide our customers with cost competitive products and the best digital experience.



DIVERSIFICATION

Business, geographical and balance sheet

- Our simple and well-targeted range of products and services meets the needs of a wide spectrum of customers: individuals, SMEs, mid-market companies, large corporates, Wealth Management customers, first-time banking customers, auto customers and dealers, and card customers.
- Santander has a strong, simple and diversified balance sheet, with a low exposure to market risk and is highly collateralized and made up mainly of loans.
- Diversification and a medium-low risk profile deliver recurrent pre-provision profit, with among the lowest volatility across peers.

Group net operating income (pre-provision profit)

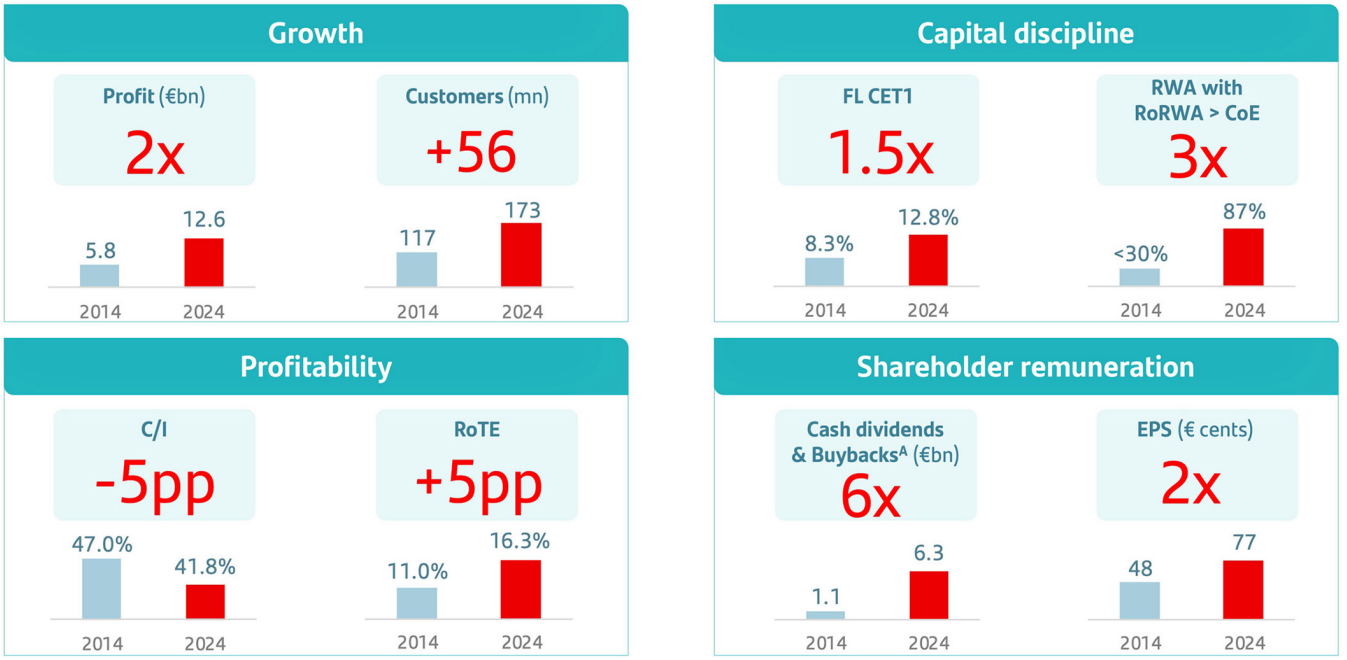
EUR billion

2024 RESULTS

Record results for the third consecutive year, creating value for shareholders

- **Record profit** on the back of 8mn new customers YoY and strong revenue growth
- A groundbreaking year in our transformation, driving **strong operating performance and profitable growth**
- **Solid balance sheet** with sound credit quality and capital ratio, reflecting **all-time high organic generation**
- Delivering double-digit **value creation and higher shareholder remuneration**

FY'24 Attributable Profit	FY'24 Revenue
€12.6bn	€62.2bn
+14%	+8%
Efficiency	**RoTE**
41.8%	16.3%
–226bps	+121bps
CoR	**FL CET1**
1.15%	12.8%
-3bps	+51bps
TNAVps + DPS	**Cash DPS paid in 2024**
+14%	+39%



Note: Based on underlying P&L. YoY changes in euros. In constant euros: FY'24 attributable profit +15% vs. FY'23; FY'24 revenue +10% vs. FY'23. For more information on figures presented in constant euros and the alternative performance measures presented above and across this chapter, see section 8. 'Alternative performance measures'. TNAVps + Cash dividend per share (DPS) includes the €9.50 cent cash dividend per share paid in May 2024 and the €10.00 cent interim cash dividend per share paid in November 2024. Growth in Cash DPS corresponds to the total cash dividend per share paid during 2024 compared to the cash dividends per share paid during 2023. For more details, see section 3.3 'Dividends and shareholder remuneration' in the 'Corporate governance' chapter. Implementation of the shareholder remuneration policy is subject to future corporate and regulatory decisions and approvals.

We delivered on all our financial targets, which we upgraded in the Q2'24 earnings presentation[A]

	2024 targets[A]	2024 achievements	
Revenue[B]	High-single digit growth	+10%	✓
Efficiency ratio	c.42%	41.8%	✓
CoR	c.1.2%	1.15%	✓
FL CET1	>12%	12.8%	✓
RoTE	>16%	16.3%	✓

A. Some targets were upgraded in the Q2'24 results presentation: i) revenue from mid-single digit growth to high-single digit growth; ii) efficiency ratio from <43% to c.42%; iii) RoTE from 16% to >16%. FL CET1 target >12% after FL Basel III implementation, FL definition as of 1 January 2025.
B. YoY change in constant euros.

Over the last 10 years our transformation and unique business model have consistently delivered profitable growth

A. Total shareholder remuneration charged against the results corresponding to the calendar year: cash dividend + share buybacks excluding scrip dividends. Implementation of 2024 shareholder remuneration policy is subject to future corporate and regulatory decisions and approvals.

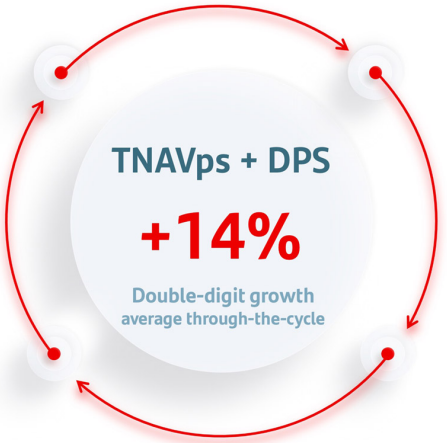
We are in a phase of value creation, driven by higher profitability underpinned by three tenets:

Think **Value**	Delivering **double-digit value creation**, on average through-the-cycle
Think **Customer**	Building a **digital bank with branches** with well-targeted products and services to grow our customer base
Think **Global**	Leveraging **global and in-market scale, network and tech** to deliver world class-services and accelerate profitable growth

Think **Value**

Delivering double-digit value creation, on average through-the-cycle

➔ We are entering the last year of our strategic cycle well ahead of all our key Investor Day targets for 2025



2024 vs. ID targets for 2025

FL CET1
12.8%
>12%

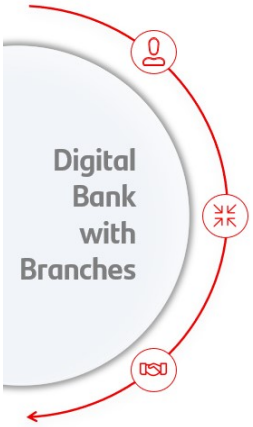
Shareholder remuneration

Payout
50%
Cash dividend + SBB
50% annually

Disciplined capital allocation

RWAs with RoRWA > CoE
87%
c.85%

Profitability



RoTE
16.3%
15-17%

Note: target payout defined as c.50% of Group reported profit (excluding non-cash, non-capital ratios impact items), distributed approximately 50% in cash dividend and 50% in share buybacks. Execution of the shareholder remuneration policy is subject to future corporate and regulatory decisions and approvals. For more details, see section 3.3 'Dividends and shareholder remuneration' in the 'Corporate governance' chapter.

Think **Customer**

Building a digital bank with branches with well-targeted products and services to grow our customer base

➔ We are committed to delivering simple, lovable, life-centric products and experiences for customers

		2023	2024
Customer centric	Total customers (mn)	165	173
Simplification & automation	Efficiency ratio (%)	44.1	41.8
Customer activity	Active customers (mn)	100	103

Think **Global**

Leveraging global and in-market scale, network and tech to deliver world class-services and accelerate profitable growth

→ Our transformation and five global businesses deliver higher revenue with lower costs structurally, supporting our ambition to become the most profitable bank in every market where we operate

Our five global businesses

We are a global Retail and Consumer powerhouse with 173 million customers

Strong results underpinned by growth across our five global businesses

2024 vs. 2023	Revenue (€bn)	Contribution to Group revenue	Efficiency	Profit (€bn)	RoTE
Retail	**32.5** +11%	**52%**	**39.7%** -3.4pp	**7.3** +29%	**18.8%** +3.7pp
Consumer	**12.9** +6%	**20%**	**40.1%** -2.7pp	**1.7** -12%	**9.8%** -1.8pp 12.0% excluding CHF and Motor Finance
CIB	**8.3** +14%	**13%**	**45.6%** +0.6pp	**2.7** +16%	**18.0%** +0.5pp
Wealth	**3.7** +15%	**6%**	**35.9%** -2.0pp	**1.6** +14%	**78.7%** +6.5pp
Payments	**5.5** +9%	**9%**	**45.0%** +0.7pp	**0.7**[A] +18%	**PagoNxt EBITDA margin 27.5%** +2.7pp

Note: YoY changes in constant euros. Contribution to Group revenue as a percentage of total operating areas, excluding the Corporate Centre. Global businesses' RoTEs are adjusted based on Group's deployed capital. For more information, see section 8 'Alternative performance measures' of the 'Economic and financial review' chapter.

A. Payments profit and YoY profit growth exclude the write-downs of our investments related to our merchant platform in Germany and Superdigital in Latin America.

Retail & Commercial Banking

Delivering operational leverage with a groundbreaking year in our transformation

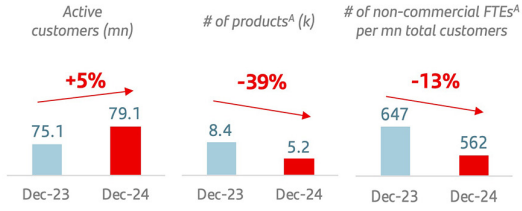
Key milestones

Q1

- **E2E digital onboarding** in place in all countries
- **Digital customer onboarding** process enabled in all branches
- New **Android app**
- **Full mortgage process** digitalized

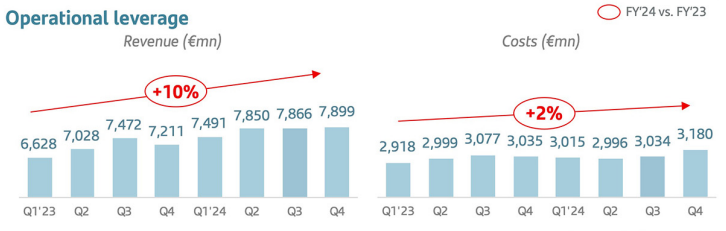
Q2

- New Começa agora **digital credit card & account offering**
- New **iOS app**
- **Money transfers in 3 clicks** in branches
- **New chatbot** for customer support implemented in digital channels



Q3

- **Non-residents digital onboarding**
- **Advanced customer identification & login** capability added to new platform
- **Personal loans & SME financing** contracting through digital channels
- **New digital offering for SMEs**



Q4

- Achieved **top-3 rank in time-to-onboard new customers** in all countries
- **Hyper-personalized customer marketing & campaigns** added to new platform
- **Tailored automatic customer proposals** for deposits, loans, credit cards and mortgages
- **Biometric customer identification** in branches

Key strategic drivers

Success from our transformation

Note: data and YoY changes in constant euros.
A. Metrics cover all products and employees in the branch network in our 10 main countries.

Digital Consumer Bank

Openbank roll out demonstrates the benefits of our strategy to deliver the best solutions to customers and transform our operating model

Key milestones

Q1

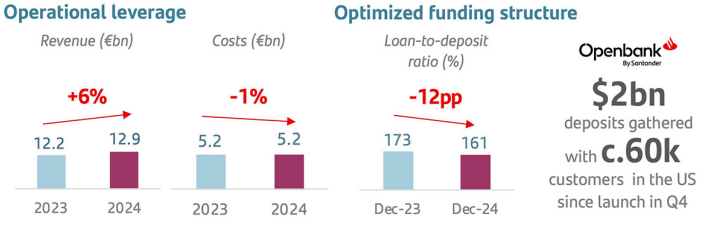
- Launched **Drive, fully-digital marketplace**
- **Increased functionalities for OEMs**
- Operational **leasing** for **individuals**
- **Openbank's AI broker**

Q2

- Launched **fully-digital onboarding process** for **leasing**
- **Zinia: Apple financing**

Q3

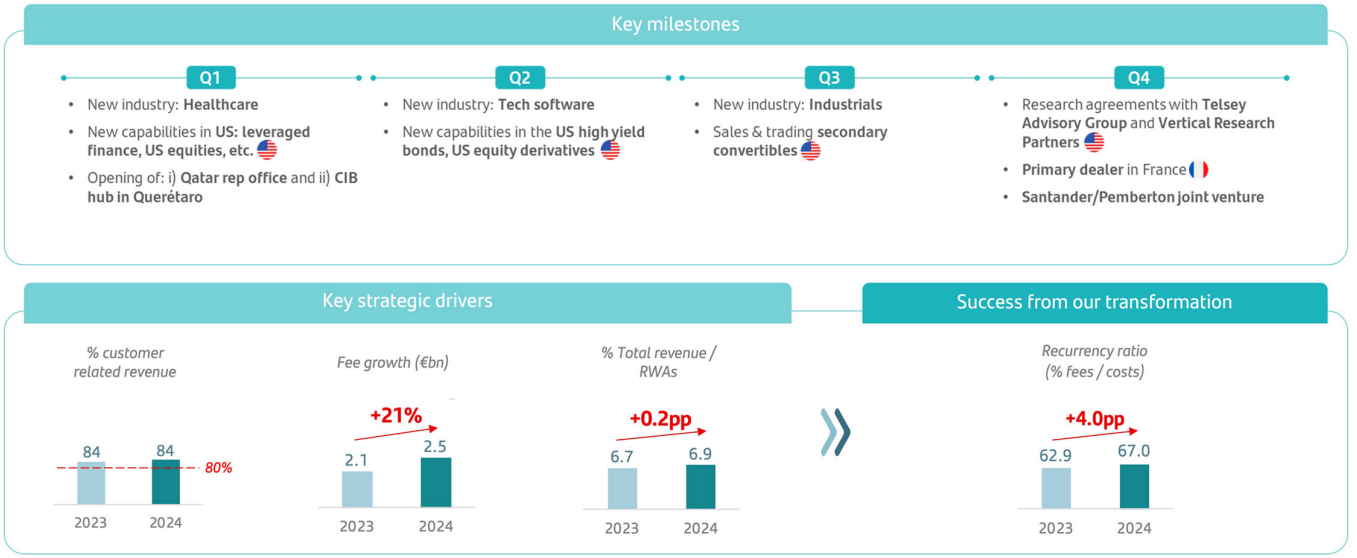
- **Mitsubishi ClickShop**
- **Remarketing capabilities**
- **Home delivery process** in leasing business
- **Zinia: Amazon co-branded card**



Q4

- Operational **leasing** for **brokers**
- **c.90% automatic decision rate**
- **Openbank launch with high-yield savings account**
- Openbank reloaded (**new app**)

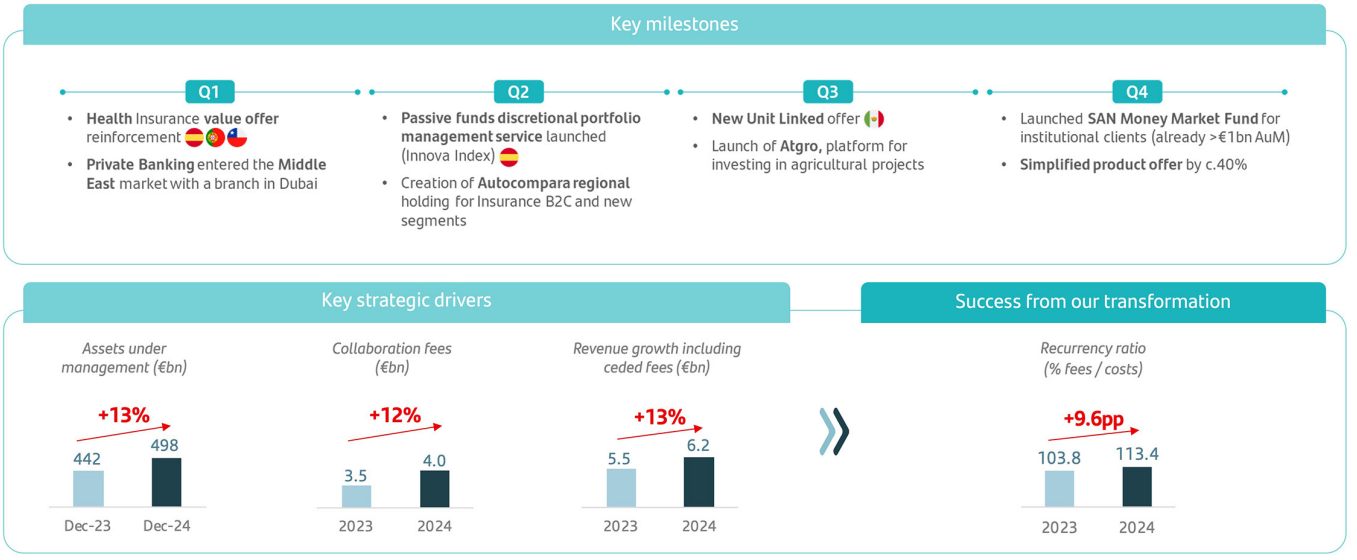
Key strategic drivers



Success from our transformation

Note: data and YoY changes in constant euros.
ANEAs: average net earning assets, including renting.

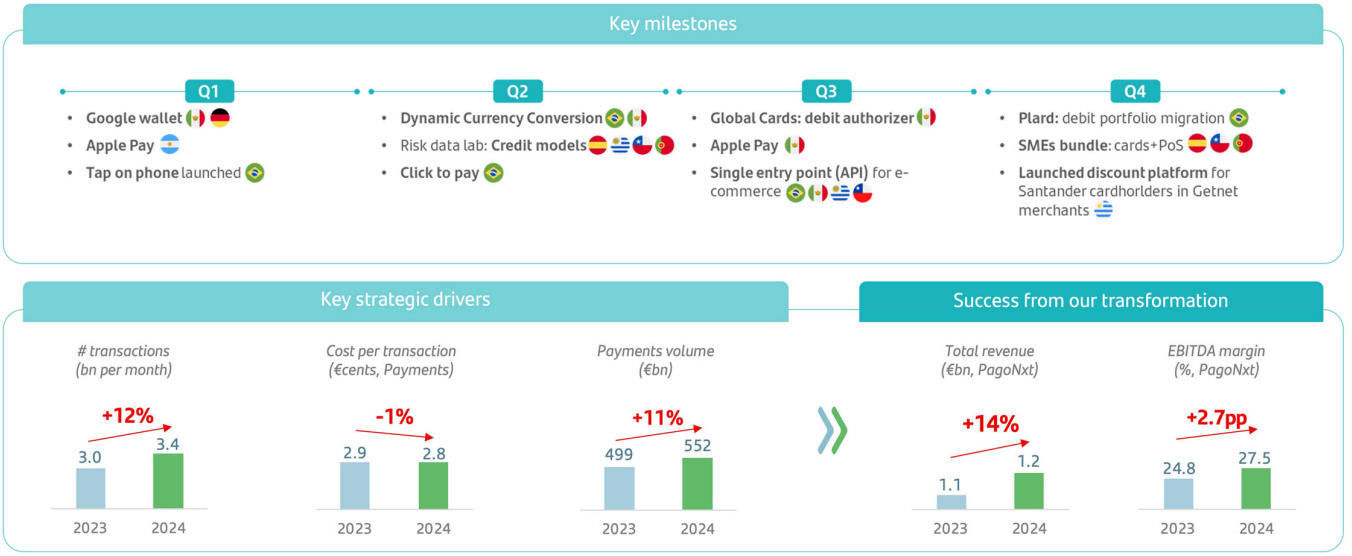
Corporate & Investment Banking



Leveraging our strengths to serve our corporate customers and institutions better

Note: data and YoY changes in constant euros.

Wealth Management & Insurance



Accelerating our customers' connectivity with our global product platforms

Note: data and YoY changes in constant euros.
Assets under management includes deposits and off-balance sheet assets. Revenue including ceded fees includes all fees generated by Santander Asset Management and Insurance, even those ceded to the commercial network, which are reflected in Retail's P&L.

Payments

Seizing a growing opportunity by capturing scale through global platforms

Note: data and YoY changes in constant euros.
Transactions include merchant payments, cards and electronic A2A payments. Payments volume includes PagoNxt Total Payments Volume (TPV) in Getnet (PagoNxt) and Cards turnover.

Network effects and global tech approach: unlocking our Group's potential

We are managing technology globally, implementing the best and most innovative common platforms across the Group, so that we develop the best technology once and operate it centrally

Santander's open financial services platforms	
Channel	Openbank By Santander
Financing	zinia By Santander
Insurance	Autocompara
Payments	PagoNxt Payments
Risk & Control	Lynx
Cards	Plard
Back-end	Gravity

→ We are leveraging Artificial Intelligence (AI) to enhance efficiency, customer experience and agility. We aim to place AI at the core of every process and customer interaction.

LOOKING AHEAD

Our consistent track record and the implementation of ONE Santander gives us the confidence to aim higher for 2025

2025 Group targets

Revenue	Fees	Cost base	CoR	CET 1	RoTE
c.€62bn	Mid-high single digit growth	Down vs. 2024 in euros	c.1.15%	13% operating range: 12%-13%	c.16.5% post-AT1[A] >17% pre-AT1

Return up to €10bn to our shareholders through share buybacks cumulative for 2025-26
Our existing c.50% payout ratio (half cash dividend) will be supplemented with exceptional SBBs using excess capital[B]

Double-digit growth of TNAV per share + dividend per share through-the-cycle

Note: Targets presented in this chapter are market dependent and do not represent guidance. Actual results may vary materially.
A. RoTE post-AT1: Group attributable profit – cost of AT1s / average of: net equity (excluding minority interests) – intangible assets (including goodwill).
B. Share buyback target corresponding to 2025-26 including: i) the buybacks resulting from application of our existing shareholder remuneration policy plus; ii) additional buybacks to distribute excesses of our CET1.
Existing shareholder remuneration policy defined as c.50% of Group reported profit (excluding non-cash, non-capital ratios impact items), distributed approximately 50% in cash dividends and 50% in share buybacks. The implementation of the shareholder remuneration policy and any share buybacks to distribute CET1 surpluses are subject to future corporate and regulatory decisions and approvals.

We are creating value for our shareholders by focusing on delivering profitable growth in a responsible way

	2023	2024	2025 targets
Green finance raised and facilitated (since 2019)	€115.3bn	€139.4bn	€120bn
Socially responsible investments (AuMs)	€67.7bn	€88.8bn	€100bn
Financial inclusion (# People)	1.8mn	4.3mn	5mn

Note: information has been verified with limited assurance by PricewaterhouseCoopers Auditores, S.L. For more details, see the 'Sustainability statement' chapter and metrics definitions see section SN 9. 'Alternative Performance Measures' of the same chapter.
Not taxonomy. Financial inclusion (# people, mn): starting Jan-23. Does not include financial education.

SUSTAINABILITY STATEMENT

Consolidated non-financial information statement and sustainability information

SUSTAINABILITY AT SANTANDER IN 2024

10 highlights

Our activity helps people and businesses prosper and contributes to address global challenges

1. **EUR 350.5 billion** to help people buy homes, enabling 3.7 million families to access housing. **EUR 214.2 billion** to purchase other goods.[A]
2. **EUR 330 billion** to help set up or grow companies (including more than 530 thousand SMEs and self-employed).[B]
3. **206,753 employees**. EUR 14.3 billion paid in wages and benefits.
4. **EUR 11.6 billion** paid to suppliers. 89% are local and account for 88% of total procurement turnover.
5. **EUR 10.9 billion** in taxes paid by the Group and **EUR 11.5 billion** in third party taxes channelled to tax authorities.
6. **EUR 139 billion** in green Finance raised and facilitated since 2019, reaching our **EUR 120 billion** target 18 months early and maintaining our leadership position in the financing of renewable energy projects.
7. Additionally, **our credit stock in green mortgages and auto** (EU taxonomy aligned) **grew 27% year over year,** supporting the alignment of our portfolios.
8. We continue to make progress towards our target of **EUR 100 billion** of assets under management in SRI (Socially Responsible Investment), reaching **EUR 89 billion** in 2024.
9. **4.3 million** people financially included since 2023, getting closer to our 5 million target until 2025. Our microfinance propositions in Latin America reached **1.3 million** underbanked entrepreneurs with **EUR 1.27 billion** in credit disbursed.
10. **EUR 166 million** in community support, including **EUR 104 million** to promote higher education, employability and entrepreneurship.

A. Credit stock and mortgage holdings as at 31 December 2024.
B. Credit stock as at 31 December 2024. Data for Small and Medium Enterprises (SMEs) and the self-employed covers individual customers with an outstanding loan at 2024 year end.

ABOUT THIS CHAPTER

Scope

This chapter covers the core activities of Banco Santander and its subsidiaries from 1 January to 31 December 2024 (for more details, see Notes 1, 2, 3 and 53 to the consolidated financial statements and sections 3 and 4 in the 'Economic and financial review' chapter). The scope of information and changes in criteria applied with respect to the 2023 Sustainability Report, when significant, are reflected in each relevant section and generally in the 'Sustainability note 1' of this chapter.

Regulation, reporting standards and other references that this chapter addresses

This chapter contains the 'Consolidated non-financial information statement and sustainability information' of Grupo Santander, in compliance with Directive (EU) 2022/2464, with regard to the presentation of information on sustainability by companies, prepared in accordance with Law 11/2018, EU guidelines 2017/C215/01 on non-financial reporting, Delegated Regulation (EU) 2023/2772 supplementing Directive 2013/34/EU of the European Parliament and of the Council with regard to sustainability reporting rules, and the Regulation on European Taxonomy (Regulation (EU) 2020/852 and Commission Delegated Regulations 2021/2139 and 2021/2178 as amended by Delegated Regulations (EU) 2022/1214, 2023/2485 and 2023/2486). This report shows the performance of Grupo Santander in those environmental, social and governance issues that have been identified as material from a double materiality perspective. Its purpose is to provide stakeholders with a fair and balanced picture of the most relevant aspects, objectives, practices and results of the 2024 exercise.

External validation

PricewaterhouseCoopers Auditores, S.L., an independent firm charged with auditing the financial statements of Banco Santander S.A., issued a verification report, with limited assurance, on the Consolidated Non-Financial Information and sustainability statement required under Act 11/2018 and the *European Sustainability Reporting Standards* (ESRS). The report's conclusion can be found in the 'Independent verification report' at the end of this chapter. For more details on the preparation and levels of control of sustainability information, see the 'Sustainability information' section in the introductory pages of this consolidated management report 2024, and the 'Sustainability note 1 and 2' in this chapter.

For more details, see **'Sustainability information' in the introduction of this Annual report**

1. SUSTAINABILITY AT SANTANDER

(General information)

1.1 Sustainability strategy

Grupo Santander's purpose is to help people and businesses prosper. We aim to be the best open financial services platform by acting responsibly and earning the lasting loyalty of our employees, customers, shareholders and communities.

Grupo Santander serves more than 173 million customers worldwide through our unique combination of global scale and local leadership. We are among the top 3 in lending, deposits and mutual funds in most of our core markets. Our diverse customer base includes individuals, SMEs, large corporates, high net worth clients and others, all with varying financial needs and expectations. Our simple, tailor-made products and services, coupled with our multichannel proposition, seek to meet those needs.

Santander has over 200 thousand employees and our activities are organized under five global businesses: Retail and Commercial Banking; Digital Consumer Bank; Corporate and Investment Banking; Wealth Management and Insurance; and Payments.

We deliver our multichannel customer proposition in the following core markets (some mature, some emerging) in Europe, North America and South America: Spain, Portugal, United Kingdom, Poland, United States, Mexico, Brazil, Chile and Argentina.

For more details on the value chain, see **SN 1.**
For more details on the distribution of employees by geographical area, see **table 1. Employees by region** in **SN 7.3. Our progress in figures. Employees**

Our sustainability strategy focuses on issues that are material to Santander, i.e. those that pose the biggest risks to, and create the best opportunity for, and where we can have the biggest impact. This strategy, which is consistent with our double materiality assessment (see section 1.3 'Materiality assessment'), has five pillars:

1. Help our customers in meeting their goals in their transition to a low-carbon economy while also managing climate-related risks and impacts.
2. Help our employees develop by promoting an inclusive culture and learning and providing fair working conditions.
3. Contribute to the economic, financial and social development of our communities, with a special focus on education, employability and entrepreneurship.
4. Be a trusted partner to our customers, with products and services that adapt to their needs, while applying responsible practices, supporting their financial inclusion, and protecting their information.
5. Act responsibly through a strong culture, governance and conduct.

Our sustainability strategy embeds the Group's three action lines: Think Value, Think Customer and Think Global to drive business growth and become more resilient to increasing environmental, governance and social risks.

- **Think Value**: Profitable growth makes us resilient and able to withstand shocks, invest in our employees and customer value proposition, support our communities, and create value for our shareholders.
- **Think Customer**: Be the partner of choice for our customers by offering the best products and helping them in their transition to a low-carbon economy and support their financial inclusion and financial health (including financial education).
- **Think Global**: Use our scale and local leadership to tackle global sustainability challenges.

The **Group's sustainability policy is embedded in the strategies of the five global businesses**, with metrics and targets that form part of our remuneration schemes.

For more details, see chapter **1.4 'Sustainability governance'**

Retail and Commercial Banking

Our ambition is to be a driver of growth and to provide value-added solutions for our customers.

Our sustainable value propositions uphold high standards of integrity for all customer and user segments (from individuals to SMEs, large corporates and institutions).

We also collaborate with multilateral development banks, aligning our financial activity with support for countries' sustainable and energy transition.

We measure the emissions of the relevant portfolios of commercial and residential properties in Spain and the United Kingdom (UK) or Agriculture in Brazil, identifying alignment levers towards the transition.

We also provide financial inclusion solutions and have a target to financially include five million people between 2023 and 2025. This includes helping underbanked through microfinance and access initiatives. We also run financial education activities to bolster our financial inclusion programmes.

Santander is also aiming to invest EUR 400 million in education, employability and entrepreneurship between 2023 and 2026, while increasing the number of people engaged in these programmes, including through platforms such as Santander Open Academy.

Digital Consumer Bank

Our ambition is to bolster our sustainable finance proposition by tapping into potential opportunities in both, the auto finance market where we are global leader in auto financing with more than 20 million customers, and the consumer finance market.

We are supporting the green transition through electric vehicle financing — EUR 6.8 billion in loans in the year, with a market share of over 12% in electric vehicle sales in Europe. An increased share of electric vehicles contributes to the alignment of the auto financing portfolio in Europe and to our 2030 alignment target.

Corporate and Investment Banking

Our ambition is to be a strategic partner for our customers by helping them achieve their low-carbon transition and sustainability goals.

We support our customers in pursuing their transition to a low-carbon economy and sustainable objectives by offering them value-added products and services that follow the strictest integrity standards without compromising profitability. We are focused on capturing business opportunities around (i) clean energy and ClimateTech advisory services, (ii) structured finance, and (iii) risk management solutions.

We continue to strengthen our leadership in sustainable finance, which enables us to harness opportunities to finance the green transition. Santander has been a leader in renewable energy project finance for the past decade. In 2024, we exceed our target of EUR 120 billion in green finance raised or facilitated (between 2019 and 2025) 18 months early. We also acted as adviser on several of the globe's biggest renewable energy transactions.

Through our initiatives, we help our customers draw up their transition plans and progress towards achieving our climate objectives in high-emitting sectors.

Wealth Management and Insurance

Our ambition is to foster sustainability through our leading global private banking platform and best-in-class funds and insurance product factories.

We're boosting our sustainable product proposition while moving towards our target of EUR 100 billion in assets under management in socially responsible investment (SRI) by 2025. Our products include a wide range of fixed income, equity, mixed and alternative funds, as well as themed products focused on climate, energy transition and natural capital. In addition, we have SRI life-savings portfolios and products, as well as the ability to build customized mandates around specific sustainability preferences.

Moreover, Santander Asset Management is strengthening engagement and voting initiatives through dialogue on climate change issues with portfolio companies and considering climate criteria in voting at shareholder meetings of companies under the scope of its Voting policy.

Payments

We are working on lowering the footprint of our cards by issuing more cards made of sustainable material and recycling more cards. We're also looking to offer our customers the possibility of calculating and offsetting the footprint of their transactions.

In 2024, we acquired 39 million cards (84% of the year's total) made of sustainable materials (recycled PVC or PLA).[1]

Embedding our sustainability strategy

Santander's sustainability strategy forms part of the Group's strategic plan, three-year financial plans and annual budget (every year). Our Chief Executive Officer (CEO) leads the preparation of our financial plan every year. The plan includes sustainability targets and priorities that are consistent with our long-term strategy. The strategy committee, executive committee and the Group board of directors review the plan's outcome. Furthermore, all global businesses and each subsidiary has its own financial plan that we review so that it aligns with the Group plan.

The risk area conducts an analysis and challenge of the strategic plan (Risk Challenge) to identify potential threats that may compromise the achievement of the Group's objectives. The risk control committee discusses the outcome of this analysis and reports to the board's risk supervision, regulation and compliance committee. Additionally, Santander has a risk management control model to identify, assess, mitigate, monitor and report all material risks, including Environmental, Social and Governance (ESG), that we may face and that may affect our strategy or business model. We base this model on the Group's risk principles and culture; a clear governance structure; and advanced risk management tools and procedures.

Likewise, Santander regularly conducts an emerging risks exercise to identify key threats to our strategic plan under theoretical stress scenarios with low likelihood of occurrence. We aim to detect, assess and monitor risks that may have a significant impact on our business model, profitability and solvency to promote our strategy remains robust.

[1] PVC: Polyvinyl Chloride; PLA: biodegradable plastic made from renewable sources.

1.2 Stakeholder engagement

Santander remains in constant dialogue with its stakeholder groups, particularly employees, customers, shareholders and communities, who we engaged as part of our materiality assessments and human rights due diligence, as we outline in this report. Grupo Santander is committed to the principles of transparency, honesty and impartiality in its engagement with stakeholders. We believe that working with our stakeholders is key to understanding their concerns, setting priorities, and when possible, spotting opportunity and areas for improvement.

Stakeholders' views **help us develop key processes** such as drawing up our strategy, financial plans and definition of goals. Group, subsidiary and global business senior management and executive committees as well as to the Board, when presenting the conclusions of the double materiality analysis, review, debate and agree on implications. The outcome of these listening exercises has helped drive our customer-centric focus, creation of new business teams to help meet customers' needs, and the reinforcement of operational procedures on service quality, security and agility.

We adapt our stakeholder engagement objectives for each group:

- **Employees.** We run three main listening exercises:
  - **Your Voice:** a tool to collect employee feedback and measure employee engagement. An independent third party manages this feedback confidentially and provides us with aggregated information only to preserve the anonymity of employees and their responses. In 2024, a global survey took place, followed by local pulses to analyse and address specific topics.

    For more details on the results and actions stemming from 'Your Voice', see section 3.1 'Our employees'.

  - **Canal Abierto:** an anonymous and confidential channel for employees to report unethical conduct and breaches of the General code of conduct. This channel also receives reports from third parties, such as vendors, customers and investors.

    For more details, see section 4.3 'Ethical channels'

  - **Dialogue with employees' legal representatives:** on top of the above mechanisms, we believe that employees' legal representatives play a key role as a spokesperson for our workforce. That's why we encourage and maintain permanent, fluid and direct dialogue, engagement and negotiation with them through trade unions and works councils. We also channel discussions on industrial relations through these representatives in the markets where they exist.

    In order that the relationship between the bank and employees' legal representatives remains productive and fluid, we engage with them through:
    - Santander's bodies for engagement with employees' legal representatives and through formal councils and committees set up for this purpose;
    - Through meetings to address specific matters, direct contact and information exchange platforms.

    The Labor Relations function also facilitates mechanisms for communication between employees' legal representatives and the people they represent and those affiliated to trade unions according to the regulations and agreements that apply in each market.

- **Customers.** The listening process varies according to customer type:
  - **Retail customers:** the aim is to measure their satisfaction and experience in each of our core markets through regular Net Promoter Score (NPS) surveys following customer interactions. We also run a customer experience benchmark to help us identify our competitive positioning, with results twice a year. Both exercises aim to spot areas for improvement that we pull together in action plans with unit´s management committee oversight.

    For more details on our complaints handling system, see section 3.3 'Our customers'

  - **Wholesale customers:** we identify needs and areas for improvement as part of our customer relations and dialogue on an ad hoc basis. Bankers escalate the insights gain that either need management or provoke actions to adjust our commercial strategy.

  Customer feedback is collected by customer interaction teams (customer experience and customer service team, among others) and fed back into key bank processes overseen by governance bodies and thus integrated into the 'Think Costumer' pillar of the strategy.

- **Shareholders and investors.** We engage with our shareholders and investors to strengthen ties and offer a value-added proposition that sets us apart. We use surveys, events, direct contact and other channels (with digital channels gaining traction) to enable close dialogue that helps this group understand the business better and communicate with senior management.

- **Communities.** The aim is to understand the needs and challenges of the communities where we operate by gathering information from several sources:
  - **Individuals**: the customer experience function runs mass surveys to learn about how the communities we serve perceive our actions.
  - **Non-governmental organizations** (NGOs): the Sustainability and Social Action functions engage in two-way communication with the leading civil organizations in our markets.
  - Under our **Environmental, social and climate change risk (ESCC) policy** and the **Equator Principles**, we conduct analyses on the environmental and social risks that our operations might have on our communities.

    For more details, see section' 3.2.3 Environmental, social and climate change management'

Our 2024 engagement in numbers

Employees

83% participation in our Your Voice survey[A]

4,437 complaints received through ethical channels

[A] 151,726 employees answered the survey based on the total number of employees eligible to participate, i.e. employees who have been with the organization for less than 3 months, long-term absentees, employees without access to the corporate intranet, and employees without access to the corporate intranet are excluded.

Customers

Over 9.9 million surveys to customers

681,636 complaints received; resolved or under management

Shareholders & Investors

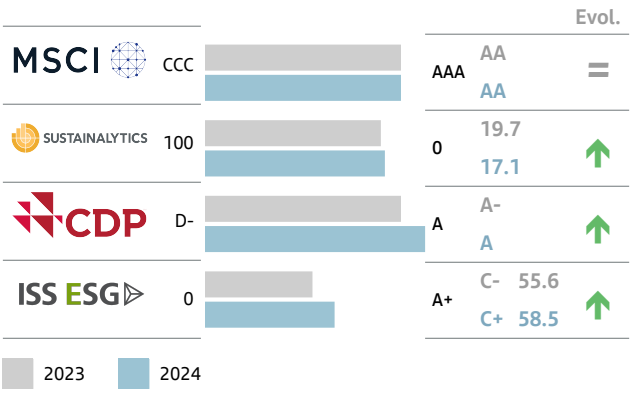
9,136 responses by retail shareholders on the perception of Santander as Simple, Personal and Fair

157,632 responses by retail shareholders and institutional investors through quality surveys and studies

229 events with retail shareholders

1,269 interactions with institutional investors (**109** on ESG matters)

Communities



158 interactions with NGO enabled us to gather and address the needs of the communities where we operate and to understand the impact of our activities

Santander also engages **with other stakeholders**, including suppliers, ESG ratings agencies, regulators and supervisors, political parties and authorities:

- **Suppliers**: we want our value chain to be more sustainable while increasing the Group's resilience to environmental and social risks. We include ESG standards in tenders for certain services and support vendors in assessments and certification procedures.

For more details, see section **4.4 Our suppliers**

- **ESG ratings agencies:** the aim is to convey our developments, assess our progress and spot areas for improvement. In 2024, we maintained our position in MSCI (AA) and at Carbon disclosure project (CDP) level A . We scored 17.1 points in Sustainalytics, remaining in its 'Low Risk' category, and reached the C+ category in ISS.

- **Regulators:** as part of the policy debate we engage with regulators (local and European) and international standard setters on the initiatives that are most important to the bank, our employees, our customers and the communities we serve. Santander works with the Basel Committee, the Financial Stability Board, the European Banking Authority, the European Central Bank, EU institutions, Banco de España, the Bank of England, and other key actors to set out the sustainable financing framework that boosts support for the United Nations Sustainable Development Goals and the Paris Climate Agreement targets. As part of this engagement, at the corporate level, the Group responded to 53 consultations during 2024. In addition, Brazil's presidency of the G20 and the COP30 to be held in Belém in 2025 will provide greater opportunity to work with stakeholders on common solutions to ramp up the transition in emerging and developing economies.
- **Supervisors:** we remain in open dialogue with supervisors so we can understand their priorities and expectations, and meet all pertinent regulatory requirements and recommendations.
- **Political parties:** we also interact with political parties in their role as policymakers on key topics that affect our sector, broader society and the environment[2].
- **Within our sector:** we work closely with industry bodies (including the Institute of International Finance, the Association for Financial Markets in Europe and the European Banking Federation) and think tanks. We work together to find common ground on issues such as the implementation of the EU Taxonomy, the framework for sustainability disclosure and reporting, and ongoing efforts to pinpoint and manage climate-related risks. We take part in these debates through consultations, workshops and other channels, and by facilitating the exchange of views between key stakeholders, in events such as the International Banking Conference and other events that Banco Santander organizes every year.

[2] In line with our principles of transparency, honesty and impartiality, Grupo Santander may only finance political parties on an exceptional and arm's length basis, and with approval from the Group executive committee. These standards prohibit making monetary or in-kind donations and contributions to elections. Total or partial debt cancellation for political parties and their affiliates is strictly prohibited. While Grupo Santander may negotiate the terms of any political party debt, the interest rate charged must never fall below the market rate.

Main sustainability initiatives where Santander is a member or participant

Linked to General Sustainability Frameworks and partnerships

→ **United Nations Global Compact**: We have been part of the Global Compact network since 2022 and a member of the gender equality programme since 2020. We also took part in the 'sustainable suppliers' programme.

→ Santander has been a member of the **United Nations Environment Programme Finance Initiative** (UNEP FI) since 1992 and a founding member of the **Principles for Responsible Banking** since its launch in 2019. A Santander representative co-chairs the global management committee and in 2024 took part in a review of the 2030 principles. We are also signatory, through Santander Asset Management and since 2008, in the Principles for Responsible Investment (PRI), which offer a menu of possible actions for incorporating ESG issues into investment practice.

→ **World Business Council for Sustainable Development** (WBCSD): Having become a WBCSD member in 2015, in 2024 we took part in the Banking for Impact on Climate in Agriculture (B4ICA) initiative, the CFO Network, LEAP project, and other programmes.

→ **Equator Principles**. Voluntary framework for financial institutions to identify, assess and manage environmental and social risks when financing projects. We have been a signatory since 2009.

→ **International Capital Market Association** (ICMA). ICMA Principles champion global green, social and sustainability bond (and related) markets to finance progress towards environmental and social sustainability. The Principles were established in 2014 and Santander has been a member since then.

Linked to Sustainability Disclosure

→ **International Sustainability Standards Boad (ISSB)**. Santander joined the IFRS Corporate Champions initiative at the end of 2024, with the aim of strengthening the positioning of the ISSB standards as the global standard for sustainability reporting.

→ **Task Force on Climate-Related Financial Disclosures (TCFD)**. The TCFD, which we support since 2017, has developed a framework to help public companies and other organizations more effectively disclose climate-related risks and opportunities through their existing reporting processes.

Linked to Advocacy Forums

→ **Instituto Internacional de Finanzas (IIF)**: Grupo Santander's Executive Chair is the current IIF Chair and has sat on its board since 2014. The bank participates in several sustainability-related working groups, including the Sustainable Finance Policy Expert Group and the Sustainable Finance Data, Disclosure and Classification Expert Group.

→ **European Banking Federation (EBF)**: Santander is a member of several working groups, such as the ESG risk group, which a Santander director chairs; the Sustainable Finance Steering Committee; and the Chief Sustainability Officers Roundtable.

→ **Association for Financial Markets in Europe (AFME)**. Santander is part of AFME´s Sustainable Finance SteerCo. AFME works with members, policymakers and other stakeholders on a wide range of important priorities including sustainability disclosures, taxonomies, sustainable financing products, sustainability due diligence and carbon markets. Santander is part of AFME´s Sustainable Finance SteerCo.

Additionally, in each of the sections, specific initiatives or collaborations for each topic are mentioned.

For more details on climate-related initiatives and working groups in which we are participate, see section **2.5.1 'Strategy for engagement with other key stakeholders'** in the Transition Plan.

1.3 Materiality assessment

Double materiality assessment underpins our sustainability strategy. For more details, see section 1.1 'Sustainability strategy'. In 2023, we shifted our focus slightly to meet the new requirements of the EU Corporate Sustainability Reporting Directive. This report shows the culmination of our work to comply with this Directive.

The analysis developed in 2024 **redefines**, in line with the regulation, **the sustainability matters that pose risks to, and create opportunity for, Santander;** and where we can have an **impact on the environment and broader society.**

We identified 32 impacts, risks and opportunities (IROs) that form part of the **five sustainability matters that are material to Grupo Santander:** E1) Climate change, S1) Own workforce, S3) Affected communities, S4) Consumers and end users, and G1) Business conduct. The table below breaks down the impacts (positive and negative), risks and opportunities of each matter.

		Impact		Financial	
	Sustainability matters (ESRS)	+	–	Risk	Opportunity
*	E1: Climate Change				
	E2: Pollution				
	E3: Water and marine resources				
	E4: Biodiversity and ecosystems				
	E5: Resource use & circular economy				
*	S1: Own workforce				
	S2: Workers in the value chain				
*	S3: Affected Communities				
*	S4: Consumers & end-users				
*	G1: Business conduct				

* Material Thresholds:

Critical Significant Informative Minimal

As a global, retail and commercial bank, the material IROs relate mainly to the **retail and commercial business** (business conduct, customer practices and safeguarding privacy) and to **our scale** (contributing to global challenges such as climate change and financial inclusion, and managing our 200,000-plus employees).

We conduct this assessment for the **entire Group, including our own operations and our value chain,** using the **available information and tools; and by engaging our key stakeholders.** We also conducted a materiality assessment in all our subsidiaries, the findings of which provided feedback on the Group's materiality, while the Group's materiality informed local materiality.

The results reflect a short to medium-term time horizon (~1-5 years) for which most of the information is available. However, a qualitative analysis suggests that if we used a long-term horizon, there would be no changes to the results and IROs that are material.

The materiality assessment is connected to **key risk management processes across the Group**. It provides input for the top and emerging risks exercise and is connected to other **internal risk exercises**.

For more details, see section **2.3 'Embedding ESG in risk management'**

The responsible banking, sustainability and cultural committee approved the bank's double materiality assessment, material impacts, risks and opportunities, and sustainability strategy.

Below are details of the material IROs under each sustainability matter. In this Sustainability statement, we outline how we manage each one through policies, actions, metrics and targets (as required by the Corporate Sustainability Reporting Directive-CSRD) in several sections under this chapter.

For more details, see **SN 3. 'Materiality assessment methodology'**

E1	**Climate change** I+ Contribution to protecting the environment by driving an increase in the use of renewable energy and other low-carbon technologies. I+ Contribution to reducing the Group's scope 1 and 2 greenhouse gas emissions. I- Adverse impact on climate and the environment due to the bank's financing of, or investment in, certain non-sustainable assets and activities. O Growth in the financing of renewable energy and other energy transition solutions. O Revenue growth by providing our customers with sustainable solutions in such sectors as construction, mobility or agriculture. R Reputational risk based on the perception of bank' progress with climate-related policies and objectives.
S1	**Own workforce** I+ Promote the health, well-being and security of our employees in a safe and inclusive workplace; facilitate a positive work-life balance through flexible working when possible. I+ Promote a workforce that reflects the society we live in and encourages collaboration and the same opportunities for all our employees, irrespective of personal characteristics and in compliance with the law. I+ Promote continuous career development and personal growth through learning and development programmes. I+ Promote the general well-being of employees and provide appropriate remuneration under equal conditions based on merit and market rates. I- Harm employees through unlawful discriminatory conduct, inadequate working conditions, harassment or corruption. R Potential risk of conflict with employees based on excessive working hours, corruption or the infringement of their rights.
S3	**Affected communities** I+ Drive economic growth and job creation in the regions where we operate and provide credit to people and businesses. I+ Contribution to sustainable development through financing and investment that promotes sustainable performance in companies, addresses societal challenges, mitigates a specific issue, or pursues better societal outcomes. I+ Contribution to education, employability and entrepreneurship, as well as to community development through support programmes. I- Finance activities (in any customer segment) that breach the bank's policies and jeopardize the well-being of present and future generations. I- Potentially negative impact on the environment or society by failing to sufficiently involve appropriate stakeholders or use suitable customer identification and management mechanisms when providing finance to a customer or project.
S4	**Consumers and end users** I+ Positive impact on customers due to the bank's offer of products and services that adapt to their needs and expectations and promote financial inclusion and health. I+ Education on, and awareness of, cyber security to understand potential threats and ways to repel them. I- Negative impact on the customer if they do not have access to complaints channels or if, after making a complaint, the bank fails to take the necessary action. I- Negative impact on the customer if the bank fails to provide sufficient information on the product or service they are signing up for. I- Potential infringement of customers', employees' or shareholders' rights due to a lack of appropriate technical or organizational measures to protect their personal data according to law and the practices set by the Group. I- Negative impact on the customer by failing to guarantee access to, or the use of, products and services that may present certain obstacles or weak spots. R Potential losses due to fines or a reduction in the number of customers because of a failure to detect or respond effectively to breaches of privacy. R Potential losses due to claims or a reduction in the number of customers because of substandard customer practices throughout their life cycle.

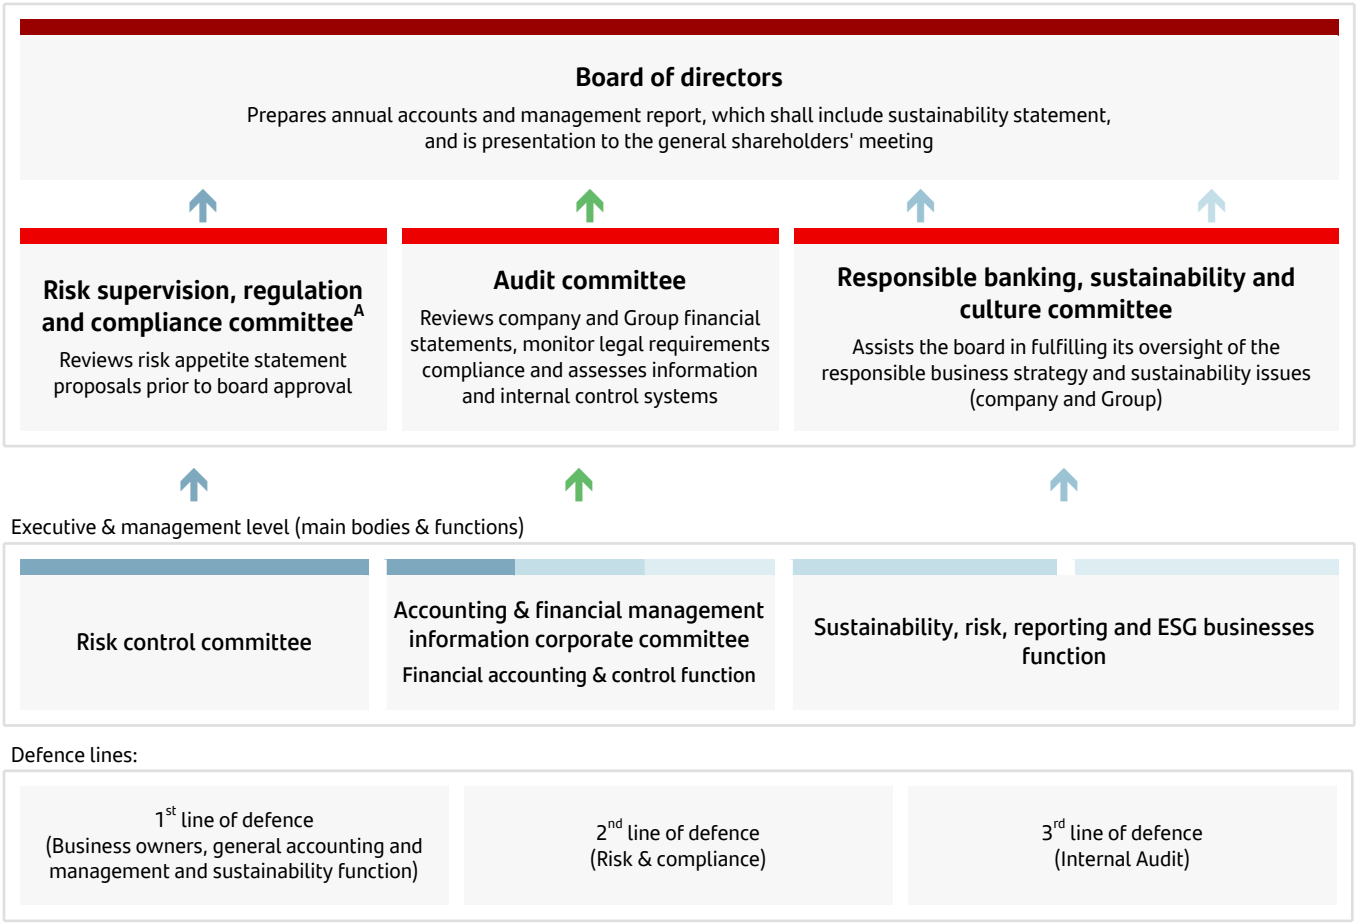
G1	**Business conduct**
	I+ Act responsibly and consider investors' interests and the impact on employees, broader society and the environment; pay taxes to support the distribution of wealth.
	I+ Protect the confidentiality of users of the bank's ethical channel and have an effective reporting system in place that follows robust principles and procedures.
	I+ Promote responsible practices among vendors; engage with them, assess their ESG performance and give them recommendations and tools to improve.
	I- Negative impact on the environment or broader society by failing to implement measures to resolve incidents through complaints or reporting channels or due to a lack of continuous improvement actions.
	I- Harm broader society through bribery or corruption.
	R Potential risk from failing to ensure the operational resilience of the value chain by assessing vendors' solvency, reputation and compliance with the law.
	R Risk stemming from improper conduct that makes illicit funds or assets appear legitimate and, therefore, facilitates illegal activity or to benefit from it.

Key: I+ Positive impact I- Negative impact R Risk O Opportunity

There are five sustainability topics that we consider non-material, given none of the impacts, risks and opportunities connected to them reach the materiality threshold: pollution, water and marine resources, biodiversity and ecosystems, resource and circular economy, and workers in the value chain.

However, we address aspects of nature and biodiversity that are most closely related to climate objectives within our transition plan.

For more information, see section 2.3.5 'Our approach to nature and biodiversity'.



1.4 Sustainability governance

We manage and review progress with sustainability at the highest level of the business. The board of directors is responsible, among other things, for approving the sustainability agenda and setting the sustainability strategy.

The responsible banking, sustainability and cultural committee proposes and oversees the development and implementation of the Group's sustainability strategy and policies, in support of the board of directors.

Other board committees also analyse specific sustainability topics. The audit committee is responsible for supervising and reviewing the financial and non-financial information process, as well as the **internal control systems**, to meet the most demanding international standards and complies with the guidelines established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

The overseeing of material sustainability issues, as well as the main lines of action for their management, are periodically reviewed through the bodies shown below, which together form the governance of the function:

A. The BRC works with the RBSCC (Responsible Banking, Sustainability and Cultural Committee) to review ESG-related conduct risk, data protection risk, customer vulnerability, reputational issues, risk policies and how business units adopted these policies.

For more details on sustainability governance, see note 'SN 2. Sustainability governance'.

1.4.1 Integration of sustainability-related performance in incentive schemes

Grupo Santander's remuneration policy reflects our strategic and long-term sustainability objectives. Variable pay is based on pre-determined, specific and quantifiable financial, sustainability-based and value-creation targets.

For more details, see section 6.1 'Remuneration policy' in the Corporate Governance chapter.

Our long-term incentives (LTI) scheme applies to our top 36 Groups' executives, including the Executive Chair and the CEO.

Sustainability has formed part of the last three LTI schemes, with a 20% weighting. The proposal for 2025-2027 will be subject to vote at the Annual General Meeting in 2025.

For more details, see section 6.3 'Remuneration of directors for executive duties' in the Corporate Governance chapter.

Short-term variable remuneration has a qualitative and quantitative component. Under the qualitative component, sustainability has had a ±5% weighting in the Group, global businesses and subsidiaries since 2020. Short-term incentives apply to our top 236 Groups' executives and global and subsidiary corporate centre employees.

In 2024, 8% of the variable remuneration received by the Chairwoman and the CEO has been linked to sustainability, while 2% of their total remuneration has been linked to climate actions.

The responsible banking, sustainability and cultural committee, remuneration committee, and board of directors approve these ESG incentive schemes.

The proposed parameters to assess ESG performance aim to reward progress with our main ESG metrics and embedding ESG in our management, as shown below:

Inclusive Culture	Progress with inclusive culture and other initiatives such as accessibility.
Financial inclusion	Progress with financial inclusion targets and other key initiatives in the social agenda (financial education, community investment, etc.).
Sustainable finance	Progress with sustainable finance and socially responsible investment.
Climate	Progress with our transition plan and the key levers to fulfil our net zero ambition.
Governance and cross-cutting matters	Conducting our double materiality assessment, implementing sustainability policies, and enhancing data efficiency and quality.

1.4.2 Human rights due diligence

We strive to foster that our operations uphold and protect the human rights of our stakeholders in the countries where we operate.

The CSRD requires the findings of human rights due diligence exercises to inform the double materiality assessment.

Human rights are integrated into management and governance based on the process type, focusing on monitoring adverse impacts and implementing measures, such as:

- looking after our employees' health and promoting decent employment, the preservation of freedom of association and collective bargaining and the prohibition of slavery and child labour.

For more details, see section 3.1 'Our employees'

- protecting our customers' human rights through responsible business practices and the protection of their data.

For more details, see section 3.3 'Our customers'

- assessing the human rights impact on transactions with customers through environmental, social and climate change (ESCC) analysis.

For more details, see section 2. 'Our climate transition plan'

- embedding environmental and social aspects, including human rights, in our supply chain management.

For more details, see section 4. 'Business conduct'

Our board-approved Responsible banking and sustainability policy includes our pledge to uphold human rights.

Canal Abierto is a key tool to identify, manage and resolve potential human rights-related incidents or violations to protect our customers, employees, suppliers and the communities we serve.

For more details, see section 4.3 'Ethical channels'

In 2024, we conducted a comprehensive human rights due diligence exercise to: (i) assess the effectiveness of current due diligence policies; (ii) identify and assess actual and potential adverse impacts based on their severity and probability; and (iii) assess the suitability of our communications channels and control measures to prevent, mitigate and remedy adverse impacts.

This exercise followed international frameworks and directives and best market practice[3] and covered all of our global businesses' units and activities.

The findings of the human rights due diligence exercise are embedded into the strategy and governance, informing the double materiality assessment. Additionally, we engaged stakeholders as part of our analysis of these findings.

For further detail regarding the 'Materiality assessment methodology', see Sustainability Note 3

For more details on our human rights due diligence, visit the website santander.com/en/our-approach/policies

[3] For instance: the Universal Declaration of Human Rights, the International Labour Organisation Declaration on Fundamental Principles and Rights at Work, the United Nations Guiding Principles on Business and Human Rights, the OECD (Organization for Economic Cooperation and Development) Due Diligence Guidance for Responsible Business Conduct, and others.

2. OUR CLIMATE TRANSITION PLAN

(Environmental information)

2.1 Strategy

2.1.1 Our approach

Santander considers climate a material topic, having identified impacts, risks and opportunities in the double materiality assessment. Per legal requirements, below we disclose our transition plan, based on three pillars. The purpose of each pillar is to support our customers and the communities we serve in their transition objectives; assess our customers' climate-related risks to manage the impact on their business and on our operations; and make progress with the alignment of our portfolios:

1

Supporting our customers in their transition goals

Supporting our customers in pursuing their transition to a sustainable economy. Having achieved our target of raising or facilitating EUR 120 bn in green finance between 2019 and 2025 18 months early, we're making headway with our next milestone of achieving EUR 220 bn by 2030. We are offering our customers guidance, advice and specific business solutions; and a wide range of products to invest in according to their sustainability preferences, with the target of reaching EUR 100 bn assets under management (AuM) in Socially Responsible Investments (SRI) by 2025.

2

Embedding climate in risk management

Embedding climate and environmental aspects in risk management implies adopting a risk-based approach to those factors, focusing on the most material sectors. We consider the risks stemming from climate and environmental factors in the overall risk management cycle, including a materiality assessment that informs the double materiality assessment and our sustainability strategy.

3

Aiming to align our activity with the Paris Agreement Goals

Aiming to align our portfolio with the Paris Agreement goals to help limit global warming. We are setting sector portfolio alignment targets for 2030 in high-emissions portfolios. The progress on these targets is expected to reflect the progress of the economies we serve. We currently have seven targets in five sectors and alignment targets for our asset management activity.

Meanwhile, we continue to reduce our impact on the environment by implementing efficiency measures in our own operations and sourcing all our electricity from renewable sources by 2025.

To achieve this, we engage with our different stakeholders:

- Customers and investors: developing products/services adapted to their needs; participating in a collaborative network of institutions to create financing opportunities; and developing assessment tools to better manage performance and monitor progress towards their transition goals.
- Key climate actors: participating in local and international organizations, alliances and working groups to progress with global goals.
- Authorities: participating in debates regarding the climate agenda with regulators, policy makers and supervisors on the developments that are most relevant to the bank, its employees, customers and the communities in which we operate.
- Communities: supporting a number of local initiatives to tackle climate change, protect biodiversity, and generate positive social impact.

2.1.2 Our ambition

We continue working towards our ambition of net zero carbon emissions by 2050 by progressively setting specific actions to make headway with our three-pillar strategy.

Incentive policies and frameworks are key to driving the energy transition. The challenge goes beyond increasing the flow of capital from the regulated financial sector to funding the energy transition. We need to scale transition activity and the demand for solutions, which will require better risk-profitability profiles. Achieving climate objectives depends largely on the macroeconomic landscape and public policy.

2.1.3 Our objectives

	2019	2020	2021	2022	2023	2024	2025/2030 target
Green finance raised and facilitated (accumulated EUR bn)[A]	19.0	33.8	65.7	94.5	115.3	139.4	120 bn by 2025 220 bn by 2030
AuM in **Socially Responsible Investments** (accumulated EUR bn)			27.1	53.2	67.7	88.8	100 bn by 2025
Thermal coal-related power & mining phase out (EUR bn)			7.0	5.9	4.9	4.8	0 by 2030
Emissions intensity of **power generation** portfolio[B]	0.21	0.17	0.19	0.16	0.15		0.11 tCO_2e/MWh in 2030
Absolute emissions of **oil & gas** portfolio[B]	23.84	22.58	27.43	20.94	20.27		16.98 $mtCO_2e$ in 2030
Emissions intensity of **aviation** portfolio[B]	92.47	93.05	97.21	81.09	82.99		61.71 $grCO_2e$/RPK in 2030
Emissions intensity of **steel** portfolio[B]	1.58	1.40	1.36	1.24	1.38		1.07 tCO_2e/tS in 2030
Emissions intensity of **auto-manufacturing** portfolio[B]		149	138	133	134		103 gCO_2/vkm in 2030
Emissions intensity of **auto-lending** portfolio[B,C]				137	133		75-89 gCO_2e/vkm in 2030
Electricity from renewable sources[D]	50%	57%	75%	88%	97%	96%	100% by 2025

In 2024:

- → we continued progressing with aligning key portfolios, including adding the disclosure of emissions for our mortgages portfolio in Spain and our commercial real estate portfolio in Spain and the UK;
- → we continued managing our own operations emissions from scopes 1 and 2, setting new reductions plans and offsetting remaining ones; and we kept our offices and buildings in our core markets free of single-use plastics to meet our target.

A. Includes Grupo Santander's contribution to green finance: project finance; green bonds; export finance and advisory services to help customers transition to a low-carbon economy.
B. The figures displayed are the latest available given limited data availability from customers to assess financed emissions. We used Banco Santander's internal calculation methodology, which is based on the Partnership for Carbon Accounting Financials (PCAF).
C. Consumer lending for the purchase of passenger cars in Europe.
D. In countries where we can verify electricity from renewable sources at Banco Santander properties. It considers the 10 core markets where we operate.
For more details of the scope of targets, see section 2.1.4.

2.1.4 Key milestones

We continue to work towards our ambition of net zero carbon emissions by 2050 by progressively setting specific actions to align our portfolios:

2021

- Net zero ambition and first alignment targets (thermal coal, power generation and Santander Asset Management-SAM)
- Cut unnecessary single-use plastics

2022

- Alignment targets disclosed for oil & gas, steel and aviation
- Development of first Sustainable Finance Classification System, including transition finance criteria

2024

- In 2024 we achieved our 2025 target to raise or facilitate EUR 120 billion in green finance 18 months early
- Alignment targets disclosed for automotive sectors (manufacturing and lending)
- Financed emissions disclosed for residential Mortgages (UK) and Agriculture (Brazil)

2025

- Financed emissions disclosed for residential mortgages (Spain) and commercial real estate (Spain and UK)
- Use 100% of electricity from renewable sources[A] in all Santander buildings
- EUR 100 billion in Socially Responsible Investment AuM

2030

- SAM target to halve net emissions for 50% of in-scope AuM[B]
- Alignment targets for power generation, oil & gas, steel, aviation, auto manufacturing and auto lending
- Raise or facilitate EUR 220 billion in green finance from 2019
- Thermal coal-related power & mining phase out

A. In countries where we can verify electricity from renewable sources at Banco Santander properties. Target considers the 10 core markets in which we operate.
B. Assets in scope are 54% of SAM's total assets, which currently have a set Net Zero methodology. This objective might be revised upwards at least every five years, depending on data availability

2.2 Supporting our customers in their transition goals

In this section we cover how Santander manages the following IRO:

I+ Contribution to protecting the environment by driving an increase in the use of renewable energy and other low-carbon technologies

O Growth in the financing of renewable energy and other energy transition solutions

O Revenue growth by providing our customers with sustainable solutions in such sectors as construction, mobility or agriculture.

To achieve our net-zero ambition, our main lever as a bank is supporting our customers in their efforts to transition to a low-carbon economy.

As a large financial institution, we have an opportunity to support our customers in their ambition to transition to low carbon business models. To this end, we continue enhancing our sustainable finance and advisory proposition, and financing in our global businesses.

To achieve this, we are:

1. growing the green finance business, which entails drawing up a green finance strategy for the Group's businesses and delivering a strong value proposition for our customers;

2. building the infrastructure that support green finance across the Group. This means implementing the sustainable finance and investment classification system (SFICS); strengthening the controls to assess and manage greenwashing risk; and executing the data strategy to measure and monitor green finance results; and

3. deploying well-trained commercial teams to capture opportunity.

In Corporate & Investment Banking (CIB), we have already reached EUR 139 billion in green finance raised and facilitated since 2019, achieving our EUR 120 billion target 18 months early and are working towards reaching EUR 220 billion by 2030.

Climate opportunities

Working with customers to support their transition objectives and carbon reduction emissions goals is key to progressing towards a low-carbon economy. To do this we identify business opportunities for transition financing assessing key sectors, working closely with our clients and with the knowledge of our sustainability experts. These opportunities inform our materiality assessment.

In addition, the Group calculates the ratio of green assets aligned with the European Taxonomy. In 2024, it amounts to 3.28% (vs. 2.6% in 2023). The volume of assets as at December 2024 aligned with the European taxonomy for mortgages is EUR 28.1 bn and auto is EUR 8.8 bn. For more details, see SN 5. European Taxonomy.

Also, from investment through our assets management business SAM, the top three climate-related opportunities are:

- new climate solutions involving products and services that boost diversification, competitive advantage and revenue;
- lower-emission energy sources that benefit from less exposure to Greenhouse Gases (GHG) emissions, lower costs, policy incentives; and
- efficient production and distribution of resources to lower operational costs and raise both production capacity and the value of fixed assets.

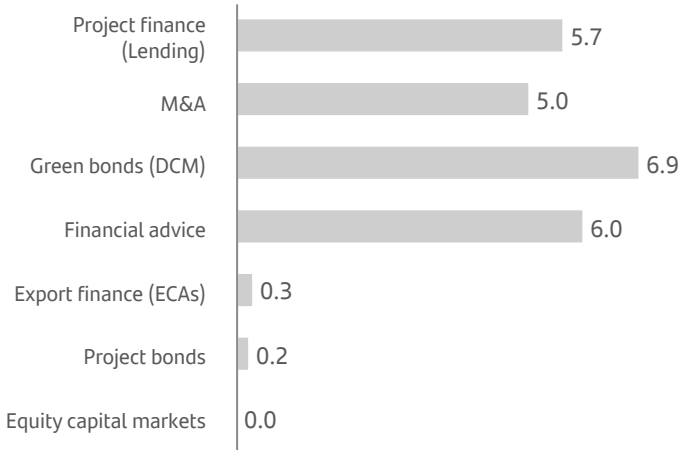
Transition finance and just transition

The regulatory framework must support growth, which is key to a stable and orderly transition.

We want to help achieve sustainable development and pledge to play an active role in supporting the green transition. It is vital that the transition is just and inclusive, taking into account regional and sector specificities to avoid isolating communities and stranding assets.

We aim to embed and promote the just transition through our engagement approach, our risk management policies and processes, and our sustainable and investment products. We consider this approach when devising our policies and reviewing our SFICS (Sustainable Finance and Investment Classification System), which covers activities aimed at addressing or mitigating social and environmental issues; bringing focus on specific matters such as protecting the Amazon biome (given our operations in Brazil) and helping local communities; and supporting initiatives like the Just Transition Alliance, led by the Grantham Research Institute at the London School of Economics.

2.2.1 Corporate and investment banking (CIB)



CIB has raised and mobilized globally EUR 139.4 billion in green finance between 2019 and December 2024. This target focuses on green use of proceeds, such as renewable energy, across products where well-recognized public information is available.

GREEN FINANCE VOLUMES FROM 2019 TO 2024
Raised or facilitated. EUR bn.

2024 GREEN FINANCE VOLUMES SPLIT BY PRODUCT

Raised or facilitated. EUR bn.

DCM (Debt capital markets); M&A (Mergers and Acquisitions)
Information obtained from public sources, such as Infralogic, TXF, Bloomberg or Mergermarket league tables. All roles undertaken by Banco Santander in the same project are accounted for. Other sustainable finance components, such as financial inclusion and entrepreneurship, are excluded. Green Finance raised and facilitated is not a synonym of EU Taxonomy. Information from League Tables extracted by January 15th, 2025, latest.

Our sustainable finance proposition includes expertise in renewable energies, as demonstrated by our long-standing global leadership in this field. We also provide a range of sustainable finance structuring solutions and advice across multiple products and geographies. Our client climate tiering approach is designed to aid in the identification of customer-level priority areas and provide transition benchmarking to support our customers in financing their transition. Our corporate finance advisory proposition, led by our global team of experts in green and transition technologies, enables us to provide bespoke strategic and corporate finance advice on opportunities to accelerate the adoption of low-carbon technologies to meet their sustainability ambitions. For more details, see below select case studies that demonstrate how we support our customers in the energy transition.

During 2024, Santander remained active in corporate finance transactions in the renewable energy sector across different technologies and geographies. In Europe, CIB supported Enel in a landmark transaction which is among the largest deals closed in the region: the sale of a 49% stake in a 2GW portfolio of operational solar PV assets in Spain to Masdar. Santander also supported Canadian Solar in the sale of a minority stake in its global development platform Recurrent Energy to BlackRock in March 2024 with a project pipeline totalling 26GW of solar PV and 56 GWh of Battery Energy Storage Systems.

Santander also acted as Financial Adviser to Sonnedix to raise a EUR 2.5 billion debt package to refinance 1.1 GW portfolio of renewable energy assets in Spain, Italy, and France, with the ability to expand the facility with new assets across Europe and the UK. The financing package provided an innovative blend of project finance-like debt structuring with more corporate-style documentation flexibility.

Santander acted as Sole Financial Advisor and LC (Letter of Credit) Provider in 3.16 billion Brazilian reals (BRL) long term financing to the renewable energy Babilonia Central project in Brazil. The project, controlled by a joint-venture between ArcelorMittal Brasil (55%) and Casa dos Ventos (45%), will have a capacity of 554 MW of renewable energy to be used by ArcelorMittal to align its steel operations in Brasil (estimated 40% of its electricity needs by 2030).

In electric mobility, Santander acted as financial advisor, sole underwriter, and green loan coordinator in the concession of a EUR 225 million green loan to Zunder to help their expansion plan that aims to deploy more than 3,000 ultra-fast charging stations across Europe.

In Debt Capital Markets, Santander helped place several landmark sustainability labelled transactions, including a EUR 1 billion, six-year inaugural green bond issuance by Saint-Gobain, a global leader in light and sustainable construction; a EUR 1 billion, dual-tranche green deal for A.P. Møller-Mærsk, an integrated logistics company; and a EUR 750 million, nine-year debut sustainability-linked bond issued by Gatwick Airport, with targets related to their CO_2 emissions reduction. Santander was recognized as ESG Bond House of the Year at the 2024 Global Banking & Markets Latin America Awards, which also selected COFIDE's USD 300 million, five-year social bond as ESG Bond Deal of the Year, where Santander acted as active joint bookrunner and ESG Structurer. Notable ESG deals in Latin America also include our sole sustainability structurer and sole bookrunner role for the Republic of Guatemala, which issued a USD 800 million, 12.5-year inaugural sustainability bond; a bookrunner position for the Republic of Honduras' USD 700 million, 10-year debut sustainability bond; and our sole ESG structurer role in the first Mexican taxonomy-aligned bond issuance from Acueducto Cuchillo 2 (6.6 billion Mexican pesos senior unsecured sustainability bond).

In Export Finance, we participated as a Pathfinder, Mandated Lead Arranger and Lender in EUR 1.3 billion green financing partially covered by BPI Assurance Export for Verkor. These funds are allocated to Verkor's first battery gigafactory in Dunkirk, with an initial production capacity of 16Gwh/year.

We also acted as a Senior Mandated Lead Arranger (SMLA) for the construction of H2GS Boden AB's fully integrated, digitalized and automated greenfield steel plant in the North of Sweden for a total debt of EUR 3.3 billion. Euler Hermes and Riksgalden, the German and Swedish ECAs (Export Credit Agencies), participated in this financing by covering part of the debt. The steel-making process will be powered by hydrogen produced from renewable energy, making it the first European large-scale steel producer based on fossil-free manufacturing. CIB won the PFI Sustainability Deal of the Year for this transaction, as well as 12 other awards, including Europe's Bank of the year.

In Trade Finance, we participated in a EUR 1.2 billion green guarantee line with coverage from Spanish export credit agency Cesce for Siemens Gamesa. The technical guarantees issued under this line will support Siemens Gamesa in its wind projects worldwide.

In Supply Chain Finance, we signed a sustainability-linked confirming program with Vestas in Brazil, the first supply chain finance program of its kind for the energy sector in the country. Santander was also awarded both Best Provider of Sustainable Finance Solutions in Trade Finance and Best Sustainable Supply Chain Finance Program by Global Finance in 2024.

Financing renewable energy

Grupo Santander has been a leader in renewable energy finance for more than 10 years. In 2024, we were among the top banks in number of transactions and deal value globally, with 82 transactions closed and a 4.54% market share according to Infralogic:

Rank	Loan Provider	Vol. (EUR million)	No. transactions	Market Share
1	Bank 1	8,009	79	4.95%
2	Banco Santander	7,346	82	4.54%
3	Bank 2	7,175	94	4.44%
4	Peer 1	5,641	80	3.49%
5	Bank 3	4,930	66	3.05%
6	Peer 2	4,126	59	2.55%
7	Peer 3	4,044	49	2.50%
8	Bank 4	3,978	41	2.46%
9	Bank 5	3,538	44	2.19%
10	Bank 6	3,411	46	2.11%

Peers are BBVA, BNP Paribas, Citi, Crédit Agricole, HSBC, ING, Itaú, Scotia Bank and UniCredit. Data extracted by January 15th, 2025, latest.

The greenfield renewable energy projects that we financed or advised on in 2024 have a total installed capacity of 10.2 GW. We also helped expand, enhance and sustain renewable energy brownfield projects that have a total installed capacity of 28.2 GW.

The greenfield renewable energy projects Santander participated as financier or advisor in 2024 can power 6.5 million households per year.

2.2.2 Retail and Commercial Banking

In 2024, Retail and Commercial Banking continued to enhance its proposition with solutions that help customers transition to a low-carbon economy, most notably in such sectors as real estate, mobility and agriculture, as well as in the circular economy (water and waste management). These solutions include sustainability-linked loans (SLL) that complement the products that help customers align production to the transition.

Managing greenwashing risk is one of the Group's priorities, particularly through compliance with operational guidelines for green finance teams and meeting supervisors' expectations on climate matters. ESG certification forums review products and transactions to validate that they are consistent with the SFICS before labelling them as green. The SFICS is an automated tool that we implemented in our core markets to provide traceability of decisions and supporting documents.

In addition, we created Green Product Inventories in our core markets where we have implemented standards and established robust control and approval procedures.

These were the core activities we performed in 2024:

- Santander España launched the "Eficiencia Energética" loan for owners associations looking to fund building renovations or boost energy efficiency. This will enable our customers to save on energy bills while helping the environment.

  Moreover, through the new Recovery and Resilience Mechanism line of credit, we promote and boost access to sustainable finance mainly for electric vehicles, renewable energy, the circular economy and social housing development.

- Banco Santander Brasil continue to broaden its sustainable finance proposition, especially in renewable energy, agriculture and electric mobility. We worked with Holu Solar to create Energía Plus, a platform to help retail customers and SMEs install solar panels.

- We also launched FIT Energía services for retail and SME customers. FIT Energía is a platform that connects consumers with producers of renewable energy to encourage the use of cleaner and cheaper energy.

- Santander Polska continues to help SME and corporate customers obtain sustainable finance through the "My electric car" programme and a green loan backed by Bank Gospodarstwa Krajowego (BGK). We also launched the Santander New Energy platform, a tool to educate and support SMEs in boosting the efficiency of their production models.

- Santander UK signed an agreement with Scottish Power to offer customers solar panels and heat pumps. Moreover, we also entered into partnership with Octopus Energy to offer customers discount on solar panels and batteries.

- Santander Portugal joined interbank services association SIBS, which developed a platform to help SMEs centralize, report on and share sustainability data, as well as to simplify disclosures on ESG requirements.

- Santander Argentina launched Tienda GRO, an online marketplace to help retail customers finance sustainable products. We also increased the technical and financial solutions for renewable energy projects available to retail customers through our partnerships with leading solar energy providers.

- Santander Chile signed its first real estate loan (USD 25 million) based on the Edge Advanced certificate and under its partnership with the International Finance Corporation (IFC). The bank continues to promote these deals to bolster sustainable development in Chile. We also entered into an agreement with Tesla to broaden our clean mobility proposition.

- In July, Santander Uruguay and Buquebus announced the financing of the world's biggest electric ferry, which will connect Buenos Aires (Argentina) with Colonia del Sacramento (Uruguay), through a USD 107 million loan granted by the bank and partially backed (USD 67 million) by the IFC. This loan saw Santander and the IFC close the world's first electric maritime transport deal.

- In October, Banco Santander Perú financed foreign trade deals worth USD 14 million for Exportadora Frutícola del Sur (Grupo Athos), a Peru-based company that holds the Global Gap certificate.

- Santander Colombia was the main lender in Jungheinrich Colombia's (German logistics multinational) acquisition of electric fork-lift trucks. We also signed an agreement with Enel X to offer our customers solar panel solutions.

Working with multilateral institutions

Santander continues to work on aligning sales activities with the objectives and opportunities that multilateral development banks (MDBs) drive in the countries where the Group operates.

In 2024, Santander España and Portugal took part in a Green Gateway Advisory Programme coordinated by the Invest EU Advisory Hub to boost the role of banks in the transition to a low-carbon, resilient economy. The purpose of this programme, which EIB (European Investment Bank) and PwC advisors lead on, was to assess Santander's, the EIB's, and the EIF's eligibility criteria, uncover the key trends and opportunities in the sustainable finance market, and explore core MDB tools that the Group can use to drive green production among customers.

As part of a synthetic securitization with the EIB, Santander Portugal agreed a line of credit for residential and commercial real estate transactions of new buildings with almost zero emissions and renovation of existing homes according to sustainable standards. This enables us to offer significant discount on the loan spread of customers whose transactions meet EIB' sustainability standards.

2.2.3 Wealth Management & Insurance (Wealth)

Most socially responsible investment (SRI) products with ESG aspects (registered as Article 8 SFDR-Sustainable Finance Disclosure Regulation) that Santander Asset Management (SAM) manages have a sustainable investment objective ranging from 1% to 50%. Some investment products registered as Article 9 have a 100% sustainable investment objective (excluding cash and derivatives).
As part of our SRI product range, we have thematic funds that focus on renewable energy (Santander Iberia Renewable Energy), social objectives (Santander Prosperity), agriculture (Atgro), and climate (Santander GO Global Environmental Solutions, Santander Innoenergy Climate, and Santander Sostenible Bonos).

The Santander Sostenible Bonos fund, launched in 2019, was a trailblazer in Spain for investing in green bonds to finance clean energy, emissions reduction and other green initiatives. The fund also invests in social, climate change, environmental and other sustainable bonds.

In private markets, Santander Alternative Investments (SAI) offers two solutions to address climate change: Santander Iberia Renewable Energy, a private equity strategy that invests in solar and wind energy projects in Spain and Portugal; and Santander Innoenergy Climate Fund, a venture capital strategy that invests in climate technology startups that work on renewable energy, smart grids, energy efficiency, storage systems, green energy batteries, mobility and the circular economy.

SAM has an advisory mandate for LA Green, a blended finance fund to boost the SME green bond market in Latin America, mobilize large-scale capital and make a positive contribution to society and the environment.

Moreover, SAM's SRI products include solidarity funds that donate a portion of their fees to NGOs. In 2024, we boosted our proposition by making changes to two equity funds: Santander Sostenible Bonos and Santander Sostenible Renta Fija Ahorro, and two profiled funds: Santander Sostenible Crecimiento and Santander Sostenible Evolución a solidarios. These funds donated to several NGOs to educate young people at risk of exclusion and help vulnerable women search for jobs, among other causes. Our Santander Responsabilidad Solidario fund won 'Best solidarity fund' at the Expansión-Allfunds Awards.

For more details on Socially responsible investment, see section 5. 2 'Responsible investment and social finance'.

2.2.4 Digital Consumer Bank (Consumer)

At Digital Consumer Bank, we have the opportunity to help our customers in their transition to more sustainable mobility and a low-carbon economy. Enhancing our sustainable finance proposition is key to achieving our climate transition targets. We split this proposition into auto and non-auto.

Auto

Santander Consumer Finance (SCF) is Europe's leading auto lender. Our ambition is to boost our sustainable finance proposition while remaining number one. Our leadership enabled us to support the green transition with EUR 6.8 billion in finance for electric vehicles and reach a market share of 12% in Europe, as well as contributing to the alignment of our auto lending portfolio and 2030 target in Europe.

EU regulation is carving out the path for the automobile industry to align through two key measures:

- Emissions targets for manufacturers in relation to new vehicles sold in a year, with progressive, more restrictive targets for passenger vehicles of 95gCO_2/km in 2020-2024 down to 49.5gCO_2/km in 2030-2034. The penalty for a failure to meet these targets will amount to EUR 95 for each CO_2 g/km of excess per vehicle sold. Most manufacturers in Europe are currently above this threshold, which could lead to penalties across the industry or the need to restrict sales of combustion-engine vehicles, but also establishing commercial policies to encourage the sale of low-emission vehicles, or the creation of pools with other brands.
- Prohibition to sell combustion-engine vehicles (unless powered by e-fuels) from 2035.

In 2024, hybrid vehicles saw the highest growth in sales in Europe, with an increase in market share of 31.4%. This suggests only a partial shift in consumers' mindset towards more sustainable mobility, with perceived barriers to electric vehicles remaining (largely due to a lack of charging infrastructure).

For the first time in several years, electric vehicle registrations fell in Europe in 2024. An end to electric vehicle subsidies in Germany triggered a 27.4% drop in sales compared to 2023. Markets where policy measures have been discontinued have seen electric vehicles become less popular, which once again highlights the link between the sale of these vehicles and government aid.

SCF continued increasing electric vehicle lending, with a market share in Europe of 12% (above the total Auto market share off 8%). This further reflects SCF's leadership in the electric vehicle market. In 2024, SCF financed 243,315 vehicles (17% of its total business) worth EUR 6.8 billion (13% of the total Auto portfolio). Electric vehicles account for 24% of SCF's new car business (number of agreements), which outlines its success in this area.

This progress has been helped by signing new financing agreements with electric vehicle manufacturers; and extending partnerships with traditional manufacturers that have set a roadmap and strategic plan to electrify their fleet (and who, therefore, are showing a solid objective to the sustainable mobility transition).

SCF has also come up with innovative, holistic financing solutions to aid customers' energy transition, such as home bundles that include charging points and solar panels.

We will continue working on building partnerships with new electric vehicle manufacturers that enter the European market as well as with startups that show vast potential in terms of new sustainable mobility ideas such as battery swapping.

Nonetheless, the effectiveness of all these measures in the medium and long term and SCF's growth in electric vehicle lending will depend on external factors that include regulation; the technological developments needed to reduce production costs and ensure access to key materials to manufacture green vehicles; the infrastructure to expand capacity and boost efficiency; and customer demand and market trends.

Non-auto

On top of Santander Consumer Finance's leadership in auto lending, it is also a reference in Europe in other consumer finance sectors, with prominent partnerships and a presence at over 75,000 points of sale throughout the continent.

This vast footprint requires a strong social and environmental objective to drive a more sustainable economy. With specific, measurable actions, SCF is working on a green finance model that promotes environmentally-friendly projects and products for responsible consumption.

Our sustainable finance value proposition for the Consumer business covers these sectors:

- Real estate: Solar panel installation, upgrade to sustainable home heating and cooling systems, and energy efficient devices.
- Sustainable mobility: Electric vehicle charging points, emission-free vehicles such as bicycles and scooters, and conversions of combustion engines to less polluting alternatives such as liquid natural gas and hydrogen.
- Other activities: Sustainable fashion, second-hand clothes, used mobile phone buybacks and the issue of cards made of sustainable materials (recycled PVC/PLA) as part of the circular economy.

Our value proposition is also complemented with financing programmes for education so that students can access the tools they need to achieve greater inclusion.

We run other initiatives such as "Hazte ECO" (SCF España) where we invite customers to join projects to protect the environment when they use their cards. SCF contributes 1% of purchases to these projects and makes twice-yearly donations to Fundación Global Nature to help restore Spain's wetlands.

The EUR 155 million in green finance disbursed by the Consumer units in 2024 is a key sign of our objective through this value proposition.

However, consumers continue to face several obstacles such as:

- Solar panels: A product with a specific shelf life (10-15 years) requires significant investment and a lengthy repayment plan, which coupled with more stable electricity prices has caused customers' appetite to wane.
- Electric bicycles: Electric bicycles are growing in popularity in Europe, especially in crowded cities, where they are a practical alternative to passenger cars. Despite being cheaper than electric vehicles, these bicycles are expensive and require significant investment (depending on the model).

The high level of investment that most sustainable initiatives require government subsidies. Lack of such subsidies and bureaucratic obstacles to aid has an impact on customer appetite.

2.2.5 Payments

In 2024, 84% of the cards we acquired (39 million) were made from sustainable materials (recycled PVC/PLA) and we have continued to make progress in providing solutions to our customers to calculate their carbon footprint based on the payments they make with their cards, as well as initiatives to offset it.

2.3 Embedding ESG in risk management

ESG factors risk management

Due to our ESG strategy, the scrutiny from stakeholders and the regulatory, reporting and disclosure requirements, we continue to work on embedding and monitoring ESG aspects in risk management. We consider ESG risk factors, especially climate-related and environmental, cross-cutting and likely to have an impact on credit, market, liquidity, operational, reputational, strategic risks, among others.

The management of these factors adopts a risk-based approach prioritizing climate and environmental aspects based on the relevance and materiality in the Group and in the current landscape. We keep improving the consideration of the elements that stem from the transition to a low-carbon economy, the physical effects of climate change and biodiversity loss, and actions to consider negative impacts on nature.

We manage social risk based on internal policies and frameworks, which draw on international principles and sector standards, and it adapts to the legal framework of the jurisdictions in which we are present.

Additionally, governance risk is analysed from a dual perspective, both the internal governance in Grupo Santander and the assessment of our customers', considering proportionality and relevance criteria.

We identify below the typologies of climate and environmental risks:

Transition risk (TR)

Market sentiment
Changes in the supply and demand of certain commodities, products and services which are considered climate risks and opportunities, pose a reputational risk among other potential issues.

Policy action
Implementing carbon pricing mechanisms to reduce greenhouse gas emissions; using energy sources with lower emissions; adopting energy efficient solutions; and promoting water efficiency measures and more sustainable land use practices.

Technology
The need to build and innovate to support the transition to an energy efficient financial system with lower CO2 emissions. This can have a significant impact on companies as new technology displaces obsolete systems and disrupts some components of the financial system as we know it.

Physical risk (PR)

Acute
Intense extreme weather events, such as wildfires, hurricanes or floods.

Chronic
Changes in rainfall patterns, extreme weather variability, average temperature rises, severe heatwaves, droughts and rising sea levels.

Beyond climate

Natural risk
Negative impact of nature degradation (including its biodiversity and the loss of ecosystem services) on economies, financial institutions and financial systems; and/or the lack of alignment of economic players with actions to protect, restore and reduce negative impacts on nature.

We measure the potential impact of the climate and environmental factors of each risk type across several time horizons, based on the average maturity of the portfolios analysed. The following table shows the potential impacts and our progress against the climate and environmental matters in 2024, and next steps:

Risk type	Climate[1] and environmental drivers	Time horizon analysed	Potential Impact of climate and environmental risk factors	What we're doing to manage climate and environmental risk	Next steps
Credit		Present day - short - medium - long term	→ Extreme weather can lead to higher retail and corporate loan default and lower collateral value It can also lead to lower incomes, harm agriculture, and increase insurance coverage and premiums. Moreover, changes in wind patterns that reduce energy production can lead to higher operating costs and hamper productivity. The degradation of nature can affect productivity in the agricultural sector and the value of collaterals. This may increase loans repayments and early disposal due to property damage in 'high risk' locations. → Adverse weather conditions can cause significant financial losses, endanger communities, harm the environment and affect the value of collaterals. → The failure of borrowers to adapt their business models to a low-carbon economy could heighten credit risk and, therefore rise the risk of an income or activity reduction that may increase default or lead to a loss of business value. → Market sentiment that influences demand; obsolete technology; customer preferences. → Higher operating costs for carbon-intensive customers; information requirements (data gathering), especially on emissions (e.g. Scope 3) and green taxonomy disclosures; and new EU financial information directives stemming from government measures.	→ Conducting materiality assessments to identify physical and transition risk in our portfolios. → Monitoring of climate concentration risks by sector and region in the short-, medium- and long-term. → Creating vulnerability heatmaps for the analysis of climate risks in the present day, short, medium and long term via Orderly, Disorderly and Hot House World scenario analyses. → Implementing mitigation measures such as policies, thresholds and insurance to combat risks and their impact. → Conducting scenario analyses and measuring sensitivities to forecast changes in ratings, the probability of default (PD) and loss given default (LGD) considering physical and transition risk. → Monitoring portfolios through metrics to control E&CC[2] risk factors in BAU processes. → Measuring E&CC factors across customer and transaction analysis and embed into ratings. → Monitoring risk appetite limits and alerts to manage climate-related sectors.	→ Monitor the progress of the subsidiaries against The Climate Race (our credit risk target operating model for climate and environmental factors) to validate the successful inclusion of E&CC factors across the end to end credit risk cycle, to allow the identification and mitigation physical and transition risk. → Calculate financial impacts through internal climate models for the short, medium and long term. → Continue to develop and enhance tools to monitor E&CC factors that consider physical and transition risk in each segment.

Risk type	Climate[1] and environmental drivers	Time horizon analysed	Potential Impact of climate and environmental risk factors	What we're doing to manage climate and environmental risk	Next steps
Market		Short term	→ High volatility in market factors under stress scenarios. → Changes in market perception leading to wider credit spreads for business in impacted sectors. → Extreme weather conditions could raise concerns about the business plans of companies operating in the impacted sectors and widen their credit spreads.	→ Regular reviews of climate stress scenarios and the subsidiaries that apply them. → Stress testing using physical and transition risk scenarios. → Trading portfolio analysis of current exposure to climate-sensitive business activities.	→ Enhance stress testing by reviewing new scenarios to include in the exercise. → Adapt stress testing to market practices.
Liquidity		Short term	→ Market impacts on the value of high quality liquid assets in Santander's liquidity buffer. → More frequent extreme weather that stifles economic growth in countries susceptible to climate change, causing sovereign debt to rise and limiting access to capital markets. → Cash outflows from companies trying to boost their reputation in the market or solve problems with climate scenarios. → Extreme weather conditions could cause financial impact on companies operating in the affected sectors impacting the funds deposited in the bank.	→ Qualitative and quantitative climate scenario analyses of impacts on highly liquid assets (HQLAs) and financing of exposed companies. → Analysis of higher outflows due to changes in market perception of corporations in climate-sensitive business activities.	→ Enhance stress testing and reviewing new scenarios to include them in the exercise. → Adapt stress testing to best market practices, including new liquidity scenarios to measure their impact.
Operational		Short - medium - long term	→ Severe climate events can cause damage to our assets, including branches, data centers, headquarters and other owned or rented properties. Impacts on our own or our suppliers' premises can also affect business continuity. → Climate and environmental - related factors can also lead to operational risk losses from litigation, claims due to inadequate sales or non-compliance with ESG standards.	→ Conducting operational risk and self-assessment controls that include ESG-related risks to evaluate our exposure. → Conducting mandatory operational risk scenario analysis that cover extreme physical and transition risk events. → Including an ESG flag in the operational risk events database to identify events and losses from climate-related and environmental risks. → Including an assessment of climate threats in business continuity scenarios. → Conducting a materiality assessment on climate-related operational risk. → Updating documentation and delivering training relating to the embedding of ESG factors across operational risk management, as well as sharing best practices throughout the Group.	→ Enhance operational risk reporting on climate and environmental - related factors. → Promote cooperation within the industry to share data, scenarios and best practices on climate-related operational risk management. → Work with the Corporate Insurance team to conduct analyses on the insurability of climate-related losses.

Risk type	Climate[1] and environmental drivers	Time horizon analysed	Potential Impact of climate and environmental risk factors	What we're doing to manage climate and environmental risk	Next steps
Reputational		Short - medium - long term	→ Customers, investors and other stakeholders could believe that banks aren't doing enough to meet low-carbon targets, that they could be acting against their policies, or that their objectives do not meet stakeholders' expectations. → Stakeholders' potential perception of inadequate financing and investment in climate and environment-related sectors, including activities linked to deforestation and/or biodiversity loss. → Possible misinterpretation by customers, investors and other stakeholders of institutional disclosures or statements, actions, announcements, policies and the sustainability features of products.	→ Implementing preventative measures to manage reputational risk and disclose risk data so that governance bodies can make informed decisions when assessing or sanctioning sensitive transactions that involve climate and environmental risk. → Regularly monitoring reputational issues and disputes (including climate and environmental matters) via working groups, involving functions such as legal, sustainability, investor relations, public policy, supervisory and regulatory affairs, risk, among others. → Development and update of greenwashing risk management guides that define the roles and responsibilities of key processes, and subsequently set specific training programmes. → Enhancing materiality assessments to measure climate-related and environmental reputational risk. Developing a methodology to quantify the reputational impact of climate and environmental risk.	→ Continue to strengthen collaboration between business and support areas as well as risk and compliance functions to embed climate and environment-related reputational risk in our operations. → Continue bolstering greenwashing risk prevention, identification, management and control. → Continue managing ESG events that pose material reputational risk and anticipate these events through early detection measures.
Strategic		Short - medium - long term	→ Our strategy could be affected if we fail to achieve our climate and environmental targets, including those related to the activities we fund and those related to our own operations. → Regulatory divergence between climate change and ESG requirements in the markets where we operate, including a possible new regulatory cycle and slowdown in the implementation of the Paris agreement.	→ Challenging ESG targets in the Group's strategic planning. → Monitoring the Group's ESG indicators regularly. → Monitoring ESG indicators as part of our regular competitor analysis. → Identification of emerging ESG risks, including analysis of the potential impact under stressed scenarios on the Group's strategic targets so that action plans can be implemented in the event such risks materialize. → Monitoring of ESG aspects in initiatives presented at the corporate product governance forum (CPGF) and investors' forum.	→ Regularly review ESG indicators to support alignment with the Group's strategy. → Monitoring of Key Performance Indicators (KPIs) related to Business Model Performance. → Monitor climate and environmental threats as part of emerging risk identification.

1. Though all climate drivers impact on risk factors, we have only included the key ones in this table.
2. E&CC: environmental and climate change.

Risk management in SAM

SAM considers that climate-related factors can pose risks and opportunities for companies and have an impact on the long-term risk and return profile of investment portfolios. By analysing climate risk, we can better understand the assets we invest in, identify the issuers best positioned to overcome future challenges, seize new opportunities and create value for businesses and broader society.

The climate-related risks that SAM's ESG analysis model considers are:

- regulatory risks related to greenhouse gas (GHG) emissions, such as higher prices;
- the risk of new, more efficient low-carbon technology alternatives that may render existing technologies obsolete; and
- market risks stemming from increased costs and shifting consumer demand, which could result in stranded assets; higher operating costs; lower demand for products and services; and the higher cost of, and limited access to, capital.

2.3.1 Resilience of our strategy and business model to climate change

Managing climate and environmental risk factors is key to continue strengthening the resilience of the Group's strategy and business model for climate change.

To enhance such resilience, we embed climate and environmental risk factors in each stage of the risk management cycle through which we analyse our own facilities and customer's financing process. The risks derived from these factors is also included in our policies, procedures, tools, metrics, governance and culture.

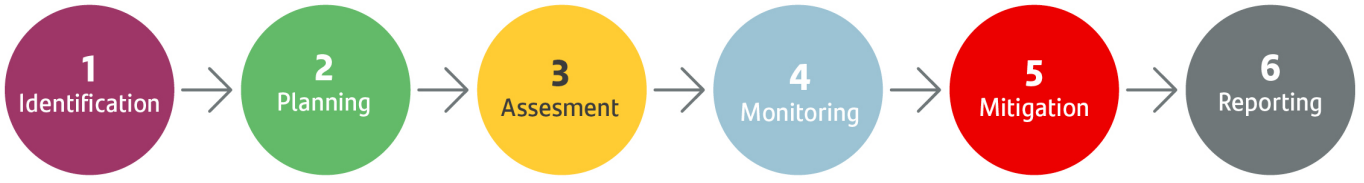
Embedding climate and environmental factors in our risk management includes the identification, planning, assessment, monitoring, mitigation and reporting, across different climate scenarios and time horizons defined, see further detail in the next section.

Additionally, the risk function works to strengthen our strategy via the following processes:

- We carry out an analysis and challenge of the strategic plan (Risk Challenge) to identify potential threats that may compromise the achievement of the Group's objectives.
- We have a risk management control model to identify, assess, mitigate, monitor and report all material risks, including ESG, that could materialize and affect our strategy and/or business model.
- Santander regularly conducts an emerging risks exercise to identify key threats to our strategic plan under theoretical stress scenarios with low likelihood of occurrence.

In this sense, we aim to identify, assess and monitor physical, transition and regulatory risks that may have an impact on our business model, profitability or solvency, improving the resilience of our strategy.

The monitoring of the material issues related to the ESG risks identified in the described processes, as well as the main lines of action for their management, are periodically reviewed through the corresponding risk governance bodies which participate in the definition of the business model and the Group's strategy in this matter.



Santander understands how climate-related and environmental risks affect our business environment across the short, medium and long term to inform their business strategy process. The way that we strategically respond to changes and uncertainties in our business environment stemming from climate-related and environmental risks will impact the resilience of the business model over time. We are explicitly considering climate-related and environmental changes in macroeconomic and regulatory environment and the competitive landscape, in particular, and reflected in Santander's business strategy processes, and demonstrated by documented management body meetings and discussions.

2.3.2 Risk management cycle

At Grupo Santander, we manage climate and environmental factors with a special focus on those that are most material for the different risk types.

Below we describe how we integrate these factors into the risk management cycle.

Risk management cycle

1. Identification

We conduct regular risk identification exercises to assess events that could threaten the Group's strategic plan. These exercises consider ESG risk factors — including mainly climate factors — with additional consideration of other factors such as greenwashing, environmental risks that go beyond climate (nature and biodiversity), social risks, among others.

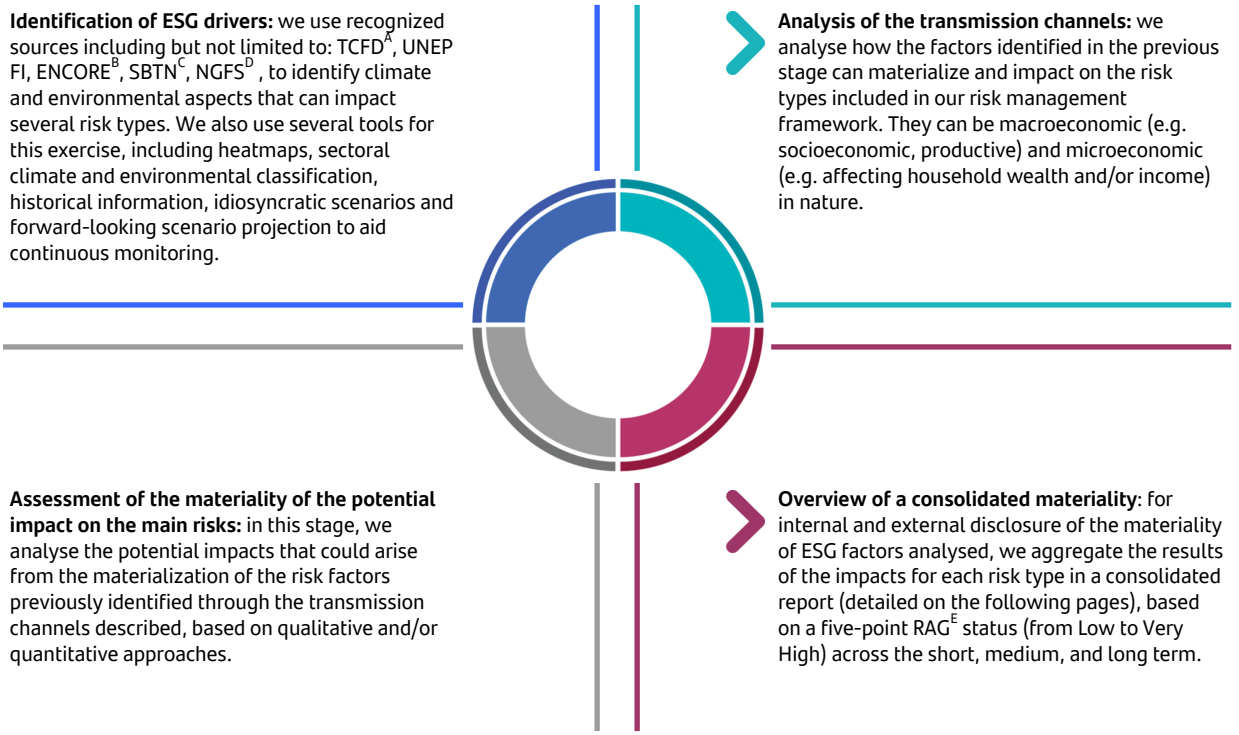
Risk identification helps us understand the internal and external threats posed by the environment and climate change to our business model, profitability, solvency and strategy.

Moreover, our internal risk taxonomy, heatmaps and materiality assessments form the basis for identifying and classifying the material environmental and climate-related risks in our portfolios.

2. Planning

We include risk management into the strategic planning process that has different time horizons, in addition to the ad-hoc analysis at each moment:

- One year for the short term (this is the standard time horizon for the short term in the Group).
- One to five years for the medium term (financial planning).
- More than five years for the long term (strategic plan).



3. Assessment

We consider ESG aspects as factors that may impact existing risks across different time horizons. We assess these factors regularly according to regulatory frameworks and practices.

The assessment of the ESG factors that could be material due to their potential impact on Santander's risk profile is conducted considering the following aspects:

Identification of ESG drivers: we use recognized sources including but not limited to: TCFD[A], UNEP FI, ENCORE[B], SBTN[C], NGFS[D] , to identify climate and environmental aspects that can impact several risk types. We also use several tools for this exercise, including heatmaps, sectoral climate and environmental classification, historical information, idiosyncratic scenarios and forward-looking scenario projection to aid continuous monitoring.

Analysis of the transmission channels: we analyse how the factors identified in the previous stage can materialize and impact on the risk types included in our risk management framework. They can be macroeconomic (e.g. socioeconomic, productive) and microeconomic (e.g. affecting household wealth and/or income) in nature.

Assessment of the materiality of the potential impact on the main risks: in this stage, we analyse the potential impacts that could arise from the materialization of the risk factors previously identified through the transmission channels described, based on qualitative and/or quantitative approaches.

Overview of a consolidated materiality: for internal and external disclosure of the materiality of ESG factors analysed, we aggregate the results of the impacts for each risk type in a consolidated report (detailed on the following pages), based on a five-point RAG[E] status (from Low to Very High) across the short, medium, and long term.

A. Task Force on Climate-related Financial Disclosures.
B. A materiality database of dependencies between production processes and ecosystem services.
C. Science Based Targets Network.
D. Network for Greening the Financial System.
E. Red, amber and green.

The following table shows the consolidated results of the materiality assessment by risk type and time horizon as of year-end 2024:

	Transition Risk			Physical Risk		
	ST	MT	LT	ST	MT	LT
Credit risk[A]						
CIB	🟡	🟡	🟡	🟢	🟢	🟢
Corporate & SME	🟢	🟢	🟢	🟢	🟢	🟢
Individuals	🟢	🟡	🟡	🟢	🟢	🟢
Auto Consumer	🟢	🟢	🟢	🟢	🟢	🟢
Operational risk[B]	🟢	🟢	🟢	🟢	🟢	🟢
Market risk	🟢	🟢	🟢	🟢	🟢	🟢
Liquidity risk	🟢	🟢	🟢	🟢	🟢	🟢
Reputational risk	🟡	🟠	🟡	🟡	🟡	🟢

🟢 **Low** 🟢 **Moderately low** 🟡 **Medium** 🟠 **High** 🔴 **Very high**

Short term (ST): 2025 | Medium term (MT): >2030 | Long term (LT): >2050
A. Assessment as of September 2024.
B. Assessment as of November 2024

In 2024, we continued to develop and enhance our materiality assessment approach in order to strengthen the resilience of our strategy. We have incorporated regulatory aspects, industry best practices, further homogenization, and synergy among different risk types in terms of sources, thresholds and scenarios.

The above table shows the final outcome of several procedures by risk type. These procedures use various tools and methodologies to assess the potential impact of climate factors. We use the above-mentioned risk factor materiality assessment to underpin climate risk identification and assessment as part of our double materiality procedure.

For more details, see section 1.3. 'Materiality Assessment'.

The materiality assessment's rationale for each risk type is as follows:

→ 3.1 Credit risk:

We conduct a materiality assessment every quarter to identify, assess and monitor the Group's climate-related and environmental credit risks by sector and geography. This assessment involves a review of the present day and other time horizons based on climate scenarios.

We use in-house scenario analysis techniques and climate stress test models to calculate and monitor climate impacts on key credit risk metrics, such as the probability of default (PD) and loss given default (LGD), across several time horizons, scenarios and at all geography, sector and unit levels.

We complete this assessment with three further initiatives, among others:

a. Customer assessment for the corporate portfolios that analyze the key aspects of transition, physical, social and environmental risk. This assessment is conducted locally.

b. Deep dives into key portfolios such as the collaterals in real estate and auto loans.

c. Geographical assessment of physical risk (acute and chronic) that uses information from expert models across different scenarios and time horizons.

The findings of our materiality assessments are key to defining our strategy, risk appetite, the identification of emerging risks and even for other stress test exercises (such as the ICAAP-Capital adequacy assessment process).

Materiality assessment enhancements in 2024

In 2024, we enhanced our credit materiality assessment to reflect the latest industry and regulatory developments by:

a. Enhancing geographic granularity of physical risk (acute and chronic) information in our European portfolio, from Nomenclature of territorial units for statistics at level 3 (NUTS3) to postcode in our core markets of Poland, Portugal, Spain and the United Kingdom;

b. The development of a new real estate module in Klima tool, which includes physical and transition risks;

c. Improved how we manage and assess collateral through the efficiency performance certificates (EPC) by obtaining data, developing estimation models and drawing up plans to gather such information during customer onboarding processes.

d. Implemented concentration metrics to monitor physical and transition risk management in our subsidiaries; and

e. Used internal climate stress test models (included in the ICAAP) to calculate financial impacts (customer 'bottom-up' approach for the CIB portfolio and 'top-down' approach at sector and geography level for the rest of the portfolios).

Klima

We run our materiality assessments through our ESCC Credit Risk Management tool Klima, where we aggregate, manage and monitor ESCC risks at local and Group level, with focus by sector and geography. It also includes an analysis of the physical risks of several economic activities and collateral.

We continue to work on enhancing climate information, methodologies and use cases:

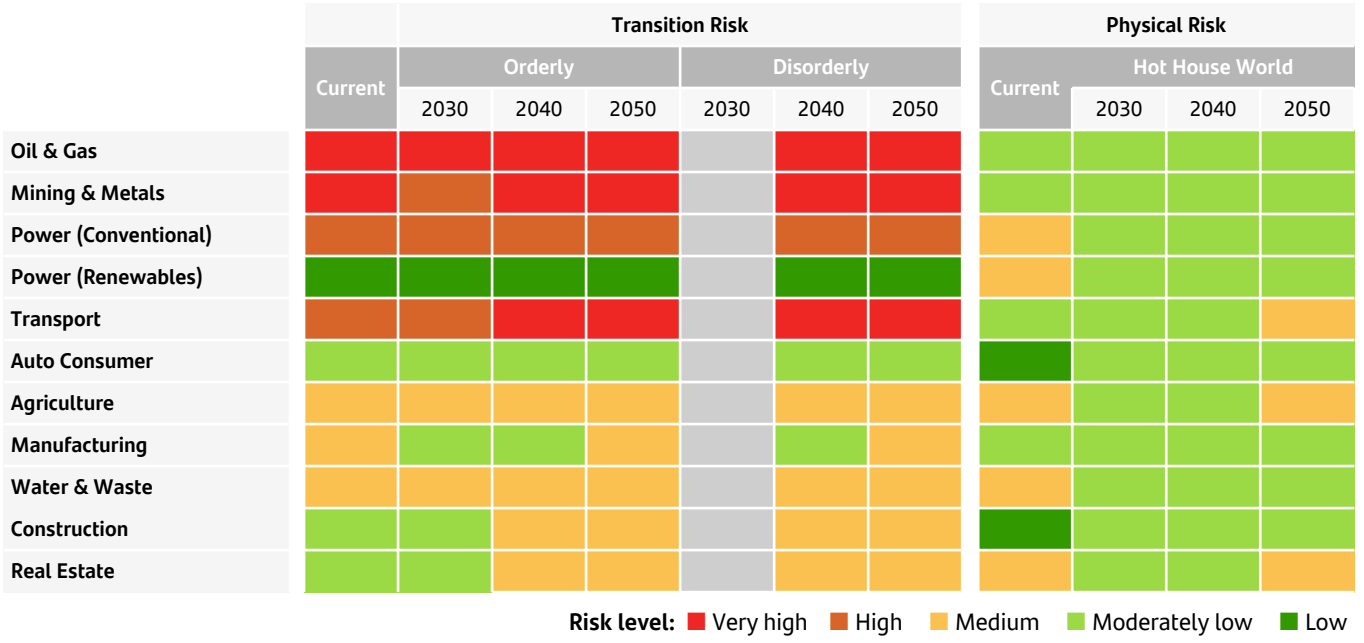
1. **Climate materiality:**

Though the findings by sector of our 2024 credit risk materiality assessment (see table below) follow a similar pattern to 2023, transition risk exposure in CIB to most vulnerable sectors decrease slightly. On the other hand, our portfolios continue to show less vulnerability to physical risk, given the concentration in low-risk locations.

Materiality assessment - Climate risk analysis and portfolio heatmap

September 2024 (pre-mitigation) - EUR billion

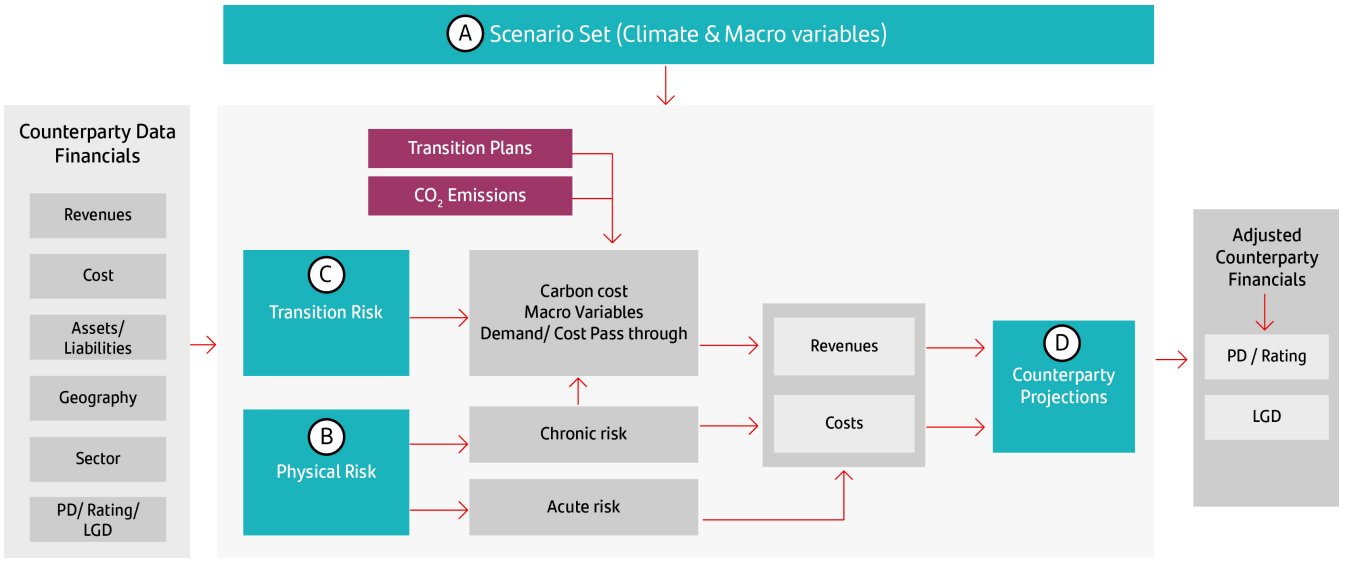
		TR	PR	CIB	Other segments
Power (conventional)				26	2
Power (renewables)				13	0
Oil & Gas				20	1
Mining y metals				13	7
Transport				29	12
Auto Consumer				0	162
Real Estate				7	386
Other climate-related sectors	Agriculture			3	9
	Construction			18	15
	Manufacturing			44	25
	Water & Waste			3	1
Climate sectors				**175**	**621**
Other sectors				65	212
Total portfolio				**241**	**833**



Low | Moderately Low | Medium | High | Very High

TR: transition risk. PR: physical risk.
CIB: REC (on and off-balance sheet lending + guarantees + derivatives PFE: Potential Future Exposure).
Other segments: Drawn amount; includes individuals, SCF, Auto US, Corporates and Institutions, and SMEs.
Other sectors: considered as low risk; include: CIB, Corporate and SMEs outside the risk taxonomy perimeter // Individuals and SCF: cards and other consumer credit // Private Banking (excl. mortgages).
Exposure 0 represents exposure below EUR 500 million.

2. **Vulnerability heatmaps**



We analyze materiality assessment findings through heatmaps that show our vulnerability to climate risk. These heatmaps rate climate risks on a scale from 1 to 5 (low to very high).

These heatmaps are based on the present day and on scenario analysis methods and models that complement our qualitative methodology and provide a forward-looking and geography-based analysis of portfolios across the medium and long term, considering impacts based on their probability, relevance and duration. Although we illustrate these in the table below according to the statistical classification of economic activities in the European Community at level 1 (NACE 1, from the French 'Nomenclature statistique des Activites economiques dans la Communaute Europeenne'-Statistical classification of economic activities in the European Community) breakdown, our sector analysis in risk management goes up to NACE level 4 to monitor the composition of our portfolios, capturing most of our value chain.

3. **Internal climate models**

Detailed below is an overview of our internal climate model:

Our climate internal models enable us to quantify the financial impact[4] of transition and physical risks that we monitor through changes in PD and LGD metrics. Our model estimates the direct and indirect impact of macroeconomic and climate variables, market trends and regulatory expectations. This model takes a bottom-up approach by considering each client's financial situation and technology. Where we don't have specific customer information, we use a top-down approach by sector and geographical location.

The development of internal models allows us a high degree of flexibility and capacity for analysis and adaptation to our portfolios, including its characteristics and maturities, to new economic and regulatory requirements. The main features are briefly described below:

A. Scenarios are based on those published by the NGFS[5] and Representative Concentration Pathways (RCP), developed by the Intergovernmental Panel on Climate Change (IPCC), which are references in the sector. Moreover, our Research department embeds and broadens external scenarios to more specific variables by country and sector to achieve thorough vision aligned to our portfolios.

[4] According to Note 54 "Risk Management": Based on internal models and results from regulatory and supervisory climate stress exercises, the Group does not believe that additional environmental or climate change risk has had a substantial impact on its equity, financial situation and results in 2024

[5] NGFS scenarios provide the common and up-to-date reference point for understanding the evolution of climate risks and trends in climate policy and technologies over different time horizons. For this reason, they are used as a basis for showing impacts on our portfolios by calculating a range of outcomes.

B. Physical risk impact considers the financial impact of acute and chronic risks, as well as long-term changes in weather patterns to give us a wide range of events that we assess at regional level. For these financial impacts, we use data from an expert reinsurance company, considering scenarios across different time horizons. We include physical risk impact through:

   - Chronic: Impact on companies' revenue due to chronic physical effects (e.g. change in productivity).
   - Acute: Increase in costs due to damages to companies' assets from extreme weather events.

C. The impact of transition risk, relates to changes in drivers such as climate policies, technology and investor and consumer sentiment that can affect demand, which affects customers on an individual basis. Therefore, depending on the level of information available, we carry out a bottom-up or top-down approach.

D. Counterparty forecasts, which reflect the changes in the financial ratios included in the credit risk rating models and are based on forecasted revenues and costs under the different scenarios, including physical and transition risk impacts. The projected ratings give us the associated PD to the counterparty. Lastly, the LGD is estimated using the Frye-Jacobs relationship between PD and LGD.

NGFS scenarios	RCP climate scenarios
Physical and transition risks	**Physical risk**
Orderly, assumes ambitious climate policies implemented early, which gradually become stricter. Therefore, both physical and transition risks are relatively moderate.	**RCP 2.6:** stringent mitigation scenario with the aim to keep global warming below 2ºC. This is associated with orderly scenarios.
Disorderly, climate policies are not introduced until 2030 and may differ between countries and sectors..	**RCP 4.5:** intermediate scenario where emissions reach their peak in 2040 and then decrease. This is associated with disorderly scenarios.
Hot house world (current policies), it is considering that some climate policies are implemented in some jurisdictions, but that global efforts are insufficient to stop significant global warming. Serious physical risks and irreversible changes, including rising sea levels.	**RCP 8.5:** very high GHG emissions. It is a business as usual scenario where emissions keep increasing throughout the whole century. This is associated with Hot house world scenarios.

4. Customer assessment

For corporate customers within climate sectors according to our risk taxonomy, the materiality assessment is complemented with analysis performed at local level that considers key physical, transition, social and environmental aspects.

We consider their findings in loan approvals and customer rating procedures.

Challenges and next steps:

Santander continues to work on embedding ESCC factors in our processes by upgrading our data, estimations, tools and models. In particular:

i. Implementing models to assess the impact of climate on credit risk metrics (PD and LGD) by using scenario analyses and models, and including customers' ESCC assessments in corporate portfolios ratings.

ii. Localizing CIB customers' production sites to obtain more accurate results in physical risk assessments.

iii. Calculating financial impacts across the short, medium and long term through the climate stress test models already included in the ICAAP.

Auto consumer

We conduct an in-depth analysis of this portfolio given the weighting of the Consumer Auto in Santander's portfolio and its specific characteristics and regulations. We consider key risk factors such as products evolution, residual value risk, portfolio average maturity, shifts in market sentiment and technology developments adapted to different markets. Moreover, we review other characteristics such as product type, borrowers' credit risk profile, engine type (internal combustion engine, hybrid or electric vehicle).

Physical risk

To assess physical risk by geographical location, we work with a leading provider in the reinsurance industry, which enables us to measure the risk of 13 physical hazards (eight acute and five chronic). We analyse the markets where we operate, with a breakdown of over 1,250 regions (NUTS 3 or equivalent), and cover all economic activities in our Risk Taxonomy, as well as the business lines (such as mortgages and automobiles).

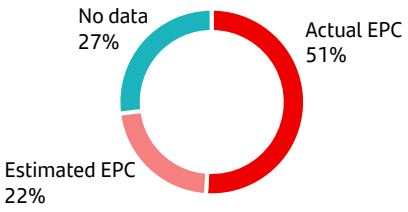
We assess each region (NUTS3) to measure the associated physical risks by rating them on our five-point RAG (Red, Amber and Green) scale (low to very high).

To assess the frequency and intensity of natural hazards, we use RCP scenarios across different time horizons (present day, 2030, 2040, 2050 and 2100).

Our analysis, based on a conservative approach, uses RCP 4.5 scenario and time horizons of 2030 for economic activity sectors and 2050 for collaterals at Group level. The results are included in our materiality assessment at Group level, by region (Europe, North America and South America) and by subsidiary. The results show that while certain sectors are more exposed to physical risks, such as agriculture, conventional energy and mining, their concentration in the Group is very low (between 1% and 2%). The collateralized portfolios have the lowest impact, albeit with very high concentration of exposure in the Group.

The granular, forward-looking physical risk assessment enables us to actively manage these risks through monitoring, metrics and mitigation measures.

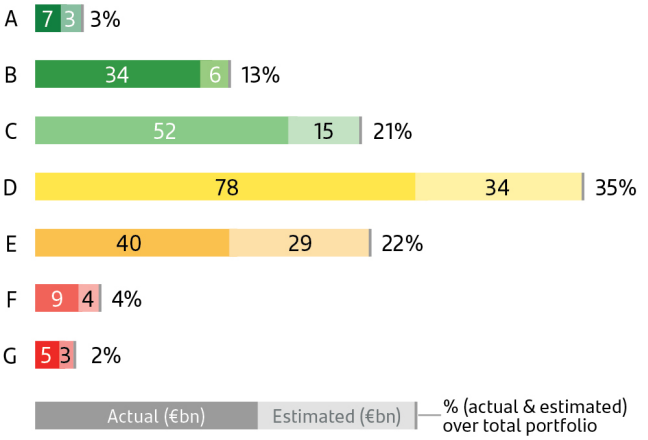
Finally, to measure and quantify physical risks more accurately, we increased the granularity of physical risks for the European portfolio (Poland, Portugal, Spain and the UK, as we now have information at postcode level).



Real estate

Santander's real estate portfolio accounts for a large proportion of Santander's balance sheet, which is why we developed a specific module within the Klima tool with a detailed overview of the portfolio's transition and physical risk.

Regarding transition risk, we increased the quality and quantity of EPC data by obtaining information, developing estimation models and defining plans to gather information during the customer onboarding process. This internal model consists of a machine learning algorithm that applies a combination of variables related to the real estate guarantee (type of property, geographic location, etc.), learning from observations made from actual data available. These enhancements give our analysis a broader scope, covering the corporate and retail segments.



This chart shows the EPC coverage of our balance sheet and distribution of actual and estimated EPC labels based on the standards and regulation in each market where this information exists:

Residential and commercial real estate EPC data (December 2024):

Distribution of exposure to residential and commercial real estate portfolios by EPC (December 2024):

Distribution based on Portfolio with EPC information. (RAG according EPC Standards)

We made considerable progress with physical risk through a review of acute and chronic risks in several scenarios and time horizons, broken down geographically at NUTS3 level. Considering a forward-looking view across different time horizons, the percentage of exposure to high and very high physical risks is not material compared to our total portfolio.

Nonetheless, we continue working on conducting a more granular assessment in Europe, where portfolio concentration is higher.

→ 3.2 Operational risk:

We assess the potential impact of physical risk through a combination of specific location-based risk scores, data on the bank's own facilities and insurance, and internal scenario analysis for certain physical risks. We assess the potential impact of transition risk through operational risk tools and external ESG-related events.

We assess physical risk as low in the short term and moderately low in the medium and long term, mainly due to exposure to more frequent and severe weather events in the regions where we operate.

For transition risk exposure, the most affected time horizon is the medium term, owing to legal and compliance risk arising from adaptation to new regulation in each jurisdiction, an increase in the number of greenwashing-related sanctions, an increase in the volume of green business, and greater awareness of climate change among external stakeholders.

→ 3.3 Market risk:

To assess the potential impact of climate factors, we conduct regular analysis of our trading portfolios to identify the materiality of positions with potential exposure to market risk climate factors. We then compare the findings from climate stress scenarios (both physical and transition risk) to those from internal, stressed and budget scenarios. This analysis concludes that the materiality is low or moderately low depending on the time horizon, due to the low exposure to climate sensitive sectors both in the bond and equity portfolios.

→ 3.4 Liquidity risk:

To assess the potential impact of climate factors, Santander compares the findings of climate stress scenarios with liquidity stress scenarios. We have a suite of physical and transition risk scenarios (disorderly transition scenarios, extreme climate events, historical events, etc.) whose impacts on liquidity are well below current internal and regulatory stresses due to their limited effect on high quality liquid assets (HQLA) and stable retail deposits.

→ 3.5 Reputational risk:

We conducted a reputational risk materiality assessment in 2023 (and updated it in 2024) to assess the potential impact on reputation of the key climate-related and environmental levers across the short, medium and long term under several scenarios. As with our strategy, policies and management models, we consider the environment collectively. Thus, the materiality assessment includes identifying and assessing climate change and other environmental impacts.

The assessment is a complex procedure that considers several sources of information and criteria across these phases: i) definition of reputational risk levers related to physical and transition risk; ii) assessment of risks by country and by portfolio exposure in sensitive sectors; iii) climate scenarios according to the Network for Greening the Financial System (NGFS); and iv) time horizons (short, medium and long term).

The reputational risk materiality assessment findings show that transition risks would have a greater reputational impact than physical risks, as transition risks tend to relate more to stakeholder scrutiny over time, which are the main grounds for reputational risk exposure.

It is our aim to have clear climate and environmental risk objectives, policies and procedures, and solid governance to manage them correctly. Even if extreme climate events occur, and based on the experience of several of them recently, from a reputational risk management standpoint, we believed that Santander has demonstrated its strength and robustness in this regard and its ability to react to a given event.

In 2024, we updated our reputational risk materiality assessment approach based on official reports and studies from recognized organizations. Additionally, we have continued working on further homogenization and synergy between risks in terms of information sources, thresholds, scenarios and others.

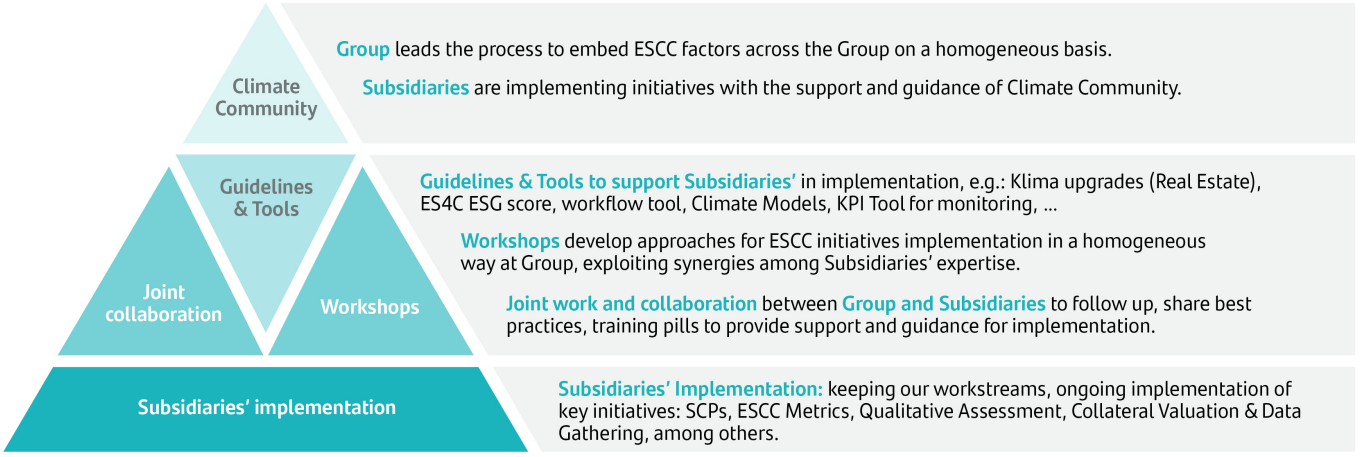
4. Monitoring

In addition to the processes described above, we carry out a continuous monitoring of ESG aspects based on:

- At Grupo Santander, we constantly monitor the risk profile and our compliance with risk appetite limits through control functions that report to the board.

  Since 2021, we have been enhancing our risk appetite statement with quantitative metrics for thermal coal and mining and power related customers.

  In 2024, we implemented the metrics approved in 2023 for oil and gas, steel, and aviation. We also approved two new metrics, one for the automotive sector and the other for Santander Consumer Finance's Auto business which will be implemented in 2025.



- We are in permanent contact with our customers to monitor and support their transition plans. We continue to embed ESG risk factors in credit risk granting and monitor processes through our target operating model, The Climate Race.

  This model is supported by the following pillars: strategic planning, risk management, loan approval and tracking, models and systems, and culture and governance. The timeline to implement was defined for 2023 and 2024 considering the supervisory expectations and Group's strategy. During 2025, we will continue with a more granular implementation.

- Our ESG Regulatory Radar enables us to monitor updates to ESG and other regulatory frameworks, as well as the potential efforts and financial impacts that the implementation of these changes may entail.

- Moreover, the Risk, Compliance & Conduct function monitors ESG initiatives (including acquisitions and divestitures) presented to the investment forum — whose delegated authorities come from the board executive committee —, as well as from the corporate product governance forum (CPGF).

- During 2024, we continued working on our Climate Community as an additional lever for a proper integration of ESCC risk factors in the Group in a collaborative manner. This community keeps the units up to date, shares best practice, sets guidelines to support homogeneous implementation and provides a clear governance structure and allocation of responsibilities. For more details, see the following chart:

5. Mitigation

We have various **internal policies and frameworks** that integrate climate and environmental factors into our risk management processes. These elements are key to mitigating and adapting climatic and environmental factors.

Our ESCC risk management policy establishes the standards for investing, and providing financial products and services to companies and customers in oil & gas, power generation and distribution, mining and metals, and soft commodities (especially retail customers dedicated to farming and ranching in the Amazon). It dictates prohibited activities and those that require special attention for the aforementioned sectors[6].

Our credit granting policies consider climate and environmental factors such as, among others, our internal taxonomy (SFICS), credit committees conclusions, corporate clients' ratings and collateral management.

To mitigate the risk of greenwashing, we reviewed key processes and responsibilities to facilitate the appropriate development, management and disclosure of our sustainability strategy, products and practices, while monitoring regulatory developments in this area.

We also mitigate this type of risk through **client engagement** for the most material sectors according to the climate materiality assessment.

This enables us to support customers in their transition to a more sustainable economy, offering them tailor-made solutions and generating business opportunities. Engaging with customers gives us access to data on ESG risk that we can use for internal risk management and reporting. Obtaining and cross-checking data directly from our customers is one way to mitigate ESG risks, including greenwashing.

Additionally, we consider ESG aspects in customer assessments to determine whether they have an **impact on credit quality**.

We launched several projects so that credit analysts have all the information and tools necessary to perform this assessment.

- Sector guidelines are followed to identify the major transition and physical risks each sub-sector is exposed to and how to pinpoint them in customer engagement. We delivered training sessions in several markets to build on these guidelines.
- ESG assessment guidelines with different levels of detail depending on the risk. In some instances, we conduct an automated assessment at different levels for physical, transitional and reputational risk, with higher risk levels undergoing a more comprehensive and contextual assessment in material cases. We're implementing this assessment model for our retail banking portfolio across several markets.
- Survey library (EQAL[7]): we developed a global tool to customize and store our numerous ESG surveys and assist in their identification and review. This will enable us to compile historical ESG data and conduct more aggregated analysis based on wider criteria. EQAL is now operational in Portugal and is currently being implemented in Spain. For Brazil, the system will be customized to replace the existing tool currently in use in the country.

Lastly, we continue working on other mitigation levers:

i. **Credit committees**, which embed environmental, social and climate change factors in transaction reviews.

[6] To the extent required by applicable law, customers and transactions involving activities enumerated in this section will be subject to an enhanced due diligence process to determine the unique risks presented prior to decisioning.
[7] EQAL: ESCC Questionnaires & Assessments Library.

ii. **CIB customer ratings**, including qualitative environmental, social and climate change assessments for material sectors.

iii. Special prices for certain products.

iv. **Collateral management** (EPC), based on enhanced data acquisition, estimation model development, and information collection during the customer onboarding process.

v. **Specific procedures** to analyse environmental, social and climate change risk. The board and its committees verify that decisions are made according to our ESCC and reputational risk policies. The first line of defence conducts a due diligence with special sector-based questionnaires for credit approval. The reputational risk assessment also forms part of decision-making contributing to compliance and preventing from risk of false accusations (with particular focus on greenwashing). The due diligence consists of assessing the CIB's project finance transactions according to the Equator Principles.

vi. Lastly, we have a **multidisciplinary working** group, where, among others, **ESG issues** are considered**.** This group is coordinated by the reputational risk function and discusses actions needed to mitigate any matter that may have a reputational impact.

ESG classification meetings

Throughout 2024, we worked on extending our sustainable operations identification model to all global businesses, amending existing processes accordingly.

We created local and global commercialization committees and ran ESG classification meetings as the governance bodies tasked, analysing and monitoring products and transactions with an ESG component, ensuring that these bodies have experts to interpret and demonstrate ESG standards through centers of excellence as well as seeking input from business, risk and sustainability teams.

We began working to implement the updated sustainable classification model by identifying the affected processes and the changes to be made across markets.

6. Reporting

Transparent and regular reports to senior managers and stakeholders help us manage climate and environmental factors and comply with the law and supervisors' expectations.

We work so that the information available to our stakeholders is complete and consistent, conveys adequately Santander's sustainability strategy and management, and mitigates potential risks.

Our reporting on climate and environmental risk management includes our Annual Report, the ICAAP exercise, and our Pillar 3 disclosures report.

Main activities in 2024

→ Advances in risk appetite, establishing new metrics and limits to support our strategy.

→ Development of internal climate models that enable us to enhance how we quantify the financial impact of transition and physical risks on credit risk variables.

→ Increased geographical granularity in physical risk information (acute and chronic) for the European portfolio, from NUTS3 to postcode in Spain, Portugal, UK and Poland.

→ Improvements on how we manage and assess collateral through the EPC by obtaining data, developing estimation models and development plans to gather information.

→ In order to mitigate the risk of greenwashing, we have reviewed the most relevant processes and responsibilities to validate the correct definition, management and disclosure of our strategy, products and practices.

→ Progress in the implementation of the climate risk management model through the Climate Race initiative to integrate ESCC factors into the credit risk granting process.

→ Advances in materiality assessments in terms of biodiversity through an internal methodology to assess both nature-related impacts and its dependencies.

2.3.3 Reputational risk

This section outlines how we manage this IRO, considered a climate-related transition risk:

R Reputational risk based on the perception of bank progress with climate-related policies and objectives.

Banco Santander manages reputational risk through the Reputational Risk Model, which sets out the principles to identify, manage, prevent and control reputational risk in every procedure, including related ESG factors.

We conduct the reputational risk impact assessment through key ESG procedures. These include setting objectives; taking part in ESG working groups and governance bodies, the structuring of transactions that may be ESG sensitive and in reporting.

To evaluate the performance and effectiveness of these actions, Banco Santander has implemented a metric[8] based on the number of very high-impact reputational risk events that have materialized and have affected various interested parties.

To manage this risk, across short, medium and long term horizons, we identify in the table of section 2.3. the possible impact of the risk factors, the actions we're performing to manage them and next steps we have in mind.

2.3.4 Potential financial effects

To cover the CSRD requirements related to financial effects (E1-9), in this report we include information of the exposure affected by material physical risks. Since this is a phased-in requirement, we will expand the information in the next reports to provide full coverage of the Regulation.

To comply with the requirements, we use the information disclosed in the Pillar 3 ESG report according to the 'Implementing Technical Standards on prudential disclosures on ESG risks' defined by the EBA (European Banking Authority).

This report covers information of the banking book portfolio, including loans and advances, debt securities and equity instruments. The Group guarantees that the information included is aligned with other reports (mainly accounting reports).

Physical risk:

We report below our exposures sensitive to impacts from relevant acute and chronic physical risks (collateralized and non-collateralized).

To assess the physical risk of our portfolio, we sourced information from an external provider on acute and chronic physical risks to cover over 1,250 regions in our core markets.

To assess the physical risk of our portfolio, we implement the methodology of our external provider.

Based on the information provided, we make the following assumptions to determine the Group's sensitive exposures to the impact of physical risk:

i. An activity in a region is considered as sensitive to the impact of physical risk when at least one hazard is assessed as 4 or higher on the scale provided.

ii. We use the RCP 4.5 scenario, which is between a scenario that considers that the Paris Agreement objectives are met (RCP 2.6) and a more specific stress exercise scenario (RCP 8.5).

iii. We consider time horizons that are consistent with the average maturities of our portfolios, under a conservative approach. Thus, for non-collateralized exposures, we considered a time horizon of 2030 and for collateralized portfolios, with longer time horizons, we used 2050.

iv. Regarding the location considered for the physical risk assessment, we analyse the location of collateral and the headquarters of our customers for non-collateralized loans at postcode level for exposures in Poland, Portugal, Spain and the UK. NUTS3 level is used for the remaining geographical locations.

According to the assumptions described, our exposure to material physical risks is EUR 54 billion as of December 2024, which accounts less than a 3% over Group's total assets.

EUR bn	Chronic	Acute	Both	Total
Total	29	20	5	54

In the Pillar 3 ESG report, the information related to physical risk is disclosed at the regional level (Europe, South America and North America), identifying higher concentration of relevant physical risks in Europe (44%).

2.3.5 Our approach to nature and biodiversity

Climate change is inextricably linked to biodiversity and nature. Climate change is one of the main drivers of nature and biodiversity loss and impacts the resilience of ecosystems, limiting their ability to regulate climate and serve as carbon sinks.

While our materiality assessment considers 'Biodiversity and ecosystems' an informative topic, we continue to oversee our

[8] Monthly metric. Banco Santander has zero tolerance for very high impact events, including ESG-related ones. The reputational risk function puts forward events with 'very high' impact, which the compliance committee verifies. Circumstances that could lead to a 'very high' impact event are: i) events that trigger silver or gold crisis management committees; ii) regulatory requirements that uncover significant weaknesses or shortcomings: very high financial penalties (above EUR 10 million), permanent cessation of economic activity, capital aggregation, loss of banking licence, restrictions on dividend distribution, etc.; iii) events with a very high impact on public opinion: with widespread and sustained negative media and TV coverage in a single market and/or in other markets for over one week or very high impact on social media; and iv) suspension of shares trading or a drop in share price of over 5% in one day on the back of the issue in question.

operations and impact on biodiversity and nature in view of our climate objectives.

Given our financial activity, and the location of our buildings and offices, mainly in urban areas, no sites located in or near biodiversity sensitive areas are identified[9]. We are conducting an analysis to determine whether any of them could be in or near biodiversity sensitive areas.

We conducted an assessment on our corporate portfolio, which considers the country in which our customers operate, to learn of the direct impact and dependency of their business on nature and biodiversity.

We followed the Task Force on Nature-related Financial Disclosures' (TNFD) LEAP[10] approach. We used two tools:

- ENCORE: A materiality database of dependencies (physical risks) between production processes and ecosystem services. For our core markets, we complemented the database with internal localization criteria based on ENCORE's hotspot depletion maps. These criteria cover three natural capital assets: soil and sediment, water, and biodiversity.
- UNEP FI Impact Analysis Tool: This tool provides an in-built impact (transition risks) mapping that, combined with our internal data and context, enables us to identify the most significant impact areas of the portfolio.

The ENCORE database helps us to begin to understand how the deterioration of natural assets could cause a loss of production processes, and the financial consequences it could have.

This methodology enabled us to analyse their dependencies (physical risks[11]) on over 20 ecosystem services in more than 10 sub-segments of our corporate lending portfolio.

Additionally, in 2024, Santander Brasil participated with various organizations in TNFD pilots to explore how to tackle nature impacts and dependencies more effectively. We used the LEAP approach and focused on the Locate phase. We gained important insight into how data gaps and a lack of methodologies tailored to highly biodiverse tropical countries limit private companies' ability to account for those factors accurately. Addressing these issues will require further work and collaboration throughout the sector to align with stakeholders' expectations.

Nature and biodiversity heatmap

Based on the above mentioned approach, we use a 'heatmap' to aggregate nature-related dependencies and show the level of threat of potential events that may affect our corporate portfolio at Group level.

We used this exercise as an input to meet disclosure requirements ESRS E2 (Pollution), ESRS E3 (Water and marine resources), ESRS E4 (Biodiversity and ecosystems) and ESRS E5 (Resource use and circular economy) in relation to ESRS 2 IRO-1. We rate our dependencies on a scale of 1 (very low dependence) to 5 (very high dependency). These are the results:

		Corporate portfolio
Pollution	Pollution of air	
	Pollution of water	
	Pollution of soil	
	Pollution of living organisms & food resources	
	Substance of concern and very high concern	
Water & marine resources	Water withdrawals, consumption and use	
	Habitat degradation & intensity of pressure on marine resources	
Biodiversity & ecosystems	Direct drivers of biodiversity loss	
	Impacts on the state of species and on the extent and conditions of ecosystems	
	Impacts & dependencies on ecosystem services	
Circular economy	Resource inflows, including resource use	
	Resource outflows related to products and services	
	Waste	

Very low | Low | Medium | High | Very high

No nature-related topic or sub-topic was considered material at Group level. We monitor these and other sectors closely as part of regular updates to our nature materiality assessment.

Nature and biodiversity in our ESCC policy

Santander embeds nature and biodiversity conservation measures in financing and investment policies. Our global environmental, social and climate change (ESCC) risk policy[12] dictates prohibited activities that Santander will not directly invest in, or provide financial products or services to, regarding biodiversity matters:

- Any projects or activities in areas classified as Ramsar Sites,[13] World Heritage Sites, or categories I, II, III or IV by the International Union for Conservation of Nature[14] (IUCN).
- Any projects or expansion of existing oil & gas facilities north of the Arctic Circle.

[9] The main environmental impact of our offices stems from their maintenance and how we manage the waste we generate. So far, we have not deemed it necessary to adopt biodiversity mitigation measures in our operations. Nonetheless, on certain occasions we have considered corrective or mitigation measures as part of our customer lending due diligence and in application of our ESCC policy.
[10] LEAP approach: locate, Evaluate, Assess and Prepare.
[11] This analysis does not consider systemic risks since no tools have been identified that include them.
[12] To the extent required by applicable law, customers and transactions involving activities enumerated in this section will be subject to an enhanced due diligence process to determine the unique risks presented prior to decisioning.
[13] The Convention on Wetlands (known as the Ramsar Convention) is an intergovernmental treaty that provides the framework for the conservation and wise use of wetlands and their resources.
[14] The International Union for Conservation of Nature (IUCN) (iucn.org) classifies protected areas according to their environmental management objectives: Category I: Nature Reserve and Wilderness Areas, Category II: National Park, Category III: Natural Monument or Feature, Category IV: Habitat/Species Management Area.

- Extraction and sale of native tropical wood species not certified by the Forest Stewardship Council (FSC).
- Palm oil processors that are not members of the Roundtable on Sustainable Palm Oil (RSPO).
- Developments in forested peatlands in 'High Risk Geographies'.[15]

The assessment of the client's ESCC risks in the applicable sectors[16] is first completed by the financial manager before a team of analysts conducts an overall assessment. The ESCC risk and compliance departments delve deeper into cases that uncover red flags. We usually conduct this extended due diligence exercise with the client to deepen our understanding of the risk profile and determine the existence (or not) of corrective or remediation measures.

As our global ESCC risk management policy dictates, we consider environmental, social and climate change risks and also conduct annual reviews of our customers and pay particular attention to potential deforestation risk with agribusiness customers in the Amazon biome.

For more details on our ESCC risk management policy, see section 3.2.3 **'Environmental, social and climate change risk management'.**

Nature-based solutions are key to carbon storage and climate resilience. Santander supports several initiatives that foster these solutions:

- Biomas, an ecosystem restoration enterprise that seeks to plant two billion native trees to reforest and protect two million hectares of degraded lands in Brazil over the next 20 years, removing 900 million tonnes of CO_2e from the atmosphere.
- Santander España — through Motor Verde — will finance three new forests of over 300 hectares to absorb 82,000 tonnes of CO_2e. Two of them have already been registered with the Spanish Office of Climate Change and the third is in the initial phase.
- Santander UK continues to form part of the Net Zero With Nature UK national parks initiative by helping develop a platform to secure private financing for nature-based solutions. We're also supporting the restoration of peatlands in the Cairngorms and the improvement of water quality at Lake Windemere.
- Since 2021, Santander México — through "LikeU" — has been helping customers contribute to reforestation in collaboration with Reforestamos México, which has been operating for 19 years.

Santander and the Brazilian biomes

Santander promotes the protection and sustainable development of Brazil's biomes, which is critical to tackling climate change and conserving biodiversity. We need economic growth, but it must be sustainable.

Brazil accounts for approximately 3% of the world's greenhouse gas (GHG) emissions. According to Observatório do Clima the main sources of emissions are land-use change (46%), particularly deforestation, followed by the agricultural sector (25%), a sector that plays a crucial role in the national economy and is vital for global food security. A significant part of the deforestation is illegal and driven by property speculation in public lands. According to Amazon Environmental Research Institute (IPAM), 50% of the Brazilian Amazon deforestation occurs on public land, especially in undesignated public forests. These forests are easy targets for land grabbers and illegal exploitation due to poorly defined tenure rights.

In recognizing the importance of its biomes, the Brazilian government created and passed the Brazilian Forest Code in 1965 and revised it in 2012. It is one of the world's strictest environmental laws, establishing the necessary protection percentage for each of the country's biomes.

As strict as the Code is, the main challenge lies in its implementation. A lack of effective adherence and enforcement has led to illegal deforestation and environmental degradation over the years.

Addressing GHG emissions and biodiversity protection in Brazil requires a multilateral approach that includes strengthening the implementation of environmental laws, continuously promoting sustainable agricultural practices, and improving monitoring and transparency.

[15] High risk geographies are every country in Africa, plus Argentina (Chaco, Formosa, Santiago del Estero, Salta and Tucumán only), Bolivia, Brazil (the Legal Amazon and the north east of the country only), Cambodia, China, Colombia, Ecuador, Estonia, Guatemala, Honduras, India, Indonesia, Laos, Latvia, Lithuania, Madagascar, Malaysia, Myanmar, Nicaragua, Panama, Papua New Guinea, Paraguay, Peru, Russia, the Solomon Islands, Thailand, Vietnam and any customer declared 'unknown'. This list will be subject to review based on the expansion of agribusiness to new geographies.

[16] Sectors covered by the ESCC Risk management policy and additional tactical sectors included in the CIB Procedure, as well as other material businesses and sectors depending on the geography and local legal requirements.

According to the 2022 MapBiomas report, a significant portion of Brazil's deforestation is illegal. Illegal activity has a major environmental impact and undermines efforts to control emissions. The MapBiomas platform uses pixel-by-pixel classification of Landsat images processed through machine learning algorithms in Google Earth Engine. Despite its limitations, such as the inability to identify areas with deforestation permits issued by state-level governments, it is a highly effective tool for monitoring deforestation.

We've been working with our customers to promote sustainable development in Brazil for years. In 2002, Santander became the first private-sector bank in Brazil to run credit analysis on environmental and social risk. In 2016, we were the first bank to formally incorporate a sustainability score into our corporate customers' credit rating.

Risk management

Environmental and social reviews of companies

Santander Brasil conducts annual reviews by analysing the socio-environmental practices of wholesale companies and main customers of SMEs with credit limits or risk exceeding BRL 7 million and that belong to one of the 14 priority social, environmental and climate sectors (including all TCFD sectors, depending on their level of risk). In the past decade, we have analysed approximately 2,000 corporate and retail customers on a yearly basis to determine whether they comply with the law and follow best practice. This procedure begins with a standardized public questionnaire that we send to customers. A team of ESCC risk specialists reviews the returned questionnaire by cross-referencing it against government permits, fines, embargoes, lawsuits, contaminated land reports, press reports and other public information.

The analysis may require additional questions. Upon completion of the analysis, the ESCC risk specialist compiles a report with a score of 1 to 5 that covers environmental, social and climate factors separately, including such aspects as water stress, climate resilience, contaminated land, human rights, environmental sanctions and supplier control. We have further procedures for customers in mining, sugar and beef production.

Farmers and ranchers

A significant portion of illegally deforested lands does not have a clear owner or is government-owned property. For this reason, Santander verifies the land ownership or lease before financing farmers and ranchers.

As part of the credit approval process, we work with a satellite-imaging firm to monitor the properties that we finance or take as collateral throughout the entire loan term. We receive daily information on government embargoes against production on illegally deforested land; modern slavery; and incursions into government protected indigenous land, parks and conservation areas. We monitor approximately 19,000 properties for deforestation alerts.

If we identify any issues, we request an explanation from the customer. If we uncover a material breach of environmental laws and regulations, our standard contracts allow us to demand the early repayment of loans.

Santander also uses Internet-based satellite-imaging tools Global Forest Watch and MapBiomas to track the detailed loss of tree cover on customers' farms and ranches over time.

Collaborating with initiatives to stop deforestation

Febraban Protocol for livestock in the Amazon

Santander actively collaborates with customers, governments, regulators and NGOs to tackle illegal deforestation. Santander Brasil is a member of Febraban's committee on forestry and agribusiness.

We have been seeking commitments from beef processing customers in the Amazon since 2020. In 2021, Santander Brasil began engaging with more than a dozen of these customers to tackle illegal deforestation linked to their supply chain by 2025. Santander Brasil, along with other banks, shared lessons learnt with Febraban, which lead to the creation of the sectorial protocol - SARB 026/2023 - in March 2023, which sets the standards for managing the risk of illegal deforestation in the bovine meat chain. The protocol defined guidelines to be adopted by its signatories.

By signing the protocol, Santander has aligned its objective with that of the Brazilian financial industry, and has been engaging with its meatpacking customers. This requires beef processing customers with slaughterhouses in the Brazilian Legal Amazon region to end illegal deforestation by December 2025, both from direct suppliers of cattle and Tier 1 indirect suppliers, and demonstrate progress against. They also must meet mid-term milestones.

Signatory banks must monitor the implementation of actions by the deadlines stipulated by the regulation, reviewing customers' public reports on the dates established by the protocol and taking measures based on the content published by beef processing customers.

Since the objective was established, Santander has actively engaged with all beef processing customers affected by the protocol, leveraging our technical expertise to assist in developing their traceability plans and reports. We monitored their progress reports throughout 2024, and by the December 2023 deadline 100% of eligible customers had been verified for protocol compliance. For those who did not initially present the required plans, credit limits were temporarily suspended and reinstated

only upon compliance. We will continue to act accordingly and monitor compliance with the milestones set by the Febraban protocol, checking adherence to the implementation timeline.

RTRS and MBPS

Santander Brasil takes part in two other external initiatives that propose solutions to stop deforestation; it was a co-founder of the Roundtable on Responsible Soy (RTRS), and chaired it from 2006 to 2009. The bank also co-founded the Brazilian Roundtable on Sustainable Livestock (MBPS, in Portuguese).

IFACC

We were the first bank to join Innovative Finance for the Amazon, Cerrado and Chaco (IFACC), an initiative coordinated by Nature Conservancy, the Tropical Forest Alliance and UNEP FI (a United Nations environmental programme that focuses on sustainable financing). The aim is to accelerate sustainable production finance through the structuring of mechanisms such as loans to rural producers, land investment funds, and corporate debt and capital market instruments.

Nature-Based Solutions Investment Collaborative

In 2024, we were the first bank to join the NBS Investment Collaborative, a platform with 10 members and 11 partners, led by Capital for Climate, focused on mobilizing BRL 5 bn for nature-based solutions in Brazil by 2025.

Amazon Finance Network

To protect the most important and diverse biome, in late 2023 we joined the Amazon Finance Network, an alliance launched during COP 28 that aims to generate sustainable impact throughout the Amazon region. It brings together 52 financial institutions with the aim of increasing investment flows, mobilizing capital, promoting financial inclusion, sharing knowledge on innovative financial solutions, and generating synergy with the public sector.

Social impact

We understand that supporting the socioeconomic development of the Amazon and other biomes and their residents is fundamental for their preservation and for the development of the country. Helping local people maintain their livelihoods is key to preserving this ecosystem. We want communities and entrepreneurs to develop further and count on our support as they do.

We joined forces with other banks and entities to help launch Jornada Amazônia, a platform that Fundação Certi runs. Its aim is to stimulate the Amazon's innovation and entrepreneurship ecosystem, with a focus on bioeconomy solutions for forest conservation. The platform's core objectives include training 3,000 talented people and creating 200 startups by the end of 2025.

Jornada Amazônia continues to progress and gain the support of other partners, including the Inter American Development Bank (IDB) and Instituto Itaúsa (the ESG arm of the Itausa holding company). Progress so far includes:

- 2,134 people given entrepreneurship training (71.1% of the target for 2025), 55% of which were women;
- 71 startups created and structured (35.5% of the target for 2025), with a cycle to create more startups under way; and
- 22 startups classified and ramped up (22% of the target for 2025), with a new acceleration cycle under way with 45 entrepreneurs.

We gathered 15 Santander executives to act as mentors in the Synergy programme to help entrepreneurs in such areas as people management, legal issues, investor access, network building and strategic vision and direction of the company.

For more details on Santander and the Brazilian Amazon, visit our corporate website **santander.com**.

2.4 Aiming to align our activity with the Paris Agreement Goals

In this section we cover how Santander manages the following IRO:

I- Adverse impact on climate and the environment due to the bank's financing of, or investment in, certain non-sustainable assets and activities.

We continue working towards our ambition of net zero carbon emissions by 2050 by progressively setting specific actions to support our customers in their climate objectives and to align those climate sectors identified as most material regarding lending, which is our most material financial activity.

Regarding our own operations, we disclose our direct and indirect emissions (scopes 1, 2 and 3) data as well as other climate-relevant metrics such as energy consumption. We report on our targets for renewable electricity[17] and the compensation of our scope 1 and scope 2 emissions. Since 2021, we have also been disclosing financed scope 3 emissions (category 15) related to our alignment objectives.

We announced our ambition to work to achieve net zero carbon emissions by 2050 in February 2021.

We are constantly reviewing our strategy and targets to incorporate the latest science insights and changes in local regulation.

We use internal methodologies that take input and recommendations from the NZBA (Net Zero Banking Alliance) guidelines, the PCAF standard, Glasgow Financial Alliance for Net Zero (GFANZ) publications, the Science Based Targets initiative (SBTi) and other references. We also use external data and models from third parties with recognized market reputation and expertise. We rely on financial and non-financial information from our customers.

Though the non-financial information required is becoming more available as more companies begin to report GHG emissions, it still falls short in certain sectors and regions. And, where available, it might not be the most suitable or accurate. In many cases, data is only available with a significant time lag. If no emissions data exist, we estimate them based on a proxy (average emissions by industry, country, etc.). Once we obtain our customers' total emissions, we apply our attribution factor in line with the PCAF approach to determine Santander's financed emissions.

2.4.1 Alignment targets

As part of our climate ambition, we prioritize the high-emitting sectors (which also bear high and very high transition risk according to our climate materiality) to which we have material exposure and must support the transition to a low-carbon economy.

In 2021 and 2022 we set targets for the wholesale segment in the power generation, thermal coal, oil & gas, aviation, and steel portfolios. In 2023, we focused on the automotive sector from two perspectives: auto manufacturing (wholesale segment) and auto lending (consumer loans for the purchase of passenger cars in Europe).

Within the sectorial climate approach described above, cement, shipping and aluminium are deemed not material given their low level of exposure. Agriculture, mortgages and commercial real estate (CRE) are considered material in the retail segment.

We are monitoring the materiality of the capital markets emissions (facilitated emissions) for the bank, and for the moment we consider them not material.

The climate performance dynamics of all these sectors are heavily dependent on their regulatory and policy framework, technology changes and customers behaviours. For example, the International Energy Agency (IEA) estimates that one third of the reductions needed to meet the Paris objectives need to come from technologies that are currently at the demonstration or prototype phase.

In sectors where corporate clients are making progress, we have set targets while acknowledging these external dependencies.

For the sectors that are heavily dependent on further regulation to align, and where most of the customers are retail, we are monitoring their alignment; but we will refrain from setting targets until the regulatory and policy framework is clear, consistent and supportive of consumer behaviour changes.

We have been sharing our understanding and experience of these policy gaps with authorities and other sectors, and plan to keep doing so. Given our footprint, we see markedly different regulatory frameworks in the regions where we operate.

Governments' approach to the transition should reflect several, simple points. First, economic growth is essential to finance the transition - and to ensure it is affordable and fair in both developed and developing economies. Policies to support the transition should, therefore, not undermine growth, nor the provision of reliable and affordable energy. Next, we believe the transition is a journey – not a moment in time – for companies, sectors and countries and that governments' policies or regulations to affect sudden change are therefore likely to undermine growth and decrease investor confidence. Third, a "one size fits all approach" to the transition ignores the economic, social and political reality facing different sectors in different regions and we need a more pragmatic, flexible approach to support green growth. Finally, the financial sector should be considered as an enabler of the transition, but not as the solution.

We believe governments' policies for the transition should reflect this by establishing clear policy pathways for critical sectors to achieve a low-carbon economy, with measures and incentives to support businesses' transition. Frameworks should be transparent and provide certainty for each sector. Today, according to IEA, there is still a large gap between the Stated Policies Scenario[18] projections and Net Zero Emissions by 2050 Scenario. This gap also exists in Santander's core markets.

[17] For 2025, in countries where we can verify electricity from renewable sources at Banco Santander properties. Target considers the 10 core markets in which we operate.
[18] The Stated Policies Scenario (STEPS) is designed to provide a sense of the prevailing direction of energy system progression, based on a detailed review of the current policy landscape.

Our efforts to pursue our transition targets also involve engaging with public bodies whose policy decisions and actions are critical if companies - including banks like Santander - are to make progress towards net zero carbon by 2050. If policies (or the lack of them) remain as they are today, a significant gap will persist between net zero scenario pathways and what will actually happen.

We also monitor technological, economic and geopolitical factors that bear on transition, from energy security to variability in approaches in different markets, including those in which we operate.

Our aim is to help our customers transition and contribute to their alignment, while understanding the constraints and limitations they may face in different jurisdictions and the gaps that make setting targets in certain sectors unfeasible. Weighting the E, the S and the G appropriately across our strategy is key to avoid undermining other ESG goals, while we pursue tackling climate change. The transition must be just and orderly.

Emissions accounting and science-based alignment target methodologies are still relatively new areas that are improving quickly to meet climate ambitions. More methodologies need to be developed so that all financial institutions have the right tools to effect positive change in the economy.

We set our alignment targets and monitor the most crucial part of each sector's value chain, focusing on those that are most emissions-intensive, actionable and where progress can be measured as well as considering the availability of quality data and market practices.

Alignment targets

Sector	Scenario	Metric	Baseline	2020	2021	2022	2023	2030 targets	Scope of emissions	Value chain in scope
Power generation	IEA Net Zero 2050	tCO_2e/MWh	0.21 (2019 baseline year)	0.17	0.19	0.16	0.15	0.11 (-46%)	1	Upstream / Generation → Midstream / Distribution → Downstream / End product
Oil & gas		$mtCO_2e$	23.84 (2019 baseline year)	22.58	27.43	20.94	20.27	16.98 (-29%)	1 + 2 + 3[A]	Integrated / Diversified; Upstream / Extraction → Midstream / Distribution → Downstream / Trading
Aviation		gCO_2e/RPK	92.47 (2019 baseline year)	93.05	97.21	81.09	82.99	61.71 (-33%)	1 + 2	Upstream / Suppliers → Midstream / Manufacturing → Downstream / Airliners
Steel		tCO_2e/tS	1.58 (2019 baseline year)	1.40	1.36	1.24	1.38	1.07 (-32%)	1 + 2	Upstream / Materials extraction → Manufacturing → Downstream / End product
Auto manufacturing		gCO_2/vkm	149 (2020 baseline year)	149	138	133	134	103 (-31%)[B]	3[A]	Upstream / Suppliers-Materials → Midstream / Manufacturing → Midstream / Dealers
Auto lending Europe[C]		gCO_2e/vkm	137 (2022 baseline year)	N/A	N/A	137	133	75-89 (-35-45%)	1 + 2	Downstream / End-users
Thermal coal	Phase-out targets to eliminate exposure by 2030 to power generation customers with a revenue dependency on coal of over 10% and thermal coal mining.									

Details on targets' scope are available in the following pages.

Monitoring of other portfolios

Sector	Absolute emissions (2023)	Scope of emissions	Value chain in scope
Commercial Real Estate	0.19 $mtCO_2e$[D]	1 + 2	Upstream / Suppliers → Midstream / Construction → Downstream / Owners
Mortgages	1.93 $mtCO_2e$[E]	1 + 2	Upstream / Suppliers → Midstream / Construction → Downstream / Homeowners
Agriculture	9.83 $mtCO_2e$[F]	1 + 2	Upstream / Suppliers → Midstream / On Farm → Downstream / End product

Details on our progress on alignment available in the following pages.

Part of the sector value chain in-scope, due emissions materiality and/or actionability

Part of the sector value chain out of scope

A. Use of sold products.
B. Target reduction is -25% vs. 2021 reference.
C. Consumer lending for acquisition of passenger cars, covering a significant majority of the exposure in Europe.
D. Financed emissions of the UK and Spain CRE portfolios.
E. Financed emissions of the UK and Spain mortgage portfolios.
F. Financed emissions of part of the Brazil agriculture portfolio.

For more details on our alignment targets, see note SN 4. 'Our transition plan'.

CIB implementation strategy

As part of supporting our customers in their climate objectives and to achieve our sectoral alignment targets we undertake several actions. These actions include an assessment of the transition plans of our customers, customer engagement, and dedicated portfolio steering governance. We also leverage on data collection as part of the risk analysis process; as well as conducting ESCC exclusion policy reviews. Given our actions directly relate to the activity of our customers, it is not practical to make quantitative estimates for how each action contributes to achieving each of our targets. All actions described below cover the CIB business globally.

Customer Climate Tiering

A key element of our implementation strategy is the customer climate tiering approach. The outcome of this tiering approach is an assessment of our customers' current and expected progress to align with our climate sector objectives. In 2024 we implemented this approach for Automotive Manufacturing, in addition to existing target sectors (power, oil & gas, steel and aviation), and adapted it where necessary to account for sector differences. We review the climate tiering assessment for each sector every year to reflect our customers' progress.

Our approach aims to facilitate the achievement of our emissions targets and to develop a strong understanding of our customers' transition strategies towards low-carbon business models. This approach is supported by governance processes, involving various internal stakeholders, such as front office teams, risk reporting functions, and senior management to guide the potential portfolio steering actions (for more details, see the Portfolio Steering section below). It is structured around four main iterative steps: Collect, Assess, Engage and Review. We have used various internationally recognized references and the Cambridge Institute for Sustainability Leadership (CISL) 'Let's Discuss Climate' guide as inputs and adapted them to our requirements and objectives.

Collect: We collect relevant information as part of regular customer dialogue and engagement. In addition, we source specific climate related information through tailored requests that contain transition-focused elements designed to help us better understand companies' alignment strategies. Furthermore, we also seek to source reliable and consistent information from credible third parties to complement our understanding.

This information is collected and updated both at the customer onboarding stage, and as part of the regular business and risk assessment review with each customer, which is performed at least once a year.

Assess: Our assessment consists of a two-step approach designed to categorize our customers according to their emissions pathway and perceived quality of their transition strategy.

The first step involves assessing how our customers' emissions trajectory aligns with our current sectoral portfolio baseline and future sectoral portfolio targets. The second step assesses the quality of each customer's transition plan. Our transition plan assessment methodology focuses on four pillars:

1. Targets: it focuses on the quality and ambition of the customer's quantitative GHG emissions targets. Where possible, we assess short- and long-term, as well as absolute and intensity reduction targets.

2. Action plan: it considers the credibility of the customer's alignment strategy. We assess the business strategy integration of climate change risks and opportunities; the existence of climate scenario planning; as well as time-bound action plans to achieve alignment targets.

3. Disclosure: it focuses on the transparency of reporting on historical emissions performance across all relevant scopes, the level of assurance, as well as the degree of reporting alignment with the TCFD. Where possible, it also includes assessing whether or not previous GHG emission targets were achieved.

4. Governance: it considers the level of management oversight and governance of the customer's transition strategy. We assess the level of seniority of executives accountable for climate strategy, board committee oversight of climate change issues, and whether executive remuneration is linked to climate change performance.

We draw on established transition plan assessment methodologies, such as the Transition Pathway Initiative (TPI), CDP, ACT (Assessing Low Carbon Transition), TCFD, as well as other related initiatives including the UK's Transition Plan Taskforce (TPT).

Our transition plan assessment methodology includes higher weightings for assessment criteria deemed to be critical to credible transition plans, compared to lower weightings for those that are considered supporting criteria. The more highly weighted criteria are designed to prioritize focus areas for customer engagement.

Ultimately, our customer climate tiering system leads to four categories (Leader, Strong, Moderate and Weak).

Two-step tiering system	
1 GHG emissions profile alignment	• Current GHG emissions profile • Future targeted GHG emissions trajectory • Assessment of alignment with Santander's pathway
↓	
2 Transition plan quality assessment	• Internal methodology to assess perceived quality of transition plans • Developed using established transition plan assessment methodologies

Transition Pillar	Overview
1. Targets	Quality and ambition of quantitative targets to reduce GHG emissions
2. Action plan	Depth of alignment strategy to achieve GHG emissions reduction targets
3. Disclosure	Transparency on GHG emissions reporting across relevant scopes
4. Governance	Management oversight and governance of transition strategy

Tier Categories		Description
Tier 1	Leader	• Emissions profile fully aligned with Santander's pathway • Strong transition plan
Tier 2	Strong	• Emissions profile fully aligned with Santander's pathway but improvement needed in transition plan; or • Strong transition plan but emissions profile partially aligned with Santander's pathway
Tier 3	Moderate	• Emissions profile partially aligned with Santander's pathway, but improvement needed in transition plan; or • Emissions profile not aligned with Santander's pathway, but strong transition plan
Tier 4	Weak	• Emissions profile not aligned with Santander's pathway • Weak transition plan

Internally organized training sessions were delivered to sector-specific relationship managers and Environmental Social Climate Change Risk (ESCC) analysts. These focused on gathering information to complete the transition plan quality assessment (the second step in our customer climate tiering system). These sessions were delivered by senior experts from our ESCC, Portfolio Alignment and Sustainability Solutions teams.

Expert resources from our global Sustainability Solutions team are made available for further education and advice on customers' transition plans assessment.

Engage with customers: Our customer climate tiering system seeks to facilitate tailored transition dialogue to help lower-tiered customers move up to higher tiers over time.

In 2024, we focused our customer engagement efforts on oil & gas as well as lower-tiered customers in other sectors. We developed internal transition assessment dashboards for relationship managers, designed to aid the identification of customer-level priority areas, industry benchmarking, and opportunities to support our customers in financing their transition. Of the customers that are in scope of our targets, approximately three quarters included sustainability-related discussions in 2024.

In addition, on a wider scope of climate-related topics, we are engaging with various public and private organizations (for more details, see section 1.2 'Stakeholder engagement').

Review: The customer transition plan assessment is performed by relationship managers, in cooperation with ESCC risk analysts, followed by portfolio level reviews by Sustainability Solutions and Portfolio Alignment teams to determine final tierings. The portfolio level review is important to help identify key trends and challenges in each sector, as well as for future transition plan assessment methodology improvements.

Initial assessments were completed for both steps for all sectors where targets have been set. Subsequently, transition plan quality assessments were reviewed and enhanced, drawing on updated reference methodologies and sector-specific research. This led to improved guidance, more focused set of questions and the inclusion of additional sector- specific questions for assessing transition plan quality.

The figure below shows the breakdown of our climate tiering system output for all entities in scope of our original sector targets, by sum of drawn exposures as of the end of 2024. See 'Sector Considerations' section for further details on each sector's portfolio composition and evolution.

Climate tiering aggregated for the sectors for which we had set targets[A]

A. Based on 2024 year-end drawn exposure, according to portfolio alignment methodology, and including project finance, both in operation and under construction.

Of our corporate customers with drawn exposure where transition plan assessments were conducted in 2024, approximately:

- two-thirds have set quantitative emissions reduction targets on sector-material GHG scopes between 2030 and 2039;
- one-third have set, or committed to set, science-based targets (SBTi), if available for the sector;
- over two-thirds have a time-bound action plan to align their business, with almost half providing details of the expected proportional impact of different alignment levers, according to our assessment;
- over half provide details or commitments for CAPEX alignment with future low-carbon solutions;

- over two thirds undertake some form of climate scenario planning; and
- over half have senior management remuneration linked to progress towards achieving their GHG emissions reduction targets.

Portfolio steering

CIB's portfolio steering governance is designed to identify actions to support our customers' transition and manage our portfolio to achieve our climate targets. A quarterly portfolio steering meeting operates at the core of our governance. Its scope includes monitoring progress towards the achievement of our portfolio targets. All relevant CIB functions are represented at this meeting. In addition, a monthly portfolio alignment meeting provides technical support by reviewing methodologies and monthly critical KPI performance.

Our risk appetite and lending policies are important tools for monitoring and steering the portfolio towards our financed emissions targets. Our customer climate tiering assessment informs our risk appetite for each sector where targets have been set, e.g., new lending business with lower tier customers might be limited when the sector deviates from the 2030 target.

In addition, Santander's Environmental, Social and Climate Change (ESCC) Risk Management Policy sets out the criteria for providing financial products to customers involved in several of the sectors within the scope of our financed emissions targets (i.e., power, oil & gas, metals & mining and soft commodities). For all sectors with alignment targets, customer climate tiering and engagement considerations are being incorporated into annual credit risk reviews. For one-off transactions (e.g., project finance transactions), we assess a transaction's impact on the relevant sector's portfolio financed emissions targets.

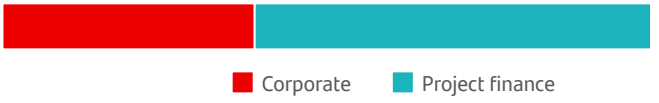
Contributing to integrity in transition finance

We continue to contribute to furthering knowledge of transition finance as a key enabler towards net zero. As part of our long-standing support for education, employability and entrepreneurship, we are collaborating with the University of Oxford to fund the development of a Transition Finance Centre of Excellence. This centre aims to play a prominent role in defining aspects of transition finance, such as best practice sectoral transition plans and new tools and insight for practitioners.

Initial research has focused on developing a deeper understanding of assessing companies' transition plans in emission-intensive sectors. Follow up work has explored external dependencies in corporate transition plans and assessing transition plans with more granular asset-based approaches. Research has also included corporate net zero transition plan implications for loan pricing, the development of tools to assess sustainability-linked bond pricing (given the dynamic nature of sustainability performance indicators), and other topics.

For more details about this collaboration and published research, visit smithschool.ox.ac.uk.

Sectorial considerations



Power generation

Sector boundaries: For the power generation sector, we assess the upstream/generation business in the value chain. Our portfolio includes both corporate customers and project finance transactions.

Industry dynamics: The industry is reducing carbon intensity by building renewable power plants, switching off coal power plants and using combined cycle power plants as transition technology. Some countries also invest in nuclear power as a low-carbon electricity source. The IEA estimates that to meet the Paris objectives, investment in clean energy will need to almost triple from current levels to around 4.5 trillion USD a year by the early 2030s.

Portfolio composition: The exposure to project finance (both in operation and under construction) outweighs the exposure to corporate customers. Within the corporate portfolio, around 80% of the portfolio is classified as tier 1 and 2 customers, typically leading power companies with existing or strong objectives to renewables. We observe clear regional differences in the climate tiering (with Europe being the leader), while many emerging market entities are still developing and disclosing their transition plans.

Power Generation portfolio distribution[A]

A. Based on September 2024 drawn exposure, according to portfolio alignment methodology, and including corporates and project finance, both in operation and under construction.

Portfolio evolution: Since 2022, we observe a downward trend in the physical emission intensity of our portfolio, going from 0.19 tCO_2e/MWh in 2021 to 0.16 in 2022 and 0.15 in 2023. One of the main drivers is an overall improvement in the average emissions intensities of our corporate portfolio customers during this period. Supporting our clients in their alignment journey implies investing in both renewable technologies and transition technologies, which may still lead to temporary increases in physical emission intensity in the future.

Sector	Year	Exposure (drawn amount EUR bn)[A]	Absolute emissions ($MtCO_2e$)	Physical emissions intensity ($MtCO_2e$/MWh)	Financial emissions intensity ($MtCO_2e$/ EUR bn lent)	PCAF score	2030 target
Power generation	**2019**	10.66	5.41	0.21	0.51	2.7	**0.11 tCO_2e/ MWh**
	2020	10.31	4.59	0.17	0.45	2.5	
	2021	10.23	4.24	0.19	0.41	2.8	
	2022	11.88	3.82	0.16	0.32	3.0	
	2023	10.75	3.14	0.15	0.29	3.2	

A. It includes Corporates and Project Finance in operation.

Oil & gas

Sector boundaries: For the oil & gas sector, we assess upstream companies, as well as integrated companies undertaking their own upstream production in oil and gas.

Industry dynamics: Oil & gas companies can reduce their emissions by reducing operational emissions (e.g. by reducing flaring and leakages), by shifting their production to less GHG intensive fuels (e.g., from oil to gas), by investing into CCUS (Carbon Capture, Utilisation and Storage) or by diversifying from fossil-fuel combustion related business (e.g., into renewable energy).

2024 saw a number of elections held in major economies. It remains to be seen how the outcome of these elections will affect energy supply and demand. As ever, energy security remains a critical theme for the sector.

Portfolio composition: To differentiate between oil & gas entities on a sector specific basis, we apply a physical emissions intensity comparison and a 2050-time horizon for our climate tiering analysis in this sector only.

Portfolio evolution: The absolute financed emissions of our portfolio decreased significantly in the years 2022 and 2023, going from 27.43 $MtCO_2e$ in 2021 to 20.94 and 20.27 in 2022 and 2023 respectively. This was primarily led by the decrease in the exposure to some low-tiered carbon-intensive clients.

Sector	Year	Exposure (drawn amount EUR bn)	Absolute emissions ($MtCO_2e$)	Physical emissions intensity (tCO_2e/TJ)	Financial emissions intensity ($MtCO_2e$/ EUR bn lent)	PCAF score	2030 target
Oil & gas	**2019**	7.68	23.84	73.80	3.10	3.4	**16.98 $mtCO_2e$**
	2020	6.67	22.58	73.60	3.38	3.6	
	2021	8.25	27.43	74.36	3.33	3.9	
	2022	6.89	20.94	73.28	3.04	3.0	
	2023	6.82	20.27	72.97	2.97	3.0	

Note on data quality: To improve the quality of timely available data, the data source for this sector has been replaced by Wood Mackenzie for figures from 2022 onwards, allowing us to analyse upstream companies and their assets in a more granular way and avoid uncertainties related to public company disclosures. Our methodology has been updated to incorporate this refinement[19].

[19] Scope 1 and 2 are directly retrieved from Wood Mackenzie. Scope 3 is calculated based on Wood Mackenzie production data and combustion emission factors.

Our role in supporting the energy transition

The world needs to ramp up renewable energy capacity to align the economy. For the global energy sector to align, all energy-intensive sectors and activities must be transformed. Our role is to support our customers' transition and, as one of the world's top lenders in renewable energy, we're increasing the volume of green finance to support this transformation.

Fossil fuels continue to meet the vast majority of global energy demand. Energy security remains key for an orderly transition. As a bank, we believe our role is to work with clients to support and encourage their transition.

Aviation

Sector boundaries: For the aviation sector, we focus on commercial passenger airlines which include both general purpose lending and aircraft-specific financing. CIB refined the methodology for the latter for 2022 and 2023, as a result of the availability of a new specialized data source that allows the calculation of emissions at the asset level.

Industry dynamics: The IEA's updated Net-Zero by 2050 Scenario lowers expectation on emissions reductions in the sector due to the current trends for sustainable aviation fuel (SAF) – high costs and availability issues - as well the slow adoption of efficiency measures such as fleet renewal or use of lighter materials, raising concerns over whether the sector can reach its current 2030 targets.

Portfolio composition: The exposure to this sector reduced significantly from its peak in 2020 until 2023, driven in particular by repayments from better climate tiered customers. Current exposure is significantly below the initial level at the time of target setting, and is very much concentrated in a small number of customers and long-term asset financing.

Portfolio evolution: Emissions intensity decreased from 97.21 grCO_2/RPK in 2021 to 81.09 in 2022 due to COVID-19 recovery and increased to 82.99 in 2023 driven by changes in the portfolio composition (repayments from less carbon-intensive clients). The emission intensities of individual airlines continue to decline as airlines improve their efficiency, in addition to a normalization effect post-COVID in 2022. It is worth noting that absolute financed emissions have reduced by almost 70% since the baseline year 2019.

Sector	Year	Exposure (drawn amount EUR bn)	Absolute emissions ($MtCO_2e$)	Physical emissions intensity (gCO_2e/RPK)	Financial emissions intensity ($MtCO_2e$/ EUR bn lent)	PCAF score	2030 target
Aviation	**2019**	1.55	1.81	92.47	1.17	3.3	**61.71 gCO_2e/RPK**
	2020	2.44	1.08	93.05	0.44	3.7	
	2021	2.02	0.84	97.21	0.42	3.2	
	2022	1.65	1.35	81.09	0.82	3.0	
	2023	0.70	0.58	82.99	0.83	3.0	

Steel

Sector boundaries: For the steel sector, our analysis covers companies that attribute over 10% of their revenue to steel production.

Industry dynamics: The main alignment levers for the steel industry are: shifting to low-carbon energy sources, -e.g. renewable energy or hydrogen-, technological improvements, – e.g. electric-arc-furnaces (EAF), carbon capture, - and material efficiency and recycling. The latest report by Global Energy Monitor (GEM) shows that 43% of planned steelmaking capacity is now based on electric arc furnace (EAF) technology, while 57% would use coal-based blast furnace-basic oxygen furnaces (BF-BOF). According to IEA, the direct CO_2 intensity of crude steel production has decreased slightly in the past few years. However, efforts will likely still need to be accelerated to align with Net Zero Emissions by 2050 scenarios.

Portfolio composition: Availability of reliable data has improved since our last report, although there are still gaps in certain regions. We employ a conservative approach by assigning all customers with insufficient data to the lowest climate tier. This is a small and concentrated portfolio, where small changes in composition have a noticeable impact on the overall emission intensity.

Portfolio evolution: The reduction in emission intensity from 1.36 to 1.24 tCO_2e/tS from 2021 to 2022 was mainly due to the increase in exposure to less carbon-intensive customers. In 2023, this effect reversed which is the main driver for the increase to 1.38 tCO_2e/tS. However, we also observed that some clients increased their individual emission intensity.

Sector	Year	Exposure (drawn amount EUR bn)	Absolute emissions ($MtCO_2e$)	Physical emissions intensity (tCO_2e/tS)	Financial emissions intensity ($MtCO_2e$/ EUR bn lent)	PCAF score	2030 target
Steel	**2019**	1.51	2.62	1.58	1.74	3.0	**1.07 tCO_2e/tS**
	2020	1.31	2.14	1.40	1.63	3.1	
	2021	1.42	1.90	1.36	1.33	3.1	
	2022	1.96	1.88	1.24	0.96	3.1	
	2023	2.04	1.84	1.38	0.90	3.3	

Automotive sector

The automotive sector is one of the key sectors to tackle in the transition to a low-carbon economy.

According to the IEA, road transport accounts for over 15% of global energy-related emissions. The switch from internal-combustion engines (ICE) to electric vehicles (EV) and plug-in hybrid electric vehicles (PHEV) is the most important alignment lever for this sector.

We are supporting our auto-manufacturer customers in the adaptation of their business models and product offering towards EVs and PHEVs. As a leading auto end-user lender in Europe, we are also helping our retail customers finance purchases of an increasing number of EVs and PHEVs.

We aim to align our global auto manufacturing and European auto lending loan portfolios, with a 2030 target and a 2030 target-range, respectively. Our approach is heavily dependent on supportive public policy frameworks that stimulate consumer demand.

Auto manufacturing

Sector boundaries: Within the automotive sector, CIB focusses on the manufacturing of passenger cars, i.e. on Original Equipment Manufacturers (OEMs). The target metric is scope 3 GHG emissions from OEMs, measured by the average CO_2 intensity per vkm of the fleet sold in the given year.

Industry dynamics: The switch from ICE to EV and PHEV is the most important alignment lever for this sector. The uptake of these technologies depends on multiple external factors.

Portfolio composition: The exposure remains stable at EUR bn 4.02. There are no significant changes in the portfolio composition in 2022 and 2023 compared to 2021. Aside from pure EV manufacturers, the carbon intensities of the OEMs' fleets are within a relatively narrow band compared to other industries.

Portfolio evolution: The emission intensity improved from 138 gCO_2e/vkm in 2021 to 133 in 2022, mainly due to an overall average reduction in the emissions intensity of our customers during this period. This reduction continued in 2023, although the emissions intensity increased slightly to 134 gCO_2e/vkm due to minor portfolio exposure changes.

Sector	Year	Exposure (drawn amount EUR bn)	Absolute emissions ($MtCO_2e$)	Physical emissions intensity (gCO_2/vkm)	Financial emissions intensity ($MtCO_2e$/ EUR bn lent)	PCAF score	2030 target
Auto manufacturing	**2020**	4.45	3.49	149	0.79	3.1	**103 gCO_2/vkm**
	2021	3.90	2.67	138	0.68	3.0	
	2022	3.95	2.74	133	0.70	3.0	
	2023	4.02	2.74	134	0.68	3.0	
Auto lending Europe	**2022**	55.27	5.84	137	0.11	3.2	**75-89 gCO_2e/vkm**
	2023	62.40	6.78	133	0.11	2.7	

The data source for auto manufacturing has been replaced by JATO Dynamic for figures from 2022 onwards, allowing us to provide more accurate and timely data points. Accordingly, the methodology has been updated to incorporate this refinement.

Auto lending in Europe

Industry dynamics: The alignment of this sector in Europe is driven by regulation and is especially affected by a law that prohibits the sale of internal combustion engine vehicles from 2035.

Nonetheless, the rate of alignment will rely on external factors such as government action (e.g. subsidies for electric or low-

emissions vehicles), the development of charging infrastructure and manufacturers' business objectives.

Portfolio evolution: 2023 emissions were 2% below the lower end of the target curve. Once we finish automating calculations, we will monitor all emissions-related metrics (total emissions, emission intensity, auto lending portfolio exposure, PCAF score, etc.) monthly.

To support the alignment of the auto lending portfolio SCF plans to:

- Enter into new agreements and build on existing agreements with electric vehicle manufacturers.
- Renew and build on existing agreements with traditional manufacturers that have ambitious electric vehicle transition targets.
- Offer additional bundles of financial products and solutions for electric vehicles (e.g. installation and financing of home chargers, solar panels, etc.).
- Implement new risk management methodologies for electric vehicles — residual value risk products to support the sale of electric vehicles under our agreements with manufacturers.

The success of these actions depends entirely on electric vehicle demand and regulation as well as manufacturers' transition plans, not to mention such other external factors as technology, infrastructure, government incentives and tariffs on electric vehicles. SCF aims to follow general market trends and help finance electric vehicles according to the transition to this vehicle type.

SCF is working on automating the emissions calculations. The Responsible banking, Business, ESG risk and other teams are monitoring action plans and emissions performance, while commercial teams are performing actions to support alignment plans. Estimating the present and future resources needed to carry out our action plan is no easy task given the organizational complexity and scope of targets (13 countries, 16 units and many areas involved).

Progress on both automotive sector portfolio targets will depend on several external factors such as:

- **Regulation and policy:** Effective government measures and policies are needed to reach the EV sales and alignment levels that the net zero scenario requires. European countries will need to meet the timelines set to end sales of new ICEs. The introduction of low emissions zones would support this change. Further adoption of subsidies on EV purchases will be key to drive up penetration, as we have seen in the Nordic countries.
- **Technology:** A guaranteed supply of the required materials to produce EVs and PHEVs at scale is needed to match demand. Also, reducing EV and PHEV production costs is required to ensure affordability in comparison with the less clean alternatives (ICEs), and thus ensure a just transition.
- **Infrastructure**: Reaching a high penetration of EVs and PHEVs will require a deep transformation of supply chains and the infrastructure that powers them (increasing the number of charging points and their performance) to shift from a model of predominantly ICE cars to an EV and PHEV majority. The investment needed for this infrastructure will require support from governments and other actors, which could be affected by conflicting interests such as energy security.
- **OEMs commitments:** For electric vehicles to become the market's number one engine type, manufacturers must fulfil their commitments regarding their development and the phasing out of combustion engines.

Thermal coal phase-out

Sector boundaries: For the thermal coal target, we assess customers for whom coal fired power generation represents directly more than 10% of revenues on a consolidated basis; and customers that own thermal-coal mines worldwide.

Industry dynamics: Power utilities can reduce their usage of thermal coal power plants by replacing them with other technologies, e.g. CCGT (Combined Cycle Gas Turbine) or renewables. Thermal coal miners can either responsibly divest their mine or run down their mining activity, eventually closing the mine sustainably. According to EIA (Environmental impact assessment), record highs have been reached in 2023 as a consequence of the Covid-19 recovery, Ukraine's conflict and the continuous growth of Indian and Chinese demand. The substitution of coal by other sources of energy, such as electricity, bioenergy or natural gas is expected to accelerate in the later years of this decade.

Portfolio composition: Most of our customers in this group already have plans in place to comply with our policy in 2030.

Sector	Year	Exposure (drawn amount EUR bn)
Thermal coal-related power & mining phase out (EUR bn)	**2021**	7.0
	2022	5.9
	2023	4.9
	2024	4.8

Portfolio evolution: We have been continuously reducing our exposure to thermal coal customers in scope of our target. Many of our customers will need financing to transition away from coal.

Transition finance support to these entities may, therefore, temporarily increase before declining over the longer term as we aim to achieve our targets.

2.4.2 Monitoring of other portfolios

Further to the five existing alignment targets published in 2021, and the two new targets in the automotive sector in 2023, in 2024 we also worked on monitoring the alignment of other climate-relevant portfolios including mortgages (in the UK and Spain), commercial real estate (in the UK and Spain) and agriculture (in Brazil). The selection of sector portfolios for this exercise considered their materiality both at Group and country level within the sectorial climate approach.

The objective of these portfolio assessments is to understand the level of financed emissions in each case, identify levers to drive alignment and understand their feasibility.

The exercise comprised baseline-financed emissions calculations; expected trajectory towards 2030; internal and external alignment levers analysis (considering supply and demand, the regulatory framework and support for sector alignment); internal governance to monitor each portfolio's alignment progress; and identification of commercial opportunities and initiatives to improve data quality to help align the customers of these portfolios. Further details on the Spain and UK mortgage, and Brazil agriculture exercises are provided below.

Agriculture

The agribusiness sector accounts for over 25% of Brazil's GDP (Gross Domestic Product). Measuring the sector's financed emissions is challenging. Agriculture comprises a complex and extensive value chain, with varying sources, types and quantities of GHG emissions. Moreover, agriculture practices and emissions vary depending on the commodity, management techniques, geographic location, high portfolios turnover (for instance only 5% of our 2022 portfolio remained active in 2023) and other factors. Our measurement focuses on emissions from primary production activities in the agribusiness sector within Santander Brasil's retail portfolio. The emissions from primary production are unique to the agricultural sector, being under its direct management, and represent a significant portion of the GHG emissions in the agribusiness value chain. Our initial assessment covered scope 1 and 2 emissions originating from farm-gate activities and the land use change (LUC) associated with farmland. Guidelines for setting net zero targets in the agricultural sector are still under development. To overcome the lack of methodology, Santander Brasil, in collaboration with WayCarbon, estimated its financed emissions based on the project finance asset class category from the PCAF, the GHG Protocol Agriculture Guideline, and Brazil's Fourth National Inventory.

Santander Brasil's on-balance credit exposure to farms with primary production was EUR 3.58 bn in December 2023. We estimated financed emissions from that portfolio amount to 9.83 $mtCO_2e$/year: c.80% estimated for land management, c.20% for LUC emissions (considering 20-year legacy), and less than 1% for energy consumption. The PCAF quality score is 3.1.

LUC emissions are mainly the result of illegal deforestation in Brazil, and, as mentioned before, a significant part of the illegal deforestation is driven by property speculation in public lands.

Santander Brazil has been implementing a robust monitoring system that uses satellite imagery to monitor and detect illegal deforestation in all financed farms and farms used as guarantees. We go above and beyond the local legal requirements and detecting illegal deforestation before the government had issued embargoes in those properties. This benchmark practice allow us to avoid being involved in financing illegal deforestation in our agriculture portfolio (see more details in 'Santander and the Brazilian biomes').

Our approach to support alignment leans towards a low-carbon agriculture portfolio. It includes:

- helping customers build a low-carbon agriculture future though green finance solutions and innovative financial transactions;
- engaging with the government and local and global forums to share methodologies, open the broader debate to improve data, and accelerate alignment in agriculture; and
- contributing to the Banking for Impact on Climate in Agriculture (B4ICA) initiative, led by the World Business Council for Sustainable Development (WBCSD), through the development of methodologies to guide the sector in the transition to a low-carbon economy.

Commercial real estate alignment

For the commercial real estate sector we have been progressing in our alignment analysis, starting with the most material portfolios with enough information available, the UK and Spain. We are not setting an alignment target for this sector. As already explained, it is heavily dependent on further regulation to align. We have assessed what the 2030 alignment point would be according to the latest available IEA - Net Zero scenario: 12.8 $kgCO_2e/m^2$.

Commercial real estate and mortgage in Spain

Santander España has been monitoring emissions from the residential mortgage portfolio since 2021 and for the commercial real estate (CRE) portfolio since 2022.

80% of Spain's properties do not have an energy performance certificate (EPC). This makes harder to calculate financed emissions.

Since 2020 we have enhanced data availability by:

- Requesting an EPC as part of new loan applications.
- Purchasing databases from an external provider with all available registers in Spain.
- Estimating non-existent EPCs using an internal, machine learning model that includes such variables as year of construction, climate zone, building type and property register information.

By doing this, we obtained actual or estimate EPCs for the entire real estate portfolio.

To calculate emissions, we use the Partnership for Carbon Accounting Financials (PCAF) methodology, with the Carbon Risk Real Estate Monitor initiative (CRREM) emissions factors from the PCAF database, for each EPC.

Our residential portfolio, which amounts to EUR 60.49 bn, has an emissions intensity of 21.41 $kgCO2e/m^2$ and a PCAF score of 4.0. Our CRE portfolio, with a scope of EUR 7.22 bn, has an emissions intensity of 20.02 $kgCO2e/m^2$ and a PCAF Score of 4.0.

This methodology was ratified by a specialist consultancy firm and the results audited both internally and externally.

Local and global governance forums, including the Santander España board of directors, regularly monitor these results.

This enables us to gain a greater understanding of our portfolios to monitor their performance and set actions in motion to align the least energy efficient buildings.

The alignment of these portfolios stems from progress in achieving government plans such as the rollout of renewable energy in the domestic energy mix and the alignment targets set out in Spain's National Energy and Climate Plan (PNIEC) and its long-term strategy for energy efficiency through the renovation of real estate (ERESSE). Moreover, according to the EU Energy Efficiency Directive, EPCs are being put up for review with the aim of achieving greater accuracy and consistency across Europe.

The limited availability of data and sensitivity of calculations to emissions factors, as well as the heavy dependence on external levers and the ever-changing regulatory landscape, pose a challenge when making alignment objectives for these portfolios. Moreover, we need sound public policy (especially for the residential portfolio) to support vulnerable groups and guarantee a just transition.

Santander España works to help customers align their residential and commercial assets while calling for public policy that supports this transition.

Santander promotes the energy efficiency of homes under our residential portfolio through:

- A 10 bp interest rate discount for the most efficient homes.
- Special Banking Environment Initiative (BEI) and European Investment Fund (EIF) lines of credit with additional discount for homes with the best energy efficiency.
- Consumer loans with special terms and conditions for energy-related renovation, including the installation of solar panels, heating and cooling systems, insulation and other items.
- State-backed loans for owners associations to renovate entire buildings.
- An energy efficiency simulator for customers and non-customers to estimate the work required to renovate their home, including projected heating bill savings and emissions avoided.

For our CRE portfolio, which is less granular, we perform these actions individually with customers:

- Agreement with CBRE to advise institutional and commercial customers on aligning and enhancing the energy efficiency of their buildings.
- In 2024, Santander España has joined the commercialization of the ICO MRR Verde line, with the aim of supporting the green transition with special terms and conditions and making buildings more energy efficient through renovation.
- In 2024, we created a new Business Growth team that specializes in CRE. This enables us to control new origination better and spot opportunities for energy renovation and green finance.

Commercial real estate and mortgages in UK

Santander UK adopts the Partnership for Carbon Accounting Financials (PCAF) framework to calculate financed emissions associated with the Mortgages portfolio. Financed emissions are calculated at property level using the value at origination, the outstanding loan amount as of 31 December 2023, and building emissions taken from EPC assessment and the PCAF emissions factors for the property. Where no EPC exists, in mortgages we used a postcode to infer the EPC or, where this wasn't possible, a regression model trained with multiple known property characteristics. In commercial real estate we used proxy information from the PCAF database. This resulted in a PCAF score of 3.2 for mortgages and 4.0 for commercial real estate, with a portfolio coverage of over EUR 201.96 billion for mortgages and EUR 11.04 billion for commercial real estate. Emissions intensity for mortgages as of 31 December 2023 was 20.87 $kgCO2e/m^2$ and 25.40 $kgCO2e/m^2$ for commercial real estate.

The evolution of the financed emissions associated with our mortgages portfolio in 2023 compared to last year is mainly explained by an update of the internal methodology we use for real estate financed emissions. In line with market practice, we base our calculations on the Carbon Risk Real Estate Monitor (CRREM) emission factors, resulting in lower attributed financed emissions.

Our initial assessment of Commercial Real estate highlights the challenge of having sufficient coverage of asset level EPC data. We were heavily reliant on use of proxy data which is reflected in the overall PCAF score. We will continue to focus on improving data quality for this portfolio and will streamline the process.

We also refreshed levers analysis to understand how the change in UK government might impact on the alignment of our mortgage lending and alignment pathways. Key levers identified within this analysis include the implementation of the Future Homes Standard for new buildings and minimum energy efficiency standards for buy to let properties. Wider grid alignment also materially supports our alignment.

During 2024 we also conducted research into the barriers facing consumers and have launched several pilot propositions intended to build our understanding of the role Santander UK can play in supporting our customers. This analysis continues to be used to inform our ongoing green finance strategy and public policy engagement over the coming years. Converging towards net zero pathways by 2030 will be challenging to achieve, particularly given the dependency on external factors such as policy and demand.

Considering this analysis (and while we will continue to advocate for policy change) we have made further progress in supporting our customers to reduce their emissions. We do not focus solely on increasing our exposure to new build lending and have a range of test and learn proposition products that support homeowners with a range of EPC rating in improving energy efficiency. These propositions also build our knowledge and capability.

The test and learn propositions launched in 2024 are:

- Octopus Energy – a solar panel installation partnership for existing customers offering 500 pounds discount.
- Vibrant – an enhanced EPC and home energy efficiency advice partnership available to existing customers.

- Home Energy Cashback to incentivize customers to make green home improvements.
- Bidirectional partnership with Scottish Power including an unsecured product that would be available in Scottish Power's customer journey.
- Green mortgage offering for customers with an A or B rated property who are remortgaging to benefit from a discounted rate.
- Working with Core Logic under the UK Governments Green Homes Finance Accelerator programme to provide the first national retrofit coordination advisory service in the UK.

2.4.3 Measuring and assessing other portfolios

We are expanding the scope of the portfolios measured to understand and assess the alignment dynamics of each one of these portfolios maintaining our focus on our sectorial climate approach. Although we are facing a clear lack of available data to measure financed emissions, especially in "Retail and Commercial" segments and in some regions. Some of the information needed to properly assess the level of emissions and potential alignment of our customers, is not being measured or available for our customers (examples: energy performance certificates of real estate assets in LATAM (Latin American) countries, emissions calculated and reported by Corporates and particularly by SMEs, etc...). We remain engaged to reduce these data gaps to measure financed emissions in a way that can be useful towards steering the alignment of other climate relevant portfolios and be able to try to implement alignment levers to broad scope of our financed portfolios.

2.4.4 Santander Asset Management's (SAM) alignment strategy and approach

In March 2021, we joined the Net Zero Asset Managers (NZAM) initiative with the ambition to align the Santander Asset Management portfolio by 2050 to help limit global warming to 1.5°C.

As part of joining this initiative, SAM set a target to halve net emissions for 50% of its AuM in scope (some 27% of the total) by 2030, as well as certain engagement objectives. SAM maintains its ambition to continue aligning its activity, promote greater transparency, and strengthen cooperation between investors and issuers in the net-zero transition. We conduct internal reviews on the way we measure and disclose our progress, in parallel with the NZAM review. We plan to take a more qualitative approach to our reporting next year.

To analyse each issuer's net zero efforts and progress, we classified assets according to the Net Zero Investment Framework (NZIF).

This maturity scale on the degree of issuers' alignment with net zero emissions targets provides us with a framework to check the progress that issuers are making in their transition and identify areas that require further effort in terms of engagement. It considers these factors:

1. A long-term ambition consistent with the goal of achieving net-zero by 2050.
2. Short- and medium-term targets to reduce GHG emissions.
3. Disclosure of scope 1, 2 and 3 emissions.
4. Emissions performance against targets.
5. Alignment strategy.

In 2024, we worked on developing our Net Zero engagement strategy, which aims to use dialogue and voting policies to encourage issuers to commit to alignment plans and transparency and disclose accurate and credible information to be able to monitor performance. It also motivates issuers to set ambitious targets that are consistent with the Paris Agreement goals.

SAM is part of the Climate Action 100+ collaborative engagement initiative and conducts regular analysis of Net Zero projects to look into their possible adherence to it. In 2023, SAM joined the IIGCC (Institutional Investors Group on Climate Change) Net Zero Engagement Initiative (launched in January of the same year), which aims to boost the number of entities that form part of the CA100+.

2.4.5 Our environmental footprint

In this section we cover how Santander manages the following IRO:

I+ Contribution to reducing the Group's scope 1 and 2 greenhouse gas emissions.

As part of our climate ambition, our strategy to lessen the environmental impact of our operations involves: reducing our CO_2e emissions and compensating those we're unable to reduce by mitigating beyond our value chain; reducing and handling waste responsibly; and raising employees' and other stakeholders' awareness of environmental issues.

We disclose our findings from the exercise we conduct on the scope 1, 2 and 3 emissions of our own operations at buildings and offices. We also disclose scope 3 - category 3.15 'Investments' (financed emissions) in the 'SN 4. Our transition plan' sustainability note.

We've been measuring our environmental footprint since 2001. Since 2011, our energy efficiency and sustainability initiatives have helped us cut our scope 1 and 2 emissions by c.86%. Though such reductions achieved, we continue to find opportunities and new technologies to become more energy efficient. In this sense, in 2024 we revised our efficiency target with the ambition of achieving a reduction in emissions from our own operations of 75% compared to 2020. The additional reductions proposed by this review are 6% in scope 1 and 49% in scope 2 compared to 2024.

2024 environmental footprint

96%
renewable electricity in 10 core countries where we are present

1,012,554 MWh
energy consumption

Scope 1
35,503 t CO_2e
direct emissions

Scope 2
24,350 t CO_2e
indirect emissions from electricity and other (market based)

For more details on our environmental footprint see note SN 7.1 'Green transition'.

The key drivers behind our reduction of consumption and emissions (which we generally group into three-year plans) were:

- Efficient spaces: Better use of space in terms of daily building occupancy and a more efficient and better located properties to carry out our operations.
- Efficient maintenance and operational management of branches and offices — implementation of ISO (International Standards Organization) 14001/ISO 50001 and LEED[20] O&M standards as drivers for continuous improvement from an environmental perspective and to facilitate that we comply with growing sector regulation at our premises in every market where the Group operates.
- Awareness and involvement of the entire organization in environment-related results.
- Technology: Heating, air conditioning, lighting, automated control, new and more efficient systems at more affordable prices.
- Vehicles in the Santander fleet fitted with better technology and a wider range of vehicle types in every market.
- Improvements in environmental data collection to analyse trends.
- The purchase of renewable energy and obtaining of energy certificates.

The latest plan, Plan 2022/2025, which ended in 2024 with an investment of EUR 38.3 million, achieved a reduction of more than 69.3 GWh through efficiency measures. Additionally, we converted 213.8 GWh into renewables through contract agreements. Other outcomes of this Plan are:

- Over 8,800 kW (kilowatt) of solar panels for self-consumption with a self-production of 18.5 GWh in Brazil, Chile and Spain, which houses two of Europe's largest solar installations on office buildings and data centres, enabling us to reduce our scope 2 emissions.
- 37% of our workforce work at premises with a buildings or energy efficiency certification or standard (LEED, Breeam[21], ISO). These certifications reflect our efforts to reduce fuel, electricity, paper and water consumption, as well as scope 1, 2 and 3 emissions. Examples include the recently confirmed Breeam Excellent certification of our new UK HQ (Headquarters), Unity Place, in Milton Keynes (almost 80,000 m^2), and of the Hernán Cortés building in Spain.
- 96% certified renewable electricity either certified purchased or self-produced in our 10 core markets, helps reduce our scope 2 emissions.
- 2,103 electric vehicle parking spaces at our buildings and commercial offices across our footprint. This is well above the 1,250 target we included in the 2025 plan. Even with the objective to electric vehicles, Santander continues to follow a policy of using company shuttles, encouraging the use of public transport, and implementing car sharing initiatives as part of a more efficient employee commuting model.

Our 2030 Efficiency Plan for the Group builds on our progress and will focus on the following initiatives and levers:

i. Renewable energy and self-production measures:

- Solar panels in Santander's own buildings, data centres and commercial premises.
- Geothermal energy.
- Bundled and unbundled agreements to purchase renewable energy (suppliers, PPAs-Power Purchase Agreements, RECs-Renewable Energy Certificates).

ii. Energy efficiency and consumption reduction measures

- Lighting efficiency projects.
- Temperature control efficiency projects.
- Automated measurement and control of office spaces and the branch network.
- Projects to enhance façade materials.
- Projects to renovate and upgrade commercial premises.
- Project to modernize facilities.
- Communications and internal training to raise awareness among employees of responsible water, electricity and paper consumption and the correct ways to recycle.
- Continuous improvement programmes that follow ISO 140001 in buildings and ISO 50001 in offices and branches in our markets to reinforce the importance of robust property and maintenance management.
- Projects to build new, more efficient headquarters and rearrange our assets.

iii. Direct emissions reduction measures:

- Replacing fossil fuels with other forms of energy.
- Preventing the leakage of direct emissions from the temperature control systems at all Santander premises.
- Updating and modernizing air conditioning systems with more eco-friendly and efficient cooling mechanisms.
- Monitoring possible leakages in air conditioning systems and implementing predictive and preventative maintenance.
- Updating Santander's fleet with hybrid and electric vehicles.

[20] Leadership in Energy and Environmental Design
[21] Building Research Establishment Environmental Assessment Method

- Replacing conventional oil or gas boilers with electric heat pump systems and technologies where the weather allows.

With these measures, we want to continue reducing our direct scope 1 and indirect scope 2 emissions, with specific targets that will enable us to reduce:

Alignment lever	Scope 1 (tCO_2e)	Scope 2 location-based (tCO_2e)	Scope 2 market-based (tCO_2e)
i. Renewable energy and self-production measures		2,000	9,000
ii. Energy efficiency and consumption reduction measures	1,600	20,000	3,000
iii. Direct emissions reduction measure	600		
Total	2,200	22,000	12,000

Banco Santander remains offsetting scope 1 and 2 emissions. As part of our voluntary carbon credit market monitoring, every year we carefully analyse and select a list of initiatives, usually in our core markets. We follow a strict carbon credit selection process that includes due diligence and compliance of our environmental policies. Projects are also certified under some of the industry's most well-known standards. Moreover, all the carbon credits we purchased in 2024 were ratified by an independent rating agency to validate their integrity. In 2024, we used 59,858 credits[22] (85% reduction credits and 15% removal credits), to offset our scope 1 and 2 emissions.

Other key measures

Waste management

Since 2021, our offices and buildings in our core markets have been free of single-use plastics to meet the target we set in 2019. The Santander Group City and Santander España's central services buildings have 'Zero waste' certification.

Employee awareness

Santander runs local and global employee awareness campaigns on the importance of reducing consumption and waste. Each subsidiary posts news and feature articles on the environment and the Group's ESG initiatives on its internal portal. In 2024, we observed Earth Hour for the 15th consecutive year by switching off the lights at the Group's most emblematic buildings.

Scope 3

The assessment we conducted to determine the materiality of indirect GHG emissions (scope 3) found that the only material category under this scope was category 3.15 (financed emissions), with a weighting of 99% of the total.

Moreover, the categories listed below are considered material based on their volume, management capacity and, therefore, potential to reduce them.

In addition to the scope 3 categories we reported on in recent years (3.6 Business travel and 3.7 Employee commuting), in this document we're reporting on four more supply chain-related categories[23] for the first time:

- 3.1 Purchased goods and services
- 3.2 Capital goods
- 3.4 Upstream transportation and distribution
- 3.9 Downstream transportation and distribution

To enhance the quality of these emissions and to draw up actions to reduce them, Santander and Aquanima will work with the key vendors of the leading purchasing groups to obtain information on their carbon footprint.

2.5 Further actions and enablers

2.5.1 Strategy for engagement with other key stakeholders

As mentioned previously, we believe that the banks are enablers of the transition and as such, should not be considered as the sole drivers of this process.

In order for banks to support the transition of their clients, the enabling conditions must be in place. Our aim is to contribute constructively to the transition debate by supporting policymakers and regulators take a common approach to legislation. In this sense, it is now necessary that the predominant regulatory and "finance-centric" approach to the net zero transition that has been adopted to date is reconsidered, acknowledging that the financial sector is an enabler, but that it cannot be the sole driver of sectors´ investments towards a low carbon transition.

In addition, it is important that banks´ aim to supporting high-emitting companies in achieving their transition to cleaner production models is recognised as a priority. This means that our financed emissions are likely to rise as we finance the transition of these companies. Nonetheless, supervisors should not consider our portfolios as misaligned with a 2050 net-zero pathway, but rather the opposite; we are financing and engaging in our customers' transition, not divesting from them.

There is a meaningful opportunity ahead to foster that the appropriate levers are set to facilitate the transition of the global economy. This includes the review of the current sustainable finance framework. Whereas much progress has been achieved to date in areas such as reporting on sustainability matters, taxonomies to classify green activities and financing, the aim of the European Commission to streamline and consolidate multiple requirements on companies is very much welcome. The reduction of complexity and of the regulatory burden would facilitate the implementation of the framework by the market, and the allocation of resources to support the transition, while positively contributing to companies' competitiveness and economic growth.

Finally, a framework that supports business transition should not seek to increase the capital requirements linked to ESG risk drivers since the Pillar I prudential framework already considers their

[22] Since emissions offsetting is done by country, the upward rounding of tCO_2e means that the total amount of credits is slightly higher than the total sum of emissions.
[23] We calculated these categories based on our operating expenditure in 2024. The emissions factors we used to calculate these categories in 2024 are based on the emission intensities within the input-output (IO) database of the US Environmental Protection Agency (EPA), which are split by economic sector.

impact. Increased capital requirements would be counter-productive and could jeopardize the transition of the economy — especially in emerging countries and that of companies in carbon intensive sectors.

Authorities should work together as much as possible on drawing up the regulatory framework that provides the right tools to finance the transition of the economy globally.

For more details on our strategy for engagement with authorities, supervisors, NGOs, etc. see 1.2 'Stakeholder engagement'.

Partnerships and sector working groups

Partnerships with others in business and governments can help us share best practice and accelerate progress if we are to tackle climate change and protect biodiversity. Grupo Santander participates in different organizations, alliances and working groups: we engage with international and local stakeholders (sector associations, think tanks, universities, peers and others) to progress in global and company goals, in line with the SDG 17 (Sustainable Development Goal) on Partnerships for Goals.

In addition to the initiatives outlined in section 1.2 'Stakeholder Engagement', we also engage with leading organisations to improve banks' stewardship of climate change and nature.

- **World Economic Forum - International Business Council:** Santander is participating in the "Transforming Energy Demand" project, which aims to identify ways in which companies can reduce energy demand intensity as a means of contributing to the global energy transition, as well as to the bottom-line. The IBC (International Business Council), currently chaired by the executive chair brings together 130 CEOs and company chairs across industries, from developed and emerging markets, on all continents. Member of this group are responsible for c.3% of global energy consumption.
- **World Economic Forum - Alliance of CEO Climate Leaders:** Santander continues its engagement within the World Economic Forum Alliance of CEO Climate Leaders as key network to influence stakeholders, including policymakers, and drive change towards meeting net zero targets. We are also following the work at the "Financing the Transition to a Net-Zero Future" initiative.
- **Banking Environment Initiative (BEI):** Coordinated by the Cambridge Institute for Sustainability Leadership (CISL), we continue to take part in the Bank 2030 initiative, which aims to create a roadmap for the banking sector to support broader society's transition to a low-carbon economy.
- **Net Zero Banking Alliance (NZBA):** We're a founding member of this initiative (created in 2021) and member of the **Net Zero Asset Managers Initiative (NZAM)**, since 2021.
- **Financing the Just Transition Alliance**: Led by the Grantham Research Institute within the London School of Economics, the goal of the Alliance is to stimulate and support system level innovation that enables investors and the financial sector more broadly to deliver a just transition in the UK.
- **Partnership for Carbon Accounting Financials (PCAF):** We have been a member of PCAF since 2021 and thus committed to disclose our financed emissions according to the PCAF standard. We also take part in its regional and sectoral working groups.
- **TNFD Forum:** We are part of the TNFD Forum to contribute to the framework for financial institutions that will help the sector to assess, manage and report on impacts and dependencies on nature. We also participated in different TNFD-pilots in LATAM (Latin American) that allow us to gain important insights that highlighted the significant challenge, particularly regarding the lack of availability of primary data and tropicalized databases to assess impacts and dependencies.
- **Energy Efficiency Financing Coalition:** Led by the European Commission and with the participation of Member States and financial institutions, including Santander, the coalition seeks to promote measures (non-regulatory and non-binding) that promote energy efficiency in relevant sectors, such as cars, agriculture, buildings, among others.

2.5.2 Governance & policies

Roles, responsibilities, and remuneration

Climate change and green transition oversight

The management and oversight bodies described in sustainability note 2 approved our transition plan, as part of this report. Also, the responsible banking, sustainability and cultural committee (RBSCC) reviewed our portfolio alignment targets, which the board of directors then approved. These bodies also receive regular updates on progress with our targets and our climate agenda.

Moreover, they have also overseen the climate finance reports that we have been publishing in recent years.

Other bodies such as the audit committee, the financial accounting and reporting committee, the management committee and the sustainability committee take part in overseeing sustainability disclosures. The risk control committee and the risks supervision commission review risk appetite proposals before their approval.

For more details on our ESG governance model, see note SN 2. 'Sustainability governance'.

Climate in incentive schemes

Since 2020, the Group's variable pay scheme and, since 2022, our long-term incentives, have considered green finance and the progress made with climate and other sustainability targets.

In 2024, shareholders at the Annual General Meeting (AGM) passed a board resolution on sustainability metrics for executives' 2024-2026 long-term incentives (with a weighting of 20%), which are consistent with our targets. Half of the sustainability dashboard covers supporting the transition to a low-carbon economy, including socially responsible investment and green finance raised and facilitated. Moreover, this line of action considers the requirement to develop a transition plan that enables a score of over 100%. Achieving a credible and comprehensive plan will depend on the regulatory and political landscape.

For more details on the integration of climate-related performance in incentive schemes, see section 1.4 'Sustainability governance'.

Main areas involved in implementing our climate change strategy

In 2024 we continued to embed climate management in business-as-usual across CIB, Risk and Sustainability. For instance, CIB strengthened its corresponding governance. And Wealth continued to reinforce and update the working groups and policies that oversee and coordinate its SRI strategy, described in section 3.2.2 'Responsible investment and social finance'. Consumer has different working groups that meet monthly to address sustainability projects and issues, and quarterly to review progress in the sustainability agenda.

Beyond global businesses, a number of local units are engaged in a process coordinated by Group Responsible Banking. The objective is to progress the alignment agenda, promote knowledge and expertise sharing by local teams and seek synergy in the design of reliable transition plans.

Other corporate-level initiatives and groups that support governance meet regularly to implement our climate change agenda and inform on regulation updates. For example, our public policy sustainability working group updates on upcoming climate and sustainability regulation; a regulatory radar governance working group that meets quarterly to monitor the status of implementation of sustainability regulations and to assign responsibility for the implementation of regulatory initiatives to the Group's areas; an environmental footprint working group that measures our footprint and reviews ways to reduce it; and a sustainable bonds working group that oversees sustainable bonds issued from Group and its subsidiaries.

ESG Reporting & Internal Control

A new ESG Reporting & Internal Control team, set up in the second quarter of 2023, in the Financial Accounting & Management Control division oversees the disclosure, supervision and control of the ESG information the Group uses to meet regulatory requirements and stakeholder expectations. This year, the team worked with each area in question to make information gathering and the governance and control of disclosed information more automated and efficient. The emission reduction objectives of our own operations emissions (scopes 1 & 2) have been reviewed in the Group's ESG Reporting Forum.

ESG classification meetings

As part of our green transaction assessments, we created global, regional and local panels to provide additional scrutiny and validation, and coordination across the Group; agree on labelling transactions as green, social or sustainable; and make sure that we use the same standards and procedures across our footprint. The Risk function leads these panels, which business, compliance and sustainability teams also take part in.

Internal Audit

The internal audit function reviews climate risk, for more details see note SN 2. 'Sustainability governance'.

Policies and guidance

The Group has different frameworks and policies that establish the principles, processes and responsibilities for managing ESG criteria throughout Santander Group.

The Group establishes ESG policies, procedures and guidelines adapted to local regulations and applied to all units. We systematically review the scope of the policies to adopt ESG standards in accordance with international best practices. The main ones are the ESCC risk policy and the Responsible banking and sustainability policy.

For more details on our ESG governance model see note **SN 2. Sustainability governance'.**

For more details on our ESCC risk management policy, see section **3.2.3 'Environmental, social and climate change risk management**'.

Climate training and skills development

Particularly in climate, we have developed different initiatives to enhance capabilities, beyond the training on sustainability detailed in section 3.3.1 'Talent and skills development'. Some themes of these initiatives are social and environmental risk management and sustainable finance.

For more details on our employees training and skills development see section **3.1.1 'Talent and skills development'.**

3. SUPPORTING EMPLOYEES, COMMUNITIES AND CUSTOMERS

(Social information)

3.1 Our employees

Aiming to attract and retain a talented team, our approach is based on[24]:

- promoting an attractive employee value proposition that offers real opportunities to grow and harness potential; innovative ways of working; projects that inspire; and a shared, uplifting culture.
- offering optimal conditions that safeguard employee health and well-being, with fair and competitive remuneration and initiatives that afford a better work-life balance.
- promoting an inclusive and meritocratic culture where everyone feels valued.

3.1.1 Talent and skills development

This section outlines how we manage the following IRO:

I+ Promote continuous career development and personal growth through learning and development programmes.

For the purpose of this Annual Report and in line with previous years, Santander defines employees as people who have an employment contract with any of the companies that comprise our consolidated group and whose contract remains in force at the time of publication. [25]

206,753
employees

Europe **42.2%**

North America **20.0%**

South America **37.8%**

It is fundamental that our employees have the necessary abilities and knowledge to perform their role.

i. Attracting talent

Our talent attraction strategy focuses on positioning ourselves as an employer of choice. In 2024, we welcomed 33,175 new employees to the Group.

We focused on:

a. digital transformation.

b. graduate internship programmes.

c. bolstering our employee value proposition (EVP).

We offer programmes and experiences for our employees' personal and career development:

- Development programmes adapted to different levels and businesses within the organization.
- Temporary and permanent domestic and international mobility and functional experiences.
- Training based on lifelong learning.

ii. Talent management

We reaffirmed our commitment to developing talent in 2024. We kept close watch on our units' and businesses' needs to anticipate and cover their requirements, with a proactive approach through initiatives that foster individual growth and boost the wealth of talent in our teams.

Developing potential

Our potential review model, implemented in 2022, has enabled us to delve deep into the skills, expertise and aspirations of some

[24] For more information on employee dialogue, see section 1.2 of Dialogue with our stakeholders.

[25] The following are not included as Employees: a) Interns; b) Salaried employees on leave or career breaks whose employment contracts are suspended under the respective local employment regulations; c) Non-salaried individuals with temporary employment contracts through an external provider (NACE78) performing similar tasks to in-house staff, who do not receive salaries or benefits paid by Santander, nor self-employed workers; d) Other workers engaged in different tasks within the value chain under service contracts. Additional information on the characteristics and distribution of our employees is provided in the 'Sustainability Notes'.

124,112 employees . It has driven us to draw up personalized development plans based on each person's needs.

We came up with a leadership profile and a common leadership assessment methodology to foster transformational and collaborative leadership aligned with our strategy and gain deep, objective and comparable knowledge of our leaders. This also enables us to support their development and make key decisions for the Group.

Mobility matters

We have our global international mobility policy approved by the Human Resources Committee by decision from the Group Board, is an essential tool for the development of our professionals. The objectives of this policy are to: contribute to the development of talent in the Group; strengthen succession plans; attract external talent; encourage global mentality; facilitate international movement to satisfy business needs; share in a transparent manner the criteria for mobility across the workforce.

iii. Learning and development

Our learning and development policy, provides an action framework for the design, supervision and deployment of learning activities with the purpose of promoting innovation and the development of skills in our employees.

In 2024, we allocated EUR 64 million to employee training to provide employees with the resources and tools they need to enhance their skills and employability and to meet critical business and market demands.

173,309 employees accessed Dojo, our digital learning platform and we continue to roll it out to reach all employees. On top of its vast catalogue of 174,223 references with courses in critical competencies promote that our employees are up-to-date with the latest trends and technologies. Dojo offers customized recommendations based on current and future roles to foster a culture of personal development and lifelong learning.

Global learning community for leaders

The aim of *Elevate* is to equip our senior directors with the means to lead their teams and achieve their strategic objectives.

It's fully digital format enables directors to sign up to development programmes that are organized into Learning Paths (People, Tech, Strategy and Change) that address the critical skills needed to lead the Group's transformation.

It provides access to the latest trends, content and tools, and helps create networks of senior leaders to promote the sharing of best practices and experiences. It also encourages them to use what they learn and make a clear path to drive our transformation.

Talent development programmes and promoting a culture of lifelong learning

Our learning and talent development strategy places focus on the development of young talent and digital business profiles, with programmes such as Young Leaders and BeTech & Business.

These programmes are designed to identify and develop internal talent, offering growth opportunities in the career of our employees, helping them be prepared for future challenges.

We trained our employees in the skills they need to further their careers. In 2024, 103,154 employees received training in core business skills related to technology, banking and people to enhance individual performance.

We award certificates to employees who complete training activities and programmes to recognize their new skills. These certificates are approved by an independent issuer. In 2024 17,305 employees obtained certificates, which will enable them to broaden their career horizon, apply for new opportunities and accredit their knowledge.

Mandatory training and promotion of Sustainability and Responsible Banking

To reinforce the Group's culture and knowledge in relevant matters, we have mandatory training, which looks to train all employees in strategic and/or regulatory topics approved by the Global Compliance Management Committee. In 2024, we covered 13 topics in mandatory training, including sustainability, code of conduct, harassment prevention, cybersecurity, financial crime and data protection. This efforts aims to protect the organization and increase our employees capabilities to act with responsibility and ethics in their daily activities. Moreover, each subsidiary has mandatory courses related and applicable to their local laws and regulations.

This year, our employees have participated in a training itinerary on Green Finance for Retail & Commercial Banking, with transversal and country-specific modules in countries we are present with a sustainable offer. Furthermore, all employees have received mandatory training on practical integration of ESG criteria into commercial processes. As part of the Board of administration training program, a session on sustainability with focus on ESRS was conducted. This training strengthens the knowledge and skills of our employees, drives business and benefits the community.

We continue progressing on the certification of experts in sustainable finance topics and promoting our ESG Talks, a program of sessions where we share knowledge and points of view on ESG topics, with the participation of internal experts from different businesses and functions involved in our sustainability agenda. We have also trained our employees in inclusion, environment, health and safety, as well as expanded our learning library related to sustainability topics.

We will continue to invest in developing our employees so that they are equipped to face future challenges and contribute to the ongoing success of the Group.

3.1.2 Working conditions

This section outlines how we manage these IROs:

I+ Promote the health, well-being and security of our employees in a safe and inclusive workplace; facilitate a positive work-life balance through flexible working.

I- Harm employees through discriminatory conduct, inadequate working conditions, harassment or corruption.

I+ Promote the general well-being of employees and provide appropriate remuneration under equal conditions based on merit and market rates.

R Potential risk of conflict with employees based on the infringement of their rights.

i. Employee health and well-being

Our employees' health is embedded in our culture and corporate strategy, under which our people and senior managers work together to protect and promote each other's health, safety and well-being.

Based on our strategy, we implemented:

- safety and prevention systems;
- proactive initiatives to boost the overall well-being of employees;
- a safe and supportive working environment when it comes to health; and
- flexible work alternatives to enhance work-life balance.

Our General health, safety and well-being policy aims to promote healthy lifestyles and create long-term value for employees and society. It applies to all our subsidiaries and follows local laws in the markets where we operate to the letter.

Occupational health[27]

The sector-level collective agreements that we sign up to consider employee health and occupational risk prevention.

We offer regular check-ups and tests after extended absences in every market where we operate. We also cooperate with local public health authorities, employees' legal representatives and occupational risk insurers. In every subsidiary with over 500 employees (accounting for 99% of the Group), our people are covered under occupational health and safety systems and policies in compliance with local risk prevention standards and best practices.

We revised our occupational risk prevention plans with employees' councils through:

- regular assessments of risk factors and preventative measures to handle or mitigate them;
- prevention through design in new work spaces and tools;
- procedures regarding safe and quality working conditions and certifications;
- emergency and evacuation plans to protect employees, customers, suppliers and visitors to our premises; emergency response; first aid training;
- measures to detect and minimize risk due to postural hygiene;
- accident investigation to avoid reoccurrence; and
- active participation of employee accident prevention delegates on health and safety committees.

Well-being

We aim to raise awareness about health and well-being through our global BeHealthy programme, which celebrated its eighth year in 2024.

BeHealthy
Live fit, reach your potential

In 2024, we ran several initiatives, activities and events in all our subsidiaries following the programme's four pillars: know your numbers (self-awareness), eat well (healthy nutrition), move (physical health) and be balanced (mental & emotional well-being). In 2024, over 64,000 employees took part in local BeHealthy initiatives.

Rating on satisfaction and opinion on health

8.4 (out of 10)
Health and well-being as a priority[28]

8.4 (out of 10)
Support I need in terms of physical and mental well-being to perform my job.[29]

In April, to celebrate World Health Day, we held BeHealthy Week, bringing health and well-being to the focus of the Group worldwide, with daily, in-person and virtual events. We also joined global initiatives run by the World Health Organization, including Global Mental Health Week, Women's Health Month and Men's Health Month.

These initiatives gave our employees access to mental health and emotional well-being support programmes, as well as to sports centres, nutrition and mental health apps, specialist health and preventative care, and other free or discounted services.

Work-life balance

Santander promotes employee work-life balance. Employees in all our entities are entitled to paid paternity or adoption leave or to care for newborn children or family members. In 2024, 8,195

[27] For more details on absenteeism and health, see the 'Sustainability notes'.
[28] Average employee rating of the statement 'Employee health and well-being is a priority at Santander'. In the top 25% of the financial sector. .
[29] Average employee rating of the statement 'Santander offers me the support I need in terms of physical and mental well-being to perform my job', in line with the financial sector.

employees took paternity, maternity or adoption leave and 2,824 other employees family care leaves.[30]

We have enhanced our flexi-working policies and options for employees in recent years to keep up with digital transformation and social change. Almost all our employees in central services roles can now adapt their working hours and location to fit with their personal circumstances. In nine of our core markets, [31] almost all our employees in central services roles take part in flexi-working programmes that enable them to work remotely or adjust their entry and exit times. We review these measures constantly with our employees and in view of customer needs — considering productivity, commitment and our experience as an employer.

Rating on satisfaction and opinion on flexibility

8.8 (out of 10)
Flexibility at Santander[32]

Social protection

At Santander we offer our employees protection against a loss of income due to sickness, accidents at work, acquired disability and paternal leave.

Our employees have public or private protection for loss of income due to sickness or acquired disability according to local regulation. On top of public health services, we offer additional private cover in our core markets, under which employees usually receive full pay during periods of sickness.

Because employee care and respect for their rights are important to Santander, 98% of our workforce have a permanent contract. In all countries, employees have coverage against loss of income due to unemployment per local laws.

Our employees have appropriate pay protection in the event of an occupational accident. In Spain and other countries, we supplement the financial benefit that can reach the entire salary of employees in situations of temporary disability.

The Group has a minimum standard in each unit of fully paid parental leave. All Group employees are entitled to a minimum 14 and up to 30 weeks' fully paid primary parental or adoption leave, while all parents (or secondary caregivers) have 4 weeks of fully paid parental or adoption leave[33]. Because of our inclusion and flexible return measures, 76% of new mothers continue working for Santander 12 months after returning from their birth, adoption, or pregnancy leaves.

Our employees have retirement coverage through public or private pension schemes in every market where we operate. Santander supplements this with defined contribution pension plans for our employees in our core markets.

Collective bargaining and social dialogue

Santander promotes respect for the rights of employees[34]. In 2024, we continued to guarantee freedom of association and the right to collective bargaining. Our Responsible banking and sustainability policy considers forming or joining unions and other representative bodies a basic right of workers, in accordance with Article 10 of our General code of conduct.

We also ensured respect for freedom of association, trade unions, collective bargaining and protection for employees' representatives under the laws of each country where we operate[35].

At 2024 year end, 110,692 employees worked at premises or in companies with union representation.

We continued to promote and comply with the International Labour Organization's Fundamental Conventions and have a European Business Council that meets regularly — Group senior managers and employees' legal representatives in Italy, Poland, Portugal, Spain, the UK and other European countries attend.

We also maintained a constant dialogue with employees' legal representatives in bilateral and special committee meetings in our markets where all parties could discuss reporting, queries and negotiations about working conditions, and employee benefits. In core countries, important agreements have been reached during 2024, including committees on occupational health and safety, monitoring of gender balance plans, control of pension plans, training, updates to corresponding collective bargaining agreements, and also other bilateral meetings with union representatives.

In Brazil, Santander and other local banks, implement preventive measures to minimize the risks from individual labour-related claims, which are common in this market. We have sufficient provisions to cover these risks[36]. In order to minimize these claims, an internal oversight committee has been established, setting preventive measures to promote an environment with adequate working hours and compensation for all positions in the same location, in compliance with local labor legislation and jurisprudence court rulings. Likewise, the departure records have been digitized, and we have strengthened policies and guidance to employees for the correct registration of working hours and digitalization of departure records.

Protection of employee data

The handling of employee data is carried out under the protection of labor laws and based on legal obligations or legitimate interests covered by data protection regulations. As the data controller of such data, Santander has the appropriate procedures, tools, and controls based on the policies of the Group's data processing.

[30] 10,874 employees (5.3% of Santander's total workforce) exercised their right to parental or family care leave in 2024. The rate by gender was 6.7% for women and 3.7% for men.
[31] The nine core markets with the most employees are Argentina, Brazil, Chile, Mexico, Poland, Portugal, Spain, the UK, and the US, accounting for 93% of our total.
[32] Employees' rating of the question on whether they are satisfied with the amount of flexibility they have in their work schedules (within the average range for the finance sector). A. 2024 Your Voice survey.
[33] At Santander Polska, this leave is shared, with a guaranteed minimum for both parents of up to 20 weeks, and in Santander Chile the father has 2 weeks of guaranteed paid leave.
[34] See our commitment to human rights (which is included as well in our Responsible Banking and Sustainability policy) and international mechanisms of application in section 1.4.2. 'Human rights due diligence'.
[35] In 15 of the countries with the highest number of employees in the Group, there are union representatives according to local regulations (by company, location or individual affiliation). In those countries, except for the United Kingdom where data on union membership cannot be disclosed, 60% of workers have union representation.
[36] For more details on our provisions, see Note 25 of this report.

For more Information on data protection, see section **3.3.3 `Privacy, data protection & cybersecurity'.**

ii. Remuneration and corporate benefits

Adequate remuneration

Our remuneration framework combines fixed and variable pay schemes based on the performance of employees and the Group.

Our remuneration and performance policies, as well as our general code of conduct, forbid differential treatment that is not based on a review of performance and corporate behaviours. It also promotes dignify pay.

Specifically, the remuneration policy lays the foundations for non-discriminatory practices (related to performance and internal consistency), as well as the principles, processes and criteria for granting fixed and variable remuneration, creating long-term value by managing risks.

Fixed remuneration schemes reflect local market conditions. To set pay, we strictly abide by the practices, regulations and collective agreements in force in each jurisdiction where we operate.

All Santander employees receive a salary equal to or higher than the legally established minimum in each of our markets and we comply with all local legislations and relevant collective agreements. Almost all employees (99%) receive other forms of remuneration that supplement their salary[37]. This demonstrates our pledge to provide fair, competitive remuneration and the appropriate combination of fixed and variable pay.

All our businesses and subsidiaries have short-term variable remuneration schemes to reflect what we have accomplished and how, according to Group-wide quantitative and qualitative goals as well as individual and team goals, behaviour, leadership, sustainability, commitment, growth and risk management. These schemes promote meritocracy, recognize individual and team contributions, and promote employee growth and well-being. Aligned with sustainability goals, the variable compensation of executive directors also weighs compliance with our sustainability and climate goals[38].

In 2024, we paid EUR 14.3 billion in employee wages and benefits[39].

To comply with EU regulations on remuneration and manage risk correctly, we identified 1.246 employees subject to a deferred variable pay scheme because their decisions can have a material impact[40] on Santander's results. Therefore, the majority of them are subject to a policy of deferral of a significant portion of their variable compensation (ranging from 40% to 60%, depending on their level of responsibility) for a period of four to seven years. This variable compensation is paid out 50% in shares and 50% in cash, and is subject to a possible reduction (malus) or recovery (clawback).

For more information on adequate salaries, total remuneration ratio, see **SN 7.3 'Employees'.**

Equal pay

Our remuneration practices promote a non-discriminatory salary management in terms of gender and equivalent remuneration, especially in those cases where employees perform the same or similar work (equally remunerated for equal work or work of equal value).

Our salary comparison between women and men who perform similar functions remains at c. 0, which confirms our positive performance in recent years and meets the ambition we set for 2025[41]. In certain jurisdictions we continue to periodically assess compensation levels for pay equity and where appropriate make adjustments to compensation.

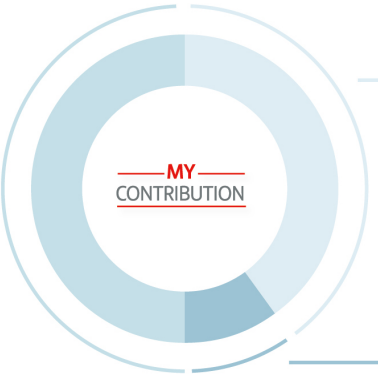
We often consult our employees to gauge how appropriate and acceptable our remuneration policies are and they recently deemed our remuneration policies competitive.

For more information about the employee consultation process, refer to section **3.1.4. 'Our listening strategy'.**

Rating on satisfaction and opinion on compensation

7.8 (out of 10)
Fair pay[42]

7.6 (out of 10)
Fair compensation process[43]



MyContribution

MyContribution is our common performance management model. We update it regularly, and it is aligned with our culture.

177,081 Santander employees had their performance reviewed (86% of the total[44]) under this model in 2024.

These reviews include quarterly or annual quantitative variables; corporate behaviour assessment variables (TEAMS) based on feedback from peers and internal customers; and risk management variables (RiskPro), which enable us to analyse individual and team performance holistically.

[37] Other compensations that complement the salary of our employees: benefits, pensions, other fixed compensations, incentives, and short or long-term variable compensations.
[38] Climate goals account for 2% of the total remuneration of executive directors, while sustainability targets represent 8% of their total variable remuneration.
[39] See Note 46 of the annual accounts.
[40] Material risk-takers.

3.1.3 Inclusive culture

This section outlines how we manage these IROs:

I+ Promote a workforce that reflects the society we live in and encourages collaboration; guarantee the same opportunities for all our employees, irrespective of gender, disability or other characteristics.

Inclusive culture is a component of our corporate culture policy, through which we focus on building a merit-based culture of equal opportunity and inclusion in compliance with laws.

In the global markets we serve, our focus on an inclusive culture is a critical driver of our business success. Our talented and engaged team generates customer loyalty, leading to strong financial results for our shareholders. By fostering equal opportunities for all and an inclusive environment that values different backgrounds, experiences, and viewpoints we enhance our problem-solving capabilities, improve decision-making, and boost creativity to achieve this.

Our approach to hiring, training, promoting, and retaining our workforce is based on meritocracy. Our success is intrinsically linked to the effectiveness of our team, making it a cornerstone of our strategy for sustained growth and profitability.

Related matters are discussed at the highest level— the Group Board cannot delegate these discussions and our executive committee reviews progress.

Our inclusive culture is embedded in the global procedures and regulations that underpin our organization and promotes meritocracy. For instance, it features in our key position, succession, nomination, and selection, suitability assessment and succession of directors policies. It is also embedded in our Group leadership principles and performance and remuneration reviews.

For further detail, see section **4.1 'Corporate culture'.**

For further detail, see section **6 'Remuneration'** of the corporate governance chapter.

We have a strategy on this matter in place since 2020, which drives us to act ethically and transparently. We base our global strategy on five pillars (gender, persons with disabilities, LGBTIQ+[45], ethnic and culture, and generational) and take action in other areas such as socio-economic. While we maintain a global outlook, each subsidiary adapts to its local landscape.

Where local laws allow, we encourage our employees to disclose personal information voluntarily so that we can identify areas for improvement and make decisions based on true data.

Rating on satisfaction and opinion on inclusion

9.3 (out of 10)
Inclusion[46]

While our local teams have action plans based on their own characteristics and conditions to continue supporting progress on inclusive culture, we also run global initiatives to continue making inroads:

- We run mentoring and networking programmes with diverse groups.
- Since 2022, we have held global awards to give recognition to individual and team initiatives that help facilitate equal opportunity access. Stand-out initiatives in 2024 included a project in Poland for the accessibility and inclusion of persons with disabilities; a scheme at the Corporate Centre to spark the interest of the daughters of our employees in studying STEM (Science, Technology, Engineering, Mathematics); and promoting labour reinsertion of women in Spain.
- We are part of global initiatives, such as:

WOMEN'S EMPOWERMENT PRINCIPLES

Valuable 500

[45] Lesbian, gay, bisexual, transgender, intersex, and queer.
[46] Average employee rating of the statement "At Santander we accept and respect everyone based on who they are, independent from gender, nationality, sexual orientation, religion, etc.", putting us in the top 10% of the finance sector.

Gender

We promote career development based on merit and support our high potential employees at every level to foster variety of leadership[47].

40% of our board members are women, which meets our goal for women to make up 40% to 60% of our directors. This goal will become a legal obligation in some jurisdictions from 2026.

Over the past five years, we have increased the number of women in or senior executive positions from 22.7% in 2019 to 31.2% in 2024 — reaching 34.4% in our core Retail & Commercial business[48].

This indicator used as reference the senior executives with the highest ranking in the organisation, representing 1% of the total workforce. Therefore, we agreed to expand the base reference[49], a move that is possible thanks to more quality data and greater analytical capacity, with common management and development programmes across the Group, which also responds to stakeholder expectations. The new indicator will allow us to:

- Reach more of our workforce[50] and, therefore, reach a greater wealth of talented women internally that will proceed towards senior roles organically.
- With this approach, we expect to progress gradually and sustainably towards gender balance, moving closer to c.40% in 2030[51].

Women make up 52.4% of our total workforce, a stable trend given 52% of new hires have been women.

We run initiatives to promote equality in the job market . Our programmes include:

- Women in Tech, which has been executed in 7[52] core countries of the Group to attract talented women with a technology or digital background (29% of our STEM roles are held by women)[53].
- InvestHer, is a global programme from Wealth Management & Insurance with participants from different Group´s geographies, that promotes the presence of women in global business roles.
- Our Santander Women Network, founded in 2018 to promote development, empowerment and connection of women within and out of the organization, has 8,000 professionals participating and reaching representation in up to 16 countries. Some initiatives are: Thursdays to Share, I Am Remarkable, Global Mentoring Program, Women in Banking (WiB), the first women's network in the Spanish banking sector, and the celebration of the 40th anniversary of the European Women's Management Development Network at Banco Santander Financial City hosted by SWN.

In 2024 we maintained our equal pay gap (EPG) at c. 0% after reaching our goal in 2023 which we fulfilled two years early. In certain jurisdictions we continue to periodically assess compensation levels for pay equity and where appropriate make adjustments to compensation.

We also measure at a global level the gender pay gap (GPG), which compares the median pay of women and men. In 2024, our GPG was 26% (improving 2.1 p.p. and 4.5 p.p. vs 2023 and 2022)[54].

Persons with disabilities

We strive for the successful inclusion of our 4,828 employees with disabilities (over 2.3% of our global workforce[55]). There is a legal requirement regarding the inclusion of persons with disabilities in the workforce at least in 7 of countries with more than 1,000 employees.

We have employee networks in several units that aim to include persons with disabilities. Our global Enable network, formed in 2022, has over 2,700 members in 10 countries.

In 2024, to promote this network, we boosted awareness and inclusion in the Group through events on visibility, technology, accessibility, and women.

Our event to mark international day of persons with disabilities, which we hold every year, included a talk with paralympic medallist Susana Rodríguez Gacio. She shared her experience and how education, hard work and passion have enabled her to break down barriers and triumph in sport and medicine.

LGBTIQ+

Our global network of LGBTIQ+ employees and partners, Embrace, ran events to share their challenges or topics of common interest. In June, we marked LGBTIQ+ pride days with an event where employees from across our footprint shared the challenges this group continues to face in being seen and heard. Embrace employees also featured on our “Santander te cuenta” podcast, which we release internally and externally.

Currently, 2.8% of our workforce identify as trans, non-binary or other diverse among the employees who voluntarily offered to share this information[56].

Ethnic and culture

We monitor ethnic minority representation in four of our core markets. Employees who identify themselves as part of an ethnic

[47] The percentage of male senior executive positions is 68,8%. For more data and metrics about employee characteristics, see the Sustainability Notes.
[48] Retail & Commercial and its support areas account for 74.5% of our global workforce.
[49] Applicable in accordance with local regulations.
[50] Including these Group categories: Sr.Executive VP, Executive VP, VP, Director, Manager, Expert and Branch Manager which account for 14% of our employees.
[51] At year end, 38.4% of senior management positions (Senior Executives and Other Executives) are held by women. This ratio does not include joint ventures due to their temporary nature and joint management (they account for only 1.7% of our workforce).
[52] When this programme or others were rolled out in a country where regulatory restrictions apply, the programmes are adjusted to comply with any required principles.
[53] We have a growing proportion of employees performing STEM-related functions (Data and Services, Information Technology-IT Support, and Products), totalling 30,089 employees across the Group.
[54] The gender pay gap measures differences in remuneration between all women and men, regardless of job type. For our management purposes, we use the gender pay gap as the difference between the median remuneration of men and women, expressed as a percentage of men's remuneration.
[55] Comparable to 2.2% at the end of 2023. As in previous years, we follow local regulations for the calculation and recognition of employees with disabilities. In most countries, disabilities are recorded at the employee's request with the support of a certificate issued by social services (e.g., degree and date of disability). In the UK, disabilities are recorded at the employee's request and do not require a certificate.
[56] The law in 12 of Grupo Santander's markets (accounting for 69% of our total workforce) allow for the voluntary request of gender identity information from employees.

or racial minority in these markets account for over 31.6% of the total workforce.

We have employee inclusion networks such as: Reach, Bold and Talento não tem cor, which in 2023 had over 1,300 members.

Anti-harassment protocol and training

To reaffirm the Group's ambition to combat discrimination[57], 108,213 employees across the Group received specialized training in 2024, while 101,651 employees undertook a course on sexual harassment. These courses are part of our global anti-harassment protocol and General code of conduct as a common framework to establish guaranteed standards and fight against discrimination and behaviours that contravene fair treatment and moral integrity.

Moreover, our subsidiaries have action plans in place based on their own characteristics and conditions to continue supporting quality inclusive culture training.

For further detail related to workforce, see **SN 7.3 'Employees'.**

Please see our work and sexual harassment protocol and moral integrity at work at santander.com/es/nuestro-compromiso/nuestra-cultura/diversidad-equidad-inclusion

3.1.4 Employee feedback and experience

As detailed in the "Engagement with stakeholders" section, "Your Voice" is our regular listening strategy to gather employees' feedback. It includes specific questions on our processes and we analyse the comments made on material impact and our employees' concerns.

Employees can give feedback and leave comments on every question, preserving anonymity at all times, since the provider facilitates data in an aggregated form to the Group. In addition, managers with five or more employees can access real-time aggregated results of their teams to identify levers that drive greater engagement and promote dialogue, trust, and transparency. As a result, this information helps each leader to enhance team performance and reduce burnout, resignations, and absenteeism.

In a broader sense, cross-geographical and global business action plans are also established. During this year, numerous actions have been launched to improve the employee experience and value proposition. Some of these initiatives have focused on professional growth, recognition, and workload management. In addition, efforts have been made to simplify internal processes and promote organizational transformation and change.

Since the implementation of YourVoice in 2022, we have seen a positive trend in results and participation, reaching levels that position us above the financial sector, with a participation rate of 83%.

8.7 (out of 10)

General engagement

Within the top 25% and +0.4 compared to the financial sector.

The engagement measures the level of involvement and enthusiasm of employees towards their work and the organization.

See in the section 4.3 'Ethics Channels' the processes to repair negative impacts and channels for own staff to express their concerns.

[57] Consider race and ethnicity, color, sex, sexual orientation, gender identity, disability, age, religion, political opinion, national or social origin, among others."

3.2 Communities' sustainable development

We consider affected communities those where Santander has a presence as an entity, either through its businesses or its community support activities, and includes any specific groups mentioned in this chapter.

3.2.1 Supporting the economic and social development of our communities

In this section we cover how Santander manages the following IRO:

I+ Drive economic growth and job creation in the regions where we operate and provide credit to people and businesses.

i. We help people and businesses prosper

Through finance and investment

→ **EUR 350.5 billion** to help people buy homes and **EUR 214.2 billion** to purchase other goods.[58]

→ **EUR 330 billion** to help set up or grow companies (including more than 530 thousand SMEs and self-employed).[59]

→ **EUR 24.1 billion** in green finance raised and facilitated and **EUR 88.8 billion** assets under management in Socially Responsible Investment.

→ **EUR 1.27 billion** disbursed in microcredits to more than **1.3 million** of microentrepreneurs to support the creation and expansion of their businesses.

Through community support

→ **2.6 million** new people financially included.

→ **EUR 166 million** invested in communities, including **104 million** to promote higher education, employability and entrepreneurship, benefitting **5 million** people.

3.2.2 Responsible investment and social finance

In this section we cover how Santander manages the following IRO:

I+ Contribution to sustainable development through financing and investment that promotes sustainable performance in companies, addresses societal challenges, mitigates a specific issue, or pursues positive societal outcomes.

i. Social finance

Santander in its financing activity, support social activities such as building hospitals, universities and homes intended for vulnerable people. The tagging of these deals as social is being done to improve the identification, management and reporting of this type of financing, following the same operating model and system that is used for environmental or sustainable finance.

Within this concept we consider the microfinance businesses that the bank has in Latin America (Prospera in Brazil & Colombia, Tuiio in Mexico and Surgir in Peru), through which the bank gave EUR 1.27 billion in microcredit in 2024. These businesses, covered in more detail in the financial inclusion and financial health section of this report, go in many cases beyond financing, providing access to a bank account and other services such as microinsurance for underbanked microentrepreneurs. During 2024, more than 1.3 million microentrepreneurs benefitted from this type of financing.

Additionally, during 2024 we have signed several agreements with Multilateral Development Banks in Spain, Chile, Brazil and Poland where these agreements include allocating part of the new portfolio to social finance. An example is the agreement with the IFC in Brazil to issue a social bond allocating funding to small and medium enterprises in underserved regions of Brazil, as well as to microentrepreneurs across the country.

ii. Socially responsible investment

We continue to improve our offer to clients with investment options that promote ESG factors and/or have sustainable objectives, with the aim of reaching EUR 100 billion of socially responsible investment (SRI) assets under management (AuM) in Wealth Management & Insurance (Wealth) by 2025. This ambition was formally approved at the Wealth ESG forum in 2021.

In 2024, Wealth's SRI AuM grew to EUR 88.8 billion[60]: EUR 63.5 bn in Santander Asset Management and EUR 25.3 bn from third party funds in Private Banking.

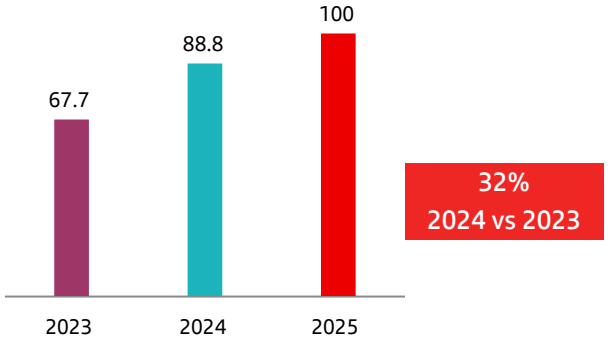
This growth owes to the integration of sustainability into our investment product and service strategy and the traction generated by EU regulation.

We calculate Wealth's SRI AuM and the metrics related to SAM's net zero by 2050 ambition every month. We process and store these data in our own repository, and perform monthly variation control and validation. An automated report on these data is sent to the Group's Sustainability data office every quarter. These data are subject to an annual limited assurance audit prior to disclosure.

Wealth defines SRI as the volume of AuM classified under Articles 8 (promoting environment and social characteristics) and 9 (with distinct sustainability objectives) of the SFDR (EU Reg. 2019/2088), except illiquid investment in Private Banking, which we report as committed capital. SRI includes: i) assets that SAM and other Group

[58] Credit stock as at 31 December 2024.
[59] Credit stock as at 31 December 2024. Data for SMEs and the self-employed covers individual customers with an outstanding loan at 2024 year end
[60] Does not include SAM funds distributed by Private Banking to avoid double counting.

asset managers in the EU (and other regions where the SFDR doesn't apply, using equivalent criteria) manage or advise on; and ii) third-party funds and advisory assets considered sustainable investment according to the SFDR (Article 2.17) or under internal SFICS sustainability standards.



Santander, through SAM, manages SRI assets through the SRI policy, the Engagement policy, and the Voting policy. Santander Private Banking Gestión (SPBG), our Private Banking asset manager in Spain, also has its own Engagement policy. Our investment product and service proposition meets the SFDR's transparency obligations, which require disclosure of information on the embedding of sustainability risk, analysis and management of adverse impacts on sustainability, ESG factors, and sustainable investment targets.

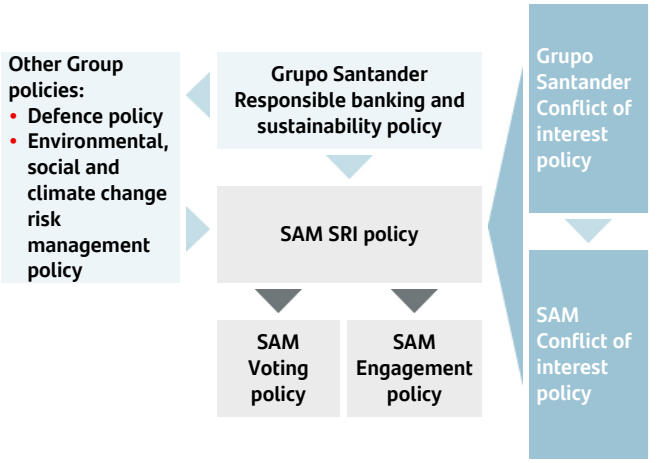
The SRI policy sets out SAM's socially responsible investment approach and the standards we consider to embed ESG variables in our investment analysis and decision-making. The Voting policy outlines the principles and guidelines regarding the right to vote in portfolio companies, facilitating alignment with the SRI policy to promote the strong performance of long-term investments. Last, the Engagement policy dictates the principles that govern SAM's individual and collective engagement activities with the companies it invests in.

The SAM board of directors approves and oversees the SRI policy. SAM's SRI team informs the local units of any revision of, or amendment to, this policy so that they adopt it correctly and, where appropriate, adapt it to local needs. Moreover, SAM's SRI strategy and monitoring forum oversees the monitoring and coordination of SAM's SRI strategy, as well as compliance with the SRI policy and monitoring and control of all activities to embed SRI in SAM.

SAM publishes its policies on its official website, as well as on the Intranet for employees. The third-party regulations and initiatives that SAM has pledged to uphold or that inspire our policies feature in section 3 of our SRI policy, appendix II of our Voting policy, and section 3 of our Engagement policy. SAM España and Santander Pensiones have been working since 2023 to achieve full alignment with the Spanish Stock Market Authority's (CNMV) Stewardship code (to which they are signatories), reporting annually on the activities they carry out to comply with each of its principles. In 2024, SAM published its first SRI report. It includes information on voting and engagement and details on its SRI practices. It offers a comprehensive view of how SAM embeds sustainability in its operations.

SRI AUM (EUR billion)[12]

Santander Asset Management



As at December 2024, SAM held EUR 63.5 billion in SRI assets (32% year on year) spread across eight countries. This accounts for 26.9% of SAM's total AuM and contributes towards Wealth's objective of EUR 100 billion in SRI AuM by 2025.

In 2024, we continued to broaden our SRI product and service range, with a focus on the transformation of pension plans in Spain and Portugal under Article 8 of the SFDR. We also launched new products such as Santander GO Global Environmental Solutions and Santander Target Maturity III. We enhanced our voting and engagement policy and methodology for non-EU asset managers.

In 2024, we continued to focus on engaging with portfolio companies in high emitting sectors. As in previous years, we took part in the 'Global Investor Statement to Governments on the Climate Crisis' initiative.

SAM's governance backs the execution of its SRI strategy. It follows environmental (including climate change), social and corporate governance (ESG) standards and is organized around i) an SRI strategy and oversight forum; ii) a voting and engagement forum; and iii) an investment and sustainability forum led by our global team of SRI experts. At the highest level is the ESG Wealth Management & Insurance forum, chaired by the Global Head of Wealth; it discusses, oversees and monitors the global SRI strategy and the SAM, Private Banking and Insurance KPI.

SAM's ESG policies and relationship with the Group's sustainability documents

SAM has a global, multidisciplinary team of SRI experts that develops and implements our ESG methodology, engagement and voting activity and SRI policies, among other tasks. There is also a local network of ESG experts for each of the markets where we operate.

Moreover, we have a network of experts who are key to embedding sustainability in our investment and reporting both globally and locally.

For more details on our ESG approach in SAM, see santanderassetmanagement.com/sustainability.

For more information on our engagement and voting strategies, see santanderassetmanagement.com/ sustainability/es/content/ view/11966/file/SAM_Informe_Stewardship_221123_ES.pdf

SAM's SRI products

SRI products in SAM's core markets

ESG methodology and business engagement

SAM runs several exclusions set out in its SRI policy that restrict or prevent investment in certain sectors that are considered unsustainable.

It also has its own analysis methodology based on market benchmarks and core international frameworks and standards, which enables it to assess the ESG performance of assets through ratings awarded to issuers.

In 2024, we bolstered our methodology by revising the materiality matrix and the data we analyse to identify the issuers that are best positioned to manage sustainability related challenges and opportunities, while generating value for both their businesses and broader society.

We define ESG factors based on the relative impact of each industry and its exposure to associated risks and opportunities that arise from changes in policies and regulations, technology, supply and demand, and stakeholder perception. We assign the ESG factors identified for each industry a weighting within the model, based on their materiality. The final ESG rating is the sum of the weighted average of each key matter.

SAM uses its own criteria to determine whether an issuance can be considered sustainable investment according to Article 2.17 of the SFDR in order to meet the minimum percentage of sustainable investment that characterizes the fund or investment or savings solution.

This analysis draws on the information provided by ESG data providers and SAM's weighting and materiality assessment methodology.

Our methodology identifies over 30 key ESG matters where issuers can generate environmental or social externalities that could translate into material impacts for the issuer, therefore representing risks and potential opportunities.

Our ESG rating analysis comprises these elements:

- Environmental factors: Any component of the issuer's activity that may represent an environmental issue such as greenhouse gas emissions, resource depletion, pollution, water management, and others.
- Social factors: Society-related matters that include workplace issues, labour standards, talent management, relationships with local communities, data privacy and security, and human rights.
- Governance factors: To assess the quality of the issuer's management, culture and ethics; the effectiveness of its governance systems to minimize the risk of mismanagement; and its ability to anticipate operational and legal risks that could lead to non-compliance.

We conduct multidimensional analysis on how each company manages these factors. It includes the existence of policies, target analysis, integration of management systems, performance of key performance factors, and other elements.

Outside the EU, we are making progress in training investment teams to embed ESG assessment and sustainable investment methodologies and standards with an approach that makes sense in each jurisdiction, as well as increasing the coverage of our data providers in certain markets (especially Latin America and Poland).

Engagement activities comprise constructive dialogue with investees about sustainable investment objectives and the qualitative and quantitative ESG factors that impact on them. This exercise can have varying aims: i) to drive their behaviour and activities towards enhancing transparency; ii) risk management and the opportunities associated with ESG factors; and iii) the impact on the sustainable investment objectives that particular investments or savings solutions pursue. Our Engagement policy sets out internal procedures, forms of engagement and different escalation processes where targets are not achieved.

Last, SAM exercises its right to vote independently in the companies it invests in under the scope and criteria outlined in its policy, which strengthens its influence on ESG and sustainability issues.

Insurance

In 2024, we focused on developing products to safeguard vulnerable groups and reflect situations in specific contexts or markets that have little protection. We'll continue to cooperate with our partners to promote this product offering and boost the management of our insurers' SRI investments.

Private Banking

Private Banking is contributing towards the objective of EUR 100 billion of SRI AuM in Wealth by 2025. Our third-party funds SRI AuM amounted to EUR 25.3 billion at 2024 year end, including committed capital to alternative funds.

In 2024, our global list of funds that are subject to advisory to clients comprised mostly SFDR Article 8 and 9 funds in the EU.

In 2024, we introduced new social metrics in the sustainability reports on the portfolio for our International Private Banking (IPB)

clients and published a series of papers for our Private Banking clients available on our global website, including papers around investment in climate adaptation vs mitigation, the evolution of businesses from a linear to circular economy, or green hydrogen and the energy transition.

We will embed ESG services in portfolio management and advisory services according to our clients' investment needs.

In 2024, *Global Finance* named us 'Best private bank for Social Responsibility' while *Euromoney* named us 'Best private bank for Sustainability' in Chile.

For more details, visit our website **santanderprivatebanking.com**

3.2.3 Environmental, social and climate change management

This section outlines how we manage these IRO:

- Finance activities (in any customer segment) that breach of the bank's policies and jeopardize the well-being of present and future generations.
- Potentially negative impact on the environment or society by failing to sufficiently involve stakeholders or use suitable customer identification and management mechanisms when providing finance to a customer or project.

i. Our ESCC policy

Grupo Santander recognises environmental and social issues (E&S) pose some of the biggest challenges for the long-term prosperity of the global economy, the well-being of people and society, and the ability of the natural environment to support life.

Santander pledges to help customers and economies in their efforts to transition to a low-carbon economy, by providing financial products and services based on their context and approach to environmentally and socially responsible business operations. This is an ongoing effort — at different rates depending on the market and with several external dependencies such as public policy, technological advances, consumer needs among other factors — requiring continuous engagement with customers in their transition to a low-carbon economy. It is also important that we monitor social issues that may arise, such as the involuntary displacement of local or indigenous populations, the health, safety and human rights of workers, and the impacts of business activities on communities and other stakeholders.

To support our fight against climate change, the Group will promote supporting customers navigate the transition to a low-carbon economy.

Grupo Santander:

- By 2030, will stop investing in, and/or providing financial services to clients for whom coal fired power generation represents directly more than 10% of revenues on a consolidated basis;
- No exposure to thermal coal mining worldwide by 2030; and
- Supports international standards and treaties.

Santander embeds environmental and social standards in risk management, focusing on priority sectors to support sustainable and inclusive growth and uphold human rights.

The Group applies the precautionary principle to the analysis and management of its main ESCC risks.

Our ESCC risk management policy (which is reviewed annually) defines the standards for investing in and, providing financial products and services to, companies and customers in oil & gas, power generation and distribution, mining and metals, and soft commodities (with particular focus on the financing of retail customers with activities dedicated to farming and ranching in the Amazon). It dictates prohibited activities[61] and those that require special attention for the aforementioned sectors.

For the purpose of this policy, we define financial products and services as transactions that entail credit risk, insurance, advisory services, equity, and asset management.

From a social perspective, the ESCC policy follows international standards and benchmarks such as the United Nations Global Compact, the Universal Declaration of Human Rights, the International Labour Organisation Declaration, the Convention on the Rights of the Child, the Rio Declaration on Environment and Development, the United Nations Convention against Corruption, the Equator Principles, and the standards for social and environmental performance and the explanatory notes of the International Finance Corporation (IFC).

The policy states that Grupo Santander will not directly invest in, or provide financial products and services to any of the following activities across any customer segment:

- Projects or activities for oil & gas extraction, power generation or transmission, mining, manufacturing, plantations or other major infrastructure projects that put areas classified as Ramsar Sites, World Heritage Sites or categories I, II, III or IV by the International Union for Conservation of Nature (IUCN) at risk.
- Projects that require free, prior and informed consent (FPIC) according to the IFC Performance Standard 7 – Indigenous Peoples and that fail to meet the standard, with no credible action plan to achieve compliance.

Moreover, we conduct a detailed analysis on CIB clients that operate in sectors subject to the ESCC policy, including any activity that entails the resettlement of indigenous populations and/or other vulnerable groups.

[61] To the extent required by applicable law, customers and transactions involving activities enumerated in this section will be subject to an enhanced due diligence process to determine the unique risks presented prior to decisioning.

We conduct environmental, social and climate change assessments in accordance with established procedures. These assessments are part of the risk management and control of our credit approval and investment decision work flows and governance. Since the Group's board of directors owns the policy, the individual or collective authorities that sanction these risks are responsible for ensuring that decisions are made in consideration of environmental, social and climate change risk and of the policy's standards.

Clients in applicable sectors[62] are assessed through a questionnaire completed by the financial manager, which is then reviewed by a team of analysts to perform a global ESCC risk assessment. ESCC assessments of Santander's CIB clients cover child labour, forced labour, workplace discrimination, freedom of association, working conditions, complaint mechanisms for employees and impacts on communities in relation to their own operations and their supply chain.

The ESCC risk and compliance departments deepen into cases that uncover red flags. We usually conduct this extended due diligence exercise alongside the client to deepen our understanding of issues and determine the existence (or not) of corrective or remediation measures. Moreover, in the client ESCC risk assessments, we analyse the existence and effectiveness of reporting channels available to affected communities, to understand if a process is in place to avoid and manage adverse impacts on communities due to their own activities or those of their supply chain.

The findings of the analysis (and its impact on credit and other risks) are escalated to the bank's risk approval committees and are considered in decision-making process.

According to the methodology we use to analyse customers' climate transition plans, we carry out an annual assessment of ESCC risk for CIB clients in sectors where we have set alignment targets (oil & gas, power generation, automotive, steel, and aviation) to classify them based on their greenhouse gas emissions, emissions targets, and transition risk management.

We continued to consider how ESCC risk affects our customers so as to make our risk assessments more rounded and offer customers support in their transition.

In 2024, the ESCC risk and compliance departments continued to work with the business units to strengthen the governance and the management of these risks in sustainable finance transactions. Our groups of experts responsible for reviewing and classifying operations as sustainable are the cornerstone of our risk management for these transactions.

In addition to the analysis performed by the ESCC risk teams, the Financial crime compliance (FCC) teams establish controls to mitigate the environmental crimes detailed in the next section.

For more details on environmental, social and climate change risk management, see section **2.3.2. 'Risk management cycle'.**

ii. Equator Principles

The Equator Principles (EP) are a voluntary framework for financial institutions to identify, assess and manage environmental and social risks when financing projects. We have been a signatory to the EP framework and applied these principles to project-related transactions (especially project and export finance) since 2009 according with its scope.

The Group has an internal procedure to manage the environmental and social (E&S) risks of project-related transactions. This procedure guides the application of the EP. The assessment of transactions that potentially require us to apply the EP starts with a preliminary assessment conducted by the Front Office. The area that manages ESCC risk under the EP sits in Santander CIB. CIB's ESCC Risk team oversees the Front Office's preliminary assessment and provides it with ad-hoc training and support. We conduct an environmental and social risk review for applicable transactions, based on the preliminary assessment findings. This review follows these guidelines:

- For projects with minimal or no adverse environmental and social risks and/or impacts (category C), the initial assessment is considered sufficient.
- For projects with potential limited adverse environmental and social risks and/or impacts that are few in number, generally site-specific, largely reversible and readily addressed through mitigation measures (category B) in designated countries, the Front Office must complete a due diligence questionnaire that includes the findings of the E&S risk assessment. The ESCC risk area provides guidance throughout this process.
- For category A (with potential significant adverse environmental and social risks and/or impacts that are diverse, irreversible or unprecedented) and B (projects that involve high-risk factors or are in non-designated countries), the ESCC risk area manages the due diligence procedure and prepares an E&S risk assessment report.

The findings of the E&S assessment form part of the application for financing that is submitted to the risk approval committees before a decision is made.

If approved, we continue to apply the Equator Principles when preparing all subsequent contractual documents, closing the transaction, and monitoring.

In the monitoring phase of a transaction, compliance with the E&S clauses, the implementation of the corresponding E&S Action Plans and compliance with the applicable E&S standards are monitored. When a transaction or material incident is identified during the life of the operation, measures could be taken in accordance with the provisions in the credit agreement, such as, for example, requiring the implementation of a Corrective Action Plan.

In 2024, we analysed 21 projects that fell within the scope of the Equator Principles (for more details, see SN.7.1. Green transition, table 5. 'Equator Principles').

[62] Sectors covered by the ESCC Risk management policy and additional tactical sectors included in the CIB Procedure, as well as other material businesses and sectors depending on the geography and local legal requirements.

Risk/impact management in local communities

As part of our due diligence under the EP, we assess and ensure that projects identify and manage environmental and social risks and impacts correctly and that they maintain a sound relationship with local communities according to international standards.

We pay special attention to, and ensure the correct management of, these situations as potential impacts of projects on communities:

- Involuntary resettlement/displacement (physical or economic) of people.
- Risks to the health and safety of neighbouring communities.
- Impacts on indigenous communities. In these cases, the project must obtain free, prior and informed consent (FPIC) under IFC Performance Standard 7.

iii. Management of principal adverse impacts (PAIS)

Asset management activities could generate non-intentional adverse impacts on society and the environment. Banco Santander and its asset management businesses disclose and manage the potential adverse impacts derived from the management of its portfolios, through the measurement of representative KPI of the main sustainability factors as detailed in the PAIS procedure document from SAM. When an adverse impact is detected, several aspects are assessed towards establishing mitigating mechanisms. Among others, we consider: impact severity, frequency, success rate of dialogue initiatives and level of exposure.

3.2.4 Community Support

This section outlines how we manage the following IRO:

I+ Contribution to education, employability and entrepreneurship, as well as to community development through support programmes.

i. Our approach

We support the communities where we operate by helping them address their social needs.

Santander's community support focuses on higher education, employability and entrepreneurship, complemented with the support on financial education and to vulnerable people. Moreover, we have a strong track record in supporting cultural and other social initiatives.

We make donations and other contributions to projects and initiatives either autonomously or in cooperation with other non-profit organizations and entities that share similar aims.

Santander has a sensitive issues policy, integrating the activity of donations, as well as a Guide on Community Support and People Helped, inspired by the Business for Societal impact (B4SI) standards. This Guide sets out the methodology for quantifying the contributions that both the parent company and our subsidiaries make. We also have a humanitarian crisis guide that outlines Santander's response to events or disasters with a social impact.

ii. Support for higher education, employability and entrepreneurship

103.8
million euros of support

2.2
million people and businesses helped

1,181
partnerships with universities and entities in 14 countries [63]

Santander has supported education, employability, and entrepreneurship for over **28 years.**

During this period, we have invested **over EUR 2.4 billion** in partnership with more than 1,100 universities and entities, helping **over 3.7 million people and businesses.** In 2024 alone, we allocated EUR 104 million to promoting education, employability and entrepreneurship, and helped 2.2 million people and businesses. This reinforces our objective with **EUR 400 million between 2023 and 2026** in these three pillars, that supports our purpose to help people and businesses prosper. Until 2024 we have allocated EUR 208.9 million against this ambition.

We help higher education institutions enhancing the university ecosystem through partnership agreements. We also help adults access and complete their higher education studies through grants and scholarships. Through lifelong learning opportunities, they can acquire and update the skills that will enable them to boost their job prospects. We provide training, resources and other benefits to help businesses and entrepreneurial projects create opportunities, grow and transform through each stage of their development.

1. Education

Our support for education involves grants and scholarships for students and researchers to access and complete their higher education studies. We also help universities to face their main challenges and strengthen their transformation in different areas, with a special focus on digitalisation. We do this through:

→ **Scholarships and grants** awarded in collaboration with universities and institutions of international prestige, which help with access to university, academic mobility, research or the opportunity to do internships.

→ **Agreements signed** with 1,181 universities, institutions and organisations in 14 countries.

[63] Includes universities, institutions and organizations that have an agreement with Santander Universities, Universia, Fundación Universia and Fundación Banco Santander. With activity from Santander Universities alone, the figure is 939 academic entities in 11 countries. Since 2024, Universia reports only agreements signed in the geographies where the Group operates.

→ **Campus Digital,** which offers an innovative relational model improving the life of the university community. It streamlines academic procedures and communications through an easy and simple experience, adapting to users' needs, and ensuring data privacy. It offers services such as digital credentials, tuition fee payments, certificates, schedules and discounts.

For more details, visit the website **mycampusdigital.com**

→ **Universia Network**, represents a global space for meetings, cooperation and joint reflection between universities in the Ibero-American higher education area.

→ **MetaRed** is a collaborative network of heads of public and private Ibero-American higher education institutions to discuss and work together on three of the biggest challenges that universities are facing: digital transformation (MetaRed TIC), university entrepreneurship (MetaRed X), and sustainability (MetaRed ESG).

For more details, visit the website **metared.org**

2. Employability

Our ambition to help people prosper through their upskilling and reskilling is embodied in our support for lifelong learning. This is a necessity demanded by both companies and society in order to respond to current and future challenges. Moreover, we facilitate access to employment in the early professional stages.

→ **Santander Open Academy** is a global platform for learning and professional development that offers, to any person, access to training to have better job opportunities.

It offers free courses and open learning for skills in high demand by the labour market.

In 2024, we launched short, direct access courses with unlimited seats and a certificate for participants to expand their knowledge and boost their skills anytime, anywhere.

For more details, visit the website **santanderopenacademy.com**

→ **Universia** is the platform through which Santander guides and posts job offers for young graduates and students who are coming to the end of their studies. It uses artificial intelligence to help them draw up their professional profile and uses online tests to measure their skills.

For more details, visit the website **universia.net**

→ **Fundación Universia,** a recognised international organisation, which participates in international forums of the United Nations and the International Labour Organization on topics related to inclusive culture. We bolster improvement of quality of life for people with disabilities and other vulnerable groups in educational and work environments.

654

scholarships and courses for students with disabilities and other vulnerable groups

1,180

people with disabilities and other vulnerable groups hired by companies

For more details, visit the website **fundacionuniversia.net**

3. Entrepreneurship

We help SMEs create opportunity, grow and transform.

→ **Santander X,** a global initiative that provides access to training, advice and resources (including benefits) needed to launch, scale up and transform a business.

We help entrepreneurs showcase the most impressive projects and connect with other businesses through Santander X 100, a dynamic, global community that offers them unique benefits.

For more details, visit the website **santanderx.com**

iii. Other community support programmes. Social action

We aim to complement our support for higher education, employability, and entrepreneurship, mainly through financial education and supporting vulnerable people.

62.5

EUR million in other community support programmes[64]

2.9

million people helped[65]

Financial education	Vulnerable people	Arts and culture
Enhanced knowledge and understanding of financial products and services	Reduced risk of exclusion and better quality of life for vulnerable people	Promote cultural events and programmes

On top of direct community action, we cooperate with, and channel our support through, local NGOs and social charities. Some partnerships are with the bank's foundations in Argentina, Spain, the US, Mexico, Portugal, Poland and the UK.

We target our support on different groups depending on their needs. Our support for vulnerable people focuses on sensitive groups (due to gender, disability, age, lack of digital skills, financial difficulty and other reasons). We usually target cultural activities at the general public, although we also include vulnerable groups to facilitate their access to events and programmes.

Volunteering

At Santander we encourage our employees to volunteer in initiatives that help the communities where we have a presence.

These initiatives, which the Group promotes and supports, seek to get employees to dedicate their time and use their skills and talent to support charitable causes, non-profit projects and organizations that benefit society.

Corporate volunteering is a valuable way for employees to engage with the community and contribute to a social cause. In particular, it aims to:

- contribute to the Group's community support objectives through the direct involvement of Group employees in volunteering programmes;
- foster a culture of inclusion by breaking down prejudices and stereotypes;
- enhance our employees' skills and work environment through collaboration; and
- contribute to the well-being of our employees through experiences that provide satisfaction, purpose and pride of belonging.

75 k

working hours volunteered

We have a global corporate volunteering guide that sets out a common framework for this activity. Moreover, each subsidiary runs initiatives based on the specific needs of its market. For instance:

- In Brazil, we offer volunteering opportunities related to financial education, entrepreneurship, employability and upholding the rights of children, teenagers and senior citizens. The programme also encourages Volunteering Groups, which carry out continuous and autonomous actions, and are a reference for mobilizing and involving other employees through the Volunteering Programme.
- At the Corporate Centre, we run initiatives to support the inclusion in the job market, mentoring programmes to help women victims of domestic violence find work, and coaching programmes to prevent early school-leaving.
- In Chile, we support students in their transition to higher education through a tutorial programme and give financial education to schoolchildren across the country through the "Misión Ahorro" programme. We also run emergency operations to help build basic shelter for people left vulnerable following fires or earthquakes.
- In Spain, on top of local activities that we run at our branches, we execute flagship projects such as the '*Finanzas para Mortales*' financial education programme, where our employees teach financially vulnerable groups; the 'Santander Natura' programme, where employees and their families help preserve the environment; and our Pro Bono volunteer programme, where volunteers' expertise helps solve the challenges that NGOs face so that they can continue to perform their work.
- In Mexico, we run numerous volunteering initiatives with a special focus on **reforestation and habitat conservation**, such as *Rally del Ajolote* (sporting events and reforestation) and a beach clean-up programme alongside WWF (World Wildlife Fund) México.
- Through Santander Tuiio, we delivered financial education sessions in schools to elementary education children on personal finance basic concepts, as well as delivering the financial health book "My first steps in finance".

[64] It includes the social contributions of the foundations linked to the Group.
[65] Based on the People Helped internal methodology, which considers international best practices. Calculated with partners' certified data or with conservative estimates based on recognized conversion factors.

Financial education

Financial education is a key component of community support. It aims to boost citizens' financial skills by providing the necessary tools and information to understand products, concepts and financial risks for better use and decision-making.

Santander promotes financial education through several initiatives that target the general public, with tailored content based on age and needs to foster financial inclusion and better financial health. In addition, and as outlined in examples above, financial education is a core component of volunteering initiatives across the bank.

Our initiatives follow international standards such as the OECD Principles, as set out in our guide to financial education, which also outlines the criteria for counting the number of beneficiaries.

We are also exploring different channels to foster financial education content and reach specific audiences, such as the use of social media as a way to engage with younger people on this subject.

In 2024, 4 million people accessed our financial education initiatives and content, which in social media considers only people engaging with the content (not the reach of the activity).

For more details on financial education, visit our website **santander.com/es/nuestro-compromiso/crecimiento- inclusivo-y-sostenible/educación-financiera**

Humanitarian crises

As an international bank that operates in several regions and markets, Santander is sensitive to global situations that can affect the well-being of individuals and communities. That's why we have a procedure to oversee our response to humanitarian crises.

We assess the severity of crises according to their scale and urgency following our corporate guide, which sets out the framework of action and governance for each situation. This helps make the bank's response to unexpected events as efficient and effective as possible.

In 2024, we analysed such events as the dana storm in Valencia (Spain), forest fires in the Valparaíso region (Chile), the floods in Rio Grande do Sul (Brazil), the earthquake in Gansu and Qinghai (China), and others.

In the case of the dana storms in Spain, since it devastated Valencia and its surroundings with special virulence, as well as other municipalities in Castilla-La Mancha and Andalucia, the Santander Group has been in contact with the teams in the affected areas and has implemented different measures to support and help both our clients, our teams and their families as well as the rest of those affected by the floods. Additionally, the Group has been in permanent contact with different NGOs, which are acting on the ground, to better understand their needs and channel the aid from the Group, that of our clients and employees in the best possible way.

Charitable foundations

Fundación Banco Santander, which is based in Spain, works to build a fair, inclusive and sustainable society by financing and running several cultural, educational, social and environmental projects.

In 2024, Santander made a donation to Fundación Banco Santander for a total of 22,167,105 Banco Santander shares. The donated shares are meant to help the foundation financially; it can use the dividends to cover some (if not all) of the cost of fulfilling its founding purposes.[66] These include managing the bank's art collection and financing numerous literary, educational, social, cultural and environmental productions and activities, in which the remodelling of the Santander's headquarters on Paseo de Pereda in Santander and our relations with universities in Spain will play an important role.

For more details, visit the website **fundacionbancosantander.com/es/fundacion/transparencia.**

We have other Santander foundations in countries where we operate (Argentina, the US, Mexico, Portugal, Poland and the UK), which boost the number of initiatives we run. Their focus varies according to local needs; for instance, in Argentina on art and culture; in Portugal on education, inclusion and culture; and in Poland on education for children and young people. Activities from these foundations are aligned with the bank's community support priorities.

For more details on our foundations in other countries, visit the websites **esg.santander.pl** (Poland), **fundacionsantander/argentina** (Argentina), and **fundacaosantanderportugal.pt** (Portugal).

3.3 Our customers

Our customer-centric approach is a fundamental lever for generating sustainable value[67], building a digital bank with branches and a multi-channel offering that covers all of our customers' financial needs. We operate through five global business segments that provide services to various types of clients, including individuals, small and medium-sized enterprises, large corporations, and public entities, among others[68].

This chapter focuses on individual customers who use the products and/or services offered by the Group and establish a contractual relationship with it. Include those clients who, due to their circumstances, may be particularly vulnerable to the marketing of products and services.

Impacts resulting from relationships with corporate clients are discussed in section 3.2.3 of Environmental, Social, and Climate Change Management.

[66] For more details, see Note 34 'Other equity instruments and own shares' in the 'Consolidated financial statements'.
[67] For more information on employee dialogue, see section 1.2 of Dialogue with our stakeholders.
[68] The actions outlined in this section are specific to Santander and not sector-wide

3.3.1 Conduct with customers

In this section we cover how Santander manages the following IRO:

R Potential losses due to claims or a reduction in the numbers of customers because of inadequate customer practices throughout their life cycle.

I- Negative impact on the customer if the bank fails to provide sufficient information on the product or service they are signing up for.

I- Negative impact on the customer if they do not have access to complaints channels or if, after making a complaint, the bank fails to take the necessary action.

Model principles

- Fair treatment
- Customer-focused product and service design
- Transparency in all customer engagement
- Responsible sales practices
- Responsible pricing
- Consideration of vulnerable customers or those in special circumstances, and prevention of overindebtedness
- Personal data processing
- Complaints handling
- Financial education
- Safeguarding consumer assets against fraud and misuse

Key processes

- Approval and ratification of products and services (Product and service approval policy)
- Customer conduct training
- Sales oversight, with special focus on the classification and suitability of products and services; advertising and transparency at the point of sale; and monitoring
- Remuneration of sales and support teams (Remuneration policy)
- Post-sales oversight, with special focus on recoveries, fraud management and complaints handling (Customer service and dissatisfaction management policy)
- Managing vulnerable customers and preventing overindebtedness (Vulnerable customers and prevention of overindebtedness policy)

Governance and remit

- Our Product governance and consumer protection area, part of the Compliance and conduct unit, develops and oversees how we follow our customer conduct risk model
- The board of directors oversees the Product and service approval policy, while local and corporate product governance forums assess and approve our products and services
- The board is also responsible for the Group Remuneration policy, while the remuneration and risk committees, with the support of the Human Resources and Compliance functions, monitor this policy's compliance
- Local and global compliance committees set our risk appetite and monitor compliance risk assessments (including customer conduct risk)

i. Customer conduct principles

Customer conduct risk model

Our customer conduct risk model approved by compliance and conduct committee, sets out the principles that underpin how we align customer engagement with our Simple, Personal and Fair culture and how we make that the products and services we offer adapt to our customers' needs while protect their rights[69]. This model also outlines the key processes, instruments and governance that enable us to mitigate and manage customer conduct risk at every stage of our relationship with them (product and service design, sales and post-sales).

The customer conduct risk model and the policies that underpin it are subject to strict internal governance that ensures they are properly communicated to all our stakeholders and transposed to the Group's subsidiaries. Moreover, we have several guides that cover the key processes of the entire customer relationship cycle and aim to help the units and functions implement internal regulations consistently.

Consumer protection and customer conduct risk mitigation are a basic pillar of the Group's strategy. The Compliance and conduct function gives shape to this through objectives and annual plans, using a methodology to monitor their effectiveness, determine the customer conduct risk profile in each unit, and set any appropriate correction measures.

In 2024, the Group focused on implementing the European Accessibility Directive in the applicable units, with specific plans to facilitate the accessibility of products, services, and channels, considering the necessary technological developments and user experience improvements.

Our risk appetite metrics for claims and internal events enable us to detect and manage customer queries and issues effectively and proactively. In 2024, while disputes related to mortgage fees in Spain and Swiss Franc mortgages in Poland impacted these metrics, our contact centres and protocols provided an appropriate response and solution for our customers.

For more information on internal conduct events, see **Note 25** of the annual accounts.

[69] For more information on our human rights commitment to our customers, see section 1.4 on our commitment to human rights.

ii. Product and service marketing and design

Product and service governance

The purpose of the Product and service approval policy is to set out the standards, processes and controls so that we design products and services according to the customer conduct risk model principles. This means products and services with appropriate features to meet the target audience's needs, reasonable pricing, and transparent marketing (i.e. the information we give to customers uses simple language and a clear format; is accurate and sufficient data; and is consistent and comparable so that customers can cross-check it with similar financial products and services). This transparency applies to all advertising, pre-contractual and contractual information, as well as throughout the product or service life cycle and across all channels.

The local and corporate product governance forums are responsible for implementing this policy. These forums are able to draw on document and assessment templates, which includes a review of contractual and briefing material on each product and service. We only approve products and services if all forum members vote unanimously in favour of them.

Conduct training

Training is a key way to boost knowledge of consumer protection. The Compliance function, with the support of Human Resources, draws up mandatory refresher training for all employees on managing and mitigating customer conduct risk. This course has a satisfactory compliance rate in every country. Moreover, every unit ensures strict compliance with the regulatory authorization required to provide services to customers in each country(e.g. MiFID licences in Europe). They also devise and monitor specific training programmes to arm sales teams with the necessary expertise to inform about and sell the products and services we offer.

Quality and conduct metrics in sales teams' remuneration

The Group follows a rule for at least 40% of sales units variable pay to be based on quality and conduct metrics. This promotes greater awareness and proactive and effective management of customer conduct risk, has a positive impact on transparency with customers, and helps us identify appropriate target audiences.

Sales monitoring

The Group has mechanisms to monitor products and services throughout their life cycle. These enable us to detect and manage (as early as possible) deterioration, failures in marketing and non-compliance with the terms and conditions under which they were approved. We analyse and monitor:

- Customer Voice: queries, complaints and surveys, are a key source of information to identify deficiencies in marketing and customer engagement, and to draw up improvement plans; and
- Sales metrics and controls: monitoring of the percentage of product or service cancellations shortly after sign-up. In 2024, this analysis allowed to set up improvement plans to strengthen welcome communications in different consumer entities, through telephone sales channels in Mexico and the governance of commercial campaigns in Poland.

iii. Post-sales

Conduct in fraud management

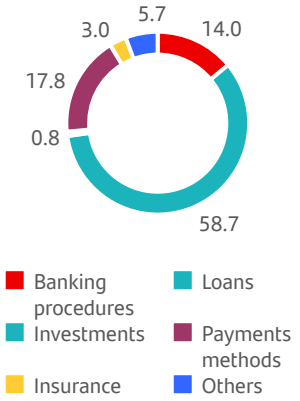
In July 2024, we embedded the guidelines for conduct in fraud management in the Grupo Santander Fraud policy, which was adopted by our subsidiaries in the second half of 2024. Moreover, following an internal review on conduct in fraud management in 2023, local units worked on aligning their improvement plans with Group standards in 2024. These plans include combining digital channels to register cases of fraud, bringing together customer voice in Group taxonomies, enhancing customer communications related to fraud cases, and bolstering controls in the first and second lines of defence in terms of conduct towards fraud victims, with special attention to vulnerable customers. They cover the period 2024-2026.

We also have additional fraud management controls based on NPS and quality assurance.

Complaints handling

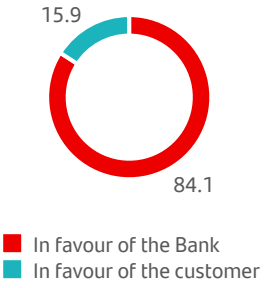
In 2024, we conducted a review of the channels on which customers can raise queries or complaints. The Customer service and dissatisfaction management policy outlines the principle of making multiple channels available to avoid the potential impact of not having adequate means for customers to convey their issues or dissatisfaction and to promote that we have channels that adapt to our customers' needs and preferences.

Additionally, customers can escalate complaints through external channels, such as the Financial Ombudsman, regulatory bodies, and consumer agencies, if they are not satisfied with the entity's resolution.



Most of our units are investing in digital channels to speed up case resolution and help customers self-manage certain queries, as well as to manage expectations better. Root-cause analysis governance and mitigation plans are an essential component of continuous improvement.

The units analyse customer complaints to identify their root causes —such as deficiencies in products, services, systems, channels, or communications—their impact, and the teams responsible for resolving them. These teams must submit clear action plans outlining what will be done, how, and when. Senior management regularly monitors progress and effectiveness. In 2024, all countries advanced in this area, with Spain leading efforts by strengthening governance and setting specific objectives. As a result, it achieved a 19% reduction in claims (excluding sector-wide events).



We have established a global, multidisciplinary working group to enhance our queries, requests and claims procedures and platforms. This includes embedding artificial intelligence in case registration and analysis.

Santander Brasil, in collaboration with the global Consumer Protection and Models and Data functions, developed "Viva Voz", a tool that uses artificial intelligence to handle large volumes of information and delve deeply and quickly into the root cause of customer complaints. With this tool, it has gone from analysing 3% of cases in two days to analysing 60% in one day and is aiming to reach 100%. Similarly, Santander España and Polska are piloting artificial intelligence solutions to enhance customer claims management.

Complaint type[A] (%)

Resolution[A] (%)

A. The Group uses the same standard claims metric for all geographies.

iv. Vulnerable customers

In this section we cover how Santander manages the following IRO:

I- Negative impact on the customer by failing to guarantee access to, or the use of, products and services that may present certain obstacles or weak spots.

The management of vulnerable families and businesses is a key pillar of Grupo Santander's strategy, as it can make a difference to performance, perception and long-term sustainability. We identified and considered our customers' difficulties and vulnerabilities, and trying to mitigate their potential impact. In 2024, we continued to make headway with embedding Group regulations[70] on vulnerable customers and the prevention of overindebtedness in every market where we operate. The aim is to provide a common approach and standards to avoid disparate management between countries.

The Group is following indicators used by the units to identify and monitor customers in special circumstances. We're also developing a methodology that will enable us to pinpoint potential signs of vulnerability in order to foresee and try to adapt services to the specific needs of certain customers.

To coordinate a common approach across our footprint, local units met with the global team every two months in 2024 to facilitate alignment in embedding the Group's vulnerable customer standards. We also launched a global training course on vulnerable customers so that all employees consider potential vulnerabilities and are aware of the lines of action in each case.

3.3.2 Financial inclusion and financial health

This section outlines how we manage the following IRO:

I+ Positive impact on customers due to the bank's offer of products and services that adapt to their needs and expectations and promote financial inclusion and health.

i. Financial health and inclusion as a key driver of social progress

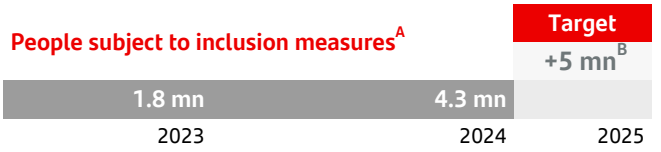
Financial health and inclusion are a priority for Santander in contributing to social progress and promoting prosperity and entrepreneurship.

In the markets where Santander operates, there are financial inclusion challenges that we strive to address with tailored business solutions.

To assess the significance of our proposition, we use the World Bank's Global Findex Database to calculate the number of unbanked, underbanked and financially distressed people due to access and financing issues in the markets where we operate as a retail bank. In particular, we:

- Considered different components of financial exclusion and aggregate indicators to cover all our target audiences.
- Defined an inclusive financial system as one that maximizes the use of financial products and services, access and financing.
- Measured involuntary financial exclusion through barriers that people who do not participate in the formal financial system perceive.
- Applied a correction factor that matches our business penetration rate in the markets where we operate.

[70] Approved in November 2023



Our ambition is for our financial inclusion initiatives to reach five million people between 2023 and 2025. This is consistent with our penetration rate in the markets where we operate and with the gap identified in our latest assessment.

Our processes pinpoint the needs of customers facing financial difficulty; develop products and services; and train our teams[71].

These processes align with our customer conduct model, vulnerable customer policy, and responsible banking and sustainability policy. We set out the accounting standards for initiatives and financially included individuals in our Financially included people guide, which applies to the entire Group. The guide includes these definitions:

- Unbanked: People who do not have a bank account or access to any banking services.
- Underbanked: People who, despite having a bank account, have difficulty accessing basic services (e.g. making deposits and withdrawals) or source financing informally.
- People in financial distress: People who earn less than their country's legal minimum wage or who are unable to cover basic living expenses.

This guide also enables us to use common metrics to monitor and manage access and financing initiatives (listed below) that contribute to our financial inclusion target:

In 2024, we financially included nearly 1 million people through access initiatives; and 1.6 million people through finance initiatives.

A. Based on internal financial inclusion methodology. Includes the principles, definitions and standards we use consistently across our footprint to count the number of people we include financially through initiatives, products and services for access and finance.
B. Cumulative figure since 2023.

Access

1 million

New people subject to financial inclusion measures related to access

We want to help unbanked and underbanked people enter the financial system and gain access to basic financial services, encouraging them to use financial services that are tailored to their needs and barriers, have greater control over their finances and enjoy faster and more secure transactions.

In 2024, our initiatives continued to:

- adapt to developing and mature market needs:
  - In developing markets, we focus on providing access to bank accounts and cash deposit and withdrawal services to unbanked and underbanked people. Our stand-out initiatives include partnerships with merchants in Mexico to offer Santander services, or the financial inclusion branches in Argentina.
  - In mature markets with high account penetration, but with an exodus of people from rural areas and an ageing population, we focus on continuity in access to basic financial services. Stand-out initiatives include Correos Cash and the waiving of fees for vulnerable customers in Spain.
- offer access amid humanitarian crises: making mobile branches available to remain close to our customers in the most affected areas and maintaining key financial services such as cash withdrawals, salary advance and payment holiday requests, and insurance. For more details on our actions during humanitarian crises, see section 3.2.4 'Supporting Communities'.
- promote inclusion: we are constantly adapting branches, products, services and channels for people with disabilities and senior citizens to be able to access them both in person and online.

All of this harnessing technology to drive financial inclusion, overcoming some of the barriers that prevent unbanked and underbanked people from accessing financial products and services.

[71] For more details, visit our website santander.com/informe-inclusion-financiera.

Access initiatives and services:

Promoting access to cash and transactions

We promote underserved communities get cash through our remote branches and agreements with private and public entities that widen our footprint.

Branches in underbanked and remote regions[A]

Partnerships to reach underserved communities[B]

Promoting digital access

We help people access the banking system so they can make payments; use basic, tailored financial services; take greater control of their finances; and make faster and more secure transactions.

Digital wallets and points of sale[C]

Basic accounts[D]

Financial solutions for vulnerable groups

We offer financial support to vulnerable groups so customers will have access to basic products and know how to use them.

Support to senior citizen customers[E]

We also have global initiatives such as GetNet, which provides digital payment services to individuals and merchants with a wide range of payments solutions, boosting simplicity, speed and security, that reaches underbanked segments improving their financial inclusion.

Finance

1.6 million

New people subject to financial inclusion measures related to finance

We promote financing for underbanked SMEs and entrepreneurs, as well as the basic needs of low-income population through products and services tailored to their needs.

Our microfinance proposition supports inclusive growth and economic development in Latin America, where the financial inclusion gap is wide. We have been offering microfinance services to low-income and underbanked entrepreneurs since 2002. We help our customers set up small businesses, which drive economic growth and social mobility.

Through these initiatives, we offer loans to boost the income-generating capacity of new ventures and help microentrepreneurs safeguard their business through financing that meets their working capital needs. A large portion of the customers under these initiatives are women, who are less likely to access financial services in developing markets.

In 2024, we continued to:

- evolve our business proposition from microcredit towards microfinance, by extending our customer value proposition through solutions that go beyond credit — basic accounts, financial education, microinsurance and other services.
- make business models more efficient, without jeopardizing the social impact of our proposition. For instance, we leveraged the use of technology to open low-cost mobile branches and improved handling procedures to minimize the time from microloan application to the funds being available to our customers.
- combine group and individual credit granting model, adjusting to our customers' circumstances and needs, high higher presence of individual model in Peru and Colombia, and growing — albeit at a lower rate — in Brazil and Mexico.

Other finance-based initiatives and services

Supporting customers in financial distress

We have debt relief programmes that include payment deferrals and line of credit extensions.

Financing low-income households' basic needs

We offer products and services that enable low-income households to access housing and meet other basic financial needs.

Supporting customers in financial distress[F]

Affordable housing supply[G]

Support for low-income households/people with difficulty accessing credit[H]

A. In Spain, branches in remote (or sparsely populated) areas to facilitate access to credit and combat social exclusion in communities of less than 10,000 inhabitants. In Portugal, branches in low-income, small or isolated regions, such as the Azores and Madeira. In Argentina, we have financial inclusion branches and remote agents in the marginal environment of Buenos Aires and vulnerable communities. In Poland, ATMs (Automated Teller Machines) in municipalities where there is no Santander branch or partner point of sale. In Uruguay, we have installed three mobile branches since 2020 to reach areas with low levels of banking penetration.
B. Agreements with Correos Cash in Spain, partnerships with retailers such as Oxxo and 7Eleven in Mexico, and agreements with third parties in Uruguay (e.g. Abitab, Red Pagos).
C. In Poland, we included the Cashless Poland programme to promote the use of payment terminals in localities where the use of digital media is low, and the use of our associated Partners Outlets points of sale. In Chile we included Mas Lucas.
D. In some countries, we have basic bank accounts that go beyond regulation in order to serve the bottom of the pyramid. For example, the Cuenta LIfe in Chile or the no-fee account for vulnerable customers in Spain.
E. In several countries we have value propositions aimed at the elderly. For example, tailor-made products for retirees in Mexico and Argentina, services such as Here & Now in Portugal to help seniors with limited digital skills, and third-party access initiatives in the UK to support seniors who need to be cared for.
F. We have programmes in many countries to help people with debt problems. In Portugal, we have the Iris programme to help customers manage defaults. In the UK, we help vulnerable customers get out of arrears with self-service tools and direct financial assistance. In Spain, we have financing programmes for vulnerable groups to relieve their mortgage debts.
G. In Spain, the bank participates in the Social Housing Fund, which facilitates renting for people on low income. It also has affordable rental housing. In the US, as part of its Communities plan, Santander US provides support for the construction, maintenance and rehabilitation of housing serving low- and moderate-income people.
H. We have initiatives to help groups with difficulties in accessing credit; among them, in Spain, we lend to SMEs at their risk limit; in the US, we lend to small businesses operating in low- and moderate-income communities; in Argentina, we lend to entrepreneurs with little credit history. In Mexico, we offer special credit programmes to people at the bottom of the pyramid.

ii. Progress on financial health

In 2024, we continued to make headway with a common approach to financial health. We define financial health as people's ability to manage finances to meet short-term needs and support long-term goals, bringing stability to avoid financial distress.

We run initiatives in all our markets to promote financial resilience, planning, security and control among our customers in general and, especially, the most vulnerable groups.

The solutions that help customers boost their financial health by making more informed decisions include tools to manage money better, debt calculators and advisory service, which together with financial education support our customers' financial health and better informed decisions.

Financial health must go hand in hand with financial inclusion so that people who access the financial system can manage their money responsibly and effectively. We complement this with financial education to narrow the knowledge gap on financial products and digital skills.

For more details on our financial education programmes for customers and non-customers alike, see section 3.2.4 'Community Support'.

In 2024 we have set metrics to monitor financial health, especially for over-indebted customers.

3.3.3 Privacy, data protection and cybersecurity

This section outlines how we manage these IRO:

I- Potential infringement of customers', employees' or shareholders' rights due to a lack of appropriate technical or organizational measures to protect their personal data according to law and the practices set by the Group.

I+ Education and awareness on cybersecurity issues to understand potential threats and mechanisms to avoid them.

R Potential losses due to fines or a reduction in the number of customers because of a failure to detect or respond effectively to breaches of privacy.

i. Privacy and data protection

The use of new technologies and progress with the digitalization of businesses have led to a rapid increase in the processing of personal data.

Our commitment to complying with regulation on the protection of personal data throughout their life cycle is key in this regard. Our corporate standards remain consistent with data protection and

privacy laws at all times, with an ethical and transparent management of personal data to enable individuals to exercise greater control over their data.

We apply measures to obtain and use only the data that is strictly necessary to process personal data for legitimate purposes. The aim of these technical and organizational measures is to preserve the confidentiality, integrity, availability and resilience of the systems and services that we use to process data; and thereby to achieve the correct protection of data subjects' rights and freedoms; and to boost individuals' and broader society's trust.

We created our compliance programme following the privacy standards to manage data protection risk correctly. It is based on:

- local subsidiaries' responsibility to abide by the General Data Protection Regulation (GDPR) and/or local regulation on data protection;
- a solid governance model consisting of:

1. corporate and local data protection policies.
2. a data protection officer (DPO) and/or privacy champions in each unit. We formally disclose appointees to local authorities.
3. a corporate oversight programme based on the monitoring of management indicators; annual reviews; and an annual monitoring forum sponsored by the Group Chief Compliance Officer where our units report on compliance status, key risks and focal points, and other key data protection matters.

Other measures that strengthen our data protection management are:

- a common, regular monitoring and reporting model for the units, including meetings that we document in minutes;
- procedures to manage security-related incidents and the risks that stem from the potentially unauthorized use of personal data. We also have specific plans of action, where required, which the corresponding areas manage;
- cooperation with third-party service providers that must comply with data protection regulation. All data processors are subject to a suitability test that we monitor through management indicators and review regularly;
- reviews on our compliance with data protection laws, which our Internal audit area performs as part of its annual programme;
- corporate tools that help us manage data protection-related tasks by bringing together and monitoring control information through indicators and the annual review programme. For instance, we regularly update our data processing inventory and report on indicators and security incidents;
- special training for DPOs and privacy champions as well as corporate initiatives and the sharing of best practice among units. In 2024, we ran a refresher course on data privacy by an external provider and initiatives on the back of it;
- employee training and awareness campaigns on data protection, which form part of our mandatory annual curriculum and that we monitor through management indicators; and
- special focus on regulatory developments to update and consolidate criteria, methodologies and documents.

In May we became aware of an unauthorized access to a Santander database hosted by a third-party provider. The bank's operations and systems were not affected, so customers were able to continue to transact securely.

Bank put in place protective actions and corrective actions for clients and employees:

- Affected individuals, where applicable, were notified the incident and dedicated channels were put in place to provide them with further information.
- Information was made public by Santander in its corporate website.
- The bank started an education campaign for clients and employees regarding the most well-known types of fraud. This campaign has been reinforced in response to the incident and to minimize future similar incidents.
- Santander also notified the relevant supervisors and authorities where the group has a presence, including the data protection agencies, prudential supervisors, resolution authorities, and in some jurisdictions law enforcement as required by local regulations.
- Regarding clients, the Fraud Prevention and Cybersecurity teams continue to be on alert and analysing any relevant behaviour that could be associated with cases that take advantage of the information in question. Also, where relevant and appropriate, fraud prevention controls have been reinforced, that aim to mitigate the possible impacts associated with this incident.

Containment was complete and corrective action has been implemented that will minimize the possibility of any similar unauthorized access.

ii. Cybersecurity

Cybersecurity provides vital support to our purpose of helping people and businesses prosper and our aim to provide customers with first-rate digital services.

We have a board- and subsidiary-board approved cybersecurity framework that sets out the governance, functions, roles and responsibilities to manage cybersecurity throughout the Group, including the role of the Chief Information Security Officer (CISO).

Our cybersecurity policies, which develop the cybersecurity framework, are based on international standards and subject to ongoing review in order to maintain and enhance safety levels in the Group. In 2024 we updated our Cybersecurity requirements policy for technical and business areas, which includes security provisions for the different domains.

To assess how we're doing on cybersecurity within the industry, we monitor our security rating provided by an independent third party. *Bitsight Company* gives us with a score between 250 and 900 (with 740-900 considered "Advanced") based on public information and externally visible network traffic and systems. In 2024, we scored 790 points, which put us in the upper quartile among our peers and meant that we hit our target.

Protecting our customers' and employees' information is the responsibility of every Santander employee. We outline this in another policy under our cybersecurity framework: Cybersecurity standards for the protection of Santander, which sets out the principles that we must follow. En 2024, we ran these cybersecurity awareness initiatives for our teams:

- Regular ethical phishing exercises to strengthen employees' and partners' resilience to cyber threats.
- Promote a culture of reporting suspicious incidents or messages through all available channels.
- Update to our mandatory cybersecurity training for employees, including security recommendations against malicious attacks by email, text message or phone call, deepfake, phishing, social engineering, and other threats.
- Specialized training for high-risk groups such as payment agents, IT professionals and developers, digital asset owners, board members, and executives and their support teams.
- Specialized fraud training for *contact centre* agents and branch employees.
- Internal awareness campaigns for all Group employees to keep them up to date with the latest cybersecurity and fraud trends.

To boost the protection of our customers *online*, we ran several initiatives that we assess by measuring their impact. In 2024, these campaigns reached 58% engagement (far exceeding the 10% market benchmark):

- Cyber Heroes, an interactive campaign where our customers test their knowledge of online security and fraud prevention in realistic scenarios. It's available in Argentina, Brazil, Chile, Mexico, Portugal, Spain, Poland, and the UK.
- Awareness workshops for retail and corporate customers at our branches to explain online threats and how they can reduce them.
- *Por una vida online y corriente* ('Everyday Cyber'), a global cybersecurity awareness campaign to help our customers adopt better online security and fraud detection habits.
- Corporate sponsorships, such as Ferrari and League of Legends (an *online* strategy game), which help us engage more audiences using their unique tones and language. These campaigns follow a multi-channel strategy to reach a global impact.
- In other Santander markets, our "Obvious Passwords" cyber campaign in Uruguay received local recognition for its work in raising awareness on such a hot topic as online security for customers.
- Titania, remains one of Santander's key initiatives to raise awareness and promote learning about cybersecurity in the form of a fiction podcast. With over two million plays, it received the prizes for Best Podcast and Best Branded Content at the Ondas Awards in Spain.

We run these campaigns through the Group's numerous digital channels. What's more, users can report suspicious messages by writing to **reportphishing@gruposantander.com.**

In 2024, we continued to promote collaboration on cybersecurity and online fraud prevention with public and private organizations:

- Santander plays a key role in the Financial Services Information Sharing and Analysis Center (FS-ISAC) for the exchange of information in Europe and is the European board's current chair. This organization, established in The Hague, has more than 1,000 members from 174 entities, including major banks, Swift and Europol.
- Santander is part of the leadership team of the US Ransomware Task Force, whose objective is to improve prevention and response capabilities against ransomware attacks.
- Santander contributes to the World Economic Forum's (WEF) initiatives to fight cybercrime. This includes the Cybercrime Atlas, which aims to disrupt cyber crime networks. We also participate in several working groups to promote cybersecurity talent through public-private partnerships; develop a cybersecurity resilience plan; and contribute to narrowing the cybersecurity skills and knowledge gap.
- We work on key cybersecurity and fraud prevention initiatives with other entities and organizations such as the Institute of International Finance (IIF), the European Financial Services Round Table (EFR), the European Banking Federation, DigitalEurope, and others.

For more details on our cybersecurity plan and the initiatives undertaken during the year, see section **5. 'Research, development and innovation (R&D&I)'** in the 'Economic and financial review' chapter; and section **'5.2 Operational risk management'** in the 'Risk, compliance & conduct management' chapter.

4. BUSINESS CONDUCT

(Governance information)

4.1 Corporate culture

Santander Way

We are a global company, guided by a common culture, The Santander Way. It is aligned with our corporate strategy and it is the basis of our success. Our values (Simple, Personal and Fair), our corporate behaviours (TEAMS), our leadership principles and our robust risk culture (Risk Pro) guide us every day:

- We continued to promote our behaviours and leadership principles in the Group's talent processes, as well as promoting them among our leaders for them to be an example of our culture.
- We have intensified our efforts to give our employees the necessary tools and resources to improve their competencies and employability, aligning us with the most critic business and market demands.
- This year we evolved Dojo, our digital learning platform, that offers a personalized offer based on current and future roles, promoting a culture of self-development and continuous learning.
- We continued to assess how to improve our efforts through our employee listening programme - YourVoice, and we have developed action planes to keep making a better place to work.
- We continued to promote our culture through our performance review, MyContribution, where 50% is based on 'what' we do, 40% on 'how' we do it and 10% on our risk management.
- All the above is sustained by our Global Culture Policy, which sets the foundations, guidelines and standards to foster a coherent culture across Banco Santander.

Our **values**

Everyone's business

4.2 Ethical conduct

In this section we cover how Santander manages the following IRO:

I+ Act responsibly and consider investors' interests and the impact on employees, broader society and the environment; pay taxes to support the distribution of wealth.

I- Harm broader society through bribery or corruption.

R Risk stemming from improper conduct that makes illicit funds or assets appear legitimate and, therefore, facilitates illegal activity or to benefit from it.

4.2.1 Conduct standards

Our General code of conduct (GCC) sets out the behaviours and values that all Grupo Santander employees must abide by when engaging with colleagues, customers, vendors and broader society. It helps promote a solid risk management and compliance culture and acts as a mechanism to prevent the risks we are exposed to.

The GCC promotes equal opportunity, non-discrimination, zero tolerance for sexual or work-related harassment, respect for others, work-life balance, human rights, and environmental protection.

The Grupo Santander board of directors approves the GCC, which all Group employees — general workforce, top management and members of the management bodies of the subsidiaries that make up Grupo Santander — must be aware of and comply with.

Available on our corporate website for all stakeholders to read, it is in force in every Group subsidiary.

It includes a message from our Executive Chair on the importance of having a solid and common corporate culture that all Santander employees are on board with. Subsidiaries' versions also have a message from their local CEO.

The GCC's core implementation mechanisms are:

i. Mandatory training for employees on the GCC through an annual course that instils the guidelines they must follow in their day-to-day to prevent possible risks, such as the Group's penal responsibility; how to handle conflicts of interest according to our policy,[72] and what to do if they receive gifts and invitations from people outside Grupo Santander.
We supplement GCC training with a statement that reinforces our employees' pledge to comply with it.

ii. #YourConductMatters: Campaigns via email, Intranet and other media to boost employees' awareness of the GCC, as well as of Canal Abierto and the latest whistleblower protection laws.

iii. The Compliance area, which deals with employees' queries on the enforcement of the GCC.

iv. *Canal Abierto,* our whistleblowing channel where employees and stakeholders can report violations of the GCC and of our corporate behaviours.

v. Breaches to the GCC are managed and sanctioned in accordance with applicable regulations.

Our risk appetite metrics include monitoring of employees' completion of mandatory training on the GCC. Every quarter, we gather completion data for every unit, which currently stands at 99,1% at December 2024. Thus, there is no requirement to put remediation plans in place.

Moreover, mandatory training forms part of our employees' annual performance review, which acts as an incentive to complete it in due time.

We also use another management metric to identify how many incidents reported to the Group's ethical channels are linked to violations of the GCC.

For more details, see section **7.2 'Compliance and conduct risk management'** in the 'Risk management and compliance' chapter.

4.2.2 Responsible taxation

The Group's tax strategy is consistent with our business strategy. Our principles of action in tax matters, which apply to all our entities, must align with our purpose of helping people and businesses prosper and with our aim to be the best open financial services platform by acting responsibly and earning the lasting loyalty of our employees, customers, shareholders and communities. The board of directors approves our tax strategy and revises it regularly.

The Group's tax risk management and control, which draws on our internal control model, sets out the actions to follow our tax strategy and the principles that underpin it.

We participate in cooperative compliance initiatives led by tax authorities. Since 2010, we've adhered to the Spanish Code of Good Tax Practices and the UK Code of Practice on Taxation for Banks, and more recently, in 2022, to the Portuguese Code of Good Tax Practices. Since 2015, we've voluntarily submitted an annual Tax Transparency Report to Spain's Tax Authority.

The principles of Grupo Santander's tax strategy must enable us to make appropriate contributions according to the value creation in each of the jurisdictions where we operate, as well as to comply with local laws.

Core principles of Santander's tax strategy

- Satisfy our tax obligations based on a reasonable interpretation of tax laws, grounded on their spirit and intention.
- Respect the rules on transfer pricing and pay taxes in each jurisdiction according to our operations, assumed risks and profits.
- Not give tax advice or planning strategies when marketing and selling financial products and services. Not engage in

[72] The Conflicts of Interest Policy has been updated to align it with the General Code of Conduct (updated in 2024) and to simplify it. In addition, the Procurement Management Conduct Policy has been integrated into this policy.

transactions or activities that enable our customers to avoid paying taxes.

- Communicate Santander's total tax contribution clearly, distinguishing between taxes borne by the Group and by third parties for each jurisdiction.
- Not create, or acquire a stake in, entities registered in countries or territories considered 'non-cooperative jurisdictions' without board approval; and properly monitor the Group's operations in such territories.

For more details on the Group's tax strategy, visit our corporate website **santander.com.**

The Group's tax contribution and the relevant role that our subsidiaries play in the effective application of their respective jurisdiction's tax systems are a key component of the sustainable and responsible banking framework we pledge to follow and our contribution to sustainable and inclusive growth.

In 2024, the Group paid EUR 22.5 billion in taxes, of which EUR 10.9 billion account for taxes we paid directly to the tax authorities (57.5% of income before taxes) and the rest for collected taxes originating from our business operations with third parties.

The taxes the Group paid directly are part of the cash flow statement and mainly correspond to the income tax paid in 2024 (EUR 5.9 billion at an effective rate of 30.9%).

There is usually a mismatch in the taxes we pay directly and those recorded in the financial statements because the payment date set by the laws of each country is often different to the accrual date of the income or the transactions subject to tax. Income tax expense recorded for the year amounts to EUR 5.3 billion, which means an effective rate of 27.8% (see Note 27 to the consolidated report).

For more details on the Group's tax contribution, see section SN **7.7 'Tax contribution'.**

4.2.3 Financial crime compliance (FCC)

Grupo Santander is firmly committed to the fight against financial crime and compliance with financial crime prevention regulation in every market where we operate.

Our Group board-approved and subsidiary-ratified **Corporate financial crime compliance** (FCC) framework sets out the key principles for preventing financial crime, which underpin these programmes: the anti-money laundering and terrorism financing prevention programme (AML/CFT); the sanctions programme; and, since 2023, the anti-bribery and anti-corruption programme (ABC).

This framework is available to all employees and interested third parties. Moreover, we use information channels to raise awareness of the importance of financial crime compliance. We reach out to all our stakeholders through annual training programmes, communications channels (corporate and subsidiary Intranet sites), awareness campaigns, internal newsletters and best practices so that they can learn about and understand their responsibilities across the Group's entire operations.

The policies that build on this framework (including customer due diligence — CDD — procedures) are designed according to domestic and international financial crime regulation to manage and mitigate the impacts and risks related to FCC and protect the Group's integrity in all our businesses and operations. We constantly review and update our policies to remain consistent with regulatory amendments and new and ever-changing external threats.

Moreover, we have a common oversight methodology that enables us to verify that all our operations comply with this framework under the most demanding, standardized criteria that the centralized and technical FCC units in our markets endorse. These units also play a crucial role in promoting FCC culture and awareness to all Grupo Santander employees.

The central and subsidiary-based Financial Crime Prevention units engage in constant dialogue with all the Group's businesses and functions to identify new risk types, overcome emerging challenges to prevent those risks, and implement risk management, control and mitigation best practice. Some of the salient responsible banking topics to highlight are:

For more details on our provisions, see Note 25 of this report.

People in special situations

Our FCC onboarding supports the Group's ambition to help people in special situations[73] get access to financial services and requires business units to mitigate the potential financial crime risk related to these groups, based on objective criteria and compliance with FCC regulation.

Our mandatory FCC procedures (identification, risk segmentation and due diligence) for people in special situations to access to banking services and the document updates we perform under our FCC framework are free of bias and subject to strict compliance with the law. Moreover, the Group has been and will continue to run remote and in-person onboarding that gives equal access and opportunity that best adapt to each customers' circumstances.

People trafficking and exploitation environmental crime

Our customer risk assessment considers the risks stemming from the sectors that our customers operate in. To categorize a sector, we consider exposure to corrupt practices, people trafficking, modern slavery, labour exploitation, child abuse and environmental crime. We subject these sectors to further know-your-customer (KYC) due diligence to be absolutely sure of their level of exposure or link to those types of practices. We also have transaction control systems that enable us to detect irregular movements that may come from or be related to such practices.

[73] People in special situations (non-exhaustive list): individuals living in extremely rural areas, those residing in care facilities or pensioners, people unable to manage their financial affairs, gender expression, students and young people, individuals living in shelters or refuges, prisoners and those on parole, international students, economic migrants, refugees, and isolated individuals.

Grupo Santander plays an active role in public-private sector initiatives and specialist forums where we provide financial crime prevention knowledge, expertise and analysis. As a global bank that offers a wide range of financial products and services, we have a deep understanding of the risks related to our sector. We are firmly committed to the integrity of the financial system and the development of effective solutions to boost cooperation between the public and private sectors in tackling complex and global challenges.

Bribery and corruption

In 2024, we continued to implement our ABC programme, which is also subject to constant review and update in line with the rest of our policies.

We conduct a risk and control self-assessment (RCSA) in all our subsidiaries and units to identify residual risk within the organization.

It involves assessing the inherent risks of our business activities in terms of financial crime, with money laundering and terrorism financing key factors and bribery and corruption also factors that we consider. Marketing, Sponsorships, Vendor Management and Human Resources are the areas with the highest exposure to the ABC risk taxonomy. In 2024, we continued to enhance our awareness strategy, which is based on the programmes included under our corporate framework, by combining basic training with customized programmes. Throughout the year, we ran technical sessions, FCC risk awareness workshops, courses on ABC risks for procurement staff, and specialized training for board members.

Thus the Group's annual programmes cover FCC risks sufficiently. Our training plans, which we supplement with compliance programmes, help raise awareness among all the Group's employees.

As one of our KPI, the number of employees we train in the Group highlights our firm commitment to mitigating bribery, corruption and other FCC risks. This cover all risks functions takers. In particular:

- 166,199 employees trained in FCC.

In 2024, we continued to bolster our assessment and mitigation of the risks related to outsourcing and supplier relations in order to automate the controls stemming from the ABC programme. To support this initiative, Group employees received specialized training on ABC and our code of conduct. This is a step forward that bolsters Santander's operational resilience and regulatory compliance significantly.

For more detailed information on this issue, see section **4.4 'Our suppliers'.**

Detecting and managing FCC incidents

Per FCC laws, the financial intelligence units in all our markets have a robust system to detect, investigate, respond to and inform the authorities of suspicious transactions in terms of FCC (including those with indications of bribery or corruption). This system includes internal controls, lines of action and independent investigation committees that operate outside of the chain of command to preserve impartial incident management. The findings of these investigations are reported regularly to the Group's management and oversight bodies.

Highlights of key activities related to detection and cooperation with authorities activities in 2024 include:

231,810
disclosures to authorities

453,175
investigations conducted

Moreover, our whistleblowing channel, which we manage according to the Group General code of conduct and *Canal Abierto* policy, is where individuals can report violations of laws and internal compliance regulations related to the fight against financial crime (FCC).

In accordance with the established criteria[74], the Group has no record of any judicial or administrative proceedings in relation to corruption and anti-bribery, nor in relation to anti-money laundering and terrorism financing.

For more detailed information on this issue, see section **4.2.1 'Conduct standards'.**

For more detailed information on this issue, see section **4.3.1 'Canal Abierto'.**

[74] Reference is made in this Sustainability statement to judicial and administrative proceedings that have finalised during 2024 with a firm conviction, sanction or fine against an entity of the Group, which are relevant to the Group due to their materiality.

4.3 Ethical channels

In this section we cover how Santander manages these IRO:

I+ Protect the confidentiality of users of the bank's ethical channel and have an effective reporting system in place that follows robust principles and procedures.

I- Negative impact on the environment or broader society by failing to implement measures to resolve incidents through complaints or reporting channels or due to a lack of continuous improvement actions.

4.3.1 Canal Abierto

Canal Abierto is an anonymous and confidential Grupo Santander channel to report unethical conduct. It protects whistleblowers by expressly prohibiting reprisals or any negative consequence against them. Every unit in the Group administers its own ethical channel in different languages (including the local tongue) according to the common standards set out in the *Canal Abierto* policy since 2020.

Minimum standards applicable to all channels include subsidiary CEO endorsement; communication to employees of the importance of using the channel; information on how incidents have been handled and lessons learned; easy access to the channel and anonymity (if desired); external platforms to receive reports according to best practice; mechanisms to manage conflicts of interest in internal investigations of reports; and regular internal audits.

The board of directors approved the *Canal Abierto* policy and the related usage and operation procedure, and brought the Banco Santander channel under the Chief Compliance Officer's direct remit. These policies and procedures are available to Group employees and stakeholders on our corporate website and the Canal Abierto platform.

Canal Abierto is available to employees on Santander Now (Intranet) and to any Banco Santander stakeholder through our corporate website and the Canal Abierto platform.

Canal Abierto is mainly set up to receive reports from employees; however, some subsidiaries' local channels are open to vendors, customers and other stakeholders, who can report violations of the GCC. Business incidents or complaints outside of *Canal Abierto*'s scope are not accepted on these channels.

On *Canal Abierto*, whistleblowers can report their suspicions about professional conduct related to:

- unlawful acts at the workplace;
- irregularities or breaches of the General code of conduct and its implementing regulation that may be subject to disciplinary action;
- improper accounting or auditing practices, internal control or influence on external auditors (SOX);
- violations of anti-money laundering and terrorism financing laws or of our internal regulations to comply with those laws, as well as acts of corruption and bribery;
- violations of securities market laws;
- conduct that may involve an act that infringes the law or any other regulation and, in particular, a serious or very serious criminal or administrative offence or infringement of European Union law; and
- acts or conduct that go against the Group's corporate behaviours.

Santander pledges to handle reports received through *Canal Abierto* in a diligent, independent and objective manner for the benefit of the parties involved. This is a protective measure for the people who communicate in good faith through the channel, as well as for anyone else who takes part of the related internal investigations. The following criteria, which we set out in the Group's *Canal Abierto* policy, reflect that pledge:

- Appropriate handling of the reports received, notwithstanding their possible rejection should they fall under any of the cases provided for in internal regulations or if it is considered that there are no grounds for a case.
- 60-day processing time, which could be extended by up to 30 days for cases that are considered especially complex.
- Conflict of interest management during the investigation of cases, in which anyone who may have a conflict of interest with the persons involved in the matter will refrain from taking part. The usage and operation procedure details the teams tasked with investigating each case in relation to the type of report.
- The prohibition of reprisals against employees or other stakeholders who report, in good faith, breaches of internal or external regulations or conduct that does not align with our corporate behaviours, for having merely accessed an ethical channel.

Every year, our employees undertake a mandatory training course on the General code of conduct that includes a module on the importance of using *Canal Abierto*.

Moreover, we raise awareness of *Canal Abierto* and it assurances among our employees through email and other channels that detail statistics on the handling of the reports received, the channel's features, when to use it, and other information.

On an annual basis, the compliance function prepares a joint report for the risk supervision, regulation and compliance committee and the audit committee, informing their members about the activity of the Group's channels, key statistics, and other matters related to Canal Abierto.

The Compliance area aims to enhance how we manage and analyse the Group's ethical channels in order to keep our governing bodies informed of the risks that we may spot, the key concerns of employees and stakeholders, and the action plans we put in place to reinforce our ethical and compliance culture.

We collect data on the Group's ethical channels every quarter in relation to the number and type of reports received, and the measures taken.

An external auditor reviews those data regularly to ensure their traceability and integrity.

In 2024, 4,437 reports were received, including 216 reports from third parties (163 from customers and 53 from vendors).

	2024
Reports received[A]	**4,437**
reports received over total headcount	2.1%
Categories of received reports	
Breaches to the GCC	**2,286**
Marketing of products and services	321
Relative to privacy/security and confidentiality of information	116
Internal fraud	292
Harassment[B]	1,094
Equal opportunities and non-discrimination	132
Conflicts of interest/activities outside the Group	219
Other breaches to the GCC[C]	112
Cases of Human Resources[D]	**1,754**
Other typologies[E]	**397**
Closed reports	**4,122**
Disciplinary actions	**715**
which led to dismissals	393
Dismissals over total headcount	0.2%

A. Scope includes companies in: Argentina, Brazil, Chile, Spain, Mexico, Poland, Portugal, United Kingdom, United States, Uruguay, Colombia, Peru, Switzerland, Bahamas, and Digital Consumer Bank subsidiaries and SCIB branches. In 2023, reports received were 3,611. The increase in the number of cases received is due to the fact that in 2024 a wider perimeter of business units was taken into account, including banking and non-banking units.

B. Harassment (according to CSRD regulation) is defined as a situation where an unwanted conduct related to a protected ground of discrimination (for example, gender under Directive 2006/54/EC of the European Parliament and of the Council (15), or workplace harassment among others) occurs with the purpose or effect of violating the dignity of a person, and of creating an intimidating, hostile, degrading, humiliating or offensive environment. Over the total communications received in this category, 89% were of workplace harassment.

C. It includes reports relative to Anti-money laundering and terrorist financing and sanctions; cybersecurity, gifts and invitations, corruption and bribery, market abuse and antitrust. The Group received 14 reports in 2024 regarding corruption, which led to 3 dismissals.

D. It includes reports relative to breach of corporate behaviours, labour regulations and serious acts of disrespect.

E. It includes reports relative to external fraud, accounting and auditing and any other breach of the Group's legal or internal regulations, policies or procedures in relation to functional or organizational aspects not mentioned in the categories above.

In accordance with the established criteria[75], the Group:

- has no record of any judicial proceedings in relation to incidents of discrimination or violation of fundamental rights.
- has no record of cases involving employees that refer to serious human rights incidents.

4.4 Our suppliers

In this section we cover how Santander manages these IRO:

I+ Promote responsible practices among vendors; engage with them, assess their ESG performance and give them recommendations and tools to improve.

R Potential risk from failing to ensure the operational resilience of the value chain by assessing vendors' solvency, reputation and compliance with the law.

4.4.1 Acting responsibly towards suppliers

Our outsourcing and third-party management model and third-party certification policy (which apply in all our markets) provide a methodology so that our suppliers meet the Group's minimum requirements to avoid risks that stem from substandard operational resilience, solvency, reputational control and regulatory compliance.

Moreover, to promote responsible practices in our supply chain, we have a supplier ESG certification methodology[76] that supplements the third-party certification policy with the aim of identifying the suppliers that pose the greatest risk in terms of sustainability. This methodology also helps us determine which controls to adopt according to the risk identified.

As a driver of the Global Compact training programme, we're supporting our suppliers in their transition through courses to boost knowledge on sustainability and the resources needed to implement it.

Sustainability in procurement

In 2024, we began embedding the new ESG approval methodology in the Group, that enables us to:

[75] More detail see previous footnote.
[76] Applicable in accordance with local regulations.

- Pre-classify all our suppliers according to their sector's environmental and social exposure[77].
- Give our suppliers a final ESG risk classification as low, medium or high, through adjusting the pre-classification with a survey considering other factors as country risk, number of employees, and company-specific environmental traits.

As at 2024 year end, we had assessed 487 suppliers[78] identified with ESG risk. We plan to continue embedding this methodology and complete assessments by giving all our suppliers a final risk classification over the next two years.

This assessment includes such ESG aspects as carbon footprint calculation, inclusion in terms of gender and people with disabilities, flexi-working, minimum wage and good governance practices, codes of conduct and anti-corruption policies, human and labour rights recognition, and other elements set out in international standards such as the United Nations Global Compact.

We supplement our supplier assessments with remediation plans, where necessary, based on our findings. This helps our suppliers in their transformation and compliance with domestic, European and international ESG regulatory frameworks.

Sustainability in supplier negotiations

Negotiations to procure certain products and services such as cards, electricity and corporate vehicles include mandatory and specific sustainability requirements that we embed in purchasing specifications.

Moreover, we request ESG information in the tenders of other products and services that also have a vast environmental and social impact, such as purchases of ATMs (Automated Teller Machines) and hardware, and the transportation of cash. This information, which in 2024 we considered for illustrative purposes, includes the product's or service's carbon footprint, the use of recycled or renewable materials, energy efficiency, accessibility for people with disabilities, and compliance with social, labour and environmental laws in the supply chain.

Other key aspects

→ The Group has a corporate tool to enhance and standardize the certification of higher risk suppliers in all our core markets as well as to review key risks such as cybersecurity, business continuity, physical security, facilities and data protection, anti-bribery and corruption, data integrity and other additional risks.

→ We continue to build up expert teams in our markets to consider ESG standards in negotiations and risks assessments under the new methodology.

→ We're working to extend our ethical channels for suppliers to the rest of our core markets.

4.4.2 Supplier payments practices

→ **EUR 11.6 billion** paid to suppliers. 89% are local and account for 88%[79] of total procurement volume.

The Group fully complies with the maximum payment terms prescribed by law. Our average is 15 days (we paid 81% of invoices within the maximum period). We have a cost model that oversees payments to third parties, and is expected to be complemented with specific controls for SMEs. There are no significant differences found in payment terms to suppliers. Likewise, the Group has no record of any judicial or administrative proceedings related to non-payment to suppliers.[80]

[77] Based on S&P's ESG Risk Atlas.
[78] New metric not comparable to 2023 information. Main companies of the Group in: Argentina, Brazil, Chile, Colombia, Germany, Mexico, Portugal, Peru, Spain, United Kingdom and Uruguay, and other geographies in which Digital Consumer Bank operates such as Italy.
[79] Main companies of the Group in: Argentina, Brazil, Chile, Colombia, Germany, Mexico, Portugal, Poland, Peru, Spain, United Kingdom, United States and Uruguay, and other geographies in which Digital Consumer Bank operates such as Italy and Nordics.
[80] Reference is made in this Sustainability statement to judicial and administrative proceedings related to non-payment to suppliers which are ongoing during 2024 and are relevant to the Group due to their materiality.

SUSTAINABILITY NOTES

SN 1. Introduction, basis of presentation of the Sustainability statement and other information

a) Introduction

This report is the 'Consolidated non-financial information statement and sustainability information' of Banco Santander, S.A. and its subsidiaries". It provides detailed information in accordance with Directive (EU) 2022/2464 on corporate information on sustainability and Commission Delegated Regulation (EU) 2023/2772. It also includes the information necessary to comply in accordance with Art.49, sections 5, 6, 7, 8 and 9 of the Spanish Commercial Code as amended by Act 11/2018, which transposes into Spanish law Directive 2014/95/EU of the European Parliament and of the Council of 22 October 2014 amending Directive 2013/34/EU as regards disclosure of non-financial and diversity information. The Sustainability statement forms part of the consolidated directors' report of Santander Group and the board of directors approved it on 25 February 2024.

b) Scope of information

The scope of this document covers the **core activities of the Group and its subsidiaries** from 1 January to 31 December 2024 and is prepared following the same consolidated basis (principles, accounting policies and criteria) as the financial statements and with the criteria differences set out in this table:

Topics	Scope of information
Climate, our transition plan (Environmental information)	
Supporting our customers in the green transition	
Green finance	Corporate & Investment Banking.
Financing of electric vehicles	Digital Consumer Bank auto loan portfolio.
Purchase of cards made of sustainable materials	Main companies of the Group in: Argentina, Brazil, Chile, México, Poland, Portugal, Spain, United Kingdom and Uruguay.
Embedding ESG in risk management	
Portfolio exposure to climatic sectors	Full Group scope
Equator Principles	Corporate & Investment Banking.
Aiming to align our activity with the Paris Agreement Goals	
Climate alignment	Corporate & Investment Banking for thermal coal, power generation, oil & gas, aviation, steel and auto manufacturing portfolios. Digital Consumer Bank for the auto loan portfolio. Commercial banking perimeter of Brazil for the agro portfolio. And perimeter of commercial banking in Spain and the United Kingdom for the portfolio of residential mortgages and real estate.
Environmental footprint	Full Group scope. Except for the calculation of Scope 3 emissions (categories 1, 2, 4 and 9) for which the information of main companies of the Group in: Argentina, Brazil, Chile, Colombia, Germany, Mexico, Portugal, Poland, Peru, Spain, United Kingdom, United States and Uruguay, and other geographies in which Digital Consumer Bank operates such as Italy.
EU Taxonomy	
Green Asset Ratio (GAR)	Scope based on the prudential consolidated group, in accordance with the Commission Delegated Regulation (EU) 2021/2178.
Supporting employees, communities and customers (social information)	
Acting responsibly towards our employees	
Headcount	Full Group scope (except for accident data where Santander Polska S.A. is not included)
Remuneration	Full Group scope

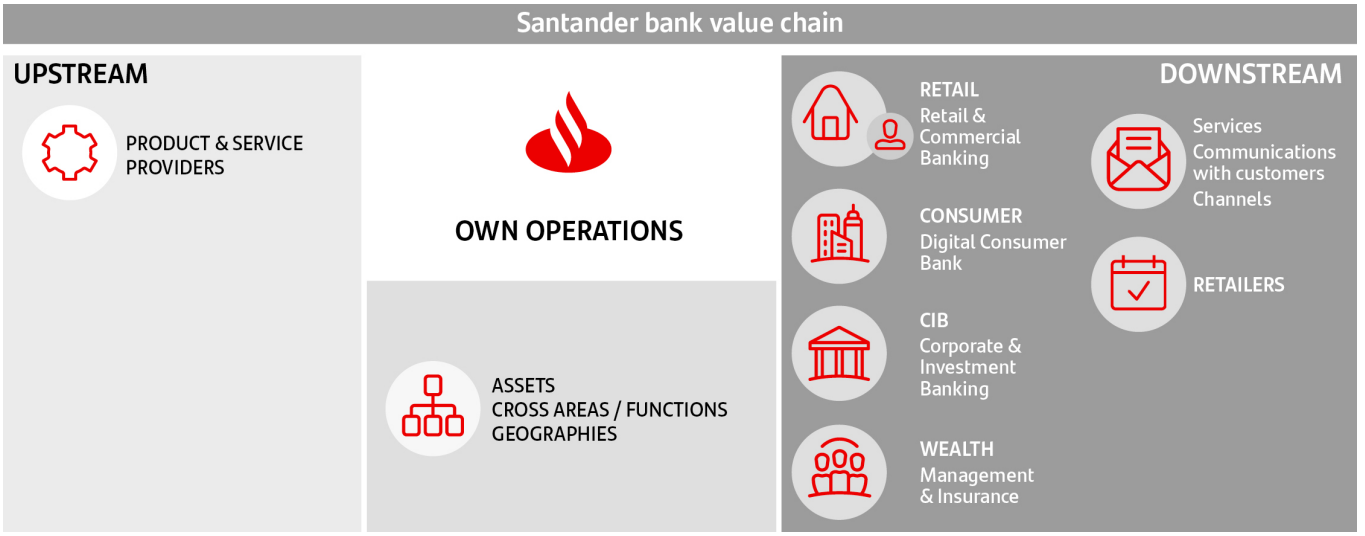
Training	Full Group scope
Employee engagement survey	Full Group scope
Communities sustainable development	
SRI AuMs	Wealth Management & Insurance: SAM and Private Banking
Support for higher education, employability and entrepreneurship	Main companies of the Group in: Argentina, Brazil, Chile, Germany, Mexico, Poland, Portugal, Spain, United Kingdom, United States, United Kingdom and Uruguay, in addition to Fundación Universia.
Other community support programmes	Main Group companies in: Germany, Argentina, Brazil, Colombia, Chile, Spain, United States, Mexico, Perú, Poland, Portugal, United Kingdom, Uruguay, and the rest of the countries in which Digital Consumer Bank operates, as well as Foundations associated to the Group (e.g. Fund. Banco Santander in Spain, Santander Foundation in the United Kingdom, etc.).
Acting responsibly towards customers	
Customers, offices and channels	Full Group scope
NPS (customer satisfaction)	Main Group companies in: Argentina, Brazil, Chile, Spain, United States, Mexico, Poland, Portugal, United Kingdom and Uruguay.
Customer complaints	All Group entities (>1% of reported claims volume in 2024).
Financial health and inclusion	Main companies of the Group in: Argentina, Brazil, Colombia, Chile, Chile, Germany, Mexico, Peru, Poland, Portugal, Spain, United Kingdom, United States and Uruguay.
Business conduct (governance information)	
Corporate governance	
Corporate governance	Banco Santander, S.A.
Communications with shareholders and investors	Banco Santander, S.A.
Ethical conduct	
Mandatory training on the GCC	Full Group scope
Tax contribution	Full Group scope
Financial crime compliance	Main Group companies with FCC obliged parties within the perimeter of GFCC (Group Financial Crime Compliance).
Litigation and penalties	Full Group scope
Ethical channels	
Ethical channel	Group companies in: Argentina, Brazil, Chile, Spain, Mexico, Poland, Portugal, United Kingdom, United States, Uruguay, Colombia, Peru, Switzerland, Bahamas, and CIB and Digital Consumer Bank subsidiaries and branches.
Acting responsibly towards suppliers	
Payments to suppliers	Main companies of the Group in: Argentina, Brazil, Chile, Colombia, Germany, Mexico, Portugal, Poland, Peru, Spain, United Kingdom, United States and Uruguay, and other geographies in which Digital Consumer Bank operates such as Italy and Nordics.
Evaluated suppliers identified with ESG risk	Main companies of the Group in: Argentina, Brazil, Chile, Colombia, Germany, Mexico, Portugal, Peru, Spain, United Kingdom and Uruguay, and other geographies in which Digital Consumer Bank operates such as Italy.

Significant changes in criteria with respect to the 2023 Sustainability Report are reflected in the corresponding section of this chapter, and generally in section h) of this note.

For a list of subsidiaries included in the consolidation that are exempt from individual or consolidated sustainability reporting pursuant to article 19a or 29a(8) of Directive 2013/34/EU, see Annex 1. Subsidiaries of Banco Santander, S.A. in the 'Audit report and consolidated annual accounts'. Of this list, the following companies are required to report sustainability information under CSRD:

- Santander Consumer Bank AS (in Norway)
- Santander Bank Polska S.A. (in Poland)
- Stellantis Banque France (in France)

Other companies that meet the requirements established by the standard but are located in countries where the directive has not been transposed are not considered obliged to report under the CSRD.



Moreover, the Group has not applied the exemption in relation to the breakdown of information on upcoming events or matters under negotiation.

From 1 January 2025 to the date on which we prepared this Consolidated non-Financial Information Statement, there were no additional events that could have a significant impact on the information set out in this report other than those described in the consolidated annual accounts.

For more details, see Notes 1, 2, 3 and 53 to the consolidated report and sections 3 and 4 of the 'Economic and financial review' chapter.

c) Value chain

Banco Santander has a defined value chain that identifies all the actors involved in it. It considers the entire consolidation scope set out in the bank's Annual Report. This chart illustrates our value chain. It is split into three main groups (upstream, own operations and downstream) and shows the actors in each one:

To define the value chain, the Group considered the indications of Regulation 2022/2464 (paragraph 33); Delegated Regulation 2023/2772 (ESRS 1); and the EFRAG (European financial reporting advisory group) Value Chain Implementation Guidance.

These are the definitions we used:

Upstream: Set of activities or processes carried out by companies that are part of the bank's upstream phases and that provide the inputs[81] that we use for the development and marketing of products and services. This includes companies with which the bank has a direct and indirect commercial relationship.

- Financial institutions: Monetary institution and public entity responsible for setting monetary policy that will impact on Banco Santander; regulating currency circulation; supervising the interbank market in which the bank operates; and providing liquidity, where required, for solvency purposes. For instance, the European Central Bank, Banco de España, Bundesbank, Narodowy Bank Polski, etc.

- Product and service providers: Companies that provide products and services that are subsequently marketed in later phases of the bank's value chain or that the bank uses to carry out its operations. For instance, insurance companies (e.g. suppliers of products that are marketed in the bank's downstream phase), technology providers, external audit and consulting service providers, materials suppliers and office landlords.

The Group continuously oversees the correct management and maintenance of its supplies to offer a high value added service to customers and to guarantee business continuity.

Own operations: Activities that the bank's functional areas and employees carry out in our markets and subsidiaries.

- Assets: Assets and properties that the bank owns. For instance, tangible assets such as offices.

- Geographies: Places where the bank and its subsidiaries carry out their operations. For instance, Brazil, Spain, United States, the United Kingdom, and Mexico.

- Cross-cutting areas/functions: Departments and areas within the bank whose function is to manage and develop the bank's operations. For instance, Compliance, Risk, Strategy, Human Resources, Procurement.

Downstream: Commercial relationships and the products and services that the bank sells to meet the needs of its customers and end users.

- Retail and Commercial Banking: A segment that focuses on meeting financial needs and offering a variety of products and services that are accessible and tailored to specific customer requirements. It covers all retail (individual) and commercial (SMEs, large corporates and institutions, excluding those in CIB) banking operations. For instance, savings accounts, mortgages, credit cards and financial services for SMEs.

- Digital Consumer Bank: A segment that aims to convert single product customers into complete banking customers through other products. This business brings together Openbank (online banking platform) and Santander Consumer Finance. For instance, auto loans, consumer loans and credit cards.

- Corporate & Investment Banking (CIB): A segment that provides a wide range of financial services to businesses,

[81] Resources that develop and/or help create products and enable us to operate as a bank (e.g. employees; capital; buildings, offices and other physical infrastructure; technology; and others).

institutions and governments. It includes global corporate banking, investment banking and markets worldwide, as well as globally managed treasuries and equities businesses. For instance, advice on mergers and acquisitions (M&A), corporate finance, investment banking, asset management and risk management.

- Wealth Management & Insurance (Wealth): A segment that provides specialized financial services to high net worth clients and those seeking to protect their assets through insurance. It comprises Santander Asset Management, Santander Private Banking, and Santander Insurance.
- Payments: A segment that provides digital payments and global technology solutions for the bank and new customers in the open market. It is structured into two businesses: PagoNxt and Cards (e.g. the cards platform).
- Joint ventures, associates and other investments: Entities that are not globally integrated in the annual accounts but in which the Group has decision-making capacity over their operating activities that have not been previously considered in the value chain.
- Retailers: Sales channels for companies in the final phases of the value chain that, through their own commercial network, are responsible for selling the bank's products and services to their customers. For instance, car dealerships.

d) Information not disclosed

In response to the request set out below, the Group has disclosed partial information. It is not possible to make further disclosure because it is confidential and sensitive information on the Group's strategy

- ESRS 2. Minimum Disclosure Requirement - Actions MDR-A - Actions and resources in relation to material sustainability matters. Paragraph 69 regarding disclosure of operating expenses (OpEx) or capital expenditure (CapEx) allocated to action plans.

  The Group discloses certain metrics such as the amounts spent on employee training and energy efficiency initiatives and investment in community support, found in the corresponding sections of this report and our annual accounts.[82]

There is no other classified or sensitive information, or information relating to intellectual property, know-how or innovation results, that the Group has not included in the report.

e) Time horizons

In preparing this Sustainability statement (including the analysis of double materiality), we used the following time horizons:

- One year for the short term (this is the standard time horizon for the short term in the Group).
- One to five years for the medium term (financial planning).
- More than five years for the long term (strategic plan).

These horizons coincide with those provided for by the ESRS standards. We expressly indicate the different time horizons we use for processes or metrics described in this report.

f) Significant estimates and assumptions

The Group discloses metrics that incorporate value chain information, which includes both direct data sources (from customers or investees) and estimated data from third-party data providers or sector averages. In some instances, these estimates draw on factors that the Group is unable to influence and that may have a significant impact on the information disclosed.

The most significant estimates and assumptions relate to the Group's disclosure of GHG emissions, the measurement of which is subject to considerable uncertainty due to methodology and data limitations, including reliance on third-party data. Our analysis and climate target-setting uses estimates based on the recognized frameworks available at the time. As methods and data evolve, our data sources and figures may become outdated, and updates to methodologies and assumptions could lead to different conclusions. Thus, greenhouse gas emission factors are expected to increase once data becomes available and the corresponding companies are included in the calculations.

Climate-related targets, actions and initiatives require forward-looking parameters and long-term horizons. Our forward-looking statements reflect our current view of future events and are based on expectations, projections and estimations. These involve significant uncertainty and risk due to such factors as scientific developments, methodology developments, standards variation, future market conditions and technological advances (which vary across industries), as well as challenges in data availability and accuracy and regulatory changes. These assessments must evolve and should not be considered reliable indicators of future performance.

We expect improvements in data quality, coverage and availability in the coming years, driven by increased sustainability information reporting and disclosure obligations and other elements. We also expect new guidance, industry standards and scientific research in this area. For that reason, Grupo Santander reserves the right to review and update its targets, methodologies and approach regularly and as necessary.

The disclosure of EU Taxonomy reporting is also subject to uncertainty over data quality and the use of third-party data. For more details, see section NS 5. EU Taxonomy of this Sustainability Statement.

g) Comparative information, changes in the preparation or presentation of sustainability information

The Group has chosen to avail itself of the transitional provision relating to section 7.1 of NEIS 1 comparative reporting whereby the company is not required to disclose comparative information in the first year of application of the directive.. Except for information that is necessary to comply with Spanish Law 11/2018 and the perimeter of disclosure allows its comparability.

In order to comply as accurately as possible with the different requirements established by the regulation, the following

[82] See sections 2.4.5 Our Environmental footprint, 3.1.1 Talent and Skills Development and 3.2.4 Community Support for this chapter; and notes 46 and 47 of the Annual Accounts.

indicators have been subject to modification in their calculation methodology. Therefore the information provided in this Sustainability statement is not comparable with the information provided in previous years.

- Number of calendar days lost due to work-related injuries and fatalities. Fatalities have been included in this metric. In previous years, only work-related accidents, common illnesses and non-work-related accidents were considered.
- Energy consumption (renewable and non-renewable). This is calculated based on the percentage of each generation source (nuclear, renewable and fossil fuels) in each of the countries where we consume energy and considers the renewable electricity that we buy and self-produce. Only electricity that has a renewable certificate is counted as renewable electricity.
- Scope 1 emissions. Emissions derived from refrigerant gas leaks are included for the first time.

Additionally, the reporting scope that applies to the related metrics has been modified:

- Internal consumption. The reporting scope is expanded with information from all subsidiaries. Now covering 100% of the Group's consolidated scope.
- Footprint compensation. Starting this year "2024", the Group compensates scopes 1 and 2 of 100% of the Group.

Finally, scope 1 and 2 emission reduction targets have been reviewed, based on the targets defined in the previous 2022-2025 plan. These targets are based on 2020 and have a horizon of 2030.

At the date of publication of this report, no material misstatements of information disclosed in prior periods have been detected.

h) Incorporation by reference

This report includes all the information necessary to comply with the requirements established in the ESRS, except in those cases in which such information is already included in the Group's audit report and consolidated annual accounts. In these cases, which are detailed below, the disclosure will be made by reference to that report.

- ESRS 2 - Disclosure requirement BP-1, paragraph 5.b).ii. Reference is made to Appendix I of the Group's consolidated annual accounts and audit report for the list of subsidiaries of Banco Santander, S.A.
- ESRS 2 - Disclosure Requirement SBM-3, paragraph 48.d). Reference is made to note 25.e) of the Group's consolidated annual accounts and audit report to complete the information relating to the financial effects derived from the amount of convictions or penalties.
- ESRS 2. Minimum Disclosure Requirement - Actions MDR-A - Actions and resources in relation to material sustainability matters. Paragraph 69 regarding disclosure of operating expenses (OpEx) or capital expenditure (CapEx) allocated to action plans. Reference is made to notes 46 and 47 of the Group's audit report and consolidated annual accounts for more details on the connection of sustainability information with annual accounts information.
- ESRS 2 - Minimum Disclosure Requirement - MDR-M parameters, in relation to the positive impact of 'Act responsibly and consider investors' interests and the impact on employees, broader society and the environment; pay taxes to support the distribution of wealth'. Reference is made to note 27 of the Group's audit report and consolidated annual accounts for more details on the Group's tax information.
- ESRS S1 - Disclosure Requirement S1-17, paragraphs 103(c), 104(b) and AR 105. Reference is made to note 25.e) of the Group's Annual Report and Consolidated Financial Statements to complete the disclosures regarding serious human rights incidents involving the company's personnel.
- ESRS S3 - Disclosure Requirements S3-1, paragraph 17 and AR 12; and S3-4, paragraph 36. Reference is made to note 25.e) of the Group's Consolidated Annual Report and Accounts for supplementary information on serious human rights incidents relating to affected groups.
- ESRS S4 - Disclosure Requirements S4-4, paragraph 35. Reference is made to note 25.e) of the Group's Consolidated Annual Report and Accounts for supplementary information on serious human rights incidents relating to consumers or end-users.
- ESRS G1- G1-4, paragraphs 24.a) and 25.d). Reference is made to note 25.e) of the Group's Annual Report and Consolidated Financial Statements to complete the information regarding convictions and fines for breaches of anti-corruption and anti-bribery laws.

Sustainability note 11. 'Directive (EU) 2022/2464 content index' provides the sections of this report and of the Group's Annual Report and Consolidated Financial Statements where the information that responds to each of the requirements defined by the ESRS can be found.

i) Use of phase-in provisions in accordance with Appendix C of ESRS 1

The following table details those requirements for which Grupo Santander has opted to not disclosure in this first year of preparing its sustainability report in accordance with the Commission's delegated regulation (EU) 2023/2772.

ESRS	Disclosure requirement	Description
ESRS 2	SBM-1, paragraph 40, b(and c)	Total revenue/Revenue by significant ESRS Sectors
ESRS 2	SBM-3, paragraph 48 e)	Potential financial effects
ESRS E1	E1-9	Potential financial effects from material physical and transition risks and potential climate-related opportunities
ESRS S1	S1-7	Characteristics of non-employee workers in the undertaking's own workforce
ESRS S1	S1-14	Health and safety: information on non-employee workers
ESRS S1	S1-15	Work-life balance

List of datapoints in cross-cutting and topical standards that derive from other EU legislation

The table below illustrates the data points covered by ESRS 2 and the thematic ESRS derived from other EU legislation. For each data point, in the last column, it is indicated whether or not it is material and if it is, where in the report the information is located.

Disclosure Requirement and related datapoint	SFDR [1] reference	Pillar 3 [2] reference	Benchmark Regulation [3] reference	EU Climate Law [4] reference	Materiality of the data point and location in the report
ESRS 2 GOV-1 Board's gender diversity paragraph 21 (d)	Indicator number 13 of Table #1 of Annex 1		Commission Delegated Regulation (EU) 2020/1816 (5), Annex II		Sustainability notes. SN2. Sustainability governance

(6) Commission Implementing Regulation (EU) 2022/2453 of 30 November 2022 amending the implementing technical standards laid down in Implementing Regulation (EU) 2021/637 as regards the disclosure of environmental, social and governance risks (OJ L 324,19.12.2022, p.1.).
(7) Commission Delegated Regulation (EU) 2020/1818 of 17 July 2020 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks (OJ L 406, 3.12.2020, p. 17)."

SN 2. Sustainability governance

Board of directors

It consist of 15 members, of which 13 are non-executive directors and 2 are executive directors. The majority are independent directors (66.67% of the total members of the council).

Likewise, the board of directors shall ensure that the procedures to select members guarantee the individual and collective expertise of directors, encourage diversity in terms of gender, age, geographical origin, experience and knowledge, and do not carry any implicit bias that could lead to any form of discrimination on grounds such as disability, race or ethnic origin. The board currently has a balanced presence of both genders (women -men) with a diversity ratio of 67%.[83] In terms of geographical origin/ international experience, 60% of the directors come from or studied in continental Europe, 60% in the US/UK, 13% in Latin America, and 7% in other regions. The Board also has extensive international experience, mainly in the markets where we operate (European market, US and UK markets, and Latin American markets). The Board also has the skills and experience to monitor materiality issues (e.g. on issues related to sustainability, human resources, culture, talent and remuneration, as well as to business conduct and risk management). None of the directors are currently assigned a specific employee representation role.

The board of directors as the highest decision-making body in the Group performs the following functions:

- approves the Responsible Banking agenda and set the strategy;
- approves the culture policy and related policies on responsible business and sustainability matters and, in particular, on environmental and social matters;
- supervise that the responsible banking strategy is consistent with Group strategy;
- reviews the performance against the public objectives and that the metrics are covered within the responsible banking agenda;
- tracks key initiatives; and
- reviews subsidiaries' strategies.

For more details, see the Rules and Regulations of the board of Directors, available on the Group's corporate website; and section 4.2 'Board composition' in the 'Corporate governance' chapter.

[83] The diversity ratio is calculated by dividing the number of women by men. The percentage of each gender vs total membership is 40% women and 60% men.

Responsible banking, sustainability and cultural committee

The responsible banking, sustainability and cultural committee (RBSCC) assists the board in fulfilling its supervisory responsibilities regarding the responsible business strategy and sustainability issues of Banco Santander and its Group. In particular, it has the following functions:

(i) advise the council on the design of the strategy and policies on responsible business and sustainability, in particular environmental and social matters, by monitoring, supervising and evaluating them;

(ii) Advise the council in formulating the Group's strategy with interest groups; as well as supervise the involvement with them;

(iii) ensure that adequate control processes are in place with respect to responsible banking practices, and that risks and opportunities related to sustainability and accountability are identified and managed; and

(iv) to report regularly to the council on the progress made by the Group on responsible business practices and sustainability.

The responsible banking, sustainability and culture committee consists of five independent directors, 80% of whom are women. All of them have been appointed by the board of directors taking into account their knowledge, qualifications and experience in the areas for which the committee is responsible. Thus, its members have competence in issues relevant to this function as strategy and human resources, culture, talent and remuneration, responsible business and sustainability, risk management and also in issues related to education and universities.

In 2024, the committee held five meetings, and, among others, the following topics were discussed.

Environmental issues:

- Reviewed the Group's climate change strategy and alignment targets. Endorsed the Group priorities for 2024 in relation to sustainability, including supporting our customers in their green transition.
- Reviewed ESG factors introduced in the credit approval process, associated action plans and related achievements. Worked with the risk supervision, regulation and compliance committee to review the progress made in embedding climate-related and environmental risks, as well as to monitor the implementation of controls and processes to mitigate ESG risks.
- Reviewed the green finance strategy and its execution.
- Monitored our own environmental footprint, value chain emissions and carbon neutral claim.

Social issues:

- Reviewed our social agenda, which includes financial inclusion; financial health; business with social output; and corporate social responsibility or philanthropic activities. And reviewed the outcomes of the holistic human rights due diligence exercise.
- Reviewed the progress made within our community support strategy, which includes Santander Universidades strategy and its alignment with the Group's transformation agenda.
- Discussed People and Culture's activities and progress and proposals regarding inclusive culture in coordination with the nomination and remuneration committees, with a key focus on the representation of women in senior positions within the Group.

Governance issues:

- Identified priority sustainability areas for action based on the outcomes of a materiality assessment that the Sustainability team conducts every year. Verified that the proposed sustainability agenda and targets remained aligned with the Group´s strategy. Monitored and assessed the Group's progress on its targets to control that its KPI remained relevant and aligned with committee expectations. And reviewed ESG global ratings' assessments of Banco Santander.
- Assisted the board in ensuring that sustainability targets and metrics were embedded in the Group's remuneration schemes. As part of that, reviewed, in coordination with the remuneration committee, a proposal to further increase the alignment of the long-term incentive for 2024-2026 with our sustainability agenda.
- Reviewed the progress made regarding the management of the supply chain in regards to ESG.
- Supported the audit committee on the supervision and assessment of the process to prepare and present non-financial information.
- Reviewed the main European and international financial regulatory and supervisory initiatives and priorities related to sustainability. Received information on local regulatory developments.

In addition, it received specific training in sustainability, with special attention to the new Corporate Sustainability Reporting Directive (CSRD).

For more details, see the Rules and Regulations of the board of Directors, available on the Group's corporate website; and sections 4.2 'Board composition' and 4.9 'Responsible banking, sustainability and cultural committee activities in 2024' in the 'Corporate governance' chapter.

Board audit committee

The board audit committee (BAC) assists the board in overseeing and reviewing the financial and sustainability information process, as well as internal control systems.

The audit committee consists of five independent directors, 60% of whom are women. All of them have been appointed by the board of directors based on their knowledge, qualifications and experience in the areas of finance, accounting and auditing, internal control, information technology, business or risk management.

In 2024, the committee held 15 meetings, including four joint sessions with the risk supervision, regulation and compliance committee. With regard to sustainability reporting, the committee oversaw the sustainability reporting process, receiving regular updates from the Group's Chief Accounting Officer (CAO) and the main functions responsible for sustainability reporting.

For more details, see the Rules and Regulations of the board of Directors, available on the Group's corporate website; and sections 4.2 'Board composition' and 4.5 'Audit committee activities in 2024' of the 'Corporate governance' chapter.

Risk supervision, regulation and compliance committee

The risk supervision, regulation and compliance committee supports and advises the board in defining and assessing risk policies that affect the Group and in determining the current and future risk appetite and the strategy and culture in this area, including proposing appropriate changes in view of internal or external circumstances that impact on the Group (both financial and non-financial risks), among other functions.

The risk supervision, regulation and compliance committee consists of five external directors (40% women), with three independent members, including its chair. All of them have been appointed by the board of directors based on their knowledge, qualifications and experience in the areas for which the committee is responsible. Thus, its members have competence in issues relevant to this function as banking, accounting, auditing and financing, strategy, risk management, governance and control, as well as in human resources, culture, talent and remuneration.

In 2024, the committee held 18 meetings, including one strategy session, four joint sessions with the audit committee, one joint session with the nomination committee and one joint session with the remuneration committee. It reviewed relevant topics on customer data protection, operational resilience, aspects of customer conduct, complaints and internal whistleblowing. Issues such as culture and internal control are also addressed.

For more information see: the Rules and Regulations of the Board of Directors, available on the Group's corporate website; and sections 4.2 'Board composition' and 4.8 'Risk supervision, regulation and compliance committee activities in 2024' in the 'Corporate governance' chapter.

Other committees of the Group board, such as the Nomination and Remuneration Committees, also support and review sustainability-related issues. For further details, see section 4. 'Board of Directors' in the 'Corporate Governance' chapter.

Other governance bodies

The **corporate accounting and financial reporting, management and sustainability committee** performs these functions (among others):

- Approve the content and scope of sustainability disclosures.
- Analyze and validate or, when applicable, propose the approval of all significant sustainability information.

This committee meets monthly, or on an extraordinary basis when deemed appropriate.

The **risk control committee** (CCR) is responsible for controlling risks and providing a holistic view of them. Determines whether lines of business are managed according to the risk appetite approved by the board. It also identifies, tracks and evaluates the impact of current and emerging risks on the Group's risk profile.

The CCR is composed of senior management members in the functions of risk, compliance and conduct, financial and general intervention, among others.

Other forums and support functions

First line of defence

Business functions and all other functions that generate risk exposure are the first line of defence. The first line of defence identifies, measures, controls, tracks and reports the risks that originate and applies the policies, models and procedures that regulate risk management. Risk generation must be adjusted to the approved risk appetite and associated limits. The head of each unit that generates a risk has primary responsibility for managing it.

The **corporate sustainability function** works continuously to define, execute and monitor our sustainability strategy, and coordinates and drives the responsible banking agenda, with support from a senior adviser on responsible business practices who reports directly to the executive chair, as well as with the sustainability network in our core markets, global businesses and corporate functions.

The **accounting and management control function**, is responsible for (among others):

- establishing and maintaining the internal control system on the financial and sustainability information generated by the function; and
- Implementing the standards and policies reflected in the sustainability information sent to the Corporation.

It is the responsibility of the functions involved in executing the strategy and preparing information on sustainability (for example: Technology, Operations, Risks, Human Resources, Tax, and others) that the information provided is true and reliable, establishing the necessary controls and correcting any weaknesses.

Second line of defence

Risk and Compliance & Conduct functions, as the second line of defence, will provide independent challenge and oversight of the risk management activities performed by the first line of defence. This second line of defence should control, within their respective domains of responsibility, that risks are managed in accordance with the risk appetite defined by senior management and promote a strong risk culture throughout the organization.

The internal control function within the Enterprise Wide Risk Management (EWRM) function will be responsible for establishing the criteria and monitoring the implementation and effectiveness of the Santander Group Internal Control System. This will help to the adequacy and integrity of the internal controls established by the different functions to provide reasonable assurance in the achievement of the defined objectives (which include, among others, the reliability of financial and sustainability reporting).

Third line of defence

The internal audit function periodically assesses that policies, methods and procedures are adequate and effectively applied for the management and control of accounting, financial and management information. The annual audit plan, which was carried out on the basis of a robust risk assessment process (Top-down & Bottom-up methodology), provides reviews of the main aspects contained in this report.

In this way, issues related to climate risk and disclaimers are regularly verified as well as compliance with the rules and procedures established in the General Code of Conduct (GCC),

independently monitoring their adequacy and effectiveness and those of their local developments. the Open Channel is reviewed and specifically evaluates compliance with data protection regulations.

The audit function reports to the Audit Committee, which, among other functions, assists the board in the supervision and evaluation of the process of preparing and presenting financial and non-financial information, as well as internal control systems.

Risk management and internal controls over sustainability information

In order to control the quality and reliability of the information included in the Sustainability statement, Santander implemented an internal control system that complies with the most demanding international standards and complies with the guidelines established by the *Committee of Sponsoring Organisations of the Treadway Commission* (COSO).

Like the Sustainability information itself, at Santander we are evolving our Internal Control System so that it covers all the material aspects identified for 2026.

First, we identify the most material risks and then establish the necessary controls, complying with the requirements regarding the disclosure of sustainability information.

The most significant aspects taken into account in the process of preparing sustainability information are the following:

- Identification and definition of quantitative and qualitative criteria that emanate from regulatory interpretation or our impacts risks and opportunities in areas where there are no consolidated market practices.
- The hypotheses, judgments, estimates and approximations used in the calculation and preparation of certain metrics.
- Ensuring the completeness of information and establishing perimeters for each metric or group of metrics.
- Difficulties in having, in certain respects, third-party information necessary for the construction of our narrative or metrics, especially in the value chain (emissions information from our portfolio, alignment information, supplier information, etc.).
- Calculation, processing and consolidation of both quantitative and qualitative information.

In addition, we also began to prepare reasonable assurance of several of the metrics to convergence in the quality standards of financial and sustainability information.

Similarly to the control of financial information, the implementation and supervision of the control system of sustainability information is carried out through the following bodies: Board of Directors, Audit committee, Risk Control committee and Corporate Accounting and Financial, Management and Sustainability Reporting committee.

For more details, see the introductory paragraph “Sustainability information” of the consolidated management report itself; section 8. 'Internal control over financial reporting (ICFR)' in the 'Corporate governance' chapter; and section 1.5 'Internal control system' in the 'Risk management and compliance' chapter.

Internal control system for sustainability information

Control culture
Basis of Internal Control. Essential to provide reasonable assurance in achieving the objectives defined by the Group, acting responsibly.

Risk Assessment (RCSA)
Dynamic process of evaluating the risks associated with achieving the organization's objectives.

Control Activities
Actions established by policies and procedures that help that management instructions are carried out to mitigate identified risks.

Information and Communication
Accurate and timely information for decision-making, facilitating the escalation and governance of improvements and incidents.

Monitoring activities
Mechanisms and instruments to monitor the correct implementation and effectiveness of the internal control system, promoting a continuous evaluation of the same.

Cross-cutting regulations to embed ESG standards in our business model

Responsible banking framework
Establishes responsible banking as a strategic topic for Grupo Santander and all local units.

Accounting and Financial Reporting, Management and Sustainability information framework
Sets out the principles, directives and guidelines regarding the preparation of accounting, financial and management information that must be applied by all Group subsidiaries as an essential element of proper governance.

Responsible banking and sustainability policy
Sets out our sustainability principles, targets and strategy (including human rights protection) to create long-term stakeholder value.

Responsible banking model
Sets out the roles and responsibilities of the first, second and third line of defence in all responsible banking-related activity to drive our sustainability agenda, embed ESG standards and achieve our goals.

In addition to these regulations, which apply to all the Group's units and businesses, the following section of this chapter details the regulations that apply specifically to the management of each of the material topics and associated IROs:

- Climate change (see section 2. 'Our climate transition plan');
- Own workforce (see section 3.1 'Our employees');
- Consumers and end users (see section 3.3 'Our customers');
- Affected communities (see section 3.2. 'Communities' sustainable development'),
- Business conduct (see section 4. 'Business conduct').

All regulations (corporate frameworks, models, policies and procedures) help maintain a high level of governance, and the highest standards in terms of their drafting, approval, and in the monitoring of their local transposition.

The approval of the regulations is responsibility of the Board of Directors or its committees, when the regulated matter falls within their scope of responsibility according to their rules and regulations. Corporate frameworks in all cases must be approved by the board of directors. The regulations approved by the board under this chapter are as follows:

→ Relevant corporate frameworks related to sustainability: Responsible Banking, Risk; Cybersecurity; Compliance and conduct; Financial Crime and compliance; Human resources.

→ Relevant policies related to sustainability: Responsible banking and sustainability; Code of conduct; Code of conduct in securities markets; Corporate Defence; Environmental, social and climate change risk; Tax; Conflict of interest; Defence sector; Anti-money laundering and countering the financing terrorism; Remuneration; Performance management; Group Succession; Culture.

For more details on the Group's key regulatory documents on sustainability, see our corporate website santander.com.

SN 3. Materiality assessment – Detailed methodology

The Group and subsidiaries' double materiality assessments are based on European Sustainability Regulatory Standards (ESRS) 1 and 2, and the Double Materiality Assessment Guide from the ERAG.

Our assessment comprised these phases:

1. Background and stakeholder analysis

General view of the bank, its operations and main lines of business, based on:

→ **Information on the entity**: Sources include strategic and financial plans, financial statements and other published reports. This analysis considers operations, products and services, geographical footprint, business relationships and the value chain.

→ **External information**: Public documents on sector trends, analyst and supervisor papers, and peers' sustainability reports.

To enhance this background analysis, we also use these **external sources**:

1. The UNEP FI impact analysis tool to uncover the impact of the Group's financing operations, including those related to climate change. This tool provides a in-built impact mappings that combined, with our internal data and context, enables us to identify the most significant impact areas of the portfolio.

2. The ENCORE (environmental risk assessment) database to obtain information on the bank customer's environmental dependencies.
   ENCORE: a materiality database of dependencies between production processes and ecosystem services.

3. Human rights due diligence to spot the actual and potential impact of the bank's operations on human rights throughout the value chain.

We use the **stakeholder** analysis to identify directly affected stakeholders (customers, employees and investors) and readers of the report (supervisors and regulators, our communities and NGOs). We analyse information gathered during stakeholder engagement exercises and conduct surveys on sustainability matters to use as part of our materiality assessment.

2. Identification of impacts, risks and opportunities

The background analysis uncovered +100 IROs. We categorize every IRO and assign them to a topic, sub-topic or sub-sub-topic under ESRS 1, AR 16. For each IRO, we detail:

→ the part of the value chain they touch and over what time frame.

→ the dependencies between impacts and risks, assessing how each impact can lead to new risks and opportunities, with a special focus on the negative impacts of the human rights due diligence exercise; and

→ who in the organization manages it.

→ What is the type of financial effect for risks and opportunities.

3. Assessment of impacts, risks and opportunities

The methodology we use to measure materiality follows the EFRAG implementation guidance. After applying that methodology in this phase, 32 IROs were material.

Impact

We analyse the materiality of actual and potential impacts based on the likelihood and severity of occurrence and, in the case of negative impacts, include irreparable impacts.

- Scale (size of impact): split into five categories: Low, moderately low, medium, high, very high.
- Scope: split into four categories: Local, national, international, global.
- Irreparable impact (when negative): split into four levels; reparable, reparable with moderate effort, difficult to repair, and irreparable.

We estimate the likelihood of impact on a scale of 1 to 5.

Risks

We adapted our methodology according to the maturity of quantifying environmental and social risks.

- The climate materiality assessment includes a climate risk assessment (transition and physical) across several time horizons to align with the EBA's Guidelines on the management of ESG risks and other EU risk management directives. We used this information to quantify the materiality of credit, market, operational, reputational and other risks.
- We assessed other environmental risks related to Pollution, Water and marine resources, Biodiversity and ecosystems and Resource use and circular economy through the exercise described in the section 2.3.5. "Our approach to nature and biodiversity". This assessment sought to identify connection between our portfolios and nature in line with target 15 of the Kunming-Montreal Global Biodiversity Framework adopted at the COP15 in 2022.
- For social and governance risks, we used the Sustainability Accounting Standards Board's (SASB) financial materiality and internal financial information.

Opportunities

We base the opportunities assessment on forecasts for all our global businesses. We mapped out projected ESG revenue against the identified opportunities and compared it to the Group's revenue on a scale of 1 to 5.

Stakeholder views

We supplement IROs assessments with stakeholder views (affected groups and readers of the report).

The number of specific inputs received within this exercise is detailed below. These inputs are part of the constant dialogue with our stakeholders, as detailed in section 1.2. Dialogue with our stakeholders.

Retail Customers	Investors	NGOs	Senior management	Employees	Regulators and supervisors[84]
N = 9000+	N = 8	N = 3	N = 8	N = c.200	N = 2

The survey results show agreement in prioritizing three areas: the fight against climate change and supporting the green transition; protecting customer data; information transparency and fostering financial inclusion. Specifically:

- Retail customers prioritize social (privacy and personal data security) and governance matters (transparency and honesty).
- Employees and senior management prioritize each ESG area equally.
- Investors, regulators and NGOs prioritize environmental matters.

4. Materiality thresholds

We set a threshold of 3.5 on a scale of 1 to 5 to classify an IRO as material (for impact perspective and financial materiality). This means that we consider IROs that sit between medium (3) and high (4) as material. Taken as a reference the score calculation for the impacts, the score values greater than 3.5 represent events of medium-high severity and events with medium-high probability of occurrence.

We also assessed the reasonability and coherence of the list of IROs identified as material. In quantitative terms assuming that the distribution of the events materiality follows a normal distribution (average=3 and standard deviation = 0.5), the probability of a score value of 3.5 is around 16%, which is considered reasonable for a material event.

1. For more information on time horizons, see section 1.3 Materiality assessment.
2. Own operations are the bank's internal activities; Business relations primarily centre on upstream and downstream value chain activities.

SN 4. Our transition plan

i. Alignment targets details

Target types: To help our customers' transition to a low-carbon economy, we employ physical emissions intensity for setting targets in the power generation, steel, aviation and auto sectors. For the oil & gas sector, we choose the absolute emissions metric. We prioritize engagement over divestment. We recognize that in certain situations, establishing alignment targets may inadvertently discourage the transition. For example, when they increase their leverage to undertake significant capex programs to align their operations, while the alignment benefits will only materialise over the medium term. To prevent undesirable outcomes like the one described, we evaluate each case individually and base our decisions on a long-term perspective. However, due to the absence of a widely accepted "transition finance taxonomy", we consider alignment targets to be an effective tool for informing portfolio decisions, provided that each case is managed individually. For the different targets' design choices taken, we considered inputs from several different internal and external stakeholders.

Scenarios:[85] To set 2030 science-based alignment targets for our financed sectors, we choose a credible scenario that draws a pathway to reach net zero emissions by 2050 and will limit temperature increase to 1.5 ºC in line with the Paris Agreement. The scenario we have chosen for the sectors for which we have released alignment targets is the "International Energy Agency - Net Zero Emissions by 2050 Scenario" (IEA-NZE). Our aviation target is consistent with the expected adoption of current technologies. This scenario takes into account the technological, regulatory and market changes that need to take place. Regarding our scope 1 and 2 own emission reduction objective by 2030, it is aligned with the cross-sector absolute reduction method considered by SBTi, going beyond the minimum ambition of a linear annual reduction of a 4.2% linear annual reduction between the base year and target year.

Target coverage:[86] All CIB portfolio targets and metrics are global and include our core subsidiaries. SCF's target is European and includes its passenger car portfolio (including loans and leasing) in 16 units (13 countries in Europe). This is the same scope we use to measure emissions performance and progress with our targets, though we are working on obtaining information and tracking emissions for other vehicle types.

Baseline years: We use 2019 as the baseline year for the four initial sectors and 2020 and 2022 for auto manufacturing and auto lending in Europe, respectively. We chose those years to be representative of our portfolios at that time. For our own operations emissions (Scopes 1 & 2) reduction objectives, we use 2020 as the baseline considering the deadline of the plan set to 2030, and the guidelines criteria for setting science-based targets.

Financed emissions: According to the methodology and design we chose for each target we calculate financed emissions based on PCAF[87]. Since the emissions information of our customers or assets financed is not available in the same way as their financial information, there is a lag of at least one year in the emissions data.

ii. Disclosed financed emissions

Santander discloses financed emissions from its loan portfolio for different uses. In the context of portfolio alignment, we calculate the financed emissions of the portfolios of the most relevant sectors, following market standards and practices, focusing on the parts of the value chain of each industry that are most polluting and actionable through alignment strategies. For this purpose it is necessary to use information to monitor alignment strategies and their effectiveness.

Additionally, obligations arising from regulatory or supervisory requirements need to cover financed emissions from wider perimeters. For this, we also use other sources and methodologies, including average emission factors per sector based on market-recognised methodologies (such as PCAF).

We also calculate the financed emissions of our long-term investments in equity and sovereign debt, which are material exposures in our balance sheet.

[85] The latest IEA's net-zero scenario was published in the World Energy Outlook in October 2024. The reference data for 2030 are 0.19 tCO_2/MWh in power (-58% vs. 2019), 23% reduction vs. 2019 in oil & gas (which implies 18.27 $mtCO_2$ applied to Santander baseline), 1.29 tCO_2e/tS in steel (-18% vs. 2019), 60.59 gCO_2e/RPK in aviation (-29% vs. 2019) and 116 gCO_2/vkm in automotive (-40% vs. 2020). For own emission reduction reference data for 2030 is 104,400 ton (-42% vs. 2020).

[86] From our total lending on the balance sheet, about 9% of our exposure comprises sectors for which Santander published emissions alignment targets for high-emitting sectors (Power generation, oil and gas, aviation, steel, auto manufacturing and auto lending. Excluding the thermal-coal phase out) and around 18% of total CIB lending. Using baselines exposures with different time horizons as per the above table, and balance sheet exposures as at December 2023. Our objectives and alignment targets have been externally assured only in the verification process of the present report.

[87] PCAF: "Partnership for Carbon Accounting Financials" is a global partnership of financial institutions that work together to develop and implement a harmonized approach to assess and disclose the greenhouse gas (GHG) emissions associated with their loans and investments. Santander joined PCAF in 2021.

2. Financed emissions for alignment[A]

Sector	Year[B]	Exposure (drawn amount EUR bn)[C]	Emissions scope	Absolute emissions ($mtCO_2e$)	Physical emissions intensity	Financial emissions intensity ($mtCO_2e$/ EUR bn lent)	Overall PCAF score[D]
Power generation	2020	10.31	1	4.59	0.17 tCO_2e/MWh	0.45	2.5
	2021	10.23		4.24	0.19 tCO_2e/MWh	0.41	2.8
	2022	11.88		3.82	0.16 tCO_2e/MWh	0.32	3.0
	2023	10.75		3.14	0.15 tCO_2e/MWh	0.29	3.2
Oil & gas	2020	6.67	1 + 2 + 3[E]	22.58	73.60 tCO_2e/TJ	3.38	3.6
	2021	8.25		27.43	74.36 tCO_2e/TJ	3.33	3.9
	2022	6.89		20.94	73.28 tCO_2e/TJ	3.04	3.0
	2023	6.82		20.27	72.97 tCO_2e/TJ	2.97	3.0
Aviation	2020	2.44	1 + 2	1.08	93.05 gCO_2e/RPK	0.44	3.7
	2021	2.02		0.84	97.21 gCO_2e/RPK	0.42	3.2
	2022	1.65		1.35	81.09 gCO_2e/RPK	0.82	3.0
	2023	0.70		0.58	82.99 gCO_2e/RPK	0.83	3.0
Steel	2020	1.31	1 + 2	2.14	1.40 tCO_2e/tS	1.63	3.1
	2021	1.42		1.90	1.36 tCO_2e/tS	1.33	3.1
	2022	1.96		1.88	1.24 tCO_2e/tS	0.96	3.1
	2023	2.04		1.84	1.38 tCO_2e/tS	0.90	3.3
Auto - manufacturing	2020	4.45	3[E]	3.49	149 gCO_2/vkm	0.79	3.1
	2021	3.90		2.67	138 gCO_2/vkm	0.68	3.0
	2022	3.95		2.74	133 gCO_2/vkm	0.70	3.0
	2023	4.02		2.74	134 gCO_2/vkm	0.68	3.0
Agro[F]	2022	1.80	1 + 2	6.20	7.04 tCO_2e/ton	3.52	3.3
	2023	3.58		9.83	6.59 tCO_2e/ton	2.75	3.1
Auto - lending[G]	2022	55.27	1 + 2	5.84	137 gCO_2e/vkm	0.11	3.2
	2023	62.40		6.78	133 gCO_2e/vkm	0.11	2.7
Mortgages[H]	2022	211.05	1 + 2	2.63	39.72 $kgCO_2e/m^2$	0.01	3.3
	2023	262.45		1.93	21.06 $kgCO_2e/m^2$	0.01	3.5
Commercial Real Estate[I]	2023	18.26	1+2	0.19	22.89 kgCO2e/m²	0.01	4.0

A. These financed emissions should not be confused with the EBA Pillar 3 exercise financed emissions calculations, as the perimeter and therefore, supporting data of the two exercises are different. In the case of corporate business loans, Banco Santander calculates the Total Value of the Company (used to obtain the emissions attribution factor) by adding the total equity and debt of the company in order to avoid the high volatility in market capitalization.
B. Obtaining emissions data from our customers is a challenge. As they disclose more non-financial information worldwide, the quality of our reporting on finance emissions will improve. In some other retail sectors, we rely on availability of emissions information for the different asset types as well as business information.
C. For power generation it includes Corporates and Project Finance in operation.
D. Scores illustrate the data quality used to calculate the financed emissions (with 1 being the best). Financed emissions information comes from a wide range of sources for emissions, physical intensity, and production data. For CIB portfolios CDP is the main source for GHG emissions and Trucost for fossil fuel production, we also used Asset Impact and Annual Reports as secondary sources to cover information gaps. We rely on Transition Pathway Initiative to measure physical intensity for certain sectors, such as Autos, O&G and Steel. In other retail sectors, we rely on the good quality of business information but also on data suppliers to improve and expand their emission databases.
E. Scope 3 - category 11: use of sold products.
F. Agriculture portfolio in Brazil. It includes financing for livestock (such as raising cattle for meat and dairy), agricultural activity (such as planting perennial and temporary crops for soybeans, corn, rice, and vegetables) and land use change. Since there is no specific methodology for agriculture, the PCAF score was adapted considering the data available in primary production portfolio that made possible to measure land management emissions. Financed emissions of the Brazil agriculture portfolio as of March 2022 and December 2023.
G. Consumer lending for the acquisition of passenger cars, covering a significant majority of the exposure in Europe.
H. Mortgage portfolio in the United Kingdom for 2022, and in the United Kingdom and Spain for 2023. Assessment includes Scope 1 and 2 emissions based on actual (where available) and modelled EPC's.
I. Commercial real estate portfolios in the United Kingdom and Spain. Assessment includes Scope 1 and 2 emissions based on actual (where available) and modelled EPC's.

More detail regarding other financed emissions calculations from our balance sheet, see section SN 7.1 Green transition.

iii. Internal carbon pricing

Internal carbon pricing is a tool that helps internalize the external costs of carbon emissions and align operations with broader sustainability objectives. Setting an internal carbon price does not appear to be the most appropriate approach for our type of operations and core business model as we strive to help our customers go green. Nonetheless, we do consider carbon pricing in several of our internal review and assessment tools, such as scenario analyses and transition risk calculations. These processes reflect the "real world" costs in our prices. A “fictitious” internal carbon price would cause disparity between the customer’s actual ability to pay debt and internal valuations. We encourage the

creation of carbon prices in real economies to facilitate the transition to a low-carbon economy.

Grupo Santander's strategy to lessen the environmental impact of our operations involves reducing CO_2e emissions and offsetting the emissions that we're unable to reduce. We follow a strict carbon credits selection process that includes due diligence on compliance and consistency with our environmental, social and climate change policy. Credits are certified under some of the industry's most well-known standards. Moreover, the carbon credits we purchase are ratified by an independent rating agency to validate their integrity. We actively monitor the voluntary carbon credit market to adapt our offsetting strategy to best practice.

Offsetting serves to internalize the cost of emissions (scopes 1 and 2) from our own operations.

iv. EU Paris-aligned benchmarks

Because of our financing and investment operations, Santander is not excluded from the EU Paris-aligned benchmarks. These benchmarks are designed to align investment with the Paris Agreement's goals and include undertakings that meet special sustainability standards. They exclude undertakings that do not meet those standards.

We disclose our exposure to undertakings excluded from those benchmarks in section '10.4 Credit quality of exposures' of our Pillar 3 disclosures report in accordance with points (d) to (g) of Article 12(1) and (2) of Regulation (EU) 2020/1818.

v. Locked-in GHG emissions

Our double materiality assessment shows that our direct emissions do not have a negative impact on, or pose material risk to, the environment. Regarding locked-in GHG emissions from key assets,[88] the nature of our financing and investment activity means that none of our key assets are sources of scope 1 and 2 emissions. Nonetheless, the Group takes carbon footprint reduction measures to help make a positive contribution to the environment.

As detailed in the 2.4.5 'Our environmental footprint' section regarding indirect GHG emissions (scope 3), the only material category under this scope was category 3.15 (financed emissions), with a weighting of over 99% of the total scope 3 emissions. Regarding locked-in GHG emissions from key products,[89] the category Scope 3.11 "Use of sold products emissions" is not material to the bank.

With regard to locked-in GHG emissions in category 3.15, there is currently no information available to have a reliable estimation due to lack of information from counterparties. In future exercises, its evaluation will be assessed based on the availability of data.

SN 5. EU Taxonomy

Information on Article 8 of the EU Taxonomy Regulation

In 2020, the European Union adopted the Taxonomy Regulation that sets out a list of activities that can qualify as environmentally sustainable[90] and stipulates that companies subject to the Corporate Sustainability Reporting Directive (CSRD[91]) must disclose how their operations align with the EU Taxonomy.

→ GAR, financial institutions:

Financial institutions have been disclosing their Green Asset Ratio (GAR) since 2023. This ratio measures the financing granted to Taxonomy-aligned activities as the numerator and the total balance sheet as the denominator.

To be considered aligned, activities must meet specific taxonomy criteria and ensure that they do no significant harm (DNSH) to any of the other environmental objectives and meet minimum social safeguards (MSS).

Santander's GAR is *3.04%* (turnover-based)[92] *and 3.28%* (CapEx-based)[93]

The European Taxonomy criteria do not reflect the full reality of companies' transition efforts. Many activities that contribute to the transition to a greener economy do not meet the Taxonomy's alignment criteria. Thus, we cannot include them in the ratio (for instance, certain types of hybrid cars, which, despite being an undoubted improvement on petrol cars, are not admitted in all cases).

Moreover, the limitations in the design of the ratio and in financial institutions' implementation of the Taxonomy lead to reduced numbers:

- The numerator and denominator are not symmetric. While the denominator reflects the balance sheet total, the numerator only includes financing in relation to four portfolios: financial institutions; non-financial institutions subject to the CSRD; households (mortgages, auto and renovations); and local governments. Thus, the numerator does not consider green loans to SMEs or the majority of non-European entities.

[88] Estimates of future GHG emissions that could arise during the useful life of a company's key assets. The term "key assets" refers to existing or planned assets that a company owns or controls (e.g. fixed or mobile installations and equipment) and that are direct or indirect energy-related sources of GHG emissions.
[89] Estimates of future GHG emissions as the direct GHG emissions from the use of products sold throughout their useful life (category 3.11).
[90] These are: 1) climate change mitigation; 2) climate change adaptation; 3) sustainable use and protection of water and marine resources; 4) transition to a circular economy; 5) pollution prevention and control and protection; and 6) restoration of biodiversity and ecosystems.
[91] The CSRD applies to large companies, listed companies, banks, or insurance companies that meet certain criteria, such as having a balance sheet total greater than EUR 20 million, a turnover greater than EUR 40 million, or an average number of employees greater than 500 during the fiscal year.
[92] Calculation for the two climate-related objectives. For the flow of volumes, the Green Asset Ratio is 2.6% (turnover-based) and 3.4% (CapEx-based).
[93] Eligibility for the climate-related targets is 34.0% (based on both turnover and CapEx) and, for the remaining four targets, is 0.04% based on turnover and 0.03% based on CapEx.

- The available data is limited. In Latin America and even in European countries such as Poland (key markets for the Group), energy efficiency certificates are either non-existent or very limited, which makes it impossible to account for aligned mortgages in the ratio. There are also significant gaps in companies' alignment information.
- DNSH (do no significant harm) and MSS (minimum social safeguards) implementation criteria are complex and in no way reflect the reality of a bank. These criteria compel financial institutions to collect evidence that shows the counterparty meets certain standards for each transaction. This results in an inability to include specific aligned financing (e.g. project finance) in the numerator.

Based on a voluntary approach and to mitigate the first limitation mentioned above, we complement disclosure, we complement the GAR with an additional ratio (European and symmetric):

- The numerator follows the same criteria than the previous ratio but only covers European exposures aligned with the Taxonomy.
- The denominator is symmetric and only includes portfolios where we can currently label exposures as environmentally sustainable: European financial and non-financial corporations subject to the CSRD, households, and local governments. We excluded (non-exhaustive list): Non-CSRD companies (since they do not have reporting obligations), cash & interbank loans, derivatives, goodwill and others.

(EUR million)	2024	2023
GAR stock[A]	**3.04%**	**2.42%**
Taxonomy aligned activities	39,656	31,142
Total GAR denominator	1,306,542	1,288,300
European & Symmetric - GAR[A]	**7.90%**	**6.09%**
Taxonomy aligned activities	39,287	30,037
Total GAR denominator	497,604	493,167

[A] Turnover-based ratio

→ **Other businesses' GAR (asset management, insurance and investment services):**

In addition to the credit institutions GAR that has already been published, we included the GAR for asset management, insurance[94] and investment services businesses according to the European Commission's requirements[95]

→ Our key performance indicator for asset management is 1.59% (based on turnover) and 2.60% (based on CapEx).[96]

→ Our key performance indicator for insurance[97] is 1.45% (based on turnover) and 2.05% (based on CapEx).[98]

→ Regarding the investment services KPI, we analysed the turnover of the Group's companies in relation to the total, noting that it accounts for less than 3% and is, therefore immaterial[99].

→ **Consolidated KPI:**

Last, per the European Commission's communiqué, we publish a consolidated KPI of all businesses, calculated as the weighted average of the applicable KPI of each business (credit institutions, asset management, insurance and investment services) based on turnover and CapEx, with weightings according to the proportion of revenue stemming from the activities covered by the corresponding KPI in their total turnover.[100]

Our consolidated KPI is 2.99% (based on turnover) and 3.24% (based on CapEx).

We considered net interest income and fees for the weighting of the turnover-based KPI.

Please find the complete disclosure on the following pages, including the templates set out in the Taxonomy Regulation.

For more details on how our financial strategy, product design and relations with customers and counterparties comply with the EU Taxonomy, please see the sections **2. 'Supporting the green transition'** and **10.9 'GFANZ transition planning'.**

For more details about GAR, please see the section **"SN 7.2 EU taxonomy tables".**

[94] For the asset management and insurer KPI, we included eligible and aligned transactions based on the eligibility and alignment ratios of counterparties (both in terms of CapEx and turnover).
[95] C/2024/6691
[96] Eligibility for climate-related targets is 10.9% based on turnover and 10.6% based on CapEx. For the remaining four objectives, eligibility is 1.0% based on turnover and 0.5% based on CapEx.
[97] European Commission requirements dictate the disclosure of a KPI relating to investment and underwriting. Since the Group does not engage in underwriting relating to non-life insurance (but only markets these products), we only disclose an investment KPI.
[98] Eligibility for climate-related targets is 11.7% based on turnover and 12.4% based on CapEx. For the remaining four objectives, eligibility is 0.3% (based on both turnover and CapEx).
[99] As part of detailed analysis, we identified the companies under this activity and reviewed a significant volume of revenue derived from it. Following our review, we conclude that this indicator is of little relevance to the Group's sustainability disclosures and, thus, decided not to publish the templates in this regard. Of the analysed revenue samples, 80% comes from customers who are not required to disclose taxonomy information and, therefore, do not publish alignment information. For customers who do publish taxonomy information, the percentage of aligned revenues of the total subject to this KPI is around 0.3%.
[100] Based on turnover and CapEx, with weightings according to the proportion of revenue stemming from the activities covered by the corresponding KPI in their total turnover.

SN 6. Sustainable finance and investment classification system (SFICS)

Sustainable finance is key to meeting our climate ambition. We continue to build on our sustainable finance guidelines, which we first published in February 2022, and that we continue updating based on developments in regulation and market practice. Since 2024 it also includes socially responsible investment standards and is now called the Sustainable finance and investment classification system (SFICS).

The SFICS outlines common standards to consider an asset or activity as environmental, social or sustainable in all the Group's units and businesses. It draws on such international market guidelines, standards and principles as the EU Taxonomy (including the four new environmental targets for 2023), ICMA (International Capital Market Association) Principles, LMA (Loan Market Association) Principles, UNEP FI Framework and the Climate Bonds Standard.

The SFICS enables us to track our sustainable activity, support product development and mitigate greenwashing risk.

We updated the SFICS based on lessons learned and market trends. It now features:

- A sustainability approach for customers that complements the activity-based approach.
- Additional details on manufacturing, real estate, sustainable agriculture and other activities.
- New activities that come to light on the back of developments in the EU Taxonomy and to cover new environmental goals related to water, waste, the circular economy and biodiversity.

We will continue working to evolve the SFICS in line with market developments and business practice, to have a comprehensive set of criteria that enables us to classify green and transition activities to support our customers transition and contribute to our climate ambition.

Internationally recognized sector principles and guidelines that the SFICS draws on

EU taxonomy	ICMA Green/ Social Bond Principles	LMA Green Loan Principles	LMA Sustainability Linked Loan Principles	ICMA Sustainability Linked Bond Principles	Febraban taxonomy (Brazil)	UNEP FI framework	Climate Bond Standards

Eligible products

Dedicated purpose

- Proceeds go towards **eligible environmental and social activities and initiatives**.
- Eligibility criteria: **Activities with a specific environmental and social purpose under accepted standards** that follow internationally recognized sector guidelines and principles (ICMA, LMA, Climate Bonds Standard) and the EU taxonomy.

Sustainability-linked financing

- **Sustainability-linked transactions** designed to help our customers achieve their ESG objectives.
- Transaction structured to achieve **pre-determined sustainability performance targets** (ESG ratings and metrics).
- Alignment with sector standards (ICMA and LMA).

Update in 2023 to the Green, social and sustainability funding global framework

Updated in 2023, this framework is the reference for all environmental, social and sustainability-labelled funding instruments traded in sustainable capital markets and enables all Grupo Santander entities to issue based on it. It replaces our previous Global sustainable bond and Green bond frameworks. Consistent with best market practice and investor expectations, it covers use of proceeds, project assessment and selection, management of proceeds and reporting in line with the International Capital Market Association's (ICMA) and Loan Market Association's (LMA) guidelines. It is also consistent with the SFICS.

SN 7.1 Green transition

1. Green finance[A]

EUR bn	2024	2023	2022	2021
Raised and facilitated	24.1	20.9	28.8	31.9
Accumulated since 2019	139.4	115.3	94.5	65.7

A. From January to December 2024, CIB contributed EUR 24.1 billion to the green finance target. According to Infralogic, Bloomberg, Dealogic, TXF and Mergermarket league tables. This refers to all roles undertaken by Banco Santander in the same project. It does not include financial inclusion and entrepreneurship. Green Finance raised and facilitated is not a synonym of EU Taxonomy.

2. Environmental footprint[A]

	2024	2023	Var. 2024-2023 (%)
Consumption			
Total internal energy consumption (MWh)	1,012,554	-	
Total fossil energy consumption (MWh)	179,258	-	
Share of fossil sources in total energy consumption (%)	17.7%	-	
Consumption from nuclear sources (MWh)	6,457	-	
Share of nuclear sources in total energy consumption (%)	0.6%	-	
Total certified renewable energy consumption (MWh)	793,136	-	
Share of certified renewable sources in total energy consumption (%)	78.3%	-	
Fuel consumption by renewable source, such as biomass (MWh)	0	-	
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources (MWh)	780,356	-	
Consumption of self-generated non-fuel renewable energy (MWh)	12,780	-	
Total not certified renewable energy consumption (MWh)	33,703	-	
Share of not certified renewable sources in total energy consumption (%)	3.3%	-	
Total electricity (millions of kwh)	856.65	805.31	6.4
Electricity from non-renewable sources (millions of kwh)	63.52	25.63	147.8
Electricity from renewable sources (millions of kwh)	793.14	779.68	1.7
Percentage of contractual instruments (contracts for renewable electricity guaranteed by utility) used for the procurement of renewable electricity.	53%		
Percentage of contractual instruments (PPAs_Power Purchase Agreements) used for the purchase of renewable electricity	9%		
Percentage of contractual instruments (IRECs (International Renewable Electricity Certificates or DoO) used for the procurement of renewable electricity	38%		
Water (m^3)[B]	1,961,149	1,858,645	5.5
Paper (t)	6,023	4,932	22.1
Recycled or certified paper (t)	5,000	4,417	13.2

A. For 2024, information is included for 100% of the Group's average employees in all the countries we operate. The entities listed under ESRS Requirement E1, paragraph 50.b) (investees with operational control), are not material to Santander.
B. Santander consumes water basically from public water supply networks.

3. Gross scopes 1, 2, 3 and total GHG emissions (excluding financed emissions)

	Retrospective				Milestones and target years [I]			
	Base year (2020) [G]	Comparative (2023) [H]	N (2024)	% N / N-1	2025	2030	2050	Annual Target % / Base Year
Scope 1 GHG emissions [A,B]								
Gross scope 1 GHG emissions (tCO_2e)	35,962	25,755	35,503	37.8%	-	33,303	-	0.7 %
Scope 2 GHG emissions [A,C]								
Gross location-based Scope 2 GHG emissions (tCO_2e)	297,621	205,292	194,276	(5.4%)	-	172,276	-	4.2 %
Gross market-based Scope 2 GHG emissions (tCO_2e)	144,038	21,516	24,350	13.2%	-	12,350	-	9.1 %
Significant scope 3 GHG emissions [D]								
Total Gross indirect (Scope 3) GHG emissions (tCO_2e)	-	**125,441**	**1,116,061**	-	-	-	-	-
1 Purchased goods and services [E]	-	-	698,768	-	-	-	-	-
2 Capital goods [E]	-	-	216,388	-	-	-	-	-
4 Upstream transportation and distribution [E]	-	-	52,835	-	-	-	-	-
6 Business travel [A,F]	-	50,061	52,150	4.2%	-	-	-	-
7 Employee commuting [A,F]	-	75,380	82,569	9.5%	-	-	-	-
9 Downstream transportation [E]	-	-	13,350	-	-	-	-	-
Total GHG emissions (excluding financed emissions) [A,J]								
Total GHG emissions (location-based) (tCO_2e)	-	**356,488**	**1,345,841**	277.5%	-	-	-	-
Total GHG emissions (market-based) (tCO_2e)	-	**172,711**	**1,175,915**	580.9 %	-	-	-	-

A. For 2024, information is included for 100% of the Group's average employees in all the countries we operate. The entities listed under ESRS Requirement E1, paragraph 50.b) (investees with operational control), are not material to Santander.

B. These emissions include those derived from direct energy consumption: Natural gas, diesel as well as the fuel consumption of the fleets where it is applicable (Argentina, Mexico, Brazil, Chile and Poland this year) and fugitive emissions of refrigerant gases according to the GHG Protocol standard. For the calculation of these emissions, emission factors from DEFRA (Department for Environment, Food and Rural Affairs) 2024 for the financial year 2024 and DEFRA 2023 for the financial year 2023 have been applied. For Brazil's own fuels, the factors of the Brazilian GHG Protocol Program are used. Santander does not use biomass as fuel and therefore does not produce direct biogenic emissions. Santander does not manage emissions subject to regulated Emission Trading Schemes (ETS), including the EU-ETS, national ETS and non-EU ETS. The direct emissions in tCO_2e disaggregated by country are: Argentina 1,554, Brazil 2,772, Chile 564, Germany 2,270, Mexico 6,609, Nordics 3, Poland 6,652, Portugal 231, Spain 5,995, UK 2,676, USA 5,109, Others 1,067.

C. These emissions include those derived from electricity consumption and the use of district heating and correspond to Scope 2 defined by the GHG Protocol standard. In 2024 they have been calculated with emission factors of the 2024 edition of the IEA, for 2023 the emission factors of the 2023 edition were used. For the calculation of district heating in Poland and Norway, local public emission factors for 2024 different from DEFRA were used. Data on biogenic emissions is not included as information on these emissions is not available in the EIA emission factor database.
- Indirect emissions Electricity – market-based: For the calculation of these emissions, only renewable electricity is considered as renewable electricity that can be certified by any type of contract or product recognized as such, but not the share of the country energy mix obtained from IEA data (i.e. where non-renewable electricity is purchased expressly).
- Indirect Emissions Electricity – location-based: The IEA emission factor for each country has been applied for all electricity purchased, regardless of its source of origin (renewable or non-renewable).

The indirect emissions in tCO_2e disaggregated by country are:
- Market-based: Argentina 441, Brazil 115, Chile 44, Germany 2,008, Mexico 1,613, Nordics 8, Poland 12,021, Portugal 309, Spain 1,371, UK 1,103, USA 0, Others 5,316.
- Location-based: Argentina 12,444, Brazil 17,577, Chile 7,350, Germany 5,824, Mexico 51,629, Nordics 36, Poland 26,826, Portugal 3,041, Spain 29,338, UK 16,408, USA 18,486, Others 5,316.

D. The assessment we conducted to determine the materiality of indirect GHG emissions (scope 3) found that the only material category under this scope was category 3.15 (financed emissions), with a weighting of 99% of the total.. The other categories are identified as not relevant, given its low representativeness. In addition, the categories disclosed in this table are defined as relevant, and the following categories are identified as not relevant, given their low representativeness: 3.3 - Fuel and energy-related activities (not included in Scope 1 or 2); 3.5 - waste generated in operations; 3.8 - upstream leased assets; 3.10 - processing of sold products; 3.11 - use of sold products; 3.12 - end-of-life treatment of sold products; 3.14 - franchises.
Biogenic emissions are not included as information on these emissions is not available in the databases we use to calculate any of the categories.

E. Supply chain emissions are calculated using a spend-based approach considering the payments to our suppliers in the current year. For that non primary data obtained from suppliers has been used. These are calculated using the Supply Chain Greenhouse Gas Emission Factors v1.3 from the U.S. Environmental Protection Agency. Our supplier taxonomies are mapped to the sectors considered in the database and then converted into emissions through spend-based emissions factors. Then, different spending taxonomies are grouped based on the GHG scope 3 categories based on their nature (purchased goods and services, capital goods, upstream and downstream transportation)

F. For the calculation of these emission factors DEFRA 2023 for fiscal year 2023 and DEFRA 2022 for fiscal year 2022 have been applied. For Brazil's specific fuels, emissions factors from the Brazilian GHG Protocol Program have been applied.

G. Base year is 2020. Emissions disclosed that year were reviewed to consider the same circumstances as the disclosed in this report 2024: equal perimeter (all countries and businesses that have employees, formerly G10) and considering fugitive emissions equivalent to current emissions (recently included in emissions footprint).

H. Data with no information for 2023 are first reported in 2024.

I. Our reduction objectives have been externally assured only in the verification process of the present report.

J. To comply with the regulatory requirements we have extended the financed emissions calculations, in most cases based on factors and other proxies. More details see table below 3.2. The total absolute financed emissions (scope 3, categories 15 and 13) of this broad scope, including scope 1, 2 and 3 are 283.8 $mtCO_2e$. And the total GHG emissions (market-based) are 285.0 $mtCO_2e$. With this figure, the ratio of "GHG total emissions / Total income" is: 4.6 $mtCO_2e$/bn€ (Total income figure as disclosed in the Consolidated Income Statements).

3.1. Financed emissions of non-financial corporations, as disclosed in Pillar 3

Sector	Gross carrying amount (€bn)	GHG financed emissions (scope 1 and scope 2 of the counterparty) ($mtCO_2e$)	GHG financed emissions (scope 3 of the counterparty) ($mtCO_2e$)	GHG emissions: gross carrying amount percentage of the portfolio derived from company-specific reporting
Exposures towards sectors that highly contribute to climate change [A]	**259.3**	**58.6**	**159.3**	**10.1%**
A - Agriculture, forestry and fishing	8.5	8.1	3.8	0.5%
B - Mining and quarrying	11	11.8	41.5	28.2%
C - Manufacturing	53.7	13.7	63.2	14.3%
D - Electricity, gas, steam and air conditioning supply	13.9	10.7	7.2	23.6%
E - Water supply; sewerage, waste management and remediation activities	1.7	1.1	0.5	3.8%
F - Construction	18.7	0.9	4.8	2.7%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	77.7	6.1	31	12.1%
H - Transportation and storage	17.3	4.4	5.6	9.4%
I - Accommodation and food service activities	11.3	0.5	1.4	1.3%
L - Real estate activities	45.6	1.3	0.3	1.0%
Exposures towards sectors other than those that highly contribute to climate change [A]	**79.2**			
K - Financial and insurance activities	0			
Exposures to other sectors (NACE codes J, M - U)	79.2			
TOTAL	**338.5**	**58.6**	**159.3**	**7.8%**

A. In accordance with the Commission delegated regulation EU) 2020/1818 supplementing regulation (EU) 2016/1011 as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks -Climate Benchmark Standards Regulation - Recital 6: Sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006.

3.2. Financed emissions estimated from balance sheet[A]

Asset	Gross carrying amount assessed (EUR bn)	GHG financed emissions (scope 1 and scope 2) ($mtCO_2e$)	GHG Scope 1 and 2 $mtCO_2e$/ exposure (EUR bn)	GHG financed emissions (scope 3) ($mtCO_2e$)	GHG Scope 3 $mtCO_2e$/ exposure (EUR bn)	PCAF Score[I]
Non-financial corporations (Pillar 3)[B]	**338.5**	**58.6**	**0.18**	**159.3**	**0.66**	**4.8**
Mortgages[C]	**350.5**	**3.6**	**0.01**	**0.0**	**0.01**	**3.8**
Motor vehicle loans[D]	**170.2**	**27.0**	**0.16**	**0.0**	**0.16**	**4.2**
Sovereign debt[E]	**155.2**	**33.9**	**0.22**	**0.0**	**0.22**	**2.2**
Corporate bonds[F]	**45.7**	**0.3**	**0.006**	**0.7**	**0.02**	**5.0**
Equity instruments[G]	**6.8**	**0.01**	**0.002**	**0.1**	**0.01**	**5.0**
Investments: joint ventures and associated[H]	**7.3**	**0.02**	**0.003**	**0.2**	**0.03**	**4.0**
TOTAL	**1,065.6**	**123.5**	**0.12**	**160.3**	**0.27**	

A. This includes scope 3 - category 13 and 15 emissions for regulatory purposes.
B. These are the financed emissions reported under the EBA Pillar 3 exercise, which should not be confused with the portfolio alignment financed emissions, as the scope and supporting data of the two exercises is different.
C. Mortgage financed emissions. Calculated as of 2023, for the UK and Spain, and as of 2024 for Poland. Also extending calculation to rest of group's mortgage portfolio (2024 data).
D Motor vehicle loans financed emissions from loans and leases. That includes the current auto-lending alignment target scope, calculated as of 2023, and other auto exposures within EU consumer finance business and auto-lending in America, calculated with 2024 financial data.
E. Sovereign debt at fair value or amortized cost. Financed emissions calculated covers scope 1 including 'Land Use, Land-Use Change and Forestry' (LULUCF), following the recommendations by PCAF methodology and using the United Nations Framework Convention on Climate Change (UNFCCC) official reported emissions factors from the PCAF database.
F. Private fixed-income instruments at fair value or amortized cost, excluding the exposures included in the Pillar 3 reporting. Financed emissions calculated covers scope 1, 2 and 3 from the issuers, following the recommendations by PCAF methodology and using the emissions factors from the PCAF database.
G. Equity instruments at fair value, excluding the exposures included in the Pillar 3 reporting. Financed emissions calculated covers scope 1, 2 and 3 from the issuers, following the recommendations by PCAF methodology and using the emissions factors from the PCAF database.
H. Investments in joint ventures and associated. Financed emissions calculated covers scope 1, 2 and 3 from the companies, following the recommendations by PCAF methodology and using the emissions factors from the PCAF database.
I. As explained below, we had to extrapolate the emissions calculations for near 20% of the exposure assessed for 'Financed emissions estimated from balance sheet'. The PCAF score is an approximation assuming the extrapolations account for PCAF score 5 (worse quality), and the rest is calculated following the PCAF standard recommendations.

Santander discloses for the first time financed emissions of new categories from our balance sheet in this annual report, and we extend the scope from the emissions calculated with PCAF methodology to a broader scope to cover almost all balance sheet exposures subject to

financed emissions calculations, with the only purpose of complying with the disclosure regulation. In the 'SN. 4 Our transition plan' we disclose the financed emissions of portfolio alignment with reasonable quality of data, with the aim of managing our portfolios with alignment purposes. In this section, we prioritize the completeness of the sustainability information disclosed. This means that the calculations where primarily supported by emissions factors, proxies or approximations, instead of actual reported emissions, to extend the calculation of financed emissions as reasonable as possible. This calculation helps us reach the figures we disclose, although we will continue to work on improving the available data and calculations in the future.

For all these reasons, we could expect some volatility in the financed emissions disclosed as better information becomes available over time or as some of the proxies/factors provided by external parties are updated.

4. GHG mitigation projects financed through carbon credits

Carbon credits cancelled and used for scopes 1+2 compensation	N (2024)
Total (tCO_2e)[A]	59,858
Share from removal projects[B] (%)	15 %
Share from reduction projects (%)	85 %
Share of projects validated by Verra's VCS	13 %
Share of projects validated by Climate Action Reserve	15 %
Share of projects validated by Gold Standard	72 %
Share from projects within the EU (%)	— %
Share of carbon credits that qualify as corresponding adjustments (%)[C]	— %

A. Since emissions offsetting is done by country, the upward rounding of tCO_2e means that the total amount of credits is slightly higher than the total sum of emissions.
B. In 2024, all GHG phase-out mitigation projects are nature-based (biogenic) solutions projects. Santander cancels all credits after purchase in the year. In 2024, 71,300 new credits were acquired and cancelled: 16.5% validated by Climate Action Reserve (removal projects) and 83.5% validated by Gold Standard (reduction projects). The existing contractual agreements Santander has in different countries will enable us to obtain 70.259 carbon credits between from now to 2073 year. Cancellation of such credits will be based on the mitigation approach at the time.
C. It is reported 0% since Article 6 is not yet applicable.

5. Equator Principles

Number of projects	Project Finance			Project Related Corporate Loans			Project-Related Refinance and Project-Related Acquisition for Project Finance		
Category	**A**	**B**	**C**	**A**	**B**	**C**	**A**	**B**	**C**

No	0	1	2	0	1	1	0	0	0

A. In accordance with the definition of designated countries included in the Equator Principles, with solid environmental and social governance, legislation and institutions to protect their inhabitants and the environment.
Category A – Projects with potential significant adverse environmental and social risks and/or impacts that are diverse, irreversible or unprecedented;
Category B – Projects with potential limited adverse environmental and social risks and/or impacts that are few in number, generally site-specific, largely reversible and readily addressed through mitigation measures;
Category C – Projects with minimal or no adverse environmental and social risks and/or impacts.

SN 7.2 EU taxonomy tables[101]

0. Summary of KPI to be disclosed by credit institutions under Article 8 Taxonomy Regulation - 2024

		Total environmentally sustainable assets (1)	KPI (3)	KPI (4)	% coverage (over total assets) (5)	% of assets excluded from the numerator of the GAR (Article 7.2 and 7.3 and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7.1 and Section 1.2.4 of Annex V)
Main KPI	**Green asset ratio (GAR) stock**	**39,656**	**3.04**	**3.28**	**69.8**	**34.0**	**30.2**

		Total environmentally sustainable assets (2)	KPI	KPI	% coverage (over total assets)	% of assets excluded from the numerator of the GAR (Article 7.2 and 7.3 and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7.1 and Section 1.2.4 of Annex V)
Additional KPI	GAR (flow)	7,862	2.63	3.35	65.9	40.7	34.1
	Trading book(6)						
	Financial guarantees	249	1.47	3.46			
	Assets under management	2,047	1.3	2.14			
	Fees and commissions income(6)						

(1) Total environmentally sustainable assets used for turnover KPI. Total environmentally sustainable assets used for Capex KPI amounts to EUR 42,834 million.

(2) Total environmentally sustainable assets used for turnover KPI. Total environmentally sustainable assets used for Capex KPI amounts to EUR 10,009 million for GAR flow, EUR 585 million for financial guarantees and EUR 3,360 million for assets under management .

(3) Based on the Turnover KPI of the counterparty.

(4) Based on the CapEx KPI of the counterparty.

(5) % of assets covered by the KPI over banks´ total assets.

(6) Fees and Commissions and Trading Book KPIs shall only apply starting 2026.

[101] Perimeter calculation for GAR, in accordance with the Commission Delegated Regulation (EU) 2021/2178, is based on the prudential consolidated group. In this context, the entities within the Santander Group are consolidated using the full consolidation method, except for jointly controlled entities, which are proportionately consolidated. Companies that cannot be consolidated due to their activity are included using the equity method. The difference between the total assets of the public and prudential perimeters is not significant. This difference is due to the exclusion of non-financial entities and the inclusion of multi-group and intergroup entities, in accordance with this consolidation criterion.

0. Summary of KPI to be disclosed by credit institutions under Article 8 Taxonomy Regulation - 2023

		Total environmentally sustainable assets (1)	KPI (3)	KPI (4)	% coverage (over total assets) (5)	% of assets excluded from the numerator of the GAR (Article 7.2 and 7.3 and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7.1 and Section 1.2.4 of Annex V)

1. Exposures in the banking book towards those sectors covered by the Taxonomy (NACE sectors 4 levels of detail), using the relevant NACE Codes on the basis of the principal activity of the counterparty. A threshold above 0.5% of the eligible exposure has been set for reporting NACE at level 4. All other NACEs outside this threshold are reported at level 1.

1. Exposures in the banking book towards those sectors covered by the Taxonomy (NACE sectors 4 levels of detail), using the relevant NACE Codes on the basis of the principal activity of the counterparty. A threshold above 0.5% of the eligible exposure has been set for reporting NACE at level 4. All other NACEs outside this threshold are reported at level 1.

3. GAR KPI stock (Capex) - 2024

Average KPI					**3.0%**	**3.2%**

9. Nuclear and fossil gas related activities - 2024 (credit institution)

	Nuclear energy related activities	
1	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	YES
2	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	YES
3	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	YES
	Fossil gas related activities	
4	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	YES
5	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	YES
6	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	YES

7	Amount and proportion of other taxonomy-non-eligible economic activities not referred to in rows 1 to 6 above in the denominator of the applicable KPI	112,934.2	89.71%
8	Total amount and proportion of taxonomy-non-eligible economic activities in the denominator of the applicable KPI	112,934.2	89.71%

SN 7.3 Employees

6. Employees by region[A,B]

	Number of employees	
Region	**2024**	**2023**
Spain	34,940	35,266
Brazil	57,133	57,868
Chile	9,240	9,576
Poland	13,846	13,361
Argentina	8,100	8,365
Mexico	29,768	31,239
Portugal	5,316	5,303
UK	22,542	24,221
USA	11,341	12,579
Others	14,527	14,986
Total	**206,753**	**212,764**

A. At year end, information from People & Culture global platform for harmonized people processes groupwide. Employee data is breakdown according to geographical criteria and cannot be compared to the figures in the 'Economic and Financial Report' chapter, which follow management criteria. Employees refers to employees hired as described in chapter 3.1. Our employees.
B. See note 46.b) in the consolidated annual accounts.

7. Employees by gender[A]

	Number of employees (headcount)	
Gender	**2024**	**2023**
Male	98,377	100,449
Female	108,319	112,315
Other[B]	6	-
Not declared	51	-
Total employees	**206,753**	**212,764**

A. Employees at year end. At Santander we comply with local regulations (and in turn to comply with the CSRD) recording Gender as defined in the employees national identification (as required by each local administration) and is broken down in female, male (both available in all countries), plus other and not declared(these two only accepted in very few countries).
B. In 12 countries the regulation allows us to voluntarily report gender identity, guaranteeing privacy and equal treatment. Among those employees who have voluntarily reported it, 2.8% identify themselves as non-binary, trans or others.

8. Employees by management group and gender[A]

	Senior executives[B]									
	2024					2023				
	Men	Women	Others	Not declared	Total	Men	Women	Others	Not declared	Total

A. At year end.
B. Senior Executives includes employees with harmonized management levels: Senior Executive VP. Executive VP and VP.
C. Other Executives includes Directors, Mangers, Experts and Branch Managers.

9. Employees by age bracket[A]

Number and % of total

	2024					
	aged < 30		aged 30 - 50		age over 50	
Europe	11,842	13.57%	54,262	62.19%	21,147	24.24%
North America	10,485	25.33%	25,239	60.97%	5,675	13.71%
South America	22,372	28.64%	49,183	62.97%	6,548	8.38%
Group total	**44,699**	**21.62%**	**128,684**	**62.24%**	**33,370**	**16.14%**

A. At year end. Age brackets are presented according to CSRD definitions. Average age of our workforce is 38 years old, as it was in 2023.

10. Employees by employment contract[A]

	2024				
	Men	**Women**	**Other**	**Not declared**	**Total**
Number of employees	98,377	108,319	6	51	206,753
Number of permanent employees	96,541	105,942	6	13	202,502
Number of temporary employees	1,836	2,377	0	38	4,251
Number of full-time employees	97,163	102,740	5	50	199,958
Number of part-time employees	1,214	5,579	1	1	6,795
Number of non-guaranteed hours employees	0	0	0	0	0

A. At year end. 98% of employees in Santander have a permanent employment contract and 97% have full-time contract, as in 2023. For additional definitions see 7. Employees by gender.

11. Collective bargaining coverage and social dialogue[A]

	Collective Bargaining Coverage		**Social dialogue**
Coverage Rate	Employees – EEA (European Economic Area) (for countries with >50 empl. representing >10% total empl)	Employees – Non-EEA (estimate for regions with >50 empl. representing >10% total empl)	Workplace representation (EEA only) (for countries with >50 empl. representing >10% total empl)
0-19%	Poland	United States	
20-39%		Mexico	
40-59%			
60-79%			
80-100%	Portugal and Spain	Argentina, Brazil, Chile and United kingdom	Spain, Poland and Portugal

A. Percentage of employees covered by collective agreement, as defined by CSRD. The aggregate average is 74%, among main entities in our 16 relevant countries that aggregately represent 98% of our global headcount, that aggregate average is similar to previous period.

12. Turnover by region[A,B]

	2024		2023	
	Total	**Turnover ratio[C]**	**Total**	**Turnover ratio**
Europe	10,464	11.77%	8.87	10.07%
North America	9,905	23.38%	10,705	24.21%
South America	19,726	25.33%	20,900	26.41%
Group total	**40,095**	**19.17%**	**40,478**	**19.14%**

A. Employees who ended definitely their employment relation with Santander entities through 2024, it does not include temporary leave or transfer between Santander companies. Information from People & Culture global platform used harmonized people processes groupwide.
B. The total number of terminated employees was 0.9% lower than in 2023, the turnover rate remained stable compared to the previous year, with variations of -1 percentage point in South America and North America and +2 points in Europe. 53.9% of those laid off are women, in line with the distribution of our workforce.
C. Turnover rate is calculated over average headcount of the period.

13. Average remuneration by management group, gender, and age bracket[A]

	2024				
	Women	**Men**	**Other[B]**	**Not declared[B]**	**Total[C]**
Gender	41,822	65,625	-	-	53,131
	Senior executives	**Other executives**	**Other employees**		**Total**
Management group	524,748	129,847	36,834	-	53,131
	<30	**30-50**	**>50**		**Total**
Age bracket	23,329	53,353	88,044	-	53,131

A. It includes gross annual salary and comparable supplements, pension schemes and variable remuneration. 99% of Santander employees receive other salaries that supplement their salary.
B. The categories requested by CSRD, by gender and age groups have been used. Groups with less than 50 employees (others, not declared) are not included because they are not statistically relevant and to avoid statistically erroneous conclusions.
C. The average pay of our constant workforce (i.e. employees who were with us at 2023 year end and remained at 2024 year end) grew 11.4% in 2024 in constant euros (this does not include Argentina due to exchange rate distortions between the two periods). If we consider the current exchange rates (including Argentina) and the new hired employees, the average remuneration has had a net increase of 3.1% in comparison with the average for our workforce in 2023 (EUR 51,535).

14. Remuneration ratios

	2024
Hourly GPG ratio (average)	36%
GPG ratio (median)[A]	26%
EPG ratio	c. 0
Remuneration ratio[B]	367.1

A. GPG Ratio (median) includes annual base salary and variable remuneration paid in the year.
B. Ratio of the annual remuneration of the highest-paid individual for the performance of executive duties (salary, pension contributions, variable remuneration); divided over Median employee annual remunerations (excluding the highest-paid). This figure is impacted by our business model, with a large presence in three geographical regions (Europe, North and South America) and a large network of branches (c.8,000), since more than half of our employees are based in Mexico and South America (mainly in Brazil) where remuneration is aligned to the local cost of living, much lower than that of other countries that are the reference for establishing the remuneration of executive directors. In addition, the use of the median overstates this effect versus the mean: with average data the result of the ratio would be 239.7.

15. Average remuneration of senior management (with variable remuneration not linked to long-term objectives)

Thousand euros	2024			2023		
	Men	**Women**	**Total**	**Men**	**Women**	**Total**
Executive directors	9,137	12,127	10,632	8,257	11,544	9,900
Non-executive directors	285	356	309	368	327	352
Senior management[A]	3,898	1,380	3,538	4,112	1,645	3,583

A. Members of the senior management at the end of the year.

16. Average remuneration of senior management linked to long-term objectives (fair value)

Thousand euros	2024			2023		
	Men	**Women**	**Total**	**Men**	**Women**	**Total**
Executive directors	1,611	2,332	1,972	1,537	2,243	1,890
Senior management[A]	553	170	498	563	189	483

A. Additionally, in 2023, one senior executive received EUR 200,000 of the Digital Transformation award from PagoNxt S.L.

17. Senior management composition

Number	2024			2023		
	Men	Women	Total	Men	Women	Total
Executive directors	1	1	2	1	1	2
Non-executive directors	10	5	15	8	5	13
Senior management	12	2	14	11	3	14

A. Members of the senior management at the end of the year.

18. Training

	2024
Total investment in training (euros)	63,730,131
Total hours of training	5,286,317
% employees trained[A]	94.4
Total attendees[B]	6,925,442
Hours of training per employee[C]	25.3

A. Calculation based on year-end headcount.
B. Training courses completed by our employees during 2024 (2% higher vs 2023).
C. Calculation based on average headcount during the year. Women completed an average of 26.2 hours and men 24.3 hours.

19. Hours of training by gender and management group[A]

	2024				
	Men	Women	Others	Not declared	Total
Gender	2,413,371	2,872,035	111	800	5,286,317
	Senior executive	Other executive	Other employees		Total
Management level	52,476	857,065	4,376,775	-	5,286,317

A. The aggregate number learning hours decreased 12.9% in comparison with the previous period, based on digitalization and optimization of training courses, plus the evolution of our workforce.

20. Occupational health and safety[A,H]

	2024			2023		
	Men	Women	Total	Men	Women	Total
Number of fatal occupational accidents or work-related illness	0	0	0	0	0	0
Work-related illness[B]	1	2	3	3	12	15
Total number of accidents[C]	317	633	950	128	271	399
Work-related accident rate (CSRD criterion, equivalent to the frequency rate of Law 11/2018)[D]	1.15	2.08	1.64	0.51	0.94	0.74
Total number of days of absence due to accidents[E]	12,617	24,094	36,711	-	-	-
Accident rate[F]	0.03	0.06	0.05	0.02	0.04	0.03
Severity rate[G]	0.05	0.08	0.06	0.03	0.06	0.04

A. As in the rest of this chapter, we only include information about our employees. In accident ratios, Santander Bank Polska s.a. is not included.
B. Reported globally since 2023, following local laws for occupational illnesses where they are regulated country-wide or for specific jobs, as soon as a medical examination confirms the cause as occupational.
C. We report occupational injuries that can be documented in 2024, including accidents while commuting. We standardized criteria, processes and systems across our footprint to calculate leave on medical grounds in every market. Banco Santander only considers occupational accidents and illnesses that, following expert review, are recognized as work-related and reported to official bodies (e.g. in Brazil, through a comunicação de acidente de trabalho — CAT, or work-related accident notice — to the Instituto Nacional do Seguro Social — INSS, National Social Security Institute). In Brazil, this indicator only considers absences due to occupational accident of 15 days or more. The variation from 2023 stems mainly from having standardized types of absence and, especially, the impact of standardization in the UK, where employees report voluntarily if the cause is occupational; in this country, though there is no specialized verification like in our other, we accounted for these absences as reported by the employees.
D. Number of occupational accidents with leave for every 1,000,000 theoretical working hours.
E. Including days missed due to occupational accident with leave according to the definition provided. Across the entire Group, we accounted for 100 days for occupational illnesses and 0 days for occupational fatalities.
F. Ratio of hours missed due to an occupational accident divided by the total number of theoretical hours worked by employees in the year.
G. Days missed due to occupational accident with leave for every 1,000 theoretical working hours. Hours worked are theoretical. This includes accidents while commuting.
H. In addition, in all units our employees have recorded 16.4 million hours of absence due to health reasons (16.9 million hours in 2023).

SN 7.4 Customers

21. Group customers[A]

	2024	2023	var.
Europe	**46,820,826**	**46,293,433**	**1%**

Santander Digital	2,596,154	2,527,302	3%
Total	**172,537,332**	**164,542,034**	**5%**

A. Figures corresponding to total customers.
B. Includes the rest of Private Banking and other CIB Europe.
C. From 2024 onwards, Brazil includes number of customers instead of decision units.
D. Includes Uruguay, Peru and Colombia.
E. Includes BPI Miami.
F. SCF includes customers in all European countries, including the UK.

22. Dialogue by channel

	2024	2023	Var .2024/2023 %.
Branches			
Number of branches	8,011	8,518	(6.0)%
Digital banking[A]			
Digital customers[B] (millions)	59.3	54.2	9.4 %

A. Santander Consumer Finance not included.
B. Counts once for customers of both Internet and mobile banking.

23. NPS ranking by country

	2024	2023
Argentina	2	1
Brazil	5	4
Chile	1	1
Uruguay	1	2
Spain	3	3
Poland	3	3
Portugal	3	2
UK	4	5
Mexico	3	2
USA	6	9

NPS to measure customer satisfaction, audited by Stiga/Deloitte.
Santander position vs competitors (Official Peer Group by countries). Key peers by country: Argentina: Galicia, BBVA, ICBC, HSBC, Banco Macro, Banco de la Nación; Brazil: Itaú, CEF, Bradesco, Banco do Brasil, Nubank; Chile: BCI, Banco de Chile, Itaú, Scotiabank, Banco Estado; Uruguay: Brou, Itaú, BBVA, Scotiabank; Spain: Bankinter, BBVA, Caixabank, Sabadell, Unicaja; Poland: ING, Millenium, MBank, Bank Polski, Bank Pekao, BNP Paribas; Portugal: BPI, Millenium BCP, CGD, Novo Banco, Montepio; UK: Nationwide, Barclays, Halifax, NatWest Gr., Lloyds, HSBC, TSB; Mexico: BBVA, Scotiabank, Banorte, HSBC, Banamex, Banco Azteca; US: Chase, Capital One, Bank of America, PNC, Wells Fargo, KeyBank, Citizens, Citigroup, TD Bank, M&T Bank, Truist.

24. Total complaints[A]

	2024	2023
Spain[B]	156,460	88,326
Portugal	3,588	4,789
United Kingdom[C]	30,778	25,309
Poland	4,209	6,272
Brazil	226,976	207,211
Mexico	71,082	68,565
Chile[D]	10,458	8,441
Argentina	6,351	5,525
US	6,256	5,712
SCF[E]	165,478	33,074

A. Compliance metrics based on group-wide criteria, homogeneous for all geographies. Include complaints received through formal channels such as the official complaints service (if exists), public or private consumer organisations and agencies, senior management, customer ombudsmen (if exists), regulator channels.
B. Spain increases due to claims for mortgage origination fees. It includes Open bank S.A.
C. UK increases due to a change in the perimeter in 2024. Excluding the effect of the change of perimeter, formal claims are reduced by 20%.
D. Impacted by the inflow of fraud claims in the first half of the year, until the country's fraud law was amended, with a significant reduction in the second half of the year.
E. SCF impacted by high volume of discretionary commission claims on UK dealers.

SN 7.5 Financial inclusion

25. People financially included[A]

million people (Accumulated since 2023)	2024	2023
Access	1.9	1.0
Finance	2.4	0.8
Total	4.3	1.8

A. A new target for people financially included was launched in 2023, which considers access and finance initiatives (the previous target also included financial education). The figures reflect only the new people financially included since 2023 (unique people).

26. Microfinance

million euros / people	2024	2023
Total credit disbursed[A]	1,270	1,172
Total micro-entrepreneurs supported	1.3	1.2

A. The increase in credit disbursed is mainly due to the bank's objective to expand its microfinance programmes in Latin America.

SN 7.6 Community support

27. Community Support

million euros	2024	2023
Support for higher education, employability, and entrepreneurship	103.8	105.1
Other local initiatives	62.5	68.9
Total	166.4	174.0

28. Outputs and outcomes

28.1 People helped through Santander Universities programmes

people helped	2024	2023
Higher education	34,062	28,849
Employability[A]	2,078,051	463,045
Entrepreneurship[B]	52,570	7,036
Total[A]	2,164,683	498,930

A. The significant increase in the number of people helped in terms of employability owes to the global launch of short, direct access courses with unlimited places and a completion certificate.
B. In 2024, we began to disclose entrepreneur support programmes in the US through Santander Universities.

28.2 People helped through other local initiatives[A,B]

	2024	2023
Childhood education	357,549	600,649
Social welfare	702,706	968,301
Art and culture	672,539	69,772
Others	1,146,566	530,764
Total	2,879,360	2,169,486

A. The nature and depth of initiatives is very diverse, both between them and comparing to initiatives of Santander Universities.
B. The increase is due to a better identification of people helped in countries, as well as the inclusion of initiatives.

SN 7.7 Tax contribution

We pay taxes in the jurisdictions where we earn a profit. Thus, the profits obtained, and the taxes accrued and paid, correspond to the countries where we operate.

For every EUR 100 in total income, the Group pays EUR 36 in taxes, including EUR 18 in taxes paid directly by Santander and EUR 18 in taxes collected from third parties.

The taxes Santander pays directly (see table below) include non-recoverable value added tax (VAT), employers' social security contributions, charges levied on banks and financial transactions in Spain, the UK, Poland, Portugal, Brazil and Argentina, and other taxes.

29. Total taxes paid

EUR million

	2024				
Jurisdiction	**Corporate income tax[A]**	**Other taxes paid**	**Total own taxes paid[B]**	**Third-party taxes[C]**	**Total contribution**

United States	241	113	354	935	1,289
Other	10	4	14	11	25
TOTAL	**5,880**	**5,062**	**10,942**	**11,526**	**22,468**

A. The Group's income tax for the year 2023 amounted to EUR 5,214 mn

B. Total own taxes paid for all these concepts amounted to EUR 10,942 mn, broken down as EUR 5,880 mn in corporate income tax, EUR 1,296 mn in non-recoverable VAT and other sales taxes, EUR 1,851 mn in employer-paid payroll taxes, EUR 90 mn in property taxes, EUR 334 mn in Spanish temporary bank levy, EUR 342 mn in bank levies and EUR 1,149 mn in other taxes.

C. Total third-party taxes amounted to EUR 11,526 mn, broken down as EUR 3,167 mn in salary withholdings and employees' social security contributions, EUR 1,230 mn in recoverable VAT, EUR 2,366 mn in tax deducted at source on capital, EUR 385 mn in non-resident taxes, EUR 404 mn in property taxes, EUR 262 mn in stamp taxes, EUR 2,188 mn in taxes related to the financial activity and EUR 1,524 mn in other taxes.

SN 8. Additional metrics to comply with Spanish Act 11/2018

1. Average employees, by contract type and gender. As required by Ley 11/2018[A]

	2024				
	Women	**Men**	**Other**	**Not declared**	**Total**
Average employees	109,762	99,257	6	86	209,112
Average permanent employees	107,404	97,487	6	64	204,960
Average temporary employees	2,358	1,771	0	22	4,151
Average full-time employees	103,837	98,023	6	83	201,949
Average part-time employees	5,925	1,234	0	3	7,163

A. Average headcount throughout the year. We reclassified genders according to CSRD definitions. The breakdown remains stable, with an average 52% women employees against 53% in 2023. The breakdown by contract type also remains similar: The average headcount with a permanent contract is 98%, while the average headcount with a full-time contract is 96.5%, the same figures as in 2023.

2. Average employees, by contract type and age bracket. As required by Ley 11/2018[A]

	2024			
	Under 30	**30-50**	**Over 50**	**Total**
Average employees	46,556	129,728	32,828	209,112
Average permanent employees	44,748	127,682	32,531	204,960
Average temporary employees	1,808	2,046	297	4,151
Average full-time employees	45,412	125,537	30,999	201,949
Average part-time employees	1,143	4,191	1,829	7,163

A. Average headcount throughout the year. We amended the age groups according to CSRD definitions and the breakdown remains flat in comparison with 2023.

3. Average employees, by contract type and management group.[A]

	2024			
	Senior executive	**Other executive**	**Other employees**	**Total**
Average employees	2,273	30,748	176,091	209,112
Average permanent employees	2,253	30,291	172,416	204,960
Average temporary employees	20	457	3,674	4,151
Average full-time employees	2,263	30,234	169,452	201,949
Average part-time employees	10	514	6,639	7,163

A. Average headcount throughout the year. The breakdown by job band remains unchanged. The breakdown of the average number of employees by band is the same as in 2023: 1% senior director; 15% other director; and 84% the rest of the workforce.

4. Dismissals, by gender, management group and age Bracket.[A,B]

	2024				
	Women	**Men**	**Other**	**Not declared**	**Total**
Gender[C]	7,755	6,599	2	29	14,385
	Senior executives	**Other executives**	**Other employees**		**Total**
Management group[D]	114	1,229	13,042		14,385
	<30	**30-50**	**>50**		**Total**
Age bracket	4,495	7,866	2,024		14,385

A. Dismissal: Termination of permanent employment determined unilaterally by the company. This includes voluntary terminations as part of reorganizations or redundancy programmes, plus other termination caused by individual performance or disciplinary actions.
B. It does not include temporary absences or transfers to other Group companies.
C. We used CSRD classification by gender and age group. The dismissal rate is stable (6.9% v 6.7% in 2023). The breakdown by gender shifted, as 53.9% of dismissed employees were women (in line with the workforce breakdown), down 3 pp in comparison with 2023 (57.4%).
D. The breakdown by job band is similar to 2023.

SN 9. Alternative performance measures (APMs)

The following are additional alternative performance measures (APMs) to those listed in section 8 of the chapter 'Economic and Financial Review'. The metrics we use in this report have not been subject to further third-party verification beyond the scope of limited assurance.

Data related to tax contribution

The profits obtained, and the taxes accrued and paid, correspond to the countries where we operate.

Taxes paid by the Group	The taxes Santander pays directly are included in the cash flow statement and mainly stem from the corporate income tax paid. They also include non-recoverable value added tax (VAT), employers' social security contributions, charges levied on banks and financial transactions in the geographies were we operate, and other taxes. See data in the section SN 7.7 Tax contribution of this chapter.	It reflects how the Bank complies with its commitment to tax transparency in the jurisdictions where it operates.
Third-party taxes	These are those generated by the development of our economic activity. This is the sum of salary withholdings and employees' social security contributions, recoverable VAT, tax deduced at source on capital, non-resident taxes, property taxes, stamp taxes, taxes related to the financial activity, and others. See data in the section SN 7.7 Tax contribution of this chapter.	
Total tax contribution	The Group's total tax contribution includes the taxes paid by the Group as a direct cost and the taxes collected from third parties in the course of our economic activity. See data in the section SN 7.7 Tax contribution of this chapter.	

Data related to sustainable finance

Green finance raised and facilitated	Nominal amount of project finance, financial advisory, project bonds, green bonds (DCM), export finance (ECA), mergers and acquisitions (M&A), and equity capital markets (ECM) transactions ranked by the ESG Classification Meeting and reported in the League Tables of Infralogic, Bloomberg, Dealogic, TXF and Mergermarket since the beginning of the year. See data in section 2. Our climate transition plan and SN 7.1 Green transition (Table 1. Green finance) in this chapter.	It reflects Santander's ambition and contribution to helping our customers, and society as a whole, in the transition to a low-carbon economy.
Financing volume of renewable energy projects	Nominal amount of renewable energy projects (greenfield and brownfield) financed since the beginning of the year and reported externally as reported in Infralogic's League Tables for project financing. See data in section Sustainability at Santander in 2024 of this chapter.	
Financing volume of renewable electric vehicles	Financing volume of vehicles powered exclusively by a rechargeable electric battery (no petrol engine). See data in section Sustainability at Santander in 2024 of this chapter.	

Credit disbursed to microentrepreneurs (EUR)	Total amount of credit disbursed during the year to low-income entrepreneurs with low access to banking services, or with difficulties in accessing credit, with the objective of creating and/or growing their businesses. Data includes information on microfinance programmes in Brazil, Colombia, Mexico and Peru. See data in section Sustainability at Santander in 2024 and SN 7.5 Financial inclusion (Table 27. Microfinance) of this chapter.	It reflects Santander's ambition and contribution to help address financial inclusion challenges in the markets where we operate.

Data related to financed emissions

Financed emissions from corporates and projects	For the financed emissions associated with business loans, equities, investments, bonds, and projects we calculate the emissions in accordance with the methodology established by management that is based on the Partnership for Carbon Accounting Financials (PCAF) standard for financed emissions. The financed emissions for a corporate client portfolio are calculated using the following equation: Financed emissions = Attribution Factor x Emissions The following equations are used to determine the attribution factor at company level: Attribution Factor = Outstanding amount / Total Enterprise Value In the case of corporate business loans (CIB alignment targets), Banco Santander calculates the Total Value of the Company (used to obtain the emissions attribution factor) by adding the total equity and debt of the company to avoid the high volatility in market capitalization. In the case of Project Finance, the financed emissions for a Project are calculated using the production and an emission factor. We use as data sources (non-exhaustive): annual/Sustainability Reports of our customers, Asset Impact, Capital IQ, Carbon Disclosure Project, S&P Trucost, Transition Pathway Initiative, Wood Mackenzie, IBA, JATO, and PCAF database. See data in section Our transition plan in this chapter.	These metrics reflect Santander's ambition and contribution to addressing the challenges of emissions measurement, supporting our customers in their objectives and aligning portfolios to progress on our ambition towards net zero emissions by 2050.
Auto – lending	For the auto lending portfolio for Santander Consumer Finance Europe the financed emissions are those associated with the passenger cars financed and leased (passenger cars being the most material vehicle type in the Auto portfolio). These are calculated following the PCAF methodology: Financed emissions = ∑ Attribution Factor x vehicle emissions To determine the attribution factor of each of the loans, the following formula is used: Attribution factor = Outstanding amount / vehicle value at origination The vehicle emissions are calculated using the emissions of each specific vehicle, where available, multiplied by the annual distance estimated for each vehicle. See data in section Our transition plan in this chapter.	
Mortgages and Commercial Real Estate	Mortgages and commercial real estate portfolio emissions lending on residential mortgages includes Scope 1 and 2 emissions based on actual (where available) and modelled EPC's. We define this asset class as on balance sheet loans for specific consumer purposes – namely the purchase and refinance of residential property. The following calculation approach was used to arrive at the financed emissions for each of the properties in the portfolio: Financed emissions = building emissions x LTV The attribution factor is the outstanding amount of the loan as per the reporting year for each mortgage, divided by the total property value at origination for each building. See data in section Our transition plan in this chapter.	
Agriculture	Agriculture portfolio emissions for Santander Brazil from lending to farmers associated with primary production activities in Brazil (agriculture and livestock activities), financed through Retail mechanisms. Assessment includes Scope 1 and 2 emissions. In this sector, Santander's financed emissions estimation is based on GHG Protocol guidance and PCAF methodology, with adaptations to accommodate data availability in retail agriculture portfolio. Land management emissions: The general equations used to calculate financed emissions of an agricultural activity are as follows: Financed emissions = ∑ quantity produced or area of production or number of animals x Emission factor Emission factor sources include the GHG Protocol Brazil Tool for the Agricultural Sector, the Reference Report from Brazil's IV National Inventory, among other specialized literature. Land Use Change (LUC) emissions: The total LUC emissions for the portfolio are calculated for each property: collecting shapefiles of farms associated with the operations financed in the retail portfolio, computing annual tree-cover loss areas (in hectares), for the last 20 years, for each property, and evaluate corresponding carbon stock loss using emission factors, applying the Linear Discounting Methodology, and calculating the attribution factor for emissions related to Santander. Sources (non-exhaustive): properties' Rural Environmental Registry number, MapBiomas Collection 8, Brazil´s IV National Inventory Carbon Map.x See data in section Our transition plan in this chapter.	
Sovereign bonds	For the sovereign bonds portfolio we calculate the financed emissions following the PCAF standard recommendations, as follows: Attributed emissions = Exposure to Sovereign Bond (USD) / PPP-adjusted GDP (international USD) x Sovereign Emissions (tCO2e) See data in section Our transition plan in this chapter.	

Data related to responsible investment

Socially responsible investment assets under management (SRI AUM)	Value corresponding to total volume of assets under management registered as article 8 - promoting ESG characteristics - and 9 - with explicit sustainability objectives - of the Sustainable Finance Disclosure Regulation (SFDR, EU Reg. 2019/2088) except for illiquid investments in Private Banking which are reported in terms of committed capital. It includes: i) assets managed or advised by Santander Asset Management (SAM) and other Group asset managers in the EU and, using equivalent criteria, in countries where SFDR does not apply; and ii) third party funds and assets under advise deemed sustainable investments according to either SFDR (Article 2.17) or internal criteria as per SFICS (Sustainable Finance & Investment Classification System). See data in section 3.2.2 Responsible investment and social finance of this chapter.	It reflects Santander's ambition and contribution to promote responsible investment. It also allows our managers and bankers to have a more complete vision of the assets in which to invest and identify competitive advantages and mitigate risks.

Data related to employees training

Total investment in training	Sum of all expenditures accrued in Learning Activities, during the period, including: Direct costs from trainers who are employed as Employees (i.e. Total Compensation prorated for the dedication to training activities), but not including Salaries of Learning and Development Employees, External suppliers / vendors expenses paid and budgeted by the Learning department (for any type of service: training design, training sessions delivery, communications, consulting), logistic and facilities costs (training rooms, catering, accommodation and travel, materials), Labour cost of employees within the Learning Department (actual amounts accrued during the period, including gross compensation - all items-, plus company taxes - contributions,), IT costs and licenses plus their applicable services; expenditures in Marketing and Communications paid and budgeted by the Learning Department.; Other expenses See data in section SN 7.3 Employees (table 19. Training) of this chapter.	It reflects the bank's commitment to training and lifelong learning for its employees.

Data related to community support

Support for education, employment and entrepreneurship	Total amount invested to support education, employment and entrepreneurship. See data in section 3.2.4 Community support and SN 7.6 Community support (table 27. Community support) of this chapter.	It reflects Santander's ambition and contribution to promoting (beyond our business operations) the progress and inclusive and sustainable growth of the communities where we are present.
Support for other local initiatives	Total amount invested through local initiatives to promote childhood education, social welfare (especially among vulnerable groups), art and culture. See data in section 3.2.4 Community support and SN 7.6 Community support (table 27. Community support) of this chapter.	
Total community support	Sum of investment in education, employability and entrepreneurship, plus investment in other community support programmes. See data in section 3.2.4 Community support and SN 7.6 Community support (table 27. Community support)of this chapter.	

Data related to suppliers

Payments to suppliers	Total amount of payments made to suppliers outside the Group. See data in section 4.4 Our suppliers of this chapter.	It reflects the Group's economic contribution through the purchase of products and services in its operations. It also reflects our commitment to the local economies of the geographies in which we operate.
% Turnover of locally contracted suppliers (M EUR)	% of the Group's total turnover made to suppliers based in the same geography where the services are purchased. Turnover from locally contracted suppliers is divided by total turnover to suppliers. See data in section 4.4 Our suppliers of this chapter.	

SN 10. Non-financial information Act 11/2018 content index

Table of equivalences with reporting requirements under Spain's Act 11/2018

	Non-financial information to be disclosed	Chapter/section of the annual report	Correspondence with CSRD/other regulations
0. General Information	Brief **description of the Group's business model** (including its business environment, organization and structure, markets, objectives and strategies, plus the main factors and trends that can affect its future performance).	Business model and strategy (p. 7). Economic and financial review (p. 384). 1. Sustainability at Santander (p. 22) [1.3 Materiality assessment]. SN 3. Materiality assessment - Detailed methodology (p. 121).	SBM-1 SBM-2 GOV-1 MDR-T E1-4 S1-5 S3-5 S4-5
	A description of the Group's policies that includes due diligence procedures for identifying, assessing, preventing and mitigating risks and significant impacts, and for verifying and controlling, including the measures in which they have been adopted):	1. Sustainability at Santander (p. 22) [1.4 Sustainability governance] [1.4.2 Human rights due diligence]. SN 2 Sustainability governance (p. 117) [Cross-cutting regulations to embed ESG standards in our business model]. 2. Our climate transition plan (p. 32) [2.3 Embedding ESG in risk management]. 3. Supporting employees, communities and customers (p. 75) [3.2.3 Environmental, social and climate change management].	GOV-4 MDR-P E1-2 S1-1 S3-1 S4-1 G1-1
	The **results of these policies**, including key indicators of relevant non-financial results that allow the monitoring and evaluation of progress and that favour the comparability between companies and sectors, in accordance with national, European or international frameworks of reference used for each matter.	2. Our climate transition plan (p. 32). 3. Supporting employees, communities and customers (p. 75). 4. Business conduct (p. 100). SN 7. Our progress in figures (p. 134).	MDR-M E1 S1 S3 S4 G1
	The **main risks related to these matters associated with the Group's activities** (business relationships, products or services) that may have a negative effect in these areas, and how the Group manages these risks, explaining the **procedures used to detect and assess them** in accordance with national, European or international frameworks of reference for each matter. It must include information about the impacts that have been detected, offering a breakdown, in particular of the main risks in the short, medium and long term.	1. Sustainability at Santander (p. 22) [1.3 Materiality assessment]. SN 3. Materiality assessment - detailed methodology (p. 121) [Information on impacts, risks and opportunities]. 2. Our climate transition plan (p. 32). 3. Supporting employees, communities and customers (p. 75). 4. Business conduct (p. 100).	GOV-5 SBM-3 IRO-1 E1 S1 S3 S4 G1

Limited assurance report issued by a practitioner on the Consolidated Non-Financial Information Statement and Sustainability Information

To the shareholders of Banco Santander, S.A, at the request of management:

Limited assurance conclusion

Pursuant to article 49 of the Code of Commerce, we have conducted a limited assurance engagement on the accompanying Consolidated Non-Financial Information Statement (hereinafter, "NFIS") for the year ended December 31, 2024 of Banco Santander, S.A. (hereinafter, the Parent company) and its subsidiaries (hereinafter, the Group) which forms part of the Group's consolidated directors' report.

The NFIS includes information in addition to that required by prevailing commercial regulations on non-financial information, specifically it includes the Sustainability Information prepared by the Group for the year ended 31 December 2024 (hereinafter, the sustainability information) in accordance with the Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022, as regards to the corporate sustainability reporting (CSRD). This sustainability information has also been subject to limited assurance procedures.

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that:

a) the Group's Consolidated Statement of Non-Financial Information for the year ended 31 December 2024 is not prepared, in all material respects, in accordance with prevailing commercial regulations and in accordance with the selected criteria of the European Sustainability Reporting Standards (ESRS), as well as with those other criteria described as mentioned for each topic in the table of note 10 of the aforementioned Statement.

b) The sustainability information as a whole is not prepared, in all material respects, in accordance with the sustainability reporting framework applied by the Group and which is identified in the accompanying note 1, including:

- That the description provided of the process for identifying sustainability information included in subsection 1.3 and note 3 is consistent with the process in place and enables the identification of material information to be disclosed in accordance with the requirements of ESRS.
- Compliance with ESRS.
- Compliance with the disclosure requirements, included in subsection 2.2 of the the environment section of the sustainability information with the provisions of article 8 of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investments.

R. M. Madrid, hoja M-63.988, folio 75, tomo 9.267, libro 8.054, sección 3ª
Inscrita en el R.O.A.C. con el número S0242 - NIF: B-79031290

Basis for conclusion

We conducted our limited assurance engagement in accordance with generally accepted professional standards applicable in Spain and specifically in accordance with the guidelines contained in Guides 47 Revised and 56 issued by the *Instituto de Censores Jurados de Cuentas de España* on assurance engagements regarding non-financial information and considering the contents of the note published by the *Instituto de Contabilidad y Auditoría* (ICAC) dated 18 December 2024 (hereinafter, generally accepted professional standards).

In a limited assurance engagement, the procedures applied are less in extent than for a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our responsibilities under these standards are further described in the *Practitioner's responsibilities section* of our report.

We have complied with the independence and other ethical requirements of the International Code of Ethics for Professional Accountants (including International Independence Standards) issued by the International Ethics Standards Board for Accountants (IESBA Code), which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

The firm applies International Standard on Quality Management 1, which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

Responsibilities of the Parent company's directors

The preparation of the NFIS included in Group's consolidated directors' report and the content thereof, as well as its content, is the responsibility of the directors of Banco Santander, S.A. The NFIS has been prepared in accordance with prevailing commercial regulations and in accordance with the ESRS criteria selected, as well as those other criteria described in accordance with the aforementioned for each topic in the of the note 10 in aforementioned Statement.

This responsibility also encompasses designing, implementing and maintaining such internal control as is determined to be necessary to enable the preparation of the NFIS that is free from material misstatement, whether due to fraud or error.

The directors of Banco Santander, S.A. are also responsible for defining, implementing, adapting and maintaining the management systems from which the information necessary for the preparation of the NFIS is obtained.

With regard to the sustainability information, the Parent company's directors are responsible for developing and implementing a process to identify the information that should be included in the sustainability information in accordance with the CSRD, ESRS and as set out in article 8 of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020, and for disclosing information about this process in the sustainability information itself in note 3. This responsibility includes:

- understanding the context in which the Group's business activities and relationships are conducted, as well as its stakeholders, with regard to the Group's impacts on people and the environment;

- identifying the actual and potential impacts (both negative and positive), as well as the risks and opportunities that could affect, or could reasonably be expected to affect, the Group's financial position, financial results, cash flows, access to finance or cost of capital over the short, medium or long term;
- assessing the materiality of the impacts, risks and opportunities identified; and
- making assumptions and estimates that are reasonable under the circumstances.

The Parent company's directors are also responsible for the preparation of the sustainability information, which includes the information identified by the process, in accordance with the sustainability reporting framework applied, including compliance with the CSRD, compliance with ESRS and compliance with the disclosure requirements included in subsection 5 of the environment section of the sustainability information in accordance with the provisions of article 8 of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment.

This responsibility includes:

- Designing, implementing and maintaining such internal control as the Parent company's directors consider to be relevant to enable the preparation of sustainability information that is free from material misstatement, whether due to fraud or error.
- Selecting and applying appropriate methods for the presentation of sustainability information and making assumptions and estimates that are reasonable in the circumstances about specific disclosures.

Inherent limitations in preparing the information

In accordance with ESRS, the Parent company's directors are required to prepare prospective information based on assumptions and hypotheses, which should be included in the sustainability information, regarding events that could occur in the future, as well as possible future actions, where appropriate, that the Group could take. Actual results may differ significantly from estimated results since they refer to the future and future events often do not occur as expected.

In determining disclosures relating to sustainability information, the Parent company's directors interpret legal and other terms that are not clearly defined and could be interpreted differently by others, including the legality of such interpretations and, consequently, they are subject to uncertainty.

Practitioner's responsibilities

Our responsibility is to plan and perform the assurance engagement to obtain limited assurance about whether the NFIS and sustainability information are free from material misstatement, whether due to fraud or error, and to issue a limited assurance report that includes our conclusion. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence decisions of users taken on the basis of this information.

As part of a limited assurance engagement, we exercise professional judgement and maintain professional scepticism throughout the engagement. We also:

- Design and perform procedures to assess whether the process for identifying the information included in both the NFIS and the sustainability information is consistent with the description of the process followed by the Group and enables, where appropriate, the identification of the material information to be disclosed in accordance with ESRS requirements.

- Perform risk assessment procedures, including obtaining an understanding of internal control relevant to the engagement, to identify the disclosures in respect of which material misstatements are likely to arise, whether due to fraud or error, but not for the purpose of providing a conclusion on the effectiveness of the Group's internal control.

- Design and perform procedures responsive to where material misstatements are likely to arise in the disclosures included in the NFIS and sustainability information. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or the override of internal control.

Summary of the work performed

A limited assurance engagement involves performing procedures to obtain evidence to support our conclusions. The nature, timing and extent of procedures selected depend on professional judgement, including the identification of the disclosures where material misstatements are likely to arise, whether due to fraud or error, in the NFIS and in the sustainability information.

Our work consisted of enquiries of management as well as of various units and components of the Group that were involved in the preparation of the NFIS and sustainability information, of the review of the processes for compiling and validating the information presented in the NFIS and sustainability information and of the application of certain analytical procedures and review procedures on a sample basis, as described below:

In relation to the process of verifying the NFIS:

- Meetings with Group personnel to understand the business model, policies and management approaches applied and the main risks related thereto, and obtaining the information required for the external review.

- Analysis of the scope, relevance and completeness of the content of the NFIS for the 2024 year based on the materiality analysis performed by the Group and described in subsection 1.3 and note 3, taking into account the content required under prevailing commercial legislation.

- Analysis of the processes to compile and validate the information presented in the NFIS for the 2024 year.

- Review of information concerning risks, policies and management approaches applied in relation to material matters presented in the NFIS for the 2024 year.

- Verification, by means of sample testing, of the information relating to the content of the NFIS for the 2024 year and its adequate compilation using data obtained from the information sources.

In relation to the process of verifying the sustainability information:

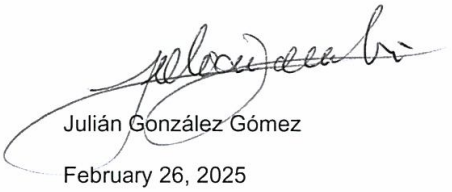
- Making enquiries of the Group's personnel:

  - in order to understand the business model, policies and management approaches applied and the main risks related thereto, and obtaining the information required for the external review.

  - in order to understand the source of the information used by management (for example, engagement with stakeholders, business plans and strategy documents); and the review of the Group's internal documentation on its process.

- Obtaining, through enquiries with the Group's personnel, an understanding of the entity's relevant processes for collecting, validating and presenting information for the preparation of its sustainability information.
- Evaluating the consistency of the evidence obtained from our procedures on the process implemented by the Group for determining the information that should be included in the sustainability information with the description of the process included in such information, as well as the evaluation of whether the aforementioned process implemented by the Group enables the identification of material information to be disclosed according to ESRS requirements.
- Evaluating whether all the information identified in the process implemented by the Group for determining the information that should be included in the sustainability information is in fact included.
- Evaluating the consistency of the structure and presentation of the sustainability information with the requirements of ESRS and the rest of the regulatory framework on sustainability information applied by the Group.
- Making enquiries of relevant personnel and performing analytical procedures on the information disclosed in the sustainability information, considering such information in respect of which material misstatements are likely to arise, whether due to fraud or error.
- Performing, where appropriate, substantive procedures on a sample basis on the information disclosed in the selected sustainability information, considering such information in respect of which material misstatements are likely to arise, whether due to fraud or error.
- Obtaining, where applicable, the reports issued by accredited independent third parties appended to the consolidated directors' report in response to the requirements of European regulations and, in relation to the information to which they refer and in accordance with generally accepted professional standards, verifying only the practitioner's accreditation and that the scope of the report issued is aligned with the requirements of European regulations.
- Obtaining, where appropriate, the documents that contain the information incorporated by reference, the reports issued by auditors or practitioners on such documents and, in accordance with generally accepted professional standards, verifying only that the document to which the information incorporated by reference refers meets the conditions described in ESRS for the incorporation of information by reference in the sustainability information.
- Obtaining a representation letter from the Parent company's directors and management in relation to the NFIS and sustainability information.

Other information



The Parent company's directors are responsible for the other information. The other information comprises the consolidated annual accounts and the rest of the information included in the consolidated directors' report,but does not include either the auditors' report on the consolidated annual accounts or the assurance reports issued by accredited independent third parties as required by European Union law on specific disclosures contained in the sustainability information and appended to the consolidated directors' report.

Our assurance report does not cover the other information, and we do not express any form of assurance conclusion thereon.

Banco Santander, S.A. and subsidiaries

With regards to our assurance engagement regarding the sustainability information, our responsibility consists of reading the other information identified above and, in doing so, considering whether the other information is materially inconsistent with the sustainability information or the knowledge we have obtained during the assurance engagement, which may be indicative of the existence of material misstatements in the sustainability information.

PricewaterhouseCoopers Auditores, S.L.

OTHER SUSTAINABILITY INFORMATION

1. Our progress in relation to UN (United Nations) Global Compact Principles

Santander has been a participant of the UN Global Compact since 2022. We express our support for and disclose our progress on compliance with the 10 Principles of the UN Global Compact on human rights, labour, the environment and anti-corruption through the Sustainability Statement included in this Annual Report.

COMMUNICATION ON PROGRESS

UN GLOBAL COMPACT

This is our **Communication on Progress** in implementing the Ten Principles of the **United Nations Global Compact** and supporting broader UN goals.

We welcome feedback on its contents.

Human rights

Principle 1
Businesses should support and respect the protection of internationally proclaimed human rights.

For more details, see sections 2.5.2. Governance & policies, 4.2.1. Conduct standards, and 4.4.1. Acting responsibly towards suppliers

We aim to act responsibly and broadly throughout our value chain by upholding the protection of human rights. We achieve this aim by focusing on our business conduct, internal regulations and governance, and other prevention, mitigation and remediation mechanisms.

Principle 2
Businesses should make sure that they are not complicit in human rights abuses.

For more details, see sections 1.4.2. Human rights due diligence, 3.2.3.i. Our ESCC policy, 4.2.3 Financial crime compliance, and 4.3.1. Canal Abierto

Human rights form part of our management and governance, based on process type. We follow responsible business and customer data protection practices and are making headway with embedding human rights in our supply chain management. We also assess the impact of transactions on human rights and adopt responsible practices with our employees.

Labour

Principle 3
Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining.

For more details see section 3.1.2.i. Employee health and well-being

We recognize freedom of association and the right to collective bargaining for all employees. We look after our employees' health and promote decent employment, a living wage and the preservation of freedom of association and collective bargaining.

Principle 4
Businesses should uphold the elimination of all forms of forced and compulsory labour.

For more details, see sections 3.2.3.i. Our ESCC policy, and 3.2.3.ii. Equator Principles

We follow the highest standards when running initiatives to combat forced labour, including analysis of environmental, social and climate change (ESCC) matters and applying the guidelines of the Equator Principles as well as analysing our suppliers.

Principle 5
Businesses should uphold the effective abolition of child labour.

For more details, see sections 3.2.3.i. Our ESCC policy, and 4.2.3. Financial crime compliance

We combat child labour by including environmental, social and climate change (ESCC) matters in our analysis, and applying the guidelines of the Equator Principles, as well as analysing our suppliers.

Principle 6
Businesses should uphold the elimination of discrimination in respect of employment and occupation.

For more details, see sections 3.1.3 Inclusive culture, 3.2.3.i. Our ESCC policy, and 4.2.1 Conduct standards.

We promote equal opportunity, diversity and non-discrimination, and an inclusive workplace. We are signatory to the UN Women's empowerment Principles and Valuable 500 which help us to inform our activity in this area.

Environment

Principle 7
Businesses should support a precautionary approach to environmental challenges.

We tackle climate change through our ambition to be net zero by 2050.

For more details, see section 2.4 Aiming to align our activity with the Paris Agreement Goals

Principle 8
Businesses should undertake initiatives to promote greater environmental responsibility.

We help our customers transition to a low-carbon economy and reduce our carbon footprint.

For more details, see section 2.4 Aiming to align our activity with the Paris Agreement Goals

Principle 9
Businesses should encourage the development and diffusion of environmentally friendly technologies.

We're a global leader in renewable energy financing and energy efficiency initiatives and we offer opportunities in green transition technologies. We aim to consume 100% renewable electricity by 2025. We contribute to this goal by increasing self-supply

For more details, see sections 2.2 Supporting our customers in the green transition, and 2.3 Embedding ESG in risk management

Anti-corruption

Principle 10
Businesses should work against corruption in all its forms, including extortion and bribery.

We promote transparency, the fight against corruption and robust governance across our organization. We use reporting channels to raise any conduct contrary to tour policies and codes of conduct regulate our business and behaviour.

For more details, see sections 2.5.2. Governance & policies, 4.2.1 Conduct standards, and 4.3.1 Canal Abierto

2. Our contribution to United Nations Sustainability Development Goals

In line with our purpose to help people and companies thrive, we grow as a business while helping to address society's challenges

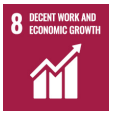
The SDGs on which our operations have the greatest impact

SDGs 1.2, 1.4, 1.5
We want to help reduce poverty, boost well-being and power economic growth wherever we operate. Our financial inclusion strategy and community support programmes empower millions of people every year.

For more details, see sections 3.3.2.i and 3.2.4.iii

SDGs 4.3, 4.4, 4.5, 4.6
We help people and businesses prosper through our education, employability and entrepreneurship free programmes, available at our platforms: Santander Open Academy, Santander X, Universia and Campus Digital.

For more details, see section 3.2.4.ii.



SDGs 5.1, 5.5
We promote an inclusive workplace to have equal opportunity and diversity

For more details, see section 3.1.3.i

SDGs 7.1, 7.2, 7.3
We're a global leader in renewable energy financing and a European leader in electric vehicle financing. We also finance initiatives on energy efficiency, sustainable mobility and cleaner transport solutions.

For more details, see sections 2.2 and 2.4.2.

SDGs 8.3, 8.4, 8.5, 8.6, 8.8, 8.10
As an employer and financier, we help people and businesses, and contribute to economic growth and job creation in the markets where we operate.

For more details, see sections 2.3, 2.4.2, 3.3.2.i and 3.2.4.ii

SDG 10.2
We help people access basic banking services like accounts and promote financial education to teach them the skills they need to manage their finances effectively

For more details, see section 3.3.2.i

SDGs 11.1, 11.4, 11.6
We finance sustainable infrastructure, real estate and mobility solutions and run community support initiatives to meet the basic needs of the communities we serve.

For more details, see sections 2.4.4, 2.5.1, 3.3.2.i, 3.2.2.i, and 3.2.4.iii

SDGs 12.2, 12.5, 12.6
We are committed to reducing our environmental footprint by implementing energy efficiency plans and cutting our consumption of paper, single-use plastics and other resources.

For more details, see sections 1.2, 2.2.5, and 4.4.1

SDG 13.1
We tackle climate change by helping our customers transition to a sustainable economy and reducing our carbon footprint.

For more details, see sections 2.1.1, and 2.3

SDGs 16.5, 16.6, 16.7
We promote transparency, the fight against corruption and robust governance across our organization. Our policies and codes of conduct regulate our business and behaviour and steer our objectives towards a more responsible banking system.

For more details, see sections 1.2, and 4.2.3

SDG 17
We participate in prominent local and international initiatives and working groups.

For more details, see section 1.2

3. Our progress in relation to the Principles for Responsible Banking UNEP FI

Principle 1
Alignment

Grupo Santander has integrated sustainability into its corporate strategy. Our sustainability strategy focuses on issues that are material to Santander, i.e. those that pose the biggest risks to, and create the best opportunity for, the bank; and where we can have the biggest impact.

For more details on our **Strategy alignment** and our business model, please see section 1.1 'Sustainability strategy' .

Principle 2
Impact & target setting

In 2024 we performed a **double materiality assessment** to identify the material impacts, risks and opportunities (IROs). As results we found five matters. For the impact estimation we used, among others, the UNEP FI tool.

For more details on the Impact analysis, please see section 1.3 'Materiality assessment'. For more details on the progress towards our objectives see, regarding climate, section 2.1.3 and, regarding employees, customers and communities sections 3.1., 3.2 and 3.3.

Principle 3
Clients & customers

Our **Responsible Banking and Sustainability policy** sets out the general principles, targets, objectives and strategy that should guide the Group's progress in sustainability. Two of our strategic pillars focus on supporting our customers in their transition to a low-carbon economy and being the trusted reference for our customers with a product and service offering tailored to their needs and supporting their inclusion.

For more details on how we support customers in their transition see section 2.2 Supporting our customers in their transition goals, while supporting customers in their financial inclusion can be found on section 3.3.2 Financial inclusion and financial health

Principle 4
Stakeholders

We proactively and continuously engage with our key stakeholders - customers, employees, investors, and NGOs - through various channels, mainly surveys. This helps us to understand their priorities and concerns. In addition, we also interact with other stakeholders such as our suppliers, rating agencies and supervisors and regulators, and engage and learn through initiatives on key issues on our agenda.

For more details see section 1.2. Stakeholder Engagement

Principle 5
Governance & culture

The Group's board of directors is responsible for approving the sustainability strategy. The board's responsible banking, sustainability and cultural committee oversees the development of the strategy and policies. At the executive level, the management meeting periodically reviews sustainability issues. Sustainability is also present in both short and long term remuneration schemes. There is mandatory sustainability training for employees, and other courses cover specific needs of some teams.

For more details see sections 1.4 Sustainability governance and 3.1.1 Talent and skills development

Principle 6
Transparency & accountability

Our sustainability report has been verified through a limited review by an independent third party. For more details on verification see section SN 12. 'Independent verification report'. Santander Group, based in Europe, is required to comply with the new sustainability disclosure directive and Spanish law 11/2018. Santander has also published a table of equivalences with the global sustainability standard, ISSB, and has provided information on how it complies with objectives such as the Global Compact.

For more details see sections 1.2. Stakeholder Engagement and Sustainability notes.

4. GFANZ transition planning content index

	GFANZ recommendations	Reference in this report
Foundations	Objectives and priorities	2.1 Strategy
Implementation strategy	Products and services	2.2 Supporting our customers in their transition goals
	Activities and decision-making	1.4 Sustainability governance; SN 2. Sustainability governance 2.5.2 Governance & policies
	Policies and conditions	SN 2. Sustainability governance
Engagement strategy	Engagement with clients and portfolio companies	2.2 Supporting our customers in their transition goals; 3.2.3 Environmental, social and climate change management
	Engagement with industry	1.2. Stakeholder engagement; 2.5.1 Engagement strategy with other key stakeholders
	Engagement with government and public sector	1.2. Stakeholder engagement; 2.5.1 Engagement strategy with other key stakeholders
Metrics and Targets	Metrics and targets	2.4 Aiming to align our activity with the Paris Agreement Goals ; SN 4. Our transition plan; SN 7.1 Green transition

	Skills and culture	2.5.2 Governance & policies; 3.1.1 Talents and skills development

5. Task Force on Climate related Financial Disclosure (TCFD) content index

		TCFD Recommendations	Reference in this Annual Report
Governance	a	Describe the board's oversight of climate-related risks and opportunities.	1.4 Sustainability governance; SN 2. Sustainability governance
	b	Describe management's role in assessing and managing climate-related risks and opportunities.	1.4 Sustainability governance; SN 2. Sustainability governance 2.5.2 Governance & policies; 2.3 Embedding ESG in risk management
Strategy	a	Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.	2.1 Strategy; 2.3 Embedding ESG in risk management
	b	Describe the impact of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning.	
	c	Describe the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.	
Risk Management	a	Describe the organization's processes for identifying and assessing climate-related risks.	2.3 Embedding ESG in risk management
	b	Describe the organization's processes for managing climate-related risks.	
	c	Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization's overall risk management.	
Metrics and Targets	a	Disclose the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process.	2.3 Embedding ESG in risk management; 2.4 Aiming to align our activity with the Paris Agreement Goals
	b	Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.	2.4.5 Our environmental footprint; SN 4. Our transition plan; SN 7.1 Green transition
	c	Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets.	2.4.1 Alignment targets; SN 4. Our transition plan

6. Table of equivalence between CSRD and ISSB

This table reflects the equivalence of the ESRS standards with the sustainability-related disclosure standards of the International Sustainability Standards Board (ISSB). In the consolidated management report and, to a greater extent, the sustainability statement (as well as in the audit report and annual accounts), the Group includes information that is equivalent to the requirements under the SASB standards that apply to the financial sector (for more details, see the note under the table).

ESRS 2 - General disclosures	ISSB
Basis for preparation	
BP-1 – General basis for preparation of sustainability	IFRS S2.10(d)
BP-2 – Disclosures in relation to specific circumstances	
Governance	
GOV-1 – The role of the administrative, management and supervisory bodies	IFRS S1.21(b) IFRS S2.6(a) IFRS S2.6(a)(i) IFRS S2.6(a)(ii) IFRS S2.6(a)(v) IFRS S2.6(b) IFRS S2.6(b)(i) IFRS S2.6(b)(ii)
GOV-2 – Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	IFRS S2.6(a)(iii) IFRS S2.6(a)(iv)
GOV-3 - Integration of sustainability-related performance in incentive schemes	IFRS S2.29(g)(i) IFRS S2.6(a)(v) IFRS S1.21(b)
GOV-4 - Statement on due diligence	
GOV-5 - Risk management and internal controls over sustainability reporting	
Strategy	
SBM-1 – Strategy, business model and value chain	
SBM-2 – Interests and views of stakeholders	
SBM-3 - Material impacts, risks and opportunities and their interaction with strategy and business model	IFRS S2.10(a) IFRS S2.10(c) IFRS S2.13(a) IFRS S2.13(b) IFRS S2.14(a)(i) IFRS S2.15(a) IFRS S2.15(b) IFRS S2.16(a) IFRS S2.16(b) IFRS S2.16(c)(i)–(ii) IFRS S2.16(d)

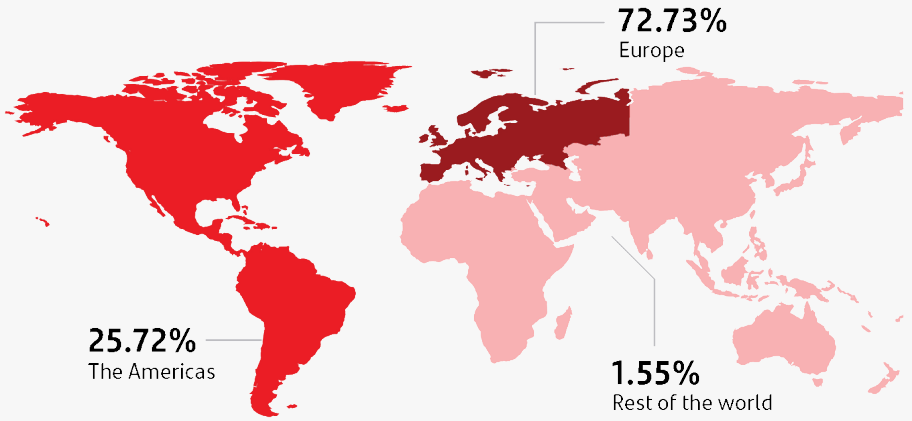
E1-7 – GHG removals and GHG mitigation projects financed through carbon credits	IFRS S2.36(e)(i) IFRS S2.36(e)(ii) IFRS S2.36(e)(iii) IFRS S2.36(e)(iv)
E1-8 – Internal carbon pricing	IFRS S2.29(f)
E1-9 – Anticipated financial effects from material physical and transition risks and potential climate-related opportunities	IFRS S2.17 IFRS S2.22(a)(iii)(1–3) IFRS S2.25(b) IFRS S2.29(b) IFRS S2.29(c) IFRS S2.29(d) IFRS S2.31 IFRS S2.B65(e) IFRS S1.21(b)

In the consolidated management report and, to a greater extent, the sustainability statement (as well as in the audit report and annual accounts), the Group includes information that is equivalent to the requirements under the SASB standards that apply to the financial sector, mainly in relation to 'commercial banking (FN-CB)', but also in relation to other sub-industries such as: 'Asset management and custody activities (FN-AC)', 'consumer finance (FN-CF)', and 'investment banking and intermediation (FN-IB)'. Specifically, the information disclosed by the Group in these reports allows us to respond, to a greater or lesser extent, to the following SASB metrics: FN-CB-230a.1 (y FN-CF-230a.1), FN-CB--230a.2, FN-CF-230a.3, FN-CB-240a.1, FN-CB-240a.2, FN-CB-240a.3, FN-CB-240a.4, FN-CB-410a.1, FN-CB-410a.2 (y FN-IB-410a.2), FN-IB-410a.3, FN-CB-510a.1 (y FN-AC-510a.1 y FN-IB-510a.1), FN-CB-510a.2 (y FN-AC-510a.2 y FN-IB-510a.2), FN-CB-550a.2 (y FN-IB-550a.2), FN-AC-330a.1 (y FN-IB-330a.1), FN-CB-000.A, FN-CB-000.B.

CORPORATE GOVERNANCE



Clear and robust corporate governance to ensure a long-term, sustainable business model

Our governance bodies

Annual general meeting	Active involvement of our shareholders in the general meeting
Board of directors	Responsible for setting the strategy and overseeing its execution and the management of the Group.
Board committees	Solid committee structure to support the board

Broad and balanced shareholder base

Share capital distribution by geography[1]

Aligned with high corporate governance standards

AENOR BUEN GOBIERNO CORPORATIVO G++ Santander

Banco Santander has the highest score in the Spanish Association for Standardisation and Certification's (AENOR) Good Corporate Governance Index (GCGI V2.0), which verifies aspects such as composition and functioning of the board and its committees, shareholders' general meeting, remuneration policy, compliance and transparency.

1. Figures as at 31 December 2024.

1. 2024 OVERVIEW 235
Statement from Glenn Hutchins, Lead Independent Director 235

1. 2024 OVERVIEW

Glenn Hutchins,
Vice Chair and Lead Independent Director

"In 2024, the board remained committed to increasing shareholder value by delivering strong, sustainable results in line with our Investor Day targets. We believe that board oversight is critical in aligning the interests of our shareholders –and other stakeholders– with the strategies of our enterprise and driving success. This corporate governance report sets out how the board and its committees work to ensure that the Group continues to deliver shareholder value with prudence and careful risk management.

Notably, we made important progress over the year in our technology transformation agenda and in our shift to five global businesses, enabling us to serve our customers better, gain operating efficiencies and clarify external reporting. We also removed the regional layer of management, facilitating fast decision-making, clear accountability and enhanced agility. We further held several meetings in session with our Executive Chair and with our CEO in order to assist in their work and evaluate their progress.

Every year the board visits one of our key markets to get an on-the-ground perspective of the businesses, opportunities and challenges faced locally. In November 2024, we travelled to Brazil in recognition of the strategic importance of that geography for the Group, meeting with key staff, important clients and external stakeholders. During the year, we also held two sessions with high potential younger executives to evaluate the quality of our internal talent pipeline. We welcomed the opportunity to engage with so many of our valued colleagues and clients around the world and will continue to do this in the future.

Critical to created shareholder value is our capacity to attract, develop and retain the best talent world-wide to support our transformation. We compete in a global market for skills not just with the world's largest financial institutions but also with large-scale technology companies. Our ability to offer market-based compensation for our top talent is vital to our capacity to compete and succeed. During the year, we met with our largest shareholders and their proxy advisers to explain our compensation philosophy and to gather feedback. The remuneration committee, which I chair, discussed the lessons from this consultation and made related changes during the year (see section 6. 'Remuneration').

As part of our ambition to be a technology-first company, we will be holding an entirely virtual Annual General Meeting (AGM) in 2025 supported by advanced technology to improve interaction with our shareholders. During 2024, I conducted an extensive engagement with shareholders on this topic to understand their expectations and to inform the design of our virtual AGM. We are confident that this approach, which positions us as a digital-first and sustainable company, will ensure equal access for all shareholders worldwide (see more details in 'Virtual AGM' in section 3.5).

Leveraging the diverse skills, experience and strengths of our board members, we implemented on a number of committee changes throughout the year. We also strengthened the board with the addition of Carlos Barrabés and Antonio Weiss. The impact and benefit of these changes was evidenced in the results of the internal board effectiveness review conducted in 2024, the details of which can be found in 'Board effectiveness review in 2024', in section 4.3.

Looking forward, we will sharpen our focus on increasing shareholder value through the transformation of Santander into a technology-defined enterprise offering high quality products, providing world-class customer service and managing costs efficiently world-wide – while remaining true to our purpose and corporate culture".

1.1 Board skills and diversity

Appointments in 2024

In 2024 board composition has remained commensurate with the required skills, experience and diversity required to oversee and drive the Group's strategy, reinforced by our board refreshment activity in the year.

Two thirds of our board members are independent directors and 40% are women. This meets the 40% minimum requirement for the less represented gender at the board set out in the Organic Law on Equal Representation and Balanced Presence of Women and Men, that will be required from June 2026.

At the annual general shareholders' meeting held on 22 March 2024 (2024 AGM) it was agreed to appoint Carlos Barrabés and Antonio Weiss who both joined the board once they obtained their corresponding regulatory approvals, filling the vacancies left by Bruce Carnegie-Brown and Ramiro Mato, respectively. These changes have continued to reinforce the board's financial, technological and digital expertise and its geographical diversity, with a key focus on US, which is one of our core markets.

Changes to the committees

Changes to the committees that the board agreed to in 2024 were partly driven by the departures of Bruce Carnegie-Brown and Ramiro Mato from the board, and the need to rotate the audit committee chair after the four-year legal term has elapsed, in line with applicable legal provisions. The board also considered other factors including the distribution of work amongst its members as well as ensuring an optimised mix of skills and experience. In addition, it has also considered the importance of observing best practice committee composition disciplines as well as alignment with regulatory guidance, therefore ensuring their ongoing effectiveness.

Changes can be summarised as follows:

- Executive committee: Ramiro Mato stepped down on 27 June 2024.
- Audit committee: Germán de la Fuente was appointed Chair on 23 March 2024 replacing Pamela Walkden, who remained as a member. Ramiro Mato stepped down on 27 June 2024.
- Nomination committee: Belén Romana, who joined the committee on 1 January 2024, was appointed committee Chair on 23 March 2024, succeeding Bruce Carnegie-Brown. Carlos Barrabés joined with effect from 27 June 2024.
- Remuneration committee: Bruce Carnegie-Brown stepped down on 22 March 2024. Antonio Weiss was appointed to the committee on 1 January 2025.
- Risk supervision, regulation and compliance committee: Pamela Walkden was appointed Chair on 23 March 2024, replacing Belén Romana, who remained as a member. Ramiro Mato stepped down on 27 June 2024 and José Antonio Álvarez became a member on 1 January 2025.
- Responsible banking, sustainability and culture committee: Sol Daurella assumed the chairship on 23 July 2024. Both Pamela Walkden and Carlos Barrabés were appointed to the committee on 23 March 2024 and 27 June 2024, respectively, replacing Belén Romana and Ramiro Mato, who stepped down on those same dates, respectively.
- Innovation and technology committee: Glenn Hutchins was appointed committee Chair on 23 March 2024, replacing Ana Botín, who remained as a member. Carlos Barrabés joined with effect from 27 June 2024.

1.2 Board effectiveness

Board effectiveness review and actions to continuously improve

Corporate governance is a priority for Santander. Our governance model has consistently received strong support from shareholders, as evidenced by their high participation in general meetings and strong approval rates for corporate management, the appointment and re-election of directors. Governance practices need to adapt to business and strategic needs, so we continuously look for opportunities for improvement.

The annual board effectiveness review, in which we periodically enlist the help of external independent advisors, is key to our commitment to good governance and allows us to verify the quality and effectiveness of the functioning of our governance bodies. It also ensures that the board is able to support management appropriately and to oversee it through constructive challenge. During 2024, the nomination committee monitored execution of the action plan derived from the 2023 board effectiveness review, which was conducted in cooperation with Spencer Stuart as external independent firm and successfully completed in June 2024.

In 2024, the board conducted its annual effectiveness review internally. The areas for improvement were reviewed by the nomination committee and the board of directors and the resultant action plan was approved in January 2025. See 'Board effectiveness review in 2024' in section 4.3.

Group and subsidiary board relations

The ongoing strength of the ties between the Group's and its subsidiaries' boards of directors is key to effective oversight of policies, controls and corporate culture. The challenges of the current macroeconomic landscape evidence the need for effective cross-border cooperation within the Group, which our proven Group Subsidiary Governance Model (GSGM) facilitates.

The strength of our governance model is maintained through a number of coordination mechanisms that are in place between the Group and subsidiaries, as follows:

Group nominated directors

A number of Group directors and top managers are also members of the boards of our subsidiaries, which facilitates the management bodies' coordination and the strategic alignment of the local boards. See section 7. 'Group structure and internal governance'.

Group and subsidiary committee relations

In 2024, the audit committee and risk supervision, regulation and compliance committee Chairs attended subsidiary committee meetings. In turn, they invited their local counterparts to join the respective Banco Santander committee meetings throughout the year. This helped to enhance communication and the sharing of topics of common interest and best practices between the Group and its subsidiaries.

The Chairs of the Group audit committee and risk supervision, regulation and compliance committee also organised several virtual meetings with their local counterparts, which enriched the communication among them and allowed them to share priorities and common matters of interest. Therefore, this practice will continue going forward.

Finally, in 2024 we also held an audit committee Chairs convention at our headquarters in Boadilla del Monte. The aim was to foster further collaboration between the Group and its subsidiaries, raise awareness about global initiatives and expectations, collectively discuss topical issues and encourage networking. As in previous occasions, the event was both successful and productive, with universal positive feedback received from participants.

Coordinated induction and training plans

We continued to share our training, induction and development methodology and associated content with the subsidiaries to promote best practices and drive a consistent approach on a group-wide basis. In 2024 we scheduled training sessions for subsidiary board members with local directors covering the consolidation of all our activities across our footprint under five global businesses. See 'Director training and induction programmes' in section 4.3.

Group and subsidiary board visits

Every year at least one board session is held in one of the Group's key geographies. As part of these visits, directors meet top management in the unit in order to better understand the country business. In 2024, the board of directors met in São Paulo, Brazil, where we also organised branch visits and meetings with senior management and clients. In addition, directors met with top talent in the region as part of our proactive approach to talent management.

Furthermore, subsidiary boards are encouraged to hold their board meetings at our corporate centre in Boadilla del Monte, Madrid, or in Santander, Cantabria, to foster further collaboration and engagement with the corporate teams. In 2024, the boards of Santander Bank Polska, Santander UK and Santander Brazil held specific meetings at our corporate centre, while Santander Mexico held a board meeting in Santander, Cantabria. The above mentioned practices will continue in 2025 and beyond.

1.3 Remuneration policy

Santander's remuneration policy has traditionally received strong support from our investors. At our 2024 AGM, shareholders approved the policy with 74.82% votes in favour. As this percentage is lower than in other years, our board of directors engaged with our top shareholders and with major proxy advisory firms to ensure that our remuneration policy continues to align with their expectations. Meetings were led by Glenn Hutchins, our Lead Independent Director and remuneration committee Chair.

Following careful consideration by our remuneration committee and the board of directors of the feedback received, the remuneration policy for 2025, 2026 and 2027 includes the following changes compared to the existing one:

- increase in the component paid in instruments from 50% to 60%;
- raise of the minimum long-term metric on relative TSR threshold for vesting from percentile 40 to percentile 50;
- increase of the weight of the long-term metric on relative TSR from 40% to 50%; and
- enhancement of the weight of the part of the remuneration that is subject to long-term metrics from 36% to 40%.

In addition, we provide further detail on the committee's process for setting and reviewing the remuneration policy, providing additional information on how we set executive remuneration and how pay aligns with performance, including our peers selection criteria for this analysis. Banco Santander conducts a rigorous process that includes an annual review of comparable market information to make sure that our remuneration remains competitive.

We believe these adjustments bolster the alignment of our management and shareholders' interests. For more details, see section 6. 'Remuneration'.

1.4 Engagement with our shareholders

In 2024 we continued to combine traditional and virtual channels in shareholder engagement, which enabled us to meet the needs of our approximately 3.5 million shareholders, and encourage their involvement in our corporate governance. For more details, see 'Engagement with shareholders in 2024' in section 3.1.

At the 2024 AGM, we once again gave our shareholders, spread around the world, the option to attend in person or remotely. This flexibility enables them to participate without needing to travel. The high shareholder participation through remote means at general meetings shows our shareholders' satisfaction with this option and has been considered by the board of directors, among other reasons, in its decision to convene the annual general meeting in virtual format (see 'Virtual AGM' in Section 3.5).

We are firmly committed to reporting information of the highest quality to align our interests with those of our shareholders through sustainable growth and long-term value creation. Against this backdrop, the sustainability information we disclose for 2024 considers the new European Sustainability Reporting Standards (ESRS) adopted by the European Commission and the International Sustainability Standards Board's (ISSB) global sustainability disclosure standards, which will enable our shareholders to compare this information more easily within the EU and globally while complying with the disclosure obligations under Spanish law (until the implementation of EU legislation takes place). For more details, see the 'Sustainability statement' chapter.

1.5 Achievement of our 2024 priorities

The 2023 annual report disclosed our priorities for 2024. The following chart describes how we delivered on each priority.

2024 priorities	How we delivered
Transformation	
To oversee the execution of agreed plans to build a digital bank with branches with a single platform, optimizing the product portfolio and enhancing the customer experience, simplifying processes and implementing the new operating model.	The board continued to oversee our operating model, so called One Santander, which completely captures the value and potential of our scale and network effects, simplifying our structure and decision making and eliminating legacies. The board confirmed the positive progress made by global businesses and corporate functions working in partnership as one team. The board also kept monitoring our transformation journey based on three strategic pillars, to better serve our customers, improve efficiency, and drive value creation: • Simplification of product portfolio and customer experience to enlarge our customer base: a key focus was placed on improving digital onboarding (including associated onboarding time reduction) across the Group, on the significant simplification of our product portfolio, and on reducing operating costs and associated complexity. • Automation and simplification of processes: we remain focused on making the business more efficient by undertaking specific Group-wide automation and digitalization of processes initiatives. • Deployment of best-in-class global tech platform and associated commonality across our footprint: the board monitored specific initiatives launched throughout 2024 together with the implementation of our own common tech global platforms. As part of that, we are evolving into an organization where the software is the product, by developing successful 'banking as a service' initiatives, such as Openbank, Zinia, Getnet, PagoNxt Payments, and Ebury.
Five global businesses	
To oversee the consolidation of our activities across all markets under five global businesses and the change of reporting of financial results aligned to this model, with the support of the audit committee.	One key strategic initiative announced in 2023 was to consolidate all activities across our footprint under five global businesses. During 2024, the board monitored the execution of this strategy to ensure that it accomplishes the intended outcomes, including customer benefits and operating efficiencies. In addition, the board oversaw, with the assistance of the audit committee, the change of reporting of financial results to global businesses as primary segments, to better align the information with the manner we manage the Group. The board considers that the consolidation under five global businesses was well executed, which enables the Group to enter into the next phase of its transformation journey. This phase is marked by a renewed focus on streamlining our structure to achieve greater agility and increasing our profitability through accelerating the roll out of our global business platforms and products. The consolidation under five global businesses represented a foundational step toward becoming a truly global, digital-first financial institution. These units enable us to deliver innovative solutions tailored to customer needs, leverage efficiencies at scale, and drive significant value creation across geographies, thanks to the network effects of being One Santander. To help us achieve this next level of transformation, the board agreed to remove the regional layer of management in January 2025. This simplification ensures that our global businesses operate directly across all countries, enabling faster decision-making, clear accountability, and enhanced agility.
People	
Continue to enhance our employee value proposition, ensuring that they are aligned with our corporate culture and that we are focused on attracting and retaining the best talent to fulfil our strategy.	The board holds the belief that having the right talent and skills in place and attracting and engaging the best talent with a best-in-class employee value proposition, will enable our transformation. As a result, senior management succession planning remained high on the board's agenda in 2024. Furthermore, the board monitored that the employee is always placed at the centre of all we do, promoting an inclusive culture, as well as health and wellbeing initiatives. In addition, the board placed a key focus on the merits of listening to employees so the Group can continuously improve in this regard. The board also approved specific organizational changes and associated appointments, with the aim of having a more dynamic and efficient organization, being well placed to face the challenges ahead with a positive impact on society, utilizing new ways of working to drive value, and reflecting the Group strategy and culture in our relation with clients, supervisors and other stakeholders.

2024 priorities	How we delivered
Progressing in our sustainability targets	
To oversee the fulfilment of our sustainability targets to ensure that we remain on track to fulfil our plans in this area and accelerate finance to help our customers in their transition to a low carbon economy. In addition, we will continue taking care of the sustainability agenda, including our objectives on financial inclusion and customer welfare.	We continued to progress on our sustainability targets. In particular: • We hit our target of EUR 120 billion in green finance raised or facilitated between 2019 and 2025 in advance (with more than EUR 129 billion in total as from 2019). • We have financially included 2.6 million people and we have supported microentrepreneurs through programs like Prospera, Tuiio and Surgir. • We invested EUR 103.8 million to support education, employability and entrepreneurship through Santander Universidades (EUR 208.9 million as from 2023). • We have progressed towards equality, achieving a greater representation of women in senior positions, from 22.7% in 2019 to 31.2% in 2024. • We accomplished the equal pay gap target for 2025 (~0%) in advance. We continued to supervise the measures in place to eliminate the pay gap. • We closed 2024 with 4,828 persons with disabilities employed within the Group (over 2.3% of our global workforce), in line with our commitment to boost the inclusion of people with disabilities by increasing the number of hires and promotions and foster accessibility. • We continued to supervise the execution our community support programmes, in line with our aim to improve people's access to education and culture and support their well-being. In 2024, we monitored our response to the effects of the flash flood in eastern Spain. We took immediate action to help our people and customers, including fee waivers, the proactive communication to provide financial support to affected customers and employees, payment holidays on loans and leasing, replacement of vehicles for affected customers, among other measures. See the 'Sustainability statement' chapter for additional details.
Long-term shareholder value	
To promote the generation of long-term and sustainable shareholder value creation through consistent returns growth while maintaining our capital management discipline. This will ensure strong shareholder remuneration and the resources required to deliver our strategic transformation.	In 2024, we continued to deliver a strong performance in terms of shareholder value creation, as outlined at the 2023 Investor Day. As part of that, the board continued to drive our potential through leveraging our unique business model based on the customer (building a digital bank with branches), scale (global and in-market scale) and diversification (business, geography and balance sheet) as follows: • **Revenue and customer growth:** revenue increased 10% in constant euros (8% in current euros) up to EUR 62,211 million and with customer numbers climbed eight million to 173 million (vs. 165 million customers in 2023). • **Strength:** CET1 above12%, closing the year at 12.8% (vs. 12.3% in 2023), where we have maintained a disciplined capital allocation methodology and prudent risk management. • **Profitability:** RoTE between 15-17%, closing the year with a 16.3% RoTE (vs. 15.1% in 2023). • **Cost discipline:** the efficiency ratio improved in 2024 to 41.8% (vs. 44.1% in 2023), in line with the target of c.42%. • **Conservative risk appetite:** the Group cost of risk was 1.15% at the end of 2024 (vs. 1.18%). • **Shareholder remuneration:** the remuneration paid to shareholders in 2024 was 34% higher than in 2023. We paid out approximately EUR 3,000 million in a cash dividend (EUR 19.50 cents per share with the right to receive a dividend, of which we paid out EUR 9.50 cents per share in May and EUR 10.00 cents per share in November), which is a 39% increase on the cash dividend paid out in 2023. Moreover, we also paid out approximately EUR 3,000 million through share buyback programmes.

2024 priorities	How we delivered
Governance effectiveness	
To remain focused on the overall effectiveness and composition of the board and its committees, ensuring that their role is discharged in the most tangible and effective manner.	In 2024, we continued to refresh the board of directors ensuring diversity in its broadest sense (gender, backgrounds, geographical provenance, new skills and experience) to ensure that we are well placed to address the challenges faced in our business and taking into account feedback from previous board effectiveness reviews. The board holistically analysed committee composition and agreed on specific changes, partly driven by the departures of Bruce Carnegie-Brown and Ramiro Mato from the board, and the need to rotate off the audit committee chair in line with applicable provisions. The agreed changes took into consideration best practice committee composition disciplines, regulatory guidance, appropriate workload distribution amongst members and optimised mix of skills and experience on each committee, among other factors. See 'Changes to the committees' in section 1.1. In 2024, the nomination committee monitored execution of the action plan derived from the 2023 board effectiveness review, which was conducted with the collaboration of an external independent firm, which was successfully completed in June 2024. In addition, the board conducted its annual effectiveness review in 2024 internally. The findings of the review concluded that the board and its committees continue to operate effectively and that the board's contribution is highly valuable for management. See 'Board effectiveness review in 2024' in section 4.3.

1.6 Priorities for 2025

The board set the following priorities for 2025:

→ **Transformation**
We will oversee the implementation of our operating model, ensuring that we operate as a truly global-local organization with five global businesses, simplifying processes, reducing costs and improving customer experience by further optimizing our product portfolio.

→ **People**
We will remain focused on attracting and retaining the best talent to fulfil our strategy now and in the future. We will maintain our proactive approach to senior management succession planning, based on the Group's strategic needs.

→ **Culture**
We will continue to monitor the embeddedness of agile methodologies and more flexible organizational structures across the Group to promote a more collaborative and multidisciplinary way of working that results in a greater customer focus.

→ **Progressing in our sustainability goals**
We will oversee the fulfilment of our sustainability goals striking a balance between financing our customers in their transition to a low carbon economy and the different political and regulatory approaches. In addition, we will continue taking care of the sustainability agenda, in line with our aim to help people and businesses prosper.

→ **Long-term shareholder value**
The board will promote the generation of long-term and sustainable shareholder value creation through consistent returns growth while maintaining our robust capital management discipline. This will ensure strong shareholder remuneration and the resources required to deliver our strategy.

→ **Governance effectiveness**
We will continue to enhance the overall effectiveness of the board and its committees, with an appropriate composition and ensuring that their role is discharged in the most tangible and effective manner.

2. OWNERSHIP STRUCTURE

→ Broad and balanced shareholder base

→ A single class of shares

→ Authorized capital consistent with best practice to provide the necessary flexibility

2.1 Share capital

Our share capital comprises ordinary shares, each with a par value of EUR 0.50. Every share belongs to the same class and carries the same voting, dividend and other rights.

We do not have any bonds or securities that can be converted into shares other than the contingent convertible preferred securities (CCPS) mentioned in section 2.2 'Authority to increase capital'.

As at 31 December 2024, Banco Santander's share capital amounted to EUR 7,576,246,161, divided into 15,152,492,322 shares.

In 2024, we amended our share capital three times, reducing it on each occasion:

- Two through the cancellation of the shares repurchased under the buyback programmes that formed part of the shareholder remuneration policy for 2023:
  - one by EUR 179,283,744 (c. 2.22% of share capital), under the authorization of the 2023 AGM and registered with the Commercial Registry on 5 February 2024; and
  - another one by EUR 165,652,500 (c. 2.09% of share capital), in the terms agreed at the 2024 AGM and registered with the Commercial Registry on 1 July 2024.
- One through the cancellation of the shares repurchased under the first buyback programme that formed part of the shareholder remuneration policy for 2024 (First 2024 Buyback Programme), by EUR 170,890,625 (c. 2.21% of share capital), under the authorization of the 2024 AGM and registered with the Companies Register on 20 December 2024.

Since November 2021, when we completed the first buyback programme of those executed within the framework of the shareholder remuneration policy, Banco Santander has reduced its share capital by c.12.62% of the outstanding shares as of that date.

At the 2025 AGM, the board of directors submitted a share capital reduction proposal to cancel the shares that will be acquired through the second share buyback programme charged against 2024 results (Second 2024 Buyback Programme); as well as, if appropriate, a further proposal to cancel the shares that are acquired in any new buyback programme that the board may implement or by other legally permitted means.

See sections 2.5 'Treasury shares' and 3.5 'Our next AGM in 2025'.

We have a diversified and balanced shareholder structure, with 3,485,134 shareholders as at 31 December 2024, broken down by type, geographical provenance and number of shares as follows:

Type of investor

	% of share capital
Board[A]	1.29%
Institutional	58.70%
Retail	40.01%
Total	**100%**

A. Shares owned or represented by directors. For more details, see 'Tenure and equity ownership' in section 4.2 and subsection A.3 in section 9.2 'Statistical information on corporate governance required by CNMV'.

Geographic distribution

	% of share capital
Europe	72.73%
The Americas	25.72%
Rest of the world	1.55%
Total	**100%**

Number of shares

	% of share capital
1-3,000	8.82%
3,001-30,000	16.92%
30,001-400,000	11.56%
Over 400,000	62.70%
Total	**100%**

2.2 Authority to increase capital

Under Spanish law, shareholders at the general meeting have the authority to increase the share capital and may delegate power to the board of directors to increase the share capital by no more than 50%. Our Bylaws are consistent with Spanish law and do not set out special conditions for share capital increases.

As at 31 December 2024, our board of directors had received authorization from shareholders to approve or carry out the following capital increases:

- **Authorized capital to 2027**: Shareholders at the 2024 AGM granted authorization to the board to increase share capital on one or more occasions by up to EUR 3,956,394,643 (50% of the capital at the time of that AGM). The board was granted this authorization for a period of three years (until 22 March 2027).

  The board can issue shares for cash consideration with or without pre-emptive rights for shareholders, and for capital increases to back any convertible bonds or securities issued under its authority granted at the 2023 AGM.

  Shares without pre-emptive rights under this authorization can be issued up to EUR 791,278,928.50 (10% of the capital at the time of the 2024 AGM). However, under the Spanish Companies Act, this limit does not apply to capital increases to convert CCPS (which shall be converted into newly-issued shares if the CET1 ratio falls below a predetermined threshold). This authorization was used for the two CCPS issues carried out in 2024.

- **Capital increases approved for contingent conversion of CCPS**: We issued contingent convertible preferred securities that qualify as regulatory Additional Tier 1 (AT1) instruments and would be converted into newly-issued shares if the CET1 ratio fell below a predetermined threshold. Each issue was backed by a capital increase approved under the authorization granted to the board by shareholders in force at the time of the CCPS issue.

  The chart below shows the outstanding CCPS at the time of this report, with details about the capital increase resolutions that back them. Those capital increases are, therefore, contingent and have been delegated to the board of directors. The board is authorized to issue additional CCPS and other convertible securities and instruments in accordance with a resolution passed at the 2023 AGM that allows convertible instruments and securities to be issued for up to EUR 10 billion or an equivalent amount in another currency (under this authorization, two CCPS issues were executed in 2023 and two in 2024). Any capital increase resulting from the conversion of shares and other convertible instruments will occur according to the capital increase authorization made at the time those instruments were issued.

Issues of contingent convertible preferred securities (CCPS)

Date of issuance	Nominal amount	Discretionary remuneration per annum	Conversion predetermined threshold	Maximum number of shares in case of conversion[A]
19/03/2018	EUR 1,500 million	4.75% for the first 7 years	If, at any time, the CET1 ratio of Banco Santander or the Group is lower than 5.125%	416,666,666
14/01/2020	EUR 1,500 million	4.375% for the first 6 years		604,594,921
06/05/2021	USD 1,000 million	4.75% for the first 6 years		391,389,432
06/05/2021	EUR 750 million	4.125% for the first 7 years		352,278,064
21/09/2021	EUR 1,000 million	3.625% for the first 8 years		498,007,968
16/11/2023	USD 1,150 million	9.625% for the first 5 years and 6 months		447,470,817
16/11/2023	USD 1,350 million	9.625% for the first 10 years		525,291,828
20/05/2024	EUR 1,500 million	7% for the first 6 years		501,672,240
01/08/2024	USD 1,500 million	8% for the first 10 years		461,964,890

A. The figure corresponds to the maximum number of shares that could be required to cover the conversion of these CCPS, calculated as the quotient (rounded off by default) of the nominal amount of the CCPS issue divided by the minimum conversion price determined for each CCPS (subject to any antidilution adjustments and the resulting conversion ratio).

2.3 Significant shareholders

As at 31 December 2024, no Banco Santander shareholder individually held over 3% of the voting rights (the minimum threshold provided under Spanish law to issue a mandatory notification of a significant holding in a listed company).

Though the following shareholding held by an asset manager was registered with the CNMV as at 31 December 2024, its related notification states that the shares and financial instruments to which voting rights the notification refers are being held on behalf of third parties (funds or other investment entities or the portfolios they manage) and that none of them exceeds 3% of the voting rights that Banco Santander shares afford.

Significant shareholding as at 31 December 2024

Date of entry in CNMV register	Shareholder name	% voting rights[A]
04/10/2024	BlackRock Inc	6.875

A. Includes voting rights attached to shares and financial instruments.

The changes notified to the CNMV in 2024 with regard to significant shareholdings are detailed below:

Significant shareholding. Changes in 2024

Date of entry in CNMV register	Shareholder name	Previous %[A]	Subsequent %[A]
18/06/2024	Dodge & Cox	3.038	2.937
04/10/2024	Blackrock Inc	5.426	6.875

A. Includes voting rights attached to shares and financial instruments.

Likewise, though as at 31 December 2024 certain custodians appeared in our shareholder registry as holding more than 3% of our share capital, we understand that those shares were held on behalf of other investors, none of whom exceeded that threshold individually. These custodians were State Street Bank (15.26%), The Bank of New York Mellon Corporation (7.16%), Chase Nominees Limited (6.01%), Citibank (3.99%) and BNP Paribas (3.36%).

There may be some overlap in the holdings declared by these custodians and the above mentioned asset manager.

Lastly, as at 31 December 2024, neither our shareholder register nor the CNMV's register showed any investor residing in a non-cooperative jurisdiction holding at least 1% of our voting rights (which is the mandatory disclosure threshold applicable to such investors under Spanish law).

Our Bylaws and the Rules and regulations of the board of directors set out a regime to analyse and approve transactions with shareholders holding more than 10% of the voting rights. See section 4.12 'Related-party transactions and other conflicts of interest'.

2.4 Shareholders' agreements

In February 2006, several persons linked to the Botín-Sanz de Sautuola y O'Shea family entered into a shareholders' agreement to set up a syndicate for their shares in Banco Santander. The CNMV was informed of the execution of this agreement and the subsequent amendments the parties made. This information can be found on the CNMV website.

The main provisions of the agreement are:

- Transfer restrictions. Any transfer of Banco Santander shares expressly included in the agreement requires prior authorization from the syndicate meeting (which can freely authorise or reject it), except when the transferee is also a party to the agreement or Fundación Botín. These restrictions apply to the shares they expressly cover under the agreement and to shares subscribed for, or acquired by, syndicate members in exercising any subscription, bonus share, grouping or division, replacement, exchange or conversion rights that pertain or are attributed to, or derive from, those syndicated shares.
- Syndicated voting. Under the agreement, the parties will pool the voting rights attached to all their shares so that syndicate members may exercise them and engage Banco Santander in a concerted manner, in accordance with the instructions and the voting criteria and orientation the syndicate establishes. This covers the shares subject to the transfer restrictions mentioned above as well as any voting rights attached to any other Banco Santander shares held either directly or indirectly by the parties to the agreement, and any other voting rights assigned to them by virtue of usufruct, pledge or any other contractual title, for as long as they hold those shares or are assigned those rights. Representation of the syndicated shares is attributed to the syndicate chair, who will be the chair of Fundación Botín (currently Javier Botín, one of our directors and brother of our Group Executive Chair (Ana Botín)).

Though the agreement initially terminates on 1 January 2056, it will extend automatically for additional 10-year periods unless one of the parties notifies of its intention not to extend six months before the initial term or extension period ends. The agreement may only be terminated early if all the syndicated shareholders agree unanimously.

As at 31 December 2024, the parties to this agreement held 109,810,101 shares in Banco Santander (0.72% of its capital at such time), which were therefore subject to the voting syndicate. They include 80,355,819 shares (0.53% of its capital by close of 2024) that are also subject to the referred transfer restrictions.

Subsection A.7 of section 9.2 'Statistical information on corporate governance required by CNMV' contains a list of parties to the shareholders' agreement and the relevant information filed with CNMV.

2.5 Treasury shares

Shareholder approval

The acquisition of treasury shares was last authorized at our 2023 AGM, for five years and subject to these provisions:

- Treasury shares held cannot exceed 10% of Banco Santander's share capital at any time, which is the legal limit set under the Spanish Companies Act.
- The acquisition price may not be lower than the par value of the shares, nor exceed by more than 3% the highest of the following two: the price of the last independent transaction or the highest independent offer at that time at the trading venue where the purchase is made.
- The purpose of the acquisition of treasury shares will be discretionary treasury share management, the execution of share buyback programmes, the delivery of these shares under the framework of the employee and director remuneration policy or any other purpose that the board deems pertinent at any given time.

Treasury shares policy

On 26 February 2024, the board updated the current treasury shares policy which dictates that Banco Santander may carry out treasury share transactions for these purposes:

- Provide liquidity or supply of securities in the market for Banco Santander shares, which gives this market depth and minimizes any potential temporary imbalances in supply and demand.
- Take advantage, for the benefit of all shareholders, of weakness in the share price due to its medium-term outlook.
- Meet Grupo Santander's obligations to deliver shares to our employees and directors.
- Serve any other purpose authorized by the board within the legal limits and those set at the general meeting. In this regard, Banco Santander made during the year the donations to Fundación Banco Santander indicated below in the context of its Responsible Banking and Sustainability Policy.

Among other things, the policy also provides for:

- The **principles** to uphold in treasury share trades, which include protecting financial markets' integrity and prohibiting market manipulation and insider trading.
- The **operational criteria** for carrying out treasury share trades, unless in exceptional circumstances as per the policy or carried out through mechanisms, such as buyback programmes, with a regulation of their own. These criteria include rules on:
  - **Responsibility for execution of these trades**, which falls on the Investments and Holdings department, which is kept separate from the rest of Banco Santander.

- **Venues.** Trades must generally be carried out in regulated markets and in the multilateral trading facilities stipulated in the policy, which has been amended by adding three multilateral trading facilities where Banco Santander's shares circulate.
- **Volume limits.** Trades must generally not exceed 15% of the average daily trading volume for Banco Santander shares in the previous 30 sessions on the relevant trading venue.
- **Price limits.** In general, (a) buy orders should not exceed by more than 3% the higher of (i) the price of the last independent transaction prior to the relevant acquisition or (ii) the highest independent bid at that time on the trading venue where the purchase is made; and (b) sell orders should not be lower than the lesser of the price of the last trade in the market by independent parties and the lowest sell order price in the order book.
- **Time limits,** including a black-out period that applies (a) during the 15 calendar days prior to the publication of each quarterly financial information and (b) if Banco Santander has decided to delay the disclosure of inside information according to market abuse regulations, until such information is disseminated. In the case of buyback programmes, the specific regulations establish a black-out period of 30 calendar days prior to the publication of annual and semi-annual results, which, however, will not apply when the buyback programme is managed by a third party or when the issuer has a temporary buyback programme in place.

- **Disclosure to the markets** of treasury shares trading.

The policy applies to the discretionary trading of treasury shares irrespective of whether they are carried out in regulated markets, in multilateral trading facilities, outside the orders market, either through blocks or through special transactions, or under buyback programmes. Furthermore, buyback programmes shall comply with all the applicable specific regulations, such as regulation on market abuse and their relevant implementing rules. The policy does not apply to transactions on Banco Santander's shares carried out to hedge market risks or provide brokerage or hedging for customers.

The full treasury shares policy is available on Banco Santander's corporate website.

Execution of the buyback programmes charged against 2023 results

According to the 2023 shareholder remuneration policy, two buyback programmes were executed:

- In the first buyback programme, executed from 28 September 2023 to 25 January 2024, we acquired 358,567,487 treasury shares (2.22% of share capital). Under the authorization of the 2023 AGM, on 30 January 2024 the board resolved to reduce Banco Santander's share capital through the cancellation of the repurchased shares.
- In the second buyback programme, executed from 20 February to 17 June 2024, we acquired 331,305,000 treasury shares (2.09% of share capital). In the terms agreed at the 2024 AGM, on 25 June 2024 the board resolved to reduce Banco Santander's share capital through the cancellation of the repurchased shares.

See section 2.1 'Share capital'.

First 2024 Buyback Programme

Under the authorization of the 2023 AGM, and according to the 2024 shareholder remuneration policy, on 26 August 2024 the board resolved to execute a new share buyback programme for a maximum amount of EUR 1,525 million, equivalent to approximately 25% of the Group reported profit (excluding non-cash, non-capital ratios impact items) for the first half of 2024 and for which we have already obtained the required regulatory authorization of the European Central Bank (ECB).

In the First 2024 Buyback Programme (executed from 27 August to 3 December 2024), we acquired 341,781,250 treasury shares (accounting for approximately 2.21% of Banco Santander's share capital), at a weighted average price per share of EUR 4.46.

On 17 December 2024, the board resolved to reduce the share capital in the amount of EUR 170,890,625, by cancelling the 341,781,250 repurchased shares.

For more details on the share capital reductions, see section 2.1 'Share capital'

Second 2024 Buyback Programme

Under the same AGM approval and also according to the 2024 shareholder remuneration policy, on 4 February 2025 the board resolved to execute a new share buyback programme for a maximum amount of EUR 1,587 million. The appropriate regulatory authorization had already been obtained and the programme began on 6 February 2025.

The board had submitted the resolution to vote at the 2025 AGM for the share capital reduction by cancelling the repurchased shares. See section 3.5 'Our next AGM in 2025'.

Activity in 2024

As at 31 December 2024, Banco Santander and its subsidiaries held 15,529,459 shares, which accounted for 0.10% of Banco Santander's share capital (compared to 297,815,673 shares, accounting for 1.84% of the share capital as at 31 December 2023).

The chart below summarizes the monthly average proportion of treasury shares to share capital throughout 2023 and 2024.

Monthly average of daily positions in treasury shares

% of Banco Santander's share capital at month end

	2024	2023
January	1.83%	1.75%
February	0.13 %	2.16%
March	0.54 %	1.46%
April	0.98 %	1.50%
May	1.49 %	1.72%
June	1.54 %	1.68%
July	0.02 %	0.08%
August	0.06 %	0.08%
September	0.45 %	0.08%
October	0.94 %	0.64%
November	1.60 %	1.25%
December	1.36%	1.56%

In 2024, Banco Santander and its subsidiaries' treasury share trades amounted to the following values:

Acquisitions and transfers of treasury shares in 2024

	Acquisitions				Transfers				
EUR (except number of shares)	Number of shares	Total par value	Total cash amount	Average purchase price	Number of shares	Total par value	Total cash amount	Average purchase price	Profit (loss) net of taxes
Discretionary trading	72,223,881	36,111,941	298,048,000	4.13	67,667,779[A]	33,833,890[A]	268,877,000[A]	4.14[B]	7,804,000[B]
Client induced trading[C]	113,575,334	56,787,667	484,880,000	4.27	113,575,334	56,787,667	484,880,000	4.27	
Buyback programmes	744,811,421	372,405,711	3,255,024,000	4.37	N/A	N/A	N/A	N/A	N/A
Total	**930,610,636**	**465,305,318**	**4,037,952,000**	**4.34**	**181,243,113[A]**	**90,621,557[A]**	**753,757,000[A]**	**4.22[B]**	**7,804,000[B]**

A. Including the donations that Banco Santander made to Fundación Banco Santander during the year totalling 22,167,105 treasury shares. For more details, see section 3.2.4 'Community Support' of the 'Sustainability statement' chapter.
B. Excluding the donations mentioned in footnote A above.
C. Transactions on Banco Santander's shares to hedge market risks or provide brokerage or hedging for customers.

The chart below shows significant changes in treasury shares that required disclosure to the CNMV in the year. Companies must report to the CNMV when purchases of treasury shares exceed 1% of the total voting rights (without discounting transfers) or there is a change in the number of total voting rights.

Significant changes in treasury shares in 2024[A]

	% of voting rights represented by shares		
Reported on	acquired since last notice	transferred since last notice	held at reference date of notice
26/01/2024[B]	1.13%	0.20%	1.61%
08/02/2024	1.00%	2.57%	0.08%
05/04/2024	1.05%	0.36%	0.76%
23/05/2024	1.01%	0.25%	1.53%
04/07/2024	0.87%	2.42%	0.01%
07/10/2024	1.02%	0.28%	0.75%
19/11/2024	1.04%	0.12%	1.67%
27/12/2024	0.81%	2.35%	0.17%

A. Percentages calculated with share capital at the date of disclosure.
B. It amends report dated 13 December 2024.

Transactions with financial instruments

The transactions with financial instruments with Banco Santander shares as the underlying asset carried out by Banco Santander of its own accord in 2024 for the purpose of discretionary treasury share management are as follows:

- In Q1'24, we reduced the investment position by a *delta* (i.e. net exposure to share price changes) equalling 860,000 shares. In Q2'24, we increased the investment position by a *delta* equalling 1,450,000 shares.
- The final position at year end was a positive aggregated delta equalling 1,500,000 shares worth a total EUR 6,785,815.
- The instruments used were total return equity swaps and listed options, to be settled at maturity exclusively in cash.

2.6 Stock market information

Markets

Banco Santander shares are listed on Spanish stock exchanges (Madrid, Barcelona, Bilbao and Valencia), the New York Stock Exchange as American Depositary Shares (ADS), the London Stock Exchange as Crest Depositary Interests (CDI), the Warsaw Stock Exchange and in the International Quotation System (SIC) of the Mexican Stock Exchange (BMV).

Market capitalization and trading

As at 31 December 2024, Banco Santander occupies the second position in the eurozone and in the thirty-second world by market value among financial institutions, with a market capitalization of EUR 67,648 million.

7,713 million Banco Santander shares traded in the year for an effective value of EUR 33,410 million and a liquidity ratio of 49%.

The Banco Santander share

	2024	2023
Shares (million)	15,152.5	16,184.1

Total cash traded (EUR million)	33,409.9	38,143.5
Average daily cash traded (EUR million)	130.5	149.6

3. SHAREHOLDERS AND GENERAL MEETING

→ One share, one vote, one dividend
→ No takeover defences in our Bylaws
→ High shareholder participation at the general meeting, mostly through virtual means
→ Bylaws authorization to hold virtual-only meetings ensuring equal treatment of our shareholders

3.1 Shareholder communication and engagement

Policy on communication and engagement with shareholders and investors

Banco Santander aims to ensure its interests are in line with those of its shareholders, through sustainable growth and long-term value creation, retaining shareholders' and broader society's trust. To do that, we:

- provide information to shareholders and investors that meets their expectations and upholds our culture and values; and
- communicate and engage with them regularly so that senior managers and governance bodies consider their views.

Our policy on communication and engagement with shareholders and investors, available on our corporate website, sets out the principles that govern the aforementioned activities:

- **Protection of all shareholders' rights and lawful interests.** We facilitate exercising of shareholders' rights, provide them with information and give them opportunities to have a say in our corporate governance.
- **Equal treatment and non-discrimination.** We treat investors in the same situation equally.
- **Fair disclosure.** We make sure that the information we disclose is transparent, truthful and consistent according to applicable law.
- **Appropriate disclosure of information.** We report appropriate and relevant information to meet our shareholders' and investors' needs and expectations, and make sure it is clear, concise and accurate.
- **Compliance with the law and corporate governance rules.** We adhere closely to the laws and regulations on inside and price-sensitive information in addition to following the principles of cooperation and transparency with supervisory and regulatory bodies.

The policy also sets out:

- the **roles and responsibilities** of the main governance bodies and internal functions involved in communication and engagement;
- the **channels for information disclosure and communication**; and
- the **ways in which we engage** with shareholders and investors.

The policy also applies to relations with agents that advise, recommend or guide our shareholders and investors, such as financial and ESG analysts, proxy advisers and ratings agencies.

Moreover, Banco Santander has board-approved frameworks on accounting, financial management and sustainability information and management, on responsible banking and on branding and communications. They set out the general principles, roles and key processes on the communication of financial, non-financial and corporate information, which help ensure that all our shareholders and other stakeholders are properly informed about our strategy, targets and results, as well as about our culture and values.

Engagement with shareholders in 2024

As part of our policy on communication and engagement with shareholders and investors, we carried out the following activities during the year:

- **The annual general meeting**. The ordinary general meeting is the most important annual event for our shareholders. We strive to encourage them to attend and participate in the meeting, in an informed way. See 'Participation at general meetings' and 'Right to information' in section 3.2.

  The annual general meeting is broadcast live on our corporate website, where its recordings are made available in full afterwards. This enables shareholders who cannot attend the meeting and other stakeholders who want to access the recording to remain fully informed of the resolutions that are submitted for approval.

The 2024 AGM was hybrid, allowing shareholders to attend in person or remotely. Our general meeting attendance app ensures shareholders can fully exercise their rights to attend and participate in real time and remotely. They can watch the entire meeting through a live feed, vote, make remarks, propose resolutions, see the remarks and proposals of other shareholders who attend remotely and contact the notary public. Our high shareholder participation rate at the most recent general meetings proves the effectiveness of our electronic means of attendance, delegation and remote voting.

As usual, an external auditor reviewed our 2024 AGM procedures, where it verified that our meeting call, preparation, communication and holding of the event were up to standard, as well as certifying the security, integrity and consistency of the means available for shareholders to participate.

Also, Banco Santander's management system for the 2024 AGM received once again AENOR certification for sustainable events in compliance with the UNE-ISO 20121.

The vast quorum and voting results at our 2024 AGM show just how important we consider shareholder engagement through general meetings. See section 3.4 '2024 AGM'.

- **Lead Independent Director meetings with key investors**. Since September 2024, our Lead Independent Director held several meetings with institutional investors, bringing forward the dates of the planned agenda. Though meetings primarily focused on understanding their concerns about remuneration, they also addressed other topics of interest such as the structure of the board, our sustainability strategy and their opinion on virtual AGMs. In total, he met with 16 large institutional investors, who account for approximately 24% of our share capital.
- **Quarterly results presentations**. We present our results at the end of each quarter on the same day we make them public. The presentation can be followed live, via conference call or streamed on our website. We release the related quarterly financial report and presentation material on the same day before the markets open. During the presentation, questions can be asked or emailed to investor@gruposantander.com.

  In 2024, we gave our first, second and third quarter results presentations on 30 April, 24 July and 29 October, respectively. Our fourth quarter results presentation took place on 5 February 2025.
- **Investor days.** We organize investor days where we explain our strategy and targets for the next three years to investors and other stakeholders in a broader context than in results presentations. Investors can interact directly with senior managers and some directors. We publish announcements about these meetings and provide related documents well in advance.

  We held our most recent investor day in London on 28 February 2023.
- **Other activities**. We know that a single format for communicating with shareholders and investors is not valid for everyone. For this reason, in 2024 and early 2025, we carried out the activities detailed in the table below to meet their diverse needs and expectations.

Other activities	
→ Investor roadshows	Our Shareholder and Investor Relations team had 1,269 meetings (both in person and virtually) with 511 investors, including 109 meetings focused on ESG matters. We engaged with 37.91% of share capital.
→ Interaction with retail shareholders	Our Shareholder and Investor Relations team held 229 events (online, in person and hybrid). Attendees accounted for 8.25% of the capital held by retail shareholders in Spain. Shareholders engaged with the Group's senior management at several of these events.
→ Studies and surveys	We received 157,632 shareholders and investors opinions through quality surveys and studies, of which 9,136 corresponded to opinions received in the SPF (Simple, Personal and Fair) survey of Banco Santander.

Communication with proxy advisors and other analysts

We have always recognized the value our investors place on open dialogue with proxy advisers, ESG analysts and other influential entities. We make sure they understand our corporate governance and sustainability priorities and messages in order to convey them properly to investors.

In 2024, we continued to engage with the main proxy advisers. Moreover, we provided information and explanations about proposed resolutions submitted to vote at the 2024 AGM so they could make voting recommendations.

We also engaged in dialogue with ESG analysts. For more details, see the 'Sustainability statement' chapter.

Corporate website

Our corporate website includes all the information on corporate governance as required by law and, in particular, (i) Banco Santander's key internal regulations (Bylaws, Rules and regulations of the board, Rules and regulations for the general shareholders meeting, etc.); (ii) information on the board of directors and its committees, as well as directors' skills and professional biographies; and (iii) all the information related to general meetings.

Information on our corporate governance can be found at https://www.santander.com/en/shareholders-and- investors/corporate-governance (included for information purposes only). The contents of our corporate website are not incorporated by reference to this annual report nor should be considered part of it for any purpose.

In addition, our corporate website provides extensive institutional, financial and sustainability information about the Group as well as other information we consider to be of interest to our shareholders and, in general, to all our stakeholders worldwide. Its design enables us to be transparent and enhance user experience by providing quality information about Santander.

Other channels

In order to maximize the dissemination and quality of information, we offer shareholders and investors an app (Santander Shareholders and Investors) compatible for Android and Apple iOS that contains a broad range of information about the Group.

We also engage with shareholders through various channels, such as an email address, telephone lines, WhatsApp, postal service and virtual office.

In addition, we regularly post information about Banco Santander on our official X and LinkedIn accounts. The contents included in these profiles are not incorporated by reference to this annual report nor should be considered part of it for any purpose.

3.2 Shareholder rights

One share, one vote, one dividend

Our Bylaws provide for one share class only (ordinary shares), which grant all shareholders the same rights. Each Banco Santander share entitles its holder to one vote and there is no preferential treatment in dividend payouts. The Bylaws fully adhere to the one share, one vote, one dividend principle.

Voting rights and unrestricted share transfers

There are no non-voting or multiple-voting shares, nor limitations to the number of votes a shareholder can cast, or any other restriction on exercising voting rights, except for those prescribed by law or set out in our Bylaws should the acquisition of the shares infringe regulations. There are no quorum requirements or qualified majorities other than those prescribed by law.

Neither Banco Santander's Bylaws nor any other means restrict the transferability of shares, which is subject only to restrictions prescribed by law.

Furthermore, our Bylaws do not include any neutralization provisions, as set out in the Spanish Securities Market Act, which would apply in takeover bids.

The shareholders' agreement mentioned in section 2.4 'Shareholders' agreements' contains transfer and voting restrictions on the shares that are subject to it.

Acquisition of significant shareholdings

Because banking is a regulated sector, the acquisition of a significant shareholding or influence in Banco Santander is subject to regulatory approval or non-objection, as applicable, by the supervising authority. Furthermore, as Banco Santander is a listed company, any parties wishing to acquire control over it and/or enter into any other lawful scenario must launch a tender offer for its shares.

Such acquisitions are largely regulated by:

- Regulation (EU) 1024/2013 of the Council of 15 October 2013, conferring specific tasks on the ECB relating to the prudential supervision of credit institutions.
- Act 10/2014, of 26 June, on the organization, supervision and solvency of credit institutions and its implementing regulation, Spanish Royal Decree 84/2015, of 13 February.
- Act 6/2023, of 17 March, on the Securities Markets and on Investment Services.

The acquisition of a significant holding in Banco Santander may also require approval by other domestic and foreign regulators with supervisory powers over Banco Santander or its subsidiaries' operations and shares listings, or other actions concerning such regulators or subsidiaries; and other authorities pursuant to foreign investment regulations in Spain or other countries where we operate.

Participation at general meetings

All registered holders of shares found on record at least five days prior to the day of a general meeting are entitled to attend. Banco Santander facilitates shareholder participation by allowing them to exercise their rights to attend, delegate, vote and participate at general meetings using remote communications systems.

Shareholders can attend general meetings virtually. They can follow them through real-time means of communication, vote, make remarks, propose resolutions and contact the notary public. Our Bylaws allow for general meetings to be virtual-only, without the physical attendance of shareholders or their proxies, provided that we can guarantee their identity and standing and that they can participate effectively in the meeting by remote means of communication, exercise their rights in real time and follow the presentations of other attendees, considering the state of the art and Banco Santander's circumstances, particularly the number of shareholders.

The electronic shareholders' forum, available on the corporate website at the time the meeting is called, allows shareholders to add to the agenda items included in the meeting notice, requests for support for their proposals, initiatives to reach the percentage required to exercise minority shareholder rights legally, and offers or requests to act as a voluntary proxy.

Supplement to the notice and proposal of resolutions

Shareholders representing at least 3% of the share capital are able to request the publication of a supplement to the annual general meeting notice, adding one or more items to the agenda, with an explanation or substantiated resolution proposal and any other relevant documents.

Shareholders representing at least 3% of the share capital may also propose reasoned resolutions on any matters that have been, or should be, added to the agenda of a called annual general meeting.

To exercise these rights, shareholders must send a certified notice to Banco Santander's registered office within five days after the annual general meeting notice is posted.

Any shareholder, irrespective of their stake, can also request the removal of directors or the filing of corporate liability action against any director to be put to a vote at the general meeting, even when not on the agenda.

Right to information

From the time the general meeting notice is posted until the fifth day before the general meeting date on first call, shareholders can submit the written requests for information or clarification they may deem pertinent, or any written questions they deem relevant to the items on the meeting agenda.

Moreover, in the same manner and within the same period, shareholders can submit written requests for clarification about information Banco Santander has sent to the CNMV since the last general meeting or about auditor's reports. Banco Santander posts all shareholder-requested information and the answers it provides on its corporate website.

Shareholders who attend either in person or virtually may also exercise their right to receive information at the meeting. Where information cannot be given during the course of the meeting, it will be provided in writing within seven days and posted on our corporate website.

Quorum and majorities for passing resolutions at the general meeting

The quorum and majorities set out in our Bylaws and Rules and regulations for general meetings in order to hold a valid meeting and adopt corporate resolutions are those provided for under Spanish law.

Except for certain matters mentioned below, on first call, shareholders accounting for at least 25% of the subscribed share capital with voting rights must be in attendance for the valid constitution of the general shareholders' meeting. If sufficient quorum is not reached, general meetings will be held on second call, which does not require a quorum.

In accordance with our Rules and regulations for general meetings, shareholders voting by remote means, by post or direct delivery or by electronic means before the meeting are counted as present in order to determine the general meeting quorum.

With the exception of certain matters mentioned below, general meeting resolutions pass when shareholders attending in person or by proxy cast more votes in favour than against.

The quorum and majorities required to amend the Bylaws, issue shares and bonds, make structural changes and vote on other significant resolutions permitted by law are those set out below for amending the Bylaws. Furthermore, in accordance with laws applying to credit institutions, if over 50% of the share capital is present at a general meeting, a qualified two-thirds majority is required to raise the proportion of variable remuneration components to fixed components above 100% (up to 200%) for executive directors and other employees whose professional activities have a material impact on the Group's risk profile; otherwise, a three-quarters majority will be necessary.

Decisions about acquiring, selling or contributing core assets to another company or similar corporate transactions shall require shareholder approval at general meetings when the law so dictates. Our Bylaws have no further requirement in this regard.

Rules for amending our Bylaws

Shareholders at the general meeting have the authority to approve any amendment to the Bylaws. However, the board can also decide to change the registered office within Spain.

The directors or, as applicable, the shareholders who have drafted a proposed amendment to the Bylaws, must write it out in full and prepare a report justifying it, which shall be provided to shareholders at the time the general meeting to debate the proposed amendment is called.

The general meeting notice must clearly state the items to be amended as well as the rights of all shareholders to examine the full text of proposed amendments and the related report at Banco Santander's registered office and to have them delivered free of charge.

If shareholders are convened to debate amendments to the Bylaws, the quorum on first call will be reached if 50% of the subscribed share capital with voting rights is in attendance. If a sufficient quorum cannot be reached, the general meeting will be held on second call, where 25% of the subscribed share capital with voting rights must be in attendance.

When less than 50% of the subscribed share capital with voting rights is in attendance, resolutions on amendments to the Bylaws can only be validly adopted if two-thirds of shareholders attending the meeting in person or by proxy vote for them. However, when 50% or more of the subscribed share capital with voting rights is present, resolutions may pass by way of absolute majority.

Resolutions to amend the Bylaws that involve new obligations for shareholders must be accepted by those affected.

Bylaw amendments are subject to ECB approval. However, amendments that are exempt from authorization but must still be reported to the ECB include a change of the registered office within Spain, share capital increases, adding mandatory or prohibitive laws or regulations to the Bylaws, changing the wording in order to comply with court or administrative rulings and any others the ECB has declared exempt due to a lack of materiality in response to prior consultations.

3.3 Dividends and shareholder remuneration

Remuneration against 2024 results

For the 2024 results, the board continued to apply the same policy as in 2023, with total shareholder remuneration of approximately 50% of the Group reported profit (excluding non-cash, non-capital ratios impact items), distributed in approximately equal parts in cash dividend and share buybacks.

- **Interim remuneration**.
  - On 26 August 2024, the board resolved to execute the First 2024 Buyback Programme worth up to EUR 1,525 million (equivalent to approximately 25% of said Group reported profit in H1'24). See 'First 2024 Buyback Programme' in section 2.5.
  - On 24 September 2024, the board resolved to pay an interim cash dividend against the 2024 results of 10 euro cents per share entitled to the dividend (equivalent to approximately 25% of said Group reported profit in H1'24); it was paid from 1 November 2024.
- **Final remuneration**. Under the 2024 shareholder remuneration policy:
  - On 4 February 2025 the board of directors resolved to implement the Second 2024 Buyback Programme worth a maximum amount of EUR 1,587 million, for which the appropriate regulatory authorization has been obtained, and the execution of which began on 6 February 2025. For more details, see 'Second 2024 Buyback Programme' in section 2.5.
  - On 25 February 2025 the board of directors resolved to submit a resolution at the 2025 AGM to approve a final cash dividend in the gross amount of 11 euro cents per share entitled to dividends. If approved at the AGM, the dividend would be payable from 2 May 2025.

Once the above-mentioned actions are completed, total shareholder remuneration for 2024 will total EUR 6,293 million (approximately 50% of the Group reported profit -excluding non-cash, non-capital ratios impact items- in 2024), distributed as approximately 50% in cash dividends (EUR 3,181 million) and 50% in share buybacks (EUR 3,112 million). These amounts have been estimated assuming that, as a consequence of the partial execution of the Second 2024 Buyback Programme, the number of outstanding shares entitled to a final cash dividend will be 14,988,884,075. Therefore, that amount may be higher if fewer shares than planned are acquired in the Second 2024 Buyback Programme; otherwise, it will be lower.

Remuneration against 2025 results

As announced on 5 February 2025, the board intends to allocate up to EUR 10 billion to shareholder remuneration in the form of share buybacks, corresponding to the 2025 and 2026 results, as well as to the expected excess capital. This share buyback target includes: (i) buybacks that are part of the existing shareholder remuneration policy outlined below, and (ii) additional buybacks following the publication of annual results to distribute year-end excesses of CET1 capital.

The ordinary remuneration policy for the 2025 results, which the board intends to apply, will remain the same as for the 2024 results, consisting of a total shareholder remuneration of approximately 50% of the Group's reported profit (excluding non-cash and non-capital ratios impact items), distributed in approximately equal parts between cash dividends and share buybacks.

The execution of the shareholder remuneration policy and share buybacks to distribute the excess CET1 capital is subject to corporate and regulatory approvals.

3.4 2024 AGM

We held our annual general meeting on 22 March 2024, on second call, in a hybrid format, allowing attendance both in person and by electronic means.

Quorum and attendance

The quorum (among shareholders present and represented) was 66.646%, broken down as follows:

Quorum breakdown	Share capital with voting rights
Present	**4.168 %**
In person and virtual attendance	0.819 %
In person attendance	0.073%[A]
Virtual attendance	0.007%
Remote voting	3.349%
By post or direct delivery	0.523 %
By electronic means	2.826%
Represented	**62.478 %**
By post or direct delivery	5.987 %
By electronic means	56.491 %
Total	**66.646 %**

A. The portion corresponding to shares directly or indirectly held by directors or represented by them at the meeting is not included in this percentage. For more details on directors' voting rights, see subsection A.3 of section 9.2 'Statistical information on corporate governance required by the CNMV'.

Approved resolutions and voting results

All items on the agenda were approved. Votes in favour of the board's proposals averaged 97.16%. 99.36% of votes approved the corporate management for 2023 and 74.82% of the votes approved the directors' remuneration policy for 2024, 2025 and 2026.

The following chart summarizes the resolutions approved and voting results:

	VOTES[A]				
	For[B]	Against[B]	Blank[C]	Abstention[C]	Quorum[D]
1. Annual accounts and corporate management					
1A. Annual accounts and directors' reports for 2023	99.71	0.29	0.05	0.30	66.65

5. Share capital					
5A. Authorisation to the board of directors to increase the share capital of the Bank on one or more occasions and at any time, within a 3-year period, through cash contributions in the maximum nominal amount of EUR 3,956,394,643. Delegation of the power to exclude pre-emptive rights.	95.16	4.84	0.04	0.22	66.65
5B. Reduction in share capital in the maximum amount of EUR 783,428,928.50 , through the cancellation of a maximum of 1,566,857,857 own shares. Delegation of powers.	99.44	0.56	0.04	0.19	66.65
5C. Reduction in share capital in the maximum amount of EUR 791,278,928.50, through the cancellation of a maximum of 1,582,557,857 own shares. Delegation of powers.	99.22	0.78	0.04	0.22	66.65
6. Remuneration					
6A. Directors' remuneration policy	74.82	25.18	0.05	0.29	66.65
6B. Setting of the maximum total annual remuneration of directors in their capacity as such	97.43	2.57	0.05	0.29	66.65
6C. Approval of the maximum ratio of fixed and variable components of total remuneration of executive directors and other employees belonging to categories with professional activities that have a material impact on the risk profile	98.84	1.16	0.06	0.27	66.21
6D. Deferred Multiyear Objectives Variable Remuneration Plan	95.63	4.37	0.06	0.29	66.65
6E. Application of the Group's buy-out regulations	98.75	1.25	0.07	0.32	66.65
6F. Annual directors' remuneration report (consultative vote)	90.18	9.82	0.06	1.31	66.65
7. Authorisation to the board and granting of powers for conversion into a public instrument	99.70	0.30	0.06	0.25	66.65
8 to 23. Corporate action to demand director liability and dismissal and removal of directors[E]	0.00	100.00	0.00	0.05	63.30

A. Each Banco Santander share grants one vote.
B. Percentage of votes for and against.
C. Percentage of share capital present and attending by proxy at the 2024 AGM.
D. Percentage of Banco Santander's share capital on the date of the 2024 AGM.
E. Items 8 to 23, not included on the agenda, were put to a separate vote. They refer to the proposal to bring corporate action to demand director liability (*acción social de responsabilidad*) against all directors in office (8) and to the proposal of dismissal and removal of the following directors: Ms Ana Botín-Sanz de Sautuola y O'Shea (9), Mr Héctor Blas Grisi Checa (10), Mr Glenn Hogan Hutchins (11), Mr José Antonio Álvarez Álvarez (12), Ms Homaira Akbari (13), Mr Javier Botín-Sanz de Sautuola y O'Shea (14), Mr Bruce Carnegie-Brown (15), Ms Sol Daurella Comadrán (16), Mr Henrique de Castro (17), Mr Germán de la Fuente Escamilla (18), Ms Gina Lorenza Díez Barroso (19), Mr Luis Isasi Fernández de Bobadilla (20), Mr Ramiro Mato García-Ansorena (21), Ms Belén Romana García (22) and Mrs Pamela Walkden (23).

The full texts of the resolutions passed can be found on our corporate website and on the CNMV's website, as they were filed as other relevant information on 22 March 2024.

3.5 Our next AGM in 2025

Resolution proposals submitted to shareholders' approval

The board of directors agreed to call the 2025 AGM on 3 April on first call or on 4 April on second call, and to propose the following resolutions:

Annual accounts and corporate management

- To approve the annual accounts and the directors' reports of Banco Santander and its consolidated Group for the financial year ended on 31 December 2024. For more details, see 'Consolidated financial statements'.
- To approve the consolidated non-financial statement for the financial year ended on 31 December 2024, which is part of the consolidated directors' report. See the 'Sustainability statement' chapter.
- To approve the corporate management for financial year 2024.

Application of results of financial year 2024

- To approve the application of results obtained by Banco Santander during financial year 2024. See note 4.a) to the consolidated financial statements.

Board of directors: appointments and re-elections

- To set the number of directors at 15, within the maximum and minimum limits stated in the Bylaws.
- To re-elect Luis Isasi, Héctor Grisi, Glenn Hutchins, Pamela Walkden and Ana Botín for a three-year period. See section 4.1 'Our directors'.

External auditor

- To re-elect the firm PricewaterhouseCoopers Auditores, S.L. (PwC) as external auditor of Banco Santander and its consolidated group for financial year 2025.

Independent verifier

- To appoint the firm PricewaterhouseCoopers Auditores, S.L. (PwC) as verifier of the sustainability information of Grupo Santander for financial year 2025.

Share capital

- To reduce the share capital of Banco Santander with the following purposes:
  - Cancelling a maximum of 1,413,743,296 treasury shares purchased under the Second 2024 Buyback Programme.
  - Cancelling a maximum of 1,515,249,232 treasury shares acquired through one or more share buyback programmes or by other legally permitted means, authorizing the board of directors to cancel them on one or several occasions within the earlier of one year or the date of the next annual general meeting.

See sections 2.1 'Share capital' and 2.5 'Treasury shares'.

Remuneration. See section 6. 'Remuneration'

- To approve the director's remuneration policy for 2025, 2026 and 2027.
- To set the maximum amount of annual remuneration to be paid to all the directors in their capacity as such.
- To approve a maximum ratio of 200% of variable components to fixed components of total remuneration for executive directors and certain employees belonging to professional categories that have a material impact on the Group's risk profile.
- To approve the Deferred Multiyear Objectives Variable Remuneration Plan.
- To approve the Group's buy-out regulations.
- To hold a non-binding vote on the annual directors' remuneration report.

Related documents and information are available for consultation on our corporate website from the date the meeting notice is published.

Virtual AGM

The 2025 AGM will be held as a virtual-only meeting broadcast live from our corporate centre in Boadilla del Monte. Holding the meeting in this format is possible thanks to the legal and statutory authorisation to hold this type of meeting that was approved by the vast majority of our shareholders, it is consistent with the Santander Group's digitalisation policy, and is motivated by the following reasons:

- First, holding the meeting exclusively by remote means allows us to ensure equal treatment of all our shareholders and facilitates their participation and full exercise of their rights at the meeting from anywhere, in line with our ongoing efforts to incentivise and increase the flexibility in the relationship with its shareholders. Banco Santander has several million shareholders, who are very diversified geographically, and only a few dozen of them attend the general meetings in person. Data on the 2024 AGM quorum and attendance, which endorse the above, are available in section 3.4 '2024 AGM'.
- Additionally, we have spent over two decades promoting remote participation of the shareholders in the general meeting and developing a remote participation platform (the General Shareholders' Meeting Platform), which proved to be ideal during the pandemic, for which reason it is now considered perfectly possible to hold the general meeting exclusively by remote means with sufficient guarantees, thereby making more effective use of the opportunities provided by technology. In this regard, the General Shareholders' Meeting Platform has sufficient guarantees, replicates the functioning of the traditional meeting and safeguards the exercise of shareholders' rights at the same level as in a physical or hybrid meeting. The platform is technologically tested and all the processes of the meeting are subject to an external audit, which verifies compliance with the procedures relating to the call, preparation, communication and holding of the meeting, certifying the security, integrity and consistency of the means made available to the shareholders regarding their participation in the meeting. All of this is also part of the Group's digitalisation and transformation process.
- Moreover, this initiative is aligned with the current digital paradigm. This is shown by the experience of countries such as the United States, Canada or Germany, where virtual-only meetings are the majority practice among the major listed companies. This is also attested by the evolution of Spanish legislation after the experience of the pandemic, with the admission of the possibility of holding meetings and assemblies exclusively by remote means and with the express statutory authorisation to this effect agreed by the vast majority of our shareholders.
- Fourthly, the initiative allows for a more effective allocation of the Group's resources and a relative reduction in the costs associated with a meeting of this nature, benefiting Banco Santander and all the shareholders.
- Finally, a virtual AGM will considerably reduce the environmental impact of a meeting held in a format requiring the physical travel of attendees, employees and other persons involved in the preparation and holding of the general meeting, particularly when an equivalent result can be achieved without such travel thanks to existing technology developed by the Group.

Attendance at the 2025 AGM shall be necessarily through the General Shareholders' Meeting Platform accessible on the corporate website www.santander.com, through the "General Shareholders' Meeting" site, or on the website www.juntasantander.com.

Since attendance at general meetings is not paid, a general policy in this regard is not necessary. However, Banco Santander offers shareholders that participate in our general meeting a commemorative courtesy gift, as has been tradition for decades.

4. BOARD OF DIRECTORS

A balanced board

→ 15 directors: 13 non-executive and 2 executive

→ Majority of independent directors (66.67%)

4.1 Our directors

Ana
Botín-Sanz de Sautuola y O'Shea
EXECUTIVE CHAIR
Executive director

Board member since 1989.

Nationality: Spanish. Born in 1960 in Santander, Spain.

Education: Degree in Economics from Bryn Mawr College of Pennsylvania.

Experience: Ms Botín joined Banco Santander, after working at JP Morgan (New York, 1980-1988). In 1992, she was appointed Senior Executive Vice President (*director general*). Between 1992 and 1998, she led Santander's expansion into Latin America. In 2002, she was appointed Executive Chair of Banesto. Between 2010 and 2014, she was CEO of Santander UK PLC and was a non-executive director until April 2021. In 2014 she was appointed Executive Chair of Banco Santander. She was also a non-executive director of Santander UK Group Holdings PLC (2014-2021) and Chair of the European Banking Federation (2021-2023).

Other positions of note: Ms Botín is a member of the board of directors of The Coca-Cola Company and Chair of the Institute of International Finance (IIF). She is also founder and Chair of the CyD Foundation (which supports higher education) and the Empieza por Educar Foundation (the Spanish subsidiary of international NGO Teach for All), and sits on the advisory board of the Massachusetts Institute of Technology (MIT).

Positions in other Group companies: Ms Botín is non-executive Chair of Open Bank, S.A., Santander Consumer Finance, S.A., Open Digital Services, S.L., PagoNxt, S.L., Universia España Red de Universidades, S.A. and Universia Holding, S.L.; and is a non-executive director of Santander Holdings USA, Inc. and Santander Bank, N.A.

Membership of board committees: Executive committee (Chair) and innovation and technology committee.

Skills and competencies: Ms Botín has extensive international experience in top executive roles in banking. She has also led Grupo Santander's strategic and cultural transformation, and her philanthropy underscores her ongoing commitment to sustainable and inclusive growth.

Héctor
Grisi Checa
CHIEF EXECUTIVE OFFICER
Executive director

Board member since 2023.

Nationality: Mexican. Born in 1966 in Mexico City, Mexico.

Education: Degree in Finance from Universidad Iberoamericana (Mexico City).

Experience: Mr Grisi joined the Group in 2015 as Executive Chair and CEO of Banco Santander México and Grupo Financiero Santander México, S.A. de C.V. He was named Regional Head for North America (2019-2022). Before joining Santander he worked in Mexico and the US. Mr Grisi spent 18 years in several leadership roles at Crédit Suisse, including Head of investment banking for Mexico, Central America and the Caribbean, and Chair and CEO of Crédit Suisse México. He also held several roles in corporate and investment banking at Grupo Financiero Inverméxico and at Casa de Bolsa Inverlat. From 2011 to 2014, Mr Grisi was Vice Chair of Asociación de Bancos de México ("Bank Association of Mexico").

Other positions of note: Mr Grisi is non-executive Chair of Cogrimex, S.A. de C.V.

Positions in other Group companies: Mr Grisi is a non-executive director of Grupo Financiero Santander México, S.A. de C.V. and PagoNxt, S.L.

Membership of board committees: Executive committee and innovation and technology committee.

Skills and competencies: Mr Grisi has gained vast experience and a unique strategic vision from his many years of executive service at several banking and financial institutions. He is well-versed in Grupo Santander's businesses and global strategy, especially in such key markets as Mexico and the US. He brings to the board geographic and international diversity and a strong, international track record of management, leadership, business transformation and connectivity between the Group's markets.

Glenn Hogan Hutchins

VICE CHAIR AND LEAD INDEPENDENT DIRECTOR

Non-executive director (independent)

Board member since 2022.

Nationality: American. Born in 1955 in Virginia, US.

Education: Graduated with a AB, MBA and JD from Harvard University.

Experience: Mr Hutchins co-founded US technology and investment firm Silver Lake, where he was CEO until 2011. Prior, Mr Hutchins had been a senior managing director at The Blackstone Group (1994-1999) and Thomas H. Lee Co. (1985-1994), and a consultant at Boston Consulting Group. He has also served on the boards of SunGard Data Systems (Chair, 2005-2015), NASDAQ (2005-2017) and Virtu Financial (2017-2021). He served as a director and Chair of the audit and risk committees of the Federal Reserve Bank of New York from 2011 to 2021. Additionally, he served on the board of the Harvard Management Company, which manages Harvard University's endowment. Mr Hutchins worked with President Clinton in his transition to power and the White House as special advisor on economic and healthcare policy.

Other positions of note: Mr Hutchins is non-executive Chair of investment firm North Island Ventures, an independent director of AT&T and Lead Independent Director of CoreWeave, Inc. He is a member of the international advisory board and investment board of Singapore's Government Investment Corporation (GIC), co-Chair of the Brookings Institution, Chair emeritus of not-for-profit organization CARE, and Vice Chair of the Obama Foundation. He also serves on the executive committee of the Boston Celtics basketball team.

Membership of board committees: Nomination committee, remuneration committee (Chair), and innovation and technology committee (Chair).

Skills and competencies: As a long-time investor in technology and fintech companies, Mr Hutchins has expertise in financial markets and is well-known among investors and stakeholders. He brings to the board his acumen in technology, telecommunications, innovation, finance and investment as well as extensive knowledge of financial regulation as a result of his leadership roles in government, especially with financial regulators and supervisors. He works closely with not-for-profit entities committed to fighting poverty, designing effective public policy and promoting social justice.

José Antonio Álvarez Álvarez

VICE CHAIR

Non-executive director

Board member since 2015.

Nationality: Spanish. Born in 1960 in León, Spain.

Education: Degree in Economics and Business Administration. MBA from the University of Chicago.

Experience: Mr Álvarez joined Banco Santander in 2002. He was appointed Senior Executive Vice President (*director general*) and Head of the Financial Management and Investor Relations division in 2004 (Group Chief Financial Officer) and was Group CEO from 2015 to 2022. He served as director at SAM Investments Holdings Limited, Santander Consumer Finance, S.A., Santander Holdings USA, Inc., and as non-executive Vice Chair of Banco Santander (Brasil) S.A. He sat on the supervisory boards of Santander Consumer Bank AG, Santander Consumer Holding GmbH and Santander Bank Polska, S.A. He was also a board member of Bolsas y Mercados Españoles, S.A.

Other positions of note: Mr Álvarez is an independent director of Aon PLC and a member of the advisory committee of Grupo Buenavista.

Positions in other Group companies: Mr Álvarez is a non-executive director of PagoNxt, S.L.

Membership of board committees: Executive committee, risk supervision, regulation and compliance committee, and innovation and technology committee.

Skills and competencies: Mr Álvarez is a highly qualified and talented leader with a distinguished career in banking. He brings significant strategic and international management expertise, in particular financial planning, asset management and consumer finance, and has vast knowledge of the Group from his tenure as CEO. He has extensive experience and an established reputation with such key stakeholders as regulators and investors.

Homaira Akbari

Non-executive director (independent)

Board member since 2016.

Nationality: American and French. Born in 1961 in Tehran, Iran.

Education: PhD in Experimental Particle Physics from Tufts University of Massachusetts and MBA from Carnegie Mellon University.

Experience: Ms Akbari was a non-executive director of Gemalto NV and Veolia Environment S.A. She was Chair and CEO of SkyBitz, Inc., managing director of TruePosition Inc., and a non-executive director of Covisint Corporation and US Pack Logistics, LLC. She also held various roles at Microsoft Corporation and Thales Group, was non-executive Chair of WorkFusion, Inc., and an independent director of Temenos, AG.

Other positions of note: Ms Akbari is CEO of AKnowledge Partners, LLC, a global consultancy firm on the Internet of Things, cybersecurity and artificial intelligence. She is an independent director of Landstar System, Inc. and a member of the security advisory board of Telefónica Soluciones de Criptografía, S.A.U. She is also a trustee of the French Institute Alliance Française.

Positions in other Group companies: Ms Akbari is a non-executive director of Santander Consumer USA Holdings Inc. and PagoNxt, S.L.

Membership of board committees: Audit committee, responsible banking, sustainability and culture committee, and innovation and technology committee.

Skills and competencies: Ms Akbari brings significant experience of technology companies. Her knowledge of digital transformation challenges and cybersecurity is an asset to the board. She also has extensive experience in diverse regions and knowledge of water, energy and waste management and treatment, which are of particular value to the Group's sustainability policy.

Juan Carlos Barrabés Cónsul

Non-executive director (independent)

Board member since 2024.

Nationality: Spanish. Born in 1970 in Huesca, Spain.

Education: Tour Operator Management from the School of Tourism of Aragón and Global Leadership and Public Policy for the XXI Century Program from Harvard Kennedy School.

Experience: Mr Barrabés sat on the board of Santander España and the advisory council of Vodafone. He was also director of the master's degree in Strategic Design Lab at Istituto Europeo di Design (IED) and of the MBA at Escuela de Organización Industrial (EOI) in Madrid, and a trustee of Fundación Ashoka Emprendedores Sociales.

Other positions of note: Mr Barrabés is the founder and Chair of Grupo Barrabés, which advises large corporates on digital transformation, innovation, new technologies, e-commerce and the Internet, and SMEs on innovation and using technology efficiently in business processes. He founded and sits on the advisory council of Escuela de Negocios del Pirineo (ESPENI); founded and sits on the management board of Épsilon Ecología, Asociación para la Defensa del Medio Ambiente; founded and is a trustee of Fundación Empieza por Educar; and is an adviser to Centro de Finanzas Sostenibles y Responsables de España (centre for sustainable and responsible finance, FINRESP).

Membership of board committees: Nomination committee, responsible banking, sustainability and culture committee, and innovation and technology committee.

Skills and competencies: With a lengthy track record as an entrepreneur and e-commerce pioneer, he brings to the board extensive experience in Spain's digital and innovation areas, especially the integration of digital technology in socio-economic development, retail distribution, the promotion of talent and the benefits of digital transformation for people and institutions. His experience as founder and trustee of multiple non-profit organizations that focus on education, entrepreneurship and environmental protection enriches the board's expertise in responsible business and sustainability.

Javier Botín-Sanz de Sautuola y O'Shea

Non-executive director

Board member since 2004.

Nationality: Spanish. Born in 1973 in Santander, Spain.

Education: Degree in Law from the Complutense University of Madrid.

Experience: Mr Botín founded JB Capital Markets, S.V., S.A.U. in 2008 and has been its Executive Chair ever since. He was co-founder and executive director of the equities division of M&B Capital Advisers, S.V., S.A. (2000-2008). Previously, he had been a legal adviser within the International Legal department of Banco Santander (1998-1999).

Other positions of note: In addition to the financial sector, Mr Botín works with several not-for-profit organizations. He has been Chair of the Botín Foundation since 2014 and is also a trustee of the Princess of Girona Foundation.

Skills and competencies: Mr Botín brings international and managerial expertise to the board, particularly in finance and banking. He also brings a deep understanding of Grupo Santander, its operations and its strategy from his tenure as a non-executive director.

Sol Daurella Comadrán

Non-executive director (independent)

Board member since 2015.

Nationality: Spanish. Born in 1966 in Barcelona, Spain.

Education: Degree in Business and MBA from ESADE.

Experience: Ms Daurella sat on the board of Círculo de Economía de Barcelona and was an independent director of Banco Sabadell, S.A., Ebro Foods, S.A. and Acciona, S.A. She was also honorary consul general of Iceland in Barcelona (1992-2021).

Other positions of note: Ms Daurella is Chair of Coca-Cola Europacific Partners PLC, Executive Chair of Olive Partners, S.A., and holds several roles in Grupo Cobega companies. She is also Vice Chair of the board of trustees of the FERO Oncology Research Foundation and a board member of Instituto de la Empresa Familiar.

Membership of board committees: Nomination committee, remuneration committee, and responsible banking, sustainability and culture committee (Chair).

Skills and competencies: Ms Daurella brings to the board excellent strategy and high-level management skills from her international top-executive experience at listed and large privately-held entities, particularly distributors. She has vast experience of corporate governance as the former Chair of several boards and having served on several audit committees. As a trustee of various health, education and environmental foundations, she provides responsible business and sustainability insight to the board.

Henrique de Castro

Non-executive director (independent)

Board member since 2019.

Nationality: Portuguese. Born in 1965 in Lisbon, Portugal.

Education: Degree in Business Administration from the Lisbon School of Economics & Management and MBA from the University of Lausanne.

Experience: Mr de Castro was Chief Operating Officer at Yahoo. Previously, he had been the manager of worldwide devices, media and platforms at Google, European sales and business development manager at Dell Inc., and a consultant at McKinsey & Company. He was also an independent director at First Data Corporation.

Other positions of note: Mr de Castro is an independent director of Fiserv Inc.

Positions in other Group companies: Mr de Castro is a non-executive director of PagoNxt, S.L.

Membership of board committees: Audit committee, remuneration committee, and innovation and technology committee.

Skills and competencies: Mr de Castro brings to the board valuable international experience in technological and digital strategy due to his executive roles in the world's top technology companies.

Germán de la Fuente Escamilla

Non-executive director (independent)

Board member since 2022.

Nationality: Spanish. Born in 1964 in Madrid, Spain.

Education: Degree in Economics and Business Administration with a diploma in auditing from the Complutense University of Madrid.

Experience: Mr de la Fuente has spent his professional career at Deloitte, where he has been Head of the audit business for the financial services industry (2002–2007), managing partner of Audit & Assurance (2007-2021) in Spain, and Chair and CEO of Deloitte, S.L. (2017-2022). He was also a member of the global board of directors of the firm from 2012 to 2016 and of the global audit and risk services committee until June 2021. He has been involved in auditing major Spanish financial groups and in multiple consulting and advisory projects.

Membership of board committees: Audit committee (Chair) and risk supervision, regulation and compliance committee.

Skills and competencies: Mr de la Fuente brings extensive experience in the auditing industry and sound knowledge in auditing, accounting and internal and risk control, and the banking sector, all of which uphold his recognition as a financial expert.

Gina Díez Barroso Azcárraga

Non-executive director (independent)

Board member since 2020.

Nationality: Mexican. Born in 1955 in Mexico City, Mexico.

Education: Degree in Design from Centro de Diseño of Mexico City.

Experience: Ms Díez Barroso was an independent director of Banco Santander México and other Grupo Santander companies in Mexico until 2020. She has been member of the board of directors of Americas Society and Council of the Americas, Laurel Strategies and Qualitas of Life Foundation. She was also a founder and a trustee of the Pro-Educación Centro and Diarq foundations.

Other positions of note: Ms Díez Barroso is the founder and non-executive Chair of Grupo Diarq, S.A. de C.V. and Centro de Diseño y Comunicación, S.C. (Universidad Centro). She is also a non-executive director of Bolsa Mexicana de Valores (BMV) and Dalia Women, S.A.P.I de C.V. (Dalia Empower), a member of Comité de 200 (C200) and represents Mexico at the W20, the G20 women's initiative to promote gender diversity.

Positions in other Group companies: Ms Díez Barroso is a non-executive director of Universia México, S.A. de C.V.

Membership of board committees: Nomination committee and responsible banking, sustainability and culture committee.

Skills and competencies: Ms Díez Barroso brings to the board vast experience in the real estate and education sectors, and has extensive knowledge of, and an ever-lasting commitment to, sustainability, inclusion and responsible business, having been a founder and trustee of foundations that focus on education, gender diversity and social support.

Luis Isasi Fernández de Bobadilla

Non-executive director (*)

Board member since 2020.

Nationality: Spanish. Born in 1956 in Jerez de la Frontera, Spain.

Education: Degree in Economics and Business Administration and MBA from Columbia Business School.

Experience: Mr Isasi began his career at Abengoa, before holding various executive positions at JP Morgan in New York and First National Bank of Chicago in London.

In 1987, he joined Morgan Stanley where he was managing director of investment banking for Europe and Chair and Country Head for Spain (1997-2020) and senior advisor (2020-2023). He has also been director of Madrileña Red de Gas, S.A. and Sociedad Rectora de la Bolsa de Madrid, S.A., as well as an independent director of Grifols, S.A.

Other positions of note: Mr Isasi is the non-executive (independent) Chair of the board of directors of Logista Integral, S.A. (LOGISTA).

Positions in other Group companies: Mr Isasi is non-executive Chair of the board of Santander España.

Membership of board committees: Executive committee, remuneration committee, and risk supervision, regulation and compliance committee.

Skills and competencies: Mr Isasi has vast experience in a wide range of sectors and international markets (in particular, finance and investment banking) as well as a strong institutional network within Spain.

(*) In the opinion of the nomination committee and the board of directors, Mr Isasi meets the requirements to be considered independent, despite being categorized as other external based on a standard of prudence. For more details, see subsection 'Other external directors' in section 4.2.

Belén Romana García

Non-executive director (independent)

Board member since 2015.

Nationality: Spanish. Born in 1965 in Madrid, Spain.

Education: Degree in Economics and Business Administration from Universidad Autónoma de Madrid. She is also a State Economist for Spain.

Experience: Ms Romana was formerly director general of Economic Policy, director general of the Treasury of the Spanish Ministry of Economy, and director at Banco de España and the CNMV. She was also a director at the Instituto de Crédito Oficial and other entities on behalf of the Ministry of Economy. She served as a non-executive director at Banesto and as Executive Chair of Sociedad de Gestión de Activos Procedentes de la Reestructuración Bancaria, S.A. (SAREB). She has also been non-executive director of Aviva PLC and Aviva Italia Holding S.p.A.

She has also been co-Chair of the board of trustees of The Digital Future Society and advisory board member at Inetum and TribalData.

Other positions of note: Ms Romana is an independent director of Industria de Diseño Textil, S.A. (Inditex), SIX Group AG and its subsidiary Bolsas y Mercados Españoles, Sociedad Holding de Mercados y Sistemas Financieros, S.A.U. She is also the non-executive Chair of its other subsidiaries, SIX Digital Exchange AG and SDX Trading AG. Furthermore, she is an independent director of Werfen, S.A.; an advisory board member at Rafael del Pino Foundation; senior adviser to Artá Capital; and academic director of the IE Leadership & Foresight Hub Programme.

Positions in other Group companies: Ms Romana is the non-executive (independent) Chair of Santander Insurance, S.L.

Membership of board committees: Executive committee, audit committee, nomination committee (Chair), risk supervision, regulation and compliance committee, and innovation and technology committee.

Skills and competencies: Given her background as a government economist and overall executive and non-executive experience in finance (particularly from serving on the audit committees of listed companies), Ms Romana is a recognized financial expert. Having held key positions in credit institutions and the regulatory and supervisory bodies of the financial industry and securities markets in Spain, she also provides strategic insights into banking, financial regulations and government relations in Spain and Europe.

Pamela Walkden

Non-executive director (independent)

Board member since 2019.

Nationality: British. Born in 1960 in Worcester, England.

Education: Master's Degree in Economics from Cambridge University.

Experience: Mrs Walkden has served in a number of senior management positions at Standard Chartered Bank, including as Group Head of Human Resources, Chief Risk Officer, Group Treasurer, Group Head of Asset and Liability Management and Regional Markets, Group Head of Internal Audit, Group Head of Corporate Affairs and Group Manager of Investor Relations. In addition, she served as an independent member of the UK Prudential Regulation Authority (PRA) Regulatory Reform Panel, as member of the European Banking Authority Stakeholder Group, and was a lay member of the Welfare and Ethics Committee of the Royal Veterinary College.

Other positions of note: Mrs Walkden is a member of the advisory board of JD Haspel Limited.

Positions in other Group companies: Mrs Walkden is a non-executive director of Santander UK PLC and Santander UK Group Holdings PLC.

Membership of board committees: Audit committee, risk supervision, regulation and compliance committee (Chair), and responsible banking, sustainability and culture committee.

Skills and competencies: She brings to the board extensive experience in the international banking industry and deep expertise in auditing, which underscores her recognition as a financial expert.

Antonio Francesco Weiss

Non-executive director (independent)

Board member since 2024.

Nationality: American and Italian. Born in 1966 in New York, US.

Education: Degree in Comparative Literature from Yale University and MBA from Harvard University.

Experience: Mr Weiss was Counselor to the Secretary of the US Department of the Treasury from 2015 to 2017, where he led the Department of Domestic Finance, working on matters related to financial markets, regulatory reform, job creation and economic growth. He previously held a number of senior management positions at Lazard, including Global Head of Investment Banking, Global Head of Mergers and Acquisitions, and Vice Chair of European Investment Banking.

Other positions of note: Mr Weiss is a founder and partner of investment firm SSW Partners, LP. He is a research fellow of the Mossavar-Rahmani Center for Business and Government at the Harvard Kennedy School of Government, a member of the Council on Foreign Relations, and a trustee of several non-profit, economic policy organizations, including the Volcker Alliance, the Citizens Budget Commission and the Bretton Woods Committee. He is non-executive director of Société Familiale d' Investissements, S.A., associate of AFWCo LP and senior advisor to the investment company JAB Holdings. He is a director and former publisher of *The Paris Review*.

Membership of board committees: Remuneration committee.

Skills and competencies: Mr Weiss has a lengthy track record in financial services, public policy and non-profit organizations. He also has vast international experience in executive positions in the US, Europe and other regions. Having held key positions in both the public and private sectors, he contributes extensive knowledge of the US market and financial sector to the board, most notably in matters of economic policy.

Jaime Pérez Renovales

General Counsel and secretary of the board

Joined the Group in 2003.

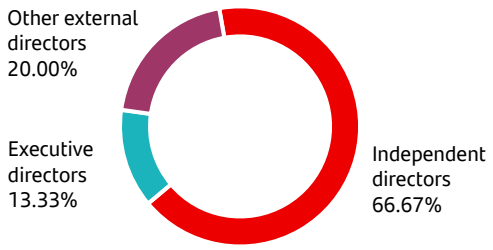
Nationality: Spanish. Born in 1968 in Valladolid, Spain.

Education: Degree in Law and Business Administration from Universidad Pontificia Comillas (ICADE E-3) and State Attorney for Spain.

Experience: Jaime Pérez Renovales was director of the office of the second deputy Prime Minister for Economic Affairs and Minister of Economy, deputy secretary to the Spanish Prime Minister, Chair of the *Spanish State Official Gazette* and the committee for Government Reform. Previously, he had been Vice General Counsel, vice secretary of the board and Head of Grupo Santander's legal department, General Counsel and secretary of the board at Banesto, and deputy director of legal services at the CNMV. He is the Banco Santander representative on the board of trustees of the Princess of Asturias Foundation and is a member of the jury for its award for Social Sciences. He is Chair of the ICADE Business Club, Chair of the board of trustees of the Fundación Universitaria Comillas-I.C.A.I. and professor of Constitutional Law in the Faculty of Law at Universidad Pontificia Comillas (ICADE).

Jaime Pérez Renovales is the secretary of every board committee.

4.2 Board composition



Size

As at 31 December 2024, the board of directors comprised 15 members, whose profile and background are described in section 4.1 'Our directors'. The Bylaws dictate that the board must be composed of no less than 12 and no more than 17 members.

Composition by type of director

The board of directors has a balanced composition between executive and non-executive directors, most of whom are independent. Each director's status has been verified by the nomination committee.

Our board composition

Executive directors

- Ana Botín, Group Executive Chair
- Héctor Grisi, Chief Executive Officer

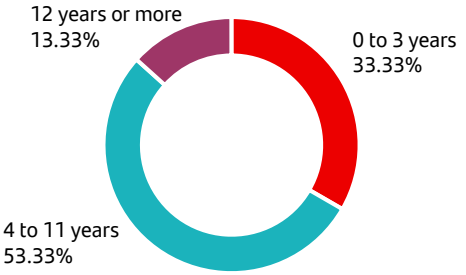
Section 4.3 provides a detailed description of their respective roles and duties under 'Group Executive Chair and Chief Executive Officer'.

Independent directors

- Glenn Hutchins (Lead Independent Director)
- Homaira Akbari
- Carlos Barrabés
- Sol Daurella
- Henrique de Castro
- Germán de la Fuente
- Gina Díez Barroso
- Belén Romana
- Pamela Walkden
- Antonio Weiss

Every year, the nomination committee verifies the independence of the board members. It considers potentially significant business relations that could affect their independence and other pertinent circumstances. For more details on this analysis, see section 4.6 'Nomination committee activities in 2024' and in subsection C.1.3 of section 9.2 'Statistical information on corporate governance required by the CNMV'.

Independent non-executive directors account for 66.7% of board members. This conforms to best corporate governance practices as well as to the Rules and regulations of the board, which require that the board be predominantly made up of non-executive directors with at least 50% independent directors.



Other external directors

- José Antonio Álvarez
- Javier Botín
- Luis Isasi

These directors are not classified as independent directors for the following reasons:

- Mr Álvarez, because he was the former CEO of Banco Santander until 31 December 2022.
- Mr Botín, because he has been a director for over 12 years.
- Mr Isasi, because it is considered preferable to classify him as an external director under prudent criteria, in view of his remuneration as non-executive chair of Santander España in addition to his remuneration as a director and the special nature of this body as supervisor of a business unit without its own corporate identity separate to Banco Santander, despite the nomination committee and the board believing that he meets the requirements to be classed as an independent director.

Board tenure

At the end of 2024, the average term of directors was 8.03 years and the average term of independent directors was 4.76 years. For more details, see 'Board skills and diversity matrix' and 'Tenure and equity ownership' in this section 4.2.

Tenure and equity ownership[A]

	Total				**13,253,725**	**57,686,483**	**157,304,169**	**194,844,377**	**1.286%**
General Counsel and secretary of the board	Jaime Pérez Renovales								

A. Figures as at 31 December 2024.
B. The date of first appointment referred herein may not match with the date of acceptance of the position.
C. The date provided does not take into account the additional period that may apply under article 222 of the Spanish Companies Act, nor the annual renewal of one-third of the board established in article 55.1 of the Bylaws. For more details, see 'Election, appointment, re-election and succession of directors' in section 4.2.
D. Banco Santander's shareholding policy aims to align our executive directors and shareholders' long-term interests. It includes the obligation for each executive director to maintain a significant investment in Banco Santander's shares, equivalent to twice their annual salary. Executive directors have five years from the time they were appointed to reach the required level of investment. Any shares they receive as remuneration are subject to a mandatory three-year holding period from their date of delivery, unless they already hold the mentioned investment equivalent, in addition to the regulatory obligation not to sell them for one year from delivery, which applies in all cases.
E. Includes shares owned by Fundación Botín, chaired by Javier Botín, and syndicated shares, including shares corresponding to Ana Botín that are also included within her direct or indirect shareholdings above, but excluding those corresponding to Javier Botín. For more details, see section 2.4 'Shareholders' agreements'. In subsection A.3 of section 9.2 'Statistical information on corporate governance required by the CNMV', we adapted this information to the CNMV's format.

As of 31 December 2024, Ana Botín, Héctor Grisi and José Antonio Álvarez had 903,995, 151,395 and 610,123 Banco Santander share options, respectively. Each option has one share as underlying asset. These options come from the Group's remuneration plans.

For more details, see section 9.2 'Statistical information on corporate governance required by the CNMV'.

Diversity

A diverse board of directors is essential to its effectiveness. Mixed skills, experiences and points of view create an environment that promotes independent opinion and constructive debate and ensures proper decision-making. Thus, we seek to achieve a sound balance of technical expertise, experience and broad diversity in the composition of the board.

Our policy on the selection, suitability assessment and succession of directors helps make our board more diverse in terms of gender, age, geographical provenance, experience and knowledge.

- **Gender.** The nomination committee and the board of directors understand the importance of fostering equal opportunity between men and women as well as the need for women board members who meet the suitability requirement. In this regard, the policy includes the gender equality target set by the nomination committee for women and men to account for between 40% and 60% of the total members of the board.

  40% of our board members are women, meeting the target for the less represented gender at the board set out in the Organic Law on Equal Representation and Balanced Presence of Women and Men, which from June 2026 will require the boards of the 35 companies with the highest market capitalization to have the least-represented gender account for 40% or more of its members.

- **Age.** Our policy also considers that selection must promote age diversity. There are no age limits for becoming a director nor for the roles of chair and chief executive officer.

- **Country of origin/international education.** Selection considers cultural diversity, geographical provenance, and international education and experience, especially in the Group's core markets.

- **Education and career.** Selection considers candidates' academic training and career history to ensure they are qualified to understand our Group's businesses, structure and markets, and that they fit within the Santander culture and other aspects deemed material to the Group.

Moreover, our policy stipulates that board member selection must not have any implicit bias that could lead to any form of discrimination, based for instance on disability, race or ethnic origin.

The policy follows the European Banking Authority (EBA) and European Securities and Markets Authority (ESMA) joint guidelines on the suitability assessment of board members and key functions holders, as well as the ECB's Guide to fit and proper assessments.

Board skills and diversity matrix

The nomination committee updates a 'Board skills and diversity matrix' that reflects the balance of the knowledge, skills, qualifications, diversity and experience required to pursue our long-term strategy in an ever-changing market.

It considers the recommendations of the EBA and ESMA guidelines on the suitability assessment of board members and key functions holders, as well as the ECB´s Guide to fit and proper assessments.

The matrix follows this structure:

- We distinguish between **thematic (technical)** and **horizontal skills.**
- We include a separate **diversity section** that details gender, country of origin/ international education, and age.
- We show each member's **tenure**.

The matrix discloses each board member's particular expertise and skills, some of which are further detailed in section 4.1 'Our directors', and is a sign of our commitment to transparency.

We continuously review the suitability of skills and diversity to ensure a diverse board that can meet Banco Santander's strategy needs. The matrix enables us to pinpoint areas we need to strengthen in the succession and election of new board members.

Last, the 'Committees skills and diversity matrix', which we also continuously update, shows the diverse composition of each committee and members' knowledge and expertise relevant to their committee's remit.

Election, appointment, re-election and succession of directors

Election

Our internal policy for the selection, suitability assessment and succession of directors dictates standards for the board's composition, the process of identifying and selecting candidates, and the suitability assessment of new directors.

Directors must meet specific requirements dictated by laws for credit institutions and our Bylaws and must also fulfil the obligations and duties of their position prescribed therein and in the Rules and regulations of the board.

Our directors must be of renowned business and professional integrity, and have the knowledge and experience needed to perform their role and exercise good governance. Director candidates will also be selected on the basis of their professional contribution to the entire board.

The board of directors will endeavour to have significantly more external or non-executive directors than executive directors, and for the number of independent directors to make up at least half of all members.

Appointment and re-election

Shareholders appoint and re-elect directors at the general meeting. Furthermore, if directors step down during their term of office, the board of directors may provisionally designate another director by co-option until the shareholders at the general meeting confirm the appointment at the next meeting.

Each appointment, re-election and ratification of directors is submitted to a separate vote at the general meeting.

Proposals for appointment, re-election and ratification of directors (regardless of their category), which the board of directors submits to the shareholders, as well as appointments of the board in cases of co-option, should be preceded by the corresponding reasoned proposal of the nomination committee.

Proposals to be submitted to the general meeting must include a duly substantiated report by the board, containing an assessment of the qualifications, experience and merits of the proposed candidate. Re-election and ratification proposals will also provide an assessment of the work and dedication to the position during the last period in which the proposed director held office. If the board disregards the nomination committee's opinion, it must explain its decision and record its reasons in the minutes of the meeting.

Term and cessation

Our directors are appointed for three-year terms. However, one-third of board members are renewed each year in order of their tenure. Outgoing directors may be re-elected.

Our directors shall cease to hold office when the term for which they were appointed ends, unless they are re-elected, when the general meeting so resolves, or when they resign. When a director ceases to hold office prior to the end of their term (i.e. by general meeting resolution or by resignation), they shall explain the reasons for resignation or, for non-executive directors, their opinion on the reasons for their cessation in office by the general meeting in a letter to the other board members, unless they report them at a meeting of the board and this is recorded in the minutes. To the extent relevant to our shareholders, the resignation shall be publicly disclosed, including sufficient information on the reasons or circumstances that the director provides.

Directors must tender their resignation to the board and formally step down from their position if the board, on the nomination committee's recommendation, deems it appropriate in cases that may adversely affect the board's functioning or Banco Santander's credit or reputation. In particular, they must resign if they find themselves in a circumstance of ineligibility or prohibition provided by law, without prejudice to the honourability requirements for directors and the consequences deriving from subsequent failure to meet those requirements, set out in Royal Decree 84/2015, that implements Act 10/2014.

Directors must notify the board as soon as possible of any circumstances affecting them, whether related to their performance in Banco Santander or not, that might damage Banco Santander's credit or reputation, especially if under criminal investigation, and of the developments of any such criminal proceedings. When the board is informed or becomes otherwise aware of any such situations, it will examine them as soon as possible and decide, based on the particulars and on a report from the nomination committee, any measures to adopt, such as opening an internal investigation, calling on directors to resign or proposing their dismissal.

Proprietary directors must also tender their resignation when the shareholder they represent sells off or significantly reduces its equity holding.

Succession planning

Succession planning is a key element of our good governance as it ensures orderly role transitions as well as board continuity and stability and its adequate renewal, composition and independence. This planning follows a well-defined methodology and clear allocation of responsibilities. Our aim is to identify candidates with the necessary talent for each function.

Banco Santander's director succession plan focuses on diversity standards and the suitability assessment policy, as well as the regular review of the composition of the board and its committees, and the identification of potential board member candidates.

The policy has specific core performance indicators, reviewed each year, for such aspects as succession effectiveness (vacancies filled by identified candidates); the number of internal and external candidates immediately available to succeed executive directors; training and development plans for potential candidates to succeed executive directors in one to three years; gender diversity and country of origin or international education; updated board member tenure; the strength of the list of successors to executive directors, committee chairs and the Lead Independent Director; and the percentage of candidates to succeed directors who are immediately available (or candidates for a one-to-three year period).

The nomination committee and the board prioritize succession planning, with sound and appropriate plans in place that are regularly revisited to make sure they meet regulatory requirements and align with industry best practice.

4.3 Board functioning and effectiveness

Board functions

Banco Santander's board of directors is our highest decision-making body, except in matters reserved to shareholders at the general meeting. It performs its duties with unity of purpose and independent judgement.

The board's policy is to designate executive bodies and managers to run day-to-day operations and implement the strategy. It focuses on general supervision and other functions it cannot delegate by law, the Bylaws or the Rules and regulations of the board, including:

- General policies and strategies including, among others, capital and liquidity; tax; new products, operations and services; corporate culture and values, including policies on responsible business and sustainability and, in particular, on environmental and social matters; crisis management and resolution planning; risk (including tax risk) control and management; remuneration policy; and compliance.
- Financial and non-financial reporting, and - more generally - information reported to shareholders, investors and the general public, as well as the processes and controls that ensure full disclosure.
- Policies on reporting and communication with shareholders, markets and public opinion, and supervision of the disclosure of information.
- Internal audit plan.
- The selection, succession and remuneration of directors, senior management and other key positions.
- Effectiveness of Grupo Santander's corporate and internal governance system, including the GSGM, corporate frameworks and internal regulations.
- Significant corporate transactions and investments.
- Calling the general shareholders' meeting.
- Related-party transactions.

Board regulation

The board is governed by the rules set out in the Bylaws and the Rules and regulations of the board, both of which are available on our corporate website.

- **Bylaws.** These dictate the basic rules that apply to the composition and operation of the board and its members' duties, and are supplemented and implemented by the Rules and regulations of the board. They can only be amended by shareholders at the general meeting. See 'Rules for amending our Bylaws' in section 3.2.
- **Rules and regulations of the board.** These set the rules for running and internally organizing the board of directors and its committees through the development of applicable laws and Bylaws provisions and good governance recommendations. They set out the principles governing its actions and the duties of its members.

  The Rules and regulations of the board adhere to all legal provisions as well as the principles and recommendations set out in the Spanish Corporate Governance Code; Corporate Governance Principles for Banks of the Basel Committee on Banking Supervision; and the EBA's in Guidelines on internal governance.

Our rules on the audit committee also adhere to the good operating practices set out in the CNMV's Technical Guide 1/2024 on Audit Committees of Public Interest Entities, published on 27 June; as well as with the applicable regulations because our shares are listed as ADS on the NYSE and, in particular, with Rule 10A-3 under the Securities Exchange Act (SEA) on standards relating to audit committees.

Our rules on the nomination and the remuneration committees also adhere to the good operating practices set out in the CNMV's Technical Guide 1/2019 on Nomination and Remuneration Committees.

Structure of the board

The board's corporate governance structure ensures that it discharges its duties effectively.

Group Executive Chair and Chief Executive Officer

The Executive Chair is Ana Botín and the Chief Executive Officer is Héctor Grisi. They are the most senior executives in the Group's strategic and ordinary management, which the board is responsible for overseeing, ensuring that their roles are clearly separated and complementary. Both report exclusively to the board of directors.

The roles of our Executive Chair and Chief Executive Officer can be summarized as follows:

Roles of the Executive Chair and the Chief Executive Officer

Executive Chair	Chief Executive Officer
• The Chair is the highest-ranking executive in Grupo Santander and its main representative with regulators, authorities and other major stakeholders. • The Chair is responsible for the long-term strategy of the Group, including new tech and digital growth engines, namely PagoNxt and the Digital Consumer Bank. • The Chair is also responsible for other corporate functions and units that help drive the Group's long-term strategy and transformation, comprising Technology and Data & Architecture, People & Culture, Financial Accounting & Control, Strategy and Corporate Development, General Secretariat and Communications & Corporate Marketing. This reflects the Chair's ultimate accountability for Transformation. • The Chair also leads the appointment and succession planning of Grupo Santander senior management, to be submitted to the nomination committee and board for approval.	• The Chief Executive Officer is entrusted with the day-to-day management of the business with the highest executive functions and reports exclusively to the board. • Accordingly, the Chief Executive Officer's direct reports are the senior managers in charge of the business units: the local CEO / Country Heads and those in charge of the global businesses (Wealth Management & Insurance, Corporate & Investment Banking, Payments and Retail & Commercial Banking (including Transformation[A])), encompassing the relevant support and control functions. Whilst the Chair is accountable for Digital Consumer Bank, given that it is a global business, the Group CEO remains fully accountable for the Countries through which Digital Consumer Bank operates. • As responsible for day-to-day management, the CFO also reports to the Chief Executive Officer. • Additionally, the Chief Executive Officer is responsible for Regulatory & Supervisory Relations and for embedding the Group's sustainability policy in the day-to-day management of Group businesses and the support and control functions.

A. Whilst Retail & Commercial Banking reports directly to the Chief Executive Officer (with no functional line to the Executive Chair), ultimate accountability for Transformation remains with the Executive Chair.

The duties of the Executive Chair, the Chief Executive Officer, the board, and its committees are clearly separated. Various checks and balances give Grupo Santander's corporate governance structure the appropriate equilibrium. In particular:

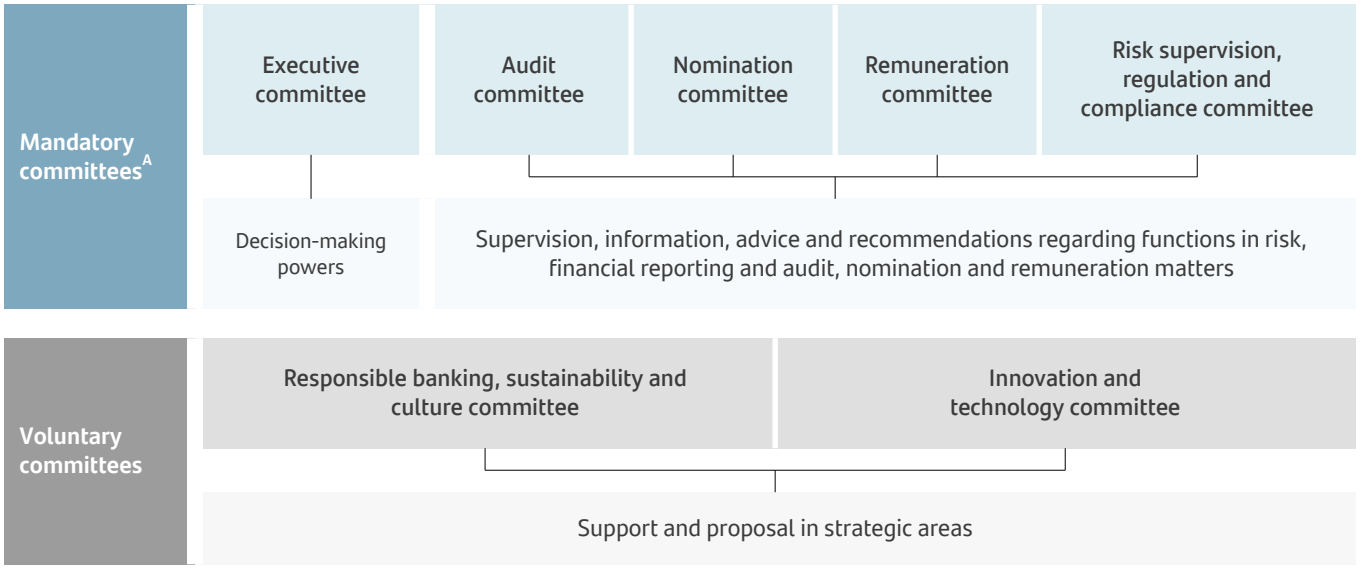
- The board and its committees supervise both the Executive Chair and the Chief Executive Officer. Both the Executive Chair and Chief Executive Officer report directly to the board of directors.
- The board has delegated all its powers to the Executive Chair and the Chief Executive Officer, except for those that cannot be delegated by law and under the Bylaws and the Rules and regulations of the board. The board directly exercises those powers to perform its general supervisory function.
- The Lead Independent Director leads the Group Executive Chair's succession and appointment in coordination with the nomination committee.
- The audit committee is chaired by an independent director who is considered a 'financial expert' as defined in Regulation S-K of the Securities and Exchange Commission (SEC).
- The audit; nomination; responsible banking, sustainability and culture; remuneration; risk supervision, regulation and compliance; and innovation and technology committees are chaired by, and have a majority of, independent directors. The first three committees are also composed entirely of independent directors.
- The Executive Chair may not simultaneously act as Banco Santander's Chief Executive Officer.
- The corporate Risk, Compliance and Internal Audit functions report as independent units to a committee or a member of the board of directors and have direct, unfettered access to the board.

Lead Independent Director

Our Lead Independent Director is Glenn Hutchins. The Lead Independent Director is key to our corporate governance arrangements. He is responsible for the effective coordination of the non-executive directors and makes sure they serve as an appropriate counter-balance to the executive directors.

The following chart shows the Lead Independent Director's functions and activities in 2024. He provides a detailed report to the nomination committee and board of directors on his activities and the discharge of his duties on an annual basis.

Duties of the Lead Independent Director and activities during 2024



Duties	Activities in 2024
Facilitate discussion and open dialogue among independent directors, holding private meetings of non-executive directors without the executive directors present and proactively engaging with them to consider their views and opinions.	Held six meetings with non-executive directors where they were able to voice their views and opinions. These meetings provided a valuable opportunity to reflect on the overall board and committee cycle throughout the year, to discuss board training topics, strategy execution, executive director and top management performance and objectives (including the CEO performance assessment given his reporting line to the board), and reflections on areas of continuous improvement. The non-executive directors held a meeting with the Chief Executive Officer without the Executive Chair present (and vice versa), in recognition of their direct reporting line to the board.
Direct the periodic evaluation of the Chair of the board of directors and coordinate her succession plans.	Led the Executive Chair's annual performance review in order to determine her variable pay. Furthermore, he coordinated her succession planning activity, facilitated through his membership of the nomination committee.
Engage with shareholders and other investors to learn of their concerns, especially with regard to Banco Santander's corporate governance.	See section 3.1 'Shareholder communication and engagement' for full details of the Lead Independent Director's activities.
Replace the Chair in her absence, with such key rights as the ability to call board meetings under the terms of the Rules and regulations of the board.	Whilst the Executive Chair was able to chair all board meetings, there were specific instances where the Lead Independent Director assumed the chairship of the board, mainly driven by the nature of the topic being discussed and the Executive Chair's potential vested interest, being therefore recused for those discussions.
Request a board meeting or that new items be added to the agenda.	While the Lead Independent Director did not need to request additional board meetings to be called, he remained fully engaged in, and informed of, board meeting agendas to add additional items as required.

Structure of board committees

Board committees support the board in three main areas:

- Managing the Group by exercising decision-making powers through the executive committee.
- Formulating strategy for core areas through the responsible banking, sustainability and culture committee, and the innovation and technology committee.
- Supervising and making important decisions through the audit committee, nomination committee, remuneration committee and risk supervision, regulation and compliance committee.

The board has seven committees under this structure:

A. Required by law, the Bylaws or the Rules and regulations of the board.

Secretary of the board

Jaime Pérez Renovales is the secretary of the board. He assists the chair and ensures the formal and substantial legality of all the board's actions. He also makes sure that good governance recommendations and procedures are observed and remain under continuous review.

The secretary of the board is also the General Counsel of Banco Santander. He acts as the secretary of all board committees and facilitates a fluid and effective relationship between the committees and the Group's units that must collaborate with them.

The appointment of the secretary of the board is a matter for the board to approve, taking into account the prior opinion of the nomination committee. The secretary does not need to be a director.

The board has two vice secretaries, F. Javier Illescas Fernández-Bermejo (Group Head of Legal) and Adolfo Díaz-Ambrona Moreno (General Counsel of Santander España). They assist the secretary with his duties on the board and its committees, and replace him in the event of absence, inability to act or illness.

Board operation

The board of directors held 18 meetings (14 ordinary and four extraordinary) in 2024. The Rules and regulations of the board dictate that it must hold at least nine annual ordinary meetings and one quarterly meeting.

Though board meetings follow a calendar approved annually and a provisional agenda of items to discuss among the matters that fall under its remit, new items can be added and additional meetings can be called. Directors may also propose items to be added to the agenda and are duly informed of changes to the calendar and meeting agendas.

To help directors prepare effectively for each meeting, they are given relevant documents sufficiently in advance and in a secure electronic format. In the board's opinion, these documents are appropriately detailed and received in good time which enables members to make appropriate decisions.

The Rules and regulations of the board of directors also expressly acknowledge directors' rights to request and obtain information on anything related to Banco Santander and its domestic and foreign subsidiaries. They also acknowledge their right to inspect the books, files, documents and any other records of corporate transactions, in addition to premises and facilities. Furthermore, directors can request and obtain any information and advice they deem necessary from the secretary in order to perform their duties.

Additionally, the board meets at the Chair's discretion or at the request of at least three directors. The Lead Independent Director is also authorized to request a board meeting or that new items be added to the agenda for a meeting that has already been called.

Directors must attend meetings in person, either physically or virtually, and endeavour to limit their absence to situations of absolute necessity. The nomination committee checks that directors attend at least 75% of board and committee meetings and that any absence has a valid excuse without raising doubt about the director's commitment to good governance. For more details, see 'Board and committee preparation and attendance' in this section 4.3.

If directors are unable to attend a meeting, they can designate (in writing and on a special basis for each session) another director to act on their behalf. Proxies are granted with instructions. Non-executive directors may only be represented by other non-executive directors. A director can hold more than one proxy.

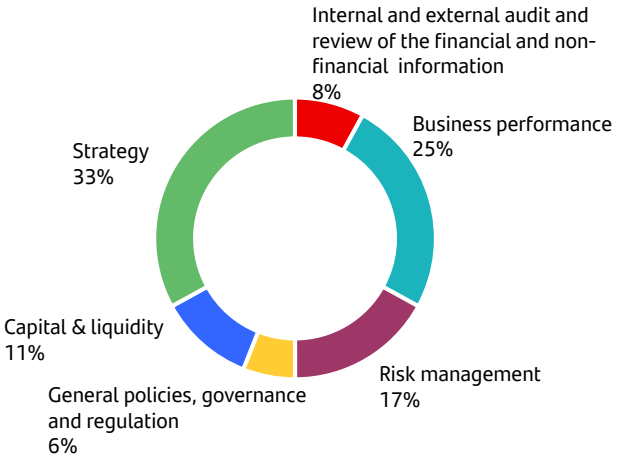
The board may meet in various rooms at the same time, provided that members can interact in real time to ensure interactivity and intercommunication via audio-visual means or telephone.

Board meetings are validly quorate when more than half of its members attend in person or by proxy.

Resolutions are adopted by absolute majority of the directors in attendance. The chair has the casting vote in the event of a tie. The Bylaws and the Rules and regulations of the board only require the qualified majorities according to law.

The secretary of the board keeps the board's documents on file and records the content of meetings in meeting minutes. Meeting minutes of the board and committees include statements members expressly request to be put on record. Moreover, the secretary oversees the monitoring of the actions that the board and its committees must perform that the parties responsible for are dully informed of.

The board may hire legal, accounting or financial advisers and other experts at Banco Santander's expense for assistance with their duties.



Comparison of number of meetings held[A]

	Banco Santander	Spain average	US average	UK average
Board	18	11.2	7.7	8.2
Executive committee	24	7.6	NA	NA
Audit committee	15	8.8	8.1	5.3
Nomination committee	13	7.5	4.6	3.9
Remuneration committee	14	7.5	5.8	4.9
Risk supervision, regulation and compliance committee	18	12.3	NA	6.4

NA: Not available.

The following chart shows the board's approximate time allocation to each function in 2024.

Approximate allocation of the board's time in 2024

Committee operation

Board committees follow a calendar and an annual work plan established every year. Each committee meets as often as is required to fulfil its duties, with a minimum of four meetings, except for the innovation and technology committee, which holds at least three meetings.

A committee meeting is quorate if it is attended by more than half the committee's members in person or through an appointed proxy. A committee resolution passes with a simple majority of votes. In the event of a tie, the committee chair has the casting vote. Committee members may appoint a proxy to vote for them and, as in board meetings, non-executive directors can only appoint a non-executive director proxy.

Committee members are given relevant meeting materials sufficiently in advance of each meeting to facilitate suitable meeting preparation and therefore promote overall committee effectiveness.

Though they cannot vote, any director can attend and participate in meetings of committees on which they do not serve if invited by the chair of the board and the chair of the respective committee, upon request to the chair of the board. Furthermore, all board members who are not executive committee members may attend executive committee meetings at least twice a year, for which they are to be called by the chair.

Committees have the authority to summon executives, who will appear at meetings at the invitation of, and under the terms dictated by, the respective chair. Their attendance will be recorded in the meeting minutes. Committees may also submit a request to the General Counsel to hire legal, accounting or financial advisers or other experts to assist with their duties at Banco Santander's expense.

The role of committee secretary is non-voting and falls on the General Counsel and secretary of the board. This fosters a fluid and efficient relationship between the board, its committees, and senior management. The board should encourage communication and engagement through these and other means with the committees to boost efficiency and ensure effective coordination in the performance of their respective support duties, through, among others, the following mechanisms:

- **Joint meetings.** The committees (mainly the audit and risk supervision, regulation and compliance committees and the latter with the remuneration committee) hold joint meetings on topics of mutual interest.
- **Information to the board.** At each board meeting, the committee chairs present on the matters that they have discussed in previous sessions of those meetings. They also provide the board members with copies of their committee meeting minutes and all other documents handed out.
- **Common members between committees.** We strive to have board members sit on several committees.
- **Cross-sectoral review of agendas.** A periodic review of the work plans of the various committees is carried out to ensure that meeting agendas are complete and coherent.
- **Informal events.** Continue to leverage informal time between board members, acknowledging the value that this brings to board culture.

Board and committee preparation and attendance

The following table shows the attendance rate of board and committee meetings in 2024.

		Committees						
Directors	**Board**	**Executive**	**Audit**	**Nomination**	**Remuneration**	**Risk supervision, regulation and compliance**	**Responsible banking, sustainability and culture**	**Innovation and technology**

Luis Isasi	18/18	24/24	_	_	13/14	18/18	_	_
Belén Romana[B]	18/18	23/24	15/15	13/13	_	17/18	2/2	5/5
Pamela Walkden[C]	18/18	_	15/15	_	_	18/18	3/3	_
Antonio Weiss[D]	8/8	_	_	_	_	_	_	_

Note: This table shows each director's in-person attendance at ordinary and extraordinary board or committee meetings except when they attended by proxy. The nomination committee was informed of directors' excused absences and verified that they raised no doubt about their capability of good governance. Some directors did not attend extraordinary meetings that were not scheduled in the annual meeting calendar. Health reasons were behind attendance lower than 75%.
A. Member of the board and of the nomination, responsible banking, sustainability and culture; and innovation and technology committees since 27 June 2024.
B. Stopped down as a member of the responsible banking, sustainability and culture committee on 23 March 2024.
C. Member of the responsible banking, sustainability and culture committee since 23 March 2024.
D. Member of the board since 27 June 2024.

The following table shows the average preparation of directors in the exercise of their functions on the board and committees in 2024:

	Meetings	**Average of hours per member[A]**	**Average of hours per chair[A]**
Board	18	229[B]	458[B]
Executive committee	24	144	288
Audit committee	15	150	300
Nomination committee	13	52	104
Remuneration committee	14	56	112
Risk supervision, regulation and compliance committee	18	180	360
Responsible banking, sustainability and culture committee	5	25	50
Innovation and technology committee	5	20	40

A. Includes hours of meeting preparation and attendance. Estimated preparation time considers travel to attend meetings in person, where appropriate.
B. Not including four extraordinary sessions held in 2024 due to their short duration and low impact on the directors' required commitment.

Directors' average time commitment is calculated by taking the number of members on the board and on each committee, the number of times each body meets during the year, average meeting length, and an estimate of the time each director needs to prepare for every meeting. We estimate that the board chair and the committee chairs have a greater time commitment than the other directors because of the added functions their roles require. We also consider the commitment to attend sessions that form part of directors' training and development programme, the meetings of non-executive directors with the Lead Independent Director, and additional unstructured Board time on other activities that enables greater informal engagement between directors.

Considering the above mentioned criteria, on average, directors dedicate approximately 63 eight-hour days a year to preparing and attending board and committee meetings.

Directors must report to the nomination committee any professional activity or role that they are going to perform outside the Group so that the committee can check that they can dedicate enough time to the Group and the professional activity or role does not pose conflicts of interest.

The annual suitability reassessment our nomination committee conducts (see section 4.6 'Nomination committee activities in 2024') enables us to update information on the estimated time directors dedicate to roles or professional activities outside the Group and demonstrates their ability to exercise good governance.

This makes sure the number of board roles that our directors have at once is within the legal limit (i.e. no more than one executive and two non-executive roles, or four non-executive roles; roles in the same group are considered a single role and roles in not-for-profit or non-commercial organizations -such as, among others,

organisations for the sole purpose of managing the private economic interests- are not included).

Director training and induction programmes

The board has an annual training and development programme to help directors continue to develop skills and increase their understanding of the Group and industry, taking into account their experience and expertise. The board selects contents on an annual basis based on feedback from its members and supervisory and regulatory requirements, among others.

Programme workshops are delivered collectively to all board members and in 2024, they covered the following topics:

- **Recovery and Resolution Plan**.
- **Cybersecurity**.
- **Sustainability**, with a key focus on CSRD.
- **Generative Artificial Intelligence**.
- **Inorganic growth analysis**.
- **Financial crime compliance**, bribery and corruption risks, sanctions and anti-money laundering regulation.
- **Regulatory updates** covering DORA, Data Privacy and Basel IV, amongst others.
- **Customer experience**.

Directors can also request one to one and ad-hoc training on specific topics tailored to their own needs, if deemed helpful. The objective of such sessions would be to enable directors to deep dive into specific areas in order to ensure that their knowledge is optimal and up to date.

Banco Santander shares its training, induction and development methodology with subsidiaries to promote best practices and drive consistency of approach across our footprint. Some Group executives facilitated special sessions for subsidiary directors throughout the year to keep them up to date with relevant Group matters such as the consolidation under five global businesses across our footprint.

Every board member receives a directors' manual. It is a support guide that provides both new and existing directors with a complete reference of information relevant to their role. In addition, the board has robust induction programmes so new directors can deeply understand the industry and Grupo Santander's business model and structure, risk profile and governance arrangements, taking into account their existing skills, competencies and knowledge. They are completed within six months after taking up their position as new directors and include document reviews, tailored meetings, site visits and training sessions with senior managers of the Group, as appropriate.

Both Carlos Barrabés and Antonio Weiss completed their induction programmes, which were tailored to their experience and particular needs.

> *"The induction programme played a key role during my onboarding as a member of the board. Both the sessions and supporting materials dealt with all key topics, ensuring that my onboarding was seamless and complete. I also benefited from early engagement with a number of senior leaders across the Group, who provided me with valuable insights into Santander's values and culture. Overall, the programme was excellent and ensured that I was well prepared to discharge my role".*

Board effectiveness review in 2024

The board undergoes a yearly assessment of its performance and effectiveness, composition, quality of its work, and individual performance of its members. The review includes its committees. Every three years, it is conducted by an external consultant, whose independence is verified by the nomination committee.

Methodology and scope of the assessment

In 2024, the review was conducted internally. The scope of the internal assessment included the structure of the board, its organisation and functioning, dynamics and internal culture and the functioning and effectiveness of its committees. In addition, the assessment covered the individual performance of the Executive Chair, Chief Executive Officer, Lead Independent Director and General Secretary. The assessment also facilitated the opportunity for performance feedback on the remaining individual directors.

The Executive Chair and the nomination committee Chair led the assessment, with the involvement of the Lead Independent Director. The review followed the methodology and structure of previous internal reviews, based on a confidential questionnaire that was fully completed by all board members. In addition, the review also took into account the feedback received from senior executives on the overall value they get from the board as a whole and reflections received as part of additional interactions throughout 2024 (including non-executive director sessions and assessment questionnaires for board training and development programmes, among others).

Findings and action plan

The results of the 2024 assessment process were discussed by the nomination committee and board of directors in January and February 2025, with a consensus view that the board and its committees continue to operate effectively. In particular, the results revealed the following:

- The board has undergone an appropriate degree of refreshment and is appropriately composed, with a depth of skills and experience, as well as high degree of independence and diversity.
- The Executive Chair model continues to work effectively and there remains clarity and universal understanding of the division

of responsibilities between the Executive Chair and the CEO, which is clearly documented. The checks and balances in place are considered to be highly effective.

- There is a strong and healthy internal board culture, where dynamics encourage open and transparent discussions, critical thinking, constructive challenge to senior management and sound decision making.
- The Executive Chair, Chief Executive Officer, Lead Independent Director and General Secretary had a positive and effective performance with the competence expected. The remaining directors also performed positively with an overall effective contribution.
- The board agenda focuses on the right priorities and the quality of reporting and information flows support robust and timely decision-making.
- Committees are considered to work effectively, with appropriate coordination mechanisms in place, and the support they give to the board is highly valued. The committee composition changes made throughout the period, including committee Chair rotation, were considered favourably and in support of an appropriate distribution of work among members, acknowledging that this would be kept under review.
- The executive team has a favourable opinion of the board, positively rating the constructive challenge and support provided.

As a result of the review, the nomination committee and board of directors discussed potential areas for improvement and the latter approved an associated action plan in February 2025. Each committee will be engaged on specific actions applicable to their remit to ensure effective and efficient operation, as appropriate.

The key action plan highlights can be summarised as follows:

- **Structure of the board.** As part of any future board refreshment, continued consideration will be given to maintaining an appropriate composition taking into account relevant factors such as our strategic direction, and the skills and experience required to oversee its delivery, and our core markets and associated geographical footprint.
- **Effectiveness of the Executive Chair model.** The split of roles and responsibilities between the Executive Chair and the CEO will be kept under continuous review and refinement, as appropriate, to ensure its ongoing effectiveness and robustness.
- **In-person engagement.** Increase in person formal and informal engagements in recognition of director preference for in-person meetings and the value they attribute to their time together.
- **Organisation and functioning.** Continue to optimise Board and committee time facilitated by keeping the volume of supporting documentation under continuous review**.**
- **Committees.** A proactive approach to committee composition will be retained, ensuring optimal performance, effectiveness and efficient distribution of work among board members, among other factors. In addition, meeting frequency will be kept under continuous review to identify streamlining opportunities to the extent possible.

The resulting actions and associated outcomes of the review have supported our continued priority focus on effective governance.

4.4 Executive committee activities in 2024

COMPOSITION

Position		Category	Appointed on
Chair	Ana Botín	Executive	11/12/1989[A]
Members	Héctor Grisi	Executive	01/01/2023
	José Antonio Álvarez	Other external	13/01/2015
	Luis Isasi	Other external	20/05/2020
	Belén Romana	Independent	01/07/2018
Secretary	Jaime Pérez Renovales		

A. Committee Chair since 10 September 2014.

Functions

The executive committee is a key governance body in Banco Santander and the Group. The board delegated to it all its powers except those that cannot be delegated by law or under the Bylaws and Rules and regulations of the board. Its meeting frequency and the nature of its decisions enable the board to focus on general oversight. It also reports regularly to the board on its core matters and decisions adopted, and provides all directors with the minutes and documents from its meetings.

Committee performance

The board, supported by its nomination committee, determines the committee's size and composition, to ensure its effectiveness. As well as the board, the committee has an external director majority, ensuring a balance of opinions and compliance with Recommendation 37 of the Spanish Corporate Governance Code. Its secretary is the secretary of the board.

The committee frequency ensures the discharge of its duties and it is generally convened every two weeks, although it can meet as many times as required by the Chair.

Main activities in 2024

In 2024, the committee addressed a breadth of matters relating to the business of the Group and its main subsidiaries, risk management, corporate transactions and other proposals that were subsequently submitted to the board, which can be summarised as follows:

- **Results.** Regularly reviewed the Group's results and stakeholder reaction to them.
- **Business performance.** Regularly received updated information on the performance of the Group's business areas and other related matters.
- **Report by the Executive Chai.**: The Executive Chair regularly reported on the Group´s management, strategy and institutional matters.
- **Report by the CEO.** The CEO regularly reported on the Group´s performance and on the budget and execution of plans for all the global businesses and units that report to him.

- **Corporate transactions.** Analysed and approved, where appropriate, corporate transactions on investments and divestments, joint ventures and capital transactions.
- **Risks.** Received regular holistic risk and compliance reports. The committee also authorized or declined material transactions within the framework of the risk governance model.
- **Global businesses and subsidiaries.** Received regular updates on global businesses, subsidiaries and other business lines' performance against agreed plans. This helped the committee support the board with the oversight and control of its global business and subsidiary operations, and with the fulfillment of the targets announced at the 2023 Investor Day.
- **Capital and liquidity.** Received regular reports on capital ratios and optimization measures, pricing (originations) and portfolio profitability. By virtue of the board's delegation and within capital and funding plans, the committee agreed non-convertible debt issuances and securitizations.
- **Supervisors and regulatory matters**. agenda and projects to ensure compliance with supervisory recommendations and regulatory reforms.
- **Governance matters.** Approved specific internal regulation under its remit. In particular, the committee reviewed and approved key governance documents associated with the five global businesses. Furthermore, the committee analysed the effectiveness of the executive first level committee structure and approved the associated improvement plans.

In 2024, the committee held 24 meetings. See 'Board and committee preparation and attendance' in section 4.3 for members' meeting attendance and the estimated average time each one spent on meeting preparation and attendance.

2025 priorities

The committee set the following priorities for 2025:

- Monitor the performance of the Group's global businesses and subsidiaries, including progress in the execution of their strategic plans.
- Continue to assess proposed corporate transactions relating to investments and divestments, joint ventures and capital transactions.
- Continue to oversee the execution and achievement of specific public targets, including those disclosed at the 2023 Investor Day.
- Continue to facilitate timely and efficient decision making, supporting the board and enabling it to focus on general oversight and strategy matters.
- Continue to ensure the committee's effectiveness and efficient coordination with the board, its committees and the executive first level committees.

4.5 Audit committee activities in 2024

Germán de la Fuente
Chair of the audit committee

"During 2024, the committee continued to benefit from a comprehensive mix of experience and skills, and each provided appropriate advice and challenge to the top management. I would like to expressly thank Pamela Walkden, who chaired the committee during the last four years until I took over in March 2024. Her devotion and excellent service have been key for discharging our responsibilities. Pamela remains a member of the committee, offering her experience and commitment. Our smooth transition has facilitated the ongoing effectiveness of the committee, ensuring that its role is discharged in the most tangible and effective manner. As part of that, we received confirmation on our overall alignment with the provisions of the new CNMV Technical Guide on audit committees and we are taking proactive steps to remain fully prepared for the implementation of the CSRD in Spain.

The committee maintained its focus on the effective oversight of the financial information integrity and the internal controls and kept a professional and open relationship with the external auditor. Specifically, we oversaw the change of reporting of financial results to global businesses as primary segments to effectively align the way we report with the manner we manage the Group. Non-financial information also remained high on our agenda last year and, in particular, we discussed at length on the need to maintain robust processes and controls in the current complex legislative framework, and monitor the greater independent assurance required going forward.

The committee oversaw and led an external auditor selection process according to applicable regulation in order to propose the appointment of our external auditor at the 2026 AGM. After a rigorous and competitive selection process, the committee recommended the board to propose the appointment of PricewaterhouseCoopers.

We monitored the independence and effectiveness of the Internal Audit function as part of our fundamental duties, ensuring the resources to fulfil its responsibilities, including the need to complement the existing workforce with new skillsets and expertise. We remained cognisant of the importance of allowing for the appropriate level of flexibility when overseeing the internal audit plan execution, to ensure that we are well prepared for any new challenges and associated risks.

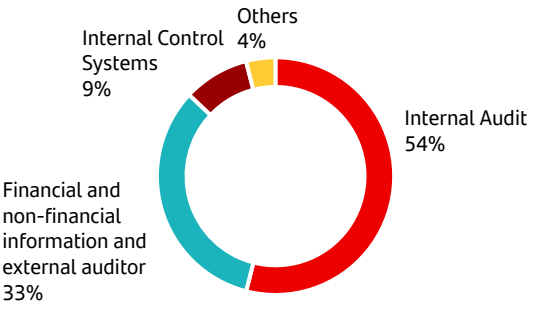
As we have done in previous years, we proactively shared emerging themes, concerns and views with our subsidiary audit committees on an ongoing basis, which enabled us to harness their vast collective expertise and helped to further instil our 'One-Santander' vision.

In January 2024, the succession process for a new Group Chief Audit Executive was invoked in order to identify a suitable successor for Juan Guitard, after almost ten years in the role. The committee conducted a rigorous process in coordination with the nomination committee, which resulted in the appointment of Julia Bayón (former Head of Business Legal, CIB Legal, and Vice-Secretary of the board), as new Group CAE. Julia brings different skills that will enrich the role. I wish her all the best and the committee is confident on her success in this new position. In turn, I would like to thank Juan for so many years of excellent performance, his strong commitment to the Group, and especially, for his assistance to the committee I have the privilege to chair."

COMPOSITION

Position		Category	Appointed on
Chair	Germán de la Fuente	Independent	21/04/2022[A]
Members	Homaira Akbari	Independent	26/06/2017
	Henrique de Castro	Independent	21/10/2019
	Belén Romana	Independent	22/12/2015
	Pamela Walkden	Independent	29/10/2019
Secretary	Jaime Pérez Renovales		

A. Committee Chair since 23 March 2024.



The board of directors appointed the committee's members based on their expertise, skills and experience in the matters within the committee's scope. For more details, see section 4.1 'Our directors' and 'Board skills and diversity matrix' in section 4.2.

According to SEC Regulation S-K, committee Chair Germán de la Fuente is considered a financial expert based on his credentials, extensive experience in accounts auditing and strong expertise in accounting and internal and risk control, as well as in the banking industry.

TIME ALLOCATION

In 2024, the committee held 15 meetings, including four joint sessions with the risk supervision, regulation and compliance committee. See 'Board and committee preparation and attendance' in section 4.3 for members' attendance and the estimated average time each one spent on meeting preparation and attendance.

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the audit committee's activities in 2024.

Duties	Actions taken
Financial and non-financial information	
Review the financial statements and other financial information	• Reviewed the individual and consolidated annual financial statements and directors' report for 2024, as well as consolidated half-yearly financial report, and submitted them to the board for approval. Monitored compliance with legal requirements and accounting principles, and ensured that the external auditor issued a report on the effectiveness of the Group's system of internal control over financial reporting (ICFR). • Reviewed quarterly financial information (dated 31 December 2023, 31 March, 30 June and 30 September 2024, respectively), inclusive of reporting five global businesses as primary segments, prior to board approval and subsequent release to the market and supervisory bodies. • Reviewed supplementary financial information to the annual report: the Universal Registration Document filed with the CNMV; Form 20-F and Form 6-K filed with the SEC. • Verified, on a quarterly basis, the consistency of the financial information published on our website and the CNMV's website (when required), ensuring that it was up to date and consistent with the information approved by the board.
Review the non-financial information	• Oversaw and assessed the preparation and reporting processes of non-financial information, including sustainability information, in coordination with the responsible banking, sustainability and culture committee and informed the board accordingly. • Received regular updates from the Group Chief Accounting Officer (CAO) and the Head of Sustainability on progress with sustainability reporting within the Group, including the associated scope of metrics and action plans and the impacts of the CSRD. As part of this, acknowledged the future requirement to appoint a verifier of sustainability information and associated governance upon implementation of the CSRD in Spain. • Reviewed the Climate Finance and Green Bond reports in coordination with the responsible banking, sustainability and culture committee, prior to their submission to the board for approval, assessing the integrity of such disclosures and the review conducted by the external auditor. • Endorsed the Pillar III disclosures report and submitted to the board for approval.
Information on applied tax policies	• Was informed by the Head of Tax on applied tax policies based on Spain's Code of Good Tax Practices, prior to their submission to the board for approval, as well as on the annual review of the tax strategy and policy tax risk management and control. • Was informed on the filing of the 2023 Tax transparency report to the Spanish tax agency (*Agencia Estatal de Administración Tributaria*).
Relations with the external auditor	
Information on the external audit plan	• Received updates on the planning, progress and execution of the audit plan, including the work conducted in connection with the non-financial information. • Was informed of the impact of legal and regulatory developments in connection with financial and non-financial information, as well as their relevance regarding timelines and assurance scope of the independent external verification. • Obtained the external auditor's confirmation of its full access to all information necessary to conduct the audit. • Analysed the audit reports for the annual financial statements before the external auditor submitted them to the board. It also received the external auditor's additional report explaining the results of the audit conducted, in accordance with the applicable regulation.
Interaction with the external auditor	• The lead audit partner, who met regularly with the committee Chair, was invited to all committee meetings, which facilitated effective communication between the external auditor and the board. In addition, the committee met him without executives present to ensure a fluent communication and the independent performance of its function.
Assessment of the external auditor's performance	• Conducted the final evaluation of the external auditor's performance and how it has contributed to the integrity of the financial information based on, among other parameters: its knowledge of the business, the quality and efficiency of its services and sufficiency of resources (including the composition and level of seniority of the team involved); the frequency and quality of its communications; its independence; transparency reports and quality controls; and the opinions of the audit committee Chairs and the controllers of the main subsidiaries or relevant subgroups within the Group. • Received the 2024 PwC Transparency report from the lead audit partner, who also informed the committee about the public outcomes of quality controls conducted by the ICAC or other supervisors and other relevant investigations.

Duties	Actions taken
External auditor independence	
PwC's remuneration for audit and non-audit services	• Monitored PwC's remuneration, including the following fees for audit and non-audit services provided to the Group:

EUR million

	2024	2023	2022
Audit	120.1	117.5	115.4
Audit-related services	13.6	8.6	6.4
Tax advisory services	0.9	1.6	0.5
Other services	7.4	5.9	4.8
Total	**142.0**	**133.6**	**127.1**

The audit and main non-audit services included for each item in the above breakdown are detailed as follows:

- Audit services: audit of the individual and consolidated financial statements of Banco Santander and its subsidiaries (which PwC or another network firm is the external auditor); audit of the interim consolidated financial statements of Banco Santander; integrated audits prepared in order to file the Form 20-F with the SEC and the internal control audits (SOx) for required Grupo Santander's entities; limited reviews of financial statements; and regulatory reports to the external auditors on Grupo Santander's entities.
- Audit-related services: issuance of comfort letters, verification services of financial and non-financial information (as required by regulators) and other reviews of documentation to be submitted to domestic or foreign authorities that, due to their nature, are typically provided by the external auditor.
- Tax services: tax compliance and advisory services provided to Group companies mainly outside Spain, which have no direct effect on the audited financial statements and are permitted in accordance with the applicable independence regulations.
- Other services: agreed-upon procedure reports, assurance reports and special reports performed under the accepted profession's standards; as well as other reports required by the regulators.

The 'Audit' heading includes the fees for the year's audit, regardless of the date the audit was completed. Any subsequent adjustments, which are not significant, are shown in note 47.b) in the 'Notes to the consolidated financial statements' for each year for comparison purposes. The fees corresponding to the rest of the services are shown by reference to when the audit committee approved them.

- Verified that the ratio of PwC's fees paid for all services for Banco Santander and the Group to its annual revenue in Spain and worldwide did not exceed the 15% limit for three consecutive years. In 2024 the ratio stood at 0.27% of PwC's total revenues worldwide.
- Verified every quarter, according to Regulation (EU) No 537/2014 of the European Parliament and of the Council, that the fees approved in 2024 for non-audit services provided by PricewaterhouseCoopers Auditores, S.L. (PwC), (including for 'Other services' and 'Audit-related services', and not including services that the external auditor is required to perform under domestic or EU laws) were significantly less than 70% of the average fees paid specifically to PwC in the past three consecutive years for the 'Audit' of Banco Santander and its subsidiaries in Spain (not including fees for reviews with more limited assurance than required for accounts auditing, which are included as non-audit services). In 2024, the ratio stood at 25.98%; and it would be 21.49% if services approved for PwC and other firms in its network and provided to Grupo Santander in and outside Spain were included.

  See subsection C.1.32 of section 9.1 'Reconciliation with the CNMV's corporate governance report model' for the reconciled amounts of the above mentioned fees listed, with the numerator and denominator values of each ratio found in section C.1.32 of section 9.2 'Statistical information on corporate governance required by the CNMV'.
- In 2024, Grupo Santander contracted for services by audit firms other than PwC in the amount of EUR 206.2 million (EUR 174.1 and 185.5 million in 2023 and 2022, respectively).

Non-audit services	• Approved, on a monthly basis, all non-audit services rendered by the Group's external auditor verifying that all of them met the independence requirements under Spanish and European regulation and SEC and Public Company Accounting Oversight Board (PCAOB) rules, as well as complying with our internal Policy on the approval of services other than audits provided by the external auditor.
Personal and financial relations	• Received confirmation from PwC that the designated audit team, PwC as the auditor firm, everyone else that forms part of PwC or of other firms in its network, including all applicable extended relations to them complied with the requirements on external auditor independence, analysing possible threats and taking appropriate safeguarding measures in line with their internal policies and procedures. • Received information about the results of the internal review, carried out every six months, according to our internal regulation, on possible financial ties between Grupo Santander and PwC and its related parties, which concluded that no existing ties compromised the independence of PwC as external auditor.

Duties	Actions taken

External auditor independence report	• Verified the external auditor's independence prior to the issuance of the 2024 auditor's report on the financial statements, considering:
	  ◦ the remuneration it has received for audit and non-audit services;
	  ◦ all non-audit services rendered by the external auditor; and
	  ◦ the personal circumstances and financial dealings, that the external auditor or persons performing the audit may have with the Group.
	• Received written confirmation from PwC of its independence from Grupo Santander in accordance with applicable European and Spanish law and the SEC and the PCAOB rules.
	• Concluded that, in its opinion, it had no objective reason to question the external auditor's independence and issued this annual report on its independence.

External auditor mandate	
Re-election	• Proposed to the board, for approval, and subsequent submission to the 2025 AGM, the re-election of PwC as external auditor of Banco Santander and its consolidated group for financial year 2025, which will be the tenth and final year of PwC's initial mandate as the Group's external auditor. Since 2021, the lead audit partner has been Julián González, PwC's banking sector audit leader who has experience as a global group audit partner (mainly in Spain and the UK) and a strong background in the Spanish financial sector. He also regularly participates in various international forums on banking supervisory and regulatory forums.
Selection process	• Oversaw a rigorous and comprehensive selection process, through a public tender according to applicable regulation, to propose to the board the appointment of the external auditor for Banco Santander and its consolidated group's at the 2026 AGM, after PwC's ten-year mandate ends. • Received the favourable opinion from Internal Audit function on the transparency, objectivity and independence of the selection process conducted. • Rated PwC's proposal the best for its technical offer, assigned team, and economic terms, among other parameters, and recommended selecting it, as preferred firm, to the board for approval and, subsequent, to propose its appointment as external auditor of Banco Santander and its consolidated group at the 2026 AGM.
Internal audit	
Oversight of the Internal Audit function	• Supervised the Internal Audit function and ensured its independence and effectiveness in 2024. • Reviewed the external quality assessment performed by the Institute of Internal Auditors in Spain to continue ensuring the effectiveness of the function and its alignment with best practice and Global Internal Audit Standards. • Oversaw, in coordination with the nomination committee, the selection process of the Group Chief Audit Executive (CAE) which resulted in the proposal to appoint Julia Bayón to the nomination committee and to the board. Monitored her onboarding process to ensure its robustness, enabling her to be truly effective in her role. • Invited the CAE to all committee meetings and held two private sessions with her without other executives or the external auditor present. The committee also invited additional internal audit officers to meetings throughout 2024, when required. • Endorsed the 2024 Internal Audit function budget, ensuring that the function had the resources and skillsets needed to discharge its duties effectively. • Reviewed and approved the Internal Audit function strategic plan for 2024-2027. • Was kept apprised of the initiatives launched and hubs created to improve the efficiency of Internal Audit's work and associated digital initiatives, including artificial intelligence capabilities. • Assessed the preparedness and effectiveness of the Internal Audit function to fulfil its duties. • Endorsed the former and new CAE's 2024 objectives for onward submission to the board for approval. Reviewed their performance against those objectives and reported the results to the remuneration committee and to the board to set their variable remuneration. • Verified the suitability of the subsidiary CAEs, in coordination with the Group nomination committee.
Monitoring of internal audit activities	• Reviewed the annual internal audit plan for 2024 and submitted it to the board for approval, ensuring that it covered the Group's relevant risks, with a key focus on credit risk, third party risk management, model risk and financial crime compliance, among others; and oversaw its progress with internal audit recommendations and ratings of businesses, units and corporate functions. Each subsidiary CAE reported to the committee at least once in 2024. • Received regular information on internal audit activities carried out in 2024, monitoring progress in audit ratings, and further promoting a continued focus on maintaining a robust control environment; and conducted an additional review of issued audit reports, requiring certain areas to present their action plans. • Continued promoting the first line's further involvement in internal audit recommendations and ensured that senior management and the board understood the conclusions of internal audit reports. • Received holistic reviews of internal audit coverage of cybersecurity, IT risks, financial crime, sustainability, model risk, credit risk, capital and solvency, operational risk, access control and vendor management, among other topics, to ensure proper oversight, with first and second line of defence representatives invited to provide additional feedback, as appropriate.

Duties	Actions taken
Internal control systems	
Monitoring the effectiveness of internal control systems	• Received information on the Group's internal control system and monitored related action plans, together with the internal control strategic plan, including those associated with sustainability reporting. • Received reports and certification on the Group's 2023 internal control system (ICS) and assessed its effectiveness in compliance with the CNMV's (ICFR) and the SEC's (SOx) regulations.
Other activities	
Coordination with Risk and with Compliance	• Held four joint meetings with the risk supervision, regulation and compliance committee to review risk, compliance and internal audit aspects of the global businesses and subsidiaries, with first line of defence representatives present. • Received information in a joint meeting with the risk supervision, regulation and compliance committee on the Group's whistleblowing channel (Canal Abierto) with a special focus on matters within the committee's remit to ensure the Group's culture empowers employees and other persons related to Banco Santander to speak up, be heard and report irregular practices without fear of reprisal. • Collectively discussed with the risk supervision, regulation and compliance committee additional topics of mutual interest, such as risk culture and the internal control environment, and received an update on internal audit matters of the Risk and Compliance functions. • Received biannual reports on the main legal contingencies, associated provisions and applicable public information, in coordination with the risk supervision, regulation and compliance committee. • Invited the CRO to all 2024 committee meetings. • The Chairs of the audit committee and of the risk supervision, regulation and compliance committee remained in constant communication, ensuring ongoing coordination and collaboration. • Received reports from Santander España's joint audit and risk committee on the main items covered at the meetings throughout the year.
Committee's operation and effectiveness	• Reviewed the CNMV's Technical Guide 1/2024 on audit committees at public-interest entities, acknowledging the committee's overall alignment with its recommendations, and endorsed specific actions mainly on sustainability-related matters to be taken following the implementation of the CSRD in Spain. • Invited subsidiary audit committee chairs to specific committee meetings throughout the year. In turn, the committee Chair attended specific subsidiary audit committee meetings to further enhance communication between them. • Held a subsidiary audit committee Chairs convention at our headquarters in Boadilla del Monte to foster further collaboration across the Group. For more details, see 'Group and subsidiary board relations' in section 1.2.
Related-party and corporate transactions	
Creation or acquisition of special-purpose vehicles and entities based in countries considered non-cooperative jurisdictions	• Was informed of the activities of the Group's offshore entities by the Head of Tax, providing this information to the board. See note 3.c) in the 'Notes to the consolidated financial statements'. • Reported favourably to the board, for its approval, on proposals to create or acquire interests in entities domiciled in non-cooperative jurisdictions or in special purpose entities and received the Special Purpose Entities Annual Update.
Authorization and oversight of related-party transactions	• Reviewed the details and balances of the related-party transactions reported in the annual and half-yearly financial statements. Checked that those transactions were carried out under market conditions. • Supervised and reported to the board on a bi-annual basis that the related-party transactions, including those authorized with delegated board powers, complied with the law, the Rules and regulations of the board and/or the conditions set by board resolution; verified the alignment with the internal reporting and monitoring procedure and that those transactions met the fairness and transparency requirements established in the aforementioned rules and were fair and reasonable. • Issued the Related-party transactions report. For more, details see section 4.12 'Related-party transactions and other conflicts of interest'.
Information for general meetings and corporate documents	
Shareholder information	• Was represented by the former committee Chair, Pamela Walkden, who reported at the 2024 AGM on the committee's activities in 2023.
Corporate documents for 2024	• Prepared this activities report on 20 February 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 priorities

The committee set the following priorities for 2025:

- Continue to supervise the Group's global business and units, from a control perspective with a special focus on those more linked to transformation, in coordination with the risk supervision, regulation and compliance committee, to ensure that appropriate controls remain effective.
- Continue to focus on the oversight of the internal audit plan execution with an ongoing focus on fundamental risks, such as credit risk, cyber, third party risk management and risk derived from emerging technologies such as artificial intelligence.
- Remain focused on the independence and effectiveness of the Internal Audit function, ensuring its preparedness to fulfil its duties, including the required resources, skills and expertise of its people.
- Continue to monitor the implementation of the CSRD in Spain and the appointment of the verifier of sustainability information. In addition, remain focused on the overall analysis and reporting processes for the non-financial information, including sustainability information, and its associated integrity, to meet increasing stakeholder expectations, in coordination with the responsible banking, sustainability and culture committee.
- Remain focused on ensuring that the committee discharges its role in the most tangible and effective manner.

4.6 Nomination committee activities in 2024

Belén Romana
Chair of the nomination committee

"The committee plays a key role overseeing that both the board and the executive team are well placed to help the Group achieves its strategic goals. As part of that, we continued to apply and supervise succession arrangements for the board as a whole so that succession planning more generally continued to be discharged in an effective manner. We have carefully analysed board composition, ensuring that its depth of skills and experience remained optimal to contribute to the Group's success.

In addition, in 2024 we analysed committee composition more broadly, to ensure that committees remained well equipped to discharge their duties, balancing continuity, refreshed membership and time commitment, relevant skills and experience, and value added. As part of that, the committee continued to benefit from a great mix of experience and skills, complemented with the appointment of Carlos Barrabés as a member in June 2024. In addition, we recommended specific committee Chair rotation movements to the board, evidencing once again the strength and depth of expertise of its members. I would like especially to thank Bruce Carnegie-Brown for his service over the last years as Chair of the committee until I took over in March 2024, when he stepped down from the board.

The committee devoted significant time to senior executive succession planning in 2024 to ensure that we have the appropriate people to lead and execute our transformation strategy. We also remain committed to the continued development of our internal succession pipeline. As part of that, the board held two informal sessions with top talent across our footprint to remain sighted on the depth of talent within the Group. However, we understand that we also need to attract external talent required to deliver our strategic targets. For such purposes, the committee remained focused on ensuring the suitability of the new profiles and the creation of an inclusive workplace that facilitates a more diverse composition of our top management and its success.

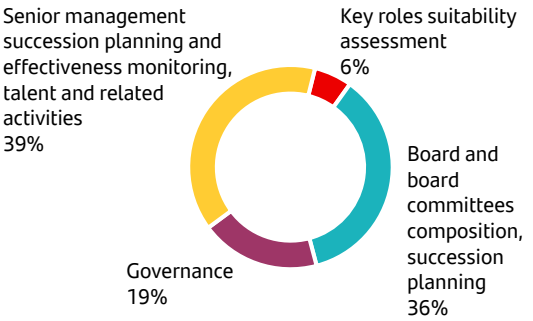
In line with our commitment to continuous governance improvements, the committee monitored the effective implementation of the action plan derived from the 2023 board effectiveness review, with was conducted with the assistance of an external expert. We also conducted an internal evaluation of the board and its committees in 2024 with a view to improving our overall effectiveness, where possible. We were pleased with the results which concluded that the board continues to operate effectively, with an efficient committee structure, and that management positively values the constructive challenge and the contribution they get from the board as a whole.

We consider that effective Group-wide governance is an essential element of business success and strategy execution. As a result, corporate and internal governance has been a key feature in the year, driving continuous improvement across the Group and ensuring adequate oversight and control of subsidiary operations. The committee has tracked governance developments and the implications for the Group and kept these under continuous review. As a good example of the continuous adaptation to current trends, the committee recommended the organization of a virtual only AGM in 2025, after checking that the measures in place fully preserved shareholders rights. A virtual AGM should foster the active participation of our shareholders, assuring their equal treatment since eliminating the differences between those attending physically and remotely, and will be more consistent with our sustainability policy, since it will avoid travel to where the AGM would take place otherwise.

Looking ahead, we will continue working on ensuring that we have the best team and robust governance in place, leveraging on our strong culture to attract, develop and retain the best people to support our transformation".

COMPOSITION

Position		Category	Appointed on
Chair	Belén Romana	Independent	01/01/2024[A]
Members	Carlos Barrabés	Independent	27/07/2024
	Sol Daurella	Independent	23/02/2015
	Gina Díez Barroso	Independent	22/12/2021
	Glenn Hutchins	Independent	20/12/2022
Secretary	Jaime Pérez Renovales		



A. Committee Chair since 23 March 2024.

The board of directors appointed the committee's members based on their expertise, skills and experience in the matters within the committee's scopes. For more details, see section 4.1 'Our directors' and 'Board and committees skills and diversity matrix' in section 4.2.

TIME ALLOCATION

In 2024, the committee held 13 meetings, including one joint session with the risk supervision, regulation and compliance committee. See 'Board and committee preparation and attendance' in section 4.3 for members' attendance and the estimated average time each one spent on meeting preparation and attendance.

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the nomination committee's activities in 2024.

Duties	Actions taken
Board and committees composition and succession planning	
Selection and succession of the board and its committees	• Ensured board member selection procedures guaranteed directors' individual and collective suitability; fostered diversity in its broadest sense; and analysed the required expertise, skills and time commitment for effective board membership. • Continued to oversee, together with the Executive Chair, succession planning activities for the board. • Assessed the composition of the committees and the international advisory board in order to ensure they had the right skills and experience to perform their duties successfully and proposed composition changes for certain committees to further enhance their performance and ongoing effectiveness. For more details, see 'Changes to the committees' in section 1.1. • Continued monitoring the board's overall skills and competencies, therefore ensuring that the collective board and its committees composition remained appropriate to oversee and lead the strategic direction of the Group.
Appointment, re-election and ratification of directors	• Considered areas of expertise and experience required to complement the board by reference to the board skills and diversity matrix as well as the annual board effectiveness review in order to target appropriate searches and recruitment. • Ensured that any proposed appointment had been drawn from a depth of candidate pool which recognised diversity in its broadest sense, therefore ensuring the best possible outcomes.
Annual verification of directors' status	• Verified each director category (i.e. executive, independent and other external) and submitted a proposal to the board for it to be confirmed or reviewed in the annual corporate governance report and at the 2025 AGM. For more details, see section 4.2 'Board composition'. • Assessed directors' independence, verifying that there were no significant business ties between the Group and companies in which they are, or have been, significant shareholders, directors or senior managers, in particular regarding financing extended by the Group to such companies. In all cases, the committee concluded that existing ties were not significant because (i) financing (a) did not constitute economic dependency for such companies because other sources of funding were available, and (b) was consistent with the Group's share of the relevant market; and because (ii) business ties did not reach comparable materiality thresholds used in other jurisdictions as benchmarks (e.g. New York Stock Exchange (NYSE), Nasdaq and Canada's Bank Act), among other reasons.
Directors' potential conflicts of interest and other professional activities	• Examined the information provided by directors about their intention to carry out other professional activities or positions outside the Group and the related time commitment and concluded that those commitments were compliant with applicable legislation regarding the maximum number of directorships they may hold, and did not interfere with their obligations as Banco Santander directors nor entail any conflict of interest.
Director induction, training and development programmes	• Assessed the effectiveness of the director induction, training and development programmes, guaranteeing that such programmes are designed according to each director's circumstances and needs. • Identified areas for improvement and additional topics for the 2025 board training programme.
Senior management succession planning and effectiveness monitoring, talent and related activities	
Succession planning for executive directors and senior management	• Oversaw the discipline applied to senior executive succession planning, which included key positions in subsidiaries, and made sure plans were orderly being implemented through a rigorous, transparent, merit-based and objective process that promotes diversity in its broadest sense. • Oversaw appointments of key positions and monitored the effectiveness of the top management succession plans. • Endorsed the proposed changes to the Group succession policy for senior executives to enhance process robustness with a more strategic approach, improving effectiveness and simplicity.
Appointment of senior management team members	• Recommended specific appointments, later agreed by the board, in coordination with certain committees, as needed. For more details, see section 5. 'Senior management team'.
People and culture	• Recommended the full integration of Human Resources and Talent functions under the common leadership of the Global Head of People and Culture. • Discussed People and Culture's activities to continue supporting progress on inclusive culture, in coordination with the remuneration and the responsible banking, sustainability and culture committees. • Assessed and challenged proposals on senior executives' mission, career development plans, mobility and talent retention initiatives Group-wide.
Governance	
Board effectiveness review	• Reviewed the execution of the action plan to address the areas for improvement revealed in the 2023 board effectiveness annual review, which was conducted with the collaboration of an independent external consultant. • Oversaw the 2024 board effectiveness review, which was conducted internally, and endorsed the resultant action plan. For more details, see 'Board effectiveness review in 2024' in section 4.3.

Duties	Actions taken
Corporate governance	• Reviewed the key highlights of the 2024 AGM. • Analysed evolving practices and market trends with regard to the general shareholder meeting format (either physical, hybrid or fully virtual), and requested updated information on our investors and proxy advisors' insights and experiences in this respect to be considered in the proposal to the board on the format for the 2025 AGM. In view that (i) the Bank has several million shareholders very diversified geographically, only a few dozen of which attend the general meetings in person, and holding a virtual-only meeting allows to offer all of them the same opportunities to participate, ensuring their equal treatment; (ii) the remote participation platform developed by the Bank as part of its digitalization process proved to be ideal during the pandemic, as it replicates the functioning of a traditional shareholder meeting and safeguards the exercise of shareholders' rights at the same level as in a physical or hybrid meeting; (iii) holding a virtual-only meeting is aligned with the current digital paradigm, which is shown by the experience of countries such as the United States, Canada or Germany where virtual-only meetings are a majority practice among major listed companies, and which is also attested by the evolution of Spanish legislation and the broad support of the amendment of our Bylaws to allow for virtual-only meetings received from our investors at the 2021 AGM; and (iv) the feedback received from institutional investors during the corporate governance roadshow hosted by our Lead Independent Director, who also had open communication with proxy advisors on this topic; the committee concluded that there are well-grounded reasons and sufficient assurance regarding the effectiveness of shareholders rights for holding a virtual-only 2025 AGM, and recommended to the board to call it in this format, taking into account that this does not necessarily mean that future AGMs will be virtual-only. • Reviewed the activities conducted by the Lead Independent Director, ensuring the discharge of his duties, as evidenced through a summary of his activities in the year, which was also submitted to the board. • Reviewed the activities conducted by the Shareholder and Investor Relations team, as well as the Lead Independent Director's engagement with investors, shareholders and proxy advisors, and their feedback on the Group's corporate governance arrangements. • Verified the independence of the external advisers hired by the committee and the remuneration committee in 2024, analysing their services and the amounts they received, among others. • Reviewed the annual corporate governance report to verify that information contained therein conforms to the applicable law and assisted the board in the periodic review of our corporate governance system for the board to fulfill its mission to promote the corporate interest and consider stakeholders' expectations.
Internal governance	• Monitored the split of the roles and responsibilities between the Executive Chair and the CEO to ensure its ongoing effectiveness and alignment with the board approved allocation of the same. For more details, see 'Structure of the board' in section 4.3. • Assessed the suitability of certain proposed key position appointments at Group and subsidiary level, subject to the Group's appointments and suitability procedure. • Oversaw subsidiary board composition to ensure consistent suitability in line with expectations across the Group. • Endorsed Group director nominations for subsidiary boards to ensure they were suitable and correctly perform their duties. • Verified the suitability of the subsidiary CAEs, and CROs and CCOs with the Group audit and risk supervision, regulation and compliance committees, respectively. • Remained apprised on new governance regulation, trends, best practices and implications for the Group, as well as on the actions taken to simplify and streamline internal regulation and executive level governance bodies' effectiveness with no loss of governance. • Verified that subsidiaries followed the provisions of the GSGM relating to board and committee structure and their functions pursuant to best practices. In addition, the committee tracked subsidiary actions and progress in implementing internal regulation required by the Group. For more details, see section 7. 'Group structure and internal governance'. • Analysed the outcomes of the subsidiary board and board Chairs annual effectiveness reviews.
Suitability assessment	
Suitability assessment of directors, senior management and key positions	• Conducted the annual suitability assessment of directors, senior management, heads of internal control functions and the Group's key position holders, confirming their continued business and professional good reputes and appropriate knowledge and experience to perform their duties. • Concluded that board members continue to discharge good governance, having analysed notifications from them regarding their other professional obligations, confirming that they are able to devote the necessary time and have no conflict of interest; and overseeing directors' attendance at board and committee meetings, ensuring that it did not fall below 75% and, in the specific cases of lower attendance, that absences were duly justified and do not undermine their capacity to devote sufficient time to discharge their duties. Furthermore, average board attendance was verified as 98%. For more details, see 'Board and committee preparation and attendance' in section 4.3. • Analysed and informed the board of potential circumstances or unforeseen situations affecting directors over the course of the year that could harm the Group's credit and reputation and, in particular, legal proceedings in which a director is subject to investigation. Based on the information received from said director on the events under investigation, and given the stage of proceedings, the nomination committee concluded that the director remained suitable to exercise his duties, though the committee will continue to monitor the case.

Duties	Actions taken
Information for general meetings and corporate documents	
Shareholder information	• Was represented by the former committee Chair, Bruce Carnegie-Brown, who reported at the 2024 AGM on the committee's activities in 2023.
Corporate documents for 2024	• Prepared this activities report on 24 February 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 priorities

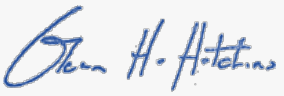
The committee set the following priorities for 2025:

- Continue to supervise succession arrangements for the board as a whole, playing an important role in ensuring that succession planning more generally is discharged in an effective manner. Continue to take its proactive approach to board refreshment and associated succession planning, considering previous board effectiveness review outcomes and other relevant factors.
- Keep a proactive focus on senior executive succession planning based on the Group's strategic needs, and the potential challenges the business may face, maintaining our attention to the continued development of our internal succession pipeline and to a merit-based culture of equal opportunity and inclusion. Ensure that people and other talent related risks are properly understood and addressed in coordination with the risk supervision, regulation and compliance committee.
- Continue to promote that leadership and talent traits and associated characteristics as a catalyst of The Santander Way, ensuring that it serves as the glue to keep everyone committed together to the transformation. Further promote an inclusive workplace to facilitate the success of our senior leaders and teams.
- Keep our corporate governance arrangements under constant review to make sure they continue to consider all stakeholders' interests with strategic relevance for the Group by closely monitoring shareholder engagement and, together with the Lead Independent Director, by taking into account their feedback and insights. In particular, monitor shareholder experience and results of the 2025 AGM, including the feedback received on the format under which it was held and reporting on this to the board.
- Monitor the implementation of CSRD in Spain and assess changes to the internal regulation that may be required in coordination with the audit committee.
- Remain focused on ensuring that the board and its committees discharge their role in the most tangible and effective manner. As part of that, monitor the effective implementation of the action plan derived from the 2024 board effectiveness review, in line with our commitment to continuous governance improvements.

4.7 Remuneration committee activities in 2024

Glenn Hutchins
Chair of the remuneration committee

"The committee is guided by key principles, which include shareholder value, meritocracy, risk management and fairness. Aligned with these principles, our remuneration philosophy is focused on strengthening our employee value proposition while meeting regulatory expectations and serving the best interests of all stakeholders. Our goal is to implement our remuneration policies and plans in a manner that serves these interests across our entire global footprint.



Critical to creating shareholder value is our capacity to attract, develop and retain the best talent world-wide to support our transformation. We compete in a global market for skills not just with the world's largest financial institutions but also with the biggest and most successful technology companies. Our ability to offer market-based compensation for our top talent is vital to our capacity to compete and succeed.

Taking account of the support received for our remuneration policy at the 2024 AGM, we met during the year with our largest shareholders and their proxy advisers to explain our compensation philosophy and to gather feedback. The remuneration committee discussed the lessons from this consultation and made a series of adjustments to our incentive plans that strengthen the alignment between pay and long-term performance. Additionally, we have expanded our disclosure to provide more detail on the committee's process for determining pay and selecting appropriate pay comparators, given our global scale and peer group.

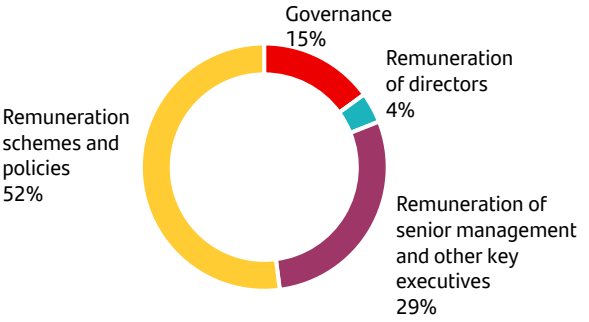
In coordination with the nomination committee, we continued to focus on fairness across the Group, ensuring the avoidance of pay gaps, meeting all relevant requirements and making fulsome disclosure. An external review has affirmed that the Group's policies, procedures, and practices fully comply with applicable legislation.

Committee members bring diverse expertise, providing valuable insights and challenges to management that enhance our decision-making and oversight. During the year, we strengthened our committee by the including a new director, Antonio Weiss, as a member.

Looking ahead, we remain committed to ensuring that the Group can attract and retain the very best talent to drive our success and deliver long-term, sustainable value for all our stakeholders. To this end, we intend to continue our dialogue with shareholders and other key stakeholders who share our interest in the prosperity of the Group".

COMPOSITION

Position		Category	Appointed on
Chair	Glenn Hutchins	Independent	20/12/2022
Members	Sol Daurella	Independent	23/02/2015
	Henrique de Castro	Independent	29/10/2019
	Antonio Weiss	Independent	01/01/2025
	Luis Isasi	Other external	19/05/2020
Secretary	Jaime Pérez Renovales		



A. Committee Chair since 1 October 2023.

The board of directors appointed the committee's members based on their expertise, skills and experience in the matters within the committee's scope. For more details, see section 4.1 'Our directors' and 'Board and committees skills and diversity matrix' in section 4.2.

TIME ALLOCATION

In 2024, the committee held 14 meetings, including one joint session with the risk supervision, regulation and compliance committee. See 'Board and committee preparation and attendance' in section 4.3 for members' attendance and the estimated average time each one spent on meeting preparation and attendance.

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the remuneration committee's activities in 2024.

Duties	Actions taken
Remuneration schemes and policies	
Remuneration policy for executive directors, senior management and other key executives	• Remained focused on simplifying executive directors and senior management remuneration, shaping remuneration schemes consistent with our Simple, Personal and Fair values, with a special focus on shareholder value creation. • Recommended the 2023 individual variable remuneration for senior management, based on annual performance targets and their weightings as set by the board. • Proposed to the board the global annual executive variable remuneration for 2024 (payable immediately and deferred executive remuneration), based on achievement of previously set quantitative and qualitative targets. In addition, reviewed the ex-ante risk adjustments of total variable remuneration assigned to the global businesses and units, based on actual risk outcomes and their management, in conjunction with the risk supervision, regulation and compliance committee. • Recommended to the board the annual performance indicators to calculate variable remuneration for 2025 with limited variations versus the previous year in order to maintain focus on risk, Group-wide collaboration and shareholder value creation, among others. • Set the achievement scales for the annual and multi-year performance targets and weightings for submission to the board. • Reviewed and considered the results of the say on pay at our 2024 AGM, as well as the feedback received from top shareholders and major proxy advisory firms, proposing to the board a remuneration policy for 2025, 2026 and 2027 that includes changes compared to the existing policy to strengthen its alignment with shareholders' expectations.
Assist the board of directors in supervising compliance with remuneration policies	• Checked that remuneration schemes were aligned with the Group's performance, corporate culture, risk appetite and applicable regulation, and created no incentive to breach risk appetite. • Reported to the board on Group remuneration practices and assessed their effectiveness, receiving confirmation on their alignment with the Group remuneration policy. • Reported to the board on an external advisor assessment of the remuneration policy that concluded that the Group's policies, procedures and practices comply with the regulatory requirements for credit institutions. • Reviewed the adoption of ex-post risk adjustments, including the application of malus and clawback arrangements within the Group.
Director remuneration policy report	• Reviewed the Lead Independent Director's report on engagement with key shareholders and proxy advisors regarding executive director remuneration. • Reviewed and proposed to the board the annual directors' remuneration report for an advisory vote at the 2024 AGM. • Assisted the board in overseeing compliance with the director remuneration policy. • Positively recommended the directors' remuneration policy for 2025, 2026 and 2027 that will be submitted by the board of directors at the 2025 AGM as a separate item on the agenda pursuant to Article 529 *novodecies* of the Spanish Companies Act and is an integral part of the director remuneration policy report. See sections 6.4 Directors' remuneration policy for 2025, 2026 and 2027' and 6.5 'Preparatory work and decision-making for the remuneration policy; remuneration committee involvement'. As part of that, the committee considered the voting results of the remuneration proposals at the 2024 AGM, the inputs from shareholder and stakeholder engagement during the year. It also considered any recommendations from regulators, legal requirements or applicable regulation concerning remuneration matters and verified that the policy is consistent with the Group's culture and Simple, Personal and Fair values. The main changes incorporated in the policy compared to the previous one include four key actions in the variable remuneration scheme: ◦ increase in the component paid in instruments from 50% to 60%; ◦ raise of the minimum long-term metric on relative TSR threshold for vesting from percentile 40% to percentile 50%; ◦ increase of the weight of the long-term metric on relative TSR from 40% to 50%; and ◦ enhancement of the weight of long-term metrics from 36% to 40%. Further detail on the committee's process for setting and reviewing the remuneration policy is provided. • Confirmed that the directors' remuneration policy for 2025, 2026 and 2027 is consistent with the remuneration scheme set out in the Bylaws.
People and culture	• Reviewed gender pay gap reduction and equal pay with a view to promoting greater diversity in its broadest sense. • Reviewed internal 'equal pay for equal work' data against the previous year and targets and focused on measures to enhance them in each unit. • Discussed People and Culture activities, with a key focus on the avoidance of associated pay gaps, in coordination with the nomination and the responsible banking, sustainability and culture committees.

Duties	Actions taken
Remuneration of senior management and other key executives	
Performance reviews	• Reviewed the calibration of executives' performance reviews for the senior management and, in particular, for the Executive Chair, the CEO and the main executives in coordination with non-executive directors; for the CRO and CCO with the risk supervision, regulation and compliance committee; and for the CAE with the audit committee.
Fixed remuneration for executive directors and senior management	• Checked that executive directors' fixed remuneration remained appropriate to their duties based on market rates. • Made sure remuneration for senior management remained fair and competitive, recommending adjustments where appropriate to the board, based on a benchmark analysis and specific pay principles.
Variable remuneration for executive directors and senior management	• Proposed to the board variable remuneration for the preceding year payable either immediately or in deferred amounts.
Share plans	• Submitted a proposal to the board for approval and subsequently for vote at the 2024 AGM on remuneration plans that involve the delivery to executive directors of shares (deferred multiyear target variable remuneration plan; deferred and conditional variable remuneration plan; application of the Group buy-out policy). • Analysed and submitted to the board tailored incentive schemes for different units to drive talent retention and alignment with the Group's strategic priorities.
Remuneration of directors	
Individual remuneration of directors in their capacity as such	• Reviewed the directors' remuneration in their capacity as such, based on the positions they held on the collective decision-making body, their membership and attendance at committee meetings, benchmark information and other objective circumstances and submitted to the board the relevant proposals. For more details, see section 6.2 'Remuneration of directors for supervisory and collective decision-making duties: policy applied in 2024'.
Remuneration of Identified Staff	
Remuneration of executives who are Identified Staff	• Reviewed the number of executives who are part of the Identified Staff (Material Risk Takers) in 2024 pursuant to applicable law, trends versus previous years and fixed and variable remuneration ratios for control functions to ensure they remained consistent with regulation and targets. • Set key remuneration components for Identified Staff in coordination with the risk supervision, regulation and compliance committee. • Submitted a proposal to the board, for subsequent submission to the 2024 AGM, regarding the approval of maximum variable remuneration of up to 200% of the fixed component for certain Identified Staff, including executive directors and senior management. • Checked that remuneration schemes supported attraction and retention of key talent to help drive the Group's strategy, the application of the incentives implemented in the Group, and the level of achievement of long-term deferred remuneration metrics.
Governance	
Coordination with subsidiaries	• Received information on remuneration practices, trends and challenges in different local markets. • Held a joint session with the risk supervision, regulation and compliance committee to review the subsidiary action plans on internal sales force pay and conduct risk for the external sales force. • Verified that remuneration schemes factor in capital and liquidity, and do not offer incentives to assume risks that exceed Banco Santander's tolerance, thus promoting and being compatible with adequate and effective risk management.
Information for general meetings and corporate documents	
Shareholders information	• Was represented by the former committee Chair, Bruce Carnegie-Brown, who reported at the 2024 AGM on the committee's activities in 2023.
Corporate documents for 2024	• Prepared this report on 24 February 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 priorities

The committee set the following priorities for 2025:

- Keep incentive measures under continuous review to ensure that they continue to incentivize shareholder value creation and remain aligned with our organization based on five global businesses and with our solid risk management and control model. This includes a continued focus on customers, sustainable profitability and our corporate culture and behaviours.
- Continue to monitor trends and best practices in executive remuneration to further enhance our employee value proposition, promoting effective attraction and retention of key talent to deliver the Group's strategy while maintaining focus on investors and proxy advisors' expectations.
- Keep our performance management system under constant review, with a set of conversations planned between managers and teams to bring attention to what we do and how we do it, all within a solid risk culture, while driving everyone's development.
- Continue working with the nomination committee on supporting progress on inclusive culture, ensuring the avoidance of pay gaps in this regard.
- Remain focused on ensuring that the committee discharges its role in the most tangible and effective manner.

4.8 Risk supervision, regulation and compliance committee activities in 2024

Pamela Walkden
Chair of the risk supervision, regulation and compliance committee

"In 2024 the economic and political environment remained dynamic and constantly evolving. We continued to monitor the macroeconomic conditions and arising risks affecting the Group, while remaining vigilant and identifying emerging risks that could impact on our business model.

The committee's agenda is closely interconnected with the Group's strategy and operating context. As part of that, risks associated with the transformation of the retail and commercial businesses and the creation of the five global businesses remained as a top priority. We continued to supervise, in coordination with the audit committee, all the Group's global businesses and units, to ensure the robustness of our control environment.

We closely monitored credit risk and non-performing assets; market risk; operational risk; and IT and cyber risks; among others, to ensure they all remain within acceptable limits. Third party risk management was a key area of focus throughout the year in coordination with the innovation and technology committee and it will remain high on our agenda this coming year, reinforced by the alignment with new regulation on operational resilience.

Compliance and conduct risk, and in particular, financial crime has been a key feature of the committee's work during the year. We oversaw the positive progress made on our One FCC programme implementation across the Group and reviewed sanction screening activity. The valuable discussions held provided useful and constructive challenge to management, which will be taken forward in 2025.

We also ran a rigorous selection process in coordination with the nomination committee, which resulted in the appointment of David Hazell as the new Chief Compliance Officer in February 2024. David moved from Santander US to take up this role and the committee looks forward to continuing to work with him as he evolves the Compliance function to further support the Group in its transformation.

The committee remains well equipped to discharge its role with a great mix of experience and skills. We have complemented this with the appointment of José Antonio Álvarez as a member with effect from 1 January 2025. I would also like to thank Belén Romana for her service over the last years as Chair of the committee until I took over in March 2024. I am delighted that Belén is staying on the committee as a member.

In 2024 I have continued to host meetings with the subsidiary risk committee Chairs, exchanging views and best practices, and have also attended a number of the subsidiary risk committee meetings. I believe both of these are important to strengthen subsidiary governance linkages and engagement, as well as effectively utilise the experience and local knowledge. Finally, I would like to thank the Risk and Compliance teams who have put in a huge amount of time and effort to help guide the Group through 2024.

For the coming year we sadly expect a complex geopolitical context to remain. The committee will continue to remain focused and do everything possible to ensure efficient and effective risk management across the Group".

COMPOSITION

Position		Category	Appointed on

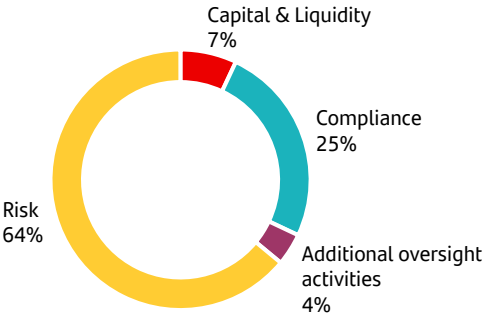
Secretary	Jaime Pérez Renovales		



A. Committee Chair since 23 March 2024.

The board of directors appointed the committee's members based on their expertise, skills and experience in the matters within the committee's scope. For more details, see section 4.1 'Our directors' and 'Board and committees skills and diversity matrix' in section 4.2.

TIME ALLOCATION

In 2024, the committee held 18 meetings, including one strategy session, four joint sessions with the audit committee, one joint session with the nomination committee and one joint session with the remuneration committee. See 'Board and committee preparation and attendance' in section 4.3 for members' attendance and the estimated average time each one spent on meeting preparation and attendance.

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the risk supervision, regulation and compliance committee's activities in 2024.

Duties	Actions taken
Risk	
Assist the board in (i) defining the Group's risks policies, (ii) determining the risk appetite, strategy and culture, and (iii) supervising their alignment with the Group's corporate values	• Reviewed and proposed to the board for approval the annual risk appetite statement proposal for 2024, including new metrics and limits. • Reviewed risk appetite metrics, compliance with the approved limits and any breaches on a quarterly basis. • Reviewed the three-year strategic plan, the annual budget and the recovery and resolution plans before the board approved them. Reviewed and challenged the identified risks and mitigating factors associated with those key processes, their consistency, and their alignment with the Group's risk appetite.
Risk management and control	• Reviewed the risk profile and risk management of the Group's global businesses and main subsidiaries in coordination with the audit committee, with a special focus on credit risk, operational risk, financial crime compliance and risks associated with our transformation. • Reviewed the risks of strategic projects and their mitigation measures, with a special focus on the global businesses, before their submission to the board. • Checked that the Group's risk management and control, most notably the risk profile assessment (RPA) and the risk control self-assessment (RCSA), remained robust. • Analysed the potential impact and opportunities associated with emerging risks and how they would affect our business model, including the different businesses and subsidiaries. • Supported the board in conducting stress tests of Banco Santander through the assessment of scenarios and assumptions, analysing the results and the measures proposed by the Risk function. • Ensured that the stress test programme was aligned with the EBA Guidelines 2018/04 on institutions' stress testing. • Received and analysed specific information on credit risk, with a special focus on non-performing assets; market, counterparty, liquidity and structural risk; operational risk (including legal and reputational risk); and social and environmental risk. The committee conducted this analysis in cooperation with the audit committee. • Received and analysed updated information on third party risk management and compliance with the requirements of DORA; and on cybersecurity and technological obsolescence, in cooperation with the innovation and technology committee. Oversaw the actions taken on the back of unauthorized access to a Banco Santander database hosted by a third party and analysed in detail the lessons learned following an investigation of the incident. • Supported the board in the supervision of crisis management and resolution planning and of the business continuity and contingency plans. • Held a strategy session with a key focus on emerging risks, the macroeconomic and geopolitical landscape, cybersecurity and the risks stemming from artificial intelligence.
Supervise the Risk function	• Reviewed the Risk function's activities, strategy, strengths and potential areas for improvement. • Ensured the ongoing independence and effectiveness of the Risk function, including the assessment of the sufficiency and appropriateness of its resourcing. • Endorsed the CRO's 2024 objectives for onward submission to the board for approval. Reviewed the CRO's annual performance against those objectives and reported the results to the remuneration committee and board of directors to set his variable remuneration. • Verified the suitability of the subsidiary CROs and participated in subsidiary CRO selection and appointment, in coordination with the Group nomination committee.
Collaboration to establish rational remuneration policies and practices	• Held a joint session with the remuneration committee to review the subsidiary action plans on internal sales force pay and conduct risk for the external sales force. • Verified that remuneration schemes factor in capital and liquidity, and do not offer incentives to assume risks that exceed Banco Santander's tolerance, thus promoting and being compatible with adequate and effective risk management. • Reviewed the ex-ante risk adjustment of total variable remuneration assigned to the global businesses and units, based on actual risk outcomes and their management, in conjunction with the remuneration committee. • Reviewed the 2024 bonus pools and the results of the exercise carried out annually to identify employees whose professional activities had a material impact on the Group´s risk profile (Identified Staff).
Regulatory and supervisory relations	• Received information on regulatory and supervisory relations, with focus on those related to the Single Supervisory Mechanism (SSM), the Single Resolution Board (SRB), the supervisors of all the Group's subsidiaries and the Supervisory Review and Evaluation Process (SREP) and specific on-site inspections related to risk and compliance matters, as appropriate.

Duties	Actions taken
Compliance	
Supervise the Compliance function	• Supervised the Compliance function's activities, strategy, strength and potential areas of improvement, as well as the development of the 2024 compliance programme, with a key focus on its support to the Group's transformation. • Ensured the ongoing independence and effectiveness of the Compliance function, including the appropriateness and sufficiency of its resourcing. • Reviewed monthly reports on regulatory issues, product governance and consumer protection, reputational risk, internal and external events, notifications and inspections by supervisors, among others. • Received updates on compliance and conduct risks from the Group's main subsidiaries and global businesses, with a special focus on the status of the implementation of the One Financial Crime Compliance programme. • Oversaw, in coordination with the nomination committee, the selection process to identify a new Chief Compliance Officer (CCO), which resulted in the appointment of David Hazell that the committee reported favourably. Monitored his onboarding process to ensure its robustness, enabling him to be truly effective in his role. • Held two private sessions with the CCO to discuss strategic compliance topics as well as to discuss independently and directly any potential material issue relating to the Compliance function. • Endorsed the CCO's 2024 objectives for onward submission to the board for approval. Reviewed the CCO's performance against those objectives and reported the results to the remuneration committee and board of directors to set his variable remuneration. • Verified the suitability of the subsidiary CCOs and participated in subsidiary CCO selection and appointment, in coordination with the Group nomination committee.
Regulatory compliance including Canal Abierto	• Reviewed our compliance with data protection regulation across the Group and received the Data Protection Officer's annual report. • Endorsed, prior to presentation to the board, amendments to the general code of conduct. • Received information, in a joint meeting with the audit committee on the Group's whistleblowing channel (Canal Abierto) with a special focus on matters within the committee's remit to ensure the Group's culture empowers employees and other persons related to Banco Santander to speak up, be heard and report irregular practices without fear of reprisal.

Financial crime compliance (FCC)	• Oversaw the Group's observance of FCC regulations as well as the activities carried out by the Compliance function:
	  ◦ Was provided quarterly progress updates on the One FCC programme implementation either on a Group, global business and/or local business perspective, including information on sanction screening activity.
	  ◦ Reviewed recommendations and observations stemming from the annual independent expert report on Banco Santander in accordance with Act 10/2010 and Royal Decree 304/2014 (on anti-money laundering and counter terrorism financing).

Product governance and consumer protection	• Reviewed reports on customer and other stakeholders' complaints, to ensure that their root causes were assessed and the action plans set to reduce and mitigate any identified deficiencies were ongoing. • Reviewed risk management and the main risks identified, as well as the concerns, priorities and actions taken by the Product Governance and Consumer Protection area regarding conduct risk with retail and vulnerable customers.
Capital and liquidity	
Assist the board in reviewing and approving capital and liquidity strategies and supervising their implementation	• Reviewed and reported favourably to the board on the annual ICAAP run by the Finance division and challenge made by the Risk function in accordance with industry best practices and supervisory guidelines. • Reviewed the capital plan according to the scenarios envisaged over a three-year period. • Reviewed and reported favourably to the board on the ILAAP, which was challenged by the Risk function and developed in line with the Group´s business model and its liquidity needs. • Reviewed liquidity risk and liquidity levels of the Group and its subsidiaries. • Continuously monitored capital levels, capital management and associated tools, the 2024 securitizations plan and the analysis of the portfolio profitability versus the risk undertaken.

Duties	Actions taken
Additional oversight activities	
Additional oversight activities	• Held four joint meetings with the audit committee to review risk, compliance and internal audit aspects of the global businesses and regions, with first line of defence representatives present. • Collectively discussed with the audit committee additional topics of mutual interest, such as risk culture and internal control environment, and received an update on internal audit matters of the Risk and Compliance functions. • The committee Chair attended specific subsidiary risk supervision, regulation and compliance committee meetings to further enhance communication between them. • Held a number of subsidiary risk supervision, regulation and compliance committee Chair meetings remotely to foster further collaboration across the Group. See 'Group and subsidiary board relations' in section 1.2 for further details. • The committee Chair and the Chair of the audit committee maintained a smooth communication, ensuring ongoing coordination and collaboration.
Information for general meetings and corporate documents	
Shareholder information	• Was represented by the former committee Chair, Belén Romana, who reported at the 2024 AGM committee's activities in 2023.
Corporate documents for 2024	• Prepared this activities report on 21 February 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 Priorities

The committee set the following priorities for 2025:

- Continue to monitor the macroeconomic landscape and supervise all the Group's risks to ensure that those risks remain within our approved risk appetite. Remain focused on credit; third party risk management (including alignment with DORA, in coordination with the innovation and technology committee); operational; market; model; IT; cyber and risk derived from emerging technologies such as artificial intelligence; and financial crime compliance.
- Continue to identify emerging and non-traditional risks to anticipate potential impacts on our business model and work in partnership with the nomination committee to ensure that people and other talent related risks are properly understood and addressed.
- Supervise the main risks associated with our transformation and the five global businesses.
- Continue to monitor the overall effectiveness of the Risk and Compliance functions in discharging their critical role in the Group.
- Remain focused on ensuring that the committee discharges its role in the most tangible and effective manner.

4.9 Responsible banking, sustainability and culture committee activities in 2024

Sol Daurella
Chair of the responsible banking, sustainability and culture committee

"In 2024 we continued to advise the board on the climate change strategy, monitoring the development of our green finance proposition and how the global businesses support our customers' transition to a low-carbon economy. As part of that, we ensured that actions for climate material exposure and strategy to align our activity with the Paris Agreement goals were consistent with the relevant disclosure requirements and standards, and supported the delivery of our public targets.

Financial inclusion, health and community support remained high on our agenda in 2024. We continued to make progress on our sustainability targets related to green finance and financial inclusion, among others, and towards equality within the Group. Santander Universidades continues to play a key role in supporting education, employability and entrepreneurship across our footprint, in line with our commitment to help people and business prosper and benefit from platforms such as Santander Open Academy, Universia and Santander X, among others.

The committee continued to analyse the divergence in public policies and actions of authorities and institutions in the countries where we operate, as well as their associated risks and the potential impact on our sustainability strategy. We kept our strong coordination with the audit committee to monitor the implementation of CSRD and non-financial disclosures in order to meet the greater expectations from stakeholders in the current complex legislative framework.

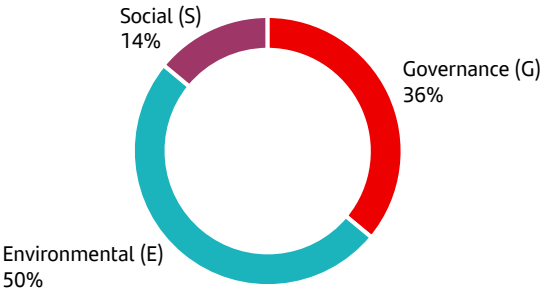
As part of the 2023 board effectiveness review conducted with the assistance of an external provider, we agreed to further develop the role and functioning of the committee given its important sustainability agenda, whilst leveraging on the work of other committees. These steps, together with our focus on continuous improvement, helped ensure that the committee remains effective.

The committee´s mix of experience and skills helped the board with the significant sustainability challenges ahead, further complemented with the appointment of both Pamela Walkden and Carlos Barrabés as members during the year. I would like to thank Ramiro Mato for his service over the last years as committee Chair until he stepped down from the board in June 2024; and to Belén Romana who remained as a committee member until March 2024.

In 2025, we will remain focused on the Group's green finance strategy, and closely monitor sustainability progress across our footprint, with a key focus on our five global businesses".

COMPOSITION

Position		Category	Appointed on
Chair	Sol Daurella	Independent	01/07/2018[A]
Members	Homaira Akbari	Independent	01/07/2018
	Carlos Barrabés	Independent	27/06/2024
	Gina Díez Barroso	Independent	31/01/2023
	Pamela Walkden	Independent	23/03/2024
Secretary	Jaime Pérez Renovales		



A. Committee Chair since 23 July 2024.

The board of directors appointed the committee's members based on their expertise, skills and experience in the matters within the committee's scope. For more details, see section 4.1 'Our directors' and 'Board and committees skills and diversity matrix' in section 4.2.

TIME ALLOCATION

In 2024, the committee held five meetings. See 'Board and committee preparation and attendance' in section 4.3 for members' attendance and the estimated average time each one spent on meeting preparation and attendance.

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the responsible banking, sustainability and culture committee's activities in 2024.

Duties	Actions taken
Environmental (E)	
Climate transition plan	• Reviewed the Group's climate change strategy and challenged it to ensure that it remained a key enabler to achieve our ambition towards net zero emissions by 2050. • Reviewed the alignment in thermal coal, power generation, energy (oil and gas), aviation, steel and auto manufacturing sectors with the Paris Agreement goals. • Reviewed the subsidiary plans to ensure their alignment with supervisory expectations and the Paris Agreement goals, covering activity regarding mortgages, commercial real estate and agriculture. • Endorsed the Group priorities for 2024 in relation to sustainability, including supporting our customers in their green transition and promoting a sustainable culture.
ESG in risk management	• Reviewed ESG factors introduced in the credit approval process, associated action plans and related achievements. • Worked with the risk supervision, regulation and compliance committee to review the progress made in embedding climate-related and environmental risks, as well as to monitor the implementation of controls and processes to mitigate ESG risks, including greenwashing.
Sustainable finance	• Reviewed the green finance strategy and its execution, including the Group´s exposure in green finance more generally. • Oversaw the sustainability strategy, including support to our customers in their green transition. • Reviewed the global businesses' progress in sustainability. • Received specific training on sustainability matters, with a key focus on CSRD to further enhance board and committee members knowledge on this matter. See 'Director training and induction programmes' in section 4.3.
Environmental footprint	• Monitored our own environmental footprint, value chain emissions and carbon neutral claim, including analysis of the associated CSRD reporting implications.
Social (S)	
Social agenda	• Reviewed our social agenda, which includes financial inclusion; financial health; business with social output; and corporate social responsibility or philanthropic activities. • Reviewed the outcomes of the holistic human rights due diligence exercise conducted and suggested to the board its associated disclosures.
Education and other support to communities	• Reviewed the progress made within our community support strategy, which includes our support to education, employability and entrepreneurship. • Reviewed Santander Universidades strategy and its alignment with the Group's transformation agenda and endorsed the associated course of action.
People and culture	• Discussed People and Culture's activities to continue supporting progress on inclusive culture, in coordination with the nomination and remuneration committees, with a key focus on the representation of women in senior positions within the Group.
Governance (G)	
Governance	• Assisted the board in ensuring that sustainability targets and metrics were embedded in the Group's remuneration schemes. As part of that, reviewed, in coordination with the remuneration committee, a proposal to further increase the alignment of the long-term incentive for 2024-2026 with our sustainability agenda. • Monitored and assessed the Group's progress on its targets to ensure that its KPIs remained relevant and aligned with committee expectations. • Identified priority sustainability areas for action based on the outcomes of a materiality assessment that the Sustainability team conducts every year. • Verified that the proposed sustainability agenda and targets remained aligned with the Group´s strategy. • Reviewed ESG global ratings' assessments of Banco Santander, identifying strengths, areas for improvement and areas of focus. Reviewed any resulting action plans after engaging with investors and NGOs on ESG-related matters. • Considered the findings and suggested areas for improvement concerning its remit derived from the 2023 board effectiveness review conducted with the assistance of an external provider and agreed on specific changes to further develop its role and functioning given the importance of the sustainability agenda, while leveraging on the work of other committees, to ensure that it remains effective. • Reviewed the progress made regarding the management of the supply chain in regards to ESG, including the compliance of associated regulatory requirements.
ESG reporting	• Supported the audit committee on the supervision and assessment of the process to prepare and present non-financial information according to the applicable regulations and international standards. • Reviewed the 2024 Group statement on non-financial information and the independent expert's report. See the 'Sustainability statement' chapter. • Reviewed the Climate Finance and Green Bond Reports in coordination with the audit committee, prior to their submission to the board for approval.

Duties	Actions taken
Regulatory landscape	• Reviewed the main European and international financial regulatory and supervisory initiatives and priorities related to sustainability. • Received information on local regulatory developments to remain abreast of local challenges and opportunities.
Information for general meetings and corporate documents	
Shareholder information	• Was represented by the former committee Chair, Ramiro Mato, who reported at the 2024 AGM committee's activities in 2023.
Corporate documents for 2024	• Prepared this activities report on 27 January 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 Priorities

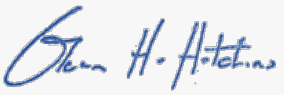
The committee set the following priorities for 2025:

- Continue to advise the board on the climate change strategy and our ambition towards net zero by 2050, monitoring the development of our sustainable finance proposition and how the global businesses support our customers' transition to a low-carbon economy.
- Oversee that actions and targets for climate material exposure and strategy to align our activity with the Paris Agreement goals are consistent with the relevant disclosure requirements and standards, and support the delivery of our targets.
- Continue to prioritize our financial inclusion, financial health and community support strategy in line with our aim to help people and businesses prosper.
- Analyse developments in public policies and actions of authorities and institutions in the markets where we operate, as well as their associated risks, and the potential impact on our sustainability strategy.
- Continue to enhance data quality and monitor sustainability disclosures and associated strategy in coordination with the audit committee, in order to meet increasing expectations from stakeholders in the current complex legislative framework.
- Remain focused on ensuring that the committee discharges its role in the most tangible and effective manner.

4.10 Innovation and technology committee activities in 2024

Glenn Hutchins
Chair of the innovation and technology committee

"Our goal as a bank is to deploy the most robust and efficient open financial services technology platform and, in particular, to become a digital bank with branches. We endeavor to do this in a manner which improves customer offerings, reduces costs, safeguards our security, meets regulatory expectations and promotes innovation. The committee's role is to support the bank in these initiatives.



In 2024, the committee held its first strategy session as an addition to our regular, quarterly meetings. We invited all board members to review and assess our global technology strategy plan to ensure that it remains aligned with the Group's priorities, with a key focus on our transformation agenda.

Over the year, the committee took a close look at our global business strategic platforms, digitalization initiatives, process automation and risk management disciplines. In particular, we focused on our common operating and business model for retail and commercial banking. The committee believes that this will enable our in-branch and service teams to free up time for customer-facing activities and to offer personal service across all channels.

The committee also reviewed our cyber security strategy and the global threat landscape with key focus on our defenses and resilience. We looked closely at third party risk management throughout the year, working in partnership with the risk committee.

We continued to position data and analytics at the core of our business strategy and, in the future, to pursue the benefits of emerging uses of artificial intelligence. We recognize that we need take advantage of the commercial opportunities inherent in AI while meeting regulatory expectations on data management and customer safety. We also remain vigilant to other emerging technologies and approaches to computation what will allow us to improve customer offerings, lower costs and improve security in the future. In this regard, we benefit from the insights and experiences of our committee members.

In June, we welcomed Carlos Barrabés, who is experienced in the commercial application of technology, as a member of the committee. Looking forward, we will continue to support the board and management team in the transformation of Santander into a technology-first enterprise".

The chart below shows the committee's approximate time allocation in 2024:

Duties and activities in 2024

This section summarizes the innovation and technology committee's activities in 2024.

Duties	Actions taken
Digital & innovation	
Digital	• Monitored metrics in connection with the Group's digitalization and associated transformation, with a special focus on customer experience, simplification and efficiency. • Reviewed core digital strategies to transform the business and accelerate new businesses growth. • Reviewed strategic technological tools developed internally to further increase value creation across the Group, improving efficiency and driving appropriate synergies. • Reviewed the execution and progress of One Transformation and its overall alignment with our strategy. • Monitored execution of the Group's digital strategy with a key focus on ensuring alignment with supervisors' expectations and regulatory demands.
Cloud	• Reviewed the cloud strategy, which focuses on improving innovation, time–to-market and efficiency with a business-based approach, ensuring alignment with applicable regulatory requirements at all times.
Innovation framework	• Reviewed the implementation of the Group's innovation agenda, leveraging on our digital and data management capabilities. • Identified the challenges and capabilities in terms of innovation to increase end-to-end business agile transformation. • Identified new opportunities to accelerate innovation across the Group and ensured that we were well placed to succeed with new business models, technologies, systems and platforms.
Technology and operations	
Technology and operations (T&O)	• Assisted the board in supervising technological risks in coordination with the risk supervision, regulation and compliance and audit committees. • Reviewed the global technology strategy plan, reported to the board on T&O planning and activities, and ensured that the T&O strategy was properly focused on the Group's key priorities, supervising its execution progress through defined top-level strategic KPIs, including those specific to the execution of One Transformation and the common architecture. • Endorsed the Group's core strategic technology priorities to integrate key digital capabilities, leveraging five pillars: agile, cloud, core system evolution, artificial intelligence and deep technology related skills and data. • Monitored the deployment of Gravity, a Santander's in-house award-winning banking platform and a software, to help the bank become a fully digital company. • Reviewed specific projects being deployed throughout the Group and their associated T&O investment through a common tool to further ensure efficiencies, synergies and robust decision-making processes. • Analysed the priorities of the T&O function and specifically, and their alignment with the Group's aim to be the best open financial services platform with innovative customer centric capabilities. • Reviewed the strategy to further simplify Group-wide processes with the aim of reducing manual operational activity, analysing alternatives for further optimization, automation and process improvement.
Cybersecurity	
Strategy	• Reviewed the Group's cybersecurity strategy, with a key focus on resilience and three main action lines: protecting the Group, bolstering its defences, and generating trust among stakeholders, customers, and broader society; and recommended it for onward submission to the board for approval. • Monitored the status and progress made on the fraud prevention plan, including its associated impacts and the actions underway to further harmonize fraud prevention capabilities across the Group.
Risk management oversight	• Assisted the board in the supervision of cybersecurity risks and those related to artificial intelligence, and associated regulatory developments in coordination with the risk supervision, regulation and compliance and audit committees. • Supervised defences against increasing threats and reviewed security controls and automated security processes. • Analysed cyber incidents (including third party risk management implications) and reviewed associated lessons learnt in coordination with the risk supervision, regulation and compliance committee. Moreover, analysed specific incidents outside the Group according to their relevance and impact. • Monitored the global cybersecurity threat landscape closely. • Received regular updates on cybersecurity risks. In 2024 it received updates at four meetings, with a special focus on crisis simulation exercises and internal data leakage protection. • Reviewed external threats such as ransomware and analysed the strategy designed to shorten data recovery time and reduce its potential impact.
Data management	
Data management	• Reviewed the data management strategy including priorities for the year, focusing on the business model and how data contributes to boost business growth and customer experience. • Reviewed the Group's approach to artificial intelligence usage as a key driver of the data and the overall Group strategy, all within a specific governance and risk management framework.

Duties	Actions taken
Information for general meetings and corporate documents	
Corporate documents for 2024	• Prepared this activities report on 14 January 2025, which includes a performance review of the committee's functions and key priorities identified for 2025. The board of directors approved it on 25 February 2025.

2025 Priorities

The committee set the following priorities for 2025:

- Continue to support the Group's innovation strategy, including the embedding of our operating model based on a global-local organization, through our own global technology platform.
- Continue to drive a culture of innovation using artificial intelligence to enhance decision-making processes, improve customer experience and drive operational savings.
- Remain abreast of emerging technologies and their potential business impact. In addition, the committee will continue monitoring associated developments in the financial sector and market players' activities, including technology companies.
- Continue to evolve our cyber security defences, with a special focus on emerging threats, as well as to continue to monitor third party risk management and alignment with DORA in coordination with the risk supervision, regulation and compliance committee.
- Remain focused on ensuring that the committee discharges its role in the most tangible and effective manner.

4.11 International advisory board

Composition

Position		Background
Chair	Larry Summers	Former Secretary of the US Treasury and President Emeritus and Charles W. Eliot University Professor of Harvard University
Members	Sheila C. Bair	Former Chair of the Federal Deposit Insurance Corporation and former President of Washington College
	Mike Rhodin	Supervisory board member of TomTom and director of HzO. Former IBM Watson Senior Vice President
	Francisco D'Souza	Managing Partner and co-founder at Recognize
	James Whitehurst	Senior Advisor at IBM and former CEO of Red Hat
	George Kurtz	CEO and co-founder of CrowdStrike. Former Chief Technology Officer of McAfee
	Nadia Schadlow	Former Deputy National Security Advisor for Strategy and former Assistant to the President of the United States
	Andreas Dombret	Former board member of Deutsche Bundesbank, of Supervisory Board of the ECB and of Bank International Settlements and former Vice Chair of Bank of America in Europe
	Carolyn Everson	Director at The Coca-Cola Company and The Walt Disney Company. Former chair of Instacart and former vice-president of Global Business Group at Facebook (Meta)
	Juan Ignacio Gallardo Thurlow	Chair of Organización Cultiba, Grupo Azucarero México and Grupo GEPP (PepsiCo bottling company in Mexico)
Secretary	Jaime Pérez Renovales	

Functions

Since 2016, Banco Santander's international advisory board has provided the Group with expert insight into innovation, digital transformation, cybersecurity, new technologies, capital markets, corporate governance, branding, reputation, regulation and compliance.

Its members are external and not members of the board. They are prominent and respected leaders who have extensive experience in the most relevant areas for the strategy of the Group, particularly in terms of innovation, digital transformation and the US and European markets.

Meetings

The international advisory board meets at least twice a year. In 2024, it met in May and October. It addressed key strategic topics for the near future within the overall context of our transformation agenda and our global-local organization with five global businesses. In particular, it covered specific topics such as the merits of the agile methodology and the implications of artificial intelligence in the financial sector, with a key focus on the Group's activity. In addition, the international advisory board analysed in depth the strategic importance of certain global businesses and geographies on a go-forward basis.

4.12 Related-party transactions and other conflicts of interest

Related-party transactions

This section contains the related-party transactions report referred to in recommendation six of the CNMV´s Corporate Governance Code, which the audit committee prepared on 20 February 2025.

Directors, senior managers and shareholders

Pursuant to the Rules and regulations of the board, a transaction that Banco Santander or its subsidiaries make with directors, shareholders who hold at least 10% of voting rights or sit on the board, and parties considered "related parties" under the International Financial Reporting Standards must be authorized:

- at the general meeting if it is worth 10% or more of assets on the last consolidated balance sheet; or
- by the board of directors in all other cases. Nonetheless, according to relevant rules and on the audit committee's recommendation, our board delegated authority to executive bodies, committees and competent proxies to approve related-party transactions if they:
  - are carried out under agreements with standard terms that would generally apply to customers who contract for the same product or service;
  - are made at prices or rates set by the supplier of such products or service or, where such products or service have no existing prices or rates, under regular market conditions as in business relations with similar customers; and
  - do not exceed 0.5% of the net annual income as stated in the last consolidated financial statements approved at the general meeting.

The board approved an internal reporting and monitoring procedure in which the audit committee confirms twice a year that such transactions authorized with delegated board powers are fair and transparent and meet the above-mentioned requirements.

The board also has an internal approval mechanism for non-banking and other transactions that do not meet the delegation requirements. It sets out minimum transaction terms and conditions in order to protect corporate and shareholder interests.

The board and audit committee check that transactions with related parties are fair and reasonable to Banco Santander and to the other shareholders.

If a related-party transaction must be approved at the general meeting or by the board, the law stipulates that the audit committee must issue a preliminary report about it. However, the law does not require the report for related-party transactions if they are approved under the board's delegated authority and meet the audit committee's requirements.

Board members must recuse themselves from all deliberations and votes on resolutions about a related-party transaction if they have a conflict of interest with it.

In 2024, the audit committee found that no director or related party, in the terms of International Financial Reporting Standards, carried out transactions deemed 'significant' or material to Santander and the related party, or under non-market conditions.

The audit committee confirmed that all related-party transactions in 2024, including those authorized with delegated board powers, had been performed correctly after conducting a bi-annual review on their conformity to the law, the Rules and regulations of the board and the conditions set by board resolution; verified the alignment with the internal reporting and monitoring procedure and that those transactions met the fairness and transparency requirements established in the aforementioned rules, and were considered fair, reasonable and under market conditions (see the audit committee activities report under section 4.5 'Audit committee activities in 2024').

Banco Santander has a policy for the admission, authorisation and monitoring of financing transactions to directors and senior managers as well as to their spouse (or similar partner), a child who is a minor or legal adult and their financial dependent, or a company controlled by a director or a senior manager whose business is to hold assets for the sole purpose of managing their personal or family wealth. The policy applies to financing transactions carried out by Banco Santander, or any of its subsidiaries, and sets out general maximum borrowing rules, interest rates and other conditions that apply to related-party transactions, which are the same for all other employees. It dictates that the board must authorize loans, credit facilities and guarantees extended to Banco Santander's directors and senior managers, and, except in the cases listed below, subsequently by the ECB:

- Transactions guaranteed in a collective agreement signed by Banco Santander, with similar terms and conditions to transactions with any employee.
- Transactions made under agreements with standard conditions that generally apply to a large number of customers, if the amount granted to the beneficiary or their related parties does not exceed EUR 200,000.

Note 5.f) 'Loans' to the consolidated financial statements describes the direct risk Grupo Santander maintained with board members as at 31 December 2024. Those transactions are consistent with market conditions, have the same terms and conditions as transactions with employees, and allocate payments in kind where appropriate.

No Banco Santander shareholder holds 10% or more of voting rights or has a seat on the board.

Intra-group transactions

The law does not consider direct or indirect transactions with a wholly-owned subsidiary or investee to be "related-party" if no party related to Banco Santander holds an interest in it. Thus, Santander monitors subsidiaries or investees' observance of these rules if they can be affected by related-party transactions.

The rules and approval bodies and procedures that apply to intragroup transactions are the same as for transactions with customers to make sure they are conducted at market prices and conditions.

Note 53 'Related parties' to the consolidated financial statements and note 47 'Related parties' to the individual financial statements state the balance of transactions with subsidiaries, affiliates, jointly-owned entities, directors, senior managers and related parties.

Other conflicts of interest

Banco Santander has internal rules and procedures for preventing and managing conflicts of interest that can arise from the Group´s operations or with directors and senior managers. Our General code of conduct and an internal policy for Group employees, directors and entities set out the guidelines we follow to prevent and manage conflicts of interest.

Directors and senior managers

The Rules and regulations of the board stipulate that our directors must adopt necessary measures to avoid situations in which their direct or indirect interests may enter into conflict with corporate interests or their duty towards Banco Santander.

Directors must refrain from using Santander's name or their position to exert undue influence on private transactions; using corporate assets for private purposes; using business opportunities for personal gain; obtaining favours or remuneration from others for being directors; and engaging in activities for themselves or others that will put them and Banco Santander in competition or permanent conflict.

Directors must report to the board conflicts of interest that they or their related parties may have with Banco Santander, which are to be disclosed in the financial statements. The nomination committee oversees compliance with the rules set from time to time to avoid potential conflicts of interest in other roles held by directors.

In 2024, no director reported a conflict of interest with Santander. Nonetheless, in 2024 there were 41 abstentions in votes on matters deliberated at board and committee meetings, including 19 instances where directors did not vote on resolutions on nominations, re-elections or board committee or Chair assignments; nine instances concerning remuneration; one instance relating to a transaction between Banco Santander and a director; and 12 instances where directors removed themselves during the review of their status and suitability.

The Code of conduct in security markets (CCSM), which directors and senior managers follow, provides mechanisms to recognize and resolve conflicts of interest. It also dictates that directors and senior managers must provide the Compliance area with a statement on their relations, and they must keep it up to date.

Subjected persons must also disclose any matter that could put them in a conflict of interest because of their ties or otherwise, and the chief officer of their area, their common senior officer (where several areas are involved), or whoever the Compliance area decides will resolve it.

The CCSM also dictates that directors, senior managers and related parties should not trade Grupo Santander's securities within 30 days either from the time they are bought or sold or before the quarterly, half-year or annual results are announced and published.

The CCSM can be found on our corporate website.

Group companies

Banco Santander is the Group's only company listed in Spain, where it's not required to have mechanisms in place to resolve conflicts of interest with a listed subsidiary.

In a conflict of interest with a listed subsidiary, Banco Santander, as the parent company, must consider the interests of all its subsidiaries, the presence of minority shareholders in them, and how these conflicts may affect the long-term interests of the Group. Subsidiaries should also consider the interests of Grupo Santander when making decisions within their remit.

The Group structures governance on a system of rules that guarantees proper oversight over subsidiaries. We have a Group-subsidiary governance model that sets out the key rules for Group-subsidiary relations and conflict of interest resolution mechanisms. For more details, see section 7. 'Group structure and internal governance'.

5. SENIOR MANAGEMENT TEAM

The table below shows the profiles of Banco Santander's senior management team (Senior Executive Vice Presidents). It does not include executive directors, whose profiles are described in section 4.1 'Our directors').

Name	Position	Profile
Mahesh Aditya	GROUP CHIEF RISK OFFICER	Mahesh Aditya joined Grupo Santander in 2017 as Chief Operating Officer of Santander Holdings USA and became Chief Risk Officer in 2018. He was appointed Chief Executive Officer of Santander Consumer USA in 2019, and Group Senior Executive Vice President and Group Chief Risk Officer in 2023. Previously, he had been Chief Risk Officer at Visa (2017-2019) and Chief Risk Officer of Retail & Mortgage Banking at JP Morgan, Capital One and Citibank.
Daniel Barriuso	GLOBAL HEAD OF RETAIL & COMMERCIAL BANKING AND GROUP CHIEF TRANSFORMATION OFFICER	Daniel Barriuso joined Grupo Santander in 2017 as Global Head of Cybersecurity (CISO) and Fraud Prevention. In 2023, he was named Senior Executive Vice President, Chief Transformation Officer, and Global Head of Retail and Commercial Banking. Previously, he had held several executive roles at BP, Credit Suisse and ABN AMRO.
Julia Bayón	GROUP CHIEF AUDIT EXECUTIVE	Julia Bayón joined Grupo Santander in 1994 and was Head of Banesto's International and Wholesale Banking legal service from 2001 to 2013, when she moved on to running the legal service for Global Transaction Banking, Credit and Restructuring at Banco Santander. In 2016, she became Head of Legal for Corporate and Investment Banking. In 2021, she was appointed Head of the Legal Service for Business and deputy secretary of the Banco Santander board of directors. In 2024, she became Group Senior Executive Vice President and Chief Audit Executive.
Juan Manuel Cendoya	GROUP HEAD OF COMMUNICATIONS, CORPORATE MARKETING AND RESEARCH	Juan Manuel Cendoya joined Grupo Santander in 2001 as Group Senior Executive Vice President (*director general*) and Group Head of the Communications, Corporate Marketing and Research division. In 2016, he was appointed Vice Chair of the board of directors and Head of Institutional and Media Relations of Santander España. Previously, he had been Head of the Legal and Tax department of Bankinter, S.A. He is also a State Attorney for Spain.
José Doncel	GROUP CHIEF ACCOUNTING OFFICER	José Doncel joined Grupo Santander in 1989 as Head of Accounting. He had also served as Head of Accounting and Financial Management at Banesto (1994-2013). He was appointed Senior Executive Vice President (*director general*) and Head of the Internal Audit division in 2013 and Group Chief Accounting Officer in 2014.
José Antonio García Cantera	GROUP CHIEF FINANCIAL OFFICER	José Antonio García joined Grupo Santander in 2003 as Group Senior Executive Vice President (*director general*) of Global Wholesale Banking of Banesto and was appointed CEO in 2006. He was appointed Senior Executive Vice President of Global Corporate Banking at Banco Santander in 2012 and Group Chief Financial Officer in 2015. Previously, he had served on the executive committee of Citigroup EMEA, as well as on the board of directors of Citigroup Capital Markets, Ltd and Citigroup Capital Markets UK.
Javier García-Carranza	GLOBAL HEAD OF WEALTH MANAGEMENT & INSURANCE	Javier García-Carranza joined Grupo Santander in 2016 as Global Head of Corporate Holdings and Investment Platforms before being appointed Global Head of Wealth Management & Insurance in 2024. Previously, he was Head of Principal Investments and Investment Banking for Europe, the Middle East and North Africa at Morgan Stanley.

Name	Position	Profile
David Hazell	GROUP CHIEF COMPLIANCE OFFICER	David Hazell joined Grupo Santander in 2012 as Chief Conduct & Compliance Officer of Santander UK. In 2018, he was named Chief Compliance Officer of Santander Holdings USA and in 2022 took the same role at Santander Bank NA. In 2024, he became Group Senior Executive Vice President and Group Chief Compliance Officer. Previously, he was Head of Risk and Regulation (2004-2009) and of Governance, Risk and Compliance (2009-2010) at PricewaterhouseCoopers LLP, and Operational & Regulatory Risk Director at Aviva PLC (2010-2012).
José María Linares	GLOBAL HEAD OF CORPORATE & INVESTMENT BANKING	José María Linares joined Grupo Santander in 2017 as Senior Executive Vice President (*director general*) and Global Head of Corporate and Investment Banking. Previously, he served as director and senior equity analyst at Société Générale (1997-1999). He joined J.P. Morgan in 1999 and was subsequently appointed managing director and Head of Global Corporate Banking at J.P. Morgan Chase & Co. (2011-2017).
Mónica López-Monís	GROUP HEAD OF SUPERVISORY AND REGULATORY RELATIONS	Mónica López-Monís joined Grupo Santander in 2009 as General Counsel and secretary of the board of Banesto. In 2015, she was appointed Group Senior Executive Vice President (*director general*) of Banco Santander and Group Chief Compliance Officer until her appointment in 2019 as Group Head of Supervisory and Regulatory Relations. Previously, she had been General Counsel at Aldeasa, S.A. She also was General Counsel at Bankinter, S.A., as well as independent director at Abertis Infraestructuras, S.A. She is also a State Attorney for Spain.
Dirk Marzluf	GROUP CHIEF OPERATING & TECHNOLOGY OFFICER	Dirk Marzluf joined Grupo Santander in 2018 as Group Senior Executive Vice President and Head of IT and Operations. Previously, he had held several roles at AXA Group, where he became CIO, leading the insurance group's technology and information security transformation and co-sponsoring its digital strategy. He also held global senior management roles at Accenture, Daimler Chrysler and Winterthur Group.
José Luis de Mora	GROUP HEAD OF CORPORATE DEVELOPMENT AND FINANCIAL PLANNING	José Luis de Mora joined Grupo Santander in 2003 to Head the Group's Strategic Plan Development and Acquisitions. In 2015, he was appointed Group Senior Executive Vice President (*director general*) and Group Head of Financial Planning and Corporate Development. He was also Head of Strategy (2019-2023) and Global Head of Digital Consumer Bank (2020-2025).
Jaime Pérez Renovales	GROUP GENERAL COUNSEL	See profile in section 4.1 'Our directors'.
Nitin Prabhu	GLOBAL HEAD OF DIGITAL CONSUMER BANK	Nitin Prabhu joined Grupo Santander in January 2025 as Senior Executive Vice President and Global Head of Digital Consumer Bank. From 2012, he worked at PayPal, where he held leadership roles spanning the payments, consumer, and merchant businesses, and where he became the Senior Vice President of Small and Medium Sized Businesses and Financial Services Products. Prior to PayPal, he worked at eBay and consulted with Fortune 1000 companies globally.
Javier Roglá	GROUP HEAD OF PEOPLE & CULTURE	Javier Roglá joined Grupo Santander in 2016 as Global Head of Santander Universities and CEO of Universia. In 2021 he became Group Senior Executive Vice President and Chief Talent Officer, and in 2024 was appointed Head of the Group's People & Culture division. He sits also on the board of Teach for All and was previously a business development consultant at Endesa and principal at Boston Consulting Group, as well as co-founding and running Fundación Empieza por Educar.

6. REMUNERATION

Sections 6.1, 6.2, 6.3, 6.5, 6.6, 6.7, 9.4 and 9.5 comprise the annual report on directors' remuneration that will be submitted to the consultative vote of the general shareholders' meeting.

In addition, sections 6.4 and 6.5 sets out the directors' remuneration policy for 2025, 2026 and 2027, which will be put to the binding vote of the general shareholders' meeting.

The annual report on directors' remuneration and the directors' remuneration policy for 2025, 2026 and 2027 were approved by our board of directors on 25 February 2025. All directors were present at the time of vote casting and voted in favour.

The remuneration policy for directors in force as of the date of this report is available on our corporate website.

Introduction

Brief summary of strategic accomplishments in 2024

- Santander achieved an attributable profit of EUR 12,574 million in 2024, a 14% increase versus 2023, thanks to strong revenue growth across all global businesses and regions, as well as the addition of eight million new customers to 173 million.
- The group maintained disciplined and rigorous cost control, with the best efficiency ratio in 15 years and continued to increase profitability and shareholder value creation, with a return on tangible equity of 16.3%; earnings per share of EUR 0.77, up 18%, and tangible net asset value per share of EUR 5.24 at the end of the year. Total shareholder return during the year was 23.2%.
- These accomplishments enabled us to exceed our strategic goals set for 2024 bonus pool, mainly in capital and customer growth, so total executive variable remuneration increased by 4% compared to the previous year.

Shareholder engagement and responsiveness

Santander has historically received strong support for our remuneration policy proposals — averaging 90% between 2019 and 2023. However, at our 2024 annual shareholder meeting, the remuneration policy proposal received support from 74.8% of votes for. This lower-than-usual support prompted our board of directors to engage with our top shareholders to understand their perspectives on our remuneration system, identify any concerns leading to votes against our proposed policy and make changes to assume best possible alignment with shareholders.

Meetings were held with the16 top investors (controlling approximately 24% of the Banco Santander's share capital) and with the major proxy advisory firms, ISS and Glass Lewis (regarding their methodologies and vote recommendations). All of these discussions were led by Glenn Hutchins, our Lead Independent Director and Chairman of our remuneration committee (see 'Statement from Glenn Hutchins, Lead Independent Director' in section 1 and 'Engagement with shareholders in 2024' in section 3.1). While primarily focused on remuneration, these meetings also covered additional topics of interest to our investors including board structure, sustainability strategy and virtual shareholder meetings.

Changes approved based on shareholder feedback

Overall feedback and insights received for many aspects of our remuneration programme were positive, since the company is committed to paying for performance and a significant portion of pay is at risk, but some general themes emerged during discussions, including expectations around an increase of the percentage of variable pay which is long-term oriented and higher threshold for TSR vesting. Our remuneration committee and the board of directors carefully reviewed our shareholders' feedback and have taken steps to address these concerns. This has resulted in a number of changes to our remuneration policy for 2025, as summarized below (for more details on these actions, see section 6.4):

1. The portion of variable remuneration paid in equity has increased from 50% to 60%.
2. The minimum relative TSR threshold for vesting has increased from the 40th percentile versus peers to the 50th percentile in the long-term award, as several investors have indicated this as a preference, in order to avoid vesting below median peer performance levels.
3. The weight of relative TSR within the long-term metrics has increased from 40% to 50%.
4. Long-term metrics application has increased from 36% of total variable remuneration to 40%, to reinforce long-term value creation in the company.

Additionally, Santander has enhanced its public remuneration disclosures to provide further detail on our Committee's process for setting the Remuneration policy.

In response to feedback from investors, this reports also contains further explanations on how we set executive remuneration and

align pay with performance, including the peer selection criteria for this analysis. Banco Santander follows a rigorous process which includes an annual review of comparative market data to ensure our pay remains competitive in the marketplace (section 6.3).

We believe these changes further strengthen the alignment of management and shareholders' interest.

6.1 Principles of the remuneration policy

Directors' remuneration in their capacity as such

The board of directors sets the individual remuneration of directors (including executive directors) for the performance of supervisory and collective decision-making duties within the amount fixed by shareholders and commensurately with the roles they perform on the collective decision-making body, their committee membership and attendance, and other objective circumstances the board might consider.

Remuneration of directors for executive duties

Banco Santander's remuneration policy for executive duties (which also generally applies to Banco Santander employees) dictates that:

1. Remuneration must be in line with shareholders and customers' interests, conducive to creating long-term value and compatible with our rigorous risk management, long-term strategy and values, as well as with maintaining a sound capital base.
2. Fixed remuneration must make up a significant proportion of total compensation.
3. Variable remuneration must reward performance for achieving individual, business unit and, as the case may be, Group targets.
4. The global remuneration package and its structure must be competitive in order to attract and retain talent.
5. Remuneration decisions must be free of conflicts of interest and discrimination of any kind different from that based on the performance assessment of objectives and corporate behaviours. Remuneration must be free of gender-based bias and help eliminate inequalities that could result from it.

The remuneration elements the policy lays down include necessary mechanisms to ensure remuneration will be conducive to achieving strategic and long-term sustainability objectives of Banco Santander.

Accordingly, it bases executive directors and senior managers' variable pay on pre-determined, specific and quantifiable financial, sustainability-based and value-creation targets that are consistent with Banco Santander's interests, including in regard to environmental, social and governance matters.

For more details, please see section 6.3 about the policy's application in 2024 and section 6.4 about the remuneration policy for 2025 and subsequent years.

Lastly, the remuneration committee and the board enlisted the assistance of Willis Towers Watson to:

- Compare markets and entities similar to the Group in size, characteristics and operations using relevant data for setting remuneration.
- Estimate the fair value of variable remuneration linked to long-term objectives.

6.2 Remuneration of directors for supervisory and collective decision-making duties: policy applied in 2024

A. Composition and limits

According to our Bylaws, the remuneration of directors in their roles consists of a fixed annual amount set at the general shareholders' meeting. This amount remains in effect until shareholders vote to amend it, even though the board may reduce it in the years it deems appropriate. At the AGM, remuneration for 2024 was set at EUR 6 million (limit that has not been updated since 2012 and whose amount finally consumed has been systematically lower), which included (a) an annual allotment and (b) attendance fees.

Santander has taken out a civil liability insurance policy for directors and other executives of the Group, subject to usual terms proportionate to its circumstances.

Directors can receive shares, share options or other forms of share-based compensation, subject to prior approval at the general meeting. Directors can also receive other compensation following a proposal made by the remuneration committee and upon resolution by the board of directors, as may be deemed appropriate, in consideration for the performance of other duties in Banco Santander, whether they are executives' duties or not, in addition to their oversight and collective decision-making as board members.

Non-executive directors do not have the right to receive any benefit on the occasion of their removal from office.

B. Annual allotment

Each director received the amounts for serving on the board and its committees and positions held in them included in the chart below for 2023 and 2024.

In accordance with the remuneration policy approved at the general shareholders' meeting on 22 March 2024, the annual allotment for board and committee membership are for the same amounts for annual allotments as those initially established for 2023, except for the responsible banking, sustainability and culture committee, which was updated to EUR 28 thousand, thus equalizing its remuneration to other committees of mandatory existence, considering the importance and complexity of the matters addressed in it. Applicable amounts were:

Amount per director in euros	2024	2023
Members of the board of directors	98,000	98,000
Members of the executive committee	170,000	170,000
Members of the audit committee	43,000	43,000
Members of the nomination committee	28,000	28,000
Members of the remuneration committee	28,000	28,000
Members of the risk supervision, regulation and compliance committee	43,000	43,000
Members of the responsible banking, sustainability and culture committee	28,000	18,000
Members of the innovation and technology committee	28,000	28,000
Chair of the audit committee	70,000	70,000
Chair of the nomination committee	50,000	50,000
Chair of the remuneration committee	50,000	50,000
Chair of the risk supervision, regulation and compliance committee	70,000	70,000
Chair of the responsible banking, sustainability and culture committee	50,000	50,000
Chair of the innovation and technology committee	70,000	70,000
Lead independent director[A]	110,000	110,000
Non-executive Vice Chair	30,000	30,000

A. Glenn Hutchins has been allocated EUR 700,000 (including annual allowances and attendance fees) in minimum total annual pay set for the required time and dedication to perform his roles.

C. Attendance fees

Pursuant to board-approved resolutions on the remuneration committee's recommendations, attendance fees for board and committees meetings (with the exception of the executive committee, for which no fees are set) added up to the amounts included in the chart below for the last two years.

Since we had not reviewed the attendance fees since 2016, shareholders at the 2024 AGM approved an increase of 4% in respect of 2023. This increase compensates for board members' greater time commitment in relation to those of other comparable banking groups, based on an independent expert analysis carried out in 2023.

Attendance fees per director per meeting in euros	2024	2023
Board of directors	2,704	2,600
Audit committee and risk supervision, regulation and compliance committee	1,768	1,700
Other committees (excluding executive committee)	1,560	1,500

D. Breakdown of Bylaw-stipulated emoluments

Total director Bylaw-stipulated emoluments and attendance fees received in 2024 amounted to EUR 5.4 million (EUR 5.3 million in 2023). This is 11% less than the amount approved at the general meeting. Each director earned the following amounts for these items:

		Amount in euros											
		2024											2023
		Annual allotment									Board and committee attendance fees	Total By-law stipulated emoluments and attendance fees	
Directors	Category	Board[F]	EC	AC[1]	NC[2]	RC	RSRCC[3]	RBSCC[4]	ITC[5]	Total			
Ana Botín	Executive	98,000	170,000	—	—	—	—	—	43,944	311,944	56,472	368,416	411,000
Héctor Grisi	Executive	98,000	170,000	—	—	—	—	—	28,000	296,000	56,472	352,472	339,500

Total		**1,791,323**	**933,111**	**306,022**	**182,828**	**168,378**	**263,022**	**190,277**	**280,310**	**4,115,270**	**1,240,200**	**5,355,470**	**5,330,650**

A. Stepped down as director on 22 March 2024.
B. All amounts received were reimbursed to Fundación Botín.
C. Stepped down as director on 27 June 2024.
D. Director and member of the NC, RBSCC and ITC since 27 June 2024.
E. Director since 27 June 2024.
F. Also includes emoluments for other roles in the board.
EC: executive committee. AC: audit committee. NC: nomination committee. RC: remuneration committee.
RSRCC: risk supervision, regulation and compliance committee. RBSCC: responsible banking, sustainability and culture committee. ITC: innovation and technology committee.
Changes in the chairship of the committees:
1. Germán de la Fuente was appointed Chair of the AC on 23 March 2024, replacing Pamela Walkden.
2. Belén Romana was appointed Chair of the NC on 23 March 2024, succeeding Bruce Carnegie-Brown.
3. Pamela Walkden was appointed Chair of the RSRCC on 23 March 2024, replacing Belén Romana.
4. Sol Daurella assumed the chairship of the RBSCC on 23 July 2024. Pamela Walkden joined to the RBSCC on 23 March 2024, replacing Belén Romana.
5. Glenn Hutchins was appointed Chair of ITC on 23 March 2024, replacing Ana Botín.

6.3 Remuneration of directors for executive duties

i) How we set executive directors pay

We set the remuneration structure for executive directors by considering company performance as well as Santander's unique individual circumstances such as multiple stock exchange listings, the geographical distribution of the company's operations, sales and employees, and the clear industry-specific pressures in terms of talent attraction and retention. As explained below, we conduct a benchmarking analysis for the executive chair and CEO positions every year in order to establish a framework of reference for what competitors are paying.

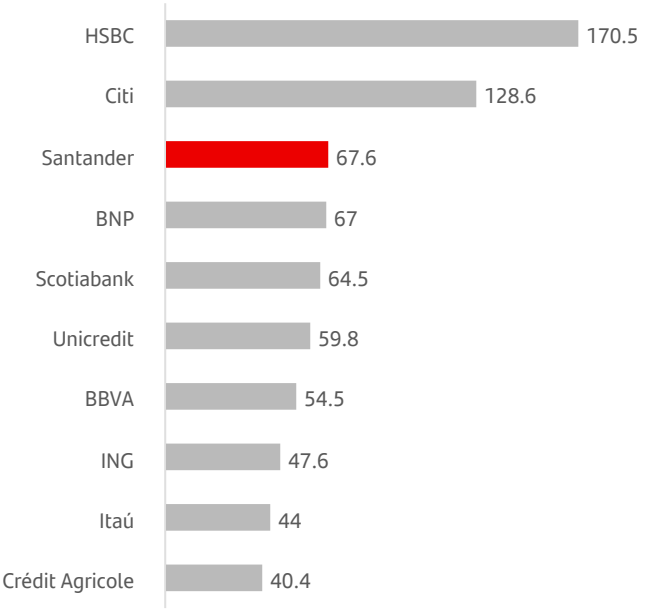
ii) How we determine our peer group

Banco Santander conducts an annual comparative review of executive directors' and top management remuneration against a peer group comprised of global banks. Because we have extensive international operations and we compete for talent on a global scale, our peer group appropriately reflects these characteristics. While two-thirds of the companies in our comparator group are European, we include banks from the US and Brazil due to the strong presence of Santander in those countries. For instance, over 50% of revenues and nearly half of profits from our secondary business segments came from the Americas in 2024, making this region a critical market for us both from a business perspective and as a source of talent.

	Europe	DCB Europe	North America	South America	% Attributable to the Americas
Revenue (EUR million)	23,510	5,679	13,915	19,783	54%
Attributable profit (EUR million)	6,644	642	2,579	3,863	47%
Total customers (thousands)	46,821	19,550	25,762	80,405	62%
Total employees	65,746	16,792	42,846	79,571	60%

As % of total operating areas, excluding the Corporate Centre.

To select the peer group, Group governing bodies follows a robust process that takes into account and ranks potential peers on the following criteria: market capitalization, scale, brand recognition, geographical diversification, business model and regulatory framework.



We regularly review the validity of our peer group and make the necessary changes to ensure it properly reflects our business and talent markets. Following an assessment in autumn of 2024, we determined that for 2025 our peer group should remain unchanged from 2024 and also from 2023. The group comprises the following companies:

- BBVA
- BNP Paribas
- Citi
- Crédit Agricole
- HSBC
- ING
- Itaú
- Scotiabank
- Unicredit

Why did we choose these banks for the peer analysis?

- To ensure a comparison under similar macroeconomic and regulatory landscape.
- To be able to identify market trends and dynamics.
- To capture the latest developments in the banking industry.
- To monitor banks with similar size, performance, geographic footprint, business model and strategy.
- To identify outliers and best practices across the sector.

Market Cap (EUR bn) at 2024 closing date

iii) Performance-based Pay and alignment with shareholder value

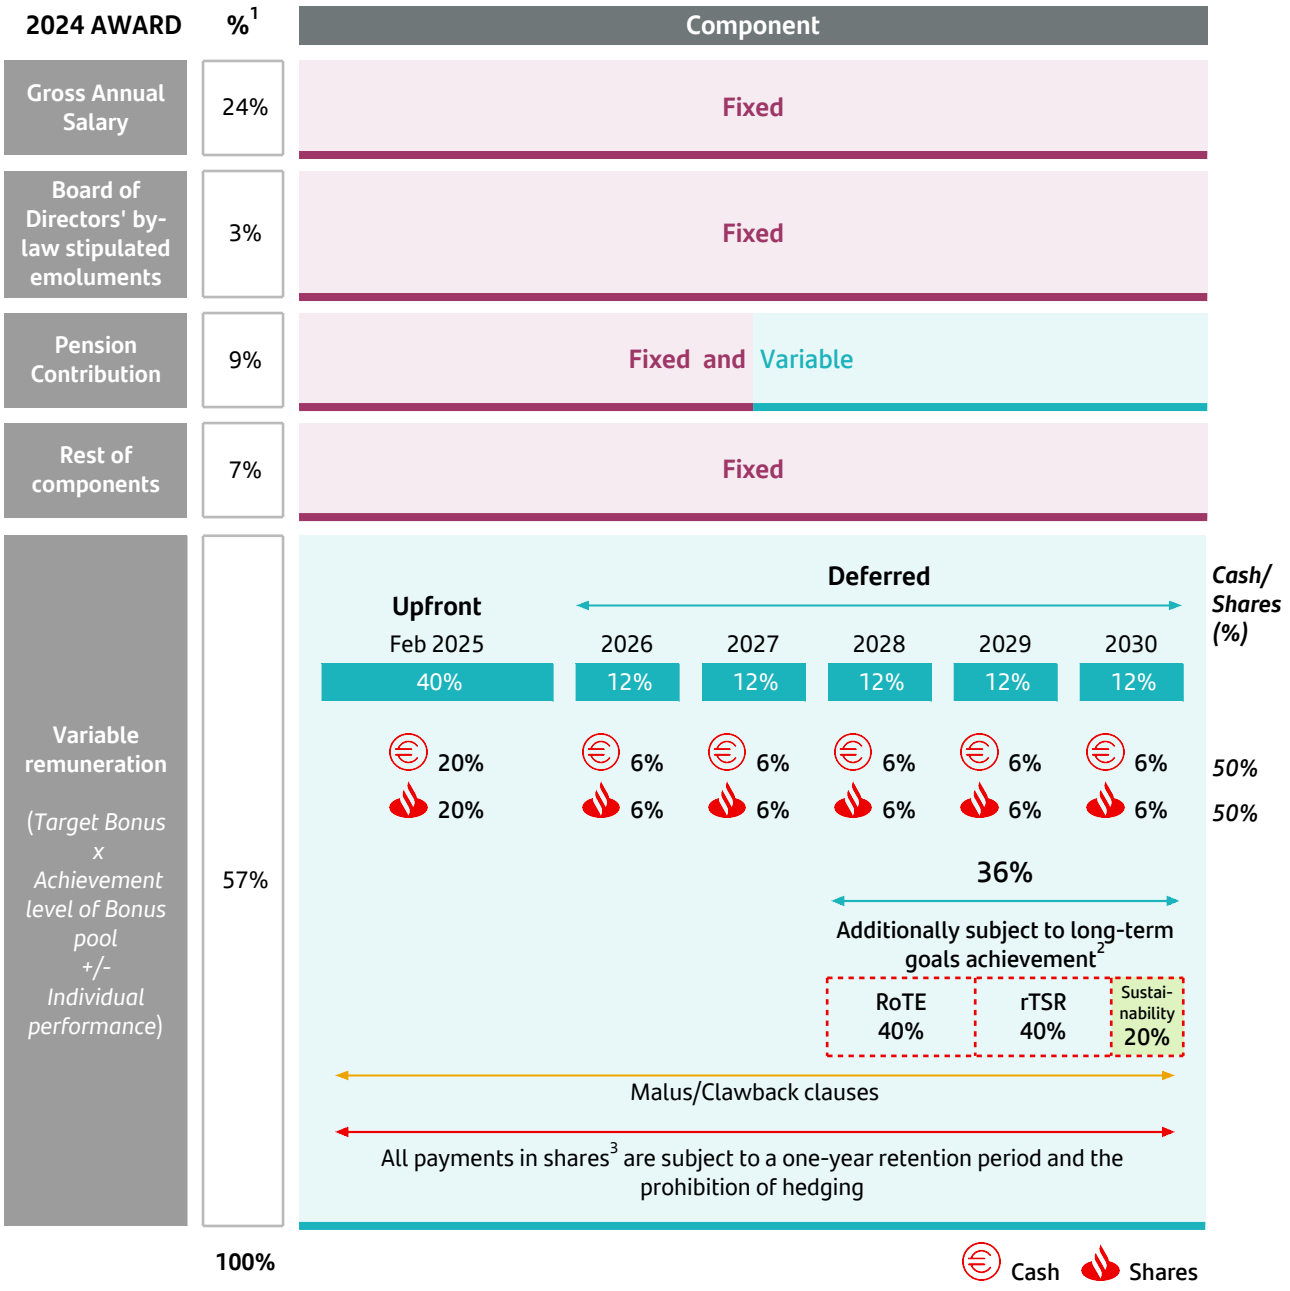
Our remuneration programme mainly focuses on paying for performance, with a significant portion of each executive's remuneration at-risk. Additionally, variable pay outcome depends on the achievement of performance targets that align with our corporate strategy and lead to enhanced value for our

shareholders. The main purpose of this incentive programme is to incentivise long-term value creation.

In this sense, for year 2024:

- 61% of our Executive Chair's total compensation is performance-based and 57% of our CEO`s total compensation is performance based.
- 36% of our executive director's total variable remuneration is subject to long-term metrics that include relative TSR, return on tangible equity and other sustainability metrics and therefore strengthen the alignment of our executive director's interests with the shareholder's interests in the long-term. This will increase from 36% to 40% in year 2025.
- Additionally, 50% of their variable remuneration is delivered in the form of equity instruments (mainly Banco Santander S.A. shares), with this portion to be increased up to 60% in year 2025.

v) Summary of executive remuneration composition



The policy on directors' remuneration for executive duties in 2024 was approved by the board of directors and put to a binding vote at the 2024 AGM, with 74.8% votes in favour. The table below summarizes the main items of remuneration policy of Ana Botín and Héctor Grisi.

Targets related to performance metrics are intended to be challenging, with payout levels established after considering upside/downside scenarios, sensitivity analysis and year-over-year growth comparisons, to ensure rigorous alignment of payouts to performance.

iv) How we include sustainability metrics in the variable incentive scheme

The current remuneration policy incorporates mechanisms that link variable remuneration to the achievement of financial, sustainability, and value creation objectives. These objectives are specific, measurable, and aligned with the bank's interests, encompassing environmental, social, and governance (sustainability) factors. For further details, please see section I.

Component	Type	Policy	Effective in 2024
Gross annual salary	Fixed	→ Paid in cash on a monthly basis (+5% vs 2023).	Ana Botin: EUR 3,435 thousand. Héctor Grisi: EUR 3,150 thousand.
Variable remuneration	Variable	→ Individual target bonus updated (+5% vs 2023). → Calculated against annual quantitative metrics and a qualitative assessment, and taking into account individual performance. → 50% of each payment is instruments, consisting of Banco Santander, S.A instruments, and restricted stock units (RSUs) of PagoNxt, S.L. → The number of instruments is set at the time of the award. → 40% paid in 2025. → 60% deferred in five years. ◦ 24% paid in equal parts in 2026 and 2027. ◦ 36% paid in equal parts in 2028, 2029 and 2030, provided certain long-term objectives are met (2024-2026).	• See section 6.3 B ii for details on annual metrics and assessment. • See section 6.3 B iii for details on individual variable pay. • See section 6.3 B iv for details on long-term metrics.
Pension scheme	Fixed	→ Annual contribution of 22% of base salary.	• No changes.
	Variable	→ Annual contribution of 22% of 30% of the average of variable remuneration in the last three years.	• See section 6.3 C for details on annual contributions and pension balance.
Other remuneration	Fixed	→ Includes life, accident and medical insurance, and other in-kind compensation. → Includes for the Executive Chair a fixed remuneration supplement in cash (not considered salary or pensionable) since supplementary death and disability benefits were eliminated.	• Regarding fixed remuneration supplement, no change for Ana Botín since 2018. • Héctor Grisi will not receive supplement in his fixed remuneration.
		→ Payment for non-compete commitment	No changes.
Shareholding policy	N/A	→ Executive directors also have the obligation to hold them for three years from their award date, unless the director already holds shares for an amount equivalent to 200% of their net annual salary (calculated on the basis of their gross annual salary). In such case, the regulatory obligation to hold shares is for one year from their grant date.	• Policy updated during 2020 to assure compliance with recommendation 62 to the Good Governance Code for Listed Companies of the CNMV. • Both Ana Botín and Héctor Grisi maintain an amount in shares higher than 200% of their fixed pay.

Remuneration scheme applicable to Executive Chair and CEO.
1. Example with Executive Chair 2024 percentages over total remuneration.
2. Long-term metrics shown for 2024 award at fair value of 70%, as have been determined by an independent expert.
3. Executive directors also have the obligation to hold them for three years from their award date, unless the director already holds shares for an amount equivalent to 200% of their net annual salary (calculated on the basis of their gross annual salary). In such case, the regulatory obligation to hold shares is for one year from their grant date.

A. Gross annual salary

On the remuneration committee's recommendation, and due to the excellent business results and total shareholder return in 2023, in order to ensure a competitive remuneration compared to other peer groups, the board resolved to increase 5% the annual salary for Ana Botín and Héctor Grisi in 2024 versus 2023.

Fixed pension contribution continues to be 22% of gross annual salary for 2024.

Executive directors' gross annual salary and fixed annual contribution to pensions for 2024 and 2023 were as follows:

EUR thousand	2024 Gross annual salary	2024 Fixed annual pension contribution	2024 Total[A]	2023 Gross annual salary	2023 Fixed annual pension contribution	2023 Total[A]
Ana Botín	3,435	756	4,191	3,271	720	3,991
Héctor Grisi	3,150	693	3,843	3,000	660	3,660
Total	**6,585**	**1,449**	**8,034**	**6,271**	**1,380**	**7,651**

A. Additionally, Ana Botín received in 2024 and 2023 EUR 525 thousand as a fixed remuneration supplement. Héctor Grisi did not receive fixed remuneration supplement.

B. Variable remuneration

i) General policy for 2024

The board approved the executive directors' variable remuneration on the remuneration committee's recommendation, according to the policy approved at the general shareholders' meeting:

- Variable components[1] of executive directors' total remuneration in 2024 should represent less than 200% of fixed components, as established by resolution of the AGM on 22 March 2024.
- At the beginning of 2025, on the remuneration committee's recommendation, the board approved the final amount of the 2024 incentive, based on the bonus pool calculated in accordance with the directors' remuneration policy approved at the general shareholders' meeting on 22 March 2024, and in consideration of:
  - Short-term quantitative metrics measured against annual objectives.
  - A qualitative assessment that cannot adjust the result by more than 25 percentage points upwards or downwards. While the metrics considered are qualitative, the assessment is not discretionary. Rather, it is based on an assessment of objective, measurable and audited goals, as described below.
  - An exceptional adjustment that, if applicable, must be supported by evidence.
  - The final 2024 individual incentive is determined based on the bonus pool payout, the executive director's target bonus and the individual performance resulting from (i) their individual objectives (which generally match the Group's and cover financial, risk management and solvency position, as well as fostering the five global businesses: Payments, Digital Consumer Bank, Retail & Commercial Banking, CIB and Wealth; and accelerating the transformation of the Bank into One Santander, with a special focus on IT, people and the sustainability agenda); and (ii) how they achieve them in consideration of how they manage employees and follow the corporate values.

A. Any exceptional adjustment supported by evidence

Quantitative metrics and qualitative assessment aspects are described below.

- Payment of the approved incentive is split equally into cash and instruments, the latter as follows:
  - EUR 500,000 and EUR 420,000 in PagoNxt, S.L. RSUs for Ana Botín and Héctor Grisi, respectively.
  - The rest, all in shares of Banco Santander.
- 40% is paid in 2025, once the final amount has been set. The remaining 60% will be deferred in equal parts over five years (subject to long-term metrics) as follows:
  - The deferred amounts payable in 2026 and 2027 (24% of the total), will be paid if none of the malus clauses described below are triggered.
  - The deferred amounts payable in 2028, 2029 and 2030 (36% of the total), will be paid if the malus clauses are not triggered and the multi-year targets described below are reached. These targets can reduce these amounts and the number of deferred instruments or increase them up to a maximum achievement ratio of 125%, so executives have the incentive to exceed their targets.
- Deferred amounts in cash may be adjusted for the inflation related to the deferral period.
- All payments in shares are subject to a three-year retention period, unless the director already holds shares for an amount equivalent to twice his/her annual fix remuneration, in which case the shares would be subject only to the regulatory one-year retention period obligation.
- The hedging of the instruments received during the retention and deferral periods is expressly prohibited. The sale of shares is also prohibited for one year from time they are received.
- All deferred payments can be subject to malus. Similarly, Santander can claw back paid incentives in the scenarios and for the period dictated in the Group's malus and clawback policy.

ii) Quantitative metrics and qualitative assessment for 2024

Executive directors' variable remuneration for 2024 has been based on the corporate centre executives' common bonus pool, which calculation comes from the quantitative metrics and qualitative assessment approved by the board at the beginning of 2024 on the remuneration committee's recommendation. This also takes into account the input from the human resources committee, which for this purpose counts on the participation of the senior management in charge of the group's Risk, Compliance, Audit, Human Resources and Legal and Financial accounting and control functions, who among others provided input on risk, solvency, liquidity, results' quality and recurrence, and compliance and control. The results for the bonus pool (shown in the chart below) resulting from the process above and reviewed and approved by

1 As indicated in the first chart in section 6.3 pension contributions include both fix and variable components, the latter of which also form part of total variable remuneration.

the board, upon recommendation from the remuneration committee, are shown in the chart below.

Category and (weight) of **Bonus pool**	**A. Quantitative metrics**[A]		
	Targets	Achievement over target	Assessment
Transformation: (45%)	Total customers (growth) (10%)	Target: 5.31 million. Achievement: 8.9 million.	150.00%
	Active customers (growth) (10%)	Target: 2.1 million. Achievement: 4.1 million.	150.00%
	Revenue per active customer (10%)	Target: EUR 600. Achievement: 617 EUR.	102.79%
	Cost (15%)	Target: EUR 24,799 million. Achievement: EUR 24,808 million.	100.00%
Capital[B] **(30%)**	CET1 ratio	Target: 12.45%. Achievement: 12.76%	252.59%
Profitability (25%)	RoTE (Return on tangible equity)	Target: 16.09%. Achievement: 16.27%.	108.86%
TOTAL metrics			**158.27%**

A. For this purpose, these metrics may be adjusted upwards or downwards by the board, following a proposal from the remuneration committee, when inorganic transactions, material changes to the Group's composition or size or other extraordinary circumstances (such as extraordinary impacts of macroeconomic environment, impairments, restructuring procedures or regulatory changes) have occurred which affect the suitability of the metric and achievement scale established in each case and resulting in an impact not related to the performance of the executive directors and executives being evaluated.

B. The related score has been calculated as per the pay-out scale approved, which factors in not only performance vs target as per CRR2 but also vs CRR3, risk transfer and net RWAs targets.

B. Qualitative assessment		
Indicators	Level of achievement	Assessment
Performance vs. Market (+/- 10%)	The Group achieved record results in 2024 for the third year in a row. This enabled us to i) place above our global peers' average in terms of profitability adjusted to cost of risk (NIM-CoR); keep a lid on cost growth more or less in line with inflation and increasing at a rate half that of our peers; and iii) continue boosting our profitability (RoTE) by climbing two positions and widening the gap with the market average. By business, Retail performed strongly in almost every market, as did Consumer, which remained a leader in NIM-CoR and profitability. Wealth grew at a faster rate than our peers.	+5.00%
***Network Collaboration* (+/- 5%)**	During the year, we have strengthened synergy between global businesses, countries and support functions, driving collaboration within our Organization as a key factor in capturing the value of our Group, reinforcing our competitive and operational advantages. This allows us to continue to strengthen our global network and transform collaboration into a real advantage for the Group.	+3.41%
Compliance and Risk (+/- 5%)	Strengthened oversight units, including in global processes (e.g. P-27). Delivered on various regulatory/supervisory issues (closure of 4 SREP recommendations, maintained SREP operational rating, delivered EBA repair programme, full implementation of ECB IFRS9 operational act). Delivered a new Group-wide IRB strategy. Significant progress on strategic and transformational initiatives and further integration of advanced risk management techniques fostering profitable growth (automated credit decisioning, use of machine learning and artificial intelligence). Also continued to deliver an effective Compliance program in 2024, meeting the defined priorities with tangible deliverables focused on regulatory priorities such as One FCC, Unit and Global Division oversight and advice, and broader issues such as talent enhancement and mobility.	+2.50%
Sustainability targets (+/- 5%)	We made significant progress in sustainability-related lines of work, most notably our strong performance in financial inclusion and sustainable business (including climate).	+3.13%
TOTAL qualitative assessment		**+14.03%**

C. Exceptional adjustment approved by board of directors upon recommendation of remuneration committee	Despite very strong results and outstanding performance in capital management, the Board, upon recommendation from the Remuneration Committee, approved a discretionary reduction of -27.3 p.p. to best align the bonus pool results with shareholder performance	**-27.30 %**
Final bonus pool 2024		**145%**

The payout relative to the level of achievement of the targets for the quantitative metrics (158.27%) and the ones relative to the qualitative evaluation (+14.03%) and exceptional adjustment (-27.30%) are added up:

A + B +C = Final bonus pool result in 2024 (as a percentage of target).

The following section details the individual variable remuneration approved by the board.

iii) Determination of the individual variable remuneration for executive directors set in 2024

The board approved executive directors' variable remuneration for 2024 on the remuneration committee's recommendation, based on the bonus pool detailed above, their individual target bonuses for 2024 and the evaluation of their individual contributions.

The board also verified that none of the following circumstances have occurred:

- The Group's ONP[2] for 2024 was not more than 50% less than for 2023. Otherwise, variable remuneration would not have been greater than 50% of the individual target.

[2] For this purpose, ONP is attributed ordinary net profit, adjusted upwards or downwards for transactions the board believes have an impact not connected to the performance of evaluated directors, for which extraordinary profit, corporate transactions, impairments, or accounting or legal adjustments that may occur during the year are evaluated. The exclusion in the calculation for these purposes of goodwill impairments is aligned with the supervisors' criteria on their recommendations on dividend distributions.

- The Group's ONP was not negative. Otherwise, the incentive would have been zero.

The board of directors, upon recommendation of the remuneration committee, resolved to increase 5% the target bonuses for the Executive Chair and the CEO in 2024.

Variable contributions to pensions in terms of percentage were not modified in 2024, remaining at 22% of the 30% of the last three assigned bonus' average. This means **complying with Circular 2/2016 of the Bank of Spain**, standard 41, on pension benefits, by which a part of not less than 15% of the total contribution must be based on variable components.

Breakdown of immediately payable and deferred remuneration

2024 was a groundbreaking year in our transformation. We delivered solid operating performance and profitable growth, with record attributable profit of EUR 12,574 million on the back of a strong increase in revenue that grew far above costs, and all this progress with an improvement in cost of risk. These excellent results enabled us to achieve the targets we set for the year: a CET1 ratio of 12.8% (far exceeding forecasts and driven by strong net organic capital generation of over 200 basis points) and shareholder value creation (TNAV per share plus cash DPS up 14% year on year and cash dividend per share of up 39% year on year). All this, coupled with our business model and robust balance sheet, enabled us to achieve an initial bonus pool of 172.30%. However, to make this pool more consistent with shareholder return, the board approved a negative adjustment of 27.30%.

Furthermore, the ratio of executive directors' total remuneration to underlying attributable profit fell from 0.19% in 2023 to 0.18% in 2024, as shown in section 6.3.I.

In this context, total executive variable remuneration increased by 4% compared to the previous year.

The immediately payable variable remuneration in deferred amounts not contingent on long-term metrics and variable remuneration deferred and contingent on long-term objectives approved by the board of directors, following a proposal by the remuneration committee, resulting from the aforementioned process are:

Immediately payable and deferred (not linked to long-term objectives) variable remuneration

	2024				2023			
EUR thousand	In cash	In shares[A]	In RSUs[A]	Total	In cash	In shares[B]	In RSUs[B]	Total
Ana Botín	2,961	2,761	200	5,922	2,848	2,648	200	5,696
Héctor Grisi	2,046	1,878	168	4,092	1,952	1,784	168	3,904
Total	**5,007**	**4,639**	**368**	**10,015**	**4,800**	**4,432**	**368**	**9,600**

A. The amounts in the foregoing table correspond to a total of 1,014 thousand shares of Banco Santander and 7 thousand RSUs of PagoNxt, S.L.
B. The amounts in the foregoing table correspond to a total of 1,168 thousand shares in Banco Santander and 6 thousand RSUs in 2023.

The following chart states deferred variable remuneration at fair value, which will only be received in 2028, 2029 and 2030 if the long-term multi-year targets are met (see section 6.3 B iv)) and beneficiaries continue to be employed at Grupo Santander, in accordance with the terms approved in the general shareholders' meeting, and no circumstances triggering malus clauses occur[3]:

Deferred variable remuneration linked to long-term objectives (fair value)

	2024				2023			
EUR thousand	In cash	In shares[A]	In RSUs[A]	Total	In cash	In shares[B]	In RSUs[B]	Total
Ana Botín	1,166	956	210	2,332	1,121	911	210	2,243
Héctor Grisi	806	629	176	1,611	769	592	176	1,537
Total	**1,972**	**1,585**	**386**	**3,943**	**1,890**	**1,504**	**386**	**3,780**

A. The number of shares in the table correspond to a total of 346 thousand shares of Banco Santander and 7 thousand RSUs of PagoNxt S.L.
B. The number of shares in the table correspond to a total of 396 thousand shares and 6 thousand RSUs of PagoNxt S.L in 2023.

Fair value has been determined on the grant date based on the valuation of an independent expert, Willis Towers Watson. Based on the design of the plan for 2024 and success levels of similar plans at peer entities, the fair value was considered to be 70% of total value linked to long-term objectives assigned.

The maximum amount of shares to be delivered under the plan is within the maximum amount of the award to be delivered in shares (EUR 11.5 million) approved at the 2024 AGM for executive directors. This number of shares has been calculated with the weighted average daily volume of weighted average listing prices of Banco Santander shares in the 50 trading sessions prior to the Friday (not inclusive) before 4 February 2025 (the date on which the board approved the 2024 bonus for executive directors), which was EUR 4.576 per share. According to an independent experts' valuation, the price per PagoNxt, S.L. RSU equals EUR 54.14.

[3] Corresponds to the fair value of the maximum amount to be received over a total of 3 years, subject to continued service -with certain exceptions-, non- applicability of malus clauses and compliance with set goals. Fair value was estimated at the plan award date on account of several scenarios for the variables in the plan during the measurement periods.

iv) Multi-year targets linked to the payment of deferred amounts in 2028, 2029 and 2030

The multi-year targets linked to the payment of the deferred amounts payable in 2028, 2029 and 2030 are:

	Metrics	Weight		Target and compliance scales (metrics ratios)
A	Banco Santander's consolidated Return on tangible equity (RoTE) target in 2026	40%		If RoTE in 2026 is ≥ 18%, then metric ratio is 1.5 If RoTE in 2026 is ≥ 15% but <18%, then metric ratio is 0 – 1.5[B] If RoTe in 2026 is < 15%, then metric is 0
B	Relative Total Shareholder Return (TSR)[A] in 2024-2026 within a peer group	40%		If ranking Santander equal percentile 100, then metric ratio is 1.5 If ranking Santander between percentiles 75 and 100 (not inclusive), then metric ratio is 1 – 1.5[C] If ranking Santander between percentiles 40 and 75 (not inclusive), then metric ratio is 0.5 – 1[C] If ranking Santander below percentile 40, then metric ratio is 0
C	Four sustainability (environmental, social and governance) metrics with the following weighting: *2/10 x Coefficient 1 + 2/10 x Coefficient 2 + 1/10 x Coefficient 3 +5/10 x Coefficient 4*	20%	1)	If % women in senior executive positions in 2026 is ≥ 37%, then metric ratio is 1.25 If % women in senior executive positions in 2026 is ≥ 36% but <37%, then metric ratio is 1 – 1.25[D] If % women in senior executive positions in 2026 is ≥ 34% but <36%, then metric ratio is 0 – 1[D] If % women in senior executive positions in 2026 is < 34%, then metric ratio is 0
			2)	If number of financially included people[E] between 2024 and 2026 (in million) is ≥ 6,3, then metric ratio is 1.25 If number of financially included people[E] between 2024 and 2026 (in million) is ≥ 5,3 but <6,3, then metric ratio is 1 – 1.25[D] If number of financially included people[E] between 2024 and 2026 (in million) is ≥ 3,5 but <5,3, then metric ratio is 0 – 1[D] If number of financially included people[E] between 2024 and 2026 (in million) is < 3,5, then metric ratio is 0
			3)	If socially responsible investment[F] in 2026 is ≥ 21%, then metric ratio is 1.25 If socially responsible investment[F] in 2026 is ≥ 18% but < 21%, then metric ratio is 1 –1.25[D] If socially responsible investment[F] in 2026 is ≥ 15% but < 18%, then metric ratio is 0 –1[D] If socially responsible investment[F] in 2026 is < 15%, then metric ratio is 0
			4)	If finance raised and facilitated[G] (in EUR billions) between 2024 and 2026 is ≥ 180, then metric ratio is 1.25 If finance raised and facilitated[G] (in EUR billions) between 2024 and 2026 is ≥ 150 but < 180, then metric ratio is 1 –1.25[D] If finance raised and facilitated[G] (in EUR billions) between 2024 and 2026 is ≥ 110 but < 150, then metric ratio is 0 –1[D] If finance raised and facilitated[G] (in EUR billions) between 2024 and 2026 is < 110, then metric ratio is 0

A. TSR refers to the difference (%) between the final and initial values of capital invested in ordinary shares of Banco Santander. The final value is calculated based on the dividends or other similar concepts (such as the Santander Scrip Dividend programme) shareholders receive for this investment during the corresponding period -as if they had invested in more shares of the same type at the first date on which the dividend or similar concept was payable to shareholders- and the weighted average share price at that date. To calculate TSR, the weighted average daily volumes of the weighted average listing prices for the fifteen trading sessions prior to 1 January 2024 (exclusive) is considered (to calculate the initial value) and the fifteen trading sessions prior to 1 January 2027 (exclusive) (to calculate the final value). The peer group consists of BBVA, BNP Paribas, Citi, Crédit Agricole, HSBC, ING, Itaú, Scotia Bank and Unicredit.
B. Straight-line increase in the RoTE ratio based on the percentage of specific RoTE in 2026 within this bracket of the scale.
C. Proportional increase in the TSR ratio based on the number of positions moved up in the ranking.
D. Increase of the coefficient is proportional to its position on this line of the scale.
E. Financial inclusion: the banking proposals or tailored finance refer to the number of people unbanked, underbanked, in financial distress or with difficulty to access credit to whom we provide tailored access and finance solutions, aiming to meet local financial inclusion needs in a recurrent, comprehensive, affordable and effective way.
F. Assets under management that meet the criteria of Santander's Sustainable Finance and Investment Classification System (SFICS) as a percentage of total assets under management.
G. Grupo Santander's contribution to our customers' transition (2024-2026): CIB green finance raised and facilitated (target), Retail & Commercial banking green finance and sustainable linked-loans, and Digital Consumer Bank green finance.

To determine the annual amount of the deferred portion linked to objectives corresponding to each executive director in 2028, 2029 and 2030, the following formula shall be applied to each of these payments ('final annuity') without prejudice to any adjustment deriving from the malus clauses:

$$\text{Final annuity} = \text{Amt.} \times (2/5 \times A + 2/5 \times B + 1/5 \times C)$$

where:

- 'Amt.' is one third of the variable remuneration amount deferred conditional on performance (i.e. Amt. will be 12% of the total variable pay set in early 2025).
- 'A' is the RoTE coefficient according to the scale in the table above, based on RoTE at year-end 2026.
- 'B' is the TSR ratio calculated as the scale in the table above, according to the relative performance of Banco Santander's TSR within its peer group in 2024- 2026.
- 'C' is the coefficient resulting from the sum of weighted coefficients for each of the four sustainability targets for 2026 described above.
- In any event, if the result of (2/5 x A + 2/5 x B +1/5 x C) is greater than 1.25, the multiplier will be 1.25.

v) Malus and clawback

Deferred amounts (whether or not contingent on multi-year targets) will be earned if the beneficiary continues to work with the Group[4], and none of the circumstances triggering malus clauses arise before each payment, according to the section on malus and clawback clauses in the remuneration policy.

Similarly, Banco Santander can clawback any paid variable amounts in the scenarios and for the period dictated by the terms and conditions in the said policy.

Variable remuneration for 2024 can be clawed back until the beginning of 2031.

Malus and clawback clauses are triggered by poor financial performance of Banco Santander, a division or area, or exposures from staff as a result of an executive(s)'s management of, at least, one of these factors:

Category	Factors
Risk	Significant failures in risk management by Banco Santander, or by a business or risk control unit.
Capital	An increase in capital requirements at the Banco Santander or one of its business units not planned at the time that exposure was generated.
Regulation and internal codes	Regulatory penalties or legal convictions for events that might be attributable to the unit or staff responsible for them. In addition, failure to comply with Banco Santander's internal codes of conduct.
Conduct	Improper conduct, whether individual or collective. Negative effects deriving from the marketing of unsuitable products and the liability of persons or bodies making such decisions will be considered especially significant.

In addition to the existing policy on malus and clawback clauses of our remuneration policy, the addendum to our remuneration policy entitled "Financial Statement Restatement Compensation" regulates the recoupment of compensation received by the executive directors of Banco Santander, S.A., and senior management, in the event of a financial restatement (according to the regulation) resulting from material noncompliance with financial reporting requirements under US federal securities laws.

The application of malus or clawback clauses for executive directors shall be determined by the board of directors, at the proposal of the remuneration committee, and cannot be proposed once the retention period for the final payment in shares under the plan has elapsed in early 2031. Therefore, the board determines the specific deferred incentive amount to be paid as well as any amount that could be subject to clawback, upon on the remuneration committee's recommendation and depending on the level of compliance with the conditions for applying malus clauses.

C. Main features of the benefit plans

Executive directors participate in the defined contribution pension scheme created in 2012, which covers contingencies due to retirement, disability and death.

According to the 2012 system, contracts for Ana Botín and other senior managers with defined benefit pension obligations were transformed into a defined contribution system. The new system gives executive directors the right to receive benefits upon retirement, even if they are not active at Banco Santander at the time, based on contributions to the system. It also replaced their previous right to receive a pension supplement in the event of retirement.

The initial contribution for Ana Botín in the new defined contribution pension scheme corresponded to the market value of the assets for which the provisions for due obligations were recognized when the previous pension commitments had been transferred to the new pension scheme.

Every year since 2013, Banco Santander has been contributing to the pension scheme for executive directors and other members of the executive team in proportion to their pensionable bases until their departure from the Group, retirement, death or disability. In general terms, the pensionable base for executive directors is the sum of their fixed remuneration plus 30% of the average of their last three variable remuneration amounts. Contributions will be 22% of pensionable bases in all cases.

This means **complying** in both cases with **Circular 2/2016 of the Bank of Spain**, standard 41, on pension benefits, by which a part of not less than 15% of the total contribution must be based on variable components.

For Héctor Grisi, CEO from 1 January 2023, since he has been in the position for two years, the calculation of the variable portion was done using the average of the last two variable remuneration amounts.

Pursuant to remuneration regulations, contributions calculated on the basis of variable remuneration are subject to the discretionary pension benefits scheme. Therefore, under the policy, malus and clawback clauses can be enforced on them in place at any given time and during the same period in which variable remuneration is deferred. Furthermore, these contributions must be invested in Banco Santander shares for five years from the date of the executive director's retirement, or from the date on which the executive directors leave the group. Once that period has elapsed, the amount invested in shares will be paid to them or their beneficiaries if some contingency covered by the pension scheme was happened or will be added to the remainder of their

[4] When the beneficiary's relationship with Banco Santander or another Group entity terminates because of retirement, early retirement or pre-retirement; a dismissal ruled by the courts to be wrongful; unilateral withdrawal for good cause by an employee (which includes the situations set forth in article 10.3 of Royal Decree 1382/1985, of 1 August, governing the special relationship of senior management, for the persons subject to these rules); permanent disability or death; mandatory redundancy; or because an employer other than Banco Santander ceases to belong to Grupo Santander, the right to receive shares and deferred amounts in cash and any amounts of the deferred amounts in cash adjusted for inflation will remain under the same conditions in force as if none of such circumstances had occurred. In the case of death, the right will pass to the beneficiary's heirs.
In cases of justified temporary leave due to temporary disability, suspension of contract due to maternity or paternity leave, or leave to care for children or a relative, there will be no change in the beneficiary's rights. If the beneficiary goes to another Group company (even through international assignment and/or expatriation), these rights will likewise not change. If the relationship terminates by mutual agreement or because the beneficiary obtains a leave not mentioned above, the terms of the termination or temporary leave agreement will apply.
None of the above circumstances shall give the right to receive the deferred amount in advance. If the beneficiary or the successors thereof maintain the right to receive the deferred remuneration in shares and cash and, where applicable, the amounts arising from the adjustment for inflation of the deferred amounts in cash, it shall be delivered within the periods and under the terms provided in the rules for the plans.

cumulative balance until their retirement age when the total amount will be paid.

The benefit plan is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A. The economic rights of the directors previously mentioned belong to them even if they are not active at Banco Santander at the time of their retirement, death or disability. Their contracts do not stipulate any severance payment outside the extent of the law for termination of contract.

The provisions recognised in 2024 for retirement pensions amounted to EUR 2,445 thousand (EUR 2,110 thousand in 2023), as broken down below.

EUR thousand	2024	2023
Ana Botín	1,339	1,144
Héctor Grisi	1,105	966
Total	**2,445**	**2,110**

The amounts corresponding to each director as of 31 December 2024 and 2023 in the pension scheme are:

EUR thousand	2024	2023
Ana Botín	54,731	49,257
Héctor Grisi	1,299	585
José Antonio Álvarez	20,326	19,495
Total	**76,356**	**69,338**

D. Other remuneration

Grupo Santander also takes out insurance policies for life, health and other contingencies for its executive directors. This other remuneration component includes the fixed supplement approved for Ana Botín to replace the supplementary benefits from the pension scheme eliminated in 2018, in addition to the cost for insuring death or disability until they retire. Directors are covered under the Group's civil liability insurance policy.

Note 5 to the Group's consolidated financial statements describes other benefits received by executive directors in detail.

E. Shareholdings

In 2016, on the remuneration committee's recommendation, the board of directors approved a shareholding policy to better align executive directors with shareholders' long-term interests.

According to this policy, in addition to the executive directors' commitment to maintaining a significant holding of shares in Banco Santander for as long as they have their role, executive directors have five years to demonstrate that their personal assets include shares in Banco Santander that amount (net of taxes) to twice their gross annual salary on that date. The following table show the ratio, with a share price of EUR 4.465[5]:

	2024		
	Gross annual salary (thousand)	**Number of shares (thousand)**	***Number of times***
Ana Botín	3,435	33,400	43.4
Héctor Grisi	3,150	2,124	3.0

Likewise, in addition to the regulatory obligation for executive directors not to sell the shares they receive as remuneration for a year from their award, which is included in the shareholding policy, and will apply to all cases, this policy has also been updated in 2020 to include the obligation for executive directors not to sell the shares they receive as remuneration for a period of three years from their award date, unless the executive director already holds Banco Santander shares for an amount equivalent to twice his/her annual salary.

F. Remuneration of board members as representatives of Banco Santander

The executive committee resolved that the remuneration accrued by executive directors who represent Banco Santander on boards of companies where it owns equity and were appointed after 18 March 2002 will accrue to the Group. No executive director received remuneration for this type of representation in 2024.

The following table includes the remuneration received by non-executive directors on a personal basis in other Group entities:

Director	Position	Remuneration
Homaira Akbari	Member of the board of Santander Consumer USA Holdings, Inc.	USD 100 thousand (EUR 96 thousand)
	Member of the Board of PagoNxt, S.L.	EUR 200 thousand
Henrique de Castro	Member of the Board of PagoNxt, S.L.	EUR 200 thousand
José Antonio Álvarez	Member of the Board of PagoNxt, S.L.	EUR 200 thousand
	Member of the Board of Banco Santander (Brasil) S.A.	BRL 1,135 thousand (EUR 183 thousand)
Pamela Walkden	Member of the Santander UK, plc and Santander UK Group Holdings Limited	GBP 109 thousand (EUR 129 thousand)

Likewise, Luis Isasi received EUR 1,000 thousand for his role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings (amount included in the chart below as "other remuneration" as it is paid by Banco Santander, S.A.).

And finally, José Antonio Álvarez received a fixed remuneration of EUR 1,750 thousand as strategic adviser of Grupo Santander, as well as the life and health insurance contributions and the supplement for having waived the death and disability policy disclosed in the table in section G below.

G. Individual remuneration of directors for all items in 2024

Below is a breakdown of each director's short-term salary (payable immediately) and deferred remuneration not based on long-term performance for 2024 and 2023. Statistical information on remuneration required by the CNMV (9.5) and Note 5 to the Group's consolidated financial statements contains disclosures on shares delivered in 2024 under the deferred remuneration schemes of previous years where conditions for their delivery were met in the related years.

[5] This share price corresponds to the share price as of closing of stock markets on 31 December 2024.

	EUR thousand									
	2024									2023
	Bylaw-stipulated emoluments		Salary and bonus of executive directors							
Directors	Board and board committees annual allotment	Board and committee attendance fees	Fixed Salary	Immediate payment bonus (50% in instruments)	Deferred payment bonus (50% in instruments)	Total	Pension Contribution	Other remuneration[F]	Total	Total
Ana Botín	312	56	3,435	3,702	2,221	9,358	1,339	1,062	12,127	11,544
Héctor Grisi	296	56	3,150	2,558	1,535	7,243	1,105	437	9,137	8,257
José Antonio Álvarez	326	56	—	—	—	—	—	3,316	3,698	3,553

A. Stepped down as director on 22 March 2024.
B. All amounts received were reimbursed to Fundación Botín.
C. Stepped down as director on 27 June 2024.
D. Member of board of directors since 27 June 2024.
E. Member of board of directors since 27 June 2024.
F. Other remuneration includes for Luis Isasi EUR 1,000 thousand for his role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings. For José Antonio Álvarez, this amount includes remuneration as strategic advisor of Grupo Santander, life and health insurance contributions (EUR 856 thousand) and the supplement for having waived the death and disability policy (EUR 710 thousand).

The following table provides each executive director's salary contingent on multi-year targets. It is only paid if they remain active in the group, malus clauses do not apply and set multi-year targets are achieved (as depending on their achievement, the amounts will be increased (limited to 125%), reduced, or even be zero, if the related minimum thresholds are not achieved):

	EUR thousand	
	2024	2023
Ana Botín	2,332	2,243
Héctor Grisi	1,611	1,537
Total	**3,943**	**3,780**

A. Fair value of the maximum amount receivable over a total of 3 years (2028, 2029 and 2030), which was estimated when the plan was granted, based on several scenarios relating to variables in the plan during the measurement periods.

H. Ratio of variable to fixed pay components in 2024

At the 2024 AGM, shareholders approved a maximum ratio of 200% of variable to fixed components in executive directors' pay.

The table below shows the ratio of variable components to fixed components for each executive director's total pay in 2024. This ratio increased slightly from 2023 by 3 pp for Ana Botín and decreased 11 pp for Héctor Grisi.

For these purposes:

- Variable components include all items of this nature, such as any contributions to the pension scheme calculated on directors' variable pay.
- Fixed components consist of the other items each director receives for executive duties, including contributions to pension schemes calculated on the basis of fixed remuneration and other benefits, as well as all Bylaw-stipulated emoluments that the director is entitled to receive in his or her capacity as such.

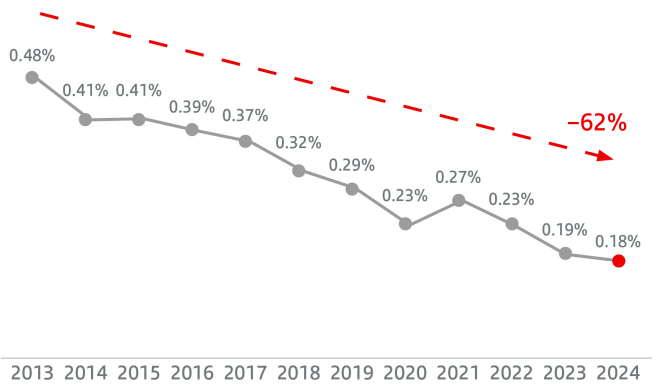
I. How we include sustainability metrics in 2024 variable incentive scheme

Banco Santander's current remuneration policy is designed to align executive pay with our strategic goals, including long-term sustainability. The policy incorporates mechanisms that link variable remuneration to the achievement of financial, sustainability, and value creation objectives. These objectives are specific, measurable, and aligned with the bank's interests, encompassing environmental, social, and governance (sustainability) factors.

Sustainability metrics are included in the two different incentive schemes, the short-term incentive and the long-term incentive. Both structures are in place to reward performance and promote a balance between immediate results and sustainable growth over time.

1. **Short-term incentive** (measured by the Bonus pool result):

- Variable pay calculated against annual quantitative metrics and a qualitative assessment based on objective factors, while also considering individual performance. We consider sustainability accomplishments in the qualitative assessment, with a weight of +/- 5%.
- Our top 236 Groups' executives (including the Executive Chair and CEO), as well as employees of the global Corporate Centre and global corporate centres of our subsidiaries, are subject to this general Bonus pool framework and their respective local adaptations.
- The proposed parameters for sustainability performance reviews aim to reward progress both in key metrics and in embedding sustainability in management. For the 2024 award, the sustainability component of the qualitative assessment considered the following sustainability-related accomplishments vs the targets budgeted for the year: progress with inclusive culture, financial inclusion, sustainable business volume, climate and governance and data.



2. **Long-term incentive**:

- A portion of variable compensation (36%), which is deferred and earned based on the achievement of pre-determined multi-year goals, including sustainability metrics (for the 2024 award, 20% of total multi-year goals). These metrics are progress with inclusive culture, financial inclusion, socially responsible investment and supporting the transition to a low carbon economy (for more details, please see section 6.3.B iv)).
- Our top 36 Groups' executives have their long-term incentive linked to these metrics, including the Executive Chair and CEO.

J. Comparative analysis of directors' remuneration, company performance and average remuneration of employees

This chart summarizes directors' compensation (short-term remuneration, deferred variable remuneration and/or deferred variable remuneration linked to multi-year targets included, excluding pension contributions) for executive duties in relation to underlying attributable profit as evidenced below. The weight of executive directors' remuneration relative to underlying attributable profit continues to decline since 2013.

Ratio of executive directors' total remuneration to underlying attributable profit

The following chart shows the comparative analysis between the directors' remuneration, the company performance (underlying profit attributable to the Group, audited profit before taxes and ordinary ROTE) and the average remuneration of Santander employees (other than directors and in a full time equivalent basis) in the last 5 years:

Directors' remuneration[1] (EUR thousand)	2024	% var. 24/23	2023	% var. 23/22	2022	% var. 22/21	2021	% var. 21/20	2020
• Executive Directors									
Ana Botín	12,127	5%	11,544	5%	11,001	(4)%	11,435	68%	6,818

Germán de la Fuente	338	25%	271	—	137	—	—	—	—
Carlos Barrabés[E]	128	—	—	—	—	—	—	—	—
Antonio Weiss[F]	72	—	—	—	—	—	—	—	—
Company's performance									
Underlying profit attributable to the Group (EUR mn)	12,574	14%	11,076	15%	9,605	11%	8,654	70%	5,081
Consolidated results of the Group[3] (EUR mn)	19,027	16%	16,459	8%	15,250	5%	14,547	—	(2,076)
Ordinary RoTE	16.27%	8%	15.06%	13%	13.37%	5%	12.73%	71%	7.44%
Employees' average remuneration[4] (EUR thousand)	**61**	**5%**	**58**	**3%**	**56**	**1%**	**56**	**18%**	**47**
Employees' average remuneration in Spain[5] (EUR thousand)	**75**	**3%**	**73**	**6%**	**68**	**10%**	**62**	**(2%)**	**63**

1. Deferred variable remuneration linked to long-term objectives is not included.
2. Non-executive directors' remuneration fluctuations are caused by joining or leaving the board of directors and the difference in the amount of meetings they assist during the year. Hence there is no correlation between their remuneration and the company performance.
3. Group operating profit/(loss) before tax.
4. Employee average remuneration includes all concepts, including other remuneration. Normally the increases or decreases in remuneration are greater for the executive directors, depending on the results of the entity, because the percentage of variable remuneration over fixed remuneration in an average employee is lower than that of the executive directors. Variable remuneration data accrued in the current year, both for employees and executive directors. Evolutive data also impacted by exchange rate performance in the group's geographies. Full time equivalent data considered.
5. Total employees in Spain geography. Fixed remuneration + effective bonus received in the year. Not all concepts are included. Not impacted by exchange rates.

A. Stepped down as director on 22 March 2024.
B. All amounts received were reimbursed to Fundación Botín.
C. Includes EUR 1,000 thousand for his role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings.
D. Stepped down as director on 27 June 2024.
E. Member of board of directors since 27 June 2024.
F. Member of board of directors since 27 June 2024.

K. Performance of the long-term metrics under the 2021 plan (2021-2023)

In 2024, the board of directors, at the remuneration committee's recommendation, approved the level of performance of the long-term metrics for the sixth cycle of the deferred multi-year objectives variable remuneration plan (2021). The table below details each metric and its result at the close of period.

Metric	Target	Result	Coefficient	Weight	Weighted coefficient
CET1 *fully loaded* in 2023	12%	12.3%	100%	1/3	**33.3%**
Earnings per share growth in 2023 vs 2020	100%	149.6%	150%	1/3	**50%**
TSR in 2021-2023	33 - 66 percentile (0% and 100%)	Percentile 33	25%	1/3	**8.3%**
Total					**91.6%**

L. Summary of link between risk, performance and remuneration

Banco Santander's remuneration policy and its application in 2024 have promoted sound and effective risk management, at the same time as supported the fulfilment of long-term business objectives.

The key elements of the remuneration policy for executive directors making alignment between risk, performance and reward in 2024 were as follows:

Key words	Aspect aligning risk, performance and remuneration
Metrics balance	The balance of quantitative metrics and qualitative assessments, including customer, risk, capital and profitability in relation to risk, used to determine the executive directors' variable remuneration.
Financial thresholds	The adjustment to variable remuneration if certain financial thresholds are not reached, which may limit the variable remuneration to 50% of the previous year's amount or lead to it not being awarded at all.
Long-term objectives	The long-term objectives linked to the last three portions of the deferred variable remuneration. These objectives are directly associated with return to shareholders relative to a peer group, return on tangible equity (RoTE) and the five targets linked to our sustainability agenda.
Individual performance	The discretion of the board to consider the performance of each executive director in the award of their individual variable remuneration.
Variable remuneration cap	200% of fixed remuneration.
Control functions involvement	The work undertaken by the human resources committee aided by senior managers leading Control functions in relation to the analysis of quantitative metrics information and undertaking qualitative analysis.
Malus and clawback	Malus can be applied to unvested deferred pay and clawback can be applied to vested or paid compensation under the conditions dictated by the Group's remuneration policy.
Shareholding policy	We have demanding executive stock ownership requirements whereby they have the obligation to hold an amount of Santander shares of at least twice their annual salary, thus reducing the incentive for short-term risk taking.
Payment in instruments	At least 50% of variable pay is in instruments and subject to retention or prohibition from exercise of at least one year from their delivery.

6.4 Directors' remuneration policy for 2025, 2026 and 2027

Remuneration policy principles and remuneration system

A. Directors' remuneration in their capacity as such

Director's remuneration is regulated by article 58 of Banco Santander's Bylaws and article 33 of the Rules and regulations of the board of directors. For 2025, 2026 and 2027, no changes to the principles and composition of directors' remuneration for supervisory and collective decision-making duties are planned with respect of those in 2024. They are described in sections 6.1 and 6.2.

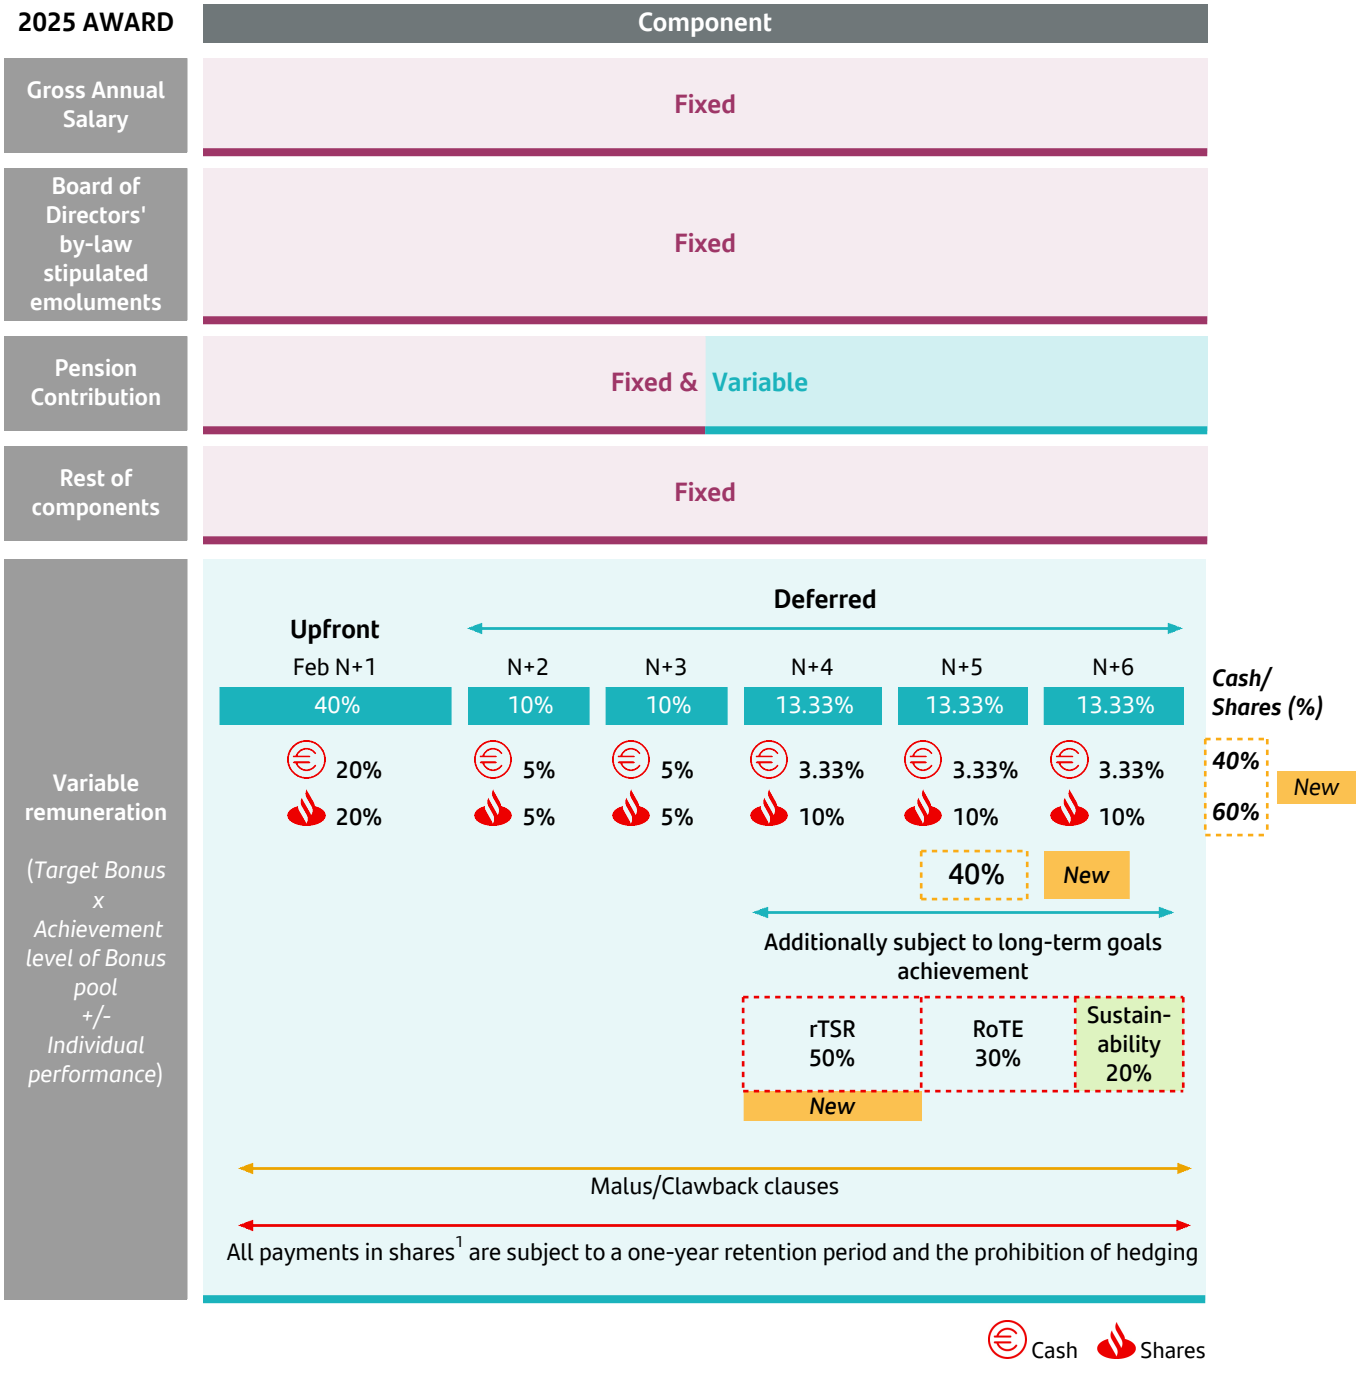
B. Executive directors' remuneration

Executive directors are entitled to be paid the remuneration (e.g., salaries, incentives, bonuses, severance payments for early termination from such duties, and amounts to be paid by Banco Santander for insurance premiums or contributions to savings schemes) deemed appropriate for performing executive functions following a proposal from the remunerations committee and by resolution of the board of directors, subject to the limits set by law.

C. Shareholder engagement

In response to the lower-than-usual support our 2024 remuneration policy proposal received in the 2024 annual general meeting, we engaged with a significant portion of our shareholders and proxy advisors to discern and address any concerns related to remuneration. These engagement efforts are described in greater detail on the introduction section of this chapter.

As a result of these conversations, the remuneration committee proposed several changes to the remuneration structure of the executive directors for the 2025 incentive award and beyond, as well as updates to our disclosure:



Key issues raised by shareholders	Actions taken in response
→ **Investors expressed their wish to increase the weight of the long-term components of variable remuneration.**	• **First**, to provide even greater alignment with shareholders, **the portion of variable remuneration paid in equity will be increased from 50% to 60%**. In this regard, in 2025, for executive directors, variable remuneration will be paid 40% in cash and 60% in instruments, the latter whose long-term valuation replicate the interests of our shareholders. The portion they will receive in instruments is split as follows: i. EUR 500 thousand and EUR 420 thousand in PagoNxt, S.L. RSUs for Ana Botín and Héctor Grisi, respectively. ii. The rest, all in shares of Banco Santander. • **Second,** to strengthen the long-term vision and value creation of the company, **the percentage of variable pay subject to long-term metrics will be increased from 36% to 40%.** • **And third,** to increase the alignment with shareholders return, **we have increased the weight of the relative TSR long-term performance metric from 40% to 50%.**
→ **Investors viewed favourably that we had increased the minimum relative TSR (rTSR) vesting from 33rd percentile to 40th percentile. Still, several indicated a preference for no vesting below median peer performance levels.**	• Starting with the 2025 awards, we have **increased the minimum vesting threshold for rTSR from 40th percentile to 50th percentile.**
→ **Some investors raised how executive remuneration levels are determined.**	• Santander has **enhanced the remuneration disclosures** to provide further detail on our Committee's process for setting the Remuneration Policy. • This report contains **further explanations** detailing how executive **remuneration is set** and **how pay is aligned with performance**, including the peer selection criteria for this analysis. Santander follows a rigorous process that includes an **annual review of comparative market data** to ensure our pay remains competitive in the marketplace.

The remuneration committee proposes to maintain the current long-term performance metrics, thus prioritizing shareholder returns and the Group's profitability in the long-term, as well as the sustainability of the balance sheet and its activities and how we carry them out. Therefore these metrics will continue to be:

- Relative performance of Banco Santander's total shareholder return (TSR) compared to our peer group. Its weight is increased from 40% to 50% of the total.
- Return on tangible equity (RoTE), as an indication of long-term value creation. Its weight will be 30% of the total.
- Four sustainability metrics linked to the progress we make on our targets to implement the Group's agenda in this sense. Their weight will be 20% of the total.

And the maximum achievement ratio will also remain at 125% so executives have the incentive to exceed their targets; however, the maximum achievement ratio for effectively paid remuneration will not exceed the thresholds approved at the AGM.

The following table shows the remuneration structure for 2025 of both executive directors, according to the aforementioned changes:

1.Executive directors also have the obligation to hold them for three years from their award date, unless the director already holds shares for an amount equivalent to 200% of their net annual salary (calculated on the basis of their gross annual salary). In such case, the regulatory obligation to hold shares is for one year from their grant date.

Moreover, to strengthen a strategic line that is key to Banco Santander's future, and with the aim of providing a strong alignment with PagoNxt's success, the Executive Chair and the Chief Executive Officer will continue to receive restricted stock units (RSUs) of PagoNxt, S.L.

The RSUs substitute part of their variable pay instruments in Banco Santander shares without increasing their total pay and will not represent more than 10% of their variable pay.

Specifically, as regards 2025, Ana Botín would receive the equivalent of EUR 500 thousand in RSUs, and Héctor Grisi would receive the equivalent of EUR 420 thousand in RSUs, in accordance with PagoNxt, S.L.'s long term incentive plan. Each RSU would grant the right to a share in PagoNxt, S.L. or the holding entity of its group (or its equivalent in cash) at the moment when, according to such plan, a liquidity event, a repurchase or a liquidation of such instruments takes place.

This plan is subject to the same principles of risk alignment, variable remuneration caps, deferrals and malus and clawback as the incentive which applies to executive directors described herein, but with payment being done in PagoNxt S.L. instruments.

Also, as detailed at the beginning of chapter 6.3, Banco Santander conducts an annual comparative review of executive directors' and top management remuneration. In 2025, the peers that comprise the review are BBVA, BNP Paribas, Citi, Crédit Agricole, HSBC, ING, Itaú, Scotiabank and Unicredit, based on their market capitalization, global scale, brand recognition, geographical diversification, business model and regulatory framework. The incorporation of US and Brazilian banks is justified by the strong presence of Banco Santander in those countries, where Santander is listed (on the New York Stock Exchange and Brazilian Stock Exchange of São Paulo).

Our findings show that Banco Santander does not award its executive directors any remunerative components outside of common market practice.

Principle of equal pay for equal work and equal employment conditions for Santander executives and employees

Santander applies the equal pay principle included in the Corporate remuneration policy of Grupo Santander for executive directors and employees alike, which forbids any type of differential treatment that is not exclusively based on an assessment of performance results and corporate behaviours, and promotes equal pay for men and women.

Furthermore, our remuneration framework rewards Santander employees for their contribution based on such common principles as:

- Meritocracy: Non-discrimination based on sex, age, culture, religion or ethnicity.
- Consistency: Remuneration consistent with the level of responsibility, leadership and performance within the Group, to promote retention of key professionals and attract the best talent.
- Sustainability: A remuneration framework that is sustainable in terms of associated costs, cost control, and related objectives (as described in the policy) that ensure variable remuneration is commensurate with the Group's performance, disincentivize short termism and promote long-term sustainability. The remuneration scheme for the 1,246 Corporate Identified Staff also includes deferrals of up to 60% of their variable remuneration, payment of 50% of their variable remuneration in instruments (subject to one-year retention) and malus and clawback clauses.

  Also, performance objectives for annual variable remuneration have included since 2020 sustainability components. From 2022, with the purpose of increasing focus on the Group's sustainability agenda and highlight this matter as a core long-term strategy, sustainability metrics are included (described in the next section) for the last deferred variable remuneration payments.
- Social responsibility: Employees' pay cannot be lower than the legal minimum wage or the living wage in the country where they work. Additionally, in order to give our social responsibility prominence in remuneration, the Group's responsible banking objectives for employee remuneration include the people financially included metric.
- Performance-based pay: Variable remuneration is subject to the achievement of (i) annual objectives (set out in section 6.4.B.ii.B), which reflect customer and profitability strategy, promote proper risk management and cost-effective capital allocation, and discourage short-term management focus; and (ii) long-term objectives (see section 6.4.B.ii.B), which support a sustainable balance sheet, shareholder return, the Group's profitability and sustainability of the Group's activities and the way they are carried out.

Directors' remuneration for 2025

A. Directors' remuneration in their capacity as such

In 2025, directors, in their capacity as such, will receive remuneration for supervisory and collective decision-making duties for a total of up to EUR 6 million as authorised by the shareholders at the 2024 AGM (which will again be put to a vote at the 2025 AGM). It consists of:

- annual allocation, and
- attendance fees.

For 2025, the board of directors, on the remuneration committee's recommendation, approved a 3% increase (in respect of 2024) to the annual allotments for the board (chair and members) and its committees (including the executive committee), as well as to the amount allocated to the role of Lead Independent Director and non-executive vice chair and to attendance fees. This increase (aligned with the average remuneration increase of the Group's staff in Spain in 2024 vs 2023) compensates the greater time commitment of board members, compared to those of other comparable banking groups, as the last market analysis we conducted alongside an independent expert concluded.

The specific amounts and the form of payment are determined by the board of directors in the manner described in the respective 6.2 section of the Annual report, based on the objective circumstances of each director.

Additionally, as indicated in the description of the director remuneration system, Banco Santander will pay its directors' the corresponding civil liability insurance premium in 2025. The related

policy is common to all executives and was taken out under usual market condition, proportionate to Banco Santander's situation.

B. Executive directors' remuneration for the performance of executive duties

i) Fixed remuneration components

A) Gross annual salary

As part of the annual review of the target compensation of our executive directors, and on the remuneration committee's recommendation, the board has decided not to increase their gross annual salaries, which they believe are competitive based on market data for our peer group and appropriate given their roles and capabilities as well as the Group's performance.

Likewise, their gross annual salary amounts may increase owing to adjustments made to the fixed remuneration mix based on the criteria approved by the remuneration committee, provided this does not entail any cost increase for Banco Santander.

B) Other fixed remuneration components

- Benefit systems: defined contribution schemes as set out in section 'Benefit schemes'[6].
- Supplement to fixed salary: Ana Botín will receive EUR 525 thousand as a supplement to her fixed pay in 2025. This was approved in 2018 when the supplementary death and disability pension schemes were eliminated. Héctor Grisi will not receive any supplement of this kind.
- Social welfare benefits: executive directors will also receive social welfare benefits such as life insurance premiums, travel grants, medical insurance and the allocation of remuneration to employee loans, in accordance with Banco Santander's general policy for senior management, and in the same terms as the rest of employees.
- Likewise, Banco Santander makes available to directors the human and material means required or considered appropriate for carrying out their duties (including any travel required for the exercise of their role). Any eventual private use of these means by the executive directors is duly paid by them under the similar terms and conditions that would be applied to third independent party under the supervision of the audit committee. This information can also be found under the 'Benefit plans' section.

ii) Variable remuneration components

The board approved the policy on executive directors' variable remuneration for 2025 on the remuneration committee's recommendation, based on the remuneration policy principles described at the beginning of this section 6.4.

Executive directors' variable remuneration consists of a single incentive scheme, linked to the achievement of short-and long-term objectives. It is structured as follows:

- The final amount of variable remuneration will be set at the start of the following year (2026) based on the target bonus amount and subject to compliance with the annual objectives described under section B) below.
- 40% of the incentive will be paid immediately once the final amount has been set, and 60% will be deferred in equal parts paid out over five years and subject to long-term metrics:
  - The amount deferred over the first two years (20% of the total) will be paid in 2027 and 2028 on the condition that no malus clauses described under section 6.3 B v) are triggered.
  - The amount deferred over the next three years (40% of the total) will be paid in 2029, 2030 and 2031, on the condition that no malus clauses are triggered and long-term targets – described in section D) Deferred incentive subject to long-term performance objectives– are met.

The Group can clawback incentives already paid in the cases and during the term set out in its malus and clawback policy, described under section 6.3. B) v).

Exceptionally, when a new executive director joins Banco Santander, his/her variable pay may include a sign-on bonus and/or buyouts.

Variable components in executive directors' total remuneration for 2025 cannot exceed the limit of 200% of fixed components submitted for approval to the 2025 AGM. However, under EU regulations on remuneration, certain variable components can be excluded.

The proportion of fixed and variable remuneration elements of Banco Santander executive directors is due to the European regulation set out in the CRD V directive. In this sense, the setting of higher fixed amounts than other executive directors of non-EU banks within our peer group is due precisely to the non-requirement of this limit 2:1 of variable/fixed components for non-EU banks.

A. Target bonus

Variable remuneration for executive directors in 2025 will be set based on bonus pool results versus items detailed in the scorecard herein, their individual target bonus and the achievement of their individual objectives, which for 2025 among others include, both for the Executive Chair and the CEO, the ones to continue consolidating the management of the Group through our five global businesses.

As part of the annual review of the target compensation of our executive directors, and on the remuneration committee's recommendation, the board has decided not to increase their target bonuses for the same reasons that their gross annual salaries were not increased.

B. Setting of final variable remuneration based on yearly results

The executive director' 2025 variable remuneration will be based on the results for the following items within an updated scorecard:

1. Three categories of **quantitative metrics** (business transformation, capital and sustainable profitability) to increase alignment with shareholder value creation and capital generation. The main changes adopted in 2025 are:

i. the removal of the total customers metric, leaving active customers, to prioritize profitability further;

[6] As indicated in the next section, executive directors contribution to the benefit systems includes both fixed and variable components

ii. the inclusion of cost per active customer (instead of total costs) to keep the focus on appropriate costs management to succeed in transformation, while connecting it with our profitable customers;

iii. the replacement of revenue per active customer with fees over costs to incentivize growing in a business with lower capital consumption and reducing costs (so when rates come down, earnings are not depressed); and

iv. the inclusion of RoRWA SVA (shareholder value added) in the quantitative assessment, removing RoTE from the scope, to increase alignment with shareholders.

2. A **qualitative assessment** with the same four components of previous year, which address regulatory requirements and the needs and concerns of our shareholders: risk and compliance, network collaboration, sustainability matters and a relative performance assessment against the market in the main financial metrics. As stated in section 6.3.b, the metrics in the qualitative assessment are measurable, objective, audited and important to executing the long-term strategy of the company. The range of adjustment related to the risk and compliance and network collaboration categories has been modified (from +/-5% in the 2024 variable remuneration framework to +/-10% in 2025) to further reinforce risk adjustments within the bonus scheme and collaboration within the Group due to its relevance for the current strategy.

3. An **exceptional adjustment** that must be duly supported and may involve changes owing to control and/or risk deficiencies, negative assessments from supervisors or unexpected material events.

Quantitative metrics +/- **Qualitative assessment** +/- **Exceptional adjustment**

Accordingly, the proposed **quantitative metrics** and weightings are:

Category	Metrics[A]	Weighting
Transformation: Weight: 45%	Active customers (growth)	10%
	Cost per active customer	15%
	Fees over costs (recurrence ratio)	20%
Capital Weight: 25%	Capital generation	25%
Sustainable profitability Weight: 30%	RoRWA (Return on risk-weighted assets) SVA	30%

A. For this purpose, these metrics may be adjusted upwards or downwards by the board, following a proposal from the remuneration committee, when inorganic transactions, material changes to the Group's composition or size or other extraordinary circumstances (such as impairments, extraordinary impacts of macroeconomic environment, regulatory changes or restructuring processes) have occurred which affect the suitability of the metric and achievement scale established in each case and resulting in an impact not related to the performance of the executive directors and executives being evaluated.

And finally, to the result obtained above, we add or subtract the **qualitative assessment** according to this table:

Qualitative assessment	Weight
Performance vs. Market	+/-10%
Compliance and Risk	'+/-10%
Network collaboration	'+/-10%
Sustainability targets	+/-5%

Lastly, as additional conditions for determining the incentive, the following circumstances must be confirmed to set variable pay:

- If the Group's ONP for 2025 were 50% less than in 2024, variable pay would in no case exceed 50% of the benchmark incentive for 2025.
- If the Group's ONP were negative, the incentive would be zero.

When setting individual bonuses, the board will also consider restrictions to the dividend policy imposed by supervisors.

C) Forms of payment of the incentive

Variable remuneration of executive directors will be paid 60% in instruments, split as:

- the amount of PagoNxt RSUs set for each year (which cannot exceed 10% of their variable pay); and
- the rest, all in shares of Banco Santander.

One portion will be paid in 2026 and the other will be deferred for five years and contingent on long-term metrics:

a) 40% of variable remuneration is paid in 2026 net of tax, with 50% in cash and 50% in instruments.

b) 60% paid, if applicable, in five parts in 2027, 2028, 2029, 2030 and 2031 (net of tax), with 33% in cash, 67% in instruments, under the conditions stipulated in section E). This is explained in more detail in the table "2025 award" at the beginning of this 6.4 section.

The final three payments, which weight has been increased from 36% of variable remuneration to 40%, will also be subject to long-term objectives described in section D) below.

Shares shall be subject to a three-years retention period, unless the executive directors already hold shares for an amount equivalent to 200% of their fix annual remuneration -in which case the regulatory one year retention period will apply.

Under the remuneration policy, the maximum number of shares will be calculated based on the daily volume-weighted average of the weighted average Santander share price in the 50 trading sessions before the last Friday (not included) before the board meeting at which executive directors' bonus is agreed.

D) Deferred variable pay subject to long-term objectives

As indicated above, the amounts deferred in 2029, 2030 and 2031 will be paid on the condition that the group achieves its long-term targets for 2025-2027, in addition to the terms described in section E).

As advanced in section B) on the principles of the remuneration policy, the long-term targets are:

A. Relative performance of Banco Santander's total shareholder return (TSR) in 2025-2027 in respect of the weighted TSR of a peer group comprising 9 credit institutions, with the appropriate TSR ratio based on the group's TSR among its peers.

Ranking of Santander TSR	'TSR Ratio'
The 100th percentile	1.5
Between the 75th and 100th percentiles (not inclusive)	1 – 1.5[A]
Between the 50th and 75th percentiles (not inclusive)	0.5 - 1[A]
Less than the 50th percentile	0

A. Proportional increase in TSR coefficient within this bracket of the scale according to the number of positions moved up in the ranking.

TSR[7] measures the return on shareholders' investment. It is the sum of the change in share price plus dividends and other similar items shareholders can receive during the period.

The peer group comprises BBVA, BNP Paribas, Citi, Credit Agricole, HSBC, ING, Itaú, Scotiabank and Unicredit.

B. Banco Santander's consolidated Return on tangible equity (RoTE) target in 2027. The RoTE ratio for this target is obtained as follows:

RoTE in 2027 (%)	'RoTE Ratio'
≥ 18.5%	1.5
≥ 17% but <18.5%	0 – 1.5[A]
< 17%	0

A. Straight-line increase in RoTE coefficient within this bracket of the scale based on the specific percentage of RoTE in 2027.

C. Sustainability metrics.

In the global markets we serve, our engagement to a inclusive culture is a critical driver of our business success. We have a large, diverse customer base, and it's essential that our workforce reflects and understands the varied perspectives of our clients. Our approach to hiring, training, promoting, and retaining an appropriately aligned workforce directly impacts our ability to innovate, relate to our customers and, ultimately, deliver superior results. By fostering an inclusive environment that values different backgrounds, experiences, and viewpoints, we enhance our problem-solving capabilities, improve decision-making, and boost creativity.

Our focus on the composition of our workforce is about doing what's smart for our business because it means we are better positioned to maximize our financial performance and deliver enhanced value to our shareholders. Our success is intrinsically linked to the effectiveness of our team, making it a cornerstone of our strategy for sustained growth and profitability.

More specifically, for the 2025 incentive, the sustainability portion of the long-term incentive that is granted is determined based on performance in the following metrics and targets, which together determine the final payout of 20% of the portion of variable compensation tied to multi-year goals.

Achievement will depend on the progress made on the Group's sustainability actions lines and associated targets (described below)[8]:

1. Women in executive positions by 2027:

In those geographies where regulation or governmental policy does not support establishing specific inclusivity objectives, there will not be specific goals tied to incentive compensation and will not be included in the methodology or formula that determines an element of the total executive payout. In those instances, and to the extent permissible, they will be assessed with other Group's initiatives, factors or projects as aspirational goals that can be a factor considered in making compensation decisions.

Women in executive positions[B] (%)	Coefficient
≥ 39.5%	1.25
≥ 39.2% but < 39.5%	1 – 1.25[A]
≥ 38.4% but < 39.2%	0 – 1[A]
< 38.4%	0

A. Increase of the coefficient is proportional to its position on this line of the scale.
B. Executive positions make up 14% of the total workforce.

The scope of this metric has been reviewed to enhance the attraction and retention of female talent and drive meaningful change. It is essential to focus on lower levels of the organization pyramid, enabling a stronger and more robust female pipeline that supports organic and sustainable progress towards our senior roles.

2. Average annual total number of people that received financial inclusion support in the period 2025 and 2027:

Financial inclusion[B] (millions of people)	Coefficient
≥ 6	1.25
≥ 4.5 but < 6	1 – 1.25[A]
≥ 3.5 but < 4.5	0 – 1[A]
< 3.5	0

A. Increase of the coefficient is proportional to its position on this line of the scale.
B. Number of people unbanked, underbanked, in financial distress or with difficulty to access credit to whom we provide tailored access and finance solutions, aiming to meet local financial inclusion needs in a recurrent, comprehensive, affordable and effective way.
Financial Inclusion thresholds have shifted from accumulative to annual average because it reflects better the performance of these programs.

[7] TSR refers to the difference (%) between the final and initial values of capital invested in ordinary shares of Banco Santander. The final value is calculated based on the dividends or other similar concepts (such as the Santander Scrip Dividend programme) shareholders receive for this investment during the corresponding period -as if they had invested in more shares of the same type at the first date on which the dividend or similar concept was payable to shareholders- and the weighted average share price at that date. To calculate TSR, the weighted average daily volumes of the weighted average listing prices for the fifteen trading sessions prior to 1 January 2025 (exclusive) is considered (to calculate the initial value) and the fifteen trading sessions prior to 1 January 2028 (exclusive) (to calculate the final value).

[8] There are thresholds that go beyond current targets, which should not be considered a revision of them, but a way to further motivate our management team, in order to progress beyond targets on sustainability main strategic lines.

3. Socially responsible investment in 2027 as a percentage of total assets under management.

Socially responsible investment[B] (%)	Coefficient
≥ 21%	1.25
≥ 19% but < 21%	1 – 1.25[A]
≥ 15% but < 19%	0 – 1[A]
< 15%	0

A. Increase of the coefficient is proportional to its position on this line of the scale.
B. Assets under management that meet the criteria of Santander's Sustainable Finance and Investment Classification System (SFICS), over total assets under management.

4. Supporting transition. This goal includes how we support our customers' transition through sustainable finance, and the progress on transition plan:

Finance raised and facilitated[B] between 2025 and 2027 (EUR bn)	Coefficient
≥ 220	1.25
≥ 165 but < 220	1 – 1,25[A]
≥ 120 but < 165	0 – 1[A]
< 120	0

A. Increase of the coefficient is proportional to its position on this line of the scale.
B. Grupo Santander's contribution to our customers' transition: CIB green finance raised and facilitated and Retail & Commercial banking green finance and Digital Consumer Bank green finance.

To achieve beyond 100% of this goal, it is necessary to progress on Banco Santander transition plan, in order to further support our customers in their transition, including: improving climate data, progress on actions to align our portfolios, enhance sustainable product offering to address market needs, further embed climate and environmental risk, and aim to support policy action and market developments.

Each sustainability goal has a different weighting:

1. Women in executive positions: 20%
2. Financial inclusion: 20%
3. Socially responsible Investment: 10%
4. Supporting transition: 50%

C = (20% Goal 1 +20% Goal 2 +10% Goal 3 +50% Goal 4)

Finally, the following formula will be used to set the annual amount of performance-based deferred variable remuneration in 2029, 2030 and 2031 ('final annuity'), without prejudice to any adjustment deriving from the application of the malus policy (see section 6.3 B v):

Final annuity = Amt. x (5/10 x A + 3/10 x B + 2/10 x C)

where:

- 'Amt.' is one third of variable remuneration deferred conditional on performance (i.e. Amt. will be 13.33% of the total incentive set in early 2026).
- 'A' is the TSR ratio calculated as the scale in the table above, according to the relative performance of Banco Santander's TSR within its peer group in 2025-2027.
- 'B' is the RoTE coefficient according to the scale in the table above, based on RoTE at year-end 2027.
- 'C' is the coefficient resulting from the sum of weighted coefficients for each of the four sustainability targets for 2027 (see section (c) above).
- In any event, if the result of (5/10 x A + 3/10 x B +2/10 x C) is greater than 1.25, the multiplier will be 1.25.

The estimated maximum amount to be delivered in instruments to executive directors is EUR 11.5 million.

Lastly, to verify compliance with these long-term objectives, the board, following a proposal from the remuneration committee, may adjust them to remove the effects of any regulatory change to its calculation rules or any extraordinary circumstances (such as impairments, corporate transactions, share buybacks or restructuring procedures) that have occurred which affect the suitability of the metrics and achievement scales established in each case and resulting in an impact not related to the performance of the executive directors and executives being evaluated.

E) Other terms of the incentive

Payment of the deferred amounts (including those linked to long-term targets) will occur only if they remain in the Group and none of the circumstances triggering malus clauses arise (as per the malus and clawback section in the Group's remuneration policy) under terms similar to those indicated for 2024 (detailed in section 6.3 B v)), policy expanded in 2023 to adapt it to the new regulation of US Securities Exchange Commission. Furthermore, the Group can claw back paid incentives under the scenarios, period and terms and conditions set out in the remuneration policy.

Hedging the value of Santander shares received during the retention and deferral periods is expressly prohibited.

The effect of inflation on the deferred amounts in cash may be offset.

Selling shares is also prohibited for at least one year since the delivery.

The remuneration committee may propose to the board adjustments in variable remuneration under exceptional circumstances owing to internal or external factors, such as requirements, orders or recommendations issued by regulatory or supervisory bodies. Such adjustments will be described in detail in the report on the remuneration committee and the annual report on directors' remuneration put to a non-binding vote at the AGM.

iii. Shareholdings

As described in section 6.3.E, in addition to the regulatory obligation not to sell shares they receive as remuneration for a year since from their award date, in order to comply with recommendation 62 of the Spanish Corporate Governance Code, the policy on shareholdings includes the obligation for executive directors not to sell the shares they receive as variable remuneration for a period of three years from their award date, unless the executive director already holds Banco Santander shares for an amount equivalent to twice his/her annual salary.

Directors' remuneration for 2026 and 2027

A. Directors' remuneration in their capacity as such

For 2026 and 2027, no changes to directors' remuneration are planned in respect of what is foreseen herein for 2025. However, shareholders at the 2026 or 2027 AGMs may approve an amount higher than the six million euros currently in force, or the board may approve an alternative allocation of that amount to directors in accordance with the criteria in article 58.2 of Banco Santander's Bylaws (i.e. duties and responsibilities; positions held on the board; membership and attendance at committee meetings; and other objective circumstances).

B. Directors' remuneration for the performance of executive duties

Executive directors' remuneration will conform to principles similar to those applied in 2025, with the following changes.

i) Fixed components of remuneration

A) Gross annual salary

Executive directors' annual gross fixed pay may be adjusted each year based on the criteria approved by the remuneration committee at any given time.

Otherwise, it must be disclosed in the report on the remuneration committee and the annual report on director's remuneration put to a non-binding vote at AGM.

B) Other fixed remuneration components

No changes planned in respect of the terms for 2025.

ii) Variable remuneration components

The policy on executive directors' variable remuneration for 2026 and 2027 will be based on the same principles as in 2025, following the same single-incentive scheme described above, and subject to the same rules of operation and limitations.

A) Setting variable remuneration

Executive directors' variable remuneration for 2026 and 2027 will be set based on the corporate bonus pool and a benchmark approved for each year which takes into account:

- a set of short-term quantitative metrics measured against annual objectives and aligned with the Group's strategic plan. These metrics will also cover, at least, capital and customers. They can be measured at Group level and, where applicable, at division level, for a specific business division headed by an executive director. The results of each metric can be contrasted with the budget for the financial year, as well as with growth from the previous year.
- a qualitative assessment that cannot raise or lower the result of the quantitative metrics by more than 35%. It will be conducted for the same categories as the quantitative metrics, including relative performance against market, risk management, compliance, network collaboration and sustainability targets.
- an exceptional adjustment that must be duly substantiated and may involve changes owing to control and/or risk shortfalls, negative assessments from supervisors or unexpected material events.

The quantitative metrics, the qualitative assessment and potential extraordinary adjustments will allow main objectives are considered from the perspective of the various stakeholders and that the importance of risk and capital management is factored in.

Once the corporate bonus pool is fixed according to the criteria above, the board of directors, further to a proposal from the remunerations committee, decides on the individual bonus, taking into consideration the level of achievement of their individual objectives, which in general terms coincide with the bonus pool metrics, their compliance with corporate values and risk culture.

Lastly, the following circumstances must be confirmed to set variable remuneration:

- If ONP does not reach a certain compliance threshold, the incentive cannot exceed 50% of the year's individual target bonus.
- If the group's ONP were negative, the incentive would be zero.
- When setting individual variable pay, the board will also consider restrictions to the dividend policy imposed by supervisors.

B) Forms of payment of the incentive

The variable remuneration of executive directors for 2026 and 2027, will be paid as follows:

- 40% in cash;
- and 60% in instruments, split as follows:
  - the amount of PagoNxt, S.L. RSUs set for each year (as described below); and
  - the rest, all in shares of Banco Santander.

It is also envisaged that for 2026 and 2027 Ana Botín would receive the equivalent of EUR 500 thousand in RSUs, and Héctor Grisi would receive the equivalent of EUR 420 thousand in RSUs, in accordance with PagoNxt, S.L.'s long term incentive plan. Each RSU would grant the right to a share in PagoNxt, S.L. or the holding entity of its group (or its equivalent in cash) at the moment when, according to such plan, a liquidity event, a repurchase or a liquidation of such instruments takes place.

The RSUs will substitute part of their Santander variable pay instruments without increasing their total pay and will not represent more than 10% of their variable pay in any event.

C) Deferred variable remuneration subject to long-term objectives

The last three annual payments of each deferred variable remuneration amount will be made in accordance with the terms described under section E) above and if the Group fulfils long-term objectives for at least 3 years. This may confirm, reduce or increase payment amounts and the number of deferred instruments.

Long-term metrics will reflect value creation and shareholder returns as well as capital and sustainability over a minimum period of 3 years. They will be aligned with the Group's strategic plan and main priorities towards its stakeholders. They can be measured for the entire Group or by country or business, when appropriate, and subsequently compared to a group of peers.

The portion paid in shares cannot be sold until one year has elapsed since delivery.

D) Other terms of the incentive

No changes to the continuity, malus and clawback clauses of the remuneration policy for 2025 described in section 6.4.B.E) are expected. Furthermore, no changes are planned in respect of the clauses on hedging instruments or the deferred amounts in cash adjusted for inflation.

iii) Shareholdings

The policy on shareholdings approved in 2016, with the amendment introduced in 2020 relating to not selling the shares they receive as variable remuneration for a period of three years detailed in section 6.3.E) above will apply in 2026 and 2027, unless the remuneration committee proposes it be amended to the board in light of exceptional circumstances (regulations, orders or recommendations from regulators or supervisors). Such amendments would be described in detail in the report on the remuneration committee and the annual report on director's remuneration put to a non-binding vote at the annual general meeting.

iv) Principle of equal pay

The same principle of equal pay that applies for executive directors and any other Santander employee described in respect of 2025 apply for 2026 and 2027.

Terms and conditions of executive director contracts and other provisions applicable to all directors

Executive directors' terms of service are governed by board-approved contracts they sign with Banco Santander. The basic terms and conditions, besides those relating to the remuneration mentioned above, are the ones described here below.

A. Exclusivity and non-competition

Executive directors may not contract with other companies or entities to perform services, unless expressly authorised by the board of directors. In all cases, they are bound by a duty of non-competition in relation to companies and activities similar in nature to Banco Santander and its consolidated group.

In addition, executive director contracts impose prohibitions on competing and attracting customers, employees and suppliers, which can be enforced for two years after their termination in their executive duties for reasons other than a breach by Banco Santander. In regard to Ana Botín and Héctor Grisi, the compensation to be paid by Banco Santander for this duty of non-competition is twice the amount of the fixed remuneration.

Finally, all directors must comply with the Board Rules and regulations provisions that prevent them from carrying out competing activities and oblige them to communicate any other professional activities, that must be assessed by the nominations committee in order to check whether there is any conflict of interest or impair director´s capacity to discharge his duties as such.

B. Code of Conduct

Directors are obliged to adhere strictly to the group's General Code and the Code of Conduct in Securities Markets, especially in terms of confidentiality, professional ethics and conflicts of interest.

C. Termination

The length of executive directors' contract is indefinite. Contracts do not provide for any severance payment upon termination apart from what the law provides.

If Ana Botín's contract is terminated by Banco Santander, she must remain available to the group for four months in order to ensure proper transition. During this period, she would continue to receive her gross annual salary.

D. Benefit plans

Executive directors participate in the defined contribution pension scheme created in 2012. It covers retirement, disability and death. Banco Santander makes annual contributions to executive directors' benefit plans schemes. Annual contributions are calculated in proportion to executive directors' pensionable bases, and the Group will continue to make them until the executive directors' leave the Group or until their retirement within the Group, their death or disability. The pensionable base of executive directors' annual contributions is their fixed remuneration plus 30% of the average of their last three variable remuneration amounts.

Contributions will be 22% of pensionable bases.

The pension amount that corresponds to contributions linked to variable remuneration will be invested in Santander shares for five years from the earlier of the date of retirement or cessation. It will be paid in cash after the five years have elapsed or on the retirement date (if later). Moreover, the malus and clawback clauses for variable remuneration contributions will apply for the same period as the related bonus or incentive.

This benefit plan is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A. Executive directors' economic rights under the scheme belong to them even if they are not active in the group at the time of their retirement, death or disability. Their contracts do not provide for any severance pay upon termination apart from what the law provides.

E. Insurance and other remuneration and benefits in kind

Ana Botín will receive the supplement to their fixed remuneration approved when the supplementary life and health benefits were eliminated in 2018. It will be paid in 2025, 2026 and 2027 in the same amount and continue to be paid until they reach retirement age (even if they are still active).

The Group has life and health insurance policies taken out for executive directors. Insurance premiums for 2025 include standard life insurance and the life insurance cover with the supplement to their fixed remuneration mentioned above. In 2026 and 2027, premiums could vary if directors' fixed pay or actuarial circumstances change.

Furthermore, directors are covered by Banco Santander's civil liability insurance policy and may receive other benefits in kind (such as employee loans) pursuant to the group's general policy and subject to the corresponding tax treatment.

Likewise, the Bank makes available to directors the human and material means required or considered appropriate for carrying out their duties (including any travel required for the exercise of their role). Any eventual private use of these means by the directors is

duly paid by them under the similar terms and conditions that would be applied to third independent party under the supervision of the audit committee.

F. Confidentiality and return of documents

Directors are bound to a strict duty of confidentiality during their relationship and subsequent to termination. Directors are required to return any documents and items relating to their activities and in their possession to Banco Santander.

Agreements with non-executive members of the board

José Antonio Álvarez has a contract since 1 January 2023 to represent the bank before supervisors, international bodies, sector organizations and other entities and authorities in institutional and public policy matters as necessary, for which he receives a fixed remuneration of EUR 1,750 thousand. This is an annual contract which has been renewed for the year 2025.

Luis Isasi has a contract since 4 April 2020 to act as non-executive Chair of the Santander España business unit (for which he receives EUR 925 thousand a year) and to serve as a member of the board of Santander España business unit (for which he receives EUR 75 thousand a year). His contract is for an indefinite term and does not entitle him to any compensation if terminated.

Appointment of new executive directors

The components of remuneration and basic structure of the agreements described in this remunerations policy will apply to any new director that is given executive functions at Banco Santander, notwithstanding the possibility of amending specific terms of agreements so that, overall, they contain conditions similar to those previously described.

Directors' total remuneration for executive duties cannot exceed the highest remuneration received by the group's current executive directors under the remuneration policy approved by shareholders. The same rules apply if a director assumes new duties or becomes an executive director.

If a director takes up executive functions in a specific division or local unit, the board of directors, on the remuneration committee's recommendation, can adapt the metrics for setting and paying incentives to take that division or local unit into account in addition to the Group.

Remuneration paid to directors in that capacity will be included within the maximum amount set by shareholders to be distributed by the board of directors in the terms described above.

A new director coming from an entity outside Grupo Santander could be paid a buyout to offset any variable remuneration foregone for having accepted a contract with the group; and/or a sign-on bonus for leaving to join Banco Santander.

This compensation could be paid fully or partly in shares, depending on the delivery limits approved at the AGM. Authorization is expected to be sought at the next general shareholders' meeting in order to deliver a maximum number of shares to any new executive directors or employees to whom buyout regulations apply.

Furthermore, sign-on bonuses can only be paid once to new executive directors, in cash or in shares, and in each case they will not exceed the sum of the maximum variable remuneration awarded for all executive directors.

Mr Grisi's appointment as CEO (with effect from 1 January 2023) did not entail a buyout or sign-on bonus since he was already part of Grupo Santander.

Temporary exceptions to the remuneration policy

According to section 6 of Article 529 *novedecies* of the Spanish Companies Act, specific exceptions may apply to components in the remuneration policy, based on particular business needs or macroeconomic context in the Group's geographies, provided that they are required to serve the long-term interests and sustainability of the entity; ensure its viability; and require to be adopted urgently.

Such exceptions include:

- Complex macroeconomic scenarios where the ordinary course of the business is severely impacted.
- The appointment of a new Executive Chair or chief executive officer, or the need to retain an executive director to avoid a vacancy at the head of the Group (*vacatio regis*) during especially complex times for the business.
- The need to adapt to regulatory change.

To apply, exceptions must be supported by:

- a reasoned remuneration committee proposal; and
- board of directors analysis and approval.

Any applied exception will be explained in the *Annual report on directors' remuneration*.

6.5 Preparatory work and decision-making for the remuneration policy; remuneration committee involvement

Section 4.7 'Remuneration committee activities for 2023', (the report on the remuneration committee) states:

- Pursuant to Banco Santander's Bylaws and the Rules and regulations of the board of directors, the duties relating to the remuneration of directors performed by the remuneration committee.
- The composition of the remuneration committee at the date the report is approved.
- The number of meetings held in 2024, including a joint session with the risk supervision, regulation and compliance supervision committee.
- The date of the meeting in which the report was approved.

The 2023 annual report on directors' remuneration was approved by the board of directors and put to consultative vote at the 2024 AGM, with 90.18% of the votes in favour. The tally of the votes

was:

	Number	% of total[A]
Votes	10,547,165,767	99.95 %

	Number	%
Votes for[B]	9,381,395,305	90.18 %
Votes against[B]	1,021,578,768	9.82 %
Blank[C]	5,497,367	0.05 %
Abstentions[C]	138,694,327	1.31%

A. Percentage on total valid votes and abstentions.
B. Percentage of votes for and against.
C. Percentage of Banco Santander's share capital on the date of the AGM.

Decision process for the development, review and application of the policy

Pursuant to Article 529 *novodecies* of the Spanish Companies Act, the remuneration committee issues the report on the proposed remuneration policy for 2025, 2026 and 2027 herein. The board of directors then submits it to the 2025 AGM as a separate item on the agenda and an integral part of this text. See 6.4 ' Directors' remuneration policy for 2025, 2026 and 2027'.

Banco Santander's Compensation function prepares the remuneration policy with the suggestions, requests and comments received during the year from the human resources committee, remuneration committee and the board of directors. A first draft of the policy is submitted to the remuneration committee for review every January. The review considers the suggestions, requests and comments the Chair and Lead Independent Director receive through shareholder and stakeholder engagement during the year on our corporate governance and our remuneration structures. Regulators' recommendations and legal requirements that may have come to light since the last time the director remuneration policy was submitted for approval by the AGM are also considered.

The committee also makes sure the policy is consistent with the Group's culture and our Simple, Personal and Fair values.

After the preliminary presentation, incorporating the changes and suggestions of these first revisions, the Compensation function then prepares the final draft for the remuneration committee to submit to the board of directors for approval in February.

Based on the analysis carried out in the context of the 2024 annual remuneration report elaboration and its continued supervision of the remuneration policy, the remuneration committee believes the director remuneration policy for 2025, 2026 and 2027 which is included in section 6.4 above is consistent with the principles of Banco Santander's remuneration policy and its remuneration scheme set out in the Bylaws.

The policy aims, among other aspects, (i) to maintain a simple executive remuneration scheme, with three categories of quantitative metrics (business transformation, sustainable profitability and capital) to further align with value creation and capital generation; (ii) outperform peers in value creation aspects; and, (iii) regarding metrics linked to multiyear objectives, to prioritize long-term profitability for shareholders and Santander and a sustainable balance sheet (total shareholder return, RoTE and sustainability-related metrics related to our responsible banking targets) in order to follow best market practice and meet our stakeholders' needs.

In 2024, no deviations from, or temporary exceptions to, the application of the remuneration policy occurred.

6.6 Remuneration of non-director members of senior management

2024 variable remuneration was approved by the board of directors on 4 February 2025 in view of the recommendation from the 27 January 2025 remuneration committee. It was set according to Banco Santander's general remuneration policy as well as specific details pertaining to senior management.

In general, senior management variable remuneration packages were calculated with the quantitative metrics and qualitative assessment used for executive directors (see section 6.3.B) ii).

Some contracts of members of senior management were amended in 2018 in the same manner described under 6.3.D) in respect of Ana Botín, with a pension scheme of 22% of their pensionable bases, the elimination of supplementary benefits, an increase of the insured sum of life insurance and a supplement to fixed remuneration in cash which is included under "Other remuneration".

The following table shows the amounts of short term remuneration (immediately payable) and deferred remuneration (not linked to multi year targets) for senior management as of 31 December 2024 and 2023, excluding those of executive directors. This amount has been reduced by 39% compared to that reported in 2014 (EUR 80,792 thousand):

EUR thousand							
		Short-term and deferred salary remuneration					
Year	Number of people	Fixed	Immediately receivable variable remuneration (50% in instruments)[A]	Deferred variable remuneration (50% in instruments)[B]	Pension contributions	Other remuneration[C]	Total
2024	14	16,466	14,753	6,639	4,520	7,153	49,531
2023	14	17,109	14,711	6,439	4,775	7,135	50,169

A. The amount immediately payable in 2024 was 1,612 thousand Santander shares (1,568 thousand Santander shares and 1,386 thousand Santander share options in 2023).
B. The deferred amount for 2024 will be 725 thousand Santander shares a (700 thousand Santander shares and 555 thousand Santander share options in 2023).
C. Includes life insurance premiums, health insurance and relocation packages, other remuneration items and RSUs of PagoNxt S.L., as members of board of directors of this entity.

The share price for 2024 variable remuneration is EUR 4.576.

This table breaks down remuneration linked to multi-year targets for senior management (excluding executive directors) at 31 December 2024 and 2023, which they will only receive if they meet the terms of continued service; non-applicability of malus clauses; and long-term goals are met during deferral periods.

Thousands of euros		
Year	Number of people	Deferred variable remuneration subject to long-term metrics[A] (50% in instruments)[B]
2024	14	6,971
2023	14	6,761

A. In 2024, this corresponds to the fair value of maximum annual payments for 2028, 2029 and 2030 in the ninth cycle of the plan for deferred variable remuneration linked to multi-year targets. In 2023, this corresponds to the estimated fair value of maximum annual payments for 2027, 2028 and 2029 in the eighth cycle of the plan for deferred variable pay linked to multi-year targets. Fair value in the plan was determined on the authorization date based on the valuation report of independent expert Willis Towers Watson. Based on the plan for 2024 and success levels of similar plans at peer entities, the fair value was considered to be 70% of the value linked to long-term metrics.
B. The number of shares in Santander as deferred variable pay subject to long-term metrics shown in the table above was 762 thousand shares in 2024 (735 thousand shares in Santander and 582 Santander share options in 2023).

The long-term goals are the same as those for executive directors. They are described in section 6.3.B) iv).

Additionally, members of senior management who stepped down from their roles in 2024 consolidated salary remuneration and other remuneration for a total amount of EUR 12,303 thousand (EUR 3,560 thousand in 2023). In 2024 rights regarding variable pay subject to long-term objectives amounted to EUR 633 thousand (this right has not been generated in 2023 for this collective).

In 2024, the ratio of variable to fixed pay components was 116% of the total for senior managers group, well within the maximum limit of 200% set by shareholders at the AGM.

See note 5 of the Group's 2024 consolidated financial statements for further details.

6.7 Prudentially significant disclosures document

On the remuneration committee's recommendation, the board approves the key remuneration elements of managers or employees who, while not belonging to senior management, take on risks, carry out control functions (i.e. internal audit, risk management and compliance) or who receive global remuneration that places them in the same remuneration bracket as senior management and employees who take on risk. These are typically those whose professional activities may have an important impact on the Group's risk profile (all of these, together with the senior management and Banco Santander's board of directors form the so called 'Corporate Identified Staff' or 'Corporate Material Risk Takers')

Every year, the remuneration committee reviews and, where applicable, updates Corporate Identified Staff in order to include individuals within the organization who qualify as such. The Remuneration Policies chapter in the 2024 Pillar III disclosures report[9] of Banco Santander explains the criteria and regulations followed to identify such staff.

At the end of 2024, 1,246 Group executives (including executive directors and non-director senior managers) were considered corporate identified staff of Grupo Santander (1,152 in 2023), which accounts for 0.60% of the total final workforce (0.54% in 2023).

Corporate Identified Staff have the same remuneration framework as executive directors (see sections 6.1 and 6.3), except for:

- Category-based deferral percentages and terms.
- The possibility in 2024 of certain less senior manager categories of only having deferred variable pay subject to malus and clawback clauses.
- The portion of variable remuneration paid or deferred as shares for Group executives in Brazil, Chile and Poland that can be delivered in shares or similar instruments of their own listed entities.

In 2025, the board will maintain its flexibility to determine full or partial payment in shares or similar instruments of Banco Santander and its relevant subsidiaries in the proportion it deems appropriate (according to the maximum number of Banco Santander shares allocated at the general meeting and to any regulatory restrictions in each jurisdiction).

The aggregate amount of variable remuneration for Corporate Identified Staff in 2024, the amounts deferred in cash and instruments, and the ratio of the variable to fixed remuneration components are explained in the remuneration policies chapter of Banco Santander's Pillar III disclosures report for 2024.

[9] The 2024 Pillar III disclosures report can be found on our corporate website.

7. GROUP STRUCTURE AND INTERNAL GOVERNANCE

The Group is structured into legally independent subsidiaries whose parent company is Banco Santander, S.A. Its registered office is in Santander (Cantabria, Spain), while its corporate centre is located in Boadilla del Monte (Madrid, Spain). It has a Group-subsidiary governance model (GSGM) and good governance practices in place for its core subsidiaries. Any references to subsidiaries in this section are to the Group's most prominent entities.

The key features of the GSGM are:

- The subsidiaries' governing bodies must ensure their rigorous and prudent management and economic solvency while pursuing the interests of their shareholders and other stakeholders.
- The subsidiaries are managed locally by teams that possess extensive knowledge on, and experience with, their customers and markets, while benefiting from the synergies and advantages of belonging to the Group.
- The subsidiaries are subject to local authority regulation and supervision, although the ECB supervises the Group on a consolidated basis.
- Customer funds are secured by the deposit guarantee schemes in the subsidiaries' countries and are subject to local laws.

The subsidiaries manage their capital and liquidity autonomously while the Group's capital and liquidity are coordinated by corporate committees. Intra-group risk transactions are limited, transparent and carried out under market conditions. In addition, the Group retains a controlling interest in subsidiaries listed in certain countries.

Each subsidiary runs independently and has its own recovery plan, limiting the contagion of risk between them and reducing systemic risk.

The GSGM also applies to the global businesses, namely: Corporate & Investment Banking (CIB), Retail & Commercial Banking (Retail), Wealth Management & Insurance (Wealth), Digital Consumer Bank (Consumer) and Payments (Payments). Local CEOs / Country Heads remain ultimately responsible for achieving the budget, execution of the customer and commercial strategy, and financial delivery while global businesses heads lead common businesses and are responsible for the implementation of the global operating model and common tech stack, thereby improving local performance; these result in a truly global-local organization.

7.1 Corporate Centre

The GSGM is supported by a corporate centre, which brings control and support units together with such functions as strategy, risk, compliance, audit, finance, accounting, technology and operations, people and culture, legal services, internal governance, communications and marketing. It adds value to the Group by:

- enhancing governance under robust corporate frameworks, models, policies and procedures to implement strategies and ensure an effective Group oversight;
- making the Group's units more efficient through cost management synergies, economies of scale and a common brand;
- sharing best commercial practices, with a key focus on global connectivity, launching commercial initiatives globally and bolstering digitalization and transformation; and
- ensuring the suitability of our main executives through the procedure for appointing key positions and assessing suitability that applies to the entire Group.

7.2 Internal governance

Group-subsidiary relationship

The GSGM outlines a set of principles that regulate three types of relationships between the Group and its subsidiaries:

- The subsidiaries' governing bodies are subject to the Group's rules and procedures for structuring, forming and running boards of directors and their committees (audit, nomination, remuneration and risk committees), according to international standards. Guidelines regarding subsidiary board composition are aligned with best international practices and ensure an appropriate Group presence on subsidiary boards with at least two Group nominated directors on each board. The subsidiaries are also subject to local regulations and supervisory standards.
- The relationship between local CEOs / Country Heads and the Group CEO. Until January 2025 these relationships were facilitated through three Regional Heads (Europe, North America and South America). Whilst the regional organizational structure has played a key role in ensuring that the Group delivers on its long-term strategic vision and against targets announced as part

of previous investor days, the board agreed to remove this management layer in line with its ongoing focus on streamlining our structure to achieve greater agility, increasing our profitability through accelerating the roll out of our global business platforms and products. See section 1.5 'Achievement of our 2024 goals'.

- The relationship between local and global heads of key positions, following a three lines of defence model: Chief Risk Officer (CRO), Chief Compliance Officer (CCO), Chief Audit Executive (CAE), Chief Financial Officer (CFO) and Chief Accounting Officer (CAO), as well as other key support and business functions (Technology and Operations (T&O), People and Culture, General Secretariat, Marketing, Communications, Strategy), as well as the five global businesses (CIB, Retail, Wealth, Consumer and Payments).

Internal regulation

The Group has corporate frameworks for matters considered to have a material impact on its risk profile, such as risk, capital, liquidity, compliance, financial crime, technology, auditing, accounting, finance, strategy, people and culture, outsourcing, cybersecurity, special situations management communications and brand and responsible banking. These frameworks, which are mandatory, also specify:

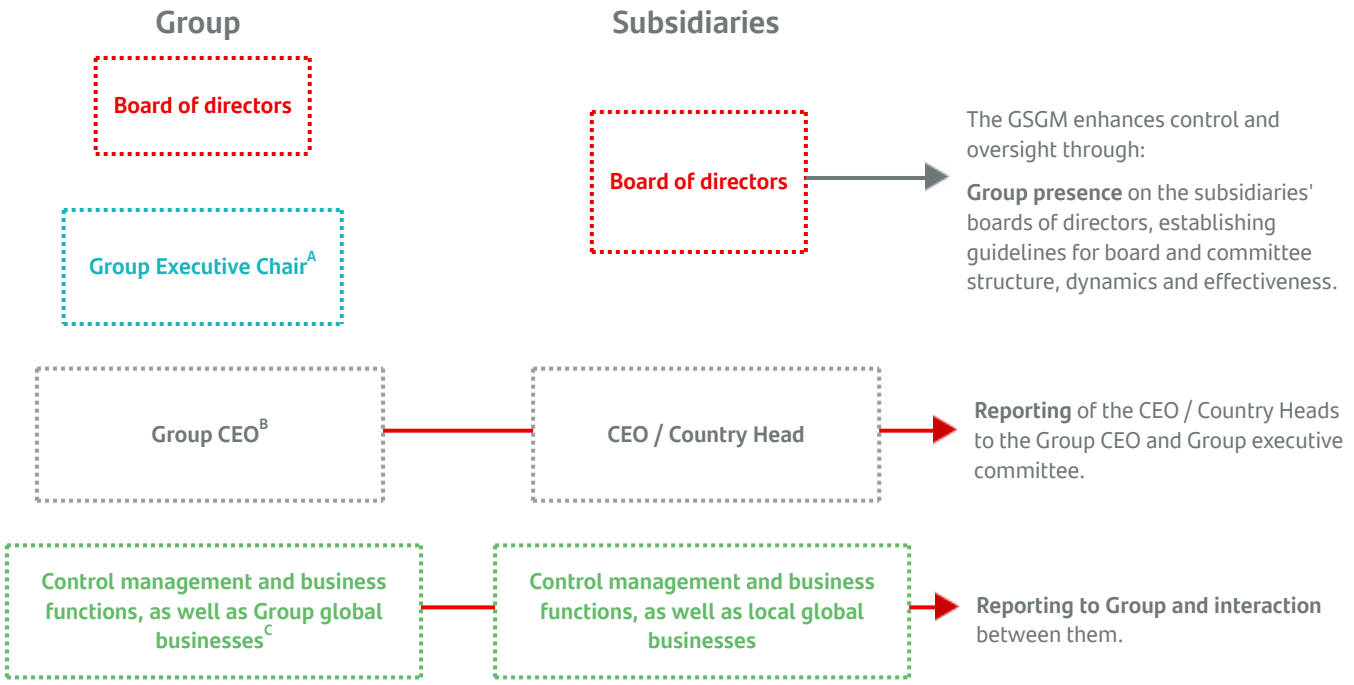
- how the Group should supervise and exert control over its subsidiaries; and
- the Group's involvement in subsidiaries' decision-making (and vice versa).

The Banco Santander board approves the GSGM and corporate frameworks for subsidiary governing bodies to formally adhere to them. They consider subsidiaries' local requirements and are revised every year as required by the Group board to adapt to new legislation and international best practices.

The functions draw on corporate frameworks to prepare internal regulatory documents that are given to subsidiaries as a reference for implementing those frameworks effectively, cohesively and in compliance with applicable local laws and supervisory requirements. This approach ensures consistency throughout the Group. Every year, the functions conduct an assessment to ensure that the Group's internal regulations are embedded locally and carry out an annual certification process to ensure the internal regulation under their scope is fit for purpose.

The Group's Internal Governance office and subsidiary general counsels are responsible for embedding the GSGM and corporate frameworks. Every year, their performance is assessed in reports sent to the relevant governing bodies.

Since 2019, a policy on the governance of non-GSGM subsidiaries has enhanced the governance and control system that has been applied to those companies.



Global businesses each have specific governance arrangements which ensures a robust Group-wide oversight of such businesses as set out in the GSGM. Each global business is responsible for defining the common business and operating model, setting the global ambition and identifying and managing the global tech platforms and product factories.

Recent developments

As we continue to progress our transformation agenda, the board agreed to remove the regional layer of management in January 2025 to drive simplification and ensure that our global businesses operate directly across all countries, enabling faster decision-making, clear accountability and enhanced agility. As a result, local CEO / Country Heads now report directly to the Group CEO. They must undertake their defined key responsibilities in compliance with European Union and country-specific laws and regulations. In turn, global businesses and corporate functions own the implementation of the global operating model across our footprint; and are responsible for of the relevant platform and products budgets. This ensures alignment with our global priorities and further ensures resource optimization.

In addition, the T&O governance model was updated in 2024 with the aim of helping the global businesses and entities in their digital transformation. This governance model details a set of guiding principles defined to implement T&O's operating model global strategy, whilst ensuring an adequate control and oversight on a Group-wide basis.

The following charts show the three levels of the GSGM, as well as the main actions to ensure an effective relationship and solid internal governance system for the Group.

A. First executive.
B. Second executive, who reports directly to the board of directors.
C. Audit, Risk, Compliance, Finance, Financial Accounting & Control, T&O, People and Culture, General Secretariat, Marketing, Communications, Strategy as well as the five global businesses (CIB, Retail, Wealth, Consumer and Payments).

Best practices and talent sharing across the whole Group and between subsidiaries is **key to our success**.

Multiple point of entry structure that has proved to be a **key resilience instrument** and is a result of our diversification strategy.

Continuous collaboration and daily interaction between local and corporate teams.

A common set of corporate frameworks and policies across the Group adapted to local market conditions.

Synergies and economies of scale across the Group.

Planning and implementation of new Group-wide and local initiatives to keep developing our management and control model.

8. INTERNAL CONTROL OVER FINANCIAL REPORTING (ICFR)

This section describes the key features of Grupo Santander's ICFR.

8.1 Control environment

Governance and control bodies

These bodies are responsible for implementing and overseeing our ICFR, which builds on the Group's internal control system (ICS):

- **Board of directors.** It approves the financial reports Banco Santander must disclose as a listed company. The board also oversees and guarantees the integrity of the Group's internal information, control, accounting and reporting systems.
- **Audit committee.** It assists the board of directors in overseeing the ICS and in preparing and presenting financial information. The audit committee also works with the external auditor to address matters that have been considered in audits to have a significant impact on our ICFR. It also makes sure the external auditor issues a report on the Group's ICFR.

For more details, see section 4.5 'Audit committee activities in 2024'.

- Risk control committee. It assists the audit committee in reviewing and overseeing the annual ICS assessment.
- Corporate accounting, financial and management, and sustainability information committee. It is responsible for governing and supervising accounting, financial management and control matters.
- Internal control steering meeting. It is chaired by the CRO and CAO and its role is to continuously monitors the Group's control environment, as well as the ICS strategy and performance.

Lead functions

The structure of the Group enables us to manage risk effectively and ensure that internal control functions (risk, compliance and internal audit) are independent of business functions and can perform their duties efficiently. The key functions that prepare financial information are:

- **Costs function.** It draws up and documents the corporate model for managing structures and templates, which is used as a reference across the Group.
- **Business and support functions.** They are responsible for identifying and documenting (under their remit) the risks, tasks and controls that make up our ICFR, based on knowledge of their operations and procedures.
- **Financial accounting and control function.** It is responsible for: (i) drawing up the Group's accounting policies and adapting them to local needs; (ii) ensuring that appropriate organizational structures are in place to carry out assigned tasks, as well as a suitable hierarchical-functional structure; (iii) using Group tools and methodologies to implement and run an ICS on the cut-off, consolidation and publication of financial information and to ensure that the financial information we report remains reliable; and (iv) implementing the corporate accounting and management information systems and adapting them to the specific needs of local units.
- **Risk and compliance functions.** These functions comprise the second line of defence and are in charge of independently overseeing and challenging the risk management that the first line conducts.

  Within the Risk division, the internal control function sets the standards and methodology for, and oversees the implementation, monitoring and reporting of the Group's ICS.
- **Internal audit function.** It is the third line of defence in overseeing and reporting on our ICFR. It recommends corrective action and areas of improvement for the first and second lines to consider and implement. Internal audit is an independent function from the board of directors and senior management that oversees the quality and effectiveness of internal control, risk management (current or emerging) and governance processes and systems, thus helping the protect the organization's value, solvency and reputation.

General Code of Conduct, Canal Abierto and training

General Code of Conduct (GCC)

The Group's GCC sets out board approved guidelines on employees' conduct. Moreover, it dictates guidelines in relation to accounting standards and financial reporting.

All of the Group's employees, including directors, sign up to the GCC when they join Santander. Some are also subjected to the Code of Conduct in Securities Markets and other codes of conduct specific to their area or business.

All Santander employees have access to courses on the GCC. The compliance function also answers employees' queries on ethics and rules in the GCC.

If anyone violates the code, the people and culture function adopts disciplinary measures and recommends corrective action (including work sanctions), irrespective of any related civil or criminal sanctions.

For more details on the GCC's core implementation mechanisms, see 'Conduct standards' in section 4.2 'Ethical conduct' in the 'Sustainability statement' chapter.

Canal Abierto

Canal Abierto is Banco Santander's internal information system where any person related to Banco Santander can confidentially and, if desired, anonymously, report unethical conduct that could be considered illegal acts in the workplace or contrary to the law; irregularities or violations of the GCC and acts that go against the Group's corporate behaviours; and improper accounting or auditing practices and internal control or influence on external auditors according to the SOx Act. It also provides a means to report suspicions of infringements of anti-money laundering and terrorism financing, corruption and bribery, and securities market laws.

The board of directors is responsible for implementing Canal Abierto, while the audit committee and the risk supervision, regulation and compliance committee jointly supervise the channel.

For more details on functioning of the channel and the number and type of reports received, see section 4.3 'Ethical channels' in the 'Sustainability statement' chapter.

Training

Group employees who help prepare or analyse financial information take part in training programmes and regular refresher courses specifically designed to teach them the concepts and skills they require to discharge their duties properly.

The functions that prepare our ICFR promote, design and oversee these programmes and courses, with support from the people and culture function.

Training takes the form of both e-learning and on-site sessions that the people and culture function monitors and oversees to guarantee that employees duly complete them and understand their contents.

Training programmes and refresher courses on financial reporting in 2024 focused on: (i) risk analysis and management; (ii) accounting and financial statement analysis; (iii) the business, banking and the financial environment; (iv) financial management, costs and budgeting; (v) mathematical skills; and (vi) calculations and statistics.

Over 81,133 employees from several units and markets where Grupo Santander operates undertook the mentioned training programmes, with some 490,000 hours spent on them. Moreover, each subsidiary has its own training plan, based on Banco Santander's.

8.2 Risk assessment in financial reporting

Grupo Santander has a specific process to identify the companies that must be included in its scope of consolidation, which the Financial Accounting and Control division and the General Secretariat division oversee.

This process enables us to identify the entities that Grupo Santander controls through voting rights that grant direct or indirect ownership of their capital and through mutual funds, securitization funds, shareholders agreements, structured entities and other means. The aim is to determine whether the Group has control over an entity, whether it has rights to the variable returns of the entity or is exposed to them, and whether it can influence the amount of such variable returns. If the Group is considered to have control, the entity is included in the scope of consolidation under the global integration method. Otherwise, we analyse whether there is significant influence or joint control. If so, the entity is also included in the scope of consolidation and is measured using the equity method.

Entities with the greatest impact on the preparation of the consolidated financial information, must use a common ICS methodology to make sure that relevant controls are included and all significant risks to financial reporting are covered.

Risk identification considers all the Group's activities, not just the risks directly related to the preparation of the Group's financial information. For more details on the specific ICS controls on non-financial information and sustainability, see 'Risk management and internal controls over sustainability information' in note SN 2. 'Sustainability governance' in the 'Sustainability statement' chapter.

Identifying potential risks that must be covered by the ICS is based on top management's knowledge and understanding of the business and its operations in relative to the importance and qualitative criteria associated with the type, complexity or structure of the business.

Banco Santander ensures that controls are in place to cover the potential risks we identify. This includes risks of errors and fraud in financial reporting and those that cover (i) the existence of assets, liabilities and transactions at the relevant date; (ii) timely and correct recording and proper valuation of assets, liabilities and transactions; and (iii) the correct application of accounting principles and rules, as well as appropriate breakdowns.

For more details on the identification, documentation and assessment of the ICS risks and controls, see section 1.5 'Internal control system' in the 'Risk management and compliance' chapter.

8.3 Control activities

Revision and approval of financial information

The board of directors and the audit committee oversee the preparation, submission and integrity of the financial information required of Banco Santander and the Group. They also review compliance with regulatory requirements, the scope of consolidation and the correct application of accounting standards, ensuring that financial information remains permanently updated on our corporate website.

The audit committee is responsible for reporting to the board of directors on the financial information that the Group must publish, ensuring that it is prepared in accordance with the same principles and practices as the financial statements and is as equally reliable.

The most significant aspects we consider when closing accounts and reviewing relevant judgements, estimates, measurements and projections are:

- impairment losses on certain assets;
- the assumptions used in the actuarial calculation for employment benefit liabilities and other obligations;
- the useful life of tangible and intangible fixed assets;
- the valuation of consolidation goodwill;
- the calculation of provisions and contingent liabilities;
- the fair value of certain unquoted assets and liabilities;
- the recoverability of tax assets; and
- the fair value of acquired identifiable assets and the liabilities assumed in business combinations.

For more details on ICS reporting and governance, see section 1.5 'Internal control system' in the 'Risk management and compliance' chapter.

Internal control policies and procedures for financial IT systems

The Technology and Operations division draws up the Group's corporate policies on IT systems that are used directly or indirectly to prepare financial statements. These systems follow special internal controls to prepare and publish financial information correctly.

The internal control policies on the following aspects are of particular importance:

- Updated and divulged internal policies and procedures for system security and access to applications and computer systems according to the duties assigned to a role, to make sure access to information is appropriate and to protect the confidentiality, availability and integrity of financial information from cyber attacks.
- The methodology we use when creating, modifying and maintaining apps follows a cycle of definition, development and testing that ensures we process financial information correctly. We have special development and security controls and data access, testing, vulnerability management, and other mechanisms. For more details on cybersecurity, see section 5. 'Research, development and innovation (R&D&I)' in the 'Economic and Financial Review' chapter.
- Comprehensive testing of applications developed based on the requirements set by a specialized development laboratory.
- We run the complete software testing cycle in a pre-production computerized environment which simulates real situations before they are rolled out. Testing includes technical and functional tests, performance tests, user-acceptance tests and pilot and prototype tests, which the entities draw up before the apps become available to end users.
- Business continuity and technological contingency plans based on corporate methodology for key functions in disasters or other events that could suspend or disrupt operations, as well as highly automated back-up systems that support critical systems and require little manual intervention owing to redundant systems and communication lines, high availability systems and data back-up.

Internal control policies and procedures for outsourced activities and valuation services from independent experts

Grupo Santander has a corporate outsourcing and third party agreement framework and third party approval policies and procedures to cover outsourcing risks properly.

The Group must adhere to this framework (and the models and policies that build on it), which meets the EBA's requirements for outsourcing and risk management with third parties and complies with DORA Regulation.

Key processes include:

- tasks to initiate, record, process, settle, report and account for transactions and asset valuations;
- IT support in terms of software development, infrastructure maintenance, incident management, security and processing; and
- other material support services that are not directly related to financial reporting, such as vendor management, property management, HR management and others.

Key control procedures to ensure adequate coverage of risks in these processes are:

- documenting relations between Group companies with comprehensive service agreements;
- documenting and validating by the Group's service providers of processes and controls for the services that the Group´s vendors perform; and
- external suppliers undergoing an approval process to ensure that the relevant risks associated with the services they provide remain within acceptable levels (according to the Group's risk appetite) and to encourage them to prove the effectiveness of their internal controls through external certifications.

Grupo Santander reviews its estimates internally according to its control model guidelines. It will hire the services of a third party to help with specific matters upon confirming their expertise and independence and approving their methods and rationale of assumptions though relevant procedures.

In particular, we have controls in place to ensure the integrity and quality of information on external suppliers of key services that could affect the financial statements. These controls are comprehensively detailed in the service level agreements that form part of the respective contracts with third parties.

For more details, see 'Supplier risk management' in the section 5.2. 'Operational risk management' in the 'Risk management and compliance' chapter.

8.4 Information and communication

Group accounting policies

Accounting policies should be understood as a complement to local financial and accounting rules. Their overarching aims are (i) for statements and financial information to be made available to management bodies, supervisors and the market to provide accurate and reliable information for decision-making in relation to the Group; and (ii) for all Group entities (due to their accounting ties to Banco Santander) to meet their legal requirements in a timely manner.

The Accounting Regulation area of the Financial Accounting and Control division is responsible for:

- setting the general framework for the treatment of the transactions that constitute Banco Santander's activity, in accordance with their economic nature and the regulations governing the financial system;
- drafting up and keeping up to date the Group's accounting policies and resolving any queries or conflicts arising from their interpretation; and
- enhancing and standardizing the Group's accounting practices.

The accounting, financial management and sustainability information corporate framework sets out the principles and guidelines to prepare accounting, financial and management information that must apply to all Grupo Santander entities as a key element of their good governance.

The Group's structure makes it necessary for these principles and standard guidelines to be common for their application across our footprint, and for each of the Group entities to have effective consolidation methods and employ homogeneous accounting policies. The framework's principles are adequately reflected in the Group's accounting policies.

Accounting policies are revised at least once a year and on the back of key regulatory amendments. Moreover, every month, the Accounting Regulation area publishes an internal bulletin on new accounting regulation and their most significant interpretations.

The Group entities, through their operations or accounting heads, maintain open communication with the Accounting Regulation area and the rest of the Financial Accounting and Control division, as well as other divisions when appropriate.

Mechanisms for the preparation of financial information

Regarding financial statement consolidation, to minimize operational risk and maximize the quality of information, the Group developed IT tools to channel the flow of information between the units and the Financial Accounting and Control division and carries out consolidation based on the information provided.

This process is automated end to end, with controls that enable us to detect incidents during consolidation. Moreover, the Financial Accounting and Control division exercises further supervisory and analytical control, which is set out in formal documents and carried out and reviewed under set time frames.

8.5 Monitoring of system functioning

2024 ICFR monitoring activities and results

The board of directors approved an internal audit framework that details the function and how it should conduct its work.

Internal audit function reports to the audit committee and, at least twice a year, to the board of directors. As an independent unit, it also has direct access to the board when required.

Internal audit assesses:

- the efficiency and effectiveness of the ICFR;
- compliance with applicable regulations and supervisory requirements;
- the reliability and integrity of financial and operational information; and
- asset integrity.

Its scope of action includes:

- all entities over which the Group exercises effective control;
- separated assets (for example, mutual funds) managed by the entities mentioned in the previous section; and
- any entity (or separated assets) not included in the above points with which the Group has entered into an agreement to provide internal audit function.

This subjective scope includes, our activities, businesses and processes (performed internally or through outsourcing), the organization and, where applicable, branch networks. Internal audit function may also conduct audits for other investees that are not included in the preceding points when the Group has reserved this right as a shareholder, as well as on outsourced activities in accordance with the established agreements.

The audit committee supervises the Group's Internal Audit function. For more details, see section 4.5 'Audit committee activities in 2024'.

As at 2024 year-end, Internal Audit division had 1,230 employees, all exclusively dedicated to this service. Of these, 281 were based at the Corporate Centre and 949 in the local units located in the Group´s core markets, all with exclusive dedication.

Every year, the internal audit function prepares an audit plan based on a risk self-assessment and is solely responsible for executing the plan. Reviews may lead to recommendations, which are prioritized in accordance with their relative importance and are continuously monitored until full implementation.

In its meeting on 13 February 2024, the audit committee gave the green light to the internal audit plan for 2024, which the board of directors subsequently approved at its meeting on 26 February 2024.

The internal audit function report on the ICFR review aimed to:

- verify compliance with the provisions contained in sections 302, 404, 406, 407 and 806 of the SOx Act;

- check corporate governance with regard to information relating to the ICFR, including risk culture;
- review the functions performed by the internal control departments and by other departments, areas and divisions that work to ensure compliance with the SOx Act;
- make sure the supporting documentation relating to the SOx Act is up to date;
- confirm the effectiveness of a sample of controls based on an internal audit risk assessment methodology;
- assess the accuracy of the unit's certifications, especially their consistency with respect to the observations and recommendations made by Internal Audit, the external auditors of the annual accounts and supervisors; and
- ratify the implementation of recommendations made in the audit plan.

In 2024, the audit committee and the board of directors were regularly informed of the internal audit function's work in accordance with its annual plan, as well as of other related matters. For more details, see section 4.5 'Audit committee activities in 2024'.

Detection and management of deficiencies

As part of its to supervise financial reporting and internal control systems, the audit committee is responsible for maintaining continuous dialogue with the external auditor regarding any significant weaknesses detected in the audit.

The audit committee also assesses the results of the work of the internal audit function and may take the necessary measures to correct any deficiencies identified in the financial information, that may impact on the reliability and accuracy of the financial statements. It may ask other areas of the Group involved in the process for vital information and clarification. The committee also assesses the potential impact of any errors detected in the financial information.

In 2024, the audit committee was informed of the ICS assessment and certification for the 2023 financial year. For more details, see section 4.5 'Audit committee activities in 2024'.

8.6 External auditor report

The external auditor issued an independent reasonable assurance report on the design and effectiveness of our ICFR.

The report is included on the following pages.

This version of our report is a free translation of the original, which was prepared in Spanish. All possible care has been taken to ensure that the translation is an accurate representation of the original. However, in all matters of interpretation of information, views or opinions, the original language version of our report takes precedence over this translation.

Independent reasonable assurance report on the design and effectiveness of Internal Control over Financial Reporting (ICFR)

To the Board of Directors of Banco Santander, S.A.:

We have carried out a reasonable assurance engagement of the design and effectiveness of the Internal Control over Financial Reporting (hereinafter, ICFR) and the description that is included in the attached Report that forms part of the corresponding section of the Annual Corporate Governance Report of Banco Santander, S.A., (hereinafter, Banco Santander or the Parent Company) and its subsidiaries (hereinafter, the Group or Grupo Santander) as at December 31, 2024. This system is based on the criteria and policies defined by the Banco Santander S.A., in accordance with the guidelines established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in its "*Internal Control-Integrated Framework*" report, in its most recent framework published in 2013.

An Internal Control over Financial Reporting is a process designed to provide reasonable assurance over the reliability of financial information in accordance with the applicable financial reporting framework and includes those policies and procedures that: (i) enable the records reflecting the transactions performed to be kept accurately and with a reasonable level of detail; (ii) provide reasonable assurance as to the proper recognition of transactions to make it possible to prepare the financial information in accordance with the accounting principles and standards applicable to it and (iii) provide reasonable assurance in relation to the prevention or timely detection of unauthorized acquisitions, use or sales assets that could have material effect on the financial information.

Inherent limitations

In this regard, it should be borne in mind that, given the inherent limitations of any system of Internal Control over Financial Reporting, regardless of the quality of the design and operation of the system, it can only allow reasonable, but not absolute security, in relation to the objectives it pursues, which may lead to errors, irregularities or fraud that may not be detected. On the other hand, the projection to future periods of the evaluation of internal control is subject to risks such as such internal control being inadequate as a result of future changes in the applicable conditions, or that in the future the level of compliance of the established policies or procedures may be reduced.

Director's responsibility

The Parent Company's Directors are responsible for taking the necessary measures to reasonably guarantee the implementation, maintenance and supervision of an adequate Internal Control over Financial Reporting, as well as the evaluation of its effectiveness, the development of improvements of ICFR and the preparation and establishment of the content of the attached information relating to the ICFR.

Our Responsibility

Our responsibility is to issue a reasonable assurance report on the design and effectiveness of the Internal Control over Financial Reporting of the Banco Santander, based on the work we have performed and on the evidence we have obtained. We have performed our reasonable assurance engagement in accordance with "International Standard on Assurance Engagements 3000 (ISAE 3000)" (Revised), "Assurance Engagements other than Auditing or Reviews of Historical Financial Reporting", issued by the International Auditing and Assurance Standards Board (IAASB) of the International Federation of Accountants (IFAC).

R. M. Madrid, hoja M-63.988, folio 75, tomo 9.267, libro 8.054, sección 3ª
Inscrita en el R.O.A.C. con el número S0242 - NIF: B-79031290

A reasonable assurance report includes the understanding of the Internal Control over Financial Reporting, assessing the risk of material weaknesses in the internal control, that the controls are not properly designed or they do not operate effectively, the execution of tests and evaluations on the design and effective implementation of this ICFR, based on our professional judgment, and the performance of such other procedures as may be deemed necessary.

We believe that the evidence we have obtained provides a sufficient and adequate basis for our opinion.

Our Independence and quality management

We have complied with the independence requirements and other ethical requirements of the Accounting Professionals Code of Ethics (including International Independence Standards) issued by the International Ethics Standards Board for Accountants (IESBA), which is based on the fundamental principles of integrity, objectivity, professional competence and diligence, confidentiality, and professional behavior.

Our firm applies the International Standard on Quality Management (ISQM) 1, which requires the firm to design, implement and operate a quality management system that includes policies or procedures related to compliance with ethical requirements, professional standards and requirements. applicable laws and regulations.

Opinion

In our opinion, Banco Santander maintained as at December 31, 2024, in all material respects, a system of Internal Control relating to Financial Reporting included in the consolidated financial statements of the Banco Santander, S.A. as at December 31, 2024 effective, which is based on the criteria and the policies defined by the Parent Company's management in accordance with the guidelines established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in its "*Internal Control - Integrated Framework*" report, in its most recent framework published in 2013.

In addition, the description of the ICFR that is attached and included in the corresponding section of the Annual Corporate Governance Report of Banco Santander as at December 31, 2024, has been prepared, in all material respects, in accordance with the requirements established by article 540 of the Consolidated Text of the Capital Companies Act and with the Circular 5/2013 of June 12 of the CNMV, and subsequent amendments, the most recent being Circular 3/2021, of September 28, of the CNMV for the purposes of describing the ICFR in the Annual Reports of Corporate Governance.

This work does not constitute an audit of accounts nor is it subject to the regulations governing the activity of the audit in force in Spain, so we do not express any audit opinion in the terms provided in the aforementioned regulations. However, we have audited under separate engagement, in accordance with the regulations governing the audit activity in force in Spain, the consolidated financial statements of Grupo Santander prepared by the Parent Company's Directors in accordance with the International Financial Reporting Standards adopted by the European Union and other provisions of the financial reporting standards applicable to the Group, and our report dated February 26, 2025 expresses a favorable opinion on those consolidated annual accounts.

PricewaterhouseCoopers Auditores, S.L.

Julián González Gómez

February 26, 2025

9. OTHER CORPORATE GOVERNANCE INFORMATION

Since 12 June 2018, CNMV allows the annual corporate governance and directors' remuneration reports Spanish listed companies must submit to be drafted in a free format, which is what we selected for our corporate governance and directors' remuneration reports since 2018.

The CNMV requires any issuer opting for a free format to provide certain information in a format it dictates so that it can be aggregated for statistical purposes. This information is included (i) for corporate governance matters, under section 9.2 'Statistical information on corporate governance required by the CNMV', which also covers the section 'Degree of compliance with corporate governance recommendations', and (ii) for remuneration matters, under section 9.5 'Statistical information on remuneration required by the CNMV'.

Some shareholders or other stakeholders may be used to the formats of the corporate governance and directors' remuneration reports set the by the CNMV. Therefore, each section under this format in sections 9.1 'Reconciliation with the CNMV's corporate governance report model' and 9.4 'Reconciliation to the CNMV's remuneration report model' include a cross reference indicating where this information may be found in the 2024 annual corporate governance report (drafted in a free format) and elsewhere in this annual report.

We have normally completed the 'comply or explain' section for all recommendations in the Spanish Corporate Governance Code to clearly show the ones we complied with, and explain the ones we partially complied or failed to comply with. In section 9.3 'References on compliance with recommendations of Spanish Corporate Governance Code', we have included a chart with cross-references showing where information supporting each response can be found in this corporate governance chapter and elsewhere in this annual report.

9.1 Reconciliation with the CNMV's corporate governance report model

Section in the CNMV model	Included in statistical report	Comments
A. OWNERSHIP STRUCTURE		
A.1	Yes	See sections 2.1 'Share capital', 3.2 'Shareholder rights' and 9.2 'Statistical information on corporate governance required by the CNMV'.

C.1.2	Yes	See sections 1.1 'Board skills and diversity', 4.1 'Our directors, 'Tenure and equity ownership' in section 4.2, and section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.3	Yes	See sections 2.4 'Shareholders' agreements', 4.1 'Our directors', 'Composition by director type' in section 4.2, 'Duties and activities in 2024' in section 4.6 and section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.4	Yes	See 'Board skills and diversity matrix' in section 4.2, in relation to financial year 2024, and section 9.2 'Statistical information on corporate governance required by the CNMV', in relation to the remaining financial years.
C.1.5	No	See 'Diversity' and 'Board skills and diversity matrix' in section 4.2 and 'Duties and activities in 2024' in section 4.6.
C.1.6	No	See section 1.5 'Achievement of our 2024 goals', 'Diversity' in section 4.2 and 'Duties and activities in 2024' in section 4.6 and also section 3.1.3 'Inclusive culture' in 'Sustainability statement' chapter.
C.1.7	No	See section 4.6 'Nomination committee activities in 2024'.
C.1.8	No	Not applicable, since there are no proprietary directors. See 'Composition by type of director' in section 4.2.
C.1.9	No	See 'Functions' in section 4.4.
C.1.10	No	See section 4.1 'Our directors'.
C.1.11	Yes	See sections 4.1 'Our directors' and 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.12	Yes	See 'Board and committee preparation and attendance' in section 4.3.
C.1.13	Yes	See sections 6. 'Remuneration' and 9.2 'Statistical information on corporate governance required by the CNMV'. Additionally, see Note 5) in the 'Notes to the consolidated financial statements'.
C.1.14	Yes	See sections 5. 'Senior management team', 6.6 '.Remuneration of non-director members of senior management' and 9.2 'Statistical information on corporate governance required by the CNMV'. Additionally, see note 5) in the 'Notes to the consolidated financial statements'.
C.1.15	Yes	See 'Board regulation' in section 4.3.
C.1.16	No	See 'Election, appointment, re-election and succession of directors' in section 4.2.
C.1.17	No	See 'Board effectiveness review and actions to continuously improve' in section 1.2 and 'Board effectiveness review in 2024' in section 4.3.
C.1.18	No	Not applicable as it was not carried out with the help of an independent external advisor. See 'Board effectiveness review and actions to continuously improve' in section 1.2 and 'Board effectiveness review in 2024' in section 4.3.
C.1.19	No	See 'Election, appointment, re-election and succession of directors' in section 4.2.
C.1.20	No	See 'Board operation' in section 4.3.
C.1.21	Yes	Not applicable since there are no specific requirements, other than those applying to directors generally, to be appointed chair. See section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.22	No	See 'Diversity' in section 4.2.
C.1.23	Yes	See 'Election, appointment, re-election and succession of directors' in section 4.2 and section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.24	No	See 'Board operation' in section 4.3.
C.1.25	Yes	See 'Lead Independent Director' and 'Board and committee preparation and attendance' in section 4.3, 'Duties and activities in 2024' in sections 4.4, 4.5, 4.6, 4.7, 4.8, 4.9 and 4.10 and section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.26	Yes	See 'Board and committee preparation and attendance' in section 4.3, section 4.6 'Nomination committee activities in 2024' and section 9.2 'Statistical information on corporate governance required by the CNMV'.

Section in the CNMV model	Included in statistical report	Comments
C.1.27	Yes	See section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.28	No	See 'Duties and activities in 2024' in section 4.5 and section 8.4 'Information and communication'.
C.1.29	Yes	See section 4.1 'Our directors', 'Secretary of the board' in section 4.3 and section 9.2 'Statistical information on corporate governance as required by the CNMV'.
C.1.30	No	See section 3.1 'Shareholder communication and engagement' and 'External auditor independence' in section 4.5.
C.1.31	Yes	See 'Re-election' in section 4.5.
C.1.32	Yes	In accordance with the CNMV's instructions, see 'External auditor independence' in section 4.5 and sub-section C.1.32 of section 9.2 'Statistical information on corporate governance required by the CNMV'. Per the CNMV's instructions on preparing annual reports on corporate governance, sub-section C.1.32 provides the fee ratios of non-audit services to total audit services, with these differences in the ratio set out in Regulation (EU) No 537/2014 that is included in section 4.5 'Audit committee activities in 2024': (a) the ratios in sub-section C.1.32 have two perimeters to the one established by Regulation (EU) No 537/2014: fees for the approved services to be performed by PricewaterhouseCoopers Auditores, S.L. (PwC) for Banco Santander and fees for the approved services to be performed by PwC and other firms in its network for all other Grupo Santander entities, in and outside Spain; and (b) the ratios' denominator is the fees amount for audit services in 2024 and not the average fee value from the past three consecutive years that Regulation (EU) No 537/2014 dictates.
C.1.33	Yes	See section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.34	Yes	See section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.1.35	Yes	See 'Board operation' and 'Committee operation' in section 4.3.
C.1.36	No	See 'Election, appointment, re-election and succession of directors' in section 4.2.
C.1.37	No	See 'Duties and activities in 2024' in section 4.6.
C.1.38	No	Not applicable.
C.1.39	Yes	See sections 6.4 'Directors' remuneration policy for 2025, 2026 and 2027', 6.7 'Prudentially significant disclosures document' and 9.2 'Statistical information on corporate governance required by the CNMV'.
C.2 Board committees		
C.2.1	Yes	See 'Structure of board committees' and 'Committee operation' in section 4.3, sections 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 4.10 and 9.2 'Statistical information on corporate governance required by the CNMV'.
C.2.2	Yes	See section 9.2 'Statistical information on corporate governance required by the CNMV'.
C.2.3	No	See 'Board regulation' and 'Structure of board committees', 'Committee operation' in section 4.3 and 'Duties and activities in 2024' in sections 4.4, 4.5, 4.6, 4.7, 4.8, 4.9 and 4.10.
D. RELATED PARTY AND INTRAGROUP TRANSACTIONS		
D.1	No	See 'Related-party transactions' in section 4.12.
D.2	Yes	Not applicable. See 'Related-party transactions' in section 4.12.
D.3	Yes	Not applicable. See 'Related-party transactions' in section 4.12.
D.4	Yes	See section 9.2 'Statistical information on corporate governance required by the CNMV'.
D.5	Yes	Not applicable. See 'Related-party transactions' in section 4.12.
D.6	No	See 'Other conflicts of interest' in section 4.12.
D.7	Yes	Not applicable. See section 2.3 'Significant shareholders' and 'Other conflicts of interest' in section 4.12.
E. CONTROL AND RISK MANAGEMENT SYSTEMS		
E.1	No	See chapter 'Risk management and compliance', in particular section 1. 'Risk management and control model' and sections 1.3 'Materiality assessment', 2.3 'Embedding ESG in risk management' and 4.2.2. 'Responsible taxation' in 'Sustainability statement' chapter.
E.2	No	See note 54 to the 'Notes to the consolidated financial statements', section 1.3 'Risk and compliance governance' in the 'Risk management and compliance' chapter. See also sections 1.3 'Materiality assessment', 1.4 'Sustainability governance' and 4.2.2. 'Responsible taxation' in 'Sustainability statement' chapter.

'Strategic risk' in 'Risk management and compliance' chapter. See also section 2.3 'Embedding ESG in risk management' in 'Sustainability statement' chapter and, for our capital needs, see section 3.5 'Capital management and adequacy. Solvency ratios' of 'Economic and financial review' chapter.
E.4	No	See section 1.4. 'Management processes and tools' in the 'Risk management and compliance' chapter and sections 1.3 'Materiality assessment', 2.3 'Embedding ESG in risk management' and 4.2.2. 'Responsible taxation' in 'Sustainability statement' chapter.
E.5	No	See 2. 'Credit risk', 3. 'Market, structural and liquidity risk', 4. 'Capital risk', 5. 'Operational risk', 6 'Compliance risk', 7 .'Model risk' and 8. 'Strategic risk' in the 'Risk management' chapter. Additionally, see note 25e) in the 'Notes to the consolidated financial statements'.
E.6	No	See sections 1. 'Risk management and control model', 2. 'Credit risk', 3. 'Market, structural and liquidity risk', 4. 'Capital risk', 5. 'Operational risk', 6. 'Compliance risk', 7. 'Model risk' and 8. 'Strategic risk' in 'Risk management' and compliance chapter. See also 1.4 'Sustainability governance' and 2.3 'Embedding ESG in risk management' in 'Sustainability statement' chapter.

Section in the CNMV model	Included in statistical report	Comments
F. ICFRS		
F.1	No	See section 8.1 'Control environment'.
F.2	No	See section 8.2 'Risk assessment in financial reporting'.
F.3	No	See section 8.3 'Control activities'.
F.4	No	See section 8.4 'Information and communication'.
F.5	No	See section 8.5 'Monitoring of system functioning'.
F.6	No	Not applicable.
F7	No	See section 8.6 'External auditor report'.
G. DEGREE OF COMPLIANCE WITH CORPORATE GOVERNANCE RECOMMENDATIONS		
G	Yes	See 'Degree of compliance with the corporate governance recommendations' in section 9.2 and section 9.3 'References on compliance with recommendations of Spanish Corporate Governance Code'.
H. OTHER INFORMATION OF INTEREST		
H	No	• See 'Board regulation' in section 4.3, as well as section 1.4 'Sustainability governance' in the 'Sustainability statement' chapter. • Banco Santander also complies with the Polish Code of Best Practices, except in areas where regulation is different in Spain and Poland. • In addition, see sections 1.4 'Sustainability governance' and 4. 'Business conduct (Governance information)' in the 'Sustainability statement' chapter. • Banco Santander has voluntarily signed up to the Code of Best Tax Practices in Spain, see section 4.2.2. 'Responsible taxation' in the 'Sustainability statement' chapter and note 27g) of the 'Notes to the consolidated financial statements'. Banco Santander also voluntarily signed up to the Code of Good Practices for the viable restructuring of debts secured by mortgages on primary residences and the Code of Good Practices for mortgage debtors at risk of vulnerability, see note 54 to the 'Notes to the consolidated financial statements'.

9.2 Statistical information on corporate governance required by the CNMV

Unless otherwise indicated all data as of 31 December 2024.

A. OWNERSHIP STRUCTURE

A.1 Complete the following table on share capital and the attributed voting rights, including those corresponding to shares with a loyalty vote as of the closing date of the year, where appropriate:

Indicate whether company Bylaws contain the provision of double loyalty voting:

Yes ☐ No ☑

Date of last modification	Share capital (euros)	Number of shares	Number of voting rights
20/12/2024	7,576,246,161	15,152,492,322	15,152,492,322

Indicate whether different types of shares exist with different associated rights:

Yes ☐ No ☑

A.2 List the direct and indirect holders of significant ownership interests at year-end, including directors with a significant shareholding:

	% of voting rights attributed to shares		% of voting rights through financial instruments		
Name or corporate name of shareholder	Direct	Indirect	Direct	Indirect	Total % of voting rights
BlackRock Inc.	0.00	6.79	0.00	0.09	6.88

Details of the indirect shares:

Name or corporate name of the indirect shareholder	Name or corporate name of the direct shareholder	% of voting rights attributed to shares	% of voting rights through financial instruments	Total % of voting rights
BlackRock Inc.	Subsidiaries of BlackRock Inc.	6.79	0.09	6.88

A.3 Give details of the participation at the close of the fiscal year of the members of the board of directors who are holders of voting rights attributed to shares of the company or through financial instruments, whatever the percentage, excluding the directors who have been identified in Section A.2 above:

Name or corporate name of director	% of voting rights attributed to shares (including loyalty votes)		% of voting rights through financial instruments		Total % of voting rights	From the total % of voting rights attributed to the shares, indicate, where appropriate, the % of the additional votes attributed corresponding to the shares with a loyalty vote

B.5 Indicate whether in the general shareholders' meetings held during the financial year to which this report relates there has been any matter submitted to them which has not been approved by the shareholders:

Yes ☐ No ☑

B.6 Indicate whether the Bylaws require a minimum holding of shares to attend to or to vote remotely in the general shareholders' meeting:

Yes ☐ No ☑

C. MANAGEMENT STRUCTURE

C.1 Board of directors

C.1.1 Maximum and minimum number of directors provided for in the Bylaws:

Maximum number of directors	**17**
Minimum number of directors	**12**
Number of directors set by the General Meeting	**15**

C.1.2 Complete the following table with the directors' details:

Name or corporate name of director	Representative	Category of director	Position in the board	Date of first appointment	Date of last appointment	Election procedure
Ana Botín-Sanz de Sautuola y O'Shea	N/A	Executive	Chair	04/02/1989	31/03/2023	Vote in general shareholders' meeting
Héctor Grisi Checa	N/A	Executive	Chief Executive Officer	01/01/2023	31/03/2023	Vote in general shareholders' meeting
Glenn Hogan Hutchins	N/A	Independent	Lead Independent Director	20/12/2022	31/03/2023	Vote in general shareholders' meeting
José Antonio Álvarez Álvarez	N/A	Other external	Vice Chair	13/01/2015	22/03/2024	Vote in general shareholders' meeting
Homaira Akbari	N/A	Independent	Director	27/09/2016	31/03/2023	Vote in general shareholders' meeting
Juan Carlos Barrabés Cónsul	N/A	Independent	Director	27/06/2024	27/06/2024	Vote in general shareholders' meeting
Javier Botín-Sanz de Sautuola y O'Shea	N/A	Other external	Director	25/07/2004	22/03/2024	Vote in general shareholders' meeting
Sol Daurella Comadrán	N/A	Independent	Director	18/02/2015	31/03/2023	Vote in general shareholders' meeting
Henrique de Castro	N/A	Independent	Director	17/07/2019	22/03/2024	Vote in general shareholders' meeting
Germán de la Fuente Escamilla	N/A	Independent	Director	21/04/2022	22/03/2024	Vote in general shareholders' meeting
Gina Díez Barroso Azcárraga	N/A	Independent	Director	22/12/2020	31/03/2023	Vote in general shareholders' meeting
Luis Isasi Fernández de Bobadilla	N/A	Other external	Director	19/05/2020	01/04/2022	Vote in general shareholders' meeting
Belén Romana García	N/A	Independent	Director	22/12/2015	22/03/2024	Vote in general shareholders' meeting
Pamela Walkden	N/A	Independent	Director	29/10/2019	31/03/2023	Vote in general shareholders' meeting
Antonio Francesco Weiss	N/A	Independent	Director	27/06/2024	27/06/2024	Vote in general shareholders' meeting
Total number of directors	**15**					

Indicate any directors who have left during the financial year to which this report relates, regardless of the reason (whether for resignation or by agreement of the general meeting or any other):

Name or corporate name of director	Category of director at the time he/her left	Date of last appointment	Date of leave	Board committees he or she was a member of	Indicate whether he or she has left before the expiry of his or her term
Bruce Carnegie-Brown	Independent	26/03/2021	22/03/2024	Nomination and remuneration committees	No
Ramiro Mato García-Ansorena	Independent	26/03/2021	27/06/2024	Executive; audit; risks supervision, regulation and compliance; and responsible banking, sustainability and culture committees	No

C.1.3 Complete the following tables for the directors in each relevant category:

Executive directors

Name or corporate name of director	Position held in the company	Profile
Ana Botín-Sanz de Sautuola y O'Shea	Executive Chair	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Héctor Grisi Checa	CEO	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Total number of executive directors		2
% of the Board		13.33

Proprietary non-executive directors

Name or corporate name of director	Name or corporate name of significant shareholder represented or having proposed his or her appointment	Profile
N/A	N/A	N/A
Total number of proprietary non-executive directors		0
% of the Board		0

Independent directors

Name or corporate name of director	Profile
Glenn Hogan Hutchins	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Homaira Akbari	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Juan Carlos Barrabés Cónsul	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Sol Daurella Comadrán	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Henrique de Castro	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Germán de la Fuente Escamilla	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Gina Díez Barroso Azcárraga	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Belén Romana Garcia	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Pamela Walkden	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Antonio Francesco Weiss	See section 4.1 'Our directors' in the 'Corporate governance' chapter in the annual report.
Total number of independent directors	10
% of the Board	66.67

Identify any independent director who receives from the company or its group any amount or perk other than his or her director remuneration, as a director, or who maintain or have maintained during the financial year covered in this report a business relationship with the company or any group company, whether in his or her own name or as a principal shareholder, director or senior manager of an entity which maintains or has maintained such a relationship.

In such a case, a reasoned statement from the Board on why the relevant director(s) is able to carry on their duties as independent director(s) will be included.

Name or corporate name of director	Description of the relationship	Reasoned statement
Sol Daurella Comadrán	Business/Financing	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained and the funding Grupo Santander granted to companies in which Sol Daurella was a principal shareholder or director in 2024 were not significant because, among other reasons: (i) they did not generate economic dependence on the companies involved in view of the substitutability of this funding by other sources, whether banks or others; (ii) they were consistent with Grupo Santander's share in the corresponding market; and (iii) they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE, Nasdaq and the Canadian Bank Act).
Henrique de Castro	Business	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained between Grupo Santander and the company in which Henrique de Castro was a director in 2024 were not significant because, among other reasons they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE and Nasdaq).
Gina Díez Barroso Azcárraga	Business/Financing	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained and the funding Grupo Santander granted to companies in which Gina Díez Barroso was a principal shareholder and director in 2024 were not significant because, among other reasons: (i) they did not generate a situation of economic dependence on the company involved in view of the substitutability of this funding by other sources, whether banks or others; (ii) they were consistent with Grupo Santander's share in the corresponding market; and (iii) they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE, Nasdaq and the Canadian Bank Act).
Glenn Hogan Hutchins	Business/Financing	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained and the funding Grupo Santander granted to the company in which Glenn Hutchins was a director in 2024 were not significant because, among other reasons: (i) they did not generate economic dependence on the companies involved in view of the substitutability of this funding by other sources, whether banks or others; (ii) they were consistent with Grupo Santander's share in the corresponding market; and (iii) they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE, Nasdaq and the Canadian Bank Act).
Belén Romana García	Business/Financing	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained and the funding Grupo Santander granted to companies in which Belén Romana was a director in 2024 were not significant because, among other reasons: (i) they did not generate economic dependence on the companies involved in view of the substitutability of this funding by other sources, whether banks or others; (ii) they were consistent with Grupo Santander's share in the corresponding market; and (iii) they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE, Nasdaq and the Canadian Bank Act).
Juan Carlos Barrabés Cónsul	Financing	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the funding Grupo Santander granted to Juan Carlos Barrabés and the companies in which he was a principal shareholder or director in 2024 were not significant because, among other reasons: (i) it did not generate economic dependence in view of the substitutability of this funding by other sources, whether banks or others; (ii) it was consistent with Grupo Santander's share in the corresponding market; and (iii) it did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE, Nasdaq and the Canadian Bank Act).
Antonio Weiss	Business	When conducting the annual verification of the independence of directors classified as independent, the nomination committee analysed the business relationships between Grupo Santander and the companies in which they are or have previously been principal shareholders, directors or senior managers. The committee concluded that the business relationships maintained between Grupo Santander and the company in which Antonio Weiss was a principal shareholder in 2024 were not significant because, among other reasons they did not reach certain comparable materiality thresholds used in other jurisdictions (e.g. NYSE and Nasdaq).

Other external directors

Identify all other external directors and explain why these cannot be considered proprietary or independent directors and detail their relationships with the company, its executives or shareholders:

Name or corporate name of director	Reasons	Company, manager or shareholder to which or to whom the director is related	Profile
José Antonio Álvarez Álvarez	Given that Mr Álvarez was the former CEO of Banco Santander until 31 December 2022, pursuant to sub-section 4.a) of article 529 *duodecies* of the Spanish Companies Act.	Banco Santander, S.A.	See section 4.1 'Our directors' in the Corporate governance chapter in the annual report.
Javier Botín-Sanz de Sautuola y O'Shea	Given that Mr Botín has been director for over 12 years, pursuant to sub-section 4. i) of article 529 *duodecies* of the Spanish Companies Act.	Banco Santander, S.A.	See section 4.1 'Our directors' in the Corporate governance chapter in the annual report.
Luis Isasi Fernández de Bobadilla	Under prudent criteria given his remuneration as non-executive Chair of Santander España's body as supervisor, unit without its own corporate identity separate to Banco Santander, pursuant to sub-sections 2 to 4 of article 529 *duodecies* of the Spanish Companies Act.	Banco Santander, S.A.	See section 4.1 'Our directors' in the Corporate governance chapter in the annual report.
Total number of other external directors			3
% of the Board			20.00

List any changes in the category of a director which have occurred during the period covered in this report.

Name or corporate name of director	Date of change	Previous category	Current category
—	—	—	—

C.1.4 Complete the following table on the number of female directors at the end of each the past four years and their category:

Number of female directors					% of total directors of each category			
	FY 2024	FY 2023	FY 2022	FY 2021	FY 2024	FY 2023	FY 2022	FY 2021
Executive	1	1	1	1	50.00	50.00	50.00	50.00
Proprietary	—	—	—	—	0.00	0.00	0.00	0.00
Independent	5	5	5	5	50.00	50.00	50.00	50.00
Other external	—	—	—	—	0.00	0.00	0.00	0.00
Total:	**6**	**6**	**6**	**6**	**40.00**	**40.00**	**40.00**	**40.00**

C.1.11 List the positions of director, administrator or representative thereof, held by directors or representatives of directors who are members of the company's board of directors in other entities, whether or not they are listed companies:

Identity of the director or representative	Company name of the listed or non-listed entity	Position	Remunerated YES/NO
Ana Botín-Sanz de Sautuola y O'Shea	The Coca-Cola Company	Director	YES
Héctor Grisi Checa	Cogrimex, S.A. de C.V.	Chair	NO
Glenn Hogan Hutchins	AT&T Inc.	Director	YES
	North Island, LL	Chair	NO
	North Island Ventures, LLC	Chair	NO
José Antonio Álvarez Álvarez	Aon PLC	Director	YES
Homaira Akbari	Landstar System, Inc.	Director	YES
	AKnowledge Partners, LLC	Chief Executive Officer	YES
Juan Carlos Barrabés Cónsul	Grupo Barrabés Cónsul, S.L.	Chair-Chief Executive Officer	NO
	Barrabés Internet, S.L.U.	Chief Executive Officer	NO
	Barrabés Ski Montaña, S.L.U.	Director	NO
	Action & Lifestyle, S.L.U.	Director	NO
	Tuca del Mont, S.L.	Chief Executive Officer	NO
	Ediciones Montañas y Hombres, S.L.U.	Director	NO
	Llitarrada Innova, S.L.	Representative of sole administrator	NO
	Innova Next, S.L.U.	Representative of joint and several administrator	NO
	Step One Ventures, S.L.	Representative of joint and several administrator	NO
	Formiguero Barrabés, S.L.	Joint and several administrator	NO
	Agencia Certificadora Autónoma, S.L.U.	Representative of joint and several administrator	NO
	Primschain, S.L.U.	Representative of sole administrator	NO
Javier Botín-Sanz de Sautuola y O'Shea	JB Capital Markets, S. V., S.A.U.	Chair	YES
	Inversiones Zulú, S.L.	Chair-Chief Executive Officer	NO
	Agropecuaria El Castaño, S.L.	Joint administrator	NO
	Inversiones Peña Cabarga, S.L.	Joint and several administrator	NO
Sol Daurella Comadrán	Coca-Cola Europacific Partners PLC	Chair	YES
	Cobega, S.A.	Representative of director	NO
	Equatorial Coca Cola Bottling Company, S.L.	Director	YES
	Cobega Invest S.L.	Joint administrator	NO
	Olive Partners, S.A.	Representative of director	NO
	Indau, S.A.R.L.	Sole administrator	YES
Henrique de Castro	Fiserv Inc.	Director	YES
	Stakecorp Capital, s.a.r.l.	Director	NO
Gina Díez Barroso Azcárraga	Grupo Diarq, S.A. de C.V.	Chair	NO
	Dalia Women, S.A.P.I. de C.V.	Director	NO
	Centro de Diseño y Comunicación, S.C.	Chair	NO
	Bolsa Mexicana de Valores, S.A.B. de C.V.	Director	YES
Luis Isasi Fernández de Bobadilla	Logista Integral, S.A.	Chair	YES
	Balcón del Parque, S.L.	Sole administrator	NO
	Santa Clara de C. Activos, S.L.	Joint and several administrator	NO
Belén Romana García	Werfen, S.A.	Director	YES
	SIX Group AG	Director	YES
	SIX Digital Exchange AG	Chair	YES
	SDX Trading AG	Chair	YES
	Bolsas y Mercados Españoles, Sociedad Holding de Mercados y Sistemas Financieros, S.A.	Director	YES
	Industria de Diseño Textil, S.A. (Inditex)	Director	YES
Antonio Weiss	Societe Familiale d'Investissements S.A.	Director	YES

Indicate, where appropriate, the other remunerated activities of the directors or directors' representatives, whatever their nature, other than those indicated in the previous table.

Identity of the director or representative	Other paid activities
Glenn Hogan Hutchins	Member of the international advisory board Government of Singapore Investment Corporation
	Member of the executive committee of Boston Celtics
Homaira Akbari	Member of the Security Advisory Board of Telefónica Soluciones de Criptografía, S.A.U.
Belén Romana García	Senior advisor of Artá Capital, S.G.E.I.C., S.A.
	Academic director of the IE Leadership & Foresight Hub Programme
Pamela Walkden	Member of the advisory board of JD Haspel Limited
Antonio Weiss	Partner of SSW Partners LP
	Associate of AFWCo LP
	Senior Advisor of JAB Holdings

C.1.12 Indicate and, if applicable explain, if the company has established rules on the maximum number of directorships its directors may hold and, if so, where they are regulated:

Yes ☑ No ☐

The maximum number of directorships is established, as provided for in article 30 of the Rules and regulations of the board, in article 26 of Spanish Law 10/2014 on the ordering, supervision and solvency of credit institutions. This rule is further developed by articles 29 and subsequent of Royal Decree 84/2015 and by Rules 30 and subsequent of Bank of Spain Circular 2/2016.

C.1.13 Identify the following items of the total remuneration of the board of directors:

Board remuneration accrued in the fiscal year (EUR thousand)	30,214
Funds accumulated by current directors for long-term savings systems with consolidated economic rights (EUR thousand)	76,356
Funds accumulated by current directors for long-term savings systems with unconsolidated economic rights (EUR thousand)	0
Pension rights accumulated by former directors (EUR thousand)	46,390

C.1.14 Identify the members of the company's senior management who are non executive directors and indicate total remuneration they have accrued during the financial year:

Name or corporate name	Position (s)
Mahesh Chatta Aditya	Group Chief Risk Officer
Daniel Barriuso Rojo	Global Head of Retail & Commercial Banking and Group Chief Transformation Officer
Julia Bayón Pedraza	Group Chief Audit Executive
Juan Manuel Cendoya Méndez de Vigo	Group Head of Communications, Corporate Marketing and Research
José Francisco Doncel Razola	Group Chief Accounting Officer
José Antonio García Cantera	Group Chief Financial Officer
Francisco Javier García-Carranza	Global Head of Wealth Management & Insurance
David Arthur Hazell	Group Chief Compliance Officer
José María Linares Perou	Global Head of Corporate & Investment Banking
Mónica Lopez-Monís Gallego	Group Head of Supervisory and Regulatory Relations
Dirk Ludwig Marzluf	Group Chief Operating & Technology Officer
José Luis de Mora Gil-Gallardo	Group Head of Digital Consumer Bank and Group Head of Corporate Development and Financial Planning
Jaime Pérez Renovales	Group General Counsel
Javier Roglá Puig	Group Head of People & Culture
Number of women in senior management	2
Percentage of total senior management	14.29%
Total remuneration accrued by the senior management (EUR thousand)	49,531

C.1.15 Indicate whether any changes have been made to the board's regulations during the financial year:

Yes ☐ No ☑

C.1.21 Indicate whether there are any specific requirements, other than those applying to directors generally, to be appointed Chair:

Yes ☐ No ☑

C.1.23 Indicate whether the Bylaws or the board's regulations set a limited term of office (or other requirements which are stricter than those provided for in the law) for independent directors different than the one provided for in the law.

Yes ☐ No ☑

C.1.25 Indicate the number of board meetings held during the financial year and how many times the board has met without the Chair's attendance. Attendance also includes proxies appointed with specific instructions:

Number of board meetings	18
Number of board meetings held without the Chair's attendance	0

Indicate the number of meetings held by the Lead Independent Director with the rest of directors without the attendance or representation of any executive director.

Number of meetings	6

Indicate the number of meetings of the various board committees held during the financial year.

Number of meetings of the audit committee	15
Number of meetings of the responsible banking, sustainability and culture committee	4
Number of meetings of the innovation and technology committee	5
Number of meetings of the nomination committee	13
Number of meetings of the remuneration committee	14
Number of meetings of the risk supervision, regulation and compliance committee	18
Number of meetings of the executive committee	24

C.1.26 Indicate the number of board meetings held during the financial year and data about the attendance of the directors:

Number of meetings with at least 80% of directors being present	18
% of votes cast by members present over total votes in the financial year	98
Number of board meetings with all directors being present (or represented having given specific instructions)	16
% of votes cast by members present at the meeting or represented with specific instructions over total votes in the financial year	98.87

C.1.27 Indicate whether the company´s consolidated and individual financial statements are certified before they are submitted to the board for their formulation.

Yes ☑ No ☐

Identify, where applicable, the person(s) who certified the company's individual and consolidated financial statements prior to their formulation by the board:

Name	Position
José Francisco Doncel Razola	Group Chief Accounting Officer

C.1.29 Is the secretary of the board also a director?

Yes ☐ No ☑

If the secretary of the board is not a director fill in the following table:

Name or corporate name of the secretary	Representative
Jaime Pérez Renovales	N/A

C.1.31 Indicate whether the company has changed its external audit firm during the financial year. If so, identify the incoming audit firm and the outgoing audit firm:

Yes ☐ No ☑

C.1.32 Indicate whether the audit firm performs non-audit work for the company and/or its group. If so, state the amount of fees paid for such work and express this amount as a percentage they represent of all fees invoiced to the company and/or its group.

Yes ☑ No ☐

	Company	Group companies	Total
Amount of non-audit work (EUR thousand)	9,301	12,339	21,640
Amount of non-audit work as a % of amount of audit work	34.43	15.47	20.26

C.1.33 Indicate whether the audit report on the previous year's financial statements contains a qualified opinion or reservations. Indicate the reasons given by the Chair of the audit committee to the shareholders in the general shareholders meeting to explain the content and scope of those qualified opinion or reservations.

Yes ☐ No ☑

C.1.34 Indicate the number of consecutive years during which the current audit firm has been auditing the financial statements of the company and/or its group. Likewise, indicate for how many years the current firm has been auditing the financial statements as a percentage of the total number of years over which the financial statements have been audited:

	Individual financial statements	Consolidated financial statements
Number of consecutive years	9	9

	Company	Group
Number of years audited by current audit firm/Number of years the company's or its Group financial statements have been audited (%)	20.93	21.43

C.1.35 Indicate and if applicable explain whether there are procedures for directors to receive the information they need in sufficient time to prepare for meetings of the governing bodies:

Yes ☑ No ☐

Procedures
Our Rules and regulations of the board foresees that members of the board and committees are provided with the relevant documentation for each meeting sufficiently in advance of the meeting date.

C.1.39 Identify, individually in the case of directors, and in the aggregate in all other cases, and provide detailed information on, agreements between the company and its directors, executives and employees that provide indemnification, guarantee or golden parachute clause in the event of resignation, unfair dismissal or termination as a result of a takeover bid or other type of transaction.

Number of beneficiaries	25
Type of beneficiary	**Description of the agreement:**
Employees	The Bank has no commitments to provide severance pay to directors. A number of employees have a right to compensation equivalent to one to two years of their basic salary in the event of their contracts being terminated by the Bank in the first two years of their contract in the event of dismissal on grounds other than their own will, retirement, disability or serious dereliction of duties. In addition, for the purposes of legal compensation, in the event of redundancy a number of employees are entitled to recognition of length of service including services provided prior to being contracted by the Bank; this would entitle them to higher compensation than they would be due based on their actual length of service with the Bank itself.

Indicate whether these agreements must be reported to and/or authorised by the governing bodies of the company or its group beyond the procedures provided for in applicable law. If applicable, specify the process applied, the situations in which they apply, and the bodies responsible for approving or communicating those agreements:

	Board of directors	General Shareholders' Meeting
Body authorising clauses	√	

	YES	NO
Is the general shareholders' meeting informed of such clauses?	√	

C.2 Board committees

C.2.1 Give details of all the board committees, their members and the proportion of executive, independent and other external directors.

Executive committee

Name	Position	Type
Ana Botín-Sanz de Sautuola y O'Shea	Chair	Executive director
Héctor Grisi Checa	Member	Executive director
José Antonio Álvarez Álvarez	Member	Other external director
Luis Isasi Fernández de Bobadilla	Member	Other external director
Belén Romana García	Member	Independent director

% of executive directors	40.00
% of proprietary directors	0.00
% of independent directors	20.00
% of other external directors	40.00

Audit committee

Name	Position	Type
Germán de la Fuente Escamilla	Chair	Independent director
Homaira Akbari	Member	Independent director
Henrique de Castro	Member	Independent director
Belén Romana García	Member	Independent director
Pamela Walkden	Member	Independent director

% of executive directors	0
% of proprietary directors	0
% of independent directors	100
% of other external directors	0

Identify those directors in the audit committee who have been appointed on the basis of their knowledge and experience in accounting, audit or both and indicate the date of appointment of the committee chair.

Name of directors with accounting or audit experience	Germán de la Fuente Homaira Akbari Henrique de Castro Belén Romana García Pamela Walkden
Date of appointment of the committee chair for that position	23 March 2024

Nomination committee

Name	Position	Type

D. RELATED-PARTY AND INTRAGROUP TRANSACTIONS

D.2 Give individual details of operations that are significant due to their amount or of importance due to their subject matter carried out between the company or its subsidiaries and shareholders holding 10% or more of the voting rights or who are represented on the board of directors of the company, indicating which has been the competent body for its approval and if any affected shareholder or director has abstained. In the event that the board of directors has responsibility, indicate if the proposed resolution has been approved by the board without a vote against the majority of the independents:

Not applicable.

D.3 Give individual details of the operations that are significant due to their amount or relevant due to their subject matter carried out by the company or its subsidiaries with the administrators or managers of the company, including those operations carried out with entities that the administrator or manager controls or controls jointly, indicating the competent body for its approval and if any affected shareholder or director has abstained. In the event that the board of directors has responsibility, indicate if the proposed resolution has been approved by the board without a vote against the majority of the independents:

Not applicable.

D.4 Report individually on intra-group transactions that are significant due to their amount or relevant due to their subject matter that have been undertaken by the company with its parent company or with other entities belonging to the parent's group, including subsidiaries of the listed company, except where no other related party of the listed company has interests in these subsidiaries or that they are fully owned, directly or indirectly, by the listed company.

In any case, report any intragroup transactions carried out with entities in countries or territories considered to be tax havens.

Corporate name of the group company	Brief description of the transaction and any other information necessary for its evaluation	Amount (EUR thousand)
The information included in this chart shows the transactions and the results obtained by Banco Santander in Spain and its foreign branches as of 31 December 2024 with Group entities resident in countries or territories that were considered non-cooperative jurisdictions pursuant to Spanish legislation, at such date (Law 11/2021 on measures to prevent and fight against tax fraud). These results, and the balances indicated below, were eliminated in the consolidation process. See note 3 to the 2024 'consolidated financial statements' for more information on offshore entities.		
Banco Santander (Brasil) S.A. (Cayman Islands Branch)	The amount shown on the right corresponds to net positive results (including results due to exchange differences) relating to contracting of derivatives. The referred derivatives had a net positive market value of EUR 143 million and covered the following transactions: - 181 Non-Delivery Forwards. - 213 Swaps. - 67 Cross Currency Swaps. - 52 Options. - 116 Forex.	232,795
	The amount shown on the right corresponds to negative results relating to demand and term deposits (liability). These deposits had a nominal value of EUR 2,564 million as of 31 December 2024.	49,681
	The amount shown on the right corresponds to positive results relating to term deposits (asset). These deposits had a nominal value of EUR 11 million as of 31 December 2024.	8
	The amount shown on the right corresponds to positive results relating to fixed income securities/ subordinated instruments (asset). This relates to the investment in Tier I subordinated perpetual notes, with original date of issue November 2018, that were fully amortized on 8 November 2024.	87,327
	The amount shown on the right corresponds to negative results relating to interests and commissions concerning correspondent accounts (liability). This relates to correspondent accounts with a credit balance of EUR 15 million as of 31 December 2024.	164
	The amount shown on the right corresponds to positive results relating to commissions received.	110

D.5 Give individual details of the operations that are significant due to their amount or relevant due to their subject matter carried out by the company or its subsidiaries with other related parties pursuant to the international accounting standards adopted by the EU, which have not been reported in previous sections.

Not applicable.

G. DEGREE OF COMPLIANCE WITH THE CORPORATE GOVERNANCE RECOMMENDATIONS

Indicate the degree of the company's compliance with the recommendations of the good governance code for listed companies.

Should the company not comply with any of the recommendations or comply only in part, include a detailed explanation of the reasons so that shareholders, investors and the market in general have enough information to assess the company's behaviour. General explanations are not acceptable.

1. The bylaws of listed companies should not place an upper limit on the votes that can be cast by a single shareholder, or impose other obstacles to the takeover of the company by means of share purchases on the market.

Complies ☑ Explain ☐

2. When the listed company is controlled, pursuant to the meaning established in Article 42 of the Commercial Code, by another listed or non-listed entity, and has, directly or through its subsidiaries, business relationships with that entity or any of its subsidiaries (other than those of the listed company) or carries out activities related to the activities of any of them, this is reported publicly, with specific information about:

a) The respective areas of activity and possible business relationships between, on the one hand, the listed company or its subsidiaries and, on the other, the parent company or its subsidiaries.

b) The mechanisms established to resolve any conflicts of interest that may arise.

Complies ☐ Partially complies ☐ Explain ☐ Not applicable ☑

3. During the AGM the chair of the board should verbally inform shareholders in sufficient detail of the most relevant aspects of the company's corporate governance, supplementing the written information circulated in the annual corporate governance report. In particular:

a) Changes taking place since the previous annual general meeting.

b) The specific reasons for the company not following a given Good Governance Code recommendation, and any alternative procedures followed in its stead.

Complies ☑ Partially complies ☐ Explain ☐

4. The company should define and promote a policy for communication and contact with shareholders and institutional investors within the framework of their involvement in the company, as well as with proxy advisors, that complies in full with the rules on market abuse and gives equal treatment to shareholders who are in the same position. The company should make said policy public through its website, including information regarding the way in which it has been implemented and the parties involved or those responsible its implementation.

Further, without prejudice to the legal obligations of disclosure of inside information and other regulated information, the company should also have a general policy for the communication of economic-financial, non-financial and corporate information through the channels it considers appropriate (media, social media or other channels) that helps maximise the dissemination and quality of the information available to the market, investors and other stakeholders.

Complies ☑ Partially complies ☐ Explain ☐

5. The board of directors should not make a proposal to the general meeting for the delegation of powers to issue shares or convertible securities without pre-emptive subscription rights for an amount exceeding 20% of capital at the time of such delegation.

And that whenever the board of directors approves an issuance of shares or convertible securities without pre-emptive rights the company immediately publishes reports on its web page regarding said exclusions as referenced in applicable mercantile law.

Complies ☑ Partially complies ☐ Explain ☐

6. Listed companies drawing up the following reports on a voluntary or compulsory basis should publish them on their website well in advance of the AGM, even if their distribution is not obligatory:

a) Report on auditor independence.

b) Reviews of the operation of the audit committee and the nomination and remuneration committees.

c) Audit committee report on third-party transactions.

Complies ☑ Partially complies ☐ Explain ☐

7. The company should broadcast its general meetings live on the corporate website.

The company should have mechanisms that allow the delegation and exercise of votes by electronic means and even, in the case of large-cap companies and, to the extent that it is proportionate, attendance and active participation in the general shareholders' meeting.

Complies ☑ Explain ☐

8. The audit committee should strive to ensure that the financial statements that the board of directors presents to the general shareholders' meeting are drawn up in accordance to accounting legislation. And in those cases where the auditors includes any qualification in its report, the chair of the audit committee should give a clear explanation at the general meeting of their opinion regarding the scope and content, making a summary of that opinion available to the shareholders at the time of the publication of the notice of the meeting, along with the rest of proposals and reports of the board.

Complies ☑ Partially complies ☐ Explain ☐

9. The company should disclose its conditions and procedures for admitting share ownership, the right to attend general meetings and the exercise or delegation of voting rights, and display them permanently on its website.

Such conditions and procedures should encourage shareholders to attend and exercise their rights and be applied in a non-discriminatory manner.

Complies ☑ Partially complies ☐ Explain ☐

10. When a shareholder so entitled exercises the right to supplement the agenda or submit new proposals prior to the general meeting, the company should:

a) Immediately circulate the supplementary items and new proposals.

b) Disclose the standard attendance card or proxy appointment or remote voting form, duly modified so that new agenda items and alternative proposals can be voted on in the same terms as those submitted by the board of directors.

c) Put all these items or alternative proposals to the vote applying the same voting rules as for those submitted by the board of directors, with particular regard to presumptions or deductions about the direction of votes.

d) After the general meeting, disclose the breakdown of votes on such supplementary items or alternative proposals.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

11. In the event that a company plans to pay for attendance at the general meeting, it should first establish a general, long-term policy in this respect.

Complies ☐ Partially complies ☐ Explain ☐ Not applicable ☑

12. The board of directors should perform its duties with unity of purpose and independent judgement, according the same treatment to all shareholders in the same position. It should be guided at all times by the company's best interest, understood as the creation of a profitable business that promotes its sustainable success over time, while maximising its economic value.

In pursuing the corporate interest, it should not only abide by laws and regulations and conduct itself according to principles of good faith, ethics and respect for commonly accepted customs and good practices, but also strive to reconcile its own interests with the legitimate interests of its employees, suppliers, clients and other stakeholders, as well as with the impact of its activities on the broader community and the natural environment.

Complies ☑ Partially complies ☐ Explain ☐

13. The board of directors should have an optimal size to promote its efficient functioning and maximise participation. The recommended range is accordingly between five and fifteen members.

Complies ☑ Explain ☐

14. The board of directors should approve a policy aimed at promoting an appro-priate composition of the board that:

a) is concrete and verifiable;

b) ensures that appointment or re-election proposals are based on a prior analysis of the competences required by the board; and

c) favours diversity of knowledge, experience, age and gender. Therefore, measures that encourage the company to have a significant number of female senior managers are considered to favour gender diversity.

The results of the prior analysis of competences required by the board should be written up in the nomination committee's explanatory report, to be pub-lished when the general shareholders' meeting is convened that will ratify the appointment and re-election of each director.

The nomination committee should run an annual check on compliance with this policy and set out its findings in the annual corporate governance report.

Complies ☑ Partially complies ☐ Explain ☐

15. Proprietary and independent directors should constitute an ample majority on the board of directors, while the number of executive directors should be the minimum practical bearing in mind the complexity of the corporate group and the ownership interests they control.

Further, the number of female directors should account for at least 40% of the members of the board of directors before the end of 2022 and thereafter, and not less than 30% previous to that.

Complies ☑ Partially complies ☐ Explain ☐

16. The percentage of proprietary directors out of all non-executive directors should be no greater than the proportion between the ownership stake of the shareholders they represent and the remainder of the company's capital.

This criterion can be relaxed:

a) In large cap companies where few or no equity stakes attain the legal threshold for significant shareholdings.

b) In companies with a plurality of shareholders represented on the board but not otherwise related.

Complies ☑ Explain ☐

17. Independent directors should be at least half of all board members.

However, when the company does not have a large market capitalisation, or when a large cap company has shareholders individually or concertedly controlling over 30 percent of capital, independent directors should occupy, at least, a third of board places.

Complies ☑ Explain ☐

18. Companies should disclose the following director particulars on their websites and keep them regularly updated:

a) Background and professional experience.

b) Directorships held in other companies, listed or otherwise, and other paid activities they engage in, of whatever nature.

c) Statement of the director class to which they belong, in the case of proprietary directors indicating the shareholder they represent or have links with.

d) Dates of their first appointment as a board member and subsequent re-elections.

e) Shares held in the company, and any options on the same.

Complies ☑ Partially complies ☐ Explain ☐

19. Following verification by the nomination committee, the annual corporate governance report should disclose the reasons for the appointment of proprietary directors at the urging of shareholders controlling less than 3 percent of capital; and explain any rejection of a formal request for a board place from shareholders whose equity stake is equal to or greater than that of others applying successfully for a proprietary directorship.

Complies ☐ Partially complies ☐ Explain ☐ Not applicable ☑

20. Proprietary directors should resign when the shareholders they represent dispose of their ownership interest in its entirety. If such shareholders reduce their stakes, thereby losing some of their entitlement to proprietary directors, the number of the latter should be reduced accordingly.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

21. The board of directors should not propose the removal of independent directors before the expiry of their tenure as mandated by the bylaws, except where they find just cause, based on a proposal from the nomination committee. In particular, just cause will be presumed when directors take up new posts or responsibilities that prevent them allocating sufficient time to the work of a board member, or are in breach of their fiduciary duties or come under one of the disqualifying grounds for classification as independent enumerated in the applicable legislation.

The removal of independent directors may also be proposed when a takeover bid, merger or similar corporate transaction alters the company's capital structure, provided the changes in board membership ensue from the proportionality criterion set out in recommendation 16.

Complies ☑ Explain ☐

22. Companies should establish rules obliging directors to disclose any circum-stance that might harm the organisation's name or reputation, related or not to their actions within the company, and tendering their resignation as the case may be, and, in particular, to inform the board of any criminal charges brought against them and the progress of any subsequent trial.

When the board is informed or becomes aware of any of the situations men-tioned in the previous paragraph, the board of directors should examine the case as soon as possible and, attending to the particular circumstances, de-cide, based on a report from the nomination and remuneration committee, whether or not to adopt any measures such as opening of an internal investigation, calling on the director to resign or proposing his or her dismissal. The board should give a reasoned account of all such determinations in the annual corporate governance report, unless there are special circumstances that justify otherwise, which must be recorded in the minutes. This is without prejudice to the information that the company must disclose, if appropriate, at the time it adopts the corresponding measures.

Complies ☑ Partially complies ☐ Explain ☐

23. Directors should express their clear opposition when they feel a proposal submitted for the board's approval might damage the corporate interest. In particular, independents and other directors not subject to potential conflicts of interest should strenuously challenge any decision that could harm the interests of shareholders lacking board representation.

When the board makes material or reiterated decisions about which a director has expressed serious reservations, then he or she must draw the pertinent conclusions. Directors resigning for such causes should set out their reasons in the letter referred to in the next recommendation.

The terms of this recommendation also apply to the secretary of the board, even if he or she is not a director.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

24. Directors who give up their position before their tenure expires, through resignation or resolution of the general meeting, should state the reasons for this decision, or in the case of non-executive directors, their opinion of the reasons for the general meeting resolution, in a letter to be sent to all members of the board.

This should all be reported in the annual corporate governance report, and if it is relevant for investors, the company should publish an announcement of the departure as rapidly as possible, with sufficient reference to the reasons or circumstances provided by the director.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

25. The nomination committee should ensure that non-executive directors have sufficient time available to discharge their responsibilities effectively.

The board rules and regulations should lay down the maximum number of company boards on which directors can serve.

Complies ☑ Partially complies ☐ Explain ☐

26. The board should meet with the necessary frequency to properly perform its functions, eight times a year at least, in accordance with a calendar and agendas set at the start of the year, to which each director may propose the addition of initially unscheduled items.

Complies ☑ Partially complies ☐ Explain ☐

27. Director absences should be kept to a strict minimum and quantified in the annual corporate governance report. In the event of absence, directors should delegate their powers of representation with the appropriate instructions.

Complies ☑ Partially complies ☐ Explain ☐

28. When directors or the secretary express concerns about some proposal or, in the case of directors, about the company's performance, and such concerns are not resolved at the meeting, they should be recorded in the minutes book if the person expressing them so requests.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

29. The company should provide suitable channels for directors to obtain the advice they need to carry out their duties, extending if necessary to external assistance at the company's expense.

Complies ☑ Partially complies ☐ Explain ☐

30. Regardless of the knowledge directors must possess to carry out their duties, they should also be offered refresher programmes when circumstances so advise.

Complies ☑ Explain ☐ Not applicable ☐

31. The agendas of board meetings should clearly indicate on which points directors must arrive at a decision, so they can study the matter beforehand or obtain the information they consider appropriate.

For reasons of urgency, the chair may wish to present decisions or resolutions for board approval that were not on the meeting agenda. In such exceptional circumstances, their inclusion will require the express prior consent, duly minuted, of the majority of directors present.

Complies ☑ Partially complies ☐ Explain ☐

32. Directors should be regularly informed of movements in share ownership and of the views of major shareholders, investors and rating agencies on the company and its group.

Complies ☑ Partially complies ☐ Explain ☐

33. The chair, as the person responsible for the efficient functioning of the board of directors, in addition to the functions assigned by law and the company's bylaws, should prepare and submit to the board a schedule of meeting dates and agendas; organise and coordinate regular evaluations of the board and, where appropriate, of the company's chief executive officer; exercise leadership of the board and be accountable for its proper functioning; ensure that sufficient time is given to the discussion of strategic issues, and approve and review refresher courses for each director, when circumstances so advise.

Complies ☑ Partially complies ☐ Explain ☐

34. When a lead independent director has been appointed, the bylaws or the Rules and regulations of the board of directors should grant him or her the following powers over and above those conferred by law: to chair the board of directors in the absence of the chair or vice chair; to give voice to the concerns of non-executive directors; to maintain contact with investors and shareholders to hear their views and develop a balanced understanding of their concerns, especially those to do with the company's corporate governance; and to coordinate the chair's succession plan.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

35. The board secretary should strive to ensure that the board's actions and decisions are informed by the governance recommendations of the Good Governance Code of relevance to the company.

Complies ☑ Explain ☐

36. The board in full should conduct an annual evaluation, adopting, where necessary, an action plan to correct weakness detected in:

a) The quality and efficiency of the board's operation.

b) The performance and membership of its committees.

c) The diversity of board membership and competencies.

d) The performance of the chair of the board of directors and the company's chief executive.

e) The performance and contribution of individual directors, with particular attention to the chair of board committees.

The evaluation of board committees should start from the reports they send to the board of directors, while that of the board itself should start from the report of the nomination committee.

Every three years, the board of directors should engage an external facilitator to aid in the evaluation process. This facilitator's independence should be verified by the nomination committee.

Any business dealings that the facilitator or members of its corporate group maintain with the company or members of its corporate group should be detailed in the annual corporate governance report.

The process followed and areas evaluated should be detailed in the annual corporate governance report.

Complies ☑ Partially complies ☐ Explain ☐

37. When there is an executive committee, there should be at least two non-executive members, at least one of whom should be independent; and its secretary should be the secretary of the board of directors.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

38. The board should be kept fully informed of the matters discussed and decisions made by the executive committee. To this end, all board members should receive a copy of the committee's minutes.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

39. All members of the audit committee, particularly its chair, should be appointed with regard to their knowledge and experience in accounting, auditing and risk management matters, both financial and non-financial.

Complies ☑ Partially complies ☐ Explain ☐

40. Listed companies should have a unit in charge of the internal audit function, under the supervision of the audit committee, to monitor the effectiveness of reporting and control systems. This unit should report functionally to the board's non-executive chair or the chair of the audit committee.

Complies ☑ Partially complies ☐ Explain ☐

41. The head of the unit handling the internal audit function should present an annual work programme to the audit committee, for approval by this committee or the board, inform it directly of any incidents or scope limitations arising during its implementation, the results and monitoring of its recommendations, and submit an activities report at the end of each year.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

42. The audit committee should have the following functions over and above those legally assigned:

1. With respect to internal control and reporting systems:

a) Monitor and evaluate the preparation process and the integrity of the financial and non-financial information, as well as the con-trol and management systems for financial and non-financial risks related to the company and, where appropriate, to the group – including operating, technological, legal, social, environmental, political and reputational risks or those related to corruption – reviewing compliance with regulatory requirements, the accurate demarcation of the consolidation perimeter, and the correct ap-plication of accounting principles.

b) Monitor the independence of the unit handling the internal audit function; propose the selection, appointment and removal of the head of the internal audit service; propose the service's budget; approve or make a proposal for approval to the board of the prior-ities and annual work programme of the internal audit unit, ensur-ing that it focuses primarily on the main risks the company is ex-posed to (including reputational risk); receive regular report-backs on its activities; and verify that senior management are acting on the findings and recommendations of its reports.

c) Establish and supervise a mechanism that allows employees and other persons related to the company, such as directors, sharehold-ers, suppliers, contractors or subcontractors, to report irregulari-ties of potential significance, including financial and accounting irregularities, or those of any other nature, related to the company, that they notice within the company or its group. This mechanism must guarantee confidentiality and enable communications to be made anonymously, respecting the rights of both the complainant and the accused party.

d) In general, ensure that the internal control policies and systems established are applied effectively in practice.

2. With regard to the external auditor:

a) Investigate the issues giving rise to the resignation of the external auditor, should this come about.

b) Ensure that the remuneration of the external auditor, does not compromise its quality or independence.

c) Ensure that the company notifies any change of external auditor through the CNMV, accompanied by a statement of any disagreements arising with the outgoing auditor and the reasons for the same.

d) Ensure that the external auditor has a yearly meeting with the board in full to inform it of the work undertaken and developments in the company's risk and accounting positions.

e) Ensure that the company and the external auditor adhere to current regulations on the provisions of non-audit services, limits on the concentration of the auditor's business and other requirements concerning auditor independence.

Complies ☑ Partially complies ☐ Explain ☐

43. The audit committee should be empowered to meet with any company employee or manager, even ordering their appearance without the presence of another manager.

Complies ☑ Partially complies ☐ Explain ☐

44. The audit committee should be informed of any structural changes or corporate transactions the company is planning, so the committee can analyse the operation and report to the board beforehand on its economic conditions and accounting impact and, when applicable, the exchange ratio proposed.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

45. Risk control and management policy should identify or establish at least:

a) The different types of financial and non-financial risk the company is exposed to (including operational, technological, financial, legal, social, environmental, political and reputational risks, and risks relating to corruption), with the inclusion under financial or economic risks of con-tingent liabilities and other off-balance-sheet risks.

b) A risk control and management model based on different levels, of which a specialised risk committee will form part when sector regula-tions provide or the company deems it appropriate.

c) The level of risk that the company considers acceptable.

d) The measures in place to mitigate the impact of identified risk events should they occur.

e) The internal control and reporting systems to be used to control and manage the above risks, including contingent liabilities and off-balance-sheet risks.

Complies ☑ Partially complies ☐ Explain ☐

46. Companies should establish a risk control and management function in the charge of one of the company's internal department or units and under the direct supervision of the audit committee or some other specialised board committee. This internal department or unit should be expressly charged with the following responsibilities:

a) Ensure that risk control and management systems are functioning correctly and, specifically, that major risks the company is exposed to are correctly identified, managed and quantified.

b) Participate actively in the preparation of risk strategies and in key decisions about their management.

c) Ensure that risk control and management systems are mitigating risks effectively in the frame of the policy drawn up by the board of directors.

Complies ☑ Partially complies ☐ Explain ☐

47. Members of the nomination and remuneration committee-or of the nomination committee and remuneration committee, if separately constituted - should be chosen procuring they have the right balance of knowledge, skills and experience for the functions they are called on to discharge. The majority of their members should be independent directors.

Complies ☑ Partially complies ☐ Explain ☐

48. Large cap companies should have formed separate nomination and remuneration committees.

Complies ☑ Explain ☐ Not applicable ☐

49. The nomination committee should consult with the company's chair and chief executive, especially on matters relating to executive directors.

When there are vacancies on the board, any director may approach the nomination committee to propose candidates that it might consider suitable.

Complies ☑ Partially complies ☐ Explain ☐

50. The remuneration committee should operate independently and have the following functions in addition to those assigned by law:

a) Propose to the board the standard conditions for senior officer contracts.

b) Monitor compliance with the remuneration policy set by the company.

c) Periodically review the remuneration policy for directors and senior officers, including share-based remuneration systems and their application, and ensure that their individual compensation is proportionate to the amounts paid to other directors and senior officers in the company.

d) Ensure that conflicts of interest do not undermine the independence of any external advice the committee engages.

e) Verify the information on director and senior officers' pay contained in corporate documents, including the annual directors' remuneration statement.

Complies ☑ Partially complies ☐ Explain ☐

51. The remuneration committee should consult with the company's chair and chief executive, especially on matters relating to executive directors and senior officers.

Complies ☑ Partially complies ☐ Explain ☐

52. The rules regarding composition and functioning of supervision and control committees should be set out in the regulations of the board of directors and aligned with those governing legally mandatory board committees as specified in the preceding sets of recommendations. They should include at least the following terms:

a) Committees should be formed exclusively by non-executive directors, with a majority of independents.

b) They should be chaired by independent directors.

c) The board should appoint the members of such committees with regard to the knowledge, skills and experience of its directors and each committee's terms of reference; discuss their proposals and reports; and provide report-backs on their activities and work at the first board plenary following each committee meeting.

d) They may engage external advice, when they feel it necessary for the discharge of their functions.

e) Meeting proceedings should be minuted and a copy made available to all board members.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

53. The task of supervising compliance with the policies and rules of the company in the environmental, social and corporate governance areas, and internal rules of conduct, should be assigned to one board committee or split between several, which could be the audit committee, the nomination committee, a committee specialised in sustainability or corporate social responsibility, or a dedicated committee established by the board under its powers of self-organisation. Such a committee should be made up solely of non-executive directors, the majority being independent and specifically assigned the following minimum functions.

Complies ☑ Partially complies ☐ Explain ☐

54. The minimum functions referred to in the previous recommendation are as follows:

a) Monitor compliance with the company's internal codes of conduct and corporate governance rules, and ensure that the corporate culture is aligned with its purpose and values.

b) Monitor the implementation of the general policy regarding the disclosure of economic-financial, non-financial and corporate information, as well as communication with shareholders and investors, proxy advisors and other stakeholders. Similarly, the way in which the entity communicates and relates with small and medium-sized shareholders should be monitored.

c) Periodically evaluate the effectiveness of the company's corporate governance system and environmental and social policy, to confirm that it is fulfilling its mission to promote the corporate interest and catering, as appropriate, to the legitimate interests of remaining stakeholders.

d) Ensure the company's environmental and social practices are in accordance with the established strategy and policy.

e) Monitor and evaluate the company's interaction with its stakeholder groups.

Complies ☑ Partially complies ☐ Explain ☐

55. Environmental and social sustainability policies should identify and include at least:

a) The principles, commitments, objectives and strategy regarding shareholders, employees, clients, suppliers, social welfare issues, the environment, diversity, fiscal responsibility, respect for human rights and the prevention of corruption and other illegal conducts.

b) The methods or systems for monitoring compliance with policies, associated risks and their management.

c) The mechanisms for supervising non-financial risk, including that related to ethical aspects and business conduct.

d) Channels for stakeholder communication, participation and dialogue.

e) Responsible communication practices that prevent the manipulation of information and protect the company's honour and integrity.

Complies ☑ Partially complies ☐ Explain ☐

56. Director remuneration should be sufficient to attract and retain directors with the desired profile and compensate the commitment, abilities and responsibility that the post demands, but not so high as to compromise the independent judgement of non-executive directors.

Complies ☑ Explain ☐

57. Variable remuneration linked to the company and the director's performance, the award of shares, options or any other right to acquire shares or to be remunerated on the basis of share price movements, and membership of long-term savings schemes such as pension plans, retirement accounts or any other retirement plan should be confined to executive directors.

The company may consider the share-based remuneration of non-executive directors provided they retain such shares until the end of their mandate. The above condition will not apply to any shares that the director must dispose of to defray costs related to their acquisition.

Complies ☑ Partially complies ☐ Explain ☐

58. In the case of variable awards, remuneration policies should include limits and technical safeguards to ensure they reflect the professional performance of the beneficiaries and not simply the general progress of the markets or the company's sector, or circumstances of that kind.

In particular, variable remuneration items should meet the following conditions:

a) Be subject to predetermined and measurable performance criteria that factor the risk assumed to obtain a given outcome.

b) Promote the long-term sustainability of the company and include non-financial criteria that are relevant for the company's long-term value, such as compliance with its internal rules and procedures and its risk control and management policies.

c) Be focused on achieving a balance between the achievement of short, medium and long-term targets, such that performance-related pay rewards ongoing achievement, maintained over sufficient time to appreciate its contribution to long-term value creation. This will ensure that performance measurement is not based solely on one off, occasional or extraordinary events.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

59. The payment of the variable components of remuneration is subject to sufficient verification that previously established performance, or other, conditions have been effectively met. Entities should include in their annual directors' remuneration report the criteria relating to the time required and methods for such verification, depending on the nature and characteristics of each variable component.

Additionally, entities should consider establishing a reduction clause ('malus') based on deferral for a sufficient period of the payment of part of the variable components that implies total or partial loss of this remuneration in the event that prior to the time of payment an event occurs that makes this advisable.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

60. Remuneration linked to company earnings should bear in mind any qualifications stated in the external auditor's report that reduce their amount.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

61. A major part of executive directors' variable remuneration should be linked to the award of shares or financial instruments whose value is linked to the share price.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

62. Following the award of shares, options or financial instruments corresponding to the remuneration schemes, executive directors should not be able to transfer their ownership or exercise them until a period of at least three years has elapsed.

Except for the case in which the director maintains, at the time of the transfer or exercise, a net economic exposure to the variation in the price of the shares for a market value equivalent to an amount of at least twice his or her fixed annual remuneration through the ownership of shares, options or other financial instruments.

The foregoing shall not apply to the shares that the director needs to dispose of to meet the costs related to their acquisition or, upon favourable assessment of the nomination and remuneration committee to address an extraordinary situation.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

63. Contractual arrangements should include provisions that permit the company to reclaim variable components of remuneration when payment was out of step with the director's actual performance or based on data subsequently found to be misstated.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

64. Termination payments should not exceed a fixed amount equivalent to two years of the director's total annual remuneration and should not be paid until the company confirms that he or she has met the predetermined performance criteria.

For the purposes of this recommendation, payments for contractual termination include any payments whose accrual or payment obligation arises as a consequence of or on the occasion of the termination of the contractual relationship that linked the director with the company, including previously unconsolidated amounts for long-term savings schemes and the amounts paid under post-contractual non-compete agreements.

Complies ☑ Partially complies ☐ Explain ☐ Not applicable ☐

List whether any directors voted against or abstained from voting on the approval of this Report.

Yes ☐ No ☑

I declare that the information included in this statistical annex are the same and are consistent with the descriptions and information included in the annual corporate governance report published by the company.

Comments *(Not included in the electronic submission to the CNMV)*

- The variable remuneration only includes the amounts related to the position of executive director of Banco Santander S.A. For the construction of "short-term variable remuneration" and "long-term variable remuneration" information has been used the consolidation criteria of CNMV. In 2024 there was no application of malus clauses.

- The **variable remuneration consolidated** as of the date of this report corresponds to the following plans:

1) Short-term variable remuneration:

a. 40% immediate payment of variable remuneration of the ninth cycle of the deferred multi-year objectives variable remuneration plan (2024).
b. First fifth deferred (12%) of variable remuneration of the eight cycle of the deferred multi-year objectives variable remuneration plan (2023).
c. Second fifth deferred (12%) of variable remuneration of the seventh cycle of the deferred multi-year objectives variable remuneration plan (2022).

2) Long-term variable remuneration:

a. Third deferred (first fifth subject to multi-year metrics) of variable remuneration of the sixth cycle of the deferred multi-year objectives variable remuneration plan (2021).
b. Fourth deferred (second fifth subject to multiyear metrics) of variable remuneration of the fifth cycle of the deferred multi-year objectives variable remuneration plan (2020).
c. Fifth deferred (third fifth subject to multiyear metrics) of variable remuneration of the fourth cycle of the deferred multi-year objectives variable remuneration plan (2019).

For the purpose of calculating the hypothetical current cash value of *Gross profit from shares handed over or consolidated financial instruments*, the same share price used for VR 2024 has been taken, calculated with the weighted average daily volume of weighted average listing prices of Santander shares in the 50 trading sessions prior to the Friday (not inclusive) before 4 February 2025 (the date on which the board approved the 2024 bonus for executive directors), which was EUR 4.576 per share.

In the case of the 2022 VR share options, the gross profit of the hypothetical consolidated instruments has been calculated as the difference between the EUR 4.576 and the exercise price of the option in that remuneration plan (EUR 3.088).

- And below are the **levels of achievement of the multi-year metrics** of the long-term variable remuneration plans:

1) Sixth cycle of the deferred multi-year objectives variable remuneration plan (2021): 91.6% of achievement for the period 2021-2023.

a. CET1 metric at 100% of achievement for 2023 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 100%). Weight of 33.3%.
c. TSR metric at 25% of achievement (target of 33-66 percentile). Weight of 33.3%.

2) Fifth cycle of the deferred multi-year objectives variable remuneration plan (2020): 83.3% of achievement for the period 2020-2022.

a. CET1 metric at 100% of achievement for 2022 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 10%). Weight of 33.3%.
c. TSR metric at 0% of achievement (minimum target of 33% not reached). Weight of 33.3%.

3) Fourth cycle of the deferred multi-year objectives variable remuneration plan (2019): 33.3% of achievement for the period 2019-2021.

a. CET1 metric at 100% of achievement for 2021 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 0% of achievement (target growth of 15%). Weight of 33.3%.
c. TSR metric at 0% of achievement (minimum target of 33% not reached). Weight of 33.3%.

iii) Long-term saving systems (thousand EUR)

Name	Remuneration from consolidation of rights to savings system
Ana Botín-Sanz de Sautuola y O'Shea	1,339

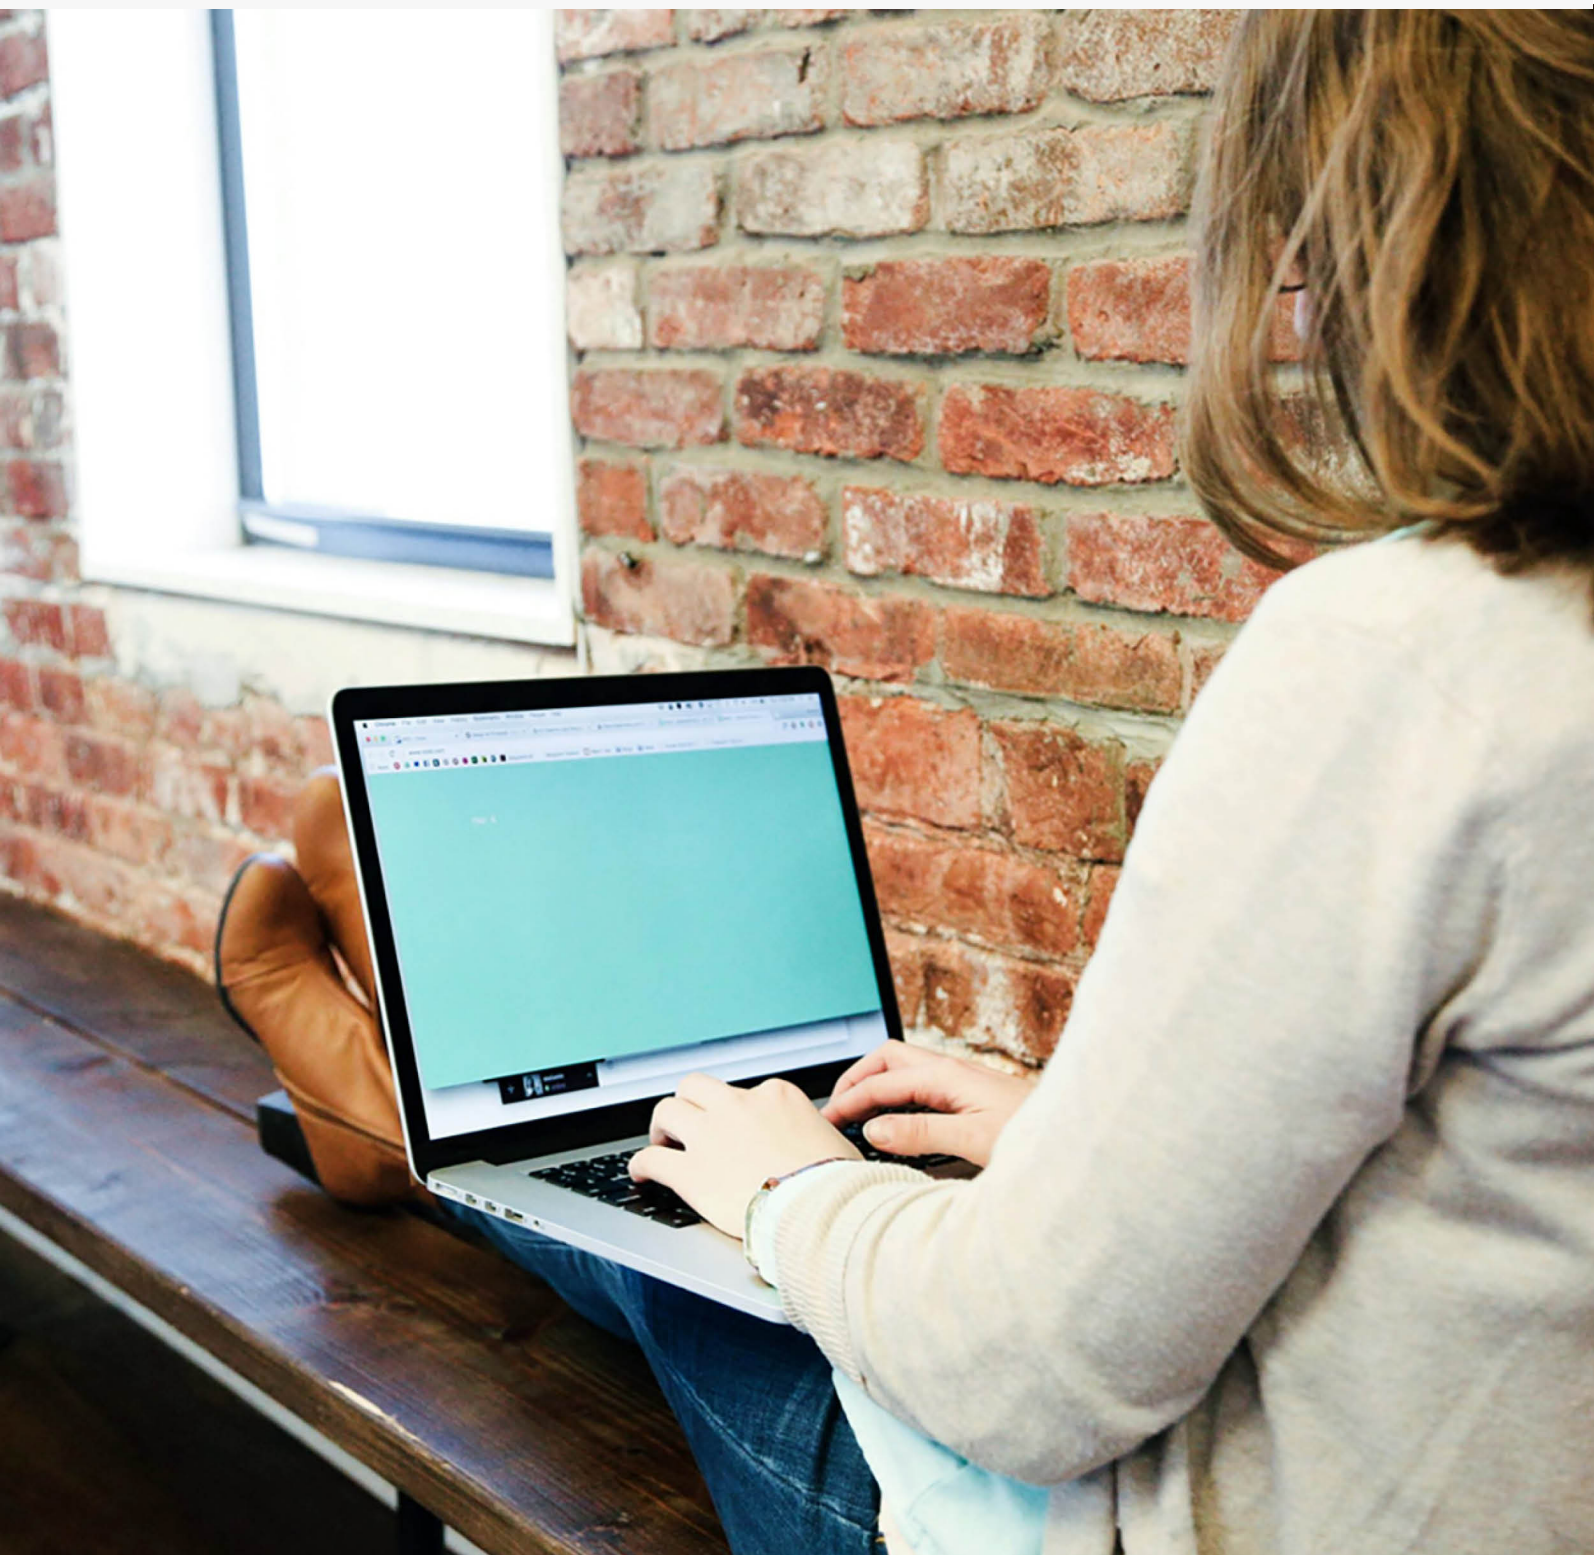
1.Non-executive directors' remuneration fluctuations are caused by joining or leaving the Board of Directors and the difference in the amount of meetings they assist during the year. Hence there is no correlation between their remuneration and the company performance.
2.The remuneration of Luis Isasi includes EUR 1,000 thousand for his role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings.
3. Group operating profit/(loss) before tax.
4. Employee average remuneration includes all concepts. Full-time equivalent data. Variable remuneration data accrued in the current year.
5. Total employees in Spain geography. Fixed remuneration + effective bonus received in the year. Not included rest of concepts. Not impacted by exchange rates.

Comments (Not included in the electronic submission to the CNMV)



- The variable remuneration only includes the amounts related to the position of executive director of Banco Santander S.A. For the construction of "short-term variable remuneration" and "long-term variable remuneration" information has been used the consolidation criteria of CNMV. In 2024 there was no application of malus clauses.
- **Total remuneration of executive directors is impacted by the excellent evolution of Santander share price.** In 2024, the revaluation of the share price used to set the 2024 variable remuneration (EUR 4.576) was +21%, so the *Gross profit from shares handed over or consolidated financial instruments* (Price x Volume) increased due to such revaluation. If it had remained stable in EUR 3.793 (share price of VR 2023), the increase in the total remuneration of the Executive Chair would have been +9% compared to the figure released in 2023 report (EUR 12,239 thousand). This variation is also highly impacted by the consolidation in 2024 of previous deferrals with better levels of achievement (e.g. 2021 plan had a 91.6% of total achievement).
- And regarding the **average remuneration of employees (EUR 61 thousand)**, to highlight the following ideas:
  a. Normally the increases or decreases in remuneration are greater for the executive directors, depending on the results of the entity, because the percentage of variable remuneration over fixed remuneration is lower in the average employee than in the executive directors.
  b. Our local presence and global scale, based on three regions and ten core markets, and our vast branch network (c.8,000), have a direct impact on this figure: more than a half of our employees are based in Mexico and South America (mainly in Brazil). The salaries of these employees are adapted to the local cost of living. Therefore, the comparison with the remuneration of executive directors (which remuneration was set for living in a mature country) is also impacted by the difference between both costs of living. Developing countries have a lower cost of living than the country where both directors carried out their functions.
  c. The different annual exchange rates have also an impact on this calculation where all local wages and salaries are translated into euros at the average year-end exchange rate.
  d. Finally, the average remuneration figure of Banco Santander is impacted by the different departures (retirements and early retirements) and annual new hires, with the average cost of the former (a more senior profile) being higher than the latter (a more junior profile).

This annual report on remuneration has been approved by the board of directors of the company, at its meeting on 25 February 2025.

State if any directors have voted against or abstained from approving this report.

1. ECONOMY, REGULATION AND COMPETITION

Economy

In 2024, Santander operated in an environment characterized by gradual reductions in interest rates by central banks, as a result of the decline in inflation and in a context with continuing geopolitical tensions. In general, the world's major economies are successfully completing the soft landing promoted by central banks' monetary policies and, while activity levels cooled down, they did so slowly. Labour markets were robust, with unemployment rates at or near full employment in two out of three economies in which Santander operates.

Our core regions' economies performed as follows in 2024:

- **Eurozone** (GDP in 2024: +0.7%). GDP growth improved slightly during the year. The reactivation of household consumption, still affected by inflation, was less than the increase in wages would have allowed. Moreover, the decline in gross fixed capital formation continued. External demand was the main driver of economic activity. The labour market remained resilient, with the unemployment rate at record lows (6.3% at year end). Inflation fell to around 2%, allowing the European Central Bank (ECB) to start a cycle of interest rate cuts, ending the year at 3%.

- **Spain** (GDP in 2024: +3.2%). Spain's economy was one of the most dynamic among the advanced economies. GDP was driven by services exports and consumption (both public and private). However, investment is not yet reflecting the expansionary cycle. Immigration supported this economic growth, with this population increase leading to some tensions in the housing market. Inflation continued to decline and remains around the euro area average.

- **United Kingdom** (GDP in 2024: +0.9%). The economy recovered in 2024 after stagnating in 2023, backed by consumption and investment. The labour market remained tight at full employment (4.3% at year end), although it began to show signs of cooling. This added pressure on wages (which grew 5% on average), which fuelled inflation through services. Inflation stood above the Bank of England's 2% target, despite its downward trend during the year, which allowed the central bank to initiate interest rate cuts in August. By year-end, the Bank of England reference rate stood at 4.75%.

- **Portugal** (GDP in 2024: +1.9%). The economy experienced a slowdown in growth, due to the loss of momentum in investment and exports, the latter due to the weak external demand from the European Union (EU). The labour market remained strong at full employment rates (6.6% in November 2024). Inflation was stable backed by little change in the more volatile components. Both headline and core inflation ended the year above the ECB's target, at 3% and 2.8%, respectively. Of note was the reduction in the economy's debt ratios, especially public debt, which, as a result of contained public deficit, remained below 100% in 2024.

- **Poland** (GDP in 2024: +2.8%). The economy recovered sharply in 2024 after weak growth in 2023 (+0.1%). Domestic demand offset the weak tone of foreign demand. The labour market remained stressed due to labour shortages, yet maintained a full employment rate which kept wage growth at double digits. Inflation moderated in H1 2024 but rebounded in H2 2024, ending the year at 4.7%, which led the central bank to hold the official interest rate at 5.75%.

- **US** (GDP in 2024: +2.8%). GDP growth was more robust than expected, backed by dynamic productivity increases. The unemployment rate remained around 4%, favoured by the increase in immigration. Inflation continued to moderate, although it remained high, and drove the Federal Reserve (Fed) to reduce the degree of monetary tightening by cutting interest rates by 100 basis points in the second part of the year to 4.50%.

- **Mexico** (GDP in 2024: +1.5% estimated). The economy slowed in 2024, driven by lower construction growth (following the completion of infrastructure projects the previous year), while the manufacturing and services sectors remained resilient. Inflation moderated at year-end, especially core inflation, which fell below 4%. The central bank began its cycle of official rate cuts, with gradual reductions from 11.25% at the end of 2023 to 10% at the end of 2024, and indicated there would be further cuts.

- **Brazil** (GDP in 2024: +3.5% estimated). The economy maintained robust growth, supported by the strength of private consumption and investment. Inflation rebounded towards the end of the year, to 4.8% (4.6% in 2023). The central bank concluded its cycle of interest rate cuts in May 2024 at 10.5% and restarted interest rate hikes in September, with interest rates ending the year at 12.25% (11.75% in December 2023).

- **Chile** (GDP in 2024: +2.3% estimated). The economy recovered in 2024, driven by consumption and exports. Inflation rebounded to 4.5% in 2024 compared to 3.9% in 2023, due to the rise of electricity prices and its effects on other goods and services. Medium-term inflation expectations remain anchored at the 3% target. This allowed the central bank to continue its cycle of interest rate cuts to reach 5% by the end of the year (compared to 8.25% in 2023).

- **Argentina** (GDP in 2024: -2.5% estimated). The economy completed its adjustment process, correcting its fiscal and external imbalances, leading to surpluses. This enabled the economy to begin recovering in the second half of the year after

an intense recession in the first half. Inflation accelerated at the beginning of the year (affected by the devaluation of the Argentine peso in December 2023), but moderated significantly by year-end, to monthly rates below 3%.

Financial markets' performance in 2024 was marked by the landing expectations of the global economy, which was softer than anticipated, supported by the beginning of the cycle of easing monetary policy in the US and the eurozone, and the presidential elections in the US, with some occasional bouts of volatility and an increase in geopolitical risk in conflict areas.

Equity markets showed a positive trend. Gains were especially positive in the US, due to the strength of the business cycle together with expectations of tax cuts and deregulation. The technology sector stood out above all, mainly driven by the rise of artificial intelligence. In European stock markets, gains were more moderate, weighed down by weaknesses in the German growth model and the prospects of a more uncertain external environment (due to the impact of US and Chinese policies).

In the sovereign debt market, despite the fact that the Fed began the cycle of interest rate cuts, there was a rebound in long-term debt yields in the US, reflecting expectations of a pick-up in inflation. In Europe, strong interest in government bonds has reduced spreads over the German bond yields. France was an exception, weighed down by weakening macroeconomic fundamentals and political uncertainty.

The US dollar strengthened against the euro towards the end of the year, underpinned by the cyclical gap between the US and eurozone economies, by geopolitical uncertainty (which benefits the dollar as a safe-haven asset) and by the political agenda of the new administration in the US (which reduces the Fed's room for additional interest rate cuts).

In commodities, gold led gains, driven by geopolitical uncertainty and declining official interest rates. Industrial metals benefited from a revival of global manufacturing activity. In contrast, oil prices fell amid concerns regarding oversupply and slow demand growth.

Latin American markets had a volatile year, especially in the second half of 2024, due to the combination of a more uncertain international context and idiosyncratic factors in several countries. Central banks continued the monetary policy easing cycles they began in 2023, albeit gradually and still maintaining restrictive positions, while paying attention to their differentials against the Fed and the performance of their currencies against the US dollar. Latin American currencies ended the year with sharp depreciations. Volatility was most pronounced in the Brazilian market, where Brazil's central bank decided to restart the cycle of interest rate hikes in the final months of the year, to curb pressures on the Brazilian real and contain its possible upward impacts on inflation.

The banking sector benefitted from a favourable macroeconomic environment and resilient labour markets which supported continued solid revenue performance and contained portfolio quality deterioration.

As a result, the market valuation of banks improved significantly throughout the year, although significant differences in the ratio of market capitalization to book value remained. While European banks increased their market capitalization to an average of 0.8 times their book value, US banks were at levels of 1.6 times their book value at year end.

The process of easing monetary policies is expected to have an impact on net interest income which is expected to be offset by an increase in credit volumes in an environment where a significant increase in non-performing loans is not expected.

Banks maintained high solvency levels, as observed in the stress tests conducted by supervisors and multilateral organizations, and they absorbed the impact of the gradual liquidity withdrawal being carried out by the major central banks.

The sector's outlook for 2025 is positive, with returns expected to be slightly lower than those recorded in 2024 but well above those observed in the last decade. In the short term, the main risks facing the sector are essentially exogenous, mainly those related to geopolitical risks.

The potential volatility in market valuations could be amplified by the positions of non-bank financial institutions. The volatility observed in the banking sector in August, although short lived, can be seen as a wake-up call.

The medium-term challenges for banks remain unchanged. The digital transition continues to force entities to make significant investments in order to offer the best customer experience to be able to face the competition from new competitors, while improving efficiency through automatization and simplification of processes, and maintaining safeguards against cyberattacks.

Additionally, the banking sector must continue to address potential risks related to sustainability.

Regulatory and competitive environment

In 2024, the regulatory agenda was similar to that of 2023, with prudential, sustainability, digitalization and retail banking issues taking the spotlight. In Europe, European Parliament elections held in June 2024 and the composition of the new European Commission slowed down the approval of ongoing proposals and the presentation of new ones. Competitiveness was consolidated as a fundamental pillar of action, both for the new European Commission - which agreed to introduce a competitiveness test in new legislative proposals - and for the UK, which introduced it as a regulatory objective.

The main regulatory topics in 2024 were:

1. **Prudential and resolution:** the European Banking Authority (EBA) began work on the secondary regulation needed to allow the Basel III reform in Europe (the new CRR3) to enter into force on 1 January 2025. However, the implementation of the Fundamental Review of the Trading Book (FRTB) was postponed until January 2026 to settle differences in criteria between jurisdictions and considering the different impacts, given the delayed implementation in the UK and the uncertainty around its implementation in the US. Additionally, the Basel Committee continued to work on the new prudential framework for cryptoasset exposures.

   In Europe, discussions also centred on the capital buffer framework (potential revision is being considered), and on securitizations, which are expected to increase in a more competitive environment. No significant progress was made on

the crisis management framework review, as negotiations were postponed until early 2025.

The Basel Committee and the Financial Stability Board (FSB) continued to analyse the lessons learned from the Silicon Valley Bank and Credit Suisse collapses, and also analysed a potential framework for non-bank financial intermediaries (NBFIs).

2. **Sustainability:** In June 2024, the European Union adopted the Corporate Sustainability Due Diligence Directive (CSDDD), which establishes obligations for large companies to identify and mitigate adverse effects on human rights and environmental impacts derived from their operations and supply chains.

   Regarding improvements in European competitiveness, the European Commission reiterated its objective of reducing reporting burdens, announcing that it will work to simplify the requirements on taxonomy, reporting (Corporate Sustainability Reporting Directive or CSRD) and due diligence regulation.

   The European supervisory authorities (the EBA, the European Insurance and Occupational Pensions Authority or EIOPA and the European Securities and Markets Authority or ESMA) published a common definition of greenwashing for the financial sector, and the EBA worked on the integration of climate and environmental risks into the Pillar 1 prudential framework. In addition, guidelines have been developed for bank transition plans in Europe and in other jurisdictions such as the UK.

   The Basel Committee aims to complement Pillar 3 transparency requirements with information on environmental risk management.

   Other jurisdictions, such as Brazil, Mexico and Chile continued to make progress in building a sustainability framework, with initiatives related to taxonomies and risk management.

   Finally, the International Sustainability Standards Board (ISSB) continued to make progress in the design of reporting requirements, consolidating its position as the international standard.

3. **Digitalization:** The European Artificial Intelligence Regulation (Regulation (EU) 2024/1689 or AI Act), which establishes a harmonized legal framework for the development, marketing and use of artificial intelligence (AI) systems in the European Union, entered into force in August 2024. The regulation classifies AI systems according to their level of risk, establishing new requirements for high-risk systems and prohibiting those that pose unacceptable risks. With this regulation, the EU positions itself as one of the first jurisdictions to generally regulate artificial intelligence. Internationally, forums such as Group of Seven (G7) have established general principles, while the best framework for the use of AI is still under debate.

   The debate on Central Bank Digital Currencies (CBDCs) continues. The EU continued to make progress on the digital euro project. The vast majority of central banks in the EU are exploring opportunities to issue a CBDC, although the focus is shifting to wholesale CBDCs, where opportunities seem to be clearer. The appetite to launch a digital currency decreased both in the US and in the UK.

   Some jurisdictions have begun to implement the recommendations for the regulation of cryptoassets and stablecoins issued by the FSB. Europe led the way with the Markets in Crypto-Assets Regulation (MiCA) while other countries such as Brazil and Argentina are exploring similar frameworks.

   In addition, Europe continued to work on a framework for data sharing between financial institutions (Financial Data Access or FiDA) whose objective is to give customers control and power over their data, with the aim of generating a data economy. Similar debates on data took place in Chile and the US.

   Finally, payment regulation in many countries, both in terms of fraud regulation in an increasingly digital world, and the regulation of interchange fees were discussed.

4. **Retail banking:** The debate focused on the European Commission's Retail Investment Strategy (RIS), a proposal which aims to empower and protect retail investors in the EU by amending several directives on capital markets, on which negotiations are still ongoing. The debate also centred on the Savings and Investments Union (formerly the Capital Markets Union), which intends to create a single market for capital and increase the number of retail investors participating in capital markets. There was also an important focus on different regulations on pricing and customer access to products in the UK, Brazil and Argentina.

For more details, see note 1.e to the consolidated financial statements.

Santander and public policy

We have a strong commitment to our customers to conduct our business in a simple, personal and fair way. We are also committed to constructively engaging with regulators and supervisors, both regarding the regulation and frameworks that affect our business, as well as the interests of our customers.

Public policy priorities

1

Promote regulation that allows banks to finance the economy and be profitable and investable

- Banks must continue to play their fundamental role of financing the economy and promoting growth in a competitive way, with profitability as their first line of defence.
- It is important that, when designing regulation and supervision, policymakers and regulators consider the need for a balance between preserving financial stability and supporting economic growth.
- Lack of growth is the biggest threat to financial stability. As such, it is crucial to promote growth in order to finance the current challenges: decarbonization, the demographic challenge and the digital transformation, among others.
- Predictability and transparency in capital, regulatory and supervisory requirements are key to preserve the ability of banks to finance the economy and its transformation, as well as their ability to invest.
- For European banks to be competitive and do more for their customers, businesses and society as a whole, it is necessary to guarantee consistent regulation and a single market. To do so, the EU needs a new Savings and Investments Union as well as a Banking Union. Additionally, it is essential for the European regulation to recognize non-EU countries, so that global European companies can continue to invest in other jurisdictions, improving their competitiveness and contributing to growth in other regions.

2

Provide support so that sustainability can boost the competitiveness and growth of companies

- It is advisable to conduct regular impact assessments on the sustainability legislation currently in force, to evaluate its contribution to a stable and fair transition.
- It is crucial for the regulatory framework to recognize specific needs given the heterogeneity in the starting points of countries and sectors in terms of their transitions, to enable banks to finance both sustainable companies and especially those undergoing a transition to become more sustainable.
- It is important that the regulatory framework does not add capital requirements associated with ESG risk management.

3

Leverage the benefits of a digital economy

- In a more digital world, banks must leverage technology to improve their value proposition to customers.
- It is positive for central banks to analyse the possibilities technology offers to increase innovation. Regarding payments, a prudent approach to CBDCs is needed, to ensure they generate opportunities while mitigating associated risks. Retail CBDCs could have significant impacts on financial stability and should not displace private payment solutions. In contrast, wholesale CBDCs could act as enablers for a new tokenized economy.
- It is vital that all payment systems are subject to a common regulatory framework, to safeguard customer protection and financial stability and promote interoperability between payment systems.
- Both education and public authorities' involvement are necessary to raise awareness of the increased risk of fraud in a digital world. Moreover, it is crucial to facilitate a framework that addresses the entire fraud chain and adequately allocates responsibilities to all parties involved, to avoid perverse incentives.
- Tokenization has the potential to transform financial markets by introducing new financial assets.

4 Promote a data economy

- Data has gained importance as an asset in an increasingly digitalized economy and society. Leveraging the benefits of a data-driven economy requires a change in the way in which companies are regulated, public institutions are managed and citizens are served.
- Data exchange should be regulated following a cross-sector perspective, to promote synergies that could arise from sharing information between sectors and thus maximize opportunities for innovation and preserve a competitive environment. One of the clearest examples is the combination of public and private data.
- It is essential that regulation encourages innovation and the adoption of AI as a transformative technology, while also curbing threats to people's safety and fundamental rights. The major challenges linked to this technology are global and must be tackled in a coordinated way across regions. Regulators and the industry must work together to establish adequate guidelines and ensure their proper implementation.

5 Achieve the proper balance between customer protection and needs

- Regulation must promote both customer protection and service as well as product, service and channel innovation, based on a market approach. The implementation of regulatory instruments such as caps on prices or bans on incentives to sell products should be carefully assessed, as they can introduce complexity and rigidity into value propositions and may even lead to the creation of an unregulated parallel market.
- Significant short- and medium-term investments are needed to finance the growing digitalisation of the economy and the green transition. It is critical to ensure that retail investors have access to capital markets, on the base of transparent and specific information on value-adding products. Additionally, incentives are key to provide advice and value-added services to these investors in open distribution models.
- To ensure financial inclusion and prevent excessive leverage, is it important for consumers to access credit according to their needs and solvency and that interest rates on consumer credit are set following market competition.
- Promoting financial education and empowering consumers with clear and targeted information is crucial to enable consumers to make informed financial decisions. In this sense, the use of data and AI will be key to better fulfil our customers' needs in a changing environment.

% changes in constant euros (2024 vs. 2023):

NII: +9.5%; Total income: +9.9%; Net operating income: +14.6%; Profit before tax: +15.6%; Attributable profit: +15.3%.

Note: for Argentina and any grouping which includes it, the variations in constant euros have been calculated considering the Argentine peso exchange rate on the last working day for each of the periods presented. Additionally, in 2024, for the Argentine peso, we apply an alternative exchange rate that better reflects the evolution of inflation (we continue to apply the official ARS exchange rate to all prior years). For further information, see section 8. 'Alternative performance measures' of this chapter.

Certain figures contained in this chapter, have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total figure given for that column or row.

Number of branches	**8,011**	8,518	(6.0)	9,019

A. Includes customer deposits, mutual funds, pension funds and managed portfolios.

B. In addition to IFRS measures, we present non-IFRS measures including some which we refer to as underlying measures. These non-IFRS measures exclude items outside the ordinary course of business and reclassify certain items under some headings of the underlying income statement as described at the end of section 3.2 'Results' and in section 8. 'Alternative Performance Measures' of this chapter. In our view, this provides a better year-on-year comparison.

C. Allowances for loan-loss provisions over the last 12 months / Average loans and advances to customers over the last 12 months.

D. Those customers who comply with the minimum balance and/or transactionality requirements as defined according to the business area.

E. Every physical or legal person, that, being part of a commercial bank, has logged in to its personal area of internet banking or mobile phone or both in the last 30 days.

3. GROUP FINANCIAL PERFORMANCE

Santander follows IFRS to report its results (see note 1.b to the consolidated financial statements), which generally inform reporting of our financial situation in this consolidated directors' report. However, we also use non-IFRS measures and Alternative Performance Measures (APMs) to assess our performance (see section 8. 'Alternative Performance Measures' of this chapter). Thus, the main adjustments to our IFRS results consist of:

- Underlying results measures: we present what we call underlying results measures which exclude items outside the ordinary course of business and reclassify certain items under some headings of the underlying income statement as described at the end of section 3.2 'Results' in this chapter and in note 52.c of the consolidated financial statements. In our view, this provides a better year-on-year comparison.

  In section 4. 'Financial information by segment', we present results by primary and secondary segments only in underlying terms in accordance with IFRS 8. We reconcile them in aggregate terms with our IFRS consolidated results in note 52.c to the consolidated financial statements.

- Local currency measures: we use certain non-IFRS financial indicators in local currency to assess our ongoing operating performance. They include the results from our subsidiary banks outside the eurozone excluding the exchange rate impact (i.e., in constant euros) except for Argentina and any grouping which includes it. For further information, see section 8. 'Alternative Performance Measures' of this chapter, which explains how we exclude the exchange rate impact from financial measures in local currency. Because changes in exchange rates have a non-operating impact on results, we believe assessing performance in local currency provides management and investors a more meaningful assessment of performance.

We have rounded certain figures in this consolidated directors' report to present them more clearly. Thus, the amounts given in the totals columns and rows of tables in certain instances may not match the sum of that column or row.

3.1 Overview of Santander

Santander is a Retail and Consumer global powerhouse and one of the largest banks in the eurozone. At 2024 year-end, we had EUR 1,837,081 million in assets and EUR 1,348,422 million in total customer funds. Santander was the second largest bank by market capitalization in the eurozone (EUR 67,648 million as of 31 December 2024).

The Santander Way

Our Purpose is to help people and businesses prosper. Our Aim is to be the best open financial services platform, by acting responsibly and earning the lasting loyalty of our stakeholders by being Simple, Personal and Fair in all we do.

Our business model and transformation in recent years has provided sustained earnings and a stronger balance sheet, despite the challenging environment and macro volatility.

We engage in a wide range of typical banking activities, operations and services. We do not merely meet our legal and regulatory obligations but we also aim to exceed the expectations of our stakeholders: employees, customers, shareholders and communities. In detail:

- We are committed to continuously improving the experience of the 206,753 **employees** who are part of Santander. Our goal is to attract and retain the best talent by offering an attractive value proposition that prioritizes personal growth, an inspiring culture, and working conditions that ensure the health and well-being of our people. Furthermore, we promote an environment that prioritizes inclusion, where all voices are valued and individuals feel safe and free to express their identity, ideas and opinions.

  Our health, safety and well-being policy applies in all countries where we operate, with a proactive and comprehensive approach to the health of the people working at Santander.

  Your Voice, our listening channel to periodically assess the engagement and experience of our professionals, showed an increase in engagement levels, achieving an average score of 8.7 and an employee Net Promoter Score (eNPS) of 63, obtaining results above the financial industry in all evaluated dimensions, positioning us at the top of the sector.

  We plan to continue working in this direction, with the firm purpose of improving year after year.

- **Customer** focus is an essential part our strategy. We are a Retail and Consumer global powerhouse with 173 million customers. We continue building a digital bank with branches to be the number one bank for our customers. By listening to our

customers' needs, we are boosting Santander's position as their trusted financial partner.

We keep moving and adapting to the evolving needs of our customers, to offer the best products, an agile and frictionless customer experience for daily needs and competitive prices.

Throughout the year, we undertook significant initiatives to transform customer experience and strengthen our value proposition. This was reflected in our customer growth rates and Net Promoter Score (NPS) improvement where we are one of the top three banks in seven markets.

In the digital space, we enhanced self-service capabilities and user experiences, leveraging behavioural economics methodologies for deeper customer insights and implementing training programmes to ensure excellence in branch interactions.

At year end, we had 8,011 branches, including traditional ones and other specialized centres for businesses, private banking, universities and other customer segments.

These physical spaces have evolved to integrate traditional services with digital facilities. In some branches, such as the Work Cafés, we have collaborative spaces, which enable native digital customers to have a better experience and integrate their financial transactions into their daily lives.

At the same time, customer interactions continued their structural shift towards digital and remote services with high user experience standards. We now have more than 59 million digital customers (10% more than in 2023) and we increased our digitally available products and services to 62% (56% in 2023).

At Santander, we appreciate the value of the human connection that our branch network provides and are mindful of our most vulnerable customers' needs, responding with tailored offers, thereby increasing customer loyalty and improving customer experience.

We are committed to creating products and services catered to our customers' needs, such as through our financial inclusion initiatives. For example, we provide customers in rural Spain access to basic financial services through our branches, ATMs, network of financial agents in communities with under 10,000 inhabitants and Correos Cash in areas that might otherwise have been left unattended. In 2024, we extended the Correos Cash agreement to offer cash access with a non-digital solution through rural letter carriers.

Santander is also committed to ensuring and promoting financial inclusion in vulnerable customers through different initiatives such as our microfinance programmes in Latin America (Prospera in Brazil and Colombia, Tuiio in Mexico and Surgir in Peru). We also signed several agreements with Multilateral Development Banks in countries such as Chile, Brazil and Poland where these agreements include allocating part of new portfolios to social finance. In Spain, we helped customers with financial difficulties to access credit (e.g., loans for a first home for young people) or those impacted by the rising cost of living or natural disasters (e.g., the floods that affected Valencia in October 2024), among others.

Additionally, we have a cross-functional team that has been working on enhancing services for our elderly customers, including measures such as extending the hours of counter/teller services and creating senior ambassadors to make sure senior citizens receive the best possible service. We also continued to promote financial education with specific content through our financial education programme, Finanzas para Mortales. Our commitment to financial education through this programme directly impacted senior citizens, people with disabilities, people in vulnerable situations and school children, among others.

- We also support our **communities** through programmes to help them address their social needs. We focus our efforts on education, employability and entrepreneurship, in addition to financial education and support for vulnerable people. Moreover, we have a strong track record of backing cultural and other social initiatives. For more information, see the 'Sustainability statement' chapter.

- For our **shareholders**, we delivered solid financial results in 2024 and met all our 2024 targets which we upgraded in July 2024.

  Once again, we achieved an all-time high attributable profit, reaching EUR 12,574 million in 2024. This was supported by revenue growth (+10% year-on-year in constant euros), better efficiency (41.8% in 2024) and profitability improvement (RoTE of 16.3% in 2024). At the same time, we maintained a solid balance sheet with sound credit quality (cost of risk was 1.15% in 2024) and capital ratios (fully-loaded CET1 ratio at 12.8% at year end).

  Finally, we delivered higher shareholder remuneration with double-digit value creation in 2024. Our TNAV per share plus cash dividend per share grew 14% year-on-year and the cash dividend per share paid during 2024 was 39% greater than cash dividends per share paid during 2023.

Looking ahead

We are in a phase of value creation which is underpinned by the following three tenets:

- **Think Value:** delivering double-digit value creation, on average through-the-cycle.
- **Think Customer:** building a digital bank with branches with well-targeted products and services to grow our customer base.
- **Think Global:** leveraging global and in-market scale, network and tech to deliver world class-services and accelerate profitable growth.

Our business model and transformation are already providing sustained earnings and a stronger balance sheet, while enabling us to accelerate profitable growth and value creation.

We manage the Group as ONE Santander through five global businesses. As one of the largest retail and consumer banks in the world, we have the scale to build our own technology platforms, making it possible to offer customers the best products and services while constantly reducing the cost-to-serve. This is a key competitive advantage and is reflected in our results through continuous improvement in operational leverage.

Our business model and our five global businesses boost value creation by leveraging our global and in-market scale. This, coupled with our network effects, drives revenue growth with structurally lower costs thereby supporting our ambition of becoming the most profitable bank in every market where we operate.

The strategic priorities of our five global businesses for 2025 are the following:

- **Retail & Commercial Banking:** i) continue our transformation journey towards our vision of becoming a digital bank with branches underpinned by a common operating model and a global tech platform; ii) adapt our business model towards value creation through stronger customer relationships and network effects; and iii) strengthen structural efficiency on the back of our transformed operating and business models to drive cost-to-serve efficiencies.
- **Digital Consumer Bank:** i) converge towards global platforms; ii) grow and consolidate partnerships; iii) promote the network effect through a complete product offering to our customers leveraging the Group's capabilities; iv) continue gathering customer deposits; and v) enhance and automate our originate-to-share model.
- **Corporate & Investment Banking**: i) deepen our client relationships with a particular focus on the US; ii) fully leverage our enhanced centres of expertise, increase connectivity around the client agenda and further digitalize our business; iii) keep evolving our active capital management and global operating models; and iv) attract, develop and retain top talent.
- **Wealth Management & Insurance:** i) improve our customer experience providing enhanced value-added products and services and expanding our presence to new countries and businesses; ii) boost operational leverage by globalizing service and product factories/hubs and enhancing local distribution; and iii) develop common global platforms to transform our operations and distribution model leveraging the Group's technology, data and AI.
- **Payments**: in PagoNxt, i) continue to scale up our global platform of innovative payments and integrated value-added solutions; ii) roll out our global payment platform to all our regions and the open market. In Cards, expand our cards business while improving customer experience.

Additionally, **we are accelerating our global approach to technology** which drives innovation and excellence in a dynamic and fast-changing environment. This is differentiating us from our peers and giving us a competitive advantage. We have already built a strong set of platforms, which provide services to customers across our footprint and, at the same time, to the open market.

To conclude, we believe Grupo Santander is well positioned to achieve our aim to be the best open financial services platform, leveraging our unique business model and our network effects.

Profit attributable to the parent	**12,574**	**11,076**	**1,498**	**13.5**	**9,605**

Main income statement items

In 2024, the profit attributable to the parent reached a new record of EUR 12,574 million, representing a year-on-year increase of 14%, compared to the EUR 11,076 million recorded in 2023. This increase was backed by the good performance in total income, which grew at a much higher pace than operating expenses.

This year-on-year comparison is impacted by a higher charge relating to the temporary levy on revenue earned in Spain (EUR 335 million in 2024), charges in Q2 2024 related to the discontinuation of our merchant platform in Germany and Superdigital in Latin America (EUR 243 million, net of tax and minority interests) and the provision in Q4 2024 for potential complaints related to motor finance dealer commissions in the UK (EUR 260 million, net of tax and minority interests). Additionally, there was a lower contribution to the Deposit Guarantee Fund in Spain in 2024 and there was no contribution to the Single Resolution Fund as contributions ended in 2023.

Total income

Total income amounted to EUR 61,876 million, a new annual record and an 8% increase year-on-year. Net interest income and net fee income accounted for 96% of total income. By line item:

Net interest income

Net interest income amounted to EUR 46,668 million, 8% higher than 2023.

The tables below show the average balances of each year calculated as the monthly average over the period, which we believe should not differ materially from using daily balances, and the interest generated.

The tables also include average balances and interest rates in 2024 and 2023, based on the domicile of the entities at which the relevant assets or liabilities are recorded. Domestic balances relate to our entities domiciled in Spain. International balances relate to entities domiciled outside of Spain (reflecting our foreign activity), and are divided into mature markets (the US and Europe, except Spain and Poland) and developing markets (South America, Mexico and Poland).

The average balance of interest-earning assets in 2024 was 2% higher than in 2023. The activity of our entities in both the domestic market and in the international mature markets grew by 3% year-on-year, while it was stable in the international developing markets.

The average balance of interest-bearing liabilities in 2024 was 2% higher year-on-year, with growth in domestic (+6% year-on-year) and international developing markets (+1% year-on-year), while it decreased by 1% year-on-year in international mature markets.

The average return on interest-earning assets increased 32 bps from 6.70% in 2023 to 7.02% in 2024, following a strong increase in 2023. By market, it grew 49 bps year-on-year in the domestic market, 54 bps year-on-year in our international mature markets, and fell 14 bps year-on-year in our international developing markets.

The average cost of interest-bearing liabilities rose 19 bps in 2024 to 4.33%. By market, it performed in line with the average yield on assets, increasing in our domestic (+48 bps year-on-year) and international mature (+67 bps year-on-year) markets, and it fell 1.1 pp year-on-year in our international developing markets.

We calculated the change in interest income/(expense) shown in the tables below by:

- Applying the interest rate of the previous period to the difference between the average balances from the current and previous periods to obtain the change in volumes.
- Applying the difference between the rates from the current and previous periods to the average balance from the previous year to obtain the change in interest rate.

Both interest income and expense increased in 2024, mainly due to higher average interest rates and, to a lesser extent, greater volumes.

As a result, net interest income increased 8% year-on-year, with generalized growth across all businesses and regions.

Especially of note was the performance in Retail, mainly in South America due to the higher volumes and lower cost of deposits, and in Spain, Poland and Portugal due to good margin management. There was also strong growth in Consumer, especially in Europe due to volumes growth and asset repricing, and in Brazil, favoured by higher volumes and lower average interest rates.

Net fee income	**13,010**	**12,057**	**953**	**7.9**	**11,790**

Net fee income

Net fee income totalled 13,010 in 2024 and grew 8% compared to 2023, with good performance in all businesses except Payments, whose year-on-year comparison was impacted by a one-time positive fee from commercial agreements in Brazil in Q1 2023.

Gains or losses on financial assets and liabilities and exchange differences (net)

Gains on financial transactions and liabilities and exchange differences (net) stood at EUR 2,273 million in 2024 (EUR 2,633 million in 2023), affected by lower market activity in South America, especially in Brazil, lower results in DCB Europe (DCBE) and lower results in the Corporate Centre from foreign currency hedges and risk transfer initiatives.

Gains and losses on financial assets and liabilities stem from mark-to-market valuations of the trading portfolio and derivative instruments, which include spot market foreign exchange transactions, sales of investment securities and liquidation of our hedging and other derivative positions.

For more details, see note 43 to the consolidated financial statements.

Exchange rate differences primarily show gains and losses from foreign exchange and the differences that arise from converting monetary items in foreign currencies to the functional currency, and from selling non-monetary assets denominated in foreign currency at the time of their disposal. Given Santander manages currency exposures with derivative instruments, the changes in this line should be analysed together with Gains/(losses) on financial assets and liabilities.

For more details, see note 44 to the consolidated financial statements.

Dividend income

Dividend income was EUR 714 million in 2024 (EUR 571 million in 2023).

Income from companies accounted for by the equity method

The income from companies accounted for by the equity method reached EUR 711 million in 2024 compared to EUR 613 million in 2023.

Other operating income/expenses

Other operating income recorded a loss of EUR 1,500 million in 2024 (compared to a EUR 1,712 million loss in 2023). These results include the hyperinflation adjustment in Argentina and charge relating to the temporary levy on revenue earned in Spain, which was 50% higher than in 2023 (EUR 335 million in 2024 versus EUR 224 million in 2023). As mentioned, there was no contribution to the SRF in 2024 and there was a lower contribution to the DGF in Spain (EUR 11 million, net of tax and minority interests in 2024).

For more details, see note 45 to the consolidated financial statement.

Operating expenses

Operating expenses amounted to EUR 26,034 million in 2024, 2% higher than 2023, growing at a much lower pace than total income.

Our cost management continued to focus on improving our efficiency and, as a result, we remained among the most efficient global banks in the world.

Our business transformation plan, ONE Transformation, continued to progress across our footprint, reflected in an enhanced operating performance and better business dynamics.

Provisions or reversal of provisions

Provisions (net of provisions reversals) amounted to EUR 3,883 million in 2024 (EUR 2,678 million in 2023) and included the charges after discontinuing our Superdigital platform in Latin America in Q2 2024, and the provision in Q4 2024 for potential complaints related to motor finance dealer commissions in the UK.

For more details, see note 25 to the consolidated financial statements.

Impairment or reversal of impairment of financial assets not measured at fair value through profit or loss (net)

Impairment or reversal of impairment on financial assets not measured at fair value through profit or loss (net) was EUR 12,644 million in 2024 (EUR 12,956 million in 2023).

Credit quality indicators remained robust, supported by good risk management and the good performance of the economy in general and labour markets in the countries where the Group operates.

Impairment of other assets (net)

The impairment on other assets (net) was EUR 628 million in 2024 and included the charge registered in Q2 2024 after discontinuing our merchant platform in Germany, compared to an impairment of EUR 237 million in 2023.

Gains or losses on non-financial assets and investments (net)

Net gains on non-financial assets and investments (net) were EUR 367 million in 2024, which included the gain recorded in Q2 2024 from an agreement with Sodexo in Brazil compared to a gain of EUR 313 million in 2023.

For more details, see note 48 to the consolidated financial statements.

Negative goodwill recognized in results

No negative goodwill was recorded in 2024. Negative goodwill of EUR 39 million was recorded in 2023.

Gains or losses on non-current assets held for sale not classified as discontinued operations

This item, which mainly includes impairment of foreclosed assets recorded and the sale of properties acquired upon foreclosure, recorded a EUR 27 million loss in 2024 (EUR 20 million loss in 2023).

For more details, see note 49 to the consolidated financial statements.

Profit or loss before tax from continuing operations

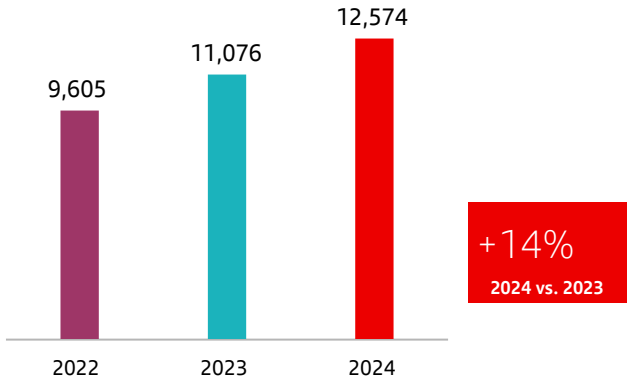
Profit before tax was EUR 19,027 million in 2024, +16% year-on-year, supported by the good performance of net interest income, net fee income and cost discipline.

Tax expense or income from continuing operations

Total income tax was EUR 5,283 million in 2024 (EUR 4,276 million in 2023).

Profit attributable to non-controlling interests

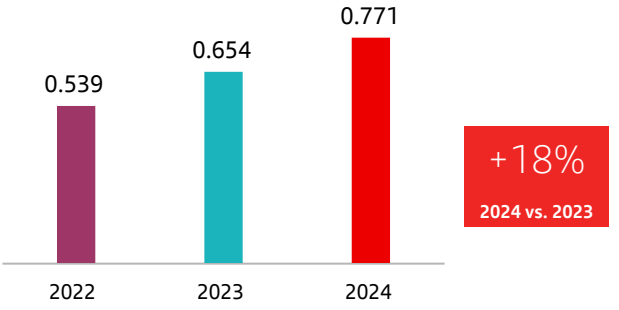
Profit attributable to non-controlling interests increased slightly to EUR 1,170 million in 2024 (EUR 1,107 million in 2023), in part due to the accelerated placement of ordinary shares of Santander Bank Polska S.A. in the year.



For more details, see note 28 to the consolidated financial statements.

Profit attributable to the parent

Profit attributable to the parent amounted to EUR 12,574 million in 2024, 14% higher than the EUR 11,076 million in 2023. These results do not fully reflect profit performance due to the aforementioned impacts.



Profit attributable to the parent

Underlying income statement

- **Third consecutive year of record revenue,** which boosted profit to an all-time high in 2024.
- **Efficiency improvement and profitable growth,** supported by the operational leverage resulting from the execution of ONE Transformation.
- **Risk indicators were robust,** underpinned by good risk management, the economic environment and low unemployment.

Attributable profit	RoTE	RoRWA
EUR 12,574 million +14% in euros +15% in constant euros	16.3% +1.2 pp	2.18% +0.2 pp

Note: changes vs. 2023.

Below is the condensed income statement adjusted for items beyond the ordinary course of business and reclassification of certain items under some headings of the underlying income statement, as described in note 52.c of the consolidated financial statements, where our segments' aggregate underlying consolidated results are reconciled to the statutory consolidated results.

The Group presents, both at the total Group level and for each of the business units, the changes in euros registered in the income statement, as well as variations excluding the exchange rate effect (i.e., in constant euros) except for Argentina and any grouping which includes it. For further information, see section 8. 'Alternative Performance Measures' of this chapter.

At the Group level, exchange rates had an unfavourable impact of 2.0 pp on total income and a favourable impact of 1.6 pp on costs in the year.

To better understand the business trends, we reclassified certain items under some headings of the underlying income statement. These items explain the differences between the statutory and underlying income statements and were:

- In 2024:
  - The impact of the temporary levy on revenue earned in Spain totalling EUR 335 million in Q1 2024, which was reclassified from total income to other gains (losses) and provisions.
  - Provisions which strengthen the balance sheet in Brazil of EUR 352 million in Q2 2024 (EUR 174 million net of tax and minority interests).
- In 2023:
  - The impact of the temporary levy on revenue earned in Spain totalling EUR 224 million in Q1 2023, which was reclassified from total income to other gains (losses) and provisions.
  - Provisions which strengthen the balance sheet in Brazil of EUR 235 million (net of tax and minority interests) in Q1 2023.

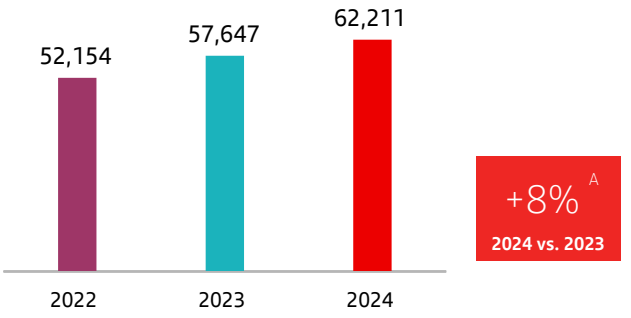
A. Excluding net capital gains and provisions.

For more details, see note 52.c to the consolidated financial statements.

In both 2024 and 2023, profit attributable to the parent and underlying profit were the same (EUR 12,574 million in 2024 and EUR 11,076 million in 2023), as profit was not affected by results that fell outside the ordinary course of our business. As a result, both attributable profit and underlying profit increased 14% in euros and 15% in constant euros compared to 2023.

This year-on-year comparison is impacted by a higher charge relating to the temporary levy on revenue earned in Spain, charges in Q2 2024 related to the discontinuation of our merchant platform in Germany and Superdigital in Latin America (EUR 243 million, net of tax and minority interests) and by the provision in Q4 2024 for potential complaints related to motor finance dealer commissions in the UK (EUR 260 million, net of tax and minority interests). Additionally, in 2024, there was a lower contribution to the Deposit Guarantee Fund in Spain and there was no contribution to the Single Resolution Fund as contributions ended in 2023.



Total income amounted to EUR 62,211 million in 2024, a new record, up 8% year-on-year. In constant euros, total income rose 10% year-on-year, as follows:

- **Net interest income** (NII) totalled EUR 46,668 million, a new record, and 10% higher year-on-year, with growth across all businesses and regions:
  - NII grew strongly in **Retail** (+11%), which represents 60% of the Group's NII. It rose in all three regions, especially in South America, which benefitted from higher volumes and lower cost of deposits, and in Europe, driven by good margin management.
  - In **Consumer** (23% of Group NII), it rose 6%, on the back of active loan repricing and volumes growth in Europe, and higher volumes and lower interest rates in Brazil.
  - In **CIB,** NII increased strongly (+15%), boosted by our three main businesses.
  - In **Wealth**, NII rose 8%, driven by good margin management in a favourable macroeconomic environment and strong commercial activity in Private Banking.
  - In **Payments**, NII increased 13%, with growth in both Cards and PagoNxt, due to higher activity.
- **Net fee income** reached EUR 13,010 million, also a new record, up 11% year-on-year, with growth across all businesses if we exclude from Payments the one-time positive fee from commercial agreements in Cards in Brazil in Q1 2023. We recorded this excellent net fee income performance as a result of executing our strategy to capture network effects across the Group. By business:
  - In **Retail**, net fee income increased 7%, supported by higher commercial activity and a larger customer base. By country, the good performances in Brazil, the US, Mexico and Poland stood out.
  - In **Consumer**, net fee income rose 24%, driven mainly by growth in Europe due to increased insurance penetration, volumes growth in Brazil and auto fee income in the US.
  - In **CIB**, net fee income increased 21%, with all businesses growing but particularly Global Banking on the back of the US Banking Build-Out (US BBO) initiative.
  - In **Wealth**, net fee income rose 19%, with growth across all three businesses, mainly due to good commercial activity in Private Banking and Asset Management.
  - In **Payments**, net fee income declined 1%, affected by the impact from the aforementioned one-time positive fee in Q1 2023 in Cards (+1% excluding it), while net fee income rose 5% in PagoNxt.
- **Gains on financial transactions and exchange differences** declined 11%, due to lower results in CIB, mainly in Brazil affected by weaker market activity (although it showed some recovery in the second half of the year), lower results in DCBE and lower results in the Corporate Centre due to impacts from foreign currency hedges and risk transfer initiatives.
- **Other operating income** registered a positive result in 2024 compared to a negative result in 2023. These results include the negative impact of the hyperinflation adjustment in Argentina and there was a lower contribution to the DGF in Spain (EUR 11 million, net of tax and minority interests in 2024). As already mentioned, there was no contribution to the SRF in 2024 as contributions ended in 2023.

This positive total income performance, with double-digit growth, enabled us to exceed our growth target for 2024, which we upgraded in Q2.

Total income

EUR million

A. In constant euros: +10%.

Administrative expenses and amortizations in 2024 totalled EUR 26,034 million, up 2% year-on-year. In real terms, excluding the impact of average inflation and in constant euros, they grew 1% year-on-year (for further information, see section 8. 'Alternative performance measures' of this chapter).

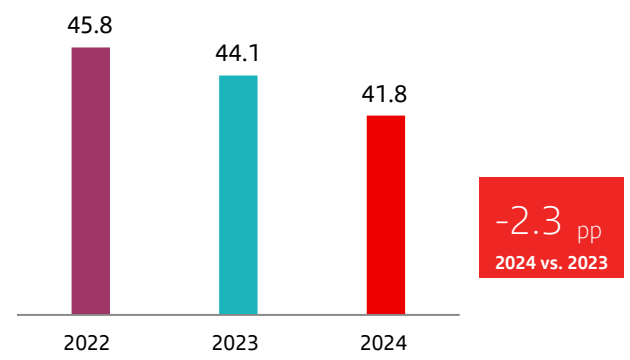
We continued to progress with our business transformation plan, ONE Transformation, reflected in greater operational leverage and better business dynamics. By business and in constant euros:

- In **Retail**, administrative expenses and amortizations grew 3%. In real terms they fell 1%, driven by the transformation efforts through organizational and process simplification and the implementation of our global platform. The efficiency ratio improved 3.4 pp year-on-year to 39.7%.
- In **Consumer**, administrative expenses and amortizations fell 1% year-on-year. In real terms, they fell 4%, even as we continued to invest in operational leasing and check-out lending platforms and in business growth. This good performance was due to our focus on efficiency and transformation and resulted in a 2.7 pp improvement in the efficiency ratio year-on-year to 40.1%.
- In **CIB**, administrative expenses and amortizations increased 14%, due to our investments in new products, capabilities and technology. The efficiency ratio stood at 45.6%, maintaining a leading position among peers.
- In **Wealth**, administrative expenses and amortizations rose 9%, due to investments in key initiatives, such as reinforcing teams in Private Banking. The efficiency ratio improved 2.0 pp year-on-year to 35.9%.
- In **Payments**, administrative expenses and amortizations rose 8%, rising 5% in real terms due to investments in global platforms in both PagoNxt and Cards. The efficiency ratio stood at 45.0%.

Our cost management continued to focus on structurally improving our efficiency. As a result, we remained one of the most efficient banks in the world with an efficiency ratio of 41.8%. This is a 2.3 pp improvement year-on-year and is in line with our target of around 42%, which we upgraded in Q2.

All in all, **net operating income** reached EUR 36,177 million, up 12% year-on-year (+15% in constant euros). This strong performance was driven by both the good performance of revenue and the efficiency improvement.

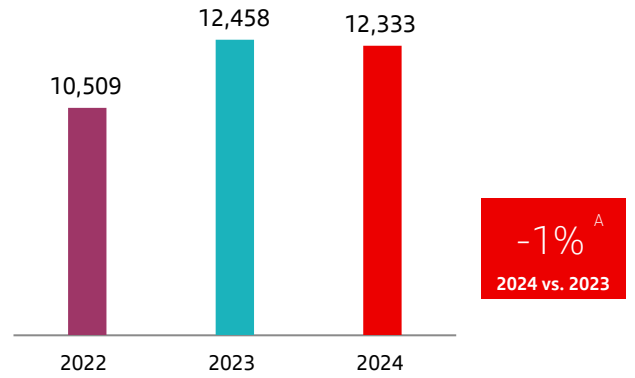
Net loan-loss provisions in 2024 amounted to EUR 12,333 million, down 1% year-on-year. In constant euros, they increased just 2%, with our credit portfolio growing 1%.



The good performance in Retail (which accounts for around 50% of the Group's total net loan-loss provisions), due to lower provisions in Europe, partially offset the expected increases in Consumer, as a result of the normalization in Europe, higher volumes, increased Swiss franc mortgage portfolio coverage, lower portfolio sales than last year and some regulatory charges.

The cost of risk stood at 1.15%, better than the Group's 2024 target to maintain the cost of risk around 1.2%.

For more details, see section 2. 'Credit risk' in the 'Risk management and compliance' chapter.



Efficiency ratio (cost to income)

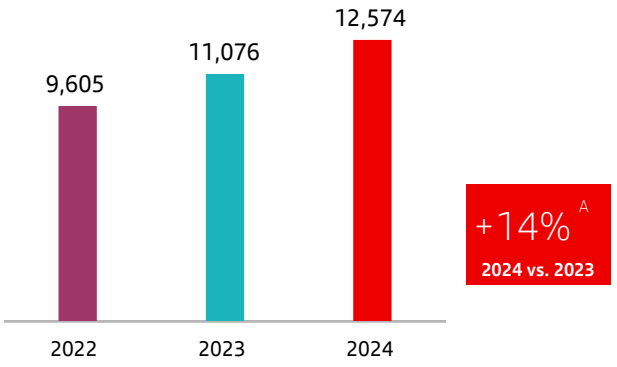
%

Net loan-loss provisions

EUR million

A. In constant euros: +2%.

Other gains (losses) and provisions recorded a loss of EUR 4,817 million in 2024, versus a EUR 3,066 million loss 2023, mainly affected by the aforementioned charges in 2024 (the discontinuation our merchant platforms in Germany and Superdigital in Latin America and the provision for potential complaints related to motor finance dealer commissions in the UK), and the higher impact of the temporary levy on revenue earned in Spain.



Profit attributable to the parent in 2024 was EUR 12,574 million, a new record, and 14% more than in 2023 (+15% in constant euros), supported by solid total income growth, which greatly outstripped cost growth, which grew practically in line with inflation, and controlled cost of risk (improving 3 bps year-on-year).

RoTE stood at 16.3% (15.1% in 2023) in line with our full-year target to exceed 16%, which we upgraded in Q2.

RoRWA stood at 2.18% (1.96% in 2023) and **earnings per share** stood at EUR 0.77 (EUR 0.65 in 2023).

Executive summary [A]

Loans and advances to customers (excluding reverse repos)

Positive activity in the year supported slight credit growth, still affected by prepayments.

EUR 1,017 billion **+1%**

➔ **By segment:**

Loan growth in Consumer, Payments and Wealth, offset the slight decrease in Retail in Europe and the US.

Retail	Consumer	CIB
-1%	+4%	0%

Customer funds (deposits excluding repos + mutual funds)

Customer funds increased 4% year-on-year, above loan growth, reflecting the interest rate environment.

EUR 1,211 billion **+4%**

➔ **By product:**

Growth in all products, rising double digits in mutual funds and with a pickup in demand deposits at the end of the year, mainly in Europe, following interest rate cuts.

Demand	Time	Mutual funds
+2%	+1%	+18%

A. 2024 vs. 2023 changes in constant euros. For more information on figures presented in constant euros and the exclusion of repurchase agreements and reverse repurchase agreements, see section 8 'Alternative performance measures'.

Loans and advances to customers

Loans and advances to customers totalled EUR 1,054,069 million in December 2024, a 2% increase year-on-year.

For the purpose of analysing traditional commercial banking loans, the Group uses gross loans and advances to customers excluding reverse repurchase agreements (repos) which amounted to EUR 1,016,546 million in December 2024, a 2% increase year-on-year.

To facilitate the analysis of Santander's management, the comments below do not consider the exchange rate impact (i.e., in constant euros), except for Argentina and any grouping which includes it. For further information, see section 8. 'Alternative performance measures' of this chapter.

Gross loans and advances to customers, excluding reverse repos and in constant euros, grew 1% year-on-year, as follows:

- In **Retail,** which represents 60% of the Group's loans, gross loans and advances fell 1%, as growth in corporate and personal loans partially offset falls in mortgages and SMEs, affected by prepayments. By region, increases in North and South America partially offset declines in Europe.
- In **Consumer**, which represents 21% of the Group's loans, gross loans and advances grew 4% driven by good performance in the auto markets in Europe and Latin America.
- In **CIB**, which represents 14% of the Group's loans, lending volumes were stable, as growth in North and South America compensated the lower volumes in Europe.
- In **Wealth and Payments** gross loans and advances increased 8% and 15%, respectively.

Gross loans and advances to customers (excluding reverse repos)

EUR billion

Gross loans and advances to customers (excluding reverse repos)

% of operating areas. December 2024

A. In constant euros: +1%.

At the end of 2024, 65% of loans and advances to customers maturing in more than one year had a fixed interest rate, while the other 35% had a floating interest rate:

- In Spain, 51% of loans and advances to customers were fixed rate and 49% were floating rate.
- Outside of Spain, 68% of loans and advances to customers were fixed rate and 32% were floating rate.

As of December 2024, gross loans and advances to customers excluding reverse repos maintained a diversified structure between the markets in which the Group operates: Europe (55%), DCB Europe (14%), North America (16%) and South America (15%).

For more details on the distribution of loans and advances to customers by business line, see note 10.b to the consolidated financial statements.

Tangible assets amounted to EUR 32,087 million in December 2024, down EUR 1,795 million compared to December 2023.

Intangible assets stood at EUR 19,259 million, of which EUR 13,438 million corresponds to goodwill (which decreased EUR 579 million) and EUR 5,821 million to other intangible assets, mostly IT developments (down EUR 33 million year-on-year).

Loans and advances to customers with maturities exceeding one year as at 31 December 2024

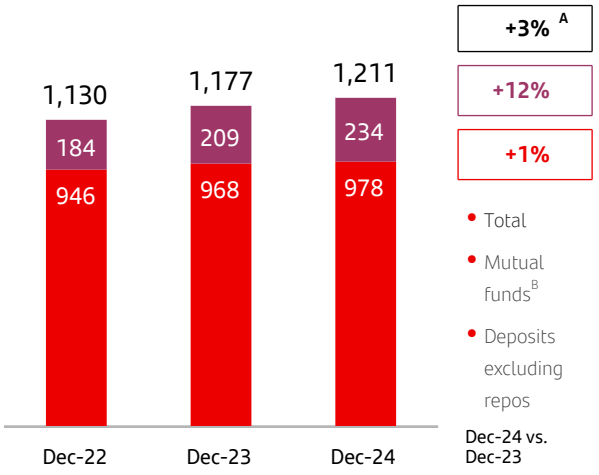
A. Including managed and marketed funds.

Customer deposits grew 1% year-on-year to EUR 1,055,936 million at 31 of December 2024.

Santander uses customer funds (customer deposits, excluding repos, plus mutual funds) to analyse traditional retail banking funds, which stood at EUR 1,211,341 million and grew 3% year-on-year.



To facilitate the analysis of Santander's management, the comments below do not consider the exchange rate impact (i.e., in constant euros), except for Argentina and any grouping which includes it. For further information, see section 8. 'Alternative performance measures' of this chapter.

Compared to December 2023, **customer funds** rose 4% in constant euros, as follows:

- By product, customer deposits excluding repos rose 2%, with an increase in both demand (+2%) and time deposits (+1%). Mutual funds rose 18%, with widespread increases across all businesses and regions.

Customer funds (excluding repos)

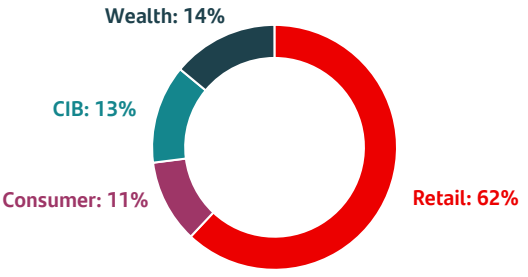
A. In constant euros: +4%.
B. Including managed and marketed funds.

- By business, customer funds increased 4% in **Retail**, driven by time deposits in Europe and South America. In **Consumer**, customer funds rose 11%, in line with our retail deposit gathering strategy. In **CIB,** customer funds fell 7%, as a result of our strategy to reduce excess corporate deposits while in **Wealth** they were up 12%, driven mainly by mutual funds.

- By secondary segment, customer funds increased practically in all countries. Of note, was South America where they grew 13%. In Europe, they increased 2% and in North America they were stable, as double-digit growth in Mexico offset the decrease in the US.



Customer funds maintained a diversified structure across the markets in which the Group operates: Europe (62%), DCB Europe (7%), North America (14%) and South America (17%). The weight of demand deposits was 56% of total customer funds, while time deposits accounted for 25% and mutual funds 19%.

In addition to capturing customer deposits, for strategic reasons the Group has a selective policy on issuing securities in international fixed income markets and strives to adapt the frequency and volume of its market operations to the structural liquidity needs of each unit, as well as to the receptiveness of each market.

For more details on debt issuances and maturities, see section 3.4 'Liquidity and funding management' in this chapter.

Customer funds (excluding repos)

3.4 Liquidity and funding management

Executive Summary

Regulatory ratios

The LCR and NSFR ratios amply exceed regulatory requirements (both 100%)

LCR [A]	NSFR
168%	126%
vs. 100% regulatory requirement	vs. 100% regulatory requirement

Debt issuances in 2024

We issued close to EUR 80 bn in debt in 2024, diversified by product, currency, country and maturity

EUR 52.6 bn	Medium- and long-term debt
EUR 26.6 bn	Securitizations

Comfortable and stable funding structure

High contribution from customer deposits

100%	Loan-to-deposit ratio

A. Group LCR.

Liquidity management

Our structural liquidity management aims to optimize maturities and costs, and to avoid undesired liquidity risks in funding Santander's operations, and is based on these principles:

- Decentralized liquidity model.
- Medium- and long-term (M/LT) funding needs must be covered by medium- and long-term instruments.
- High contribution from customer deposits due to the retail nature of the balance sheet.
- Wholesale funding sources diversified by instrument, investor, market, currency and maturity.
- Limited use of short-term funding.
- Sufficient liquidity reserves (including standing facilities/discount windows at central banks) to be used in adverse situations.
- Group and subsidiary-level compliance with regulatory liquidity requirements.

To apply these principles effectively across the Group, we developed a unique, three-pronged management framework:

- **Organization and governance.** Strict organization and governance that involve subsidiaries' senior managers in decision-making and our global strategy. Decisions about structural risks, including liquidity and funding risk, falls on the local asset and liability committees (ALCOs), which coordinate with the global ALCO. The global ALCO is empowered by Banco Santander, S.A.'s board of directors under the corporate Asset and Liability Management (ALM) framework.

  This enhanced governance model is part of our risk appetite framework, which meets regulatory and market standards for strong risk management and control systems.

- **Balance sheet and liquidity risk.** In-depth analysis that supports decisions and controls to ensure liquidity levels cover short- and long-term needs with stable funding sources, and optimize funding costs.

  Each subsidiary has a conservative risk appetite framework (based on their commercial strategy) which sets out the liquidity risk management framework. Subsidiaries must work within the framework limits to achieve their strategic objectives.

- **Liquidity management adapted to the needs of each business.** We prepare a liquidity plan every year to achieve:
  - a solid balance sheet structure, with a diversified footprint in wholesale markets;
  - stable liquidity buffers and limited asset encumbrance; and
  - compliance with regulatory and other metrics included in each entity's risk appetite statement.

We monitor all these plan's components throughout the year.

Santander continues to carry out the Internal Liquidity Adequacy Assessment Process (ILAAP) as part of its other risk management and strategic processes to measure liquidity in ordinary and stressed scenarios. The quantitative and qualitative items we consider are also inputs for the Supervisory Review and Evaluation Process (SREP).

Once a year, we must submit a board-approved ILAAP assessment to supervisors that demonstrates our funding and liquidity structures will remain solid in all scenarios and our internal processes will ensure sufficient liquidity (based on analyses that each subsidiary conducts according to local liquidity management models).

We believe that our governance structure is robust and suited to identify, manage, monitor and control liquidity risks. It rests on common frameworks, conservative principles, clearly defined roles and responsibilities, a consistent committee structure, effective local lines of defence and well-coordinated corporate supervision.

We produce frequent, detailed liquidity monitoring reports for management, control and reporting purposes. We also regularly send the most relevant information to senior managers, the pertinent ALCOs, the executive committee and the board of directors.

Over the last few years, Santander and each subsidiary have developed a comprehensive special situations management framework that centralizes our governance for such scenarios. It contains contingency funding plans that form part of our governance model, including feasible, pre-assessed actions that follow a defined timeline, are categorized and prioritized, and provide for sufficient liquidity and execution time to mitigate stress scenarios. For more details, see the '3.6 Special situations and resolution' section in this chapter.

Funding strategy and liquidity in 2024

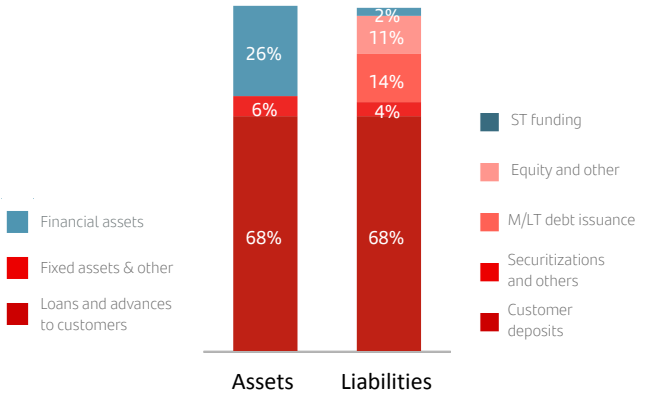
Funding strategy and structure

Our funding strategy is focused on extending our management model to all subsidiaries.

It is based on a model of autonomous subsidiaries that are responsible for covering their own liquidity needs. This enables us to better understand the advantages derived from our solid retail banking model to maintain sound liquidity positions in the Group and our core local units, even amid market stress.

We have adapted our funding strategies to business trends, market conditions and new regulations. In 2024, we improved specific aspects, without significant changes in liquidity management or funding policies and practices. We believe this will enable us to start 2025 from a strong position and with no growth restrictions.

Our subsidiaries continue to apply the same funding and liquidity management strategies to:



- maintain sufficient and stable medium- and long-term wholesale funding levels;
- ensure the right volume of assets that can be discounted in central banks as part of the liquidity buffer; and
- generate liquidity from the retail business.

These developments provide Santander with a very strong funding structure with the following characteristics:

- Customer deposits are our main funding source. At the end of December 2024, they represented just over two thirds of net liabilities (i.e. of the liquidity balance sheet). They are highly stable because they mainly arise from retail customer activity. For more details, see the Liquidity in 2024 section.

Group liquidity balance sheet

%. December 2024

Note: Liquidity balance sheet for management purposes is the consolidated balance sheet, net of trading derivatives and interbank balances. For more information on the consolidated balance sheet, see the 'Consolidated financial statements' chapter.

- M/LT funding (including M/LT issuances and securitizations) accounted for nearly 18% of net liabilities at the end of 2024 (similar to 2023).
- The outstanding balance of M/LT debt issued (to third parties) at the end of 2024 was EUR 222,623 million. Our maturity profile is comfortable and well balanced by instrument and market with a weighted average maturity of 4.2 years (slightly above average maturity of 4.1 years at the end of 2023).

These tables show our funding by instrument over the past three years and by maturity profile:

Group. Stock of medium- and long-term debt issuances [A]

EUR million

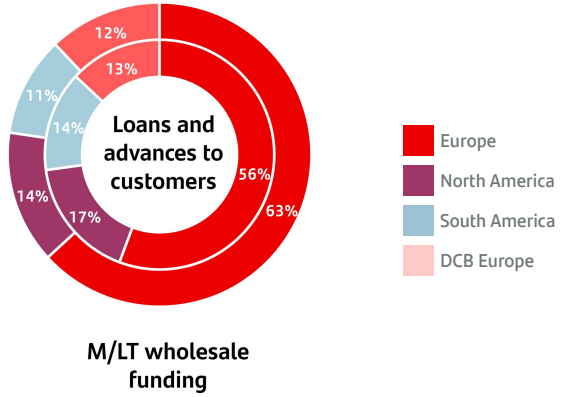
	2024	2023	2022
AT1/Preferred shares	11,254	9,892	8,693
Tier 2/Subordinated	23,468	20,708	17,573
Senior debt	137,693	125,951	116,350
Covered bonds	50,207	49,639	44,073
Total	**222,623**	**206,190**	**186,689**

A. Placed in markets. Does not include securitizations, agribusiness notes and real estate credit notes.

Group. Distribution by contractual maturity

EUR million

	0-1 month	1-3 months	3-6 months	6-9 months	9-12 months	12-24 months	2-5 years	more than 5 years	Total
AT1/Preferred shares	—	—	—	—	—	—	—	11,254	**11,254**
Tier 2/Subordinated	—	1,542	—	394	1,442	2,573	3,400	14,117	**23,468**
Senior debt	5,662	3,791	5,558	4,961	1,322	20,426	60,153	35,820	**137,693**
Covered bonds	993	1,258	1,322	492	356	11,397	22,509	11,880	**50,207**
Total	**6,655**	**6,591**	**6,880**	**5,848**	**3,119**	**34,397**	**86,062**	**73,071**	**222,623**



Note: There are no additional guarantees for any of the debt issued by the Group's subsidiaries.

In addition to M/LT wholesale debt issuances, we have securitizations placed in the market as well as collateralized and other specialist funding totalling EUR 66,971 million (including EUR 12,226 million in debt instruments placed with private banking clients in Brazil). The average maturity was around 1.9 years.

This chart shows the similarity of the geographic breakdown of our loans and advances to customers and M/LT wholesale funding across our footprint. This distribution is very similar to 2023.

Loans and advances to customers and M/LT wholesale funding

%. December 2024

Wholesale funding from short-term issuance programmes is a residual part of Santander's funding structure, which is related to treasury activities and is comfortably covered by liquid assets.

The outstanding short-term wholesale funding balance at the end of 2024 was EUR 38,450 million, of which 54% was in European Commercial Paper, US Commercial Paper and domestic programmes issued by Banco Santander, S.A.; 14% in certificates of deposit and commercial paper programmes in the UK; 19% in Santander Consumer Finance commercial paper programmes; and 13% in issuance programmes in other subsidiaries.

Liquidity in 2024

The key liquidity takeaways from 2024 were:

- basic liquidity ratios remained at comfortable levels;
- regulatory liquidity ratios were well above minimum requirements; and
- our asset encumbrance from funding operations was moderate.

In 2024, the main central banks started to cut interest rates, with different levels of intensity. However, Brazil's central bank started to raise its interest rate at the end of 2024, while in Poland, interest rates remained stable during the year.

In 2024, the repayment of the ECB TLTRO-III funding programme launched by the European Central Bank was completed, being replaced by a mix of funding sources that allowed regulatory liquidity ratios and internal metrics to remain at appropriate levels.

The liquidity position remained solid, and commercial activity did not consume significant liquidity during the year, as the growth in lending was matched by the growth in deposits.

i) Basic liquidity ratios at comfortable levels

At the end of 2024, Santander recorded:

- A credit to net assets ratio (i.e., total assets minus trading derivatives and inter-bank balances) of 68%, a similar level to previous years.
- A net loan-to-deposit ratio (LTD) of 100%, a very comfortable level (well below 120%) although slightly higher than the 99% at 2023 year-end.
- A customer deposit plus M/LT funding to net loans and advances ratio of 128%, slightly above the 127% in 2023.
- Limited recourse to short-term wholesale funding (around 2-3% of total funding), in line with previous years.
- An average structural surplus balance, defined as the excess of structural funding sources (deposits, M/LT funding and capital) against structural liquidity needs from fixed assets and loans, of EUR 340,438 million in the year.

  The consolidated structural surplus stood at EUR 363,828 million at year-end. Fixed-income assets (EUR 230,862 million), equities (EUR 20,368 million) and net interbank and central bank deposits (EUR 151,048 million) were partly offset by short-term wholesale funding (-EUR 38,450 million). This totalled around 24% of our net liabilities (similar to previous years).

This table shows Santander's basic liquidity monitoring metrics in recent years:

Group's liquidity monitoring metrics

%

	2024	2023	2022
Loans [A] / Net assets	68%	68%	72%
Loan [A] -to-deposit ratio (LTD)	100%	99%	103%
Customer deposits and medium- and long-term funding / Loans [A]	128%	127%	121%
Short-term wholesale funding / Net liabilities	2%	3%	3%
Structural liquidity surplus (% of net liabilities)	24%	23%	19%

A. Net loans and advances to customers.

The table below shows the principal liquidity ratios of our secondary segments as at 31 December 2024:

Secondary segments' liquidity metrics

%. December 2024

	LTD ratio (loans [A] / deposits)	Deposits + M/LT funding / Loans [A]
Spain	76%	142%
United Kingdom	107%	110%
Portugal	100%	112%
Poland	76%	139%
DCB Europe	168%	85%
US	108%	120%
Mexico	90%	121%
Brazil	94%	131%
Chile	134%	97%
Argentina	68%	147%
Group	**100%**	**128%**

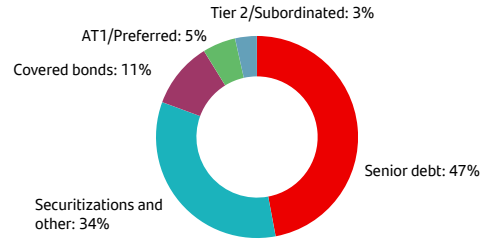
A. Net loans and advances to customers.

In 2024, the key drivers of Santander's and its subsidiaries' liquidity were:

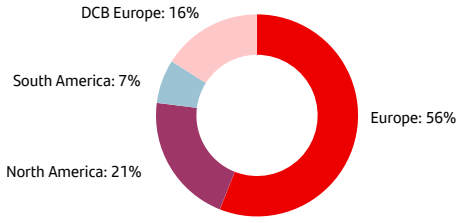
- Commercial activity has provided liquidity during the year.
- Issuance activity continued to be intense, to finance issuance maturities and repayment of central bank funding, even exceeding the funding plan proposed at the beginning of the year, taking advantage of favourable market conditions, to pre-fund part of the 2025 maturities.

In 2024, Santander issued EUR 79,127 million in M/LT funding (at year-average exchange rates).

By instrument (in constant euros, i.e., excluding exchange rate impact), issuances of M/LT fixed income debt (i.e., covered bonds, senior debt, subordinated debt and capital hybrid instruments) increased by around 18% to EUR 52,575 million in the year. Activity in senior debt issuances (mainly TLAC eligible) increased significantly compared to 2023. The volume of covered bond issuances in 2024 was similar to the previous year. Securitizations and structured finance totalled EUR 26,552 million in 2024, a 33% increase year-on-year.



Spain issued the most M/LT fixed income debt (excluding securitizations), followed by the UK. The UK and Spain registered the highest absolute increases in the year. The main year-on-year decrease occurred in Santander Consumer Finance.



The US and Santander Consumer Finance were the main issuers of securitizations.

The charts below show issuances in the year by instrument and region:

Distribution by instrument and region

%. December 2024

The issuance of eligible hybrid instruments, such as AT1 or subordinated debt, depends on risk-weighted asset growth. In 2024, they reduced their weight versus 2023, to the benefit of senior debt. The weight of covered bonds decreased in 2024, to the benefit of securitizations.

In 2024, at average exchange rates, the Group issued EUR 20,800 million in subordinated debt instruments, including EUR 13,848 million in senior non-preferred debt from Banco Santander, S.A. and Poland and senior preferred from the holdings in the UK and the US; EUR 2,762 million in subordinated debt issued from Banco Santander, S.A., EUR 2,881 million of AT1 eligible hybrid instruments were issued from Banco Santander, S.A. and EUR 1,308 million hybrid instruments were issued from Brazil, as AT1 eligible and as subordinated for the Group.

In conclusion, in 2024, we retained comfortable access to all our markets having issued and securitized debt in 17 currencies, involving 30 major issuers from 14 countries and an average maturity of 4.9 years, similar to 2023 (4.8 years).

ii) Compliance with regulatory ratios

Within the liquidity management model, Santander manages implementation, monitoring and compliance with the liquidity requirements established under international financial regulations.

Liquidity Coverage Ratio (LCR)

As the regulatory LCR requirement has been at 100% since 2018, we set a risk appetite of 110% at the consolidated and subsidiary level.

Our good baseline short-term position liquidity, combined with the management of the ratio in all units, enabled us to maintain levels of over 100% in the year, both at the consolidated and individual level.

The Group LCR ratio as at end of December 2024 was 168%. This ratio is calculated using an internal methodology that determines the common minimum percentage of simultaneous coverage in all Group jurisdictions, taking into account all existing restrictions on the transfer of liquidity in third countries. This methodology reflects more accurately the Group's resilience to liquidity risk.

This internal ratio is very much in line with the level that would be achieved under the approach followed until mid-2024, which did not include restrictions on liquidity transfer between subsidiaries.

The Consolidated LCR ratio as at end of December 2024 was 153%, comfortably exceeding internal and regulatory requirements. This ratio is calculated, at the request of the ECB, using a consolidation methodology that does not take into account any excess liquidity in excess of 100% of the LCR outflows and that is subject to transferability restrictions (legal or operational) in third countries, even if such excess liquidity can be used to cover additional outflows within the country itself, which is not subject to any restrictions.

However, as the Group manages the liquidity on a decentralized level, the consolidated metrics are not considered a representative indicator of the Group's liquidity position.

This table shows that all our subsidiaries substantially exceeded the required minimum in 2024 and the comparison versus 2023. Santander UK's figures only include activities that the Financial Services and Markets Act 2000 leaves within the Ring-Fenced Bank.

Liquidity Coverage Ratio (LCR)

%

	December 2024	December 2023
Parent bank	162%	159%
United Kingdom	154%	159%
Portugal	142%	150%
Poland	220%	221%
Santander Consumer Finance	263%	357%
US	179%	138%
Mexico	212%	171%
Brazil	168%	154%
Chile	181%	207%
Argentina	226%	226%
Group LCR	**168%**	**—**
Consolidated LCR	**153%**	**166%**

NSFR (Net Stable Funding Ratio)

Regulation (EU) 2019/876 of the European Parliament dictated that entities must have a net stable funding ratio greater than 100% from June 2021.

The NSFR is a structural measure that gives banks an incentive to ensure long-term stability and proper management of maturity mismatches by funding long-term assets with long-term liabilities. It is the quotient of available stable funding (ASF) and required stable funding (RSF).

ASF comprises sources of funding (i.e., capital and other liabilities) considered stable over one year. As RSF primarily refers to any asset deemed illiquid over one year, it needs to be matched with stable sources of funding.

The risk appetite limit for the NSFR is set at 103% at the consolidated and subsidiary level.

The high weight of customer deposits (which are more stable); permanent liquidity needs deriving from commercial activity funded by medium- and long-term instruments; and limited recourse to short-term funding help maintain our balanced liquidity structure as reflected in our consolidated and subsidiary NSFRs which all exceeded 100% in December 2024.

The following table provides details by entity as well as a comparison with 2023. Santander UK's figures only include activities that the Financial Services and Markets Act 2000 leaves within the Ring-Fenced Bank. All figures were calculated using European regulations.

Net Stable Funding Ratio

%

	December 2024	December 2023
Parent bank	122%	117%
United Kingdom	137%	138%
Portugal	120%	117%
Poland	156%	157%
Santander Consumer Finance	116%	111%
US	120%	117%
Mexico	128%	129%
Brazil	114%	113%
Chile	112%	115%
Argentina	181%	202%
Group	**126%**	**123%**

iii) Asset Encumbrance

Santander's use of assets as collateral in structural balance sheet funding sources is moderate.

Per the 2014 European Banking Authority (EBA) guidelines on disclosure of encumbered and unencumbered assets, the concept of asset encumbrance includes on-balance-sheet assets pledged as collateral in operations to obtain liquidity, off-balance-sheet assets received and reused for a similar purpose, and other assets with liabilities for reasons other than funding.

The tables below show the asset encumbrance data we must submit to the EBA as of 2024.

On-balance-sheet encumbered assets amounted to EUR 299.8 billion, of which 56% were loans and advances (e.g., mortgages and corporate loans). Off-balance-sheet encumbrance stood at EUR 161.0 billion and mainly related to debt securities received as collateral in reverse repos and reused ('rehypothecated').

In total, encumbered assets amounted to EUR 460.9 billion, giving rise to associated liabilities of EUR 363.0 billion.

At the end of 2024, total asset encumbrance in funding operations was 22.5% of the Group's extended balance sheet under EBA criteria (total assets plus guarantees received: EUR 2,047.7 billion), similar to 2023.

Group. Disclosure on asset encumbrance as at December 2024

EUR billion

	Carrying amount of encumbered assets	Fair value of encumbered assets	Carrying amount of unencumbered assets	Fair value of unencumbered assets
Assets	**299.8**	**—**	**1,537.2**	**—**

Total sources of encumbrance (carrying amount)	**363.0**	**460.9**

Rating agencies

Rating agencies influence Santander's access to wholesale funding markets and the cost of its issuances.

The agencies listed below regularly review our ratings. Debt ratings depend on several internal factors (business model, strategy, capital, income generation capacity, liquidity, ESG related factors, etc.) but also on external factors related to economic conditions, the industry and sovereign risk across our footprint.

Sometimes the methodology applied by the rating agencies limits a bank's rating to the sovereign rating of the country where it is headquartered. As at end 2024 Banco Santander, S.A. was rated above the sovereign debt rating of the Kingdom of Spain by Moody's, DBRS and S&P and rated at the same level by Fitch, which demonstrates our financial strength and the benefits from our diversification.

At the end of 2024, the ratings from the main agencies were:

Rating agencies

	Long term	Short term	Outlook
DBRS	A (High)	R-1 (Middle)	Stable
Fitch Ratings	A-(SeniorA)	F2 (Senior F1)	Stable
Moody's	A2	P-1	Positive
Standard & Poor's	A+	A-1	Stable
Scope	AA-	S-1+	Stable
JCR Japan	AA-	—	Stable

In October 2024, Moody's confirmed the A2 rating for long-term and P-1 rating for short-term and maintained the positive outlook, which it had already upgraded in April, following the same movement in the rating of the Kingdom of Spain and keeping it two notches above it.

In September 2024, S&P Global Ratings confirmed Santander's credit rating at A+ for long-term debt issuances and A1 for short-term. In April, S&P rated our AT1 instruments as BBB- (investment grade), a new rating for this type of instrument. It also maintained Santander's outlook at stable, above the sovereign rating.

Fitch maintained the senior ratings at A/F1 in September 2024 and the stable outlook. In February 2025, it upgraded Santander's long-term rating from A- to A and the short-term rating F2 to F1 and maintained the outlook at stable, above the sovereign.

DBRS maintained the outlook at stable, above the sovereign.

In January 2025, JCR upgraded Santander's rating by one notch from A+ to AA- for long-term debt issuances and senior rating from A to A+, with a stable outlook.

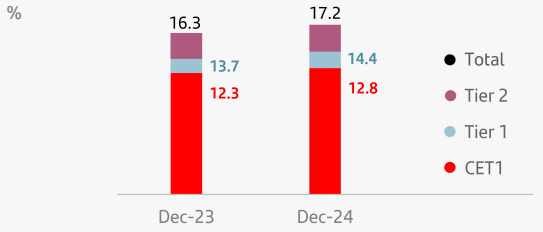
Funding outlook for 2025

Grupo Santander has begun 2025 in a comfortable position and with a good funding outlook for the year, despite some uncertainty stemming from the global macroeconomic and geopolitical situation.

We expect a moderate lending increase across our footprint, together with a good performance of deposits, which will not put pressure on liquidity in commercial business.

Maturities in the coming quarters are expected to be manageable, aided by limited recourse to short-term funding and an active medium- and long-term issuance dynamic. We will manage each country and optimize liquidity to maintain a solid balance sheet structure across our footprint.

Our funding plans consider costs and diversification by instrument, country and market as well as the construction of liability buffers with loss-absorbing capacity in resolution (whether capital eligible or not). We design them to ensure Santander and its subsidiaries satisfy regulatory requirements and those stemming from our risk appetite framework.



Santander has been very active at the beginning of 2025. Banco Santander, S.A. pre-funded approximately EUR 8.0 billion in 2024. In January 2025, the main issuers in the Group (Banco Santander, S.A., Santander UK and Santander Holdings USA) had already issued EUR 6.3 billion, which, together with the pre-funding amounts to around EUR 15 billion.

3.5 Capital management and adequacy. Solvency ratios

Executive summary

Fully-loaded capital ratio

The fully-loaded CET1 ratio increased 0.5 pp in the year to 12.8%, remaining above 12% in every quarter in 2024

Fully-loaded CET1

Strong organic generation driven by higher profit and risk transfer and balance sheet mobilization initiatives

Organic generation in 2024 **+209 bps**

TNAV per share

The TNAV per share was **EUR 5.24, +14% year-on-year** including cash dividends paid in 2024

Capital management and adequacy at Santander aims to guarantee solvency and maximize profitability, while complying with regulatory requirements and internal capital targets.

Capital management is a key strategic tool for decision-making at both the subsidiary and corporate levels.

We have a common framework that covers capital management actions, criteria, policies, functions, metrics and processes. We have a team in charge of our capital analysis, adequacy and management that coordinates with subsidiaries on all matters related to capital and monitors and measures shareholder returns.

Our most notable capital management activities are:

- Establishing capital adequacy and capital contribution targets that align with minimum regulatory requirements, internal policies and the budget, to guarantee robust capital levels consistent with our risk profile and efficient use of capital.
- Drawing up a capital plan to meet our strategic plan objectives.
- Monitoring the capital ratio in both regulatory and economic terms and the efficient capital allocation to country units and global businesses. Assessing capital adequacy to ensure the capital plan is consistent with our risk profile and risk appetite framework in baseline and stress scenarios.
- Integrating capital metrics into businesses' management ensuring alignment with the Group's objectives. Continuously monitoring stock and new business profitability as well as new business pricing at the country unit, global business, segment and customer levels, in addition to tracking businesses, portfolios and customers with profitability below the minimum target.
- Coordinating and promoting the bank's asset mobilization plan (e.g., securitizations, guarantees, sales).
- Preparing internal capital reports, and reports for the supervisory authorities and the market (ICAAP, Pillar 3 reports and stress tests).
- Planning and managing other loss-absorbing instruments other than regulatory capital instruments (MREL and TLAC).

Santander's capital function has the following aims:

Capital allocation

Capital allocation based on **shareholder value creation** by measuring profitability on a full cost allocation basis

Maximize profitability in the economic cycle

Sustain **profitability improvements** in a **changing macro-economic environment**

Shift towards a fee-based, capital-light model

Embrace a fee-based, **capital-light** model, given intense competition from peers operating with **lighter capital models** with more competitive pricing

Provide economic value to shareholders

Improve **free capital generation** by **increasing profitability per unit of capital** deployed as well as by **mitigating impacts that hinder free capital generation**

Continue building a sound capital base

Continuously improve the Group's capital base, while cautiously following the **net zero RWA growth mandate**

Santander's goal is to generate capital growth and value creation for shareholders

The main measures we took in 2024 were:

Issuances of capital hybrid and other loss-absorbing instruments

In 2024, Banco Santander, S.A. issued around EUR 5.7 billion in hybrid instruments, of which approximately EUR 2.8 billion was Tier 2 subordinated debt and approximately EUR 2.9 billion was contingently convertible preferred shares (CoCos). One EUR 1.5 billion CoCo issuance was to replace an AT1 issuance of the same amount that was called in a tender offer. The other CoCo, a USD 1.5 billion issuance, was to cover regulatory requirements.

Additionally, Banco Santander, S.A. issued around EUR 9.0 billion in senior non-preferred debt.

Dividends and shareholder remuneration

For the 2024 results, the board continued to apply the same policy as in 2023, with total shareholder remuneration of approximately 50% of the Group reported profit (excluding non-cash, non-capital ratios impact items), distributed in approximately equal parts in cash dividend and share buybacks.

- **Interim remuneration**.
  - On 26 August 2024, the board resolved to execute the First 2024 Buyback Programme worth up to EUR 1,525 million (equivalent to approximately 25% of said Group reported profit in H1'24). See 'First 2024 Buyback Programme' in the 'Corporate governance' chapter.
  - On 24 September 2024, the board resolved to pay an interim cash dividend against the 2024 results of 10 euro cents per share entitled to the dividend (equivalent to approximately 25% of said Group reported profit in H1'24); it was paid from 1 November 2024.
- **Final remuneration**. Under the 2024 shareholder remuneration policy:
  - On 4 February 2025 the board of directors resolved to implement the Second 2024 Buyback Programme worth a maximum amount of EUR 1,587 million, for which the appropriate regulatory authorization has been obtained, and the execution of which began on 6 February 2025. For more details, see 'Second 2024 Buyback Programme' in the 'Corporate governance' chapter.
  - On 25 February 2025 the board of directors resolved to submit a resolution at the 2025 AGM to approve a final cash dividend in the gross amount of 11 euro cents per share entitled to dividends. If approved at the AGM, the dividend would be payable from 2 May 2025.

Once the above-mentioned actions are completed, total shareholder remuneration for 2024 will total EUR 6,293 million (approximately 50% of the Group reported profit -excluding non-cash, non-capital ratios impact items- in 2024), distributed as approximately 50% in cash dividends (EUR 3,181 million) and 50% in share buybacks (EUR 3,112 million). For more details, see section 3.3 'Dividends and shareholder remuneration' in the 'Corporate governance' chapter.

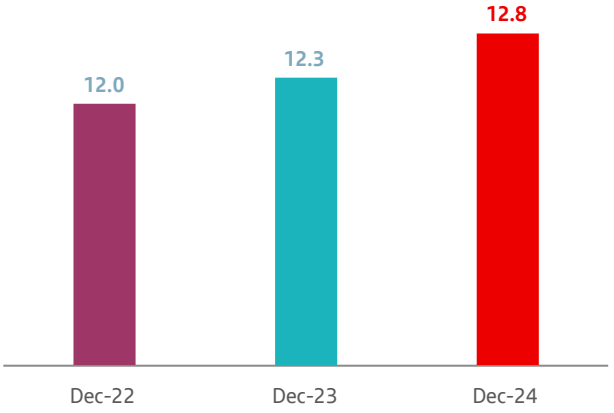
Strengthening our active capital management culture

We continue to focus on disciplined capital allocation and shareholder remuneration after achieving our 2024 fully-loaded CET1 target of remaining above 12%.

At end 2025, we are targeting to reach a CET1[A] ratio of 13%, above the 12% objective and at the top end of our 12-13% operating range. Additionally, the board of directors intends to return up to EUR 10 billion to our shareholders through share buybacks corresponding to 2025 and 2026 by combining: i) buybacks resulting from the application of our existing shareholder remuneration policy consisting of a c.50% pay-out ratio (distributed approximately equally between cash dividends and share buybacks); plus ii) additional buybacks to distribute excesses of our CET1. The implementation of the shareholder remuneration policy and any share buybacks to distribute CET1 surpluses are subject to future corporate and regulatory decisions and approvals.

Continuous improvement of our capital ratios reflects our profitable growth strategy and a culture of active capital management at all levels.

The Capital and Profitability Management team is in charge of our capital analysis, adequacy and management, coordination with subsidiaries on all matters related to capital and monitoring and measuring returns.



Every country and business unit has drawn up individual capital plans that focus on maximizing return on equity.

Santander places high value on its long-term sustainability and the efficient use of capital in the incentives of the Group's main executives. We considered certain aspects relating to capital management and returns when setting senior managers' 2024 variable remuneration including return on tangible equity (RoTE) and other relevant capital metrics (capital generation or CET1).

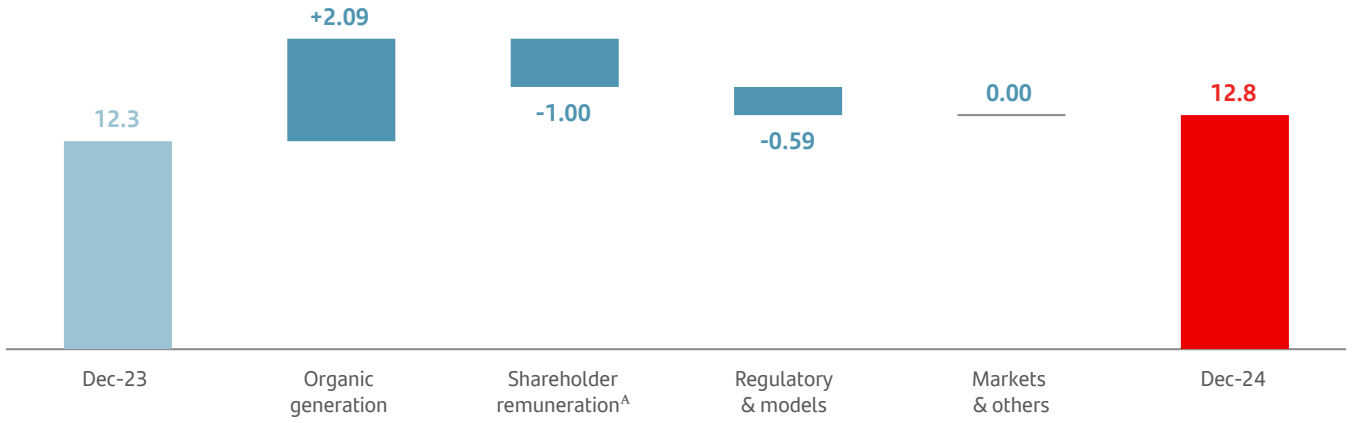
	Fully loaded		Phased in[A]	
	2024	2023	2024	2023
Common equity (CET1)	79,705	76,448	79,800	76,741
Tier 1 (T1)	90,076	85,450	90,170	85,742
Eligible capital	107,106	101,747	108,589	102,240
Risk-weighted assets	624,477	623,652	624,503	623,731
CET1 capital ratio	12.8%	12.3%	12.8%	12.3%
T1 capital ratio	14.4%	13.7%	14.4%	13.7%
Total capital ratio	17.2%	16.3%	17.4%	16.4%
Leverage ratio	4.78%	4.68%	4.78%	4.69%

A. The phased-in ratios include the transitory treatment of IFRS 9, calculated in accordance with article 473 bis of the Regulation on Capital Requirements (CRR) and subsequent amendments introduced by Regulation 2020/873 of the European Union. Additionally, the Tier 1 and total phased-in capital ratios include the transitory treatment according to chapter 2, title 1, part 10 of the aforementioned CRR.

Fully-loaded capital ratios in 2024

The fully-loaded CET1 ratio was 12.8% if we do not apply the transitory IFRS 9 provisions or the subsequent amendments introduced by Regulation 2020/873 of the European Union. This represents a 0.5 pp increase in the year.

We organically generated 209 bps of capital, strongly supported by results obtained during the year and by a significant uplift from asset rotation and risk transfer initiatives. The impact from shareholder remuneration in the year was -100 bps.



We also recorded a negative 59 bp impact in regulatory and models, mainly relating to a parameter change regarding maturities in CIB models and changes in capital model associated with large exposures.

Additionally, there was no net contribution in markets and others, as positive impacts from the accelerated placement of Santander Bank Polska S.A. ordinary shares, intangible assets and ALCO portfolio valuations were offset by various smaller charges (pensions, tax credits, etc.).

The fully-loaded leverage ratio stood at 4.78% at the end of 2024.

Fully-loaded CET1 ratio in 2024

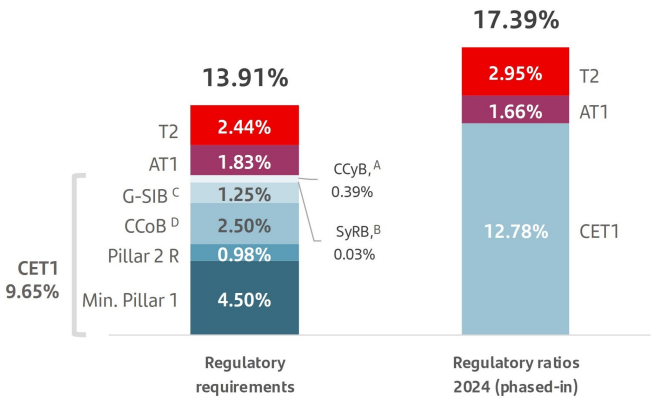
%

A. Deduction for expected shareholder remuneration. Our target payout is approximately 50% of Group reported profit (excluding non-cash, non-capital ratios impact items), divided approximately equally between cash dividends and share buybacks. The implementation of the shareholder remuneration policy is subject to future corporate and regulatory decisions and approvals.

Regulatory capital ratios (phased-in)

The phased-in ratios are calculated by applying the CRR transitory schedules. The transitory schedule ended on 31 December 2024 (with the exception of some issuances in the UK). From 1 January 2025, a new transitory schedule will apply related to the implementation of CRR3. For more information, see note 1.e in the consolidated financial statements.

On a consolidated basis, the minimum levels required by the European Central Bank in 2024 were 9.6% for the CET1 ratio and 13.9% for the total capital ratio.



Our capital requirements increased in 2024 compared to 2023 due to:

- a higher D-SIB requirement driving an increase in the D-SIB/G-SIB requirement from 1% to 1.25% due to: i) a methodological change by the ECB which was later adopted by Banco de España; and ii) because institutions must hold capital at the consolidated level for the higher of the G-SIB (currently at 1%) and D-SIB requirements;
- the ECB's revision of Banco Santander, S.A.'s P2R requirement from 1.58% to 1.74% (mainly due to a change in the ECB's methodology);
- higher countercyclical buffer requirements by the competent authorities in the countries in which we operate (+0.02 pp); and
- and a new systemic risk buffer (0.03 pp).

At year-end, the phased-in CET1 ratio was 12.8%, resulting in a CET1 management buffer of 313 bps. This shows our ability to generate capital organically, our solid position to be able to pay dividends and our strong capital management.

The total phased-in capital ratio was 17.4%. Taking into account the shortfall in AT1, Santander exceeded the 2024 minimum regulatory requirements (i.e. distance to the maximum distributable amount - MDA) by 297 bps.

The phased-in leverage ratio stood at 4.78%.

A. Countercyclical buffer.
B. Systemic risk buffer.
C. Global systemically important banks (G-SIB) buffer.
D. Capital conservation buffer.

Note: Breakdown according to debtor's residency, except operational risk (management criteria). Counterparty RWAs are included in the IRB/STD approaches. The amounts shown in the table are presented in EUR billion, therefore, the amounts have been rounded. Consequently, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total figure given for that column or row.
A. It does not include 1,250% deductions. See footnote C in the previous table.

Note: EUR 5 billion allocated to other countries (1% of total Group RWAs).

This table presents the main changes to capital requirements by credit risk:

Credit risk capital movements [A]

EUR million

	RWAs	Capital requirements
Starting amount (31/12/2023)	**539,247**	**43,140**
Asset size	(17,322)	(1,386)
Asset quality	(2,584)	(207)
Model updates	8,307	665
Methodology and policy	14,308	1,145
Acquisitions and disposals	—	—
Foreign exchange movements	(8,897)	(712)
Other	—	—
Ending amount (31/12/2024)	**533,060**	**42,645**

A. Includes capital requirements from equity, securitizations and counterparty risk (excluding CVA and CCP).

Credit risk RWAs decreased EUR 6,187 million in 2024. If we isolate the exchange rate effect (due to the depreciation of the Brazilian real, the Mexican peso and the Chilean peso, partially offset by the appreciation of the US dollar and the pound sterling), RWAs increased EUR 2,709 million. This is mainly due to 'Methodology and policy' from calculating maturity models in CIB (+EUR 11,556 million) and a review of the application of the SME factor on some operations with self-employed customers (+EUR 2,752 million). Additionally, 'Model updates' contributed +EUR 8,307 million, mainly relating to capital model changes associated with large exposures in some portfolios. This growth was compensated by the decrease in RWAs related to 'Asset quality' (-EUR 2,584 million) and 'Asset size' (-EUR 17,322 million), as securitizations during the year (-EUR 29,499 million) more than offset widespread business growth.

In short, from a qualitative point of view, Santander's solid capital ratios are consistent with its business model, balance sheet structure and risk profile.

Economic capital

Economic capital is the capital required to cover all risks from our activity with a certain level of solvency. We measure it using an internal model. To calculate the required capital, we determine our solvency level based on our long-term rating target of 'A' (in line with the Kingdom of Spain); this represents a confidence level of 99.95% (above the regulatory level of 99.90%).

Our economic capital model measurements cover all significant risks incurred in our activity (concentration risk, structural interest rate risk (ALM), business risk, pensions risk, deferred tax assets (DTAs), goodwill and others that are beyond the scope of regulatory Pillar 1). It also considers diversification, which is key to determining and understanding our risk profile and solvency in view of our multinational operations and businesses.

Our total risk and related economic capital are less than the sum of the risk and capital of all individual units combined. Because our business spans several countries in a structure of separate legal entities with different customer and product segments and risk types, our earnings are less vulnerable to adverse situations for any given market, portfolio, customer type or risk. Despite increasing economic globalization, economic cycles and their impact differ by country. Groups with a global presence tend to have more stable results and are more resistant to market or portfolio crises, which translates into lower risk.

In contrast to regulatory criteria, we consider such intangible assets as DTAs and goodwill to retain value (even in a hypothetical resolution), owing to the geographic structure of our subsidiaries. Thus, we can value assets and estimate their unexpected loss and capital impact.

Economic capital is an essential internal management tool that helps us develop our strategy, assess solvency and manage portfolio and business risk. As such, it is a key part of the Supervisory Review and Evaluation Process (SREP).

Regarding Basel Pillar 2, we use our economic model for the internal capital adequacy assessment process (ICAAP). We plan business progression and capital needs under a baseline scenario and alternative stress scenarios to make sure we meet our solvency objectives, even in adverse scenarios.

Economic capital-derived metrics help us assess risk-return objectives, price operations based on risk, determine how economically viable projects are, and value country units and business lines to fulfil our overriding objective of maximizing shareholder value.

As a homogeneous risk measure, we can use economic capital to explain how we distribute risk throughout Santander, bringing together several activities and risk types under a single metric.

Given its relevance to internal management, Santander includes several economic capital-derived metrics from both a capital needs and a risk-return point of view, within a conservative risk appetite framework established at both Group and subsidiary levels.

Required economic capital in December 2024 amounted to EUR 69,984 million. Compared to the available economic capital base of EUR 96,342 million, this implies a capital surplus of EUR 26,358 million.

Reconciliation of economic and regulatory capital

EUR million

	2024	2023
Net capital and issuance premiums	45,961	49,618
Reserves and retained profits	85,979	76,841
Valuation adjustments	(38,323)	(34,484)
Minority interests	8,485	6,908
Prudential filters	(912)	(669)
Other [A]	(4,847)	(3,986)
Base economic capital available	**96,342**	**94,228**
Deductions	(17,379)	(18,867)
Goodwill	*(13,664)*	*(14,161)*
Other intangible assets	*(2,293)*	*(3,059)*
DTAs	*(1,423)*	*(1,648)*
Other	*(743)*	*1,088*
Base regulatory (FL CET1) capital available	**79,705**	**76,448**
Base economic capital available	**96,342**	**94,228**
Economic capital required [B]	69,984	74,721
Capital surplus	26,358	19,507

A. Includes: deficit of provisions over economic expected loss, pension assets and other adjustments.

B. For a better comparison with regulatory capital, the differences in goodwill due to FX changes are included in the required economic capital. All figures according to EC 2024 methodology.

The main difference compared to regulatory CET1 is the treatment of goodwill, other intangible assets and DTAs; we consider them additional capital requirements rather than a deduction from available capital.

Profitability metrics and Economic Value Added

One of the Group's primary priorities is to manage capital by ensuring that we make a profitable allocation of capital in all our activities.

Our strategy includes investing capital in markets, country units, global businesses and portfolios with the highest returns on capital, ensuring strong and sustainable shareholder value creation. Metrics such as RoTE, RoRWA and RoRAC are part of approvals and monitoring policies. These metrics help us compare the return on operations, customers, portfolios and businesses on a like-for-like basis. We can identify what is obtaining a risk-adjusted return higher than its cost of capital and thus align risk and business management to maximize economic value added (EVA).

We regularly assess the level and progression of EVA across the Group's country units and global businesses, both from a regulatory and economic capital point of view. EVA is the profit generated above the cost of capital employed.

The minimum return on capital a transaction must obtain is determined by the cost of capital (i.e. the minimum compensation required by shareholders). We calculate it by adding the premium shareholders demand to invest in Santander to the risk-free return. The premium depends essentially on the degree of volatility in our share price with respect to market performance. Santander's cost of capital in 2024 was 12.0% (versus 11.2% in 2023).

On top of reviewing the cost of capital every year, we also estimate a cost of capital for each business unit based on its features (under the philosophy that subsidiaries manage capital and liquidity autonomously) to determine whether each business is capable of creating value on a standalone basis.

This table shows economic value added and RoRAC of the Group's geographical segments at the end of December 2024.

Economic Value Added[A] and RoRAC

EUR million

	2024		2023	
	RoRAC	**EVA**	**RoRAC**	**EVA**
Europe	28.3%	4,149	24.1%	3,169
DCB Europe	13.0%	72	23.2%	788
North America	22.8%	1,205	18.8%	886
South America	26.3%	872	19.0%	(45)
Total Group	**17.5%**	**4,332**	**15.3%**	**3,285**

A. The economic value added is calculated with the cost of capital of each unit. The Group's total RoRAC includes the operating units and the Corporate Centre, reflecting the Group's economic capital and its return.

In 2024, we generated EUR 4.3 billion EVA for our shareholders, with positive contributions from all our geographical segments.

Additionally, we also internally use a Shareholder Value Added (SVA) view which adjusts components that affect shareholder value creation but are not reflected in results.

Identifying and managing businesses with low profitability is part of the Group's capital optimization process. We dynamically target and actively monitor customers, portfolios, global businesses and markets with attractive returns on capital.

To ensure improved profitability and maximize capital productivity, we must focus on capital efficiency from origination. Pricing is an objective process based on the characteristics of the transaction, product, borrower, segment and market. Furthermore, it should ensure that the price exceeds a minimum threshold covering at least funding, operating, credit and capital costs, as well as an additional spread that takes into account demand sensitivity to prices and value generation. Therefore, pricing should aim to maximize profitability, with positive EVA for every transaction, customer, portfolio and/or global business, and ensure compliance with minimum return on capital targets.

Santander has granular approvals tools for the CIB and corporate segments which it uses to calculate the return on both regulatory and economic capital (RoRWA and RoRAC) and determine appropriate pricing. For retail segments, tools are locally developed by the units, tailoring them to the individual characteristics of each market. We also employ a granular tool to track returns on capital on a like-for-like basis between units.

Our approvals tools enable us to identify and justify any new loans with a pricing below the minimum threshold and our monitoring tools enable us to identify operations with profitability below the cost of capital, thereby recurrently destroying value. To try to ensure that all customer relationships add value, we regularly monitor and actively manage low performing customers through specific action plans.

Both approvals and profitability monitoring have a robust approval and review governance which i) ensures the consideration of minimum pricing thresholds are properly integrated into capital processes; ii) establishes a timely scaling/authorizing process; and iii) that detailed follow-ups are carried out for operations approved below the minimum threshold.

Capital planning and stress tests

Capital stress test exercises are a key tool in banks' dynamic assessments of their risks and solvency. These forward-looking reviews are based on unlikely-but-plausible macroeconomic and idiosyncratic scenarios. They require robust planning models that can translate the effects defined in the projected scenarios to elements that affect solvency.

The ultimate aim of these exercises is to assess risks and solvency thoroughly to determine capital requirements if a bank fails to meet its regulatory and internal capital objectives.

Santander has an internal capital stress and planning process to respond to various regulatory exercises and is a key tool integrated within management and strategy. They aim to ensure sufficient current and future capital, even in unlikely-but-plausible economic scenarios. We estimate results in various business environments (including severe recessions as well as expected macroeconomic environments), based on our initial situation (defined using financial statements, capital base, risk parameters and regulatory and economic ratios) to determine our solvency ratios, usually for a three-year period.

Planning offers a comprehensive view of our capital for the analysed period and in each of the defined scenarios based on regulatory capital and economic capital metrics.

This chart describes the structure in place:

1	**Macroeconomic scenario**	• **Central and recession** • **Idiosyncratic:** based on specific risks the entity faces • **Multi-year** horizon • **Reverse stress tests**
2	**Balance sheet and income statement forecasts**	• Projection of **volumes**. Business **strategy** • **Margins** and **funding costs** • **Fees** and operating **expenses** • **Market** shocks and **operational** losses • Credit losses and **provisions**. PIT LGD and PD models • IFRS 9 models and migration among stages
3	**Capital requirements forecasts**	• **Consistent** with projected **balance sheet** • **Regulatory and economic risk parameters** (PD, LGD and EAD)
4	**Solvency analysis**	• Available **capital base**. Profits and dividends • **Regulatory and legislative impacts** • **Capital and solvency ratios** • **Compliance** with capital **objectives** • **Regulatory and economic view**
5	**Action plan**	• In the event of failure to comply with internal objectives or regulatory requirements

This structure supports the ultimate objective of capital planning, by making it an important strategic component that:

- ensures current and future solvency, even in adverse economic scenarios;
- facilitates communication with the market and supervisors;
- ensures comprehensive capital management, analyses specific effects and integrates them into strategic planning;
- enables a more efficient use of capital; and
- helps formulate our capital management strategy.

Senior managers are fully involved in and closely oversee capital planning under a framework that ensures proper governance and is subject to the robust challenge, review and analysis.

In capital planning and stress analysis exercises, calculating the required provisions under stress scenarios is key, especially to cover losses on credit portfolios. It is particularly important for income statement forecasts under adverse scenarios.

To calculate loan-loss provisions of the credit portfolio, we use a methodology that ensures provisions cover loan losses projected by internal expected loss models, based on exposure at default (EAD), probability of default (PD) and loss given default (LGD) parameters, at all times.

In 2018, we adapted this methodology to incorporate changes brought in by the new IFRS 9 regulations, with models to calculate balances by stages (S1, S2, S3) as well as the movements between them and the loan-loss provisions in accordance with the new standards.

Our capital planning and stress analysis culminate in an analysis of solvency under various scenarios over a set period to measure capital adequacy and ensure we meet all internal capital and regulatory requirements.

Should we fail to meet our capital objectives, we would draw up an action plan with the measures needed to attain the minimum capital desired. We analyse and quantify those measures as part of internal exercises even if we don't need to use them as we exceed the minimum capital thresholds.

Santander carries out its internal stress and capital planning transversally throughout the Group, at the consolidated and local level. Our subsidiaries use it as an internal management tool, particularly to respond to local regulatory requirements.

We have undergone nine external stress tests since the beginning of the economic crisis in 2008. Every test proved our strength and solvency in the most extreme and severe macroeconomic scenarios showing that, owing to our business model and geographic diversification, we would still be capable of generating a profit for shareholders while satisfying the most demanding regulatory requirements.

The ECB determines and sets Pillar 2 Guidance (P2G) according to the results of the adverse scenario in these supervisory stress tests, including the EU-level stress tests carried out by the EBA. When determining the P2G, the ECB considers the maximum impact expected on the CET1 ratio, which, for this purpose, is the difference between the lowest CET1 ratio in the adverse scenario over the projection horizon and the real CET1 ratio at the starting point.

In the most recent ECB-EBA stress test in 2023, Santander destroyed the least fully-loaded CET1 capital among peers in the adverse scenario (-170 bps versus a peer average of -418 bps). This implies that, in absolute terms, the Group would have a fully-loaded CET1 ratio 30 bps better than the peer average at the end of the stressed horizon. Even in the adverse scenario, Santander was forecasted to generate a cumulative profit of EUR 6,582 million, well above its peers and the European banking system as a whole (where losses of EUR 3,129 million and EUR 1,404 million were projected, respectively).

We have also conducted internal stress tests every year since 2008 as part of our ICAAP (Basel Pillar 2). Every test has proven our capacity to confront the most difficult exercises globally and locally. We carry out these capital planning processes using tools shared throughout the Group.

We incorporate an analysis of the potential impact of climate risks (transition risk and physical risk) into internal stress exercises in addition to expressly considering them in the macroeconomic scenario definitions, in line with industry best practices and supervisory expectations.

In 2022, Santander participated in the ECB's first climate risk stress test comprising three parts: first, the supervisor assessed entities' internal capacities; second, the entities provided information on their main customers' emissions and revenue shares by activity sector to the supervisor; and third, the ECB made projections under various transition risk, heat wave risk and flood risk scenarios. The ECB published aggregate results for the industry as a whole.

Total Loss-Absorbing Capacity (TLAC) and Minimum Requirement for own funds and Eligible Liabilities (MREL)

In November 2015, the FSB published the TLAC term sheet based on the previously published principles for crisis management frameworks. It aims to ensure global systemically important banks (G-SIBs) will have the capacity to absorb losses and recapitalize as required to maintain critical functions during and immediately after resolution proceedings without compromising public funds or financial stability.

From 1 January 2022, the TLAC term sheet requires each G-SIB to have an individually set minimum TLAC level that is the greater of 18% of risk-weighted assets and 6.75% of the Basel III Tier 1 leverage ratio exposure.

Some jurisdictions have already transposed the TLAC term sheet into law (as is the case in Europe, the US and Mexico as of 1 January 2023); however, other jurisdictions where we operate (e.g. Brazil) have yet to do so.

In Europe, the final texts of CRR 2 and BRRD 2, which amend the resolution framework, were published in June 2019. One of the main objectives of this revision was to implement the TLAC requirement in Europe.

The CRR 2, which came into force in June 2019, dictates the 18% of RWAs minimum requirement for G-SIBs as set in the TLAC term sheet. It must be made up of subordinated liabilities (with the exception of a percentage of senior debt of maximum of 3.5% or RWAs, with the resolution authority's authorization).

As of 31 December 2024, the TLAC of the resolution group headed by Banco Santander, S.A. stood at 31.0% of risk-weighted assets and 9.8% of the leverage ratio exposure.

The BRRD 2 was transposed into law in Spain in 2021.

G-SIBs also have a Pillar 2 requirement in addition to the minimum CRR TLAC requirement, owing to the MREL methodology in the BRRD 2.

In June 2024, Banco de España formally communicated the (binding) MREL requirement for the Banco Santander, S.A. Resolution Group (sub-consolidated):

- Until 31 December 2024, the Group needed to meet the minimum requirement set at the highest of 29.69% of the Resolution Group's RWAs and 11.51% of the Resolution Group's leverage ratio exposure. Of the total MREL requirement, a minimum subordination level was fixed as the highest of 10.27% of RWAs and 6.13% of the leverage ratio exposure. However, the Resolution Group headed by Banco Santander, S.A.'s minimum subordination is determined by TLAC, not by MREL, as the TLAC subordination requirement is greater. This MREL requirement was based on December 2021 data.

  As of 31 December 2024, Banco Santander, S.A.'s MREL was 42.1% of RWAs and 16.5% of the leverage ratio exposure and subordinated MREL was 35.2% of RWAs and 13.8% of the leverage ratio exposure. As a result, Banco Santander, S.A. met its MREL requirements.

- From 1 January 2025 until 24 June 2025, the Group must meet the minimum requirement set at the highest of 32.39% of the Resolution Group's RWAs and 12.23% of the Resolution Group's leverage ratio exposure. Of the total MREL requirement, a minimum subordination level was fixed as the highest of 11.30% of RWAs and 6.22% of the leverage ratio exposure. This MREL requirement is based on December 2022 data.

- From 24 June 2025, until otherwise communicated by Banco de España, the Group will need to meet a minimum requirement set at the highest of 33.59% of the Resolution Group's RWAs and 12.93% of the Resolution Group's leverage ratio exposure. Of the total MREL requirement, a minimum subordination level was fixed as the highest of 11.30% of RWAs and 6.22% of the leverage ratio exposure. This MREL requirement is based on December 2022 data.

3.6 Special situations and resolution

Corporate special situations and resolution framework, crisis management, recovery and resolution planning

This section summarizes the main developments in the year relating to preparing and strengthening mechanisms for a potential crisis, recovery plans and preparing and executing initiatives to improve resolvability plans.

Corporate framework for special situations and resolution

The framework enables our units to aggregate and clearly interpret the various mechanisms for monitoring, escalating and managing both financial and non-financial events as well as governance. It helps link the action plans (e.g. contingency plans, business continuity plans, recovery plan) to be executed in each phase.

We base crisis governance on a collective decision-making model that is organized into and operated under severity levels to facilitate flexibility and sequential decision-making. For instance, in the most severe stages of a hypothetical crisis, the Gold committee, composed of the Group's top executives supported by the Silver forum and other specialist Bronze teams, would be the leading decision-making body.

The framework aims to encourage the sharing of best practices across the Group and continuous collaboration between subsidiaries and corporate teams (including coordination in the recovery and resolution planning phases) to continue to develop our management and control model in the most effective way.

Two of Santander's key processes are the recovery plan and the bail-in playbook, which describes the resolution tool's execution.

Crisis management

We managed several important events in 2024 relating to i) cybersecurity (e.g., unauthorized access to a database hosted by a third party); ii) geopolitical and/or macroeconomic events (e.g., armed conflicts in the Middle East); iii) natural disasters (e.g., forest fires in Valparaíso, Chile; floods in Rio Grande do Sul, Brazil, in Poland and in dozens of Spanish municipalities, earthquake in the Chinese provinces of Gansu and Qinghai); and iv) operational events (e.g., related to the operation of digital channels or critical providers).

We have taken away important lessons from these events, including:

- The benefits of *ex ante* preparation. Crisis management simulation exercises conducted over the past few years have enabled us to act quickly.
- The importance of maintaining a consistent and global approach that enables us to act as a Group, regardless of the type of event, where the incident occurs, the size of the affected unit or which global business is affected.
- The ability to anticipate potential events is decisive in the final result, especially in internal and external communication and in case of events that affect critical services with customers or require frequent contact with competent authorities.

Despite the very different nature of the events managed, our crisis management model once again demonstrated its strength. There are two fundamental and defining aspects of our model:

- Coordination between and with the subsidiaries and the five global businesses. Cooperation between the different units is not only a strength of the operating model under normal conditions, but has also proven to be a strength in times of crisis. There are several instruments that support this coordination such as i) the ability to summon global crisis governing bodies (e.g., Bronze teams and/or global Silver forum); ii) the close relationship between Crisis Management Directors (CMDs), crisis management managers and the involved functions; or iii) the ongoing issuance of corporate guidelines to facilitate decision-making.
- Early incident management. Through Bronze teams, we have been able to give a quick and proactive response to the most critical events.

However, in order to further strengthen our crisis management model, we carried out several initiatives:

- A more granular taxonomy and methodology is available for the identification and classification of events, both for financial and non-financial events.
- We integrated new decision-making processes to strengthen confidentiality and protect the security of our employees and customers.
- We assigned new roles to align the crisis management function to the new organizational model based on five global businesses.
- We further developed the process governing the response to humanitarian crises. By using the corporate guide, units are able to determine the severity of these events depending on their scale and urgency, as well as the action and governance framework for each situation.

In short, despite the challenges faced in 2024, the Group has shown it has the right tools to respond to crises of very different nature. However, given the complexity of the current environment and the potential threats facing the banking industry, the Group remains committed to strengthening crisis management mechanisms and instruments.

Recovery plans

Context. Santander drew up its 15th corporate recovery plan in 2024. It sets out measures we have at our disposal to survive a very severe crisis without extraordinary public aid, in accordance with article 5.3 of the BRRD.

Its primary aims are to test i) the feasibility, effectiveness and credibility of the recovery measures; and ii) the suitability of the recovery indicators and their respective thresholds, above which decision-making would be escalated to cope with stress situations.

It sets out macroeconomic and/or financial crisis scenarios that could materialize in idiosyncratic, systemic and combined events that could lead the Group to trigger the plan.

The recovery plan should not be considered an instrument separate from our structural mechanisms to measure, manage and supervise risk. It is aligned with the risk appetite framework (RAF), the risk appetite statement (RAS), the risk profile assessment (RPA), the business continuity management system (BCMS), the internal assessments of capital and liquidity (ICAAP and ILAAP) and other tools. It is also integrated into the Group's strategic plans.

Progress in 2024. In January, the new 'Guidelines on Total Recovery Capacity in Recovery Plans' came into force, which require us to incorporate more severe scenarios that reach the near-default point and calculate the recovery capacity in a dynamic way and taking the moment the indicator was breached as a starting point. These requirements were already taken into account in the 2023 plan.

In May 2024, the ECB sent us a letter with their annual priorities, recommending that: i) entities should focus their efforts on improving liquidity recovery capacity and demonstrate that they have sufficient recovery options that can be implemented within a short time frame (less than one month); ii) simulations should be carried out to demonstrate the feasibility of these measures; and iii) liquidity scenarios should incorporate idiosyncratic and rapidly evolving events that lead to a point close to default in less than three months.

As it does every year, the 2024 recovery plan fully covers all the recommendations and priorities required by the ECB, including:

- A more conservative recalibration of capital indicators with regulatory requirements. They also expanded information on all indicators and the justification for their calibration.
- More extreme scenarios, so that all scenarios reach a near-default point according to the guidelines.
- A complete and detailed analysis of the risk profile of the entity at different times in each of the scenarios.
- A report including the characteristics of the two simulations carried out, with a critical evaluation of the lessons learned and possible follow-up actions.
- A new recovery measure.

The key takeaways from our review of the 2024 corporate plan were:

- there are no material interdependencies between main subsidiaries;
- we have ample recovery capacity in all scenarios through available measures. Our geographically diversified model is a great asset from a recovery standpoint;
- each subsidiary has sufficient capacity to emerge from a recovery situation on its own, which strengthens the Group's model based on units that are autonomous with respect to liquidity and capital;
- we have sufficiently robust governance to manage financial and non-financial stresses that vary in nature and intensity; and
- amid a serious financial or solvency crisis, no subsidiary is important enough to trigger the corporate plan by causing the severest recovery indicator levels to be breached.

These factors prove our business model and geographic diversification strategy would remain firm in a recovery situation.

Regulation and governance. Santander's recovery plan complies with EU regulations and follows the non-binding recommendations of the Financial Stability Board (FSB) and other international bodies.

We submitted our latest plan to the Single Supervisory Mechanism in October 2024; the EBA has six months to make formal considerations.

Santander's recovery plan comprises the corporate plan (Banco Santander, S.A.) and local plans for the UK, Brazil, Mexico, the US, Germany, Argentina, Chile, Portugal, Norway and a recovery plan summary for Santander Bank Polska S.A. and Santander Consumer Bank S.A. -Poland-. All subsidiaries (except Santander Chile) must draw up a local plan in compliance with local regulations and corporate requirements.

Though the board of Banco Santander, S.A. approves the corporate plan, relevant content and figures are previously submitted to and discussed by the Silver forum, Gold committee, risk control committee and the risk supervision, regulation and compliance committee. Local plans are approved by local bodies in coordination with the Group (as they are included in the Group's corporate plan).

Resolution plans

The relevant authorities prepare the resolution plans[1] and Santander cooperates with them, providing all requested information. During 2024, the members of the crisis management group (CMG) upheld their decision on our multiple point of entry (MPE) strategy to be used in a hypothetical resolution, formed by 11 different resolution groups where the parent company, Banco Santander, S.A., forms the main resolution group along with the rest of its subsidiaries of the Banking Union.

1. With the exception of the US, where individual entities draw up their own resolution plans.

This strategy is consistent with our legal and business structure, as the 11 resolution groups can be resolved independently without involving other parts of the organization, given the low level of interconnection.

Meetings with the Single Resolution Board (SRB) and its working priorities letters confirmed in October 2023 that there are no substantial impediments to Banco Santander, S.A.'s resolvability, achieving the target set for December 2023 by the SRB. Despite this, the SRB highlighted the need to continue to work on resolvability and meet the targets set for the new resolution planning cycle starting in 2025, which focus on the operationalization of the resolution tool, i.e., internal recapitalization (bail-in).

In 2024, we prepared the multi-annual work plan to continue to meet resolution planning requirements. Banco Santander, S.A.'s board of directors approved it in February 2025, prior to its definitive submission to the SRB and in which the following actions, among others, were defined:

1) Conduct initial tests to measure capability to provide high quality data for resolution valuations

In 2024, Banco Santander, S.A. carried out a real-time dry run exercise on governance and obtaining data for valuation in resolution for each of the relevant subsidiaries of Banco Santander, S.A. within the resolution group known as the Banking Union. We shared the generated data with the SRB.

2) Conduct a liquidity exercise based on the joint SRB-ECB liquidity report prepared in October 2024

During November 2024, we worked on a new liquidity report, jointly required by the SRB and the ECB. In 2025, we will again conduct a liquidity exercise aimed at strengthening our liquidity reporting capabilities during and after resolution, which will take into account the SRB's comments on the 2024 liquidity exercise. For the first time, it will be a real-time dry run exercise and the SRB will observe.

3) Continue the work on the separability of important subsidiaries in the resolution group headed by Banco Santander, S.A.

We will continue the work on separability, an area that was established as a priority for Santander in 2023, and will continue to be so during 2025, focused on improving our ability to implement alternative resolution tools to sell a business in the event of resolution by developing an advanced separability analysis report.

This analysis should identify potential obstacles and mitigating factors to ensure the subsidiaries' operational and business continuity if separated from the Group. We will work on developing specific business transferability manuals in 2025, detailing how to execute the sale of a business from an operational point of view.

4) Test the internal recapitalization resolution tool and the internal loss transfer and recapitalization mechanism, together with information system capabilities

Given the results of the dry-run exercises for the internal recapitalization testing exercises in previous years, Banco Santander is expected to continue to annually test its bail-in preparation through a test focused on its information systems' capabilities, accounting and amortization processes, conversion and issuance of new capital, communication and governance, as described in the bail-in playbook. Testing should also include the internal loss transfer and recapitalization mechanism (ILTRM) in place for most of the important Banco Santander, S.A. subsidiaries. The SRB has already communicated the new developments of this simulation exercise for 2025, mainly the inclusion of new subsidiaries and the stress assumptions.

5) Continue the work on Management Information Systems

During 2024, we completed all the manuals for reporting information regarding internal recapitalization and valuation data. We also did dry-run tests on the capabilities of management information systems, including the preparation and extraction of resolution valuation information and bail-in instruments. In 2025, we plan to carry out further testing to ensure information systems are capable of providing accurate and timely information.

6) Guarantee operational continuity in resolution situations

In 2024, we continued to work on operational continuity in resolution: i) we developed retention plans for certain units of the Banking Union Resolution Group; ii) remediation plans continued with the inclusion of clauses in vendor contracts to ensure resilience in resolution; and iii) we updated the contingency plan for access to market infrastructure. In 2025, we plan to test the operational continuity in bank resolution through simulation exercises.

4. FINANCIAL INFORMATION BY SEGMENT

4.1 Description of segments during 2024

We base segment reporting on financial information presented to the chief operating decision maker, which excludes certain statutory results items that distort year-on-year comparisons and are not considered for management reporting. This financial information (underlying basis) is computed by adjusting reported results for the effects of certain gains and losses (capital gains, write-downs, impairment of goodwill, etc.). These gains and losses are items that management and investors ordinarily identify and consider separately to better understand the underlying trends in the business (see also note 52.c to the Santander financial statements).

Santander has aligned the information in this chapter with the underlying information used internally for management reporting and with that presented in the Group's other public documents.

Santander's executive committee has been selected to be its chief operating decision maker. The Group's operating segments reflect its organizational and managerial structures. The executive committee reviews internal reporting based on these segments to assess performance and allocate resources.

As we announced at the end of 2023, following the creation of two new global segments and in order to align the operating and management model, we adapted our reporting, starting with the financial information for Q1 2024, with global businesses becoming the primary segments.

Main changes to the composition of Santander's segments

The main changes, which apply from 1 January 2024 to the management information for all periods included in the consolidated financial statements, are as follows:

- All of the Group's businesses across all markets were consolidated into five global areas: Retail & Commercial Banking, Digital Consumer Bank, Corporate & Investment Banking, Wealth Management & Insurance and Payments. These became the new primary segments.
- The changes in financial information were:
  - The former Retail Banking was split into two new segments: Retail & Commercial Banking and Digital Consumer Bank. Our cards business now forms part of the new Payments segment.
  - The results of activities mainly related to financial management located in the countries are fully allocated to their global businesses based on the segment that generates the financial position.
  - The local corporate centres are fully allocated to the global businesses.
  - The revenue sharing criteria between global businesses were revised to better reflect the contribution of each business to the Group.
- The former primary segments (Europe, North America, South America and Digital Consumer Bank - which is renamed DCB Europe) became our secondary segments. 2023 published figures for the countries, regions and the Corporate Centre remain unchanged.

All the changes described above have no impact on the reported Group consolidated financial statements.

Primary segments

This primary level of segmentation, which is based on the Group's management structure from 1 January 2024, comprises six reportable segments: five operating areas plus the Corporate Centre.

The operating areas are:

Retail & Commercial Banking (Retail): area that integrates the retail banking business and commercial banking (individuals, SMEs and corporates), except for business originated in the consumer finance and the cards businesses.

Digital Consumer Bank (Consumer): comprises all business originated in the consumer finance companies, plus Openbank, Open Digital Services (ODS) and SBNA Consumer.

Corporate & Investment Banking (CIB): this business, which includes Global Transaction Banking, Global Banking (Global Debt Financing and Corporate Finance) and Global Markets, offers products and services on a global scale to corporate and institutional customers, and collaborates with other global businesses to better serve our broad customer base.

Wealth Management & Insurance (Wealth): includes the corporate unit of Private Banking and International Private Banking in Miami and Switzerland (Santander Private Banking), the asset management business (Santander Asset Management) and the insurance business (Santander Insurance).

Payments: the Group's digital payments solutions, providing global technology solutions for our banks and new customers in the open market. It is structured in two businesses: PagoNxt (Getnet, Ebury and PagoNxt Payments) and Cards (cards platform and business in the countries where we operate).

Secondary segments

At this secondary level, Santander is structured into the segments that made up the primary segments until 31 December 2023, which are Europe, DCB Europe, North America and South America:

Europe: comprises all business activity carried out in the region, except that included in DCB Europe. Detailed financial information is provided on Spain, the UK, Portugal and Poland.

DCB Europe: includes Santander Consumer Finance, which incorporates the entire consumer finance business in Europe, Openbank in Spain and ODS.

North America: comprises all the business activities carried out in Mexico and the US, which includes the holding company (SHUSA) and the businesses of Santander Bank (SBNA), Santander Consumer USA (SC USA), the specialized business unit Banco Santander International, the New York branch and Santander US Capital Markets (SanCap).

South America: includes all the financial activities carried out by Santander through its banks and subsidiary banks in the region. Detailed information is provided on Brazil, Chile and Argentina.

In addition to these operating units, both primary and secondary segments, the Group maintains the Corporate Centre, which includes the centralized activities relating to equity stakes in financial companies, financial management of the structural exchange rate position, assumed within the sphere of the Group's assets and liabilities committee, as well as management of liquidity and shareholders' equity via issuances.

As the Group's holding entity, this area manages all capital and reserves and allocations of capital and liquidity with the other businesses. It does not incorporate the costs related to the Group's central services (charged to the areas), except for corporate and institutional expenses related to the Group's functioning.

The businesses included in each of the primary segments in this report and the accounting principles under which their results are presented here may differ from the businesses included and accounting principles applied in the financial information separately prepared and disclosed by our subsidiaries (some of which are publicly listed) which in name or geographical description may seem to correspond to the business areas covered in this report. Accordingly, the results of operations and trends shown for our business areas in this document may differ materially from those of such subsidiaries.

As described in section 3. 'Group financial performance', the results of our business areas presented below are provided on the basis of underlying results only and generally including the impact of foreign exchange rate fluctuations. However, for a better understanding of the changes in the performance of our business segments, we also provide and discuss the year-on-year changes to our results excluding such exchange rate impacts. For Argentina and any grouping which includes it, the variations in constant euros have been calculated considering the Argentine peso exchange rate on the last working day for each of the periods presented. Additionally, in 2024, for the Argentine peso, we apply an alternative exchange rate that better reflects the evolution of inflation (we continue to apply the official ARS exchange rate to all prior years). For further information, see the 8. 'Alternative performance measures' section.

The statements included in this section regarding Santander's competitiveness and that of its subsidiaries have been produced by the Group based on public information (corporate websites of competing entities and information published by national banking institutions).

Certain figures contained in this chapter, have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total figure given for that column or row.

Strategy	To support our vision of becoming a digital bank with branches, during the year, we focused on providing the best experience for our customers, driving our ONE Transformation programme, implementing a common operating model and rolling out our global technology platform.
Business performance[1]	Loans fell slightly (-1% year-on-year) due to lower loans in Europe and the US, partially offset by the increases in South America and Mexico. Deposits rose 3% year-on-year, with growth in all three regions.
Results[1]	Attributable profit in 2024 was EUR 7,263 million, a 29% increase year-on-year, driven by a good revenue performance, efficiency gains from our transformation programme and lower provisions in Europe.

1. In constant euros.

Strategy

During the year, we consolidated the Group's individual, SME and corporate banking activities within a new global business, Retail & Commercial Banking (Retail), successfully executing our three strategic priorities with the following advances:

- **Common operating model.** Our vision is to become a digital bank with branches, offering our products and services digitally through our own global platform and using our branch network to advise our customers. In 2024, all countries worked with a common operating model and within this vision. We have 147 million customers who can access most of our products and services digitally. Sales through our digital channels rose double digits year-on-year. Additionally, we have a network of nearly 8,000 branches, where customers can receive advice and support.
- **Transformation,** based on three pillars:
  - **Customer experience.** We reduced the number of products by 39% year-on-year, as part of our commitment to offer a simple and attractive product portfolio that provides the best experience for our customers. We also continued to improve customer journeys, especially digital onboarding (substantially reducing onboarding times in all countries). Additionally, we launched a new 100% digital and simplified offer for individuals in Brazil and SMEs in Spain. As a result of the improvement in customer experience and digital onboarding, customers grew more than 8 million in the year.
  - **Operational leverage.** We reduced the number of resources dedicated to non-commercial activities per million customers by 13% during the year, supported by digitalization, process automatization and organizational simplification, with significant progress in all units. Some examples this year were the digitalization of in-branch processes in Spain and mortgage servicing in Poland, as well as the simplification of the branch organization in Brazil and Chile. Additionally, our strategy to promote a self-service model is producing results, as chatbot interactions increased during the year and contact centre call volumes decreased. This has freed up time to be spent on value-added tasks and has contributed to greater efficiency.
  - **Global technology platform.** The roll out of the global platform is especially relevant for business transformation. This platform is based on two proprietary technologies developed in-house: i) Gravity, with open technologies to reduce back-end costs; and ii) ODS, deployed in the cloud for the front-end, offering a superior omni-channel experience to our customers.

    During the year, we completed the initial integration of Gravity and ODS in the US, which enables us to provide a new digital offering and the best customer experience. We also completed the migration of our customers in the UK to the new app. In addition, we are rolling out our global commercial tool to support branches in Spain and Mexico.
- **Profitable growth.** Structural efficiency improvements that the global platform's scale provides and disciplined capital management, together with increased simplification and process automatization were significant drivers of profitable growth. Additionally, enhanced customer experience and a greater commercial focus drove further customer growth and profitability improvement.

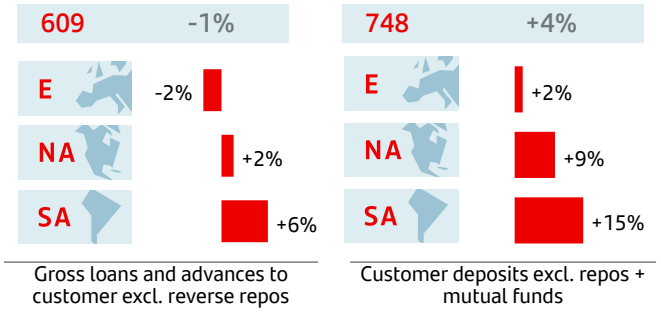
Business performance

Loans and advances to customers decreased 1% year-on-year. In gross terms, excluding reverse repos and in constant euros they also decreased 1%, due to the decline in mortgages and SMEs, partially offset by the increases in corporate and personal loans. By region, the decrease in Europe and the US volumes was partially offset by rises in South America and Mexico.



Mortgage balances fell both in the UK (in line with our profitability strategy) and in Spain, still impacted by pre-payments despite a pickup in new business volumes. This was partially offset by increases in Portugal, Poland, Mexico and Brazil. Personal loans performed well, especially in Brazil, Spain and Poland.

Corporate loans rose, mainly driven by Poland, Brazil and Mexico. SME loans decreased mainly due to pre-payments in Europe, partially offset by higher volumes in Brazil and Poland.

Customer deposits decreased 1% year-on-year. Excluding repos and in constant euros, they rose 3%, driven by Spain, Poland and overall growth in South America, notably in Brazil. All products contributed to the increase, but especially time deposits in Europe and South America. Mutual funds rose 19% in constant euros, driven by commercial efforts in the current interest rate environment. As a result, customer funds increased 4% in constant euros.

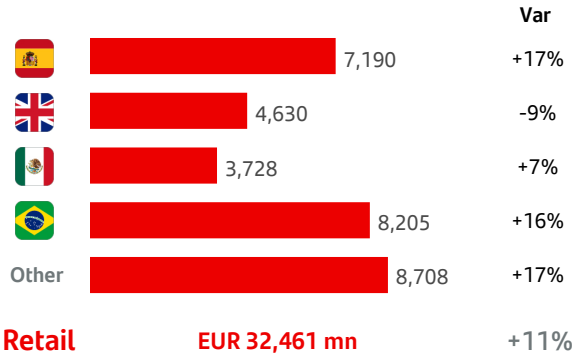
Results



Attributable profit in 2024 was EUR 7,263 million (53% of the Group's total operating areas), up 28% compared to 2023. In constant euros, it rose 29% year-on-year, with the following detail:

- Total income grew 11% driven by higher net interest income and net fee income. Net interest income increased 11%, with rises in most countries, but especially in South America, driven by higher volumes and lower deposit costs, and in Spain, Poland and Portugal due to good margin management. The exceptions were the UK, due to lower mortgage volumes (in line with our strategy) and higher cost of deposits (competitive market), and the US, due to lower volumes.

  Greater commercial activity and a larger customer base contributed to net fee income growth (+7%). The most significant increases were in Brazil, the US, Mexico and Poland.

Retail. Total income

EUR million and YoY % change in constant euros

- Administrative expenses and amortizations increased 3%. In real terms, costs declined 1% reflecting our transformation efforts through organizational simplification, process automatization and the deployment of the global platform, particularly evident in Spain and the US. As a result, net operating income grew 17% and efficiency improved to 39.7%.

- Net loan-loss provisions improved 7%, due to a positive performance in Europe, especially in Spain, Poland and the UK (macro outlook improvement in the country), which more than offset greater provisions in South America due to higher activity and the cost of risk normalization in Mexico and Chile.

- The other gains (losses) and provisions line was 21% more negative than in 2023, mainly due to greater restructuring charges in some countries and higher charges related to the CHF mortgage portfolio in Poland.

RoTE in 2024 was 18.9%, a 3.7 pp improvement year-on-year.

Consumer

Digital Consumer Bank

Underlying attributable profit

EUR 1,663 mn

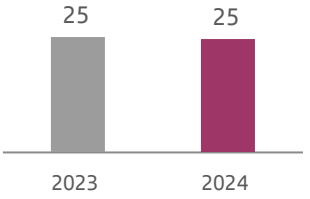
Strategy	Our priority is to continue expanding our leadership in consumer finance and to be the most cost competitive player, with the best customer experience through a more digital global operating model and the best solutions (check-out lending, digital journeys in auto lending and operational leasing) through common platforms.
Business performance [1]	Loans increased 4% year-on-year, +6% in auto. Deposits rose 10%, in line with our strategy aimed at lowering funding costs and reducing net interest income volatility across the cycle, to be able to offer our customers better pricing.
Results [1]	Double-digit year-on-year growth in net operating income due to solid performance in net interest income and net fee income and good cost control. However, this was not reflected in attributable profit (-12%) due to impacts from higher CHF mortgage provisions and the provision for potential complaints related to motor finance dealer commissions in the UK.

1. In constant euros.

Strategy

Digital Consumer Bank (Consumer) is a leading consumer finance company globally. It operates in 26 countries in Europe and the Americas and it serves the financing needs at the point of sale (both physical and digital) of 25 million customers. It combines three interconnected businesses: auto financing, consumer lending, supported by Zinia, and Openbank.

Our vision in the Consumer business is to become the **preferred choice of our partners and our end customers,** and offer greater profitability and value creation to our shareholders, while being the most cost-efficient player in the industry.



To respond to the changes the mobility and consumer finance ecosystem is undergoing and deliver on our vision, during 2024, we worked **to transform our operating model by**:

- **Offering global and best-in-class solutions,** integrated into our partners' (OEMs, importers and retailers) processes, accompanying them as their increasingly digital business models evolve.
  - We continued to foster cross-regional partnerships and consolidate new partnerships by leveraging existing agreements, particularly in the US where we incorporated new strategic agreements in auto throughout the year and in Latin America where we continued to focus on developing strategic alliances.
  - We further upgraded our value proposition for improved customer experience.
- **Simplifying and automating our processes** to increase scalability. We are working to align our functions with the Group's operating model. In the US, our focus has been on recovering pre-pandemic profitability, driving efficiency savings and improving our service. In Europe, we focused on transforming our operating model by streamlining the organization and making it more agile, accelerating process automatization, improving digital capabilities and converging towards global platforms.
- **Building and developing global platforms.** Throughout the year, we:
  - Expanded the functionalities of our auto leasing platform, operative in three European markets, and we opened the broker channel in Germany.
  - Continued to simplify our auto operating model in Europe, having moved from one platform per country to three in total, towards our final goal of having one common platform to support our aim of being the most cost-efficient player.
  - Fostered growth in Zinia, our check-out lending technology in Germany, through new agreements such as a co-branded card with Amazon and instalment loans with Apple.
  - Launched Openbank in the US in Q4 2024. We also prepared the launch of an Openbank branch in Germany (opened in January 2025) and the full launch of Openbank in Mexico (in February 2025) with a complete value proposition to compete with other neobanks.

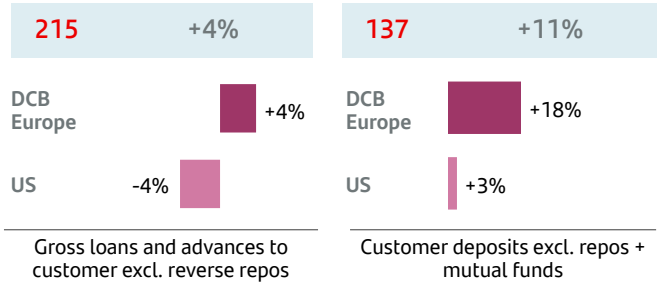
    These launches, together with digital deposit gathering activities in the Netherlands during the year, support our profitable growth strategy to capture deposits (a lower cost and more stable source of funding) and actively manage our balance sheet to make it more capital light.

Consumer. Total customers

Millions

Business performance

After a difficult environment in previous years, 2024 showed further signs of recovery supported by a market with inflation moderation and lower interest rates in Europe and North America.



In this environment, new lending increased 4% year-on-year, with solid growth across our main markets, especially in South America, led by Brazil. The stock of loans and advances to customers rose 4%. In gross terms, excluding reverse repos and in constant euros, they were also 4% up year-on-year, mainly driven by Brazil.

We have a EUR 17 billion leasing portfolio which decreased 5% year-on-year in constant euros, as growth in Europe was more than offset by a decline in the US.

Customer deposits, which accounted for 60% of Consumer's total funding, increased 12% year-on-year. Excluding repos and in constant euros, they were up 10%, as a result of our strategy aimed at lowering funding costs and reducing net interest income volatility across the cycle. Our access to wholesale funding markets remained strong and diversified. Mutual funds rose 19% in constant euros, up from very low levels. As a result, customer funds rose 11% year-on-year in constant euros.

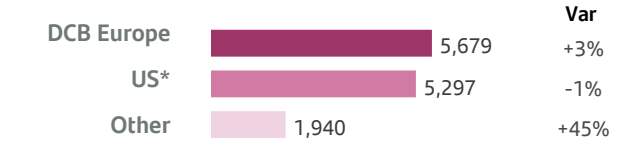
Total leasing	17	-5%

Results



Attributable profit in 2024 was EUR 1,663 million (12% of the Group's total operating areas), down 13% year-on-year. In constant euros, profit fell 12%, as follows:

- Total income rose 6%, with net interest income growing 6% on the back of active loan repricing actions and volumes growth in Europe, and higher volumes in Brazil. Net interest income in the US rose slightly as benefits from higher yields were mostly offset by lower credit volumes.

  Net fee income increased strongly (+24%), largely driven by increased insurance penetration in Europe, volumes growth in Brazil and auto fees in the US. Gains on financial transactions decreased, mainly in Europe. Leasing income fell, due to a decrease in auto residual values and, in the US due lower leasing volumes and as we pass on fiscal benefits (recorded in the tax line) from electric vehicle leases to pricing.

Consumer. Total income

EUR million and YoY % change in constant euros

* Year-on-year growth in revenue in the US is flat if we include the impact of the EV incentives in the tax line.

- Administrative expenses and amortizations performed well, declining slightly year-on-year (-4% in real terms), even as we invest in leasing and check-out lending platforms and in business growth. This good performance reflects our efficiency and transformation efforts in both the US and DCB Europe. Consequently, net operating income grew 11% and efficiency improved 2.7 pp to 40.1%.

- Net loan-loss provisions increased 12%, affected by continued normalization in Europe and the US, higher volumes, increased CHF mortgage portfolio coverage, lower portfolio sales than last year and some regulatory charges. Credit quality remained controlled with the cost of risk at 2.16%, having normalized in line with expectations, and the NPL ratio stood at 5.07%.

- Other gains (losses) and provisions registered a loss of EUR 939 million in 2024 compared to a EUR 250 million loss in 2023, mainly driven by higher Swiss franc mortgage provisions in Poland and the provision for potential complaints related to motor finance dealer commissions in the UK (for more information, see note 25.e in the consolidated financial statements).

RoTE in 2024 was 9.8%, a 1.8 pp decrease year-on-year.

CIB Corporate & Investment Banking

Underlying attributable profit

EUR 2,740 mn

Strategy	We made our centres of expertise more sophisticated and deepened client relationships, on the back of our Global Markets plan and US Banking Build-Out (US BBO) initiative, and actively managed capital.
Business performance [1]	Strong activity year-on-year across all business lines, particularly driven by our growth initiatives in Global Markets and Global Banking.
Results [1]	Attributable profit rose 16% year-on-year, on the back of revenue growth (+14%) from a record 2023, which more than offset higher costs related to the investment in new capabilities. We maintained a leading position in efficiency and profitability with a low cost of risk.

1. In constant euros.

Strategy

CIB is our global business focused on wholesale customers, with a strong advisory component and high value-added solutions. We leverage the Group's technology to digitalize our business and automate end-to-end processes, enhancing and protecting the business while increasing operational efficiency.

Our tech partnerships and participations with Allianz Trade, the fintech Two, SAP and Komgo, among others, enable us to compete with new digital players and other competitors and benefit from new opportunities arising in the current environment.

In 2024, we made good progress in the execution of our strategy to become a focused, world-class CIB business, positioning ourselves as a trusted advisor to our clients while delivering profitable growth and maintaining dynamic capital management, with good progress with respect to the priorities set for the year:

- We made our **centres of expertise more sophisticated**, further strengthening our teams in sales, trading and banking, on the back of our two most important strategic initiatives: US BBO and Global Markets plan.

  In Global Banking (GB), we expanded our sector and product capabilities in areas adjacent to our traditional strengths to offer complete investment banking solutions with coverage across multiple industries, making key hires in our Global Industry Groups (such as TMT, Healthcare, Industrials and Financials) and product teams (M&A, Leveraged Finance, Equity Capital Markets - ECM and Debt Capital Markets - DCM).

  In Global Markets (GM), we continued to execute our ambitious plan centred on increasing activity with our corporate and institutional clients (strengthening our European Markets platform with sales teams in Paris, Frankfurt and Milan), further leveraging technology, increasing cross-border flows and enhancing our trading and distribution capabilities.

  We started to reap the rewards of our investments in 2023 and 2024, as reflected in the solid performance in institutional sales.

- We further **deepened our client relationships,** with a particular focus on the US where we are taking our CIB franchise to the next level through the execution of the US BBO initiative, selectively expanding our client universe and product capabilities enabling us to increase our addressable market and the contribution of fees as a share of total revenue, especially in the US.

  As a result, we are already making progress in targeting untapped wallets, especially in the US and EMEA, where our recent investments have had a positive effect and synergies are evident.

  Our US BBO initiative is producing results, enabling us to deliver more sophisticated solutions to our clients and achieve numerous 'firsts' in businesses where we did not have presence and upgraded roles in transactions. Additionally, this is leading to follow-on business opportunities in other areas and markets, such as in our DCM business, which has led the reverse Yankee bond market.

- We continued to **actively manage capital** through our originate-to-share model to drive large-scale capital recycling in coordination with the Group's Global Asset Desk team. This enabled us to increase origination and maintain good profitability ratios.

- **Attracting, developing and retaining top diverse talent** is key to the execution of our strategy and for business success, and we implemented several initiatives to enhance our teams' skills and provide enriching careers.

Note: In DCM, Europe and the UK refers to financial institutions group (FIG).

Business performance

A high proportion of CIB's activity is customer related (84% of total income) and capital light, supported by our active balance sheet management, as reflected in a total revenue to risk-weighted assets ratio of 6.9%, up 1 pp since 2022.

Loans and advances to customers, mainly concentrated in GTB and GB businesses, increased 9% year-on-year. In gross terms, minus reverse repos and in constant euros, they were flat. Customer deposits decreased 1% year-on-year. Excluding repos and in constant euros, they fell 10% in line with our strategy to reduce excess corporate deposits.

By business line, we had the following performance:

- **In Global Transaction Banking**, strong activity in Export Finance and Trade & Working Capital Solutions more than compensated weaker activity in Cash Management, impacted by lower interest rates.

  In Export Finance, we maintained a 10% market share on the back of our coordinator and underwriter roles in some of the most important transactions. Trade & Working Capital Solutions continued to increase collaboration with Financial Sponsors, Leveraged Finance and M&A teams and we outperformed the market backed by our leading innovative solutions.

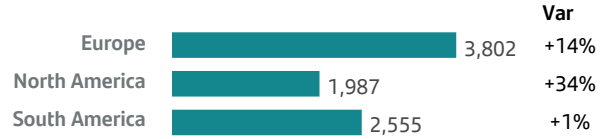
- **Global Banking** performed well on the back of growth in Corporate Finance (CF) and Global Debt Financing (GDF).

  In CF, we gained market share in a complex environment, with leading advisory and capital raising roles across our focused industry sectors and higher activity levels in Europe and the US, as a result of our upgraded capabilities and the expansion of our US franchise.

  GDF had the best-ever year in terms of DCM activity and wallet share growth. Structured Finance increased significantly at the end of the year driven by Energy advisory mandates and Fund Finance. Securitized Products in Europe had the most active year in over a decade, being the leading bookrunner in primary cash issuances and as synthetic securitization arranger with fund investments, with increasing activity in Latin America.

- **Global Markets** had good activity levels throughout the year in Europe, Asia and the US, while Latin America recovered in the second half of the year. Our investments led to increased client activity, highlighting institutional flows, while the US BBO initiative continued to gain momentum, with most key products implemented and volumes ramping up. There was strong activity in Rates, Securitized Products and Cash Equities.

Results

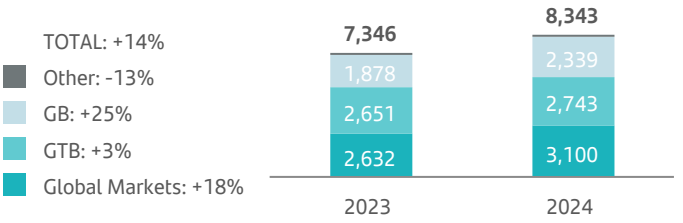


Record attributable profit in 2024, increasing 12% year-on-year to EUR 2,740 million (20% of the Group's total operating areas). In constant euros, profit grew 16%, with the following detail:

- Total income rose 14% year-on-year, backed by double-digit growth in net interest income and net fee income, both at record levels. Net interest income grew 15%, boosted by GB and to a lesser extent by GM. Net fee income increased 21%, driven particularly by GB on the back of the US BBO initiative. Gains on financial transactions decreased 7% due to lower market activity in South America, mainly in Brazil.

By region, good total income performance in North America and Europe, while total income grew only slightly in South America, in part due to weaker activity in the Brazilian market .

CIB. Total income by region



EUR million and % change in constant euros

By business, total income rose 25% in GB (CF in Europe and the US and GDF across markets) and +18% in GM, on the back of strong activity in Europe and North America, mainly with institutional clients. In GTB, total income grew 3% supported by good performance in Export Finance and Trade & Working Capital Solutions.

CIB. Total income by business

EUR million and % change in constant euros

Note: total income includes revenue from other activities which are less material (EUR 186 million in 2023 and EUR 161 million in 2024).

- Administrative expenses and amortizations increased 14% due to our investments in new products, capabilities and technology. The efficiency ratio stood at 45.6%.

- Due to the nature of the business, net loan-loss provisions have a limited impact on CIB's results. They were EUR 174 million (EUR 165 million in 2023), with a low cost of risk of 0.10%.

- Other gains (losses) and provisions recorded a EUR 353 million loss compared to a EUR 181 million loss in 2023.

As a result, RoTE was 18.1% in 2024 (0.5 pp higher than in 2023).

Wealth Management & Insurance

Underlying attributable profit

EUR 1,650 mn

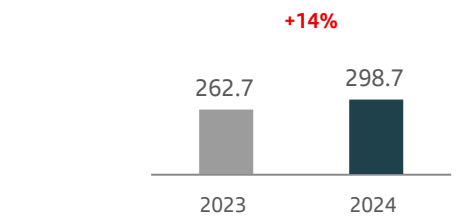
Strategy	We continue building the best wealth and insurance manager in Europe and the Americas supported by our leading global private banking platform and our best-in-class funds and insurance product factories that leverage our scale and global capabilities to offer the best value proposition to our customers.
Business performance[1]	Total assets under management reached EUR 498 billion, +13% year-on-year, on the back of the excellent commercial dynamics in both Private Banking and Santander Asset Management. In Insurance, gross written premiums exceeded EUR 11.5 billion in 2024.
Results[1]	Attributable profit grew 14% to EUR 1,650 million with an RoTE of 79%.

1. In constant euros.

Strategy

Our Wealth Management & Insurance business was established in 2017 with the aim of enhancing its service model and value proposition as part of a common platform that leverages Santander's scale and capabilities.

Since then, it has been an important growth driver for the Group through its three businesses, delivering consistent double-digit growth and generating around one third of the Group's total fees, when those ceded to the commercial network are included.



- **Santander Private Banking (PB)** is our leading global platform serving our clients across 11 countries. We have a best-in-class service model and value proposition connecting clients and countries through a single platform.
- **Santander Asset Management (SAM)** is our global asset manager, which manufactures investment solutions for retail and institutional customers, with presence in 10 countries and over 50 years of experience. SAM makes the most of its local client knowledge and global capabilities to provide customers the best investment opportunities.
- **Santander Insurance** provides protection solutions following a model based on strategic alliances with leading insurance companies that enables us to have a comprehensive value proposition across 12 countries. We complement this with in-person and digital distribution capabilities to better serve our clients. Most of this activity is currently under the recently established Santander Insurance Holding with a solid governance and risk monitoring processes.

During 2024, we focused on the following strategic initiatives:

- In **PB**, where we already have a best-in-class global platform leading investment flows between Latin America, Europe and the US, we are developing key growth opportunities to expand our footprint, such as in the Middle East. During the first half of the year, we established a branch in the Dubai International Financial Centre.

Private Banking clients

Thousands

We continued expanding our high value-added offering in all countries, strengthening, for example, our alternatives investments offering and developing an open architecture for structured products. We are also increasing our focus on portfolio advisory services with ongoing initiatives mainly in Spain, Brazil and Mexico. Additionally, we established a global ultra-high-net-worth (UHNW) team based in Madrid.

We were named the Best International Private Bank in Latin America and the Best International Private Bank in eight of our countries by *Euromoney* and the Best Private Bank in Spain and Mexico by the *Professional Wealth Management Magazine*, a *Financial Times* publication.

- In **SAM**, we operate as a global asset manager leveraging our scale, global investment capabilities and product distribution hubs. In terms of retail distribution, we progressed in the implementation of our advisory model across countries and deployed SAM Conecta in Mexico and Brazil (already operating in Spain and Portugal), enhancing our distribution capabilities with real-time information for our customers.

  We recently launched Santander Money Market Fund in partnership with Amundi Asset Management to offer short-term cash management solutions to institutional and corporate clients.

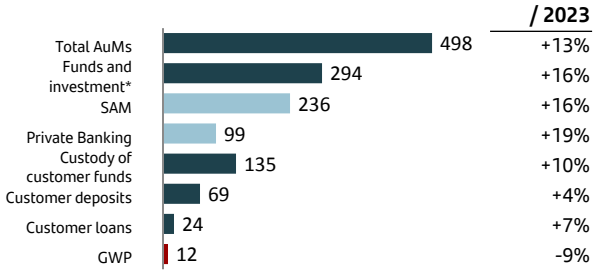
  In our alternatives business, we implemented eFront, our common operating platform to support our aim of enhancing our value proposition and consolidating our operations.

  During the year, we were the asset manager that received most awards in the Salmon Awards in Chile and were named the Best Asset Manager for Money Markets in Brazil by *Guia de Fundos de Investimentos FGV*.

- In **Insurance**, we continued to deploy our strategic plans across countries to deliver more value to our customers and simplify our operations. We are focused on completing our value offering, especially in higher growth verticals such as life savings, underscoring our long-term vision for growth in the retirement products and services. Another area of focus is health, where we have launched new products in Spain, Portugal and Chile.

  Additionally, we continue to improve customer growth and loyalty by deploying fully-digital servicing and claims capabilities, already implemented in Brazil, Spain, Poland and Argentina. We are also developing global platforms such as Autocompara, our motor insurance comparison engine, to capture additional business in Latin America.

Business performance



Total assets under management (AuMs) reached EUR 498 billion, +13% year-on-year in constant euros, driven by excellent commercial activity and positive market performance. In Insurance, gross written premiums exceeded EUR 11.5 billion in 2024. By business and in constant euros:

- In **Private Banking**, customer assets and liabilities exceeded EUR 327 billion (+11% year-on-year), with all products growing, especially funds and investments. Net new money totalled EUR 18.6 billion in 2024. We offer our customers the benefits of our scale and international presence which is reflected in 14% growth year-on-year in total clients to 299 thousand.
- In **SAM**, total AuMs reached EUR 236 billion,+16% year-on-year, on the back of the record commercial activity across countries. Net sales in 2024 reached EUR 15.8 billion, exceeding 2023 net sales.

  Spain surpassed the EUR 100 billion in AuMs for the first time and Mexico delivered record net sales.
- **Insurance** had good activity levels, with customer growth of 3% year-on-year and an increase in the protection business. Gross written premiums recorded in our Wealth business were 9% lower in 2024, impacted by lower activity in related business.

Wealth. 2024 business performance

EUR billion and % change in constant euros. December 2024

Note: total products marketed, advised, under custody and/or managed.

Results

Attributable profit was EUR 1,650 million (12% of the Group's total operating areas), 12% up compared to 2023. In constant euros, it was 14% higher, by line item:

- Total income reached EUR 3,661 million, 15% higher year-on-year, supported by solid growth in both net interest income and net fee income.

  Net interest income increased 8% in a favourable macro environment driven by solid margin management and strong commercial activity in Private Banking.

  Net fee income rose 19% year-on-year to EUR 1,489 million, with growth across businesses (mainly in Private Banking and SAM), boosted especially by higher volumes on the back of positive commercial activity and favourable market performance.

  Including the fees ceded to our commercial network, which are mainly related to Insurance (c.70% of the total fees ceded), total revenue reached EUR 6,248 million, up 13%, with a solid performance across all three businesses.

EUR million and % change in constant euros

Note: information at the total Wealth level excludes overlaps between businesses.

- Administrative expenses and amortizations were 9% higher year-on-year, due to investments in key initiatives, such as reinforcing PB teams to address the increase in commercial activity. As a result, net operating income increased 19% year-on-year and the efficiency ratio improved 2.0 pp to 35.9%.
- Net loan-loss provisions increased from net releases of EUR 17 million in 2023 to a EUR 41 million net provision in 2024.
- The other gains (losses) and provisions increased from a loss of EUR 18 million in 2023 to a EUR 48 million loss in 2024.

The total contribution to Group profit (profit after tax plus fees ceded to the commercial network) reached EUR 3,399 million, up 9% year-on-year (+12% in constant euros).

RoTE in 2024 was 78.7%, a 6.5 pp improvement year-on-year.

Payments

Payments

Underlying attributable profit

EUR 413 mn

Strategy	PagoNxt and Cards bring a unique position in the payments industry to the Group, covering both sides of the value chain of card payments (issuing and acquiring businesses) and account-to-account payments.
Business performance[1]	Activity increased in both businesses supported by global platform development, enabling further scale gains. In PagoNxt, Getnet's Total Payments Volume rose 13% year-on-year and the number of transactions improved 5%. In Cards, turnover rose 9% year-on-year and transactions rose 8%.
Results[1]	Attributable profit was EUR 413 million. Excluding charges after discontinuing our merchant platform in Germany and Superdigital in Latin America in Q2 2024, profit was EUR 656 million, increasing 18% year-on-year. PagoNxt's EBITDA margin improved 2.3 pp to 27.5%

1. In constant euros.

PagoNxt and Cards strategy

At the beginning of the year, we consolidated our PagoNxt and Cards businesses into the unique global business of Payments.

In PagoNxt, we made progress in the following strategic priorities:

- In **Getnet**, building on our global platform we deployed global solutions which enable us to gain market share. For example, our Tap On Phone functionality launched in Spain, Portugal and Brazil, our Dynamic Currency Conversion service in Brazil, and a regional e-commerce API for merchants who are pursuing acquiring and processing services in Brazil, Mexico, Argentina and Chile through a single integration.

  We remain focused on our current value proposition in Spain and Portugal, and as such, we decided to discontinue our merchant platform in Germany in June 2024.

- In **Ebury**, we continued to make progress by focusing on: i) growing customers by expanding our product offering and online capabilities; ii) expanding geographically with a focus on emerging markets; and iii) introducing tailored products to capture verticals such as mass payments.

- **PagoNxt Payments** integrated Lynx Tech, a software company based on AI to detect and prevent financial crime. We continued to develop Payments Hub, our A2A payment processor which already processes all types of payments globally for our banks, and aims to achieve an industry-leading cost per transaction with value-added services and is starting to offer our services to third parties.

Also, in 2024, we discontinued our Superdigital platform in Latin America, in line with our strategy to promote the use of common platforms across the Group.

In Cards, we focused on the following priorities:

- **Expand the business:** we made progress implementing Cards Risk Data Lab in four countries, a global solution with more than 1 million new pre-approved customers. We launched a differential joint value proposition (card + PoS) in Spain, Chile and Portugal, reaching more than 50,000 new business cards.

- **Improve customer satisfaction**: we are working to offer the best card payment experience in a simple way at any time, through what we call Invisible Payments. For physical payments, we launched Apple Pay in Mexico and Argentina, while in e-commerce payments in Brazil we implemented Click to Pay.

- **Implement our global card platform (Plard)**, which manages more than 15 million debit cards in Brazil and will start issuing new customer debit cards in Chile in early 2025. In Mexico, the new authorizer is live with 160 million transactions per month.

Business performance

Loans and advances to customers increased 4% year-on-year. In gross terms, excluding reverse repos and in constant euros, loans rose 15%, driven mainly by Cards in Brazil and Mexico.

Payments has a small amount of deposits, concentrated in PagoNxt, that decreased 27% year-on-year. Excluding repos and in constant euros they also fell 27%.

Results

Attributable profit was EUR 413 million in 2024 (3% of the Group's total operating areas), 32% down year-on-year affected by the aforementioned charges related to the discontinuation of platforms. Excluding these charges, profit was EUR 656 million, 18% up year-on-year in constant euros, by line item:

- Total income grew 9%, boosted by a good NII performance driven by higher activity.

- Administrative expenses and amortizations rose 8% due to our investments in platforms both in Cards and PagoNxt.

- Net loan-loss provisions, mainly related to Cards, increased 8% driven by South America and Mexico.

The charges related to the discontinuation of platforms were recorded in the other gains (losses) and provisions line which recorded a EUR 347 million loss (EUR 84 million loss in 2023).

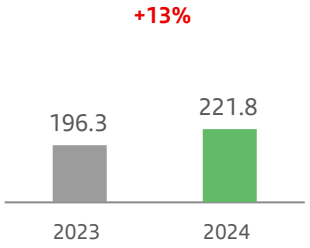
PagoNxt



Business performance

In 2024, the total number of transactions in Getnet reached 9.8 billion, 5% higher year-on-year, and the total payments volume (TPV) was EUR 221.8 billion, 13% more than in 2023 in constant euros, driven by the good performance in Europe, Mexico and Chile.

In PagoNxt Payments, the number of transactions processed in 2024 was 1.2 billion compared to 303 million in 2023.

PagoNxt. Activity. TPV (Getnet)

EUR billion and changes in constant euros

Results

Attributable loss of EUR 299 million in 2024 (EUR 56 million loss if we exclude the charges related to the discontinuation of platforms), compared to a EUR 77 million loss in 2023. There was no material impact from exchange rates in the period. Year-on-year and in constant euros:

- Total income rose 14%, driven by the increase in Getnet's revenue in Europe, Mexico and Chile and a good performance in Ebury.
- Administrative expenses and amortizations rose 9% year-on-year, reflecting continued investment in global payments platforms.
- Net loan-loss provisions improved 31%, supported by all regions.
- Other gains (losses) and provisions recorded losses of EUR 296 million, higher losses than a year ago due to the aforementioned charges related to the discontinuation of our platforms.

EBITDA margin was 27.5%, 2.7 pp higher than in 2023.

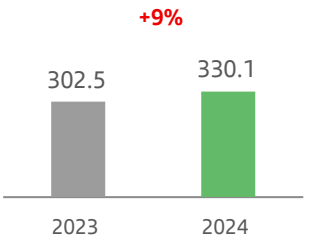
Cards

Business performance



We recorded good activity levels in the year, resulting in 9% card turnover growth year-on-year in constant euros, especially credit cards (+14% in constant euros), with most countries at record levels.

The number of transactions rose 8% year-on-year, boosted by a larger card pool and increased card usage across all transaction sizes.

Loans and advances to customers increased 4% year-on-year. In gross terms, excluding reverse repos and in constant euros, they rose 16%, driven mainly by Brazil and Mexico.

Cards. Activity. Turnover

EUR billion and changes in constant euros

Results

In 2024, attributable profit was EUR 712 million, 4% higher compared to 2023. In constant euros, profit rose 10%, by line item:

- Total income increased 7%. Net interest income improved (+11%) mainly due to higher volumes in Latin America, which offset the fall in net fee income (-5%) affected by customer retention campaigns in Mexico, a regulatory impact in Chile and a one-time positive fee recorded in Q1 2023 in Brazil.
- Administrative expenses and amortizations rose 7% driven mainly by our investments in platforms.
- Net loan-loss provisions rose 9%, below portfolio growth.
- Other gains (losses) and provisions recorded a EUR 50 million loss compared to a EUR 42 million loss in 2023.

In 2024, RoTE in Cards was 32.6% (35.5% in 2023).

Corporate Centre

Underlying attributable profit
-EUR 1,154 mn

2024 highlights:

The Corporate Centre continued to support the Group and add value, defining, developing and coordinating the Group's strategy, as well as aiding the operating units.

It carries out the corporate oversight and control functions, coordinates interactions with the Group's supervisors and regulators and also carries out functions related to financial and capital management.

Attributable loss of EUR 1,154 million in 2024, compared to a EUR 998 million loss in 2023, due to a weaker performance in net interest income, affected by greater interest expenses related to higher TLAC/MREL issuances and increased losses on financial transactions driven by the impact from foreign currency hedges and risk transfer initiatives, which were partially offset by an improvement in the sum of the rest of the lines (costs, net fee income and tax).

Strategy and functions

The Corporate Centre contributes value to the Group, through the following functions, among others:

- Implementing global control frameworks and supervision.
- Fostering the exchange of best practices in cost management, which enables us to be one of the most efficient banks.
- Collaborating in the definition and execution of the global strategy, competitive development operations and projects that ensure we meet the business plan.
- Contributing to the launch of projects that our global businesses will carry out which aim to leverage our worldwide presence to generate economies of scale.
- Ensuring open and constructive communication with shareholders, analysts, investors, bondholders, rating agencies and other market players.
- Adding value to our businesses, countries and divisions by encouraging the exchange of best practices, driving and managing innovative global initiatives and defining corporate policies, to improve efficiency in our processes and service quality for our customers.

It also coordinates the relationship with European regulators and supervisors and carries functions related to financial and capital management, as follows:

- **Financial Management functions**:
  - Structural management of liquidity risk associated with funding the Group's recurring activity and stakes of a financial nature. At the end of 2024, the liquidity buffer was EUR 351 billion.

    This is done via diversified funding sources (issuances and other), maintaining an adequate profile in volumes, maturities and costs.

    The price of these transactions with other Group units is the market rate that includes all liquidity concepts (which the Group supports by immobilizing funds during the term of the transaction) and regulatory requirements (TLAC/MREL).
  - Interest rate risk is also actively managed in order to dampen the impact of interest rate changes on net interest income, conducted via high credit quality, very liquid and low capital consumption derivatives.
  - Strategic management of exposure to exchange rates in equity and dynamic management of the FX hedges related to the units' next twelve months results in euros. The net investments in equity currently hedged totalled EUR 12,169 million (mainly in Mexico, the UK and Poland) through different FX instruments (spot or forwards).
- **Management of capital and reserves**: capital analysis, adequacy and management of the Group including coordination with subsidiaries, profitability monitoring to maximize shareholder returns, setting solvency targets and capital contributions, monitoring the capital ratio (in both regulatory and economic terms), and efficient capital allocation to the units.

Results

The attributable loss of EUR 1,154 million was 16% higher than in 2023 (loss of EUR 998 million), as follows:

- Net interest income worsened by EUR 268 million, as increased liquidity buffer remuneration was amply offset by greater interest expense related to higher volumes of TLAC/MREL issuances.
- Losses on financial transactions increased by EUR 106 million due to the impact from foreign currency hedges and risk transfer initiatives.
- Administrative expenses and amortizations showed a positive trend, decreasing 3% year-on-year, driven by ongoing simplification measures.
- Net loan-loss provisions recorded a EUR 3 million release in 2024, after having registered a release of EUR 2 million in 2023.
- The net negative impact of other gains (losses) and provisions (which includes provisions, intangible asset impairments, cost of the state guarantee on deferred tax assets, pensions, litigation, one-off provisions, etc.) increased from a loss of EUR 134 million in 2023 to a EUR 265 million loss in 2024.

Strategy	We maintained our objective to accelerate our business transformation to achieve higher growth and a more efficient common operating model.
Business performance [1]	New business lending volumes improved year-on-year and there was a strong increase in total customers (+527,000). However, the stock of loans decreased slightly, still impacted by prepayments. Customer deposits decreased, driven by both demand and time deposits.
Results [1]	Attributable profit increased 19% year-on-year to EUR 6,644 million, with strong revenue growth, mainly from net interest income, and lower provisions.

1. In constant euros.

Strategy

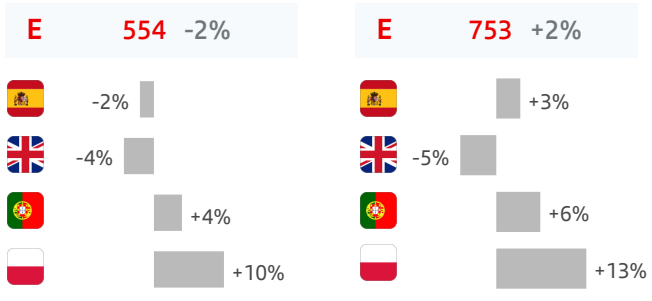
In 2024, we focused on growing and transforming our business and implementing of our common operating model.

- In Retail, we continued to drive digitalization through a common online banking and mobile experience, while reducing running costs and streamlining products and processes.
- In CIB, we focused on deepening customer relationships and boosting our distribution capabilities.
- We continued to grow our Wealth business, which is a key driver of fee generation, while increasing its efficiency by developing centralized global technology platforms.
- In Payments, we remain focused on our current PagoNxt value proposition in Spain and Portugal and on expanding our Cards business.

Business performance

Commercial activity continued its positive trend, supported by an increase of more than 527,000 customers year-on-year. Loans and advances to customers rose 2% year-on-year. In gross terms, excluding reverse repos and in constant euros, they decreased 2%, mainly in the UK and Spain, partially offset by growth in Poland and Portugal supported by new loan origination in Retail.

Customer deposits increased 1% year-on-year. Excluding repos and in constant euros, they decreased 1% year-on-year driven by both time and demand deposits. Mutual funds rose 19% in constant euros.



Results

Attributable profit was EUR 6,644 million in 2024 (48% of the Group's total operating areas), up 21% year-on-year. In constant euros, profit rose 19% year-on-year, as follows:

- Total income grew 8%, with an increase in net interest income (+3%), which rose significantly in Spain, Poland and Portugal due to good margin management, that more than offset the fall in the UK due to lower volumes (in line with our strategy) and a higher cost of deposits in a more competitive market. Net fee income rose 5%, mainly driven by mutual fund fees in Spain. Gains on financial transactions increased 31% driven by greater activity in CIB.
- Administrative expenses and amortizations increased 3%, flat in real terms as higher costs in the UK and Poland, both affected by competitive labour markets, were offset by declines in Portugal and Spain. Net operating income rose 12% and the efficiency ratio improved to 40.0%.
- Net loan-loss provisions decreased 28% mainly driven by credit quality improvement across countries and by the macro-outlook improvement in the UK.
- The other gains (losses) and provisions line recorded losses of EUR 2,111 million, 24% higher, related to the temporary levy on revenue earned in Spain and greater charges related to the Swiss franc mortgage portfolio in Poland.

Spain

Underlying attributable profit
EUR 3,762 mn

Business performance

During the year, we continued to drive our transformation programme and we maintained the solid trend in customer growth, achieving 40 consecutive months of positive net growth (+285,000 customers in 2024).

There were good commercial dynamics, with the focus on profitability. In Retail, new business volumes increased double digits, mainly due to corporate, personal loans and mortgages. We increased our market share in payrolls, pensions and cards and we recorded positive trends in mutual funds and insurance business. In CIB, we consolidated our leadership in the major league tables.

Loans and advances to customers increased 3% year-on-year. In gross terms and excluding reverse repos, loans decreased 2%, impacted by SME amortizations, partially offset by growth in CIB and Wealth growth.

Customer deposits were flat year-on-year. Excluding repos, they decreased 1%, affected by time deposits, mainly in CIB. Mutual funds increased 20% year-on-year.

Results

Attributable profit in 2024 reached EUR 3,762 million, 59% higher than in 2023. By line item:

- Total income was up 18% propelled by net interest income, mainly in Retail, net fee income mainly from mutual funds, a lower contribution to the DGF and the end of contribution to the SRF in 2023.
- Administrative expenses and amortizations increased 1%. In real terms, they fell 2% driven by efficiencies generated. As a result, net operating income rose 30% and the efficiency ratio improved 6 pp to 35.7%.
- Net loan-loss provisions decreased 17% supported by proactive risk management, with an improvement in the cost of risk and NPL ratio to 0.50% and 2.68%, respectively.
- The other gains (losses) and provisions line recorded 2% higher losses, due to a higher charge for the temporary levy on revenue earned in Spain.

United Kingdom

Underlying attributable profit
EUR 1,306 mn

Business performance

During the year, we advanced in our transformation programme through digitalization and automatization, which helped to simplify the business and improve efficiency. Our focus on customer service, both in branches and through a new mobile banking app received very positive scores.

We prioritized profitability, through pricing discipline and planned balance sheet optimization. As a result, loans and advances to customers were flat year-on-year. In gross terms, excluding reverse repos and in constant euros, they decreased 4%.

Customer deposits decreased 1% year-on-year. Excluding repos and in constant euros, both customer deposits and total customer funds decreased 5%. Mutual funds were flat year-on-year in constant euros.

Results

Attributable profit was EUR 1,306 million, 15% down from 2023. In constant euros, profit decreased 18%. By line item:

- Total income declined 8%, mainly due to a decrease in net interest income, affected by lower volumes (in line with our strategy) and a higher cost of deposits in a very competitive market. Net fee income decreased mainly due to lower transactionality.
- Administrative expenses and amortizations rose 3% (+1% in real terms) as costs related to investments, technology and personnel were partially offset by transformation savings. The efficiency ratio stood at 55.9%.
- Net loan-loss provisions decreased 75%, driven by macro-outlook improvement in the UK and good risk management. The cost of risk was 3 bps, an improvement of 7 bps in the year.
- The other gains (losses) and provisions line recorded losses of EUR 441 million, a 1% greater loss year-on-year.

Portugal

Underlying attributable profit
EUR 1,001 mn

Business performance

In 2024, our strategy remained centred on the execution of our commercial and digital transformation, focusing on excellence in customer experience and satisfaction, especially in Retail, which enabled us to grow in both customers and volumes.

During the year, and despite a competitive environment, we were leaders in new mortgage lending, supported by our mixed-rate offering. In individuals, there was a good performance in personal loans and insurance (especially in health). In corporates, we promoted investment projects and energy transition, both in Retail and CIB.

As a result, loans and advances to customers grew 4% year-on-year. In gross terms excluding reverse repos, they also increased 4%.

Customer deposits increased 5%, also +5% excluding repos, supported by a well-targeted strategy. Mutual funds rose 15% year-on-year, supported by our growth strategy focused on high value-added segments.

Results

Attributable profit reached EUR 1,001 million in 2024, 12% higher than in 2023 as follows:

- Total income increased 6%, reflecting higher net interest income (+6%) supported by higher volumes and good margin management. Net fee income increased slightly (+1%), in part due to legal limitations on fees charged on mortgages and other loans.
- Administrative expenses and amortizations rose 1% (-1% in real terms). However, the efficiency ratio improved 1 pp to 26.1%.
- Net loan-loss provisions fell 86%, returning to the minimum levels seen in 2022, with a cost of risk of only 3 bps and an NPL ratio that improved 0.19 pp to 2.40%.
- The other gains (losses) and provisions line recorded losses of EUR 61 million, a 25% greater loss year-on-year.

Poland

Underlying attributable profit
EUR 800 mn

Business performance

In 2024, we launched a new strategy based on three pillars: total experience (best experience for customers and employees), total digitalization (digitalizing and automatizing customer journeys with the best digital channels) and total responsibility (regulatory compliance and responsible business agenda). We remain in the top 3 in NPS and we substantially increased active customers, supported by OneApp in the first year since its implementation.

There were good commercial dynamics, mainly in SMEs and corporates. Loans and advances to customers were 12% up in the year. In gross terms, excluding reverse repos and in constant euros, they rose 10% mainly in Retail and in CIB.

Customer deposits increased 13% year-on-year. Excluding repos and in constant euros, they rose 11%, driven by both time and demand deposits. Mutual funds increased 30% in constant euros.

Results

Attributable profit was EUR 800 million in 2024. Year-on-year, profit rose 19%. In constant euros, it increased 13%, as follows:

- Total income was 6% higher, driven by net interest income (+6% on the back of higher volumes and strict funding cost control). Net fee income grew 8%, mainly in FX and funds.
- Administrative expenses and amortizations increased 6%, mainly affected by a competitive labour market. The efficiency ratio stood at 27.1% in line with 2023.
- Net loan-loss provisions decreased 28%, with a significant improvement in the cost of risk.
- The other gains (losses) and provisions line recorded losses of EUR 429 million, a 61% greater loss year-on-year, impacted by charges related to the Swiss franc mortgage portfolio.

Digital Consumer Bank Europe

Underlying attributable profit
EUR 642 mn

Strategy	Our strategy is focused on strengthening our leadership in auto and non-auto through strategic alliances and better service through new operational leasing and non-auto (Zinia) platforms.
Business performance [1]	In 2024, new business volumes rose 1% year-on-year (+2% in auto) and the stock of loans grew 4%. Deposits grew double digits, in line with our objective to increase retail funding through common platforms to reduce liability costs.
Results [1]	Net operating income rose 6% year-on-year due to higher net interest income and net fee income and lower costs. However, this was not reflected in attributable profit (-47% year-on-year) due to cost of risk normalization, higher provisions related to the Swiss franc mortgage portfolio in Poland and the provision for potential complaints related to motor finance dealer commissions in the UK.

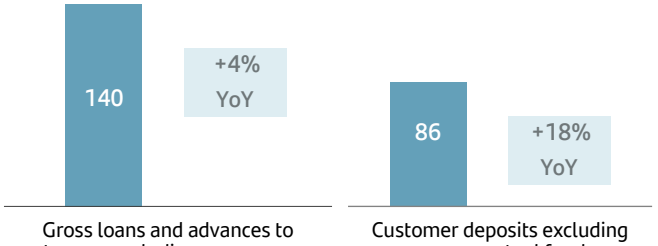
1. In constant euros.

Strategy

Our strategy in Europe is aligned with that of Consumer at the global level. The vision in our DCB Europe business is to become the **preferred choice of our partners and our end customers** and offer greater profitability and value creation to our shareholders, while being the most cost competitive player in the industry.

Our main focus is on **transforming our operating model:**

- **Offering global solutions** integrated into our partners' (OEMs, importers and retailers) processes, accompanying them as their increasingly digital business models evolve.
- **Simplifying and automating our processes** to improve customer experience and gain scalability.
- **Building and developing global platforms.** In 2024, we strengthened our operational leasing solution and launched an Amazon co-branded card through Zinia in Germany. We prepared the launch of an Openbank branch in Germany (opened in January 2025) and we continued to upgrade our customer value proposition and experience.



Business performance

The stock of loans and advances to customers rose 3% year-on-year. In gross terms, excluding reverse repos and in constant euros, it rose 4% year-on-year (primarily due to auto). New business volumes rose 1% year-on-year in constant euros, mainly new auto.

In line with our strategy to increase retail funding, customer deposits increased 17% year-on-year. Excluding repos and in constant euros, they grew 18% to EUR 81 billion. Mutual funds increased 24% in constant euros albeit from very low levels. Our access to wholesale funding markets remained strong and diversified.

DCB Europe. 2024 business performance

EUR billion and % change in constant euros

Results

Attributable profit in 2024 was EUR 642 million (5% of the Group's total operating areas), a 46% decline year-on-year. In constant euros, profit fell 47%, as follows:

- Total income increased 3%, due to higher net interest income (+4%), supported by active loan repricing and customer deposit growth, and net fee income (+13%) driven by greater penetration in direct insurance, especially in Germany and due to higher fees from our agreements.
- Administrative expenses and amortizations fell slightly, even as we invest in business growth. Net operating income increased 6% and the efficiency ratio improved 1.7 pp to 45.9%.
- Net loan-loss provisions were 52% higher, impacted by higher provisions in Swiss franc mortgage portfolio in Poland. They were also impacted by normalization, in line with expectations, volumes growth, some regulatory impacts and lower portfolio sales than last year. Despite all of this, cost of risk remained at low levels (0.88%), having normalized in line with expectations.
- Other gains (losses) and provisions registered a loss of EUR 735 million in 2024 compared to a EUR 72 million loss in 2023, mainly driven by Swiss franc mortgage provisions and the provision for potential complaints related to motor finance dealer commissions in the UK (for more information, see note 25.e in the consolidated financial statements).

The largest contribution to profit came from Germany (EUR 229 million), followed by the Nordic countries (EUR 202 million) and France (EUR 113 million).

North America

Underlying attributable profit
EUR 2,579 mn

Strategy	We continue to progress in our digital transformation in the region, leveraging the strengths of our global businesses with the recent launch of Openbank, to deliver a superior customer experience with improved operational leverage.
Business performance [1]	Loans and advances to customers were flat year-on-year, as growth in Mexico was offset by decrease in the US. Customer deposits declined 5%, in line with our strategy to reduce excess corporate deposits in the US, partially mitigated by deposit growth in Mexico and Consumer in the US.
Results [1]	Attributable profit grew 12% year-on-year, driven by revenue growth in CIB in both countries and the good revenue performance in all businesses in Mexico, amply offsetting higher costs (inflation and investments).

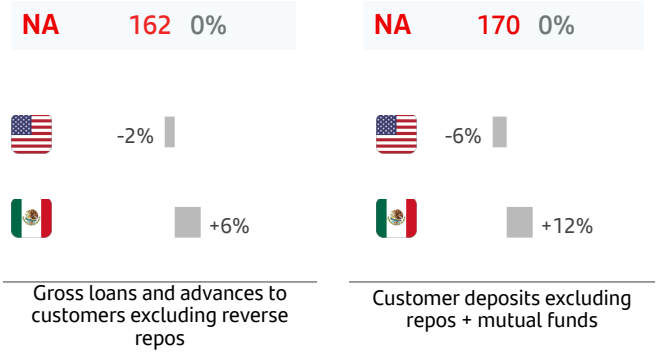
1. In constant euros.

Strategy

We continued to pursue business transformation across the US and Mexico, while leveraging our global and regional scale. In 2024, we:

- Remained focused on the transformation of our Retail business, targeting product simplification, digital investments, process and operations streamlining.
- Achieved an important milestone in Consumer, launching Openbank in the US to gather retail deposits and we prepared the full launch in Mexico (in February 2025) to compete with new players in the country.
- Continued to invest in our CIB Banking Build-Out in the US (US BBO initiative), with the expansion of our advisory services and product capabilities, which is already positively impacting revenue.
- Pursued growth in Wealth, with targeted investments to enhance our capabilities and strengthen business growth levers.

Business performance



Loans and advances to customers were up 3% year-on-year. In gross terms, excluding reverse repos and in constant euros, they were flat as growth in Mexico was offset by decrease in the US, in line with our strategy focused on capital optimization and efficient allocation, and value creation.

Customer deposits were flat year-on-year. Excluding repos and in constant euros, they decreased 5%, in line with our strategy to reduce excess corporate deposits in CIB in the US.

Mutual funds grew 23% year-on-year in constant euros, largely driven by Retail in Mexico and Wealth in both countries.

North America. 2024 business performance

EUR billion and YoY % change in constant euros

Gross loans and advances to customers excluding reverse repos

Customer deposits excluding repos + mutual funds

Results

Attributable profit in 2024 was EUR 2,579 million (19% of the Group's total operating areas), +10% year-on-year. In constant euros, profit grew 12%, by line:

- Total income increased 7%, driven by strong performance in CIB in the US, as we consolidate our US BBO initiative, and by growth in all businesses in Mexico, supported by higher volumes.
- Administrative expenses and amortizations were 5% higher impacted by inflation. In real terms, they rose slightly (+1%) as higher costs related to investments that we are undertaking in Retail in Mexico and for the development of new capabilities in CIB in the US were offset by savings from transformation initiatives.
- Net loan-loss provisions rose 2%, reflecting business growth in Retail and Payments in Mexico, partially compensated by lower provisions in auto and Commercial portfolios in the US.
- We recorded a EUR 336 million loss in the other gains (losses) and provisions line, compared to EUR 138 million loss in 2023 due to charges related to transformation acceleration in the US.

United States

Underlying attributable profit
EUR 1,109 mn

Business performance

Loans and advances to customers were 6% higher than in December 2023. In gross terms, excluding reverse repos and in constant euros, they were 2% down year-on-year, in line with our focus on capital optimization and efficient allocation and value creation.

Customer deposits rose 3% year-on-year. Excluding repos and in constant euros, they fell 8%, mainly due to our strategy to reduce excess corporate deposits in CIB. Deposits from individuals, including those from Openbank since its launch in Q4 2024, grew 2% year-on-year. Mutual funds increased 12% year-on-year in constant euros, supported by an enhanced value proposition.

Results

Attributable profit in 2024 was EUR 1,109 million, a 19% increase year-on-year. In constant euros, profit also grew 19%, as follows:

- Total income rose 5%, driven by strong net fee income growth (+50%) and higher gains on financial transactions supported by increased activity levels in CIB and the good performance related to the Multifamily servicing agreement with the FDIC. Net interest income decreased 1%, due to higher funding costs, partially offset by higher volumes in auto loans. Leasing income dropped mainly due to lower leasing volumes.
- Administrative expenses and amortizations increased 4%. In real terms, they rose just 1%, as investments related to the Openbank launch and the US BBO initiative were largely offset by savings captured from our transformation plan.
- Net loan-loss provisions improved 3% due to lower provisions in the auto and Commercial portfolios, in line with portfolio performance. Cost of risk improved to 1.82%.
- Other gains (losses) and provisions recorded a EUR 190 million loss compared to a EUR 74 million loss in 2023, due to charges related to transformation acceleration.
- Tax on profit had a positive impact both in 2023 and 2024 as a result of the tax incentives related to electric vehicle leasing.

Mexico

Underlying attributable profit
EUR 1,671 mn

Business performance

In 2024, we recorded solid activity levels, mainly in individuals, where we continued to perform well with a market share of 14% well above our total loan share of 12%.

Loans and advances to customers decreased 6% year-on-year. In gross terms, excluding reverse repos and in constant euros, loans rose 6%, with growth in all global businesses except CIB (-6% year-on-year, in line with our focus on profitability and risk appetite). There were notable increases in Retail (good performance in mortgages, personal loans and corporates) and double-digit growth in Consumer and Wealth.

Customer deposits declined 7% year-on-year. Excluding repos and in constant euros, they increased 5%, driven by demand deposit growth (+7%) due to our strategy to manage funding costs and improve the mix. Mutual funds rose 33% in constant euros.

Results

Attributable profit in 2024 was EUR 1,671 million, 7% higher year-on-year. In constant euros, it increased 10% year-on-year as follows:

- Total income rose 10%, with increases in net interest income (+8%, with growth in all businesses), net fee income (+4%, supported by mutual fund and insurance fees) and gains on financial transactions (+94%).
- Administrative expenses and amortizations increased 6%. In real terms however, they rose just 1%, as our investments in technology and digitalization were offset by savings from transformation initiatives. As a result, the efficiency ratio improved by 1.4 pp to 42.5%.
- Net loan-loss provisions were up 16%, due to the normalization of provisions and solid loan growth. Asset quality performed well and cost of risk remained at comfortable levels (2.64%).
- Other gains (losses) and provisions recorded a EUR 62 million loss, compared to a EUR 57 million loss in 2023.

South America

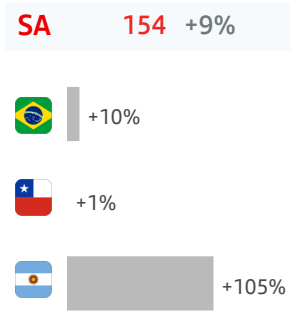
Underlying attributable profit
EUR 3,863 mn

Strategy	In 2024, our franchise continued to grow and create value for the Group, in line with our objective of being the primary bank for our customers and becoming the most profitable bank in each of the countries where we operate. Given our focus on service quality, our customer base grew 10% year-on-year, reaching 80 million.
Business performance [1]	Both loans and deposits grew year-on-year (+9% and +12%, respectively), as we supported regional strategic initiatives including multinationals, consumer, payments and inclusive and sustainable businesses through differential value propositions.
Results [1]	Attributable profit was EUR 3,863 million in 2024, reflecting a 36% increase year-on-year driven by higher activity, lower cost of deposits, good performance in net fee income as well as improvements in efficiency.

1. In constant euros. In volumes and results, the variations in constant euros have been calculated considering the Argentine peso exchange rate on the last working day for each of the periods presented. For further information, see section 8. 'Alternative performance measures' of this chapter.

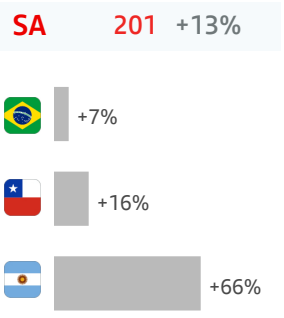
Strategy

In 2024, we focused on being the primary bank for our customers, leveraging the synergies generated by our global businesses:



- In Retail, we continued on our journey to become a digital bank with branches by streamlining our product and service offering and improving customer experience.
- In Consumer, we maintained our market leadership in auto by strengthening strategic alliances and new business acquisitions.
- In CIB, we continued evolving towards a pan-regional offering, focusing on Markets and Corporate Finance businesses.
- In Wealth, we increased liability gathering to drive loyalty and continued developing our distribution channels.
- In Payments, we expanded our Getnet business and started implementing Plard, our Cards platform, in Brazil and Chile.

Business performance



Loans and advances to customers decreased 4% year-on-year. In gross terms, excluding reverse repos and in constant euros, they rose 9%, with increases in all global businesses. Retail had a good performance overall in Brazil and in corporates in Uruguay and Chile. There were positive trends in loans across our main countries in Consumer, Payments and Wealth. In CIB, growth in Brazil and Argentina was partially offset by decreases in Chile and Uruguay.

South America. 2024 business performance

EUR billion and YoY % change in constant euros.

Gross loans and advances to customers excluding reverse repos

Customer deposits excluding repos + mutual funds

Customer deposits fell 7% year-on-year. Excluding repos and in constant euros, they grew 12%, rising in all our main countries and driven by double-digit growth in both time and demand deposits. Mutual funds increased 14%, supported by all our main countries.

Results

Attributable profit was EUR 3,863 million (28% of the Group's total operating areas), 27% higher than in 2023. In constant euros, profit increased 36% as follows:

- Total income rose 18%, supported by 27% net interest income growth, up in all global businesses (of note, Retail) on the back of higher activity in the region and, in the case of Brazil and Chile, also benefiting from negative sensitivity of their balance sheets in a lower interest rate environment. Solid net fee income growth amply offset lower gains on financial transactions.
- Administrative expenses and amortizations increased 7% (up 3% in real terms), mainly driven by Argentina, but with good cost management in our main countries. The efficiency ratio improved 3.4 pp, reaching 35.1%.
- Net loan-loss provisions rose 9%, due to Brazil and Argentina, where provisions increased (although both by less than portfolio growth), normalization from low levels in Chile and portfolio growth in Consumer in Uruguay. The cost of risk reached 3.50%, from 3.36% in December 2023.
- Greater loss in other gains (losses) and provisions, mainly driven by Argentina and Chile.

Brazil

Underlying attributable profit
EUR 2,422 mn

Business performance

In Brazil, we continued working to become the primary bank for our customers by launching several initiatives through our global businesses. In Retail, we focused on providing a personalized experience for our customers through data analysis and the use of artificial intelligence. In Consumer, we strengthened our strategic alliances and maintained our leadership in auto for individuals. In CIB, we consolidated our leadership in foreign trade financing and foreign currency. In Wealth, we furthered our fund gathering plan, leveraging a diversified investment ecosystem. In Payments, we achieved sustained growth and increased active customers.

Loans and advances to customers fell 8% year-on-year. In gross terms, excluding reverse repos and in constant euros, they rose 10%, supported by all global businesses, with notable growth in Retail and Consumer.

Customer deposits decreased 15% year-on-year. Excluding repos and in constant euros, they grew 8% mainly driven by time deposits (+9%). Mutual funds rose 6% and total customer funds increased 7% in constant euros.

Results

Attributable profit in 2024 was EUR 2,422 million, 26% higher year-on-year. In constant euros, it increased 36%, as follows:

- Total income rose 11%, as the good performance in net interest income (+20%), which benefitted from higher volumes and the negative sensitivity of the balance sheet in a lower interest rate environment, and net fee income (+6%, particularly insurance and FX fees) amply offset lower gains on financial transactions.
- Administrative expenses and amortizations increased 3%, but fell 1% in real terms, as a result of good cost management. The efficiency ratio improved to 32.1%.
- Net loan-loss provisions rose 3%, increasing below loan growth and having registered charges in 2023 due to single names in CIB. The cost of risk stood at 4.51% (4.77% in 2023).
- The negative impact of other gains (losses) and provisions decreased in the period (-3%).

Chile

Underlying attributable profit
EUR 629 mn

Business performance

In 2024, we remained focused on improving customer service, furthering digitalization and increasing our customer base by leveraging our digital products. This enabled us to be the most recommended bank in the country for the fifth consecutive year. We further expanded Getnet and we are also scaling our platform to make international transfers to 28 countries, with no cost for our customers. In Consumer, we strengthened our leadership, exceeding a market share of 24%.

We lead the market among privately-owned banks in loans and deposits. Loans and advances to customers decreased 5% year-on-year. Excluding reverse repos and in constant euros, gross loans and advances to customers rose 1%, increasing in all global businesses except CIB.

Customer deposits rose 2% year-on-year. Excluding repos and in constant euros they were 10% higher, mainly underpinned by time deposits (+13%), while mutual funds grew 32%. Total customer funds increased 16% in constant euros.

Results

Attributable profit in 2024 was EUR 629 million, up 8% year-on-year. In constant euros it grew 22%, by line item:

- Total income rose 28%, as an increase in net interest income (+48%), which benefitted from higher activity and the negative sensitivity of the balance sheet in a lower interest rate environment, and in net fee income (mainly driven by mutual funds, cards and advisory) more than offset lower gains on financial transactions (falling from high levels in 2023).
- Administrative expenses and amortizations were up 3% (-1% in real terms) and the efficiency ratio improved 8.6 pp to 36.0%.
- Net loan-loss provisions increased 53%, normalizing from very low levels. The cost of risk rose 39 bps, standing at 1.19%. The NPL ratio stood at 5.37%.
- Other gains (losses) and provisions reflected a loss of EUR 51 million related to labour charges (gain of EUR 51 million in 2023).

Argentina

Underlying attributable profit
EUR 665 mn

Business performance

In Argentina, we pursued our profitable growth and value creation strategy, focused on customer experience. We further consolidated our leadership in the transactional business, generating results with low capital consumption. In Retail, we relaunched mortgage loans and redefined our operating model, focusing on optimizing cost to serve. In Consumer, we strengthened our leadership via strategic alliances. We expanded our perimeter in Wealth and also developed new digital functionalities in Cards.

In volumes and results, in contrast to the other countries, the variations in Argentina have been calculated only considering the Argentine peso exchange rate on the last working day for each of the periods presented. For further information, see section 8. 'Alternative performance measures' of this chapter.

Loans and advances to customers rose 104% year-on-year. In gross terms and excluding reverse repos they were up 105%, underpinned by growth in all businesses (notably in Retail).

Customer deposits increased 74% year-on-year. Excluding repos, they also grew 74%, supported by both demand (+72%) and time deposits (+82%). Mutual funds rose 51% in 2024, contributing to a 66% increase in customer funds.

Results

Attributable profit in 2024 was EUR 665 million, 72% higher year-on-year. By line item:

- Total income grew 61%, underpinned by increases in net interest income (higher credit volumes and income from public securities) and net fee income, in an environment characterized by narrowing margins, regulatory changes and disinflation.
- Administrative expenses and amortizations rose 32%, well below total income growth total income. As a result, the efficiency ratio improved 9.1 pp year-on-year, reaching 41.1%, while net operating income was up 90%.
- Net loan-loss provisions increased (+89%) although by less than loan growth. The cost of risk stood at 4.59%, improving 2.0 pp year-on-year.
- Other gains (losses) and provisions registered charges relating to labour charges.

5. RESEARCH, DEVELOPMENT AND INNOVATION (R&D&I)

Research, development and innovation activity

Innovation and technological development are crucial to Santander's strategy. We focus on operational excellence and customer experience to meet the challenges that stem from digital transformation.

The information we gather through new technology platforms helps us to better understand the customer journey and design a more accurate digital profile which boosts trust and increases customer loyalty.

In addition to competition from other banks, we must be mindful of new entrants to the financial system that use new technology to stand out from the crowd and gain a competitive advantage.

Developing a sound strategic technology plan must provide:

- greater capacity to adapt to customers' needs (customized products and services, full availability and excellent, secure service on all channels);
- enhanced processes for Santander's professionals to ensure greater reliability and productivity; and
- proper risk management that provides teams with the means to spot and assess all business, operational, reputational, regulatory and compliance risks.

As a global systemically important bank, Santander and its subsidiaries face increasing regulatory demands that impact system models and underlying technology, which require considerable investments to guarantee compliance and legal certainty.

As in previous years, the European Commission's 2024 EU Industrial R&D Investment Scoreboard (based on 2023 data) recognized our technological efforts. We were the top bank in R&D investment, both in Europe and globally, with EUR 2,197 million invested. In 2024, the equivalent investment in R&D&I to that considered in the ranking was EUR 2,104 million. See note 18 to the consolidated financial statements.

Technology strategy

To aid the Group's strategy to become the best open digital platform for financial services, our technology must boost efficiency and minimize risk through optimization, simplification, supporting business growth and value creation.

Our IT strategy is based on a global platform model with reusable components, known as the ONE Santander platform. This strategy is aligned with the Group's strategic initiatives, global business and operating model.

Our in-house ONE Santander platform is supported by common technical components (such as a cloud-based platform, common data platform and artificial intelligence platform) as well as components of our five global businesses and global control and support functions. For example, Gravity is one of the components of the global platform and its implementation laid the foundations for digitalization with its own core banking software.

To ensure the commitment of all Group units to the IT strategy and to manage the ONE Santander platform, there is an appropriate global governance including all active players involved in key decision making.

To implement our technology strategy, we use internal regulation and the Group's governance model that defines platforms, projects and initiatives to shape the strategy across our footprint.

Innovation is at the core of Santander's activity, with a commitment to the latest technology that enable more robust, efficient and secure systems and processes.

Artificial intelligence (AI) is transforming our business across multiple dimensions, from data-driven strategies, to process automation and customer interaction. Our AI and Agents Platform, which provides us with advanced generative AI capabilities and supervised autonomous agents, is a key enabler and accelerator of the Group's transformation. During 2024, we made significant progress, with ongoing initiatives which demonstrate the impact of these technologies.

We have an inventory of over 550 data-driven models using machine learning to accelerate revenue growth and operational efficiency across multiple countries and businesses. Our models focus on areas including simplification, business growth (customer acquisition and retention, card lifecycle optimization), risk management and pricing optimization (advanced credit and smart pricing models).

Generative AI is having significant impacts on customer support, operations and software development. In 2024, we implemented conversational assistants in Spain, Brazil and the UK.

In process automation, we are using operational agents to manage over 6 million documents. Additionally, 5,800 developers are using AI tools supporting software development, achieving a 25% improvement in the time-to-deliver.

At Santander, we are confident that data and AI will continue to play a pivotal role in our strategy, as they represent a significant opportunity in the coming years to drive cost savings, revenue generation, business growth and operational simplification.

Santander Digital Services (SDS), a Group service company, is contributing to the implementation of our global business strategy using this new technology. It is providing our ONE Santander platform with components linked to the cloud, process automation, generative AI or data projects among other areas. With over 9,000 employees in Spain, Poland, Portugal, the UK, Mexico, the US, Brazil and Chile, SDS is a key element in Santander's technology and operations strategy, offering its services and know-how to the different Group entities and banks.

Technological infrastructure

Santander has a network of high-quality data processing centres (CPDs) interconnected by a redundant communications system. They are spread across strategic markets to support and develop our operations. They combine traditional IT systems with the capabilities of a private, on-premise cloud, which, thanks to its swift adoption, enables us to integrate management of the business areas' technology, accelerate digitalization and achieve significant cost savings.

Santander has migrated more than 96% of its technology infrastructure to the cloud and has accelerated the deployment of next generation infrastructure in the on-premise private cloud with a technology architecture that provides greater resilience and efficiency while reducing energy consumption.

Our local Cloud Centres of Excellence (CCoEs), coordinated by Global CCoE, guarantee consistent and rigorous cloud adoption across our entities. This minimizes risk in accordance with our public cloud policy. Migration will also contribute towards Santander's sustainable banking goals as we have reduced our carbon footprint by 32 tonnes.

Cybersecurity

Cybersecurity is crucial in supporting our purpose of helping people and businesses prosper and to become the best open financial services platform. Both the digital evolution, driven by the boom in connectivity and emerging technologies, as well as the complex cyber threat landscape, continue to make cybersecurity a business risk and a priority for the Group.

In 2024, the Group continued to strengthen its cyber defences in an effort to mitigate the risks associated with the current environment, which is marked by increased geopolitical tensions and the accelerating adoption of emerging technologies such as artificial intelligence. As a result, new controls have been implemented to address current risk areas and new attack methods. Among these, security controls were strengthened, focusing on ransomware and distributed denial of service (DDoS) preparedness and response, access management in virtual environments, supply chain protection, and the incorporation of measures to prevent digital fraud and identity theft, ensuring a more secure customer experience. To ensure alignment with the cybersecurity requirements set out in the Digital Operational Resilience Act (DORA), regulation that aims to strengthen IT security of financial entities, we also reviewed and adapted internal regulations with a focus on incident management and reporting and advanced penetration testing.

To manage the environment with increasingly complex threats and the rapidly transforming digital landscape that means a continually expanding attack surface, Santander has updated its cybersecurity strategy, which focuses on three pillars:

- Shift-left. Embedding security by default is key to help identify and mitigate cybersecurity risks from the earliest stages of initiatives. It is essential to have a culture where security is our priority as an organization. In particular, we have defined measures in this area aimed at reinforcing the risk culture, reducing the attack surface and combating phishing scams, among others.
- Automated and assisted cyber defence. Taking advantage of the capabilities provided by advanced technologies to reduce response times, such as the use of AI to speed up analysis by cybersecurity teams, providing more dynamic and efficient defence capabilities.
- Resilience. Strengthening resilience globally is essential to sustainably defend the bank against evolving threats.

The Santander Fusion Center, which integrates the cybersecurity and IT monitoring teams, carries out the functions of detection, monitoring and response to operational failures and cybersecurity events for the Group's entities, 24 hours a day, seven days a week.

Information systems are regularly reviewed through internal and external audits. Santander identifies IT assets, systems and information (including those of third parties) and periodically reviews the risks and level of protection to proactively detect and remedy potential weaknesses. The activities performed comprise periodic security tests including vulnerability scans, penetration tests and red team exercises that simulate real cyber-attack scenarios.

In addition to periodic testing and review, independent certification authorities review and certify our critical cybersecurity processes. Certifications, including International Organization for Standardization (ISO) 27001:2022 and 27017, Statement on Standards for Attestation Engagements (SSAE) 18 and Payment Card Industry Data Security Standard - PCI DSS4.0, are regularly reviewed and updated, including new processes and controls on an annual basis.

For more details on the cybersecurity initiatives we ran in 2024, see section 3.3.1 'Conduct with customers' in the 'Sustainability statement' chapter. For details on the measurement, monitoring and control of cybersecurity-related risks, and their respective mitigation plans, see section 5.2 'Operational risk management' in the 'Risk management and compliance' chapter.

Fintech ecosystem

Santander actively participates in the fintech ecosystem in all the regions in which we operate. We work with fintech companies as partners as part of our efforts to foster and channel innovation while improving customer experience and efficiency. Through our Fintech Station programme, we work with startups and scale-ups in pilot programmes and implement or co-create new products and services with them. In 2024, Santander Fintech Station worked on eight Proofs of Concept (PoC) and also launched six production initiatives. The Group also provides banking services to these fintech companies, such as advice on financing rounds, buying and selling processes and IPOs.

Santander is an active investor in the fintech sector, sometimes directly through its Corporate Venture Capital (CVC) programme, or through funds promoted by the Group, such as Mouro Capital, a global fintech venture capital fund. To date, the Group has invested in several strategic fintech startups directly and through Mouro, which has a portfolio comprising 46 companies throughout Europe, North America and South America and continues to be a key tool to drive innovation within the Group. Santander collaborates with many of the companies in Mouro's portfolio, for example, with ThetaRay for money laundering and sanctions prevention worldwide. Atempo Growth, a pan-European venture debt fund also backed by the Group, consolidated its market position by financing 31 companies, many of them in the fintech sector (e.g., Form3, Acin or Clarity.ai). In February 2024, Trainera Venture Finance began its activity, a venture debt fund launched with Inveready, which has since financed 15 high-growth startups in Spain, several of them in the fintech sector such as REVENI or TECFYS.

6. SIGNIFICANT EVENTS SINCE YEAR END

- On 20 January 2025, Banco Santander, S.A. prepaid all the Tier 1 Contingently Convertible Preferred Securities with ISIN code XS179325004 and common code 179325004 in circulation, for a total nominal amount of EUR 187.6 million and which trade on the Irish Stock Market 'Global Exchange Market' (the 'PPCC').
- As part of our strategy of becoming ONE Santander, through the simplification and transformation of the Group, and after a year with our five global businesses in full operation, the board of directors approved the dissolution of the regional structures. This is effective from 3 February 2025, having fulfilled their mission to support the transition to the global operating model. Through this, we are taking another step in simplifying the Group's structure, as the CEOs in our main markets will now report directly to the Group's CEO, Héctor Grisi.
- Under the authorization of the 2023 annual general meeting and also according to the 2024 shareholder remuneration policy, on 4 February 2025 the board resolved to execute a new share buyback programme for a maximum amount of approximately EUR 1,587 million. The appropriate regulatory authorization has already been obtained and the execution of which began on 6 February 2025.

7. TREND INFORMATION 2025

This directors' report contains prospective information on the directors' plans, forecasts and estimates, based on what they consider to be reasonable assumptions. Readers of this report should take into account that such prospective information must not be considered a guarantee of our future performance as the plans, forecasts and estimates are subject to numerous risks and uncertainties, our future performance may not match initial expectations. These risks and uncertainties are described in the 'Risk management and compliance' chapter of this report and in note 54 of the consolidated financial statements.

→ Macroeconomic environment

The prospects for 2025 are for a moderate economic slowdown, in an environment that will continue to be relatively uncertain due to global geopolitical tensions. Inflation is expected to continue to slow down gradually, converging toward the central banks' targets, although it is likely to do so at different rates between regions. Central banks such as the Fed or the ECB are expected to complete their rate-cutting cycle in 2025, with terminal rates depending on the strength of the economies. Economic slowdown is not expected to have a strong impact on the unemployment rate due to the strength of most labour markets.

Our **macroeconomic forecasts for 2025** by country/region are as follows:

Eurozone

The eurozone is expected to face many challenges in 2025. Economic growth could show some improvement, particularly in household consumption, supported by increased real income, high savings rates and lower interest rates. However, the year will be marked by uncertainty arising from a complex geopolitical situation, the potential protectionist shift in US trade policy, elections in Germany and France's difficulties in reducing its public deficit. Inflation is expected to reach the ECB's 2% target, which is expected to allow the ECB to reduce interest rates to levels which have a neutral effect on the economy.

Spain

We expect notable dynamism in economic growth, although growing at a slightly lower rate than in 2024. Household consumption is expected to be the main growth driver and we expect corporate investment to play a growing role (due to the reconstruction of the damage caused by the floods in Valencia and the implementation of the EU Recovery and Resilience Plan). The unemployment rate is expected to continue to improve. Inflation is expected to around 2%, as wage increases are moderating.

United Kingdom

In 2025, we expect the economy to regain momentum and register growth close to its potential. Growth is likely to be supported by increased public spending, offsetting part of the slowdown in the private sector. Households are expected to face weaker growth in nominal income with slightly higher inflation than in 2024 which, together with increased fiscal pressure (tax thresholds will not be adjusted for inflation), would reduce their purchasing power. The labour market is expected to maintain the stability observed in recent years, with an unemployment rate at full employment. The Bank of England is expected to continue relaxing its monetary policy until the end of the year reaching 3.75%.

Portugal

In 2025, the economy is expected to maintain a growth rate similar to that observed in 2024, driven by improved external demand from the eurozone and the dynamism of domestic consumption supported by improved purchasing power. External demand is expected to be underpinned by positive trends in tourism services. The labour market is expected to remain at full employment, with the unemployment rate around 6.6%. We expect inflation to remain slightly above the ECB's 2% target.

Poland

The economy in 2025 is expected to accelerate, supported by an investment boom largely financed from EU funds. While investment is expected to take the lead, private consumption will likely continue to support domestic demand, leaving the economy partially immune to the weak growth expected in the euro area. The labour market is expected to remain at full employment, and continue to fuel significant wage increases, albeit less so than in 2024. Inflation is expected to remain around 5%. The central bank will not consider interest rate cuts until it sees a change in inflation, which is not expected before the second half of the year.

US

The scope of the economic policies of the new administration is still unknown. In 2025, positive growth inertia, combined with deregulation policies and tax cuts, can be expected to offset the potential negative impact of tariff increases and tightened migration policies. Thus, we expect growth to remain around 2%, with inflation slightly higher than expected, but not too far from the target, which would lead the Fed to pause interest rate cuts earlier and at a higher level than previously expected.

Mexico

We expect the economy to slow down, reflecting the effects of fiscal consolidation and reduced investment in infrastructure. The central bank is expected to continue its cycle of cutting official rates, with gradual declines, keeping an eye on the Fed's monetary policy and exchange rate movements.

Brazil

The economy is expected to slow down, toward more moderate rates compared to the strong dynamism of the last three years. Monetary and fiscal policies will face major challenges. Brazil's central bank is expected to continue the cycle of interest rate hikes

that restarted in September 2024, which is likely to contribute to the slowdown of the economy, moderate inflation and anchor its medium-term expectations. Fiscal policy is expected to undertake a consolidation process to meet targets and direct the public debt ratio toward a sustainable path.

Chile

The economy is expected to grow at a similar rate to that of 2024, but with a solid recovery in domestic demand, especially in investment. External demand will likely have a smaller contribution, reflecting increases in imports. Inflation is expected to moderate, but remain above the 3% target, which is expected to be reached in 2026. The central bank has room for additional interest rate cuts depending on inflation and its constraints.

Argentina

The economy is expected to show a clear recovery, consolidating the improvement in the second half of 2024, with the fiscal balance remaining close to equilibrium, and inflation is expected to continue the moderation observed in the final months of 2024. Expectations of a new agreement with the IMF that would eventually involve additional funding for Argentina and a more stable exchange rate are expected to lead to a replenishment of international reserves.

→ Financial markets

Our outlook for 2025 points to cautious optimism: a macroeconomic environment characterized by lower interest rates and positive economic growth should support risk appetite.

Tax cuts and deregulation efforts from the new US government are likely to support profit growth in the US, although the high valuations of the technology sector could bring some bouts of volatility. Other opportunities are also expected to arise in other regions.

While the US and the eurozone are expected to move forward in the monetary easing cycle, we believe that long-term yields on sovereign bonds have little room to fall from their current levels. The Fed and ECB rate cuts are widely discounted, while the new administration's agenda puts upward pressure on US Treasury yields.

Cyclical divergence between the US and the eurozone, geopolitical uncertainty and relatively higher interest rates in the US are tilting towards a more appreciated US dollar against the euro in 2025.

Macroeconomic and geopolitical uncertainty are expected to continue to sustain demand for precious metals.

In developing economies, a major hotspot of uncertainty remains with respect to the Chinese economy and the effect of the Chinese government's reaction to the new tariffs introduced by the US. In Latin America, markets are expected to remain vulnerable to global uncertainty. In any event, domestic factors are likely to continue to play a significant role in market behaviour, which pay close attention to how countries in the region face their main challenges, in particular, fiscal consolidation and anchoring inflation expectations to central bank targets.

The financial sector is expected to be marked by monetary policy normalization, which will have an impact on net interest income. This impact is expected to be partially offset by an improvement in business volumes in a stable portfolio credit quality environment.

Risks are slightly skewed to the downside and may come from non-bank financial institutions, with the risk of disorderly adjustments in asset prices and disruptions to market liquidity. Even so, at the moment, most entities currently have solid solvency positions to face such a scenario.

In addition to the economic environment, banks must cope with the acceleration of the business digitalization and knowledge and management of the risks associated with climate change.

→ Financial regulation

Elections held across our footprint (the US, Mexico, the UK, the EU) in 2024, will usher in a new political cycle that will define the regulatory agenda. The first 100 days of the European Commission will be critical, focusing on boosting competitiveness and growth through simplification and with defence and both the green and digital transitions as the main focus points of its strategy.

Competitiveness and Capital Markets Union 2.0

Recently released publications by political figures such as Enrico Letta, Christian Noyer and Mario Draghi agree on a lack of competitiveness and innovation within the EU. The new Savings and Investments Union (SIU) will be instrumental in channelling the trillions of euros in European savings towards capital markets, but this will require less fragmented, more liquid and transparent markets. The debate on how to complete the Banking Union, through the creation of a deposit guarantee fund, is expected to resume.

Prudential and resolution

During 2025, the European Banking Authority (EBA) is expected to continue developing technical standards to further the implementation of Basel III in Europe. Some legislative developments are expected in the field of non-bank financial intermediaries (NBFIs) and in the macroprudential framework in Europe. The European Commission will review the securitization framework and a legislative proposal is expected to be presented in 2025. In addition, the crisis management and deposit insurance (CMDI) framework review in Europe is expected to resume.

Sustainability

The sustainability regulatory agenda is expected to be reviewed in 2025, focusing on implementation. In January 2025, the reporting obligations established in the Corporate Sustainability Reporting Directive (CSRD) came into force. Although transposition is delayed in some European countries, companies will still be expected to comply with this standard and collect data on sustainability for the 2024 financial year. Under the CSRD, general reporting standards will continue to be implemented and industry-specific standards will continue to be developed (European Sustainability Reporting Standards, ESRS).

The European Commission has announced an omnibus proposal that will reduce the burden on companies, by simultaneously revising and simplifying sustainability regulations, including taxonomy, reporting and due diligence standards. In addition, a proposal to revise the Sustainable Finance Disclosure Regulation

(SFDR) is expected, which could include a new categorization system for financial products such as funds.

Regarding prudential matters, in 2025, the EBA will continue to assess the need for an adjustment in the Pillar 1 framework, to ensure that climate and environmental risks are adequately integrated. In addition, it will continue to analyse if emerging systemic risks, such as ESG, should be managed by using macroprudential tools.

The Basel Committee is expected to publish the final international standards on Pillar 3 climate disclosure requirements during 2025. Developments will continue in countries that have already begun their work in this area, such as Mexico, Chile and Brazil.

Digital

Discussions will continue to revolve around innovation, data use and artificial intelligence. Regulators have widened their view on fraud beyond the financial sector, as a significant amount of fraud occurs through different digital platforms. Central banks will continue to explore the opportunities linked to central bank digital currencies (CBDCs), focused on the wholesale market, with the exception of some jurisdictions such as the EU, which continues to design the digital euro. By the end of 2025, the ECB will have to decide whether to continue with the development of the digital euro, which depends upon a regulatory framework that remains under discussion since 2023. Focus will remain on the implementation of the Digital Markets Act (DMA) whose objective is to regulate competition in digital markets.

Retail banking

Access to capital markets and consumer protection will continue to be a priority in the EU's agenda, in line with projects such as the SIU and the Retail Investment Strategy (RIS). The transposition of the new directive regarding consumer credit should also occur in 2025.

These are the main management priorities for 2025 in our Global Business segments and countries:

Retail

Retail & Commercial Banking

A global business integrating our retail and commercial banking activities

Retail & Commercial Banking's top priorities for 2025 are to:

- → Continue our **transformation journey** towards our vision of becoming a digital bank with branches underpinned by a common operating model and a global tech platform.
- → Adapt our **business model** towards value creation through stronger customer relationships and network effects.
- → Strengthen **structural efficiency** on the back of the transformation of our operating and business models to drive cost-to-serve efficiencies.

Our vision for 2025 is to continue working on the transformation of our operating model, to become a **digital bank with branches,** powered by the Group's network, with all of our products and services available to our customers on our websites and applications, and with the branch network serving as a powerful sales and advisory channel.

This vision is underpinned by **Retail's common operating model,** which leverages our global scale and local presence, and takes advantage of best practices across the Group. The operating model is centred around three strategic pillars: i) customer experience; ii) operational leverage; and iii) global technology platform.

Our transformation efforts in 2024 resulted in increased customer growth and efficiency. In 2025, we will continue to focus on our **transformation journey** building on our three strategic pillars:

- **Customer experience.** Provide our customers with the best products and experiences and make them available through improved customer journeys. Continue enhancing our digital capabilities to drive engagement and digital sales. Also, continue implementing our new branch and Work Café model that provides enhanced capabilities for personal advisory and support to our customers.
- **Operational leverage.** Continue to streamline processes and promote lean organizational structures to drive efficiency, accuracy and speed. Develop the key role of artificial intelligence in automating operations, resulting in faster transaction processing, reduced operational tasks and efficiencies in cost to serve.
- **Global technology platform.** Deploy our Global Platform to deliver best-in-class solutions and reduce the cost per transaction, promoting efficiency and innovation across the Group. Continue to converge all units towards the global platform with focusing on rolling out: Gravity, our award-winning back-end technology, which will increase the number of transactions it processes while reducing the cost per technical transaction and ODS, our proprietary cloud-based front-end technology which enables a superior digital experience, global products and faster time to market.

Additionally, as part of our **business model transformation,** we will deepen our focus on value creation through stronger customer relationships and network effects.

- Build strong **customer relationships** and consolidate our position as their trusted financial partner through a tailored approach to our core segments (individuals, SMEs and commercial banking).
- Leverage our competitive position to better serve our customers, taking advantage of the **network effect** provided by the Group's global business structure.

Executing the transformation of our operating and business models across our footprint to pave the way for **structural savings** and **cost-to-serve efficiencies**, and support **value creation** for our shareholders.

Customer experience

Best digital products and **new branch model**

Operational leverage

Process automation and leaner organization

Global platform

Proprietary back-end (Gravity) and **cloud based front-end** (ODS) technologies

Consumer

Digital Consumer Bank

Deliver the best solution to customers (B2B and B2C), while being the most cost competitive player in the market

Our priorities for 2025 are to:

- **Converge towards global platforms** and continue transforming our operating model, automating key processes and gaining efficiencies and providing best customer experience.
- **Grow and consolidate partnerships** with our partners, offering solutions with a better digital experience.
- **Promote the network effect** through a complete product offering to our customers, leveraging the Group's capabilities.
- Continue **gathering customer deposits** to lower funding costs and reduce net interest income volatility across the cycle, to be able to offer our customers better pricing.
- Enhance and automate our **originate-to-share model.**

Our vision is to become the **preferred choice of our partners and our end customers,** and offer greater profitability and value creation to our shareholders, while being the most cost competitive player in the industry.

In 2025, our strategic priorities include:

- **In Auto:**
  - Continue to consolidate Santander's leadership position by: i) strengthening existing partnerships and incorporating new strategic agreements with OEMs and retailers; ii) expanding the operational leasing platform across Europe; and iii) developing new revenue sources.
  - Support profitability improvement by simplifying, automating and digitalizing customer journeys to operate with lower cost-to-serve. Utilize improved digital capabilities to take customer experience to the next level.
- **In the consumer lending business (non-auto),** within our objective to expand our consumer lending offering through Zinia, we will continue prioritizing the expansion to other products and markets and continue transforming the check-out lending business through existing agreements and expanding them across regions.
- **In Openbank:** leverage advanced data, tech and product capabilities to successfully deliver on our plans for the US and Mexico, expanding our value proposition.
- Finally, we will continue to drive deposit gathering initiatives in Europe and the expansion of securitization programmes, as part of our originate-to-share model.

Customer experience

Global solutions and relationship management (OEMs, importers and retailers)

Operational leverage

Operational and commercial benchmark to maximize profitability and growth

Global platform

From multiple country-specific platforms to **global platforms** (e.g. leasing, BNPL)

CIB

Corporate & Investment Banking

Our global platform to support corporate and institutional clients

Our aim is to become a focused, world-class Corporate & Investment Banking business, positioning ourselves as a trusted advisor to our clients while delivering profitable growth. Our priorities for 2025 are to:

- **Deepen our client relationships,** with a particular focus on the US.
- Fully leverage our **enhanced centres of expertise,** increase connectivity around the client agenda and further digitalize our business.
- Keep evolving our **active capital management** and global operating models.
- Attract, develop and retain **top talent.**

In order to deliver on our 2025 priorities, **we will focus on the following levers**:

- **Deepen client relationships**:
  - Foster and expand our advisory/value-added businesses on the back of our transformation initiatives, with a particular focus on fee business.
  - Materialize the growth plan for our US franchise, maximizing impact on global CIB, leveraging our new capabilities and expanded coverage.
  - Continue to foster collaboration with other global businesses to generate additional value for the Group.
- **Operational leverage:**
  - Consolidate our centres of expertise to strengthen our positioning in our core markets.
  - Further grow our Global Markets franchise on the back of the investments made and leveraging collaboration opportunities with Global Transaction Banking and Global Banking.
  - Advance in the execution of our automatization and digitalization initiatives, enhancing the business value from our data and exploring tangible opportunities from AI.
- **Global platforms:**
  - Keep evolving our operating model deepening globalization, standardization and specialization of our business, improving client experience, efficiency and risk management.
  - Further optimize our originate-to-share model in close partnership with the Group's Global Asset Desk for active capital management.
- Attract, develop and retain **top talent** while strengthening our culture and risk awareness.

Customer experience

Trusted advisor to our clients, building long-term relationships supported by **our global reach and local strength**

Operational leverage

Consolidate our **global centres of expertise and tech investments** as levers for growth

Global platform

Further optimize our **originate-to-share and global operational models,** leveraging technology

Wealth

Wealth Management & Insurance

Globalizing and transforming our Private Banking, Asset Management and Insurance businesses

Our priorities for 2025 are to:

- **Improve our customer experience** providing enhanced value-added products and services and expanding our presence to new countries and businesses.
- Boost **operational leverage** by globalizing service and product factories/hubs and enhancing local distribution.
- Develop common **global platforms** to transform our operations and distribution model leveraging Group's technology, data and AI.

We aim to **transform** Wealth businesses leveraging the Group's technology and AI as major enablers, while promoting globalization and simplification to deliver more value to our customers. This should increase Wealth's contribution to the Group while maintaining attractive profitability levels.

To deliver on this ambition, our priorities for 2025 are organized around three growth levers:

- Provide our customers with personalized best-in-class service and investment & protection solutions, leveraging digital and data capabilities to enhance **customer experience**.

  We are increasing our penetration in our footprint and expanding into new markets that are relevant for our business (e.g., Middle East and the US), which should enable us to increase our customer base.

  We will continue developing products with significant growth potential, such as alternative investments, life retirement solutions and non-life high-growth businesses, including health and cyber insurance.

- Globalize our service and investment & insurance product factories to better serve local distribution networks with a simplified value proposition and developing common hubs to boost **operational leverage**.

  We also plan to continue leveraging the synergies between our businesses to improve profitability and provide a stable source of capital, while we keep working to reinforce the collaboration with the other global businesses.

- Develop common **global platforms** to transform how our businesses operate with an increased focus on technology, data and AI, providing a tailored value proposition and service to our clients while we evolve and improve our distribution model, for example, through an embedded and highly contextualized offer or digital platforms for servicing and claims.

Additionally, we will continue to further reinforce our leadership and governance, having recently made a few additions and changes to the board of directors of Santander Insurance Holding.

Customer experience

Providing our customers with **enhanced value-added** products and **personalized** services

Operational leverage

Globalize our operations and product factories while **simplifying** our processes and value proposition

Global platform

Develop common **digital platforms** to transform our operations, service and distribution capabilities

Payments

Payments

Single infrastructures for payments solutions: PagoNxt and Cards

Our priorities for 2025 are to:

- **Scale up our global platform** of innovative payments and integrated value-added solutions.
- **Roll out our global payment platform** to all our regions and the open market.
- **Expand our cards business** while improving customer experience.

PagoNxt

In PagoNxt, our priorities by business are:

- **Getnet**
  - Strategic market share management with focus on profitable growth, investing in commercial capabilities to further expand business across Santander's banks and capture opportunities in the open market.
  - Focus on product globalization and delivery of strategic value-added services.
  - Investment in globalizing technology to improve efficiency and lower cost per transaction, and scale up our platform functionalities.
- **Ebury**
  - Customer growth through enhanced product offering and online capabilities and geographical expansion.
  - Introduction of tailored products to capture verticals such as mass payments.
- **Payments**
  - Migration of Group A2A payments to the new cloud-native platform.
  - Leverage scale and connectivity to drive lower cost-per-transaction and to offer adjacent services and open market propositions.
  - Delivery of an instant cross-border payments solution.

Cards

We aim to provide an exceptional payments experience, foster customer loyalty and leverage transactional data to enhance profitability.

To implement this vision, we are focusing on three pillars:

- **Profitably expand our credit business:**
  - Drive profitable growth through credit cards through the use of data and models through our Cards Risk Data Lab.
  - Exploit the commercial cards business, with a complete offering in their payment management through corporate cards, leveraging Santander's presence in the corporate and SME segments.
  - Connect card issuing and acquiring platforms, developing new business opportunities between Cards and Getnet.
- **Improve payment experience through cards**:
  - Offer our customers the most seamless and convenient card payment experience through Invisible Payments, both for face-to-face and e-commerce purchases.
  - Expand, develop and adopt common digital services that improve customer experience.
- **Build and implement our global card processing tech platform:**
  - Once the debit solution is completed, the aim for 2025 is to finish the credit solution development and to improve the solution for corporates.
  - After starting the debit integration in Brazil, continue implementing the platform in the other countries, and start with the credit integration once the building is complete.

Customer experience

Deliver **best-in-class payment solutions** leveraging our global and local scale

Operational leverage

Reduce cost per transaction through capex optimization and operational efficiency

Global platform

Migrate volumes to common global platforms to **gain scale** and offer competitive pricing in the **open market**

Secondary segments

E Europe

Spain

- Continue to grow and develop our customer base, providing personalized answers to our customers' needs and the best experience, to become their main bank.
- Evolve our operating model towards a digital bank with branches, moving forward in the simplification of products and services, digitalization and the elimination of operational processes to focus on value creation.

Portugal

- Further our commercial and digital transformation, focusing on excellence in customer experience and satisfaction.
- Remain best-in-class in terms of efficiency and profitability, creating value with an appropriate return on capital.

United Kingdom

- Prioritize profitability, through pricing discipline and planned balance sheet optimization, growing through customer engagement and exceptional customer experience.
- Continue transforming the bank through simplification and digitalization, in order to improve efficiency and performance.

Poland

- Accelerate our digital transformation, through increased availability of products and services through digital channels.
- Continue to improve customer and employee experience.

DCBE DCB Europe

In 2025, our strategic priorities include:

- Expand our European leadership with strong focus on profitability, through competitive, innovative financing products and solutions.
  - Auto: expand the implementation of the operational leasing platform, digitalize customer journeys, grow partnerships and deliver the best customer experience.
  - Consumer lending: continue to expand partnerships through Zinia and transform our consumer lending business.
- Transform our operating model through global platforms, the simplification and the automatization of processes, aiming to become the most cost competitive player in the market.
- Reduce sensitivity to interest rates by increasing deposit gathering, optimizing the balance sheet and maintaining a strict capital allocation.

NA North America

US

- Deliver strategic priorities through disciplined capital allocation, focused on customer-centric growth in businesses that benefit from Santander's global network or operate at scale locally and where we have deep expertise.
- Consumer: leverage Group-developed digital platforms to support profitable growth.
- CIB: enhance advisory and investment banking capabilities focused on profitable client relationships and expanding our product and services offering.
- Wealth: accelerate growth through initiatives to expand cross-border client relationships, while enhancing local private banking.

Mexico

- Strengthen our Retail transformation and enhance our model by focusing on digital offerings and channels, new service models, continued product simplification and customer primacy.
- Roll-out new digital capabilities, particularly through the launch of Openbank, to challenge the rise of neobanks with a superior and fully-digital value proposition.
- Grow selectively, rebalancing our asset mix towards more profitable and capital-light businesses.
- Reinforce our low-cost producer positioning, offering the best products at the best price while improving our deposit mix.

SA South America

Brazil

- Focus on being the primary bank for our customers. Sustain value creation and continue to personalize our offering and improve customer experience, through intensive use of technology.
- Continue with our sustainable growth strategy, focusing on disciplined capital management, process optimization and cost reduction to improve profitability.
- Further diversify our asset portfolio and boost our liabilities business and transactional revenue.

Chile

- Continue to digitally transform the bank, capturing new customers, maintaining our NPS leadership and consolidating our position in the mass segment through new product offerings.
- Strengthen our corporate and private banking franchise, with specialized value propositions and a leadership position in transactional foreign exchange and Wealth Management products.
- Continue to transform our operating model, boosting global initiatives, converging our platforms, further simplifying our offering and reducing cost per active customer.

Argentina

- Further develop our financial platform, promoting synergies between businesses and within value chains, and consolidating recent inorganic acquisitions.
- Continue to pursue our profitable growth and value creation strategy. Increase productivity and reduce cost to serve by streamlining products and processes. Focus on operational excellence and market leadership in customer experience.

8. ALTERNATIVE PERFORMANCE MEASURES (APMs)

In addition to the financial information prepared under IFRS, this consolidated directors' report contains financial measures that constitute alternative performance measures (APMs) to comply with the guidelines on alternative performance measures issued by the European Securities and Markets Authority on 5 October 2015 and non-IFRS measures.

The financial measures contained in this consolidated directors' report that qualify as APMs and non-IFRS measures have been calculated using our financial information but are not defined or detailed in the applicable financial information framework or under IFRS and therefore have neither been audited nor are susceptible to being fully audited.

We use these APMs and non-IFRS measures when planning, monitoring and evaluating our performance. We consider these APMs and non-IFRS financial measures to be useful metrics for management and investors to facilitate operating performance comparisons from period to period. While we believe that these APMs and non-IFRS financial measures are useful in evaluating our business, this information should be considered as supplemental in nature and is not meant as a substitute of IFRS measures. In addition, the way in which Santander defines and calculates these APMs and non-IFRS measures may differ from the calculations used by other companies with similar measures and, therefore, may not be comparable.

Additional APMs to those included in this section are presented in section SN 9. 'Alternative Performance Measures' of the 'Sustainability statement' chapter.

The APMs and non-IFRS measures we use in this document can be categorized as follows:

Underlying results

In addition to IFRS results measures, we present some results measures which are non-IFRS and which we refer to as underlying measures. These measures allow in our view a better year-on-year comparability given that they exclude items outside the ordinary performance of our business (e.g. capital gains, write-downs, impairment of goodwill) or certain line items have been reclassified in the underlying ("adjusted") income statement, as their impact on profit is zero, to better understand the trends in the business. Further information is included at the end of section 3.2 'Results'.

In addition, in section 4. 'Financial information by segment' covering the primary and secondary segments, results are presented only on an underlying basis in accordance with IFRS 8. The use of this information by the Group's governance bodies and a reconciliation on an aggregate basis to our IFRS consolidated results can be found in note 52.c to our consolidated financial statements.

Profitability and efficiency ratios

The purpose of the profitability ratios is to measure the ratio of profit to equity, to tangible equity, to assets and to risk-weighted assets, while the efficiency ratio measures how much general administrative expenses (personnel and other) and amortization costs are needed to generate revenue.

Additionally, goodwill adjustments have been removed from the RoTE numerator as, since they are not considered in the denominator, we believe this calculation is more correct.

Ratio	Formula	Relevance of the metric
RoE (Return on Equity)	Profit attributable to the parent / Average stockholders' equity [A] (excl. minority interests)	This ratio measures the return that shareholders obtain on the funds invested in the bank and as such measures the bank's ability to pay shareholders.
RoTE (Return on Tangible Equity)	Profit attributable to the parent [B] / Average stockholders' equity [A] (excl. minority interests) - intangible assets	This is used to evaluate the profitability of the company as a percentage of its tangible equity. It is measured as the return that shareholders receive as a percentage of the funds invested in the bank less intangible assets.
RoA (Return on Assets)	Consolidated profit / Average total assets	This metric measures the profitability of a company as a percentage of its total assets. It is an indicator that reflects the efficiency of the bank's total assets in generating profit over a given period.
RoRWA (Return on Risk-Weighted Assets)	Consolidated profit / Average risk-weighted assets	The return adjusted for risk is a derivative of the RoA metric. The difference is that RoRWA measures profit in relation to the bank's risk-weighted assets.
RoRAC (Return on Risk-Adjusted Capital)	Underlying consolidated profit / Average economic capital	This is the return on economic capital required internally (necessary to support all risks inherent in our activity).
Economic Value Added	Underlying consolidated profit – (average economic capital x cost of capital)	Economic value added is the profit generated in excess of the cost of economic capital employed. This measures risk-adjusted returns in absolute terms, complementing the RoRAC approach.
Efficiency (Cost-to-income)	Operating expenses [C] / Total income	One of the most commonly used indicators when comparing productivity of different financial entities. It measures the amount of resources used to generate the bank's total income.

A. Stockholders' equity = Capital and Reserves + Accumulated other comprehensive income + Profit attributable to the parent + Dividends.
B. Excluding the adjustment to the valuation of goodwill.
C. Operating expenses = Administrative expenses + amortizations.

Profitability and efficiency [A] [B] (EUR million and %)

	2024	2023	2022
RoE	**13.00%**	**11.91%**	**10.67%**
Profit attributable to the parent	12,574	11,076	9,605
Average stockholders' equity (excluding minority interests)	96,744	93,035	89,986
RoTE	**16.27%**	**15.06%**	**13.37%**

Adjustments to total income for items outside ordinary course of businesses [C]	335	224	37

A. Averages included in the RoE, RoTE, RoA and RoRWA denominators are calculated using the monthly average over the period, which we believe should not differ materially from using daily balances.
B. The risk-weighted assets included in the denominator of the RoRWA metric are calculated in line with the criteria laid out in the CRR (Capital Requirements Regulation).
C. Following the adjustments in note 52.c to the consolidated financial statements.

Ratio	Formula	Relevance of the metric
Global business RoTE	Profit attributable to the parent excluding goodwill impairment / Average stockholders' equity (excl. minority interests) - intangible assets [A]	This indicator is used to evaluate the profitability of the company as a percentage of its tangible equity. It's measured as the return that shareholders receive as a percentage of the funds invested in the entity less intangible assets.

A. Allocated according to RWA consumption.

Numerator: underlying operating expenses.
Denominator: underlying total income.

Credit risk indicators

The credit risk indicators measure the quality of the credit portfolio and the percentage of non-performing loans covered by provisions.

Ratio	Formula	Relevance of the metric
NPL ratio (Non-performing loans ratio)	Credit impaired customer loans and advances, guarantees and undrawn balances / Total Risk [A]	The NPL ratio is an important variable regarding financial institutions' activity since it gives an indication of the level of credit risk the entities are exposed to. It calculates risks that are, in accounting terms, declared to be credit impaired as a percentage of the total outstanding amount of customer credit and contingent liabilities.
NPL coverage ratio	Total allowances to cover impairment losses on customer loans and advances, guarantees and undrawn balances / Credit impaired customer loans and advances, guarantees and undrawn balances	The NPL coverage ratio is a fundamental metric in the financial sector. It reflects the level of provisions as a percentage of the credit impaired assets. Therefore, it is a good indicator of the entity's solvency against customer defaults both present and future.
Cost of risk	Allowances for loan-loss provisions over the last 12 months / Average loans and advances to customers over the last 12 months	This ratio quantifies loan-loss provisions arising from credit risk over a defined period of time for a given loan portfolio. As such, it acts as an indicator of credit quality.

A. Total risk = non-impaired and impaired customer loans and advances and guarantees + impaired undrawn customer balances.

Credit risk (I) (EUR million and %)

	2024	2023	2022
NPL ratio	**3.05%**	**3.14%**	**3.08%**

PagoNxt's cost of risk is not provided as we do not consider it a relevant metric for this type of business.

Other indicators

The Group has a series of additional financial metrics which facilitate analysis of the underlying business trends and performance.

Ratio	Formula	Relevance of the metric
TNAV per share (Tangible net asset value per share)	Tangible book value [A] / Number of shares excluding treasury stock	This is a very commonly used ratio used to measure the company's accounting value per share having deducted the intangible assets. It is useful in evaluating the amount each shareholder would receive if the company were to enter into liquidation and had to sell all the company's tangible assets.
Price to tangible book value per share (X)	Share price / TNAV per share	This is one of the most commonly used ratios by market participants for the valuation of listed companies both in absolute terms and relative to other entities. This ratio measures the relationship between the price paid for a company and its accounting equity value.
LTD ratio (Loan-to-deposit)	Net loans and advances to customers / Customer deposits	This is an indicator of the bank's liquidity. It measures the total loans and advances to customers net of loan-loss provisions as a percentage of customer deposits.
Loans and advances (excl. reverse repos)	Gross loans and advances to customers excluding reverse repos	In order to aid analysis of the commercial banking activity, reverse repos are excluded as they are highly volatile treasury products.
Deposits (excl. repos)	Customer deposits excluding repos	In order to aid analysis of the commercial banking activity, repos are excluded as they are highly volatile treasury products.
PAT + After tax fees (in Wealth Management & Insurance)	Net profit + fees ceded by Santander Asset Management and Santander Insurance to the branch network, net of taxes, excluding Private Banking customers	Metric to assess Wealth Management & Insurance's total contribution to the Group's profit.

A. Tangible book value = Stockholders' equity (excl. minority interests) - intangible assets.

Impact of exchange rate movements on profit and loss accounts

We make use of certain financial measures in local currency to help in the assessment of our ongoing operating performance. These non-IFRS financial measures include the results of operations of our subsidiary banks located outside the eurozone, excluding the impact of foreign exchange. Because changes in foreign currency exchange rates do not have an operating impact on the results, we believe that evaluating their performance on a local currency basis provides an additional and meaningful assessment of performance to both management and the company's investors.

The Group presents, at both the Group level as well as the business unit level, the real changes in euros in the income statement as well as the changes excluding the exchange rate effect (i.e., "excluding FX" or "constant euros"), as it considers the latter facilitates analysis, since it enables business movements to be identified without taking into account the impact of converting each local currency into euros.

Said variations, excluding the impact of exchange rate movements, are calculated by converting income statement lines for the different business units comprising the Group into our presentation currency, the euro, applying the average exchange rate for 2024 to all periods contemplated in the analysis. We use this method for all countries with the exception of Argentina, where we use the exchange rate on the last working day of each period presented, given it is a hyperinflationary economy, to mitigate the distortions caused by the hyperinflation.

Impact of exchange rate movements on the balance sheet

The Group presents, at both the Group level as well as the business unit level, the changes in euros as well as the changes excluding the exchange rate effect ("excluding FX" or "constant euros") for loans and advances to customers excluding reverse repurchase agreements (repos) and customer funds (which comprise deposits and mutual funds) excluding repos. Additionally, we present changes in the main balance sheet lines of the Group's countries and regions both in euros as well as the changes excluding the exchange rate effect. As with the income statement, the reason is to facilitate analysis by isolating the changes in the balance sheet that are not caused by converting each local currency into euros.

These changes excluding the impact of exchange rate movements are calculated by converting the balances, into our presentation currency, the euro, applying the closing exchange rate on the last working day of December 2024 to all periods contemplated in the analysis. We use this method to calculate the variations for all countries with the exception of Argentina, where we use the exchange rate on the last working day of each period presented, given it is a hyperinflationary economy, to mitigate the distortions caused by the hyperinflation.

Due to the significant divergence between the official Argentine peso exchange rate and other macroeconomic magnitudes, mainly inflation, we applied an alternative exchange rate to 2024 results which reflects the exchange rate observed in transactions ordered between market participants under the prevailing economic conditions, such as the repatriation of dividends from businesses in Argentina. This alternative exchange rate takes the dollar *contado con liquidación* rate (CCL) as a reference, which is the exchange rate resulting from the sale of local bonds denominated in Argentine pesos in US dollars (dual denomination peso/dollar bonds). At the end of the year, the value of this exchange rate did not significantly differ from other market rates or the official exchange rate.

The average and period-end exchange rates for the main currencies in which the Group operates are set out in the table below.

Exchange rates: 1 euro/currency parity

	Average (income statement)		Period-end (balance sheet)	
	2024	2023	2024	2023
US dollar	1.082	1.081	1.039	1.105
Pound sterling	0.846	0.870	0.829	0.868
Brazilian real	5.809	5.397	6.427	5.365
Mexican peso	19.723	19.158	21.554	18.691
Chilean peso	1,020.473	906.417	1,032.560	965.192
Argentine peso [A]			1,232.389	893.635
Polish zloty	4.305	4.538	4.275	4.343

A. Average exchange rates for the Argentine peso are not included since we use the exchange rate on the last working day of each period presented given it is a hyperinflationary economy. For 2024 data, we apply an alternative exchange rate for the Argentine peso that better reflects the evolution of inflation (we continue to apply the official ARS exchange rate to all prior periods).

Impact of inflation on operating expenses

Santander presents, for both the Group and the business units included in the primary and secondary segments: i) the changes in operating expenses in euros; ii) the changes excluding the exchange rate effect with the exception of Argentina which is calculated as described above; and iii) the changes excluding the exchange rate effect minus the effect of average inflation over the year except for Argentina as cost growth in euros should already largely reflect the effect of hyperinflation on exchange rates. The reason is that the two latter facilitate analysis for management purposes.

Inflation is calculated as the arithmetic average of the last 12 months for each country and, for the regions and global businesses, as the weighted average the inflation rate of each country comprising the regions or global business, weighted by each country's operating expenses in the region or global business. For the Group, the global businesses and South America, we exclude the impact of inflation in Argentina from the calculation of the region's average inflation as cost growth in euros should already largely reflect the effect of hyperinflation on exchange rates.

The table below shows the average inflation rates calculated as indicated.

Average inflation 2024 (%)

	Average inflation last 12 months
Retail & Commercial Banking [A]	**3.4**
Digital Consumer Bank [A]	**2.7**
Corporate & Investment Banking [A]	**3.2**
Wealth Management & Insurance [A]	**3.1**
Payments [A]	**3.3**

RISK MANAGEMENT AND COMPLIANCE

Our risk management and compliance is key to making us a solid, safe and sustainable bank that helps people and businesses prosper

2024 Highlights

→ **Credit quality** indicators improved despite the macro and geopolitical scenario.

NPL ratio	Cost of risk
3.05%	1.15%
-9 bp /2023	-3 bp /2023

→ **VaR** remained at moderate levels in an economic context marked by geopolitical risk and the evolution of inflation. Robust and diversified liquidity buffer.

Avg. VaR	LCR ratio[1]
€17.1 Mn	168%
+5.4 Mn /2023	

→ **Capital optimization** with updated models that allow for better capital allocation in our businesses.

Fully-loaded CET1 ratio[2]	RWAs
12.8%	€625 Bn
+51 bp /2023	+1 Bn /2023

[1] Group LCR: Calculated since 2024 to better reflect the restrictions to transferability of assets, using an internal methodology that determines the minimum common coverage percentage simultaneously across all the Group's jurisdictions, considering all existing restrictions on liquidity transfer in third countries.
[2] Fully-loaded IFRS 9.

→ The **operational risk** profile did not show significant changes in the year, maintaining a focus on risks related to process execution, suppliers and cyberrisk.

→ In **compliance risk,** our profile remained stable, with continuous progress in enhancing the Group's FCC risk profile and proactive management of conduct related risks to support delivering effective customer outcomes.

→ During 2024, technological transformation was strengthened and the **model risk** function was simplified, making it more efficient. Additionally, the model inventory was reviewed from the perspective of the five global businesses, seeking effective management aligned with the Group's strategy.

→ In **strategic risk**, we focused on monitoring the evolution and potential impact of geopolitical risks, and on effectively challenging our three-year financial plan and strategic initiatives to support the Group's transformation.

1. RISK MANAGEMENT AND CONTROL MODEL

Our risk management and control model is underpinned by common principles, a solid risk culture, a clear governance structure and advanced management processes for different risk types.

Robust corporate governance is crucial to the functioning of banks and, especially, to risk management. According to regulatory requirements, Grupo Santander's governance structure and risk management enable the board of directors and top management to receive accurate information, make decisions on strategy and oversee every risk to which the bank is exposed to check consistency with our risk appetite and set limits.

1.1 Risk principles and culture

Grupo Santander's risk management and control must follow these mandatory principles and our risk culture (Risk Pro), which consider regulatory requirements and best market practices:

1. **All employees are risk managers** who must understand the risks that their work can pose and avoid taken risks that will exceed the Group's risk appetite or have an unknown impact.
2. **Senior managers must be involved** to promote consistent risk management and control through their conduct, action and communications, as well as reviewing our risk culture and making sure we keep our risk profile within risk appetite.
3. **Independence of risk management and control functions**, according to our three lines of defence model (described in detail in section 1.3 'Risk and compliance governance') and with clearly defined roles and responsibilities.
4. **We take a forward-looking, comprehensive approach** for all businesses and risk types, which should be proactive and analyse trends over different time periods and under different scenarios.
5. **Effective information management** to identify, assess, manage and disclose risks at appropriate levels.

Risk culture - *Risk Pro*

One of the pillars of the Group's culture, The Santander Way, is our solid risk culture, Risk Pro (or 'I AM RISK' in the US), which is a key lever of the Group's purpose to help people and businesses prosper.

Risk Pro is each employee's accountability for the risks taken in their day to day and their individual contribution to identifying, assessing and managing risks properly and responsibly. In addition, it is part of all stages of the employee life cycle: recruitment, training, day-to-day activities, remuneration, and recognition.

Because communication is a key tool in embedding our risk culture, in 2024 we enhanced all units' communications and awareness plans in this area.

For more details about Group's risk culture, see the section '**4.1. Corporate culture**' of the 'Sustainability statement'.

1.2 Key risk types

Grupo Santander has suitable procedures in place to identify, measure, manage, control and report the risks that we are exposed to in our day-to-day operations and under special circumstances.

The Risk and Compliance functions follow internal regulations for each type of risk. These regulations define the processes, tools, responsibilities, roles, and governance requirements necessary to establish our control environment.

Our corporate risk framework defines each key risk type. They are (click on each one type for more details):

Given the cross-cutting impact that ESG (environmental, social and governance) risk factors can have on the different types of risks that exist in different time horizons, our ESG risk management requires a comprehensive view to be able to manage and control these risks correctly, align with the Group's sustainability strategy, and meet regulatory requirements and supervisory expectations.

For more details about ESG factor management, see the section **'2.3 Embedding ESG in risk management'** of the 'Sustainability statement'.

1.3 Risk and compliance governance

Our risk and compliance governance structure emanates from our board of directors and is set up to promote autonomy between management and control functions according to our three lines of defence model. Our units' adherence to corporate frameworks gives us a common governance model that we replicate across our footprint.

Lines of defence

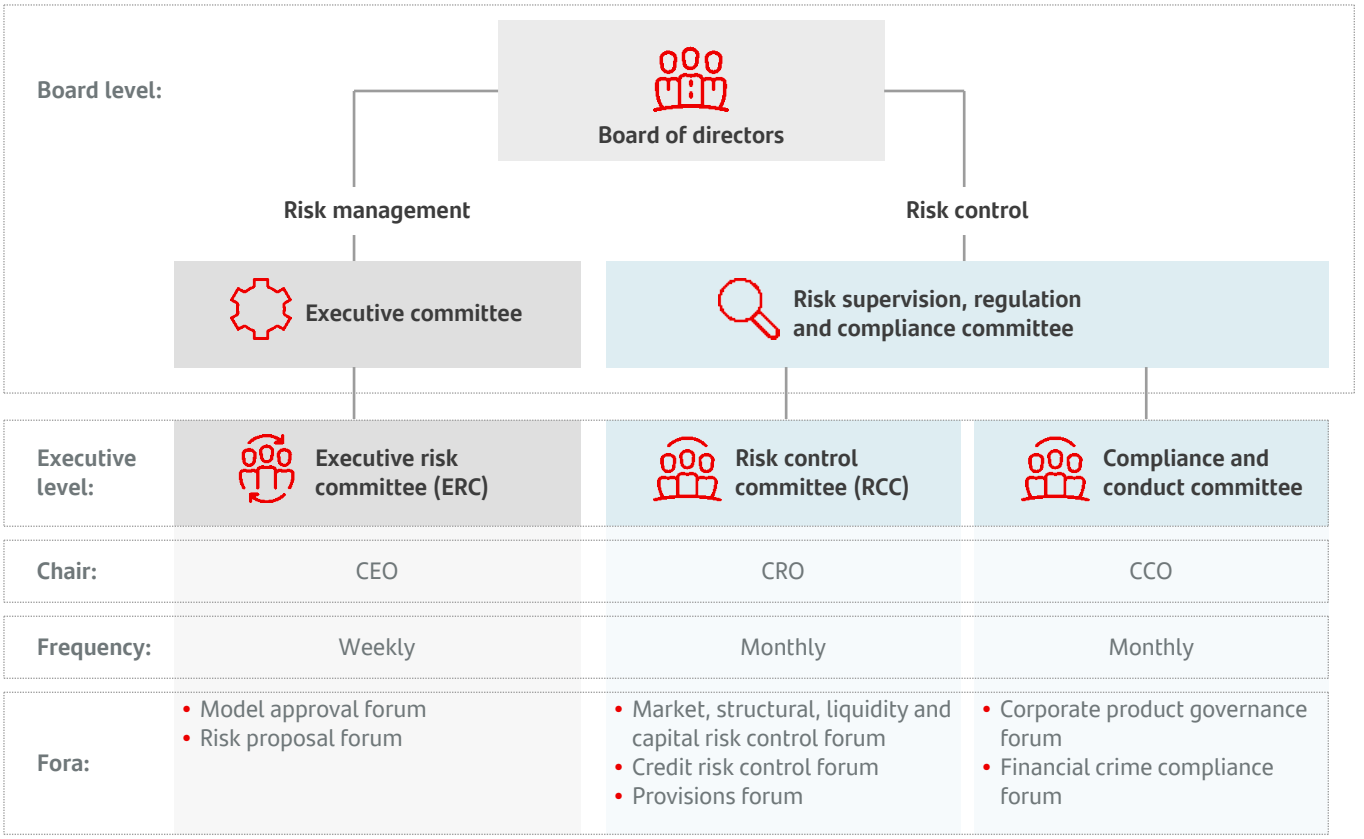
Grupo Santander's risk governance keeps the functions of each line of defence separate to manage and control risks effectively. This model is key to ensuring that the Group remains robust, secure and sustainable.

1st The business and support functions that take or originate risks are primarily responsible for managing them. The first line detects, measures, controls, monitors and reports on the risks it originates according to internal risk management policies, models and procedures. Risk management must be consistent with the approved risk appetite and related limits. The first line of defence executes the mitigation plans for the risks where we have identified shortcomings in their control environment.

2nd The second line of defence, comprising the risk and compliance functions, independently oversees and challenges risk management at the first line of defence. Its duties include promoting that risks are managed according to the senior management approved risk appetite, and strengthening our risk culture across the Group. The second line of defence must supervise and challenge the control environment implemented by the first line.

3rd The third line of defence, which is the Internal Audit functions, is fully independent to give the board and senior management assurance of high-quality and efficient internal control, governance and risk management to verify that we comply with the law and to preserve our value, solvency and reputation.

Risk, compliance and internal audit functions are sufficiently separate and independent from each other. Each function has direct access to the board and its committees. The risk and compliance functions report to the risk supervision, regulation and compliance committee and the internal audit function reports to the audit committee.



Risk and compliance committees' structure

The Group's risk and compliance governance covers our day-to-day operations and special situations. It is supported by a clearly defined committee structure, from the board of directors and board committees to top level committees and lower level forums.

Our governance aims to facilitate effective and efficient decision-making on risks, oversee risk control, and check that we manage risks according to the risk appetite set by the Group and subsidiary boards of directors. To achieve these aims, our risk and compliance governance keeps risk control and risk-taking separate.

The board of directors has final oversight of risk and compliance management and control to promote a sound risk culture and to review and approve risk appetite and policy, with support from its risk supervision, regulation and compliance committee (RSRCC) and its executive committee.

For more details, see section **4.8 'Risk supervision, regulation and compliance committee activities in 2024'** on 'Corporate governance' chapter.

Our governance structure includes key positions and executive level committees that enable us to perform effective risk control and oversight.

The **Group chief risk officer (CRO)**, who leads the implementation and execution of our risk strategy and promotes proper risk culture, is in charge of overseeing all risks, as well as challenging and advising business lines on risk management.

The **Group chief compliance officer (CCO)** leads the implementation and execution of the compliance risk strategy and is in charge of overseeing the risks within their purview and reporting on them to the CRO.

The CRO and the CCO report directly to both the risk supervision, regulation and compliance committee and the board of directors.

The executive risk committee, the risk control committee and the compliance and conduct committee are executive committees with powers delegated from the board.

Executive risk committee (ERC)

The ERC manages risk with board-given authority to accept, modify or escalate the important models as well as actions and transactions that may pose significant risk to the Group. It makes the highest-level risk decisions, mindful of risk appetite. It is formed of the CEO and other senior managers from the Risk, Finance and Compliance areas. The CRO can veto the committee's resolutions.

Risk control committee (RCC)

The RCC controls and provides a holistic overview of risks. It makes sure business lines are managed according to the board-approved risk appetite. It also determines and checks the impact of existing and emerging risks on Grupo Santander's risk profile. It is formed of senior officers from the Risk, Compliance, Financial Accounting and Control, and other areas. From time to time, subsidiary-level CROs to report the committee on their risk profile.

Compliance & conduct committee

This committee monitors and reviews compliance risk management and oversees corrective measures for new risks and risks detected among management-related deficiencies. It is formed of senior officers from the Compliance, Risk, Financial Accounting and Control, and other areas. The chair holds the casting vote over the committee's resolutions.

Executive-level committees delegate some duties to management and control fora and meetings (see chart above) that:

- inform the CRO, the CCO, the risk control committee, and the compliance and control committee if risks are being managed within risk appetite;
- regularly monitor each key risk type; and
- oversee measures to meet supervisors' and auditors' expectations.

In 2024, the reputational risk forum was embedded in the compliance committee as a simplification proposal suggested. Recurrent updates on these reputational risk matters are presented to the compliance committee.

Grupo Santander can establish additional governance measures for special situations. We have upgraded the monitoring of all risks, with special attention to the main macroeconomic indicators,

liquidity, vulnerable sectors and customers, cybersecurity reinforcement, among other areas. The special situations forums we have set up are enabling us to cope with the geopolitical and macroeconomic environment landscape resiliently.

Group-subsidiary relations

Grupo Santander subsidiaries' risk and compliance management and control model is consistent with the frameworks approved by the Group board of directors. Subsidiaries adhere to the frameworks through their own boards and can only adapt to higher standards according to local law and regulation.

As part of our aggregate risk oversight, we challenge and ratify subsidiaries' internal regulation and transactions to create a common risk management and control model across the Group.

The risk and compliance functions will continue to support the businesses and oversee risk control both globally and locally. Throughout the year, we continued to build on our group-subsidiary governance model (GSGM) by leveraging our global scale to uncover synergy under a common operating model and platform. The model promotes process simplification and more enhanced control to help grow the business.

The GSGM sets out the principles that govern the relationship between Group and subsidiary key positions to safeguard the independence of the second lines of defence in local units. The CRO, the CCO and regional heads of risk are involved in appointing, setting objectives for, reviewing and compensating their country-unit counterparts and assessing whether risks are properly controlled.

Our subsidiaries work together to strengthen group- subsidiary relations effectively through these common initiatives:

- Enhancing organizational structures based on subsidiary benchmarks and strategic vision to promote more advanced risk management infrastructures and practices;
- Exchanging best practices to strengthen processes and drive innovation to have a quantitative impact;
- Promoting internal talent and encouraging geographic and functional mobility, which we placed special emphasis on in 2024. Continuous investment in our risk employees' development and promoting diverse teams and a global outlook are key to boosting risk expertise across our footprint.

For more details on our relationship with our subsidiaries, see section **7. 'Group structure and internal governance'** of the 'Corporate Governance' chapter.

1.4 Risk management processes and tools

In the following section, we describe Grupo Santander's processes and tools to carry out effective risk management.

Risk appetite and structure of limits

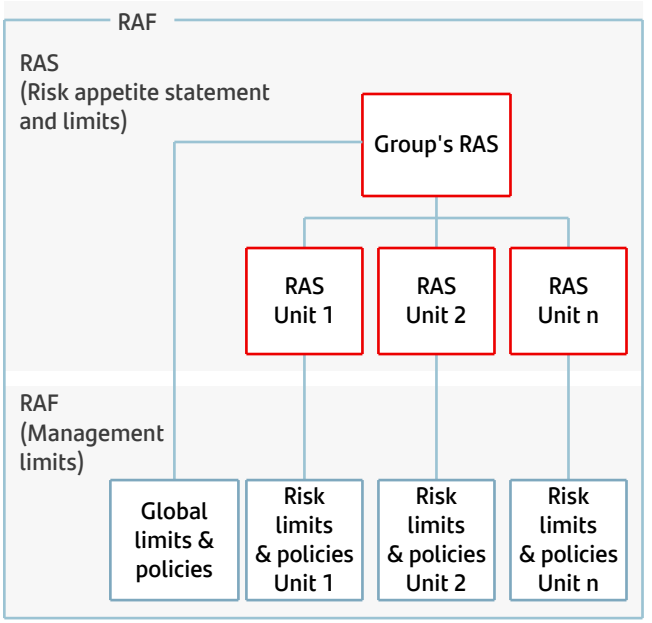
Risk appetite is the aggregate level and types of risk we deem prudent for our business strategy, even in unforeseen circumstances.

The risk appetite is expressed through qualitative statements and quantitative limits and metrics representative of the bank's risk profile. Those metrics cover all key risk types according to our corporate risk framework. We articulate them in five axes that provide us with a holistic view of all risks we incur in the development of our business model:

	Key risks								
Risk Appetite axes	Credit risk	Market risk	Liquidity risk	Structural risk	Operat. risk	Financial Crime Risk	Model risk	Reputat. risk	Strategic risk
P&L volatility	Control of P&L volatility associated with business plan under baseline and stressed conditions								
Solvency	Control of capital ratios under baseline and stressed scenarios (aligned with ICAAP)								
Liquidity	Control of liquidity ratios under base and stress scenarios (aligned with ILAAP)								
Concentration	Control of concentration levels in customers, sectors and portfolios								
Non financial risks & control environment	Solid controls on non financial risks aimed to minimize financial, operative, technological losses, as well as legal and regulatory breaches, and conduct events or reputational damage								

Our risk appetite and business model rests on:

- a medium-low, predictable target risk profile, customer focus, internationally diversified operations and a significant market share;
- stable, recurrent earnings and shareholder remuneration, sustained by a sound base of capital, liquidity and sources of funding;
- autonomous subsidiaries that are self-sufficient in terms of capital and liquidity to safeguard their risk profiles against compromising the Group's profile;
- an independent risk function and a senior management actively engaged in supporting a robust control environment and risk culture; and
- a conduct model that protects our customers and our Simple, Personal and Fair culture.

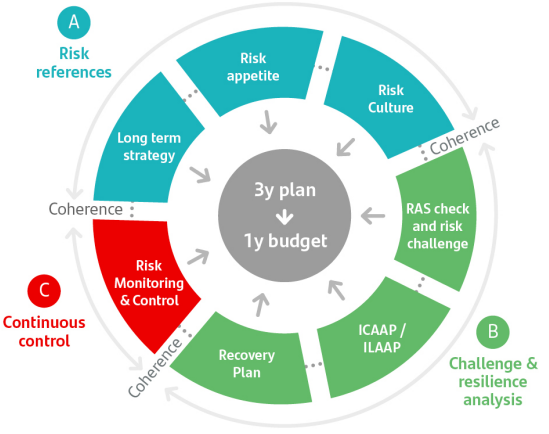


Risk appetite is governed throughout the Group by the following principles:

- **Risk appetite is part of the board's duties.** It prepares the risk appetite statement (RAS) for the whole Group every year. In a cascading down process, each subsidiary's board also sets its own risk appetite.
- **Comprehensiveness and forward-looking approach.** Our appetite includes of all material risks that we are exposed to and defines our target risk profile for the current and medium term with a forward-looking view considering stress scenarios.

To promote that all material risks are adequately represented, we use corporate methodologies to identify and assess the risk to which we are exposed to, in the different counties, and are inherent to our activities (emerging risks and risk control self-assessment — RCSA— among others).

For more details on these exercises see sections 'Management and control model' **5.2 Operational risk management'** and **'8.3 Emerging risks'.**



- **Common standards embedded in the day-to-day risk management.** The Group shares the same risk appetite model, which sets common requirements for processes, metrics, governance bodies, controls and standards. It also facilitates an effective and traceable embedding of our appetite into more granular management policies and limits across our subsidiaries.
- **Continuous adaptation** to market best practices, regulatory requirements and supervisors' expectations.
- **Aligning with business plans and strategy.** The risk appetite is a key point of reference for strategic and business planning. We verify that the three-year strategic plans, the annual budget, and capital and liquidity planning are within the limits set in the RAS before we approve them.

RAF Risk appetite framework

We promote that strategic and business plans are aligned with our risk appetite by:

- considering the risk appetite, long-term strategic view and the risk culture when drafting strategic and business plans.
- challenging business and strategic plans against the risk appetite. Misalignments trigger a review of either the three-year strategic plan (to make sure we stay within RAS limits) or risk appetite limits, with independent governance.
- control through the three lines of defence model that the risk appetite limits are subject to periodic oversight and that the specialized control functions report on risk profile and compliance with limits to the board and its committees every month.

Risk profile assessment (RPA)

Risk identification and assessment activities, and risk profile calculation extend to all types of risks arising from the entity's activities. The risk framework, reviewed annually, defines the key risk types resulting from the Group's main risk identification and assessment exercises.

Risk identification encompasses all processes aimed at detecting risks and vulnerabilities, both internal and external, to which the Group is exposed. These processes enable the responsible functions to become aware of these risks and form the starting point for effective management and control.

Risk assessment includes processes through which the relevance of identified risks is determined, quantitatively and/or qualitatively, considering both inherent risk (before considering the effects of associated mitigant and controls) and residual risk levels.

We systematically evaluate the Group's risk profile and its subsidiaries using a unique RPA methodology, based on the fundamental principles of the risk identification and assessment model: responsibility of all functions, efficiency, common methodologies, completeness in covering all risks, materiality, and orientation towards corrective and mitigation actions.

The calculation of the risk profile according to this methodology generates results through a scoring system composed of four materiality categories: low, medium-low, medium-high and high. This allows for monitoring the risk appetite approved by the board. Additionally, it provides a holistic view of all risks at a given point in time, enabling the identification of management weaknesses and potential deviations from the business plan, on which corrective actions can be taken. It provides evidence of prudent risk management, confirming strong solvency ratios and comfortable liquidity levels.

Our objective is to maintain a medium-low risk profile, stable in an environment dominated by market volatility, a gradual decline in inflation, and ongoing geopolitical tensions. Prudent and forward-looking risk management means strong profitability indicators and credit quality at year-end, as well as a solid liquidity risk profile.

Scenario analysis

Scenario analyses enable us to measure the resilience of our balance sheet, financial statements and our capital adequacy under stressful conditions. We use the findings of these analyses to review our risk appetite and draw up actions to mitigate expected losses or, if needed, to reduce capital and liquidity.

Scenario analyses also enable senior management to comprehend the nature and scope of the vulnerabilities to which the Group is exposed in the execution of its business plan.

Our Research department plays a key role in determining scenarios, macroeconomic variables and other factors that can affect our risk profile in our markets.

We conduct a systematic review of our risk exposure under base, adverse and favourable scenarios that predict an impact on solvency and liquidity. These exercises are fundamental to our processes:

- **Regulatory exercises** based on EU and domestic supervisors' guidelines.
- **Business planning** to help set the Group's risk strategy and profile, with:
  - internal capital and liquidity adequacy assessment processes (ICAAP and ILAAP) that measure capital and liquidity in various scenarios;
  - budget and strategic planning when implementing a new risk approval policy, in assessing the risk profile or when monitoring specific portfolios and business lines;
  - our annual recovery plan, which specifies which tools Grupo Santander could use to survive a severe financial crisis. The plan's financial and macroeconomic stress scenarios have various levels of severity, plus idiosyncratic and/or systemic events; and
  - risk appetite, with stressed metrics to determine how much risk we want to expose ourselves to.
- **Recurrent risk management** also uses scenario analyses for:
  - provisions estimates, which involve adjusting the value of credit operations due to existing or prospective risk factors that have not been considered in the initial approval and rating process, both for individual customers and for the portfolio as a whole; and
  - regular credit and market risk stress tests that simulate changes in expected losses to estimate required capital and absorb unexpected losses.

For more details on scenario analysis, see sections **3.2 'Market risk management' and 3.6 'Liquidity risk management'** and section **'Expected loss estimation'** in Note 54 to the consolidated financial statement.

- **Climate change scenario analysis**, for which we have embedded the scenarios defined by the Network for Greening the Financial System (NGFS), by Representative Concentration Pathways (RCP) and by the Intergovernmental Panel on Climate Change (IPCC), which our Research department integrates and expands by adjusting them to more specific variables by country and sector to offer a more complete and tailored view of our portfolios.

  This enables us to boost our forward-looking capabilities to quantify the impact on our customers of a transition to a lower greenhouse gas emissions economic model, as well as potential physical risk events.

To make stress testing more consistent and robust:

- Our three lines of defence and senior management are involved in scenario analysis governance and oversight.
- The models we develop estimate future metric values (e.g. credit losses).
- Our backtesting and reverse stress exercises challenge model outcomes regularly.
- Our teams contribute expert opinions and a vast understanding of portfolios.
- And we thoroughly monitor models, scenarios, assumptions, results and mitigating management measures.

Amid an economic 'soft landing', where falling inflation is paving the way for central banks to cut interest rates; the unfolding of armed conflicts; election outcomes; early signs of GDP weakness in some economies; and the effects of floods in Brazil, hurricanes in the US, flash floods in Spain and other climate events, scenario analysis proved vital in 2024 to identify and manage correctly the potential impacts of these events on our portfolios.

We boosted our management and forecasting capacity by drawing up action points, adapting our strategy to maintain solvency levels and considering our more vulnerable customers due to the macroeconomic environment and some specific events.

Risk reporting structure

In order for senior management to have a complete and up-to-date view of the risk profile for proper decision-making, we report recurrently and in a consolidated manner on current and future risks. Reporting is comprehensive and dynamic, adapts to needs, and prioritizes all significant risks in a timely and appropriate manner.

Our reports cover every risk included in our corporate risk framework, with all necessary considerations for their proper risk assessment. They also provide a consolidated view of all risks, maintaining the quality and consistency of information according to our corporate data framework.

Our risk reporting structure continues to strike a balance between data, analysis and qualitative commentary, incorporating forward-looking measures, risk appetite information and limits, emerging risks, and other elements.

We continue to enhance our reporting with simpler, automated processes and tighter controls that adapt to new needs. In 2024, we continued to report and monitor all the impacts of ongoing armed conflicts and natural disasters; escalated cases of risk from macroeconomic and geopolitical volatility; and paid close attention to every emerging risk that could have a direct or indirect impact on the Group. Moreover, we adapted reporting by embedding the global businesses to be consistent with the Group's strategic objectives and round off the existing geographical view.

1.5 Internal control system

Our internal control system (ICS) comprises the risk and control procedures that the board of directors, senior management and the rest of our employees perform as part of scheme of individual responsibilities. Its aim is to provide reasonable guarantee regarding the operational efficiency; the reliability of financial and sustainability reports; and compliance with internal policies, by acting responsibly and covering every process across the organization (business, risk and support areas).

Our ICS is consistent with the most demanding international standards and follows the guidelines set out by the Committee of Sponsoring Organisations of the Treadway Commission (COSO). We base it on these principles:

- **Tone at the top:** the board of directors oversees the ICS's integrity, while senior management sets an appropriate ICS. Both groups work to raise awareness of the ICS's importance, especially in new initiatives (transformation projects, regulatory compliance, and others).
- **Risk Control Self-Assessment (RCSA):** it is where we identify, document and assess the ICS's risks and controls to measure — dynamically and proactively — the likelihood and exposure of each operational risk related to our targets once we've assessed the effectiveness of the control that mitigates such exposure.
- **Oversight:** ongoing review of the ICS's effectiveness as well as the management of material deteriorations and oversight of the mitigation plans drawn up to resolves any issues correctly. Monitoring the implementation of the ICS helps to reinforce its robustness and effectiveness.
- **Governance & reporting:** to make sure that we adopt accurate and clear information, and disclosure procedures for decision-making, as well as form strict governance to assess the status and performance of the ICS continuously.

To establish a robust control environment, the first line of defence:

- identifies and documents risk and control based on its knowledge and understanding of its businesses and processes. This covers the risks that we face in performing our activities and achieving the targets we set; and the controls we need to mitigate risks.
- keeps our ICS dynamic to reflect the Group's reality, the risks that affect us, and the controls to mitigate them; and
- assesses the effectiveness of internal controls and exposure to risks, and sets and monitors the mitigation of control shortcomings and undesired exposure.

We run all of this on our Heracles system to provide a comprehensive view of Santander's ICS.

As the second line of defence, the Internal Control function:

- sets the standards and methodology for, and oversees the implementation of, the Group's ICS. This will help safeguard the suitability and integrity of the internal risks and controls that each function sets to provide reasonable guarantee regarding the achievement of targets.
- oversees and challenges the ICS's effectiveness by monitoring its main shortcomings, unwanted risk exposure and the correct execution of mitigation plans.
- reports a comprehensive overview of the internal control environment regularly to senior management and governance bodies to enhance our risk management.

We compile the key conclusions and main shortcomings of the RCSA in a report to submit to the CRO, CAO and governance bodies. The report outlines whether we have overcome those shortcomings correctly or have remediation plans in place to do so. It helps the CEO, CFO and CAO decide on the ICS's effectiveness according to the Sarbanes-Oxley Act (SOx).

2. CREDIT RISK

2.1 Introduction

Credit risk is the risk of financial loss when a customer or counterparty whom Santander has financed or has a contractual obligation with defaults or loses creditworthiness. It includes counterparty risk, country risk and sovereign risk and generates the most exposure and capital consumption.

2.2 Credit risk management

We take a holistic view of the credit risk cycle, including the transaction, the customer and the portfolio to identify, analyse and make decisions about credit risk.

Credit risk identification facilitates active and effective portfolio management. We classify external and internal risk in each business to adopt any corrective or mitigating measures through:

1
Planning

Strategic commercial plans (SCPs) are a risk management and control tool the business and risk areas prepare for different credit portfolios. It helps us determine business targets, risk policies, infrastructure, to have a holistic view of the portfolios, and draw up actions plans aligned with our risk appetite statement.

2
Risk assessment and credit rating

Risk approval depends on the applicant's ability to repay the debt, for which we review their regular sources of income, including funds and net cash flows from any businesses. The credit quality assessment models are based on the credit rating engines for each of our segments.

3
Scenario analysis

Scenario analyses determine potential risks in credit portfolios; give us a better understanding of their performance under various macroeconomic and environmental conditions; and enable us to bring forward and employ management strategies to avoid future deviations from set targets.

4
Monitoring

Our holistic, regular monitoring of every customer enables us to track credit quality, spot risk trends early and check business performance against original plans, which are key to credit risk management.

5
Mitigation techniques

We approve risk according to a borrower's ability to make due payment, regardless of any additional collateral or personal guarantees we may require. We always consider guarantees or collateral as a reinforcement measure to mitigate a loss if the borrower defaults on their payment obligation.

6
Collections and recoveries

The Collections & Recoveries area draws up a strategy based on local economic conditions, business models and other recovery-related particulars. For effective and efficient recoveries management, the area segments customers based on certain aspects and the use of new digital channels.

For more details on the credit cycle, see the **'Credit risk management' section** in Note 54 to the consolidated financial statement.

2.3 Key metrics

During 2024, increasing geopolitical tensions, different electoral processes, uncertainty associated with the pace of inflation decline, the cut in interest rates by central banks in some geographies, as well as uncertainty about economic growth, have marked market behaviour.

Although the financial system, in general terms, has benefited throughout much of the year from the increase in credit margins, it is also facing certain adverse factors (headwinds) related to lower loan demand, deterioration in credit quality, and potential increase in credit losses due to the reduction in disposable income of households, despite the strength of labor markets, as fiscal policies that have supported families and businesses are being withdrawn.

The macroeconomic outlook has influenced Grupo Santander's performance and led us to strengthen our credit risk control framework with a more anticipatory vision in all processes, in order to strengthen our resilience to possible future economic disruptions. Our geographical and business diversification, prudent balance sheet management, and proactive risk management, among others, help us face this challenging environment.

Our credit risk maintained a strong, diversified balance of mature and emerging markets: Europe (56%), North America (17%), South America (15%) and Digital Consumer Bank Europe (12%).

The distribution of credit risk by global businesses (including gross loans to customers, guarantees, and documentary credits) is shown below:

Main credit risk performance metrics from our activity with customers
Dec. 24 data

	Credit risk with customers[A] (EUR million)			Impaired loans (EUR million)			NPL ratio (%)		
	2024	2023	2022	2024	2023	2022	2024	2023	2022

Total Group includes Corporate Centre.
A. Includes gross loans and advances to customers, guarantees and documentary credits
B. Loan-loss provisions net of post write-off recoveries (EUR 1,606 million).
C. Cost of risk calculated as the ratio of loan-loss provisions over the past 12 months / average customer loans and advances of the last 12 months.

For more details on secondary segments, see 2. 'Main aggregates and variations' section in Note 54 to the consolidated financial statement.

Credit quality in December 2024 was as follows:

The **NPL ratio** stood at 3.05% (-9 bps versus 2023 year end), since the impaired loans remained stable, reaching EUR 35,265 million, with increase in Consumer and Payments, which were offset by the positive behaviour in Retail, CIB and Wealth. Gross credit risk with customers (total risk) grew 2.1% in 2024 to EUR 1,157 million, owing mainly to the strong performance of CIB.

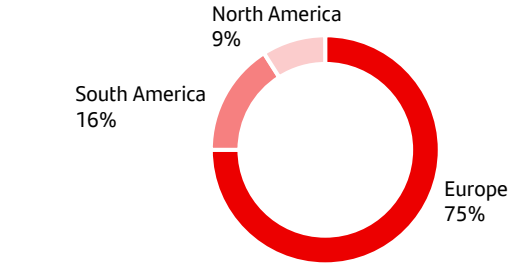
Per IFRS 9 guidelines, Group **loan-loss provisions** for 2024 amounted to EUR 12,333 million, 1% less than the previous year despite normalization in Consumer, an increase in provisions for Swiss Franc mortgages in Poland, and an increase in Wealth (after registering net releases in 2023), which was partially offset by a strong performance in Retail (in Europe). In general, our credit profile in the global businesses and markets remained positive.

The **cost of risk** stood at 1.15% (-3 bps versus 2023 year end), in line with our target for the year, due to the good performance of loan-loss provisions and total risk.

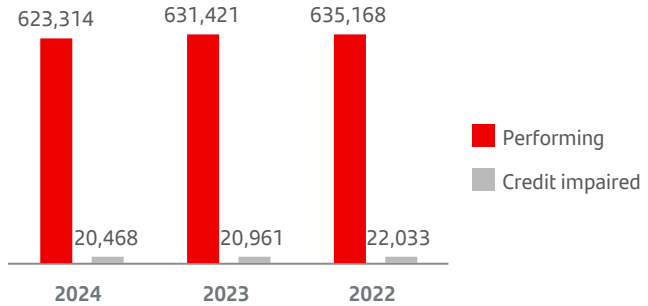
The **NPL coverage ratio** fell to 65%, with loan-loss reserves standing at EUR 22,835 million. Coverage remains at a comfortable level, considering that 66% of the Group's portfolio is backed by collaterals.

To alleviate the mortgage burden for clients considered vulnerable, since the rates reduction, derived from the decreases in official rates in some countries, has not yet been applied to the entire portfolio, the Group maintains the aid measures proposed by various governments, and particularly in Spain, the ICO lines for those affected by the flash floods and the promotion of social housing.

For more details on segments, see section '4.1 Description of segments' of the 'Economic and financial review' chapter.



Our credit risk management performance within the five global businesses at 2024 year end was as follows:



Retail & Commercial Banking

The Retail portfolio mainly comprises high quality mortgages (90% of which have a loan to value ratio of lower than 80%) and a corporate portfolio in which around 50% is backed by collateral or real estate guarantee.

Portfolio distribution by region and by performing loans and credit impaired

Dec.24

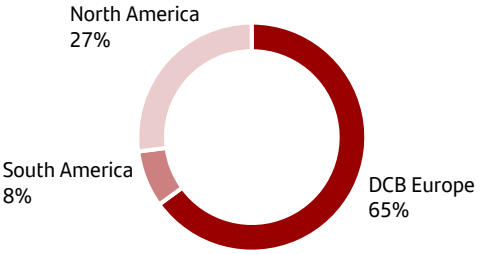
The Retail credit risk with customers is distributed between Mortgages (52%), Corporates (24%), SMEs (14%), and Other individuals (10%).

The **NPL ratio** decreased 3 bps to 3.18%, owing to a 2.4% decrease in impaired loans mainly in Mexico, the UK and Spain on the back of non-performing portfolio sales, partially offset by growths in South America and the US . The credit risk with customers (total risk) fell slightly in the year (-1.3%).

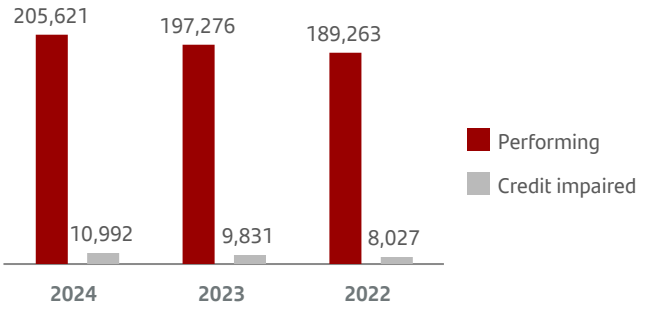
Loan-loss provisions in 2024 fell 11% in comparison with the same period in 2023, largely due to strongly performing European portfolios, which were partially offset by an increase, due to normalization in Mexico and Chile.

The **cost of risk** decreased 10 bps to 0.92% in comparison with 2023, explained by the positive loan-loss provision effect.

The **NPL coverage ratio** fell slightly to 58%. Since Retail includes the mortgage portfolios for Spain and the UK, which are backed by quality collateral, this ratio is at a suitable level versus the portfolio risk.



Digital Consumer Bank



Digital Consumer Bank brings together all our consumer finance businesses in Europe and the Americas, and also includes Openbank, Open Digital Services (ODS) and SBNA Consumer. The portfolio mainly comprises auto loans (80% of the total) that originate from our strategic alliances with manufacturers, the leasing business, and consumer loans.

In the second half of the year, we launched a new digital proposition in the US under the Openbank brand. This launch will help ramp up the execution of our profitable growth strategy for the US by capturing deposits to provide liquidity to our auto lending subsidiary.

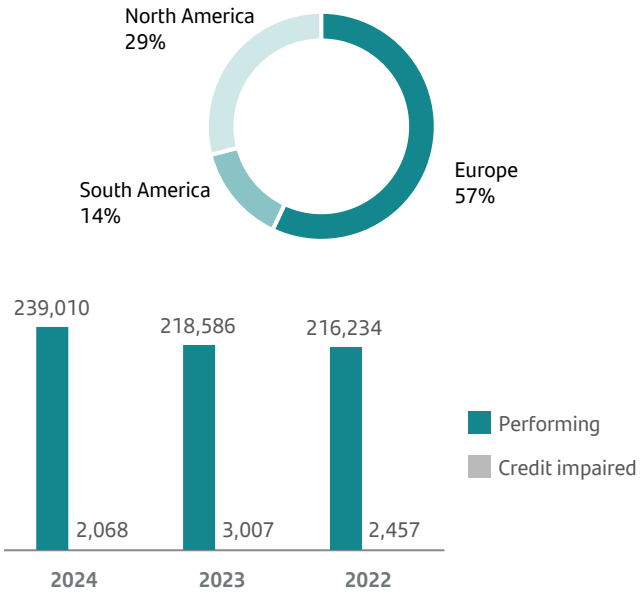
Portfolio distribution by region and by performing loans and credit impaired

Dec.24

The **NPL ratio** stood at 5.07%, up 32 bps in comparison to 2023, owing to an increase in impaired loans mainly in the United States and Europe, which the growth in credit risk with customers (total risk) could not offset because of lower auto loan volume in Europe and the US.

Loan-loss provisions in 2024 grew 11% in comparison with the same period in 2023, due to normalization in Europe, higher volume in Latin America, an increase in the coverage of the Swiss franc mortgage portfolio, lower portfolio sales, and less regulatory burden.

The **cost of risk** climbed 12 bps to 2.16% in comparison with December 2023; the growth in loan-loss provision could not offset by credit risk with customers (total risk) growth (+4.5%)



The **NPL coverage ratio** fell slightly to 74%, which is considered a comfortable level considering the positive effect of the evolution of vehicle prices and the increased weight of the guaranteed loan portfolio, mainly in the US.

Corporate & Investment Banking

Corporate & Investment Banking is a wholesale business in which over 85% of our customers have a credit rating higher than 'investment grade'. It's a business with a strong component of advisory services and high value added solutions.

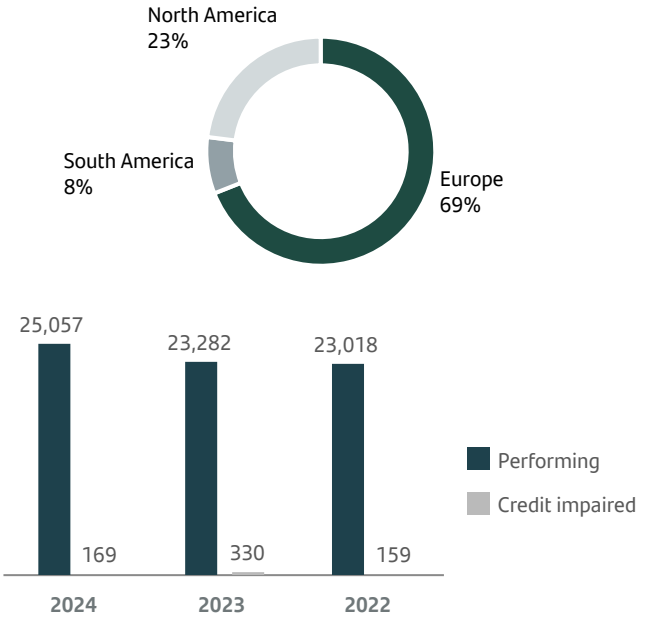
Portfolio distribution by region and by performing loans and credit impaired

Dec.24

The **NPL ratio** improved by 50 bps during the year, reaching 0.86%, due to a 31% drop in impaired loans (mainly in Brazil), accompanied by a 9% growth in the primarily in Spain and the US, driven by the New York branch.

Loan-loss provisions in 2024 grew 6% in comparison with the same period in 2023, due to significant growth in Spain and the United States portfolios, partly offset by good performance of loan-loss provision in Brazil.

The **cost of risk,** meanwhile, remained stable at 0.10%.



The **NPL coverage ratio** stood at 39%, down 2 pp from December 2023, owing to the outflow of some credit impaired assets with an above-average level of coverage.

Wealth Management & Insurance

Wealth Management & Insurance brings together Santander Private Banking in Miami and Switzerland, Santander Asset Management, and Santander Insurance.

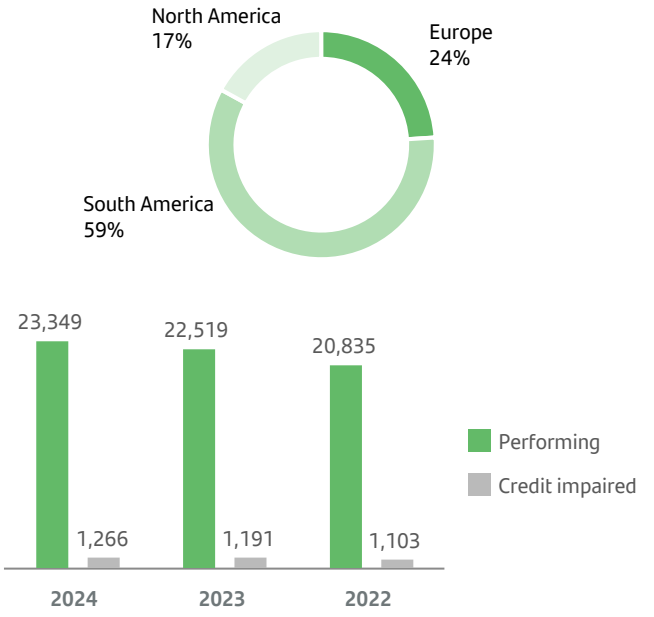
Portfolio distribution by region and by performing loans and credit impaired

Dec.24

The **NPL ratio** closed at 0.67%, with a decrease of 73 bps during the year, almost halving impaired loans, mainly in Europe and Brazil. On the other hand, gross credit risk with customers (total risk) increased by 7% over the period.

Loan-loss provisions in 2024 stood at EUR 41 million, compared with a EUR 17 million release in the same period one year earlier.

The **cost of risk** increased by 26 basis points during the year, changing from negative to positive, standing at 0.18%.



The **NPL coverage ratio** climbed to 80%.

Payments

Payments brings together the Group's digital payment services. It offers global technology solutions for our banks and our customers in the open market. The portfolio groups our exposure to payment and transfer processor operations (PagoNxt) and the Cards businesses, which are typified by rapid turnover and profitability that is appropriate to their level of risk.

Portfolio distribution by region and by performing loans and credit impaired

Dec.24

The **NPL ratio** closed at 5.14%, 12 bps above 2023 year-end, due to a 6% increase in impaired loans, mainly in Brazil and, to a lesser extent, in Europe. Though Mexico performed strongly, it was not enough to offset the other markets. On the other hand, gross credit risk with customers (total risk) increased by 4% comparing to 2023, although in constant euros it increased by 15% during the year, thanks to the good commercial dynamics in all countries, with a clear strategic focus on growth, service quality, and technological transformation to offer the Group's payments and cards customers an improved experience and quality of service.

Loan-loss provisions, which are concentrated in Cards, reached EUR 1,714 million, increased by 3% comparing to 2023, owing to performance in South America and Mexico.

The **cost of risk** increased by 17 bps during the year, reaching 7.39%, due to the growth in provisions and the portfolio. The anticipatory measures adopted have allowed the improvement of the quality and profitability of new production, contributing to a balanced risk profile with the portfolio's economic profitability.

The **NPL coverage ratio** remained high and stable at 140%.

Reconciliation of key figures

Santander's 2024 consolidated financial statements disclose loans and advances to customers before and after loan-loss reserves. Credit risk with customers also includes off-balance sheet risk or contingent liabilities. This table shows the relationship between those concepts:

		Gross credit risk with customers[A] 1,157,274				
Gross credit risk with customers 1,157,274		Gross loans and advances to customers & others 1,076,195				Contingent liabilities 81,079
Loans and advances to customers(Gross)	=	Financial assets measured at amortized cost (Gross)[B]	+	Financial assets held for trading[B]	+	Financial assets at fair value (Gross)[B]
1,076,195		1,033,025		26,591		16,579
Loan-loss reserves	=	Loan-loss reserves		+		Loan-loss reserves
-22,125		-21,983				-142
Net loans and advances to customers	=	Net financial assets measured at amortized cost	+	Financial assets held for trading	+	Net financial assets at fair value
1,054,070		1,011,042		26,591		16,437
		Net loans and advances to customers 1,054,070				

Section 2. Credit risk Balance sheet item from consolidated financial statement

A. Includes gross loans and advances to customers, guarantees and documentary credits.
B. Before loan-loss allowances.

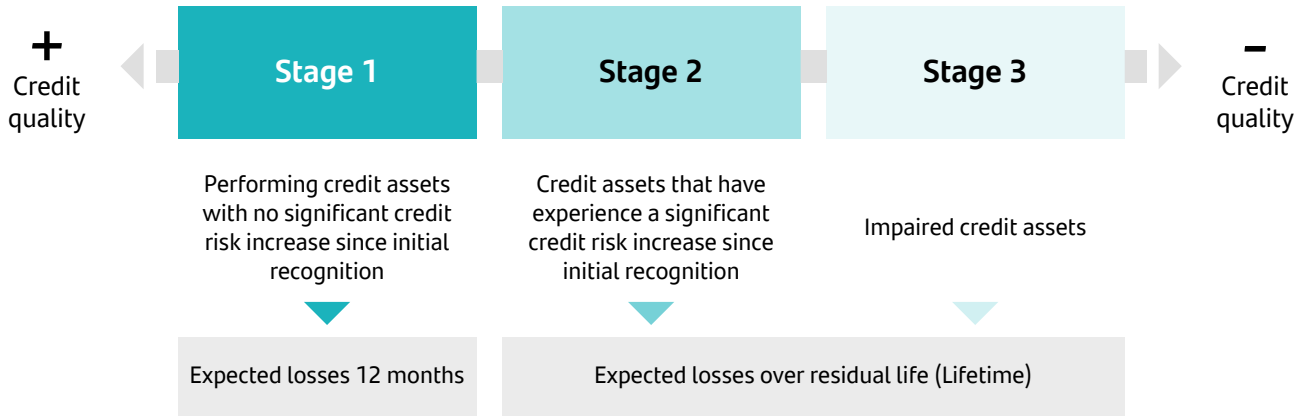
Financial asset impairment

IFRS 9 amended the criteria for provisioning financial assets subject to credit risk, from only recognizing losses once they had occurred to requiring provisions from the time the transaction receives approval (based on expected losses) because the credit risk exists from that moment as opposed to upon default. This gave rise to modification of the models and methodologies we use to calculate expected losses for customers and portfolios, which now consider economic forecasts and the residual life of individual transactions.

We quantify expected losses from credit events and, therefore, impairment provisions, using an unbiased, weighted consideration of up to five future scenarios that could affect our ability to collect contractual cash flows. They consider the time-value of money, information from past events, and current conditions and projections of GDP, house prices, unemployment, interest rates, and other important macroeconomic factors.

We calculated impairment losses using parameters (mainly EAD[1], PD[2], LGD[3] and discount rate) based on internal models and regulatory and management expertise. As they are far from a simple adaptation, we define, update and validate them according to IFRS 9 guidelines.

[1] Exposure at Default.
[2] Probability of Default.
[3] Loss Given Default.



For more details on financial asset impairment and the calculation of provisions under IFRS 9, see section '**2. Main aggregates and variations**' in Note 54 to the consolidated financial statement.

IFRS 9 classifies financial assets in stages according to changes in the level of credit risk from the time of approval to the date of analysis to establish transaction prices and with varying criteria to calculate expected loss. Transactions with contrasting likelihood of default should be pegged to different interest rates or spreads that cover each transaction's expected losses.

If a transaction's risk increases significantly compared to when it was approved, the original interest rate will no longer cover the potential risk, which calls for greater provisions. Under IFRS 9, transactions are split according to three stages:

- **Stage 1** includes financial assets with no significant increase in credit risk since initial approval or registration. Thus, the impairment provision reflects expected credit losses from defaults over the next 12 months from the reporting date.

- **Stage 2** include financial assets that show a significant credit risk increase since initial registration or the time for approval but no materialized impairment event. Thus, the impairment provision reflects expected losses from defaults over the transaction's lifetime.
- **Stage 3** includes financial assets with true signs of credit risk impairment as a result of one or more events resulting in a loss. Thus, the impairment provision reflects expected losses for credit risk over the instrument's expected lifetime.

Impairment provisions or loan loss reserves include expected credit risk losses over the expected residual life of purchased or originated credit impaired (POCI) financial assets.

The following table shows credit risk exposure by stage and geography:

Exposure by stage and geography[A,B]

EUR million. Dec.24

	Stage 1	Stage 2	Stage 3	Total
Europe	**537,090**	**48,589**	**13,774**	**599,453**
Spain	231,751	17,145	7,672	256,568

Forbearance

Grupo Santander's forbearance policy follows the EBA Guidelines on management of non-performing and forborne exposures. It is a standard for our subsidiaries and meets supervisory expectations.

The policy establishes criteria for identification, classification and monitoring forbearances, to underwrite and monitor these transactions with the utmost diligence. Forbearance must aim to recover outstanding debt, with payment obligations adapted to customers' circumstances.

Forborne debt should remain appropriately classified for sufficient time in order to determine both associated risk and reasonable certainty about recovery of ability to pay. Forbearance may never be used to delay the immediate recognition of losses or hinder the appropriate recognition of risk of default.

In 2024, forbearance stock continued to fall (15% in the year), and stood at EUR 27,144 million, due to consistent payment behaviour in our core markets. In terms of credit quality, 54% are classified as credit impaired with average coverage of 41%.

Key forbearance figures

EUR million

	2024	2023	2022

2.4 Other credit risk details

Credit risk from financial markets activities

This section covers the credit risk generated from treasury activity with customers (especially credit institutions) through money market financing and counterparty risk products to meet the needs of customers and the Group's own needs in their management.

Counterparty credit risk is the risk that a customer will default before the final settlement of a transaction's cash flows. It creates a bilateral credit risk because it can affect both parties to a transaction. It is also uncertain because it depends on market factors, which can be volatile.

As part of counterparty credit risk exposure, an additional risk known as wrong-way risk can arise. This risk occurs when the exposure to a portfolio or counterparty increases as the credit quality of the counterparty deteriorates. In other words, there is wrong-way risk when there is an increase in default risk, and consequently, the exposure to the counterparty increases. Santander has specific models to measure this risk.

Regarding settlement risk, this occurs when the settlement of a transaction involves a bilateral exchange of flows or assets between two counterparties. For example, when a counterparty buys dollars in exchange for euros, the settlement of the transaction involves one party delivering euros and receiving an equivalent amount of dollars from the other. Settlement risk is the risk that one of the parties fails to meet their settlement obligations. We have also developed a global infrastructure and specific models to measure this risk.

To manage and control counterparty risk, it is essential to have an infrastructure that allows measuring current and potential exposure at different levels of aggregation and granularity in an agile and dynamic way, ensuring the generation of reports with sufficient detail to facilitate the understanding of exposures and the decision-making process.

To measure exposure, we follow two methodologies: mark-to-market (MtM or replacement value in derivatives) plus potential future exposure (add-on), and Monte Carlo simulation for calculating exposure for some countries and products. Additionally, we calculate capital at risk or unexpected loss, which is the loss that constitutes economic capital net of guarantees and recoveries, after deducting the expected loss.

After market close, we recalculate exposures by adjusting all operations to their new time horizon, adapting the potential future exposure and applying mitigation measures (netting, collateral, among others), so that exposures can be controlled daily against the limits approved by senior management within the risk appetite. We perform risk control through a real-time integrated system, which allows us to know at any moment the available exposure limit with any counterparty, in any product and term, and across all subsidiaries.

Counterparty risk exposures: over-the-counter (OTC) transactions and organized markets (OM)

As at December 2024, the positive market value of total exposure (under management criteria) with netting and collateral agreements for counterparty risk was 15,855 million euros (net credit risk equivalent of 52,604 million euros). Despite the environment in which we operate, the 9% increase in exposure compared to the previous year is driven by the 26% increase in the Group's trading volume in notional terms over this period.

Counterparty risk: exposure in terms of market value and credit risk equivalent, including the mitigation effect[A]

EUR million

	2024	2023	2022
Market value with netting effect and collateral[B]	15,855	13,428	13,249
Net CRE[C]	52,604	48,372	45,157

A. Figures under internal risk management criteria. Listed derivatives have a market value of zero. No collateral is received for these types of transactions.
B. Includes the mitigation of netting agreements and deducting the collateral received.
C. CRE (credit risk equivalent): net value of replacement plus the maximum potential value, less collateral received.

The chart below shows counterparty risk products (especially interest rate and FX hedging instruments) by nominal risk:

Counterparty risk by nominal[A]

EUR million

	2024	2023	2022
	Nominal	Nominal	Nominal
Credit derivatives[B]	45,628	24,528	14,765
Equity derivatives	28,431	20,326	26,177

A. Figures under internal risk management criteria.
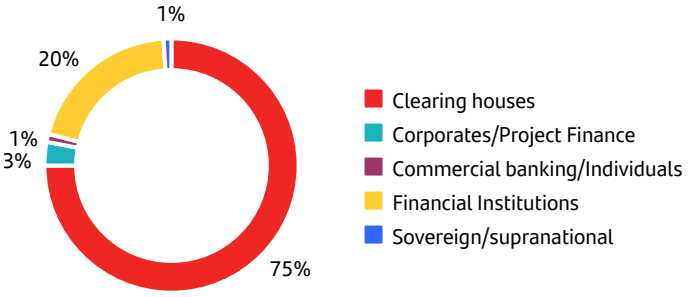
B. Credit derivatives acquired, including coverage of loans.
C. Refers to transactions involving listed derivatives (proprietary portfolio). Listed derivatives have a market value of zero. No collateral is received for these types of transactions.

Even if the credit quality of some counterparties declines, most counterparty credit risk is with customers with high credit quality (90% rated A or higher).

In terms of notional value, 97% of operations with counterparty credit risk belong to CIB's customer and are handled under its management model.

Counterparty risk: Notional values by customer rating[A]

Dec.24 data



Rating	%
AAA	0.67%
AA	1.11%
A	87.84%
BBB	9.27%
BB	1.04%
B	0.07%
Other	0.01%

A. Ratings based on internally defined equivalences between internal ratings and credit agency ratings.

Transactions with clearing houses and financial institutions are subject to netting and collateral agreements, which we also seek to use to cover all other transactions. In general, the collateral agreements Santander signs are bilateral; still, we do sign some unilateral agreements in the customer's favour, mainly with multilateral organizations and securitization funds.

Counterparty risk: Notional values by customer segment

Dec.24 data

We use collateral to reduce counterparty risk. It consists of highly liquid instruments with economic value. They are deposited or transferred from one counterparty to another to guarantee or reduce counterparty credit risk from portfolios of cross-risk derivatives.

We measure trades subject to collateral agreements daily, with parameters to determine the amount of collateral to be paid or received from the counterparty (in cash or securities). Our processes to manage collateral properly and more often have proved effective amid high volatility.

Most of the collateral received under Credit Support Annex (CSA), Overseas Securities Lending Agreement (OSLA), International Securities Market Association (ISMA), Global Master Repurchase Agreement (GMRA) and other agreements signed by the Group has been effective (44%); the rest is subject to strict quality policies in regard to the issuer and their rating, debt seniority and haircuts.

Because of the credit risk we assume with each counterparty, we apply credit valuation adjustments (CVA) to over-the-counter (OTC) derivatives when calculating the results of trading portfolios.

A CVA is a change to the market value of OTC derivatives that accounts for counterparty credit risk throughout the contract life. A counterparty's CVA adds up to the CVA on all maturity dates. It discounts the value of a derivative offered by a buyer based on the chance that the counterparty will default. We calculate it with exposure at default, probability of default, loss given default, the discount curve and other inputs.

We also apply debt valuation adjustments (DVA), which are similar to CVA but result from credit risk assumed by OTC counterparties trading with Grupo Santander. Both CVA and DVA are done within the potential period of exposure.

As of December 2024, CVA adjustments amounted to EUR 272 million (representing a 7.2% decrease compared to December 2023) and DVA adjustments were EUR 317 million (3.9% decrease vs December 2023). These decreases are mainly due to drops in interest rate markets in EUR and USD, a decrease in inflation, and movements in credit markets where spread levels have moderately decreased compared to those in December 2023.

Counterparty risk, organized markets and clearing houses

Santander's policies promote early action according to regulation on OTC derivatives, repurchase agreements and securities lending (whether settled through clearing houses or bilaterally). In recent years, we have been standardizing OTC transactions to settle and clear new contracts through clearing houses according to current regulation, in addition to promoting internal use of electronic execution systems.

We actively manage contracts not settled by clearing houses to optimize volume, in accordance with regulation on margins and capital.

While our counterparty risk management does not contemplate credit risk in such transactions, we have been calculating regulatory credit exposure for organized market exchanges since the Basel principles on capital calculation.

The table below shows the weight of contracts settled by CCP versus total counterparty risk as of December 2024:

Counterparty risk: Notional values by settlement channel and product[A]

Nominal in EUR million

	Bilateral		CCP[B]		Organised markets[C]		Total
	Nominal	%	Nominal	%	Nominal	%	
Credit derivatives	17,944	39.3%	27,684	60.7%	—	—%	45,628
Equity derivatives	21,315	75.0%	574	2.0%	6,542	23.0%	28,431
Fixed income derivatives	17,471	99.5%	96	0.5%	—	—%	17,567
Exchange rate derivatives	1,316,307	94.6%	39,420	2.8%	35,838	2.6%	1,391,564
Interest rate derivatives	810,896	9.3%	7,740,492	88.8%	167,179	1.9%	8,718,567
Commodity derivatives	2,223	9.4%	—	—%	21,539	90.6%	23,762
Repos	275,003	60.0%	182,973	40.0%	—	—%	457,977
Securities lending	73,845	99.6%	294	0.4%	—	—%	74,139
Total	**2,535,003**		**7,991,535**		**231,098**		**10,757,636**

A. Figures under internal risk management criteria.
B. Central counterparties (CCP).
C. Refers to transactions involving listed derivatives (proprietary portfolio). Listed derivatives have a market value of zero. No collateral is received for these types of transactions.

Risk settled by CCP and product[A]

Nominal in EUR million

	Sept. 2024	2023	2022
Credit derivatives	27,684	10,140	4,848
Equity derivatives	574	559	758
Fixed income derivatives	96	—	15
Exchange rate derivatives	39,420	44,152	24,349
Interest rate derivatives	7,740,492	5,844,580	4,555,519
Commodity derivatives	—	—	—
Repos	182,973	193,386	109,248
Securities lending	294	—	—
Total	**7,991,535**	**6,092,817**	**4,694,737**

A. Figures under internal risk management criteria.

Credit derivatives

We use credit derivatives to hedge transactions, customer business in financial markets and trading. The credit derivatives Santander has negotiated have a low notional value: 0.4% of the notional value of counterparty risk. Furthermore, we subject credit derivatives to internal robust controls and procedures to minimize operational risk.

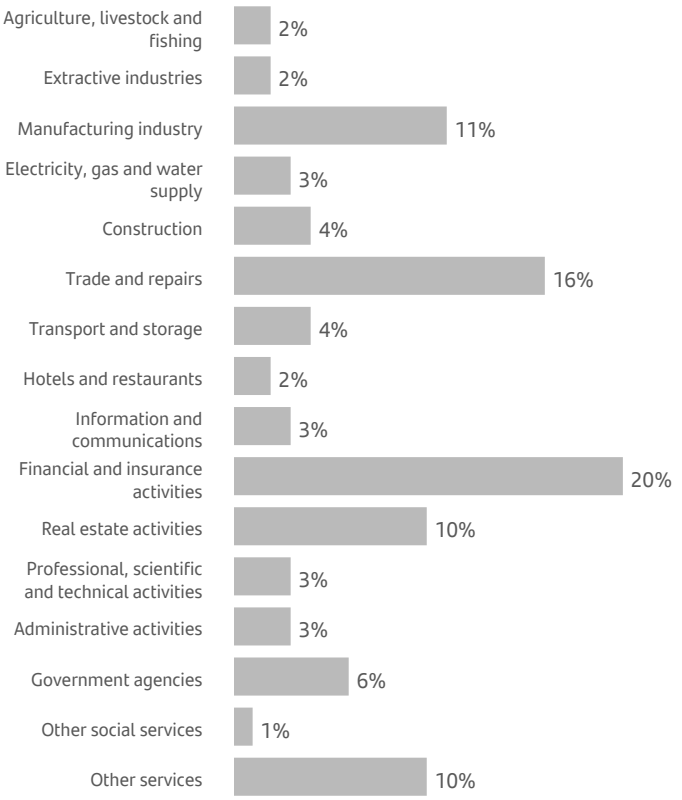
Concentration risk

Concentration risk control is key to our management. We continuously monitor credit risk concentration by region and country, economic sector, customer type and other criteria.

The board sets concentration limits according to risk appetite. Accordingly, the executive risk committee develops risk policies and reviews the appropriate exposure levels so we can effectively manage credit risk concentration.

Because Santander is subject to the Capital Requirements Regulation (CRR) stipulations on large risks, exposure with a customer or group of associated customers will be considered 'large exposure' if its value is equal to, or greater than, 10% of eligible capital.

No large exposure should exceed 25% of the entity's eligible capital, including the credit risk reduction effect set out in the regulation.



The use of risk mitigation techniques resulted in no groups triggering those thresholds as at the end of December. 5.5% of total credit risk (including loans to customers and off-balance-sheet risk) is with the 20 'large exposure' groups, according to regulation on credit exposure. While 8.4% of total credit risk is with the 40 'large exposure' groups.

Our Risk division works closely with the Finance division on actively managing credit portfolios with credit derivatives, securitizations and other techniques to reduce exposure concentration and optimize risk-reward.

As indicated in the key metrics section of this chapter, our credit risk is diversified among our core markets (Spain 25%, the UK 21%, the US 12%, Brazil 9%, etc.). Grupo Santander is enhancing our markets with global businesses that will help boost local performance to add value.

In terms of sector diversification, 56% of our credit risk is with individuals, who are inherently highly diverse. It is also well distributed, with no significant concentration in a particular industry. The chart below shows credit risk by industry as at December 2024:

Diversification by economic sector[A]

A. Includes total risk (gross) on balance for all clients with economic activity but excludes individuals and reverse repos.

Sectors identification and management

Grupo Santander conducts a quarterly review of exposure to customers operating in sectors that could be more affected by macroeconomic conditions (energy consumption, commodity prices, and key macroeconomic variables). This monitoring is complemented by the use of internal tools that allow projecting the behaviour and evolution of clients in each sector under different macroeconomic scenarios. It considers:

- Market information: Industries' stock market performance.
- Analysts' EBITDA forecasts for the coming years.
- Internal information: Changes in credit exposure, defaults (in different timelines) and stagings.
- Our industry experts' opinion, based on specific details about our exposures and our relationships with customers.

We continued to build up our analysis of potential losses to the highest level of granularity by enhancing our sector-level methodology and projection tool based on the resilience of each company's financial statements to different macroeconomic scenarios. We considered their pledge to meet energy commitments through possible transition plans by quantifying impacts under the assumptions of an orderly, disorderly or non-existent transition to be able to keep our management of the portfolio one step ahead.

Country risk

In credit risk, country risk involves transactions with customers residing in a particular country with unusual business risk. It includes sovereign risk and transfer risk, as well as war, natural disaster, balance of payments crisis and other things that can disrupt international finance. To cover potential losses arising from these types of events, we integrate country risk into our models and provisioning processes in accordance with applicable regulation.

We assume country risk very selectively in transactions that enhance our global relations with customers. And we follow highly cautious standards to manage it.

Sovereign risk and risk with government agencies

Sovereign risk arises from central bank transactions (including regulatory cash reserves), government bonds (public debt) and transactions with non-commercial government institutions funded exclusively by a state's budget revenue.

Our standard for sovereign risk differs somewhat from the EBA's standard for regular stress testing. In particular, the EBA does not consider deposits with central banks, exposures with insurance companies or indirect exposures from guarantees and other financial instruments. However, its standard does generally include entities run by regional, local and central governments.

We continue to track and manage transactions with sovereign risk based on available information, such as reports by rating agencies and international organizations. We monitor each country where we have cross-border[4] and sovereign risk. We analyse events that could affect the country's political or institutional stability and assign its government or central bank a credit rating. This helps us set limits for transactions with sovereign risk.

In recent years, total sovereign risk exposure has remained within regulatory requirements and strategy defined for its management. Because exposure spans several countries, each with its distinct macroeconomic outlook and growth scenario, it varies due to our liquidity management strategy and our interest and FX rate coverage, which apply limits based on each country's credit rating.

At the end of December 2024, total sovereign risk exposure was EUR 198,627 million, which was 23% higher than 2023.

For more details on sovereign risk exposure, see section '**4. Other credit risk aspects**' in Note 54 to the consolidated financial statement.

Our exposure to local sovereign risk not in the issuer country's currency at the end of December 2024 was minor (EUR 4,459 million or 1.1% of total sovereign risk), based on our management criteria. Exposure to non-local sovereign issuers with cross-border risk was also minor[5] (EUR 11,494 million or 2.8% of total sovereign risk). The sovereign debt we hold in Latin America, which is recorded in local ledgers, is predominantly in local currency and short-term.

Additionally, our investment strategy for sovereign risk considers country's credit quality to set the maximum exposure limits.

The table below shows exposure ratios by rating[6] December 2024:

	2024	2023	2022
AAA	21%	18%	27%
AA	18%	19%	19%
A	41%	41%	34%
BBB	11%	12%	11%
Lower than BBB	9%	10%	9%

[4] Risks with domestic public or private borrowers in foreign currency and originated outside the country.
[5] Countries that are not considered low risk by Banco de España.
[6] Internal ratings are applied.

3. MARKET, STRUCTURAL AND LIQUIDITY RISK

3.1 Introduction

This section is about Grupo Santander's management and control of market risk in 2024, including trading risk, liquidity risk and structural risk. It provides a brief description of our methodologies and metrics.

Market risk comes from movements in interest rates, inflation, foreign exchange, equity prices, credit spread, commodity prices, volatility, liquidity risk from products and the balance sheet, and other market variables that can affect transaction performance. It also includes trading and structural risk.

For more details on market factors see section **'Activities subject to market risk and types of market risk'**, in Note 54 to the consolidated financial statement.

Options, futures, forwards, swaps and other derivatives can mitigate some or all of these risks.

Market risk factors that require more complex hedging are correlation, market liquidity, pre-payment and underwriting risk.

On-balance sheet liquidity risk is also key (for more detail, see 3.6 'Liquidity risk management'), as pension and actuarial risk also depend on market variables (for more details, see 3.8 'Pension and actuarial risk management' at the end of this section).

We check our compliance with the Basel Committee's Fundamental Review of the Trading Book (FRTB) and its implementation according to the EU's Capital Requirements Regulation (CRR II) and the EBA's guidelines on market risks.

In 2024, we ran several projects to give control teams the best tools to manage market risk and capital consumption. They included:

- Running numerous initiatives to enhance the calculation of market risk-related capital requirements under the Fundamental Review of the Trading Book - Standard Approach (FRTB- SA) methodology. In particular we:
  - rounded off the scope of calculation for entities and risk factors subject to market risk-related capital;
  - made necessary amendments to adapt the calculation to the CRR III;
  - strengthened the control environment over metrics, static risks and technical procedures through an overhaul of data architecture to reduce calculation times and enable us to run simulations; and
  - built up the exploitation layer of capital data under FRTB SA.
  - developed new regulatory reporting required by the EBA; and
  - strengthen our governance framework for FRTB-SA procedures by redefining the functions of certain forums, adapting internal regulation, and setting new escalation criteria.
- Enhancing the procedures to classify financial instruments under the fair value hierarchy.
- Updating the stress test programme for trading portfolios to meet regulator's expectations.
- Implementing new valuation adjustment methodologies in all units using corporate tools and common standards.
- Broadening the content and analysis of market risk reporting to top management.
- Enhancing the governance framework for the approval and use of market risk models.

3.2 Market risk management

Because factors inside and outside a unit can give rise to market risk, management and control must cover all potential risk sources with coordinated, uniform treatment by all subsidiaries.

The Group's senior management receives thorough, accurate reporting on a regular basis to measure subsidiaries' risk profiles and gain a holistic view of market risk for global analysis and control.

Limits management and control system

The market risk area runs daily checks so that market positions remain within approved limits. It also assesses the performance of, and significant changes in, related metrics.

We set market risk limits in a dynamic process according to risk appetite levels in the annual limits plan prepared by senior management and extended to all subsidiaries.

We take a prudent approach to manage market risk activity from multiple perspectives and to establish appetite limits on different metrics including:

- value at risk (VaR) and stressed VaR (sVaR) limits;
- equivalent and/or nominal position limits;
- interest rate sensitivity limits;
- vega limits;
- limits for risk of delivery of short sales (bonds and equities);
- limits to reduce effective losses or protect profits during the year (loss trigger and stop loss);
- credit limits (limits for total exposure and jump-to-default by issuer); and
- origination limits.

Those general limits have sub-limits that make the structure granular enough to control market risks from trading. We monitor subsidiaries' positions every day.

We set global approval and control limits, global approval limits with subsidiary-run control and subsidiary-level approval and control limits. Each subsidiary's business unit manager requests limits based on business particulars and budgetary targets so that they will match the risk-reward ratio. Risk bodies approve limits according to established governance.

Subsidiaries must adhere to approved limits. The day a limit breach occurs, subsidiary business managers must provide a written explanation with an action plan to correct it.

Market risk-related capital requirements

We use internal and standard models to determine market risk-related capital requirements. We also use internal models to calculate regulatory capital for the trading books of our subsidiaries in Chile, Mexico and Spain (Santander España's trading book includes Santander London Branch, which helps diversify its positions).

In 2024, we continued to work on enhancing the calculation of market risk-related capital, most notably to adapt our infrastructure to new FRTB requirements. Moreover, we worked to enrich internal regulation and reporting on market risk-related capital to meet supervisory expectations.

We rolled out all these enhancements in our core markets through corporate tools, enabling us to automate processes and reduce the use of expert judgement significantly.

Our internal market risk model calculates the Group's consolidated regulatory capital as subsidiaries' total regulatory capital that the ECB has approved. Because it does not consider capital savings owing to geographical diversification, our model is conservative.

It uses advanced methods with VaR, stressed VaR, Incremental Risk Charge (IRC) and Risk Not in Model (RNIM) as fundamental metrics to calculate ECB-approved regulatory capital in trading consistently with the CRR.

Methodologies and key aspects

a) Value at Risk (VaR)

Value at risk (VaR), our standard methodology for managing and controlling market risk, measures maximum expected loss with a certain confidence level over a given time. For standard historical simulation, the confidence level is 99% and the time window is one day. We also apply a two-year horizon or VaR over 520 days and other statistical adjustments in order to quickly and efficiently account for recent events that influence risk levels.

We report the highest of two VaR figures, which we calculate every day. One figure includes an exponential decay factor with a low weighting on the oldest observations; the other weights all observations the same. We also use the same methodology to calculate value at earnings (VaE), which gives maximum potential earnings within a certain confidence level and time horizon.

As a risk metric, historical VaR simulation has many advantages. It states a portfolio's market risk in a single figure according to market movements. Still, it does have its limitations:

- VaR is calibrated to a certain confidence level, above which it does not reveal potential losses.
- The liquidity horizon of products in a portfolio is longer than the VaR model's.
- VaR is not a dynamic measure of risk even if it is subject every day to significant, albeit unlikely, changes.
- High sensitivity to time windows.
- Inability to show plausible high-impact events outside the time window.
- No market inputs (e.g. correlations, dividends or recovery rates) for measurement parameters.
- Slow adaptation to new volatility and correlations, as the weighting of the newest and the oldest data is the same.

To circumvent some limitations, we use stressed VaR (sVaR) and expected shortfall (ES); calculate VaR with exponential decay; make conservative measurement adjustments; and run analyses and backtesting to assess the accuracy of the VaR calculation model.

b) Stressed VaR (sVaR) and Expected Shortfall (ES)

Every day, we calculate sVaR for our main portfolios using the same VaR calculation method but with these exceptions:

- A window of 260 observations (as opposed to 520 for VaR) over a continuous stress period. For each portfolio, we review the history of a subset of market risk factors (selected with expert criteria) and the most significant positions per book.
- Unlike VaR, the percentile we take to get sVaR has uniform weighting and is not the highest one based on exponential and uniform weightings.

We calculate ES as expected loss above VaR at a 99% confidence level. We also weight all observations the same. Unlike VaR, ES has the advantage of showing tail risk (i.e. the risk of loss due to a rare event) while being a subadditive metric. According to the Basel Committee, 97.5% ES is a risk level similar to 99% VaR.

c) Scenario analysis

Santander's risk measures are based on normal market conditions, price stability, sufficient liquidity and other assumptions used in daily risk management and decision-making. However, some extreme movements and vast unforeseen changes might not be properly anticipated.

Scenario analysis enables us to recognize unexpected outcomes and estimate how much capital could be needed to absorb losses stemming from those outcomes.

We regularly calculate and review stress test scenarios for all the trading books of the Group and our subsidiaries, such as:

Historical scenarios

Historical scenarios consider trading portfolio performance during a crisis or significant past market events to estimate maximum losses based on existing positions.

Hypothetical scenarios

We use extreme scenarios based on market risk shocks that do not relate to past events (e.g. abrupt crisis with strong movements in all risk factors, worst-case scenarios, scenarios based on regulatory stress exercises, and forward-looking scenarios). Unlike generally *ex post* historical scenarios, hypothetical scenarios are ex ante.

Reverse stress test scenarios

Reverse stress test scenarios indicate loss-causing market variables that may compromise the bank's survival. They supplement traditional stress test scenarios and point out potentially vulnerable business areas, hidden risks and correlations between risk factors.

Climate change scenarios

We use climate change scenarios to measure the potential impact of current exposure to climate-sensitive economic activities on trading portfolios resulting from climate and environmental risks. They include both exposure to physical risk and transition risk.

Other stress test scenarios

In addition to the above scenarios, we conduct other stress tests every quarter to identify potential losses or significant impacts on capital arising from extreme market movements (e.g. IRC scenarios, proxy stress scenarios in the VaR calculation stress scenarios in valuation adjustments).

d) Calibration and backtesting

According to regulation, the VaR model must accurately show material risks. Because VaR uses statistical techniques under normal conditions for a certain confidence level over a set time horizon, the estimate of maximum potential loss may differ from actual losses. We review and contrast the VaR calculation model on a regular basis to verify its accuracy.

We run internal backtesting, contrast VaR and review assumptions about portfolios for subsidiaries that follow the internal market risk model. For subsidiaries with an approved internal model, we run regulatory backtesting to find exceptions (where daily profit or loss is higher than VaR or VaE) that will influence the calculation of regulatory capital requirements for market risk.

Through backtesting, we assess the quality and general effectiveness of our risk measurement model. Our backtesting compares daily VaR/VaE observed on D-1 to profit and loss (P&L) observed on D: Economic P&L, actual P&L, hypothetical P&L, and theoretical P&L.

We run daily backtesting for our subsidiaries, as well as daily, weekly and monthly internal (non-regulatory) backtesting depending on portfolio granularity.

The number (or proportion) of exceptions we record is one of the most intuitive indicators of a model's soundness. As our regulatory backtesting covers a historical period of one year (250 days) and a 99% VaR, we expect two to three exceptions per year. To calculate regulatory capital for market risk, we take the regulatory K[7] from the number of exceptions we find in actual and hypothetical backtesting.

e) Analysis of positions, sensitivities and results

Santander uses positions to quantify the market value of derivative transactions by main risk factor and with the Delta value of futures and options. We can express risk positions in subsidiaries' base currency and in the currency used to standardize information. We monitor positions every day to correct any incidents we find immediately.

Sensitivity to market risk is the estimated impact of change in a risk factor on the market value of an instrument or portfolio. We measure it with partial derivatives or a full portfolio revaluation to get an analytical approximation.

The Market risk area's daily P&L statement is an excellent indicator of the impact of changes of financial variables on portfolios.

f) Derivatives activities and credit management

Because of their atypical characteristics, we have special measures to monitor derivatives and credit management daily. On the one hand, we monitor the sensitivity of underlying assets to price movements (Delta and Gamma) to volatility (Vega[8]) and over time (Theta). On the other hand, we systematically check measurements of their sensitivity to spread risk, jump-to-default risk and position concentrations by rating.

Based on regulation and the Basel Committee's recommendations, we also calculate the IRC, an additional metric for credit risk in the trading book.

[7] K: Parameter to calculate regulatory capital consumption for market risk.
[8] Vega represents the sensitivity of the value of a portfolio to changes in the value of market volatility.

The IRC covers default risk and rating migration risk (which VaR does not show adequately) by taking credit spread changes into account. In general, we apply it to government and corporate bonds; to forwards, options and other bond derivatives; and to credit default swaps, asset-backed securities and other credit derivatives. To calculate it, we take direct measurements of loss distribution tails at the right percentile (99.9%) over a one-year horizon and follow the Monte Carlo method with one million simulations.

g) Credit valuation adjustment (CVA) and debit valuation adjustment (DVA)

The Group calculates trading book results through CVA and DVA.

For more details on CVA and DVA see 'Credit risk from financial markets activities' in section 2.4 'Other credit risk details'

3.3 Key market risk metrics

In 2024, trading risk levels remained low, slightly above 2023 levels, amid the high volatility caused by uncertainty over inflation and the pace of central bank monetary policy tightening and its effects on global economies. Moreover, political issues such as elections in certain countries and the conflicts in Ukraine and the Middle East compounded market volatility.

Risks continued to originate from trading non-complex instruments with customers. Most were hedges for interest rate and FX risk.

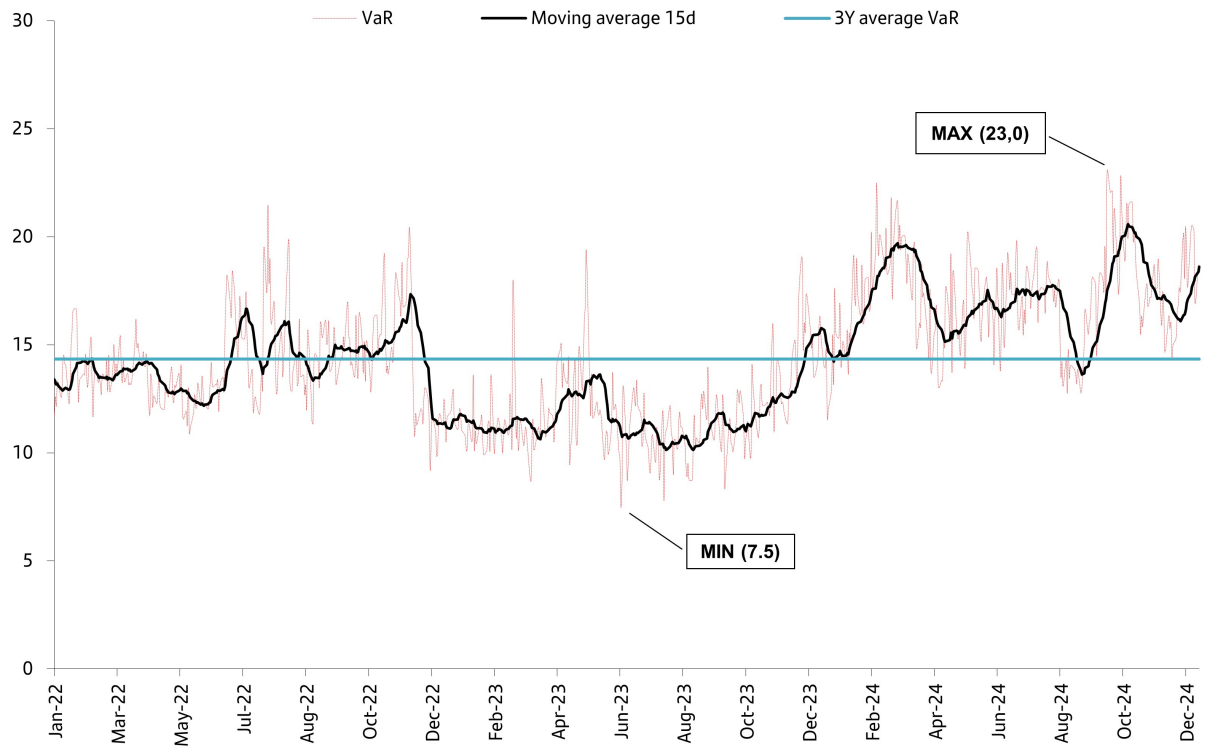
2024 saw generally low consumption of trading limits, which are based on the Group's market risk appetite.

VaR analysis

As the VaR of CIB's trading book shows, market risk strategy focuses on trading with customers to minimize net directional exposure and keep risk diversified by geography and risk factor.

In 2024, VaR fluctuated between EUR 23.0 and EUR 11.6 million. Average VaR in 2024 was EUR 17.1 million, higher than 2023 and 2022 (EUR 11.7 million and EUR 14.1 million, respectively). Market volatility throughout the year (especially in terms of interest rates) caused VaR to stay above its three-year average for almost the entire period.

VaR at the end of December (EUR 18.7 million) was EUR 5.2 million higher compared to the end of 2023, reflecting the spike in market volatility caused by geopolitical risk, inflation and its impact on central banks' monetary policy, and greater exposure to interest rate risk in North America.



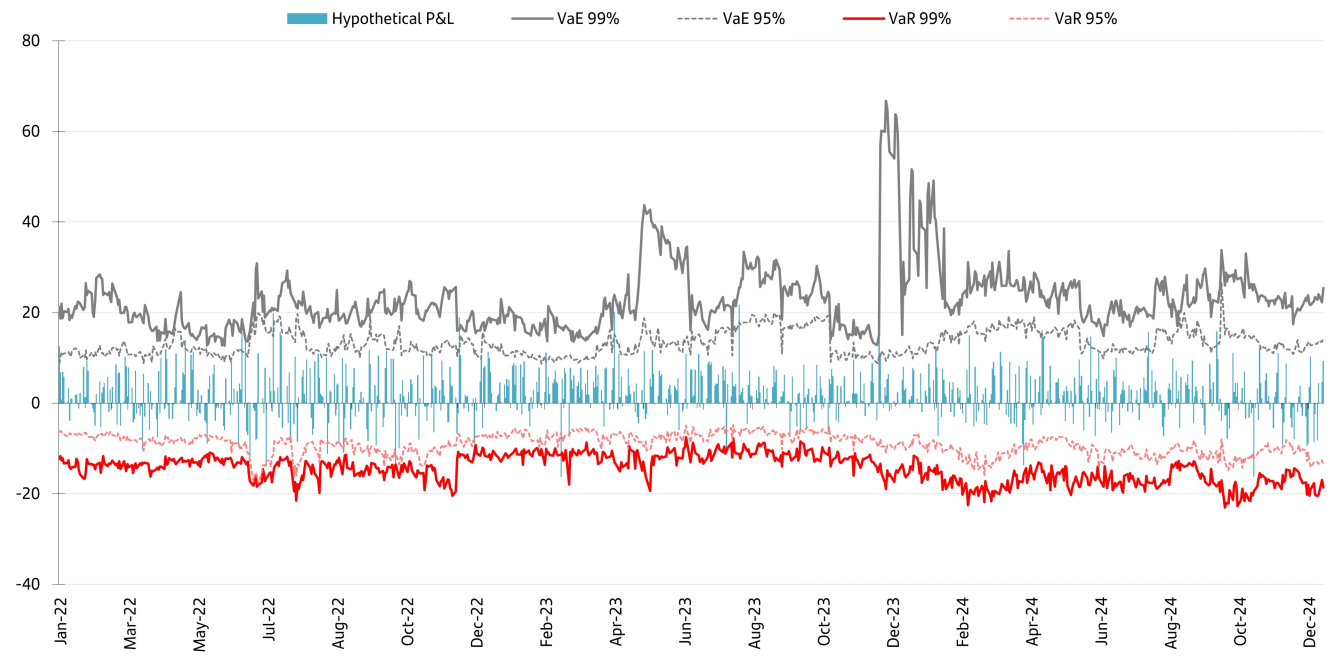
Average VaR was higher for all risk factors, especially interest rates. Temporary VaR increases owe more to short-term price volatility than to significant changes in positions.

Average VaR was higher in the three regions where we operate, with the increase due to interest rates risk factor in North America, and more distributed among the other factors in the other regions.

For more details on VaR and expected shortfall (ES) by risk factor and region see table on section '2. Trading market risk management', in Note 54 to the consolidated financial statement

VaR 2022-2024

EUR million. VaR at 99% over a one day horizon



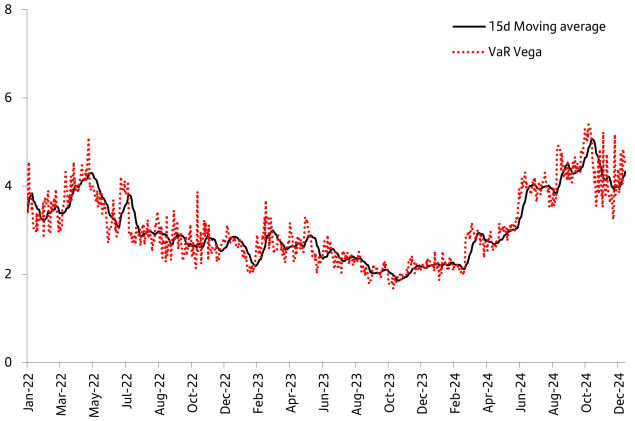
Backtesting

Actual losses can differ from predicted losses because of VaR's limitations. Santander measures the accuracy of our VaR calculation model to make sure it is reliable (see 'Methodologies' in section 3.2 'Market risk management'). The most important tests we run involve backtesting:

- Backtesting of hypothetical P&L and of the entire trading book showed no exceptions in 2024 (daily loss greater than VaR or daily profit greater than VaE) to VaR and VaE at 99% confidence level.
- These results are consistent with assumptions in the VaR calculation model.

Backtesting of trading portfolios: daily results vs. VaR for previous day

EUR million



Derivatives risk management

Our operations with derivatives consist mainly in selling investment products and hedging risks for customers. We aim to keep open net risk as low as possible. Trading includes equity, fixed-income and FX options, chiefly in Spain, Brazil, the UK, the US and Mexico.

The graph shows the VaR vega of structural derivatives over the past three years. On average, it has increased some EUR 3.0 million. In general, high VaR values stem from sudden spikes in market volatility, such as changes to monetary policy on the back of inflation performance, or at times of political uncertainty in our geographies.

Change in risk over time (VaR) of structure derivatives

EUR million. VaR Vega at a 99% over a one day horizon

Average VaR was based mainly on equities, followed by interest rates and FX rates. In December 2024, average risk (EUR 3.5 million) was slightly higher than in 2023 and more or less the same as in 2022 (see table below):

Financial derivatives. Risk (VaR) by risk factor

EUR million. VaR at a 99% over a one day horizon

	2024				2023		2022	
	Minimum	Average	Maximum	Latest	Average	Latest	Average	Latest
Total VaR Vega	**1.9**	**3.5**	**5.4**	**4.5**	**2.4**	**2.1**	**3.2**	**2.7**
Diversification effect	0.6	(2.0)	(5.7)	(1.7)	(1.9)	(1.2)	(1.1)	(1.0)
Interest rate VaR	0.8	1.3	3.0	0.9	2.0	1.5	2.0	1.4
Equity VaR	—	3.1	5.2	3.8	1.4	1.2	1.4	0.9
FX VaR	0.5	1.1	2.9	1.5	0.9	0.6	0.9	1.4
Commodity VaR	—	—	—	—	—	—	—	—

Santander's exposure to complex structured instruments and assets is very limited, this reflects our risk culture and prudent risk management. The Group's risk appetite restricts total level 3 assets and liabilities (those whose fair value is calculated using significant unobservable inputs in market data) to 5% of the Group's total assets and liabilities measured at fair value.

At the end of December 2024, our exposure to hedge funds amounted to EUR 111 million (indirect as the counterparty in derivative contracts). We review this type of counterparty risk on a case-by-case basis, setting collateralization ratios based on each fund's characteristics and assets.

Our policy on approving new derivatives transactions has always been extremely prudent and conservative. It is reviewed by senior management.

Scenario analysis

The table below shows worst case scenario results from the end of December 2024:

Stress scenario: maximum volatility (worst case)

EUR million. Dec 2024

	Interest rate	Equities	Exchange rate	Credit spread	Commodities	Total
Total trading	**(275.8)**	**26.3**	**(83.2)**	**(69.2)**	**—**	**(401.9)**
Europe	(118.4)	27.6	(80.3)	(69.2)	—	(240.3)
North America	(151.9)	(0.2)	(1.9)	—	—	(154.0)
South America	(5.5)	(1.1)	(1.0)	—	—	(7.6)

Our analysis found that Santander's trading books would lose EUR 402 million in market value in the worst-case scenario of market stress. Losses would mainly affect Europe (especially in interest rates if rates rise, in exchange rates if the euro were to appreciate and finally in credit spreads if credit prices rise) and North America (especially if interest rates rise).

Connection with balance sheet items

Below are items on Santander's consolidated balance sheet that generate market risk. The table distinguishes positions whose main risk metric is VaR from other positions that are monitored with other risk metrics.

Risk metric values on the consolidated balance sheet

EUR million. Dec. 2024

		Main market risk metrics		
Assets subject to market risk	**Balance sheet amount**	**VaR**	**Other**	**Main risk factors for 'Other' balance**
Cash, cash balances at central banks and other deposits on demand	192,208		192,208	Interest rate
Financial assets held for trading	230,253	230,253		
Non-trading financial assets mandatorily at fair value through profit or loss	6,130	4,641	1,489	Interest rate, spread
Financial assets designated at fair value through profit or loss	7,915		7,915	Interest rate, spread
Financial assets at fair value through other comprehensive income	89,898	2,193	87,705	Interest rate, spread
Financial assets measured at amortised cost	1,203,707		1,203,707	Interest rate, spread
Hedging derivatives	5,672		5,672	Interest rate, exchange rate
Changes in the fair value of hedged items in portfolio hedges of interest risk	(704)		(704)	Interest rate
Other assets	102,002			
Total assets	**1,837,081**			
Liabilities subject to market risk				
Financial liabilities held for trading	152,151	152,151		
Financial liabilities designated at fair value through profit or loss	36,360		36,360	Interest rate, spread
Financial liabilities at amortised cost	1,484,322		1,484,322	Interest rate, spread
Hedging derivatives	4,752		4,752	Interest rate, exchange rate
Changes in the fair value hedged items in portfolio hedges of interest rate risk	(9)		(9)	Interest rate
Other liabilities	52,178			
Total liabilities	**1,729,754**			
Total equity	**107,327**			

3.4 Structural balance sheet risk management

Structural risk is the risk that market or balance sheet movements will change the value or profit generation of assets or liabilities in the banking book.

It covers insurance and pension risks, as well as the risk that Santander will not have sufficient capital (in terms of quantity or quality) to meet internal business targets, regulatory requirements or market expectations.

Limits management and control systems

The internal policies set by senior management dictate mechanisms to monitor and control structural risk according to regulatory requirements and our risk appetite. These mechanisms consider sub-types of structural risk and their implications, contingencies and interrelations.

The Structural risk area's role in the second line of defence is to oversee that structural risks are understood, controlled and reported to senior management according to established governance:

- It sets interest rate risk metrics and reviews and challenges the structural risk appetite and limits proposed by the first line of defence.
- It oversees the first line of defence's structural risk management and checks compliance with set limits.
- It regularly reports on our risk profile to senior management and issues guidelines to business lines about measures it deems necessary.
- It reviews and challenges business proposals and helps senior management and business units understand the interest rate risk of the Group's businesses and operations.
- It develops and revises models and policy, and checks that structural risk procedures are fit and proper.

Like market risk, structural risk also has an annual plan framework to set structural balance sheet risk limits according to risk appetite.

These are the main limits we use:

- Structural interest risk in the banking book:
  - Net interest income (NII) sensitivity limit over a one-year horizon.
  - Economic value of equity (EVE) sensitivity limit.
  - Limit of the negative impact on shareholder equity of changes to the value of assets carried at fair value in the banking book stemming from adverse movements in the market.
- Structural FX risk:
  - Limit on the net permanent position of the core capital ratio.
  - Limit on the individual hedge required for each currency.

We supplement these limits with other alerts and triggers that monitor certain aspects of such risks and complement the metrics described above.

Business lines' risk managers must provide explanations for potential limit and sub-limit breaches as well as an action plan to correct them.

Methodologies and other key details

a) Structural interest rate risk

As part of structural risk, interest rate risk in the banking book (IRRBB) is a key balance sheet risk.

Santander measures the potential impact of interest rate movements on EVE and NII. Because of the effect of changing rates, we must manage and control many subtypes of interest rate risk, such as repricing risk, yield curve risk, basis risk and option risk (e.g. behavioural or automatic).

Interest rate positions on the balance sheet and market conditions and outlooks could necessitate certain financial measures to achieve the Group's risk profile target.

Metrics for checking IRRBB include NII and EVE sensitivity to interest rate movements.

- Net interest income (NII) and sensitivity: NII is the difference between interest income from assets and the interest cost of liabilities in the banking book over a typical one- to three-year horizon (one year being standard in Santander). It enables us to see short-term risks and supplement economic value of equity (EVE) sensitivity.
- Economic value of equity (EVE) and sensitivity: EVE is the difference between the present value of all assets minus the present value of all liabilities in the banking book. It does not include shareholder equity and non-interest-bearing instruments. It enables us to see long-term risks and supplement NII sensitivity.

b) Credit spread risk

The metrics we use to monitor credit spread risk in the banking book (CSRBB) includes NII and EVE sensitivity to changes in spread curves as well as the impact of stress scenarios on positions that have been identified as affecting CSRBB.

In 2024, we embedded the CSRBB monitoring framework in our units and added limits and metrics to track the impact of adverse movements in credit spreads on market value, EVE, and NII.

c) Interest rate models

Interest rate risk metrics consider the behaviour of financial products under stress scenarios in which uncertainty is common and the failure to meet contractual obligations is possible. We have methodologies that help explain how such products will behave. These are our key interest rate risk models:

- Treatment of liabilities without stated maturity. The Group's model shows balances of all accounts without maturity using stable and unstable volumes, settlement speed over time, customer and market types, and other variables.
- Prepayment treatment for certain assets. Prepayment risk mainly affects fixed-rate mortgages in subsidiaries where contractual rates are below market rates and customers have the incentive to pay off all or part of their mortgage early.

d) Structural exchange rate risk/hedging of results

We measure FX positions, VaR and P&L every day.

In 2024, we introduced new limits to FX positions in the banking book to complement the structural FX metrics and monitor exchange rate risk in full.

e) Structural equity risk

We measure equity positions, VaR and P&L.

3.5 Key structural balance sheet risk metrics

In line with previous years, the market risk profile of the Group's balance sheet remained moderate in 2024.

Each subsidiary's Finance division manages interest rate risk from retail banking and is responsible for handling structural risk from interest rate fluctuations.

Grupo Santander measures interest rate risk by analysing changes to EVE and NII triggered by movements in parallel and non-parallel interest rates, balance sheet composition, and shifts in customer behaviour. Once we've measured these risks, we decide whether to follow strategies to mitigate structural risk with interest-rate instruments (such as bonds and derivatives) and keep an interest rate risk profile within risk appetite.

Exposure across all our footprint was moderate in relation to the annual budget and capital levels in 2024.

The NII and EVE sensitivities below are based on scenarios of parallel interest rate movements between ±100 pbs.

Structural interest rate risk

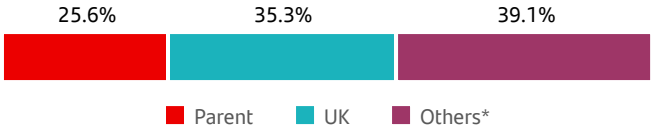
Europe

At the end of December, sensitivity of NII on our core balance sheets to interest rate hikes was positive, while EVE sensitivity was negative in the case of UK and positive in Spain considering the same scenario.

Under the scenarios described above, at the end of December, the most significant risk of NII sensitivity to the euro amounted to EUR 877 million; to the pound sterling, EUR 211 million; to the Polish zloty, EUR 61 million; and to the US dollar, EUR 54 million, all with the risk of rate cuts.

Net interest income (NII) sensitivity

% of total



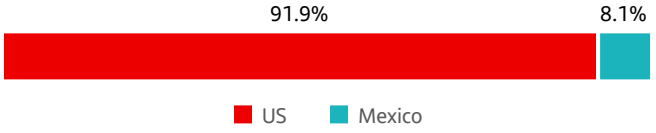
* Other: Portugal and SCF.

Significant risk of EVE sensitivity to yield curves of the euro was EUR 753 million; of the pound sterling, EUR 662 million; of the Polish zloty, EUR 244 million; and of the US dollar, EUR 132 million, related to the risk of interest rate increases, except for the US dollar.

Economic value of equity (EVE) sensitivity

% of total

* Other: Poland, Portugal and SCF.

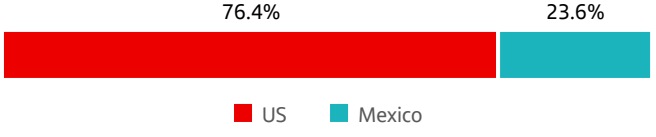


North America

At the end of December, sensitivity of NII on our North America balance sheet to interest rate hikes was positive, while EVE sensitivity was negative.

At the end of December, the most significant risk to NII was mainly in the US and amounted to EUR 125 million.

Net interest income (NII) sensitivity

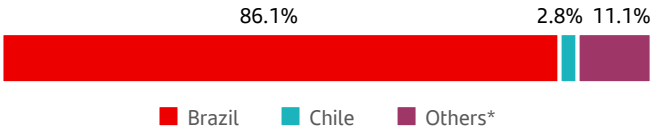


% of total

The most significant risk to EVE was in the US and amounted to EUR 639 million.

Economic value of equity (EVE) sensitivity

% of total



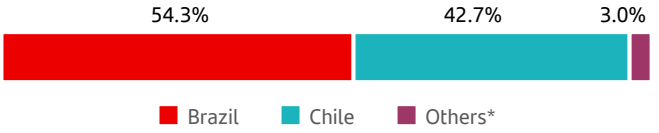
South America

The EVE and NII of our main South American balance sheets are positioned for interest rate cuts.

At the end of December, the most significant risks to NII were mainly in Brazil (EUR 124 million) and Chile (EUR 4 million).

Net interest income (NII) sensitivity

% of total



* Other: Argentina, Peru and Uruguay.

The most significant risks to EVE were in Brazil (EUR 411 million) and Chile (EUR 323 million).

Economic value of equity (EVE)

% of total

* Other: Argentina, Peru and Uruguay.

Structural foreign exchange rate risk/results hedging

Our structural FX risk exposure mainly stems from the performance of, and hedges for, permanent financial investments. In our dynamic management of this risk, we aim to limit the impact of FX rate movements on the core capital ratio. In 2024, the hedged of the different currencies that have an impact on our core capital ratio was close to 100%.

In December 2024, our permanent exposures (with potential impact on shareholder equity) were, from largest to smallest, in the US dollar, British pounds sterling, Brazilian reais, Mexican pesos, Polish złoty and Chilean pesos.

We use FX derivatives to hedge part of those permanent positions. The Finance division manages FX risk and hedging for the expected profits and dividends of subsidiaries whose base currency is not the euro.

Structural equity risk

Santander holds equity positions in its banking and trading books. They are either equity instruments or stock, depending on the share of ownership or control.

Equities in the banking book at the end of September 2024 were diversified, with securities from Spain, China, Morocco, Poland and other countries. Most of them invest in the financial and insurance sectors. We have minor equity exposure to property and other sectors.

Structural equity positions are exposed to market risk. We calculate their VaR with a set of market prices and proxies. At the end of December 2024, VaR at a 99% confidence level over a one-

day horizon was EUR 127 million (EUR 171 million in 2023 and EUR 195 million in 2022).

Structural VaR

Homogenous metrics like VaR make it possible to monitor all market risk in the banking book (minus CIB trading; see section 3.3 'Key market risk metrics'). We differentiate fixed income based on interest rates and credit spreads in ALCO portfolios, FX rates and shares.

In general, the structural VaR of our total assets and equity is minor.

Structural VaR

EUR million. VaR at a 99% over a one day horizon

	2024				2023		2022	
	Minimum	Average	Maximum	Latest	Average	Latest	Average	Latest
Structural VaR	**620.7**	**747.7**	**910.0**	**687.5**	**705.0**	**749.5**	**664.0**	**538.5**
Diversification effect	(237.2)	(386.4)	(575.5)	(268.6)	(416.6)	(444.7)	(417.1)	(422.4)
VaR Interest Rate[A]	210.7	412.0	685.6	235.2	348.4	380.2	350.8	304.5
VaR Exchange Rate	526.9	571.7	629.8	594.4	580.4	642.9	493.4	461.0
VaR Equities	120.3	150.4	170.1	126.5	192.8	171.1	236.9	195.4

A. Includes credit spread VaR on ALCO portfolios.

3.6 Liquidity risk management

Liquidity risk occurs if the bank is unable to meet payment obligations promptly or would do so at a high price. Losses may result from a forced asset disposal and a cash flow imbalance.

The second line of defence oversees that this risk is understood, controlled and reported to senior management and across the Group according to established governance. For this purpose:

- defines liquidity risk and provides detailed measurements of current and emerging liquidity risks;
- sets liquidity risk metrics, and reviews and challenges risk appetite and limits proposed by the first line of defence;
- assesses and challenges commercial and business proposals, and gives senior management and business units the information they need to understand Santander's liquidity risk;
- oversees the first line of defence's liquidity risk management and measures how long business will remain within risk appetite limits;
- reports to governing bodies (risk control committee, RSRCC and board of directors) on compliance with risk appetite limits and any exceptions;
- provides a comprehensive overview of our liquidity risk exposure and profile; and
- makes sure that liquidity risk procedures are appropriate to manage the business within risk appetite limits.

The market remained stable throughout 2024. Debt markets operated under normal conditions and we achieved our proposed financing targets. Additionally, our subsidiaries have a sound balance sheet and stable funding structure, supported by a large base of customer deposits, low dependence on short-term funding and liquidity metrics that are well above local and corporate regulatory requirements and within risk appetite limits.

3.7 Key liquidity risk metrics

Our solid liquidity position stands on a decentralized model under which each subsidiary manages its own liquidity autonomously. To measure liquidity risk, we use tools and metrics for the right risk factors. We follow the guidelines set out in the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD) to draw up liquidity risk metrics. We determine liquidity scenarios for internal metrics based on the behaviour of other banks in liquidity crises, regulatory assumptions, and expert opinion.

These are our core monitoring metrics in the Group:

A) Regulatory metrics:

a. Liquidity coverage ratio (LCR) assesses the short-term resilience of our liquidity profile by making sure we have enough high-quality liquid assets to withstand a considerable market stress scenario for 30 calendar days. In 2024, the Group's LCR remained stable and well above the regulatory threshold.

b. Net stable funding ratio (NSFR) measures long-term liquidity risk. It is the ratio of available stable funding to required stable funding. In 2024, the NSFR of our core subsidiaries and the Group remained above the regulatory requirement of 100% and the internal risk appetite.

B) Internal metrics:

a. Liquidity buffer assesses whether liquid assets are enough for the bank to survive for set time horizons under several liquidity stress scenarios.

b. Wholesale counterparty concentration metric measures the impact of our largest non-financial counterparties withdrawing deposited funds. We use it to measure the quality of our liquidity and to uncover excessive dependency on a small number of customers.

c. Structural asset encumbrance metrics. We calculate two metrics to measure asset encumbrance risk. One the one hand, the asset

encumbrance ratio is encumbered assets to total assets; on the other hand, the structural asset encumbrance ratio gives the proportion of encumbered assets by structural funding transaction (namely long-term collateralized issues and credit transactions with central banks).

d. Other liquidity metrics. Grupo Santander has a set of additional liquidity indicators to complement those listed above and to measure other non-covered liquidity risk factors.

e. Liquidity risk scenario analysis. Grupo Santander has five standard scenarios:

i. An idiosyncratic scenario of events that are detrimental only to Santander.

ii. A local market scenario of events that are highly detrimental to Grupo Santander's base country's financial system or real economy.

iii. A global market scenario of events that are highly detrimental to the global financial system.

iv. A combined scenario of more severe idiosyncratic and local and global market events, occurring simultaneously in an interconnected manner.

v. Climate scenarios, with various stress situations based on the potential economic effects of climate change.

We use these stress test outcomes as tools to determine risk appetite and support business decision-making.

f. Early-warning liquidity indicators. The system of early warning indicators consists of quantitative and qualitative liquidity indicators that help predict stress situations and weaknesses in the funding and liquidity structure of Grupo Santander entities. External indicators relate to market-based financial variables; internal indicators relate to our own performance.

g. Intraday liquidity metrics. Santander follows Basel regulation and calculates several metrics and stress scenarios for intraday liquidity risk to maintain a high level of control.

For more details on liquidity metrics, see section **3.4 'Liquidity and funding management'** in the 'Economic and financial review' chapter.

3.8 Actuarial, pension and insurance risk management

Actuarial risk

Actuarial risk stems from biometric changes in defined benefit recipients' and life insurance policyholders' life expectancy; and from suddenly higher non-life insurance payments.

These are the actuarial risks we distinguish:

- **Life liability risk**: Risk of loss on liabilities due to changing risk factors that affect pension obligations, split into mortality/longevity risk, morbidity risk, withdrawal/surrender risk, expense risk, and catastrophe risk.
- **Non-life liability risk**: Risk of loss on liabilities due to changing risk factors that increase Santander's non-life payment obligations towards employees, split into premium risk, reserve risk, and catastrophe risk.

Pension risk

Grupo Santander runs several defined benefit pension schemes that generate financial, market, credit and liquidity risks from assets and investments, as well as market and actuarial risks from pension obligations.

Our pension risk management and control involves identifying, measuring, mitigating and reporting on sources of pension risk to reduce long-term exposure.

Grupo Santander uses a VaR methodology to measure pension risk, set pension risk appetite limits and calculate economic capital. Moreover, we estimate combined losses each year on assets and liabilities under a stress scenario that includes shifts in interest rates, exchange rates, inflation, stock markets, property values and credit spreads.

The majority of our defined benefit pension schemes are in Brazil, Germany, Portugal, Spain and the UK.

In 2024, the impact of market performance on pension risk was slightly negative, owing to contrasting behaviour of discount rates in our core markets and a rise in inflation in the markets that are exposed to this risk. Throughout the year, we took measures to reduce our exposure to pension and actuarial risk by taking advantage of interest rate levels.

Insurance risk

Grupo Santander's insurance risk model is based on our own insurers and partnerships with insurers in which we hold a non-majority interest (joint ventures).

These insurers assume financial, non-financial, actuarial and other risks according to their risk profile.

Our core aim in managing and controlling insurance risk is to identify, measure, mitigate and convey all sources of risk in the insurance business to help meet our commitments to policyholders and shareholders.

We continuously monitor the solvency of our insurers by calculating regulatory solvency levels and making sure that they stay within the established risk appetite. Moreover, we run sensitivity analyses and stress scenarios on the most significant risks to assess their impact on solvency.

In 2024, our insurers' risks remained stable. Regarding actuarial risk, though natural disasters have generally increased in our markets, they have not had a significant impact on solvency due to reinsurance programmes and other public and private protection schemes.

4. CAPITAL RISK

4.1 Introduction

Grupo Santander's structural risk includes the risk that the bank has insufficient capital to absorb losses stemming from its operations or to meet internal business objectives, regulatory requirements and market expectations.

We oversee first-line capital management and check that our capital adequacy and coverage match our risk profile and Group strategy through our Capital Risk area, which is part of our second line of defence. We also oversee transactions that could be considered significant risk transfers (SRT).

Capital management falls under the Group's capital framework and model. It brings together capital planning and adequacy, budget execution and tracking, and the ongoing measurement, reporting and disclosure of capital data.

4.2 Capital risk management

We independently oversee the capital activities carried out by the first line of defence. These activities are split into four workflows to promote an appropriate level and efficient use of capital, meet internal solvency targets and regulatory requirements, and match our risk profile:

Capital planning

We draw up a capital plan (consistent with the strategic plan) that sets out our solvency targets and the actions required to execute it. The control area reviews the plan's viability to identify, assess and quantify the risks that may impact on fulfilling it.

Capital adequacy

We measure capital levels against the risk assumed, based on a risk profile assessment and our risk appetite framework, and under stress scenarios. Oversight of this process aims to:

- cover all significant risks in the course of our operations;
- confirm that results are reasonable and consistent with business strategy, the macroeconomic environment and system variables; and
- check that planning methodologies and assumptions are appropriate.

Capital risk assessment

Capital measurement is an internal risk management process to calculate the metrics we use in capital management, supervisory reporting and market disclosures regularly.

The continuous monitoring of our capital measurement is an additional control function to achieve the right capital risk profile. It involves a review of capital metrics and set thresholds, as well as oversight of compliance with solvency risk appetite to keep capital levels above internal and regulatory requirements, and market expectations.

Origination (risk transfer initiatives)

Origination is where we oversee the structuring and launch of the Group's initiatives to release shareholder equity and their subsequent monitoring.

We oversee securitizations that might be significant risk transfers originated by Santander in order to release capital, according to articles 243 and 245 of Regulations (EU) 2017/2401 and 2017/2402.

Oversight is an essential prerequisite for synthetic and traditional securitizations, especially if they can reduce risk-weighted assets (RWA) under regulatory standards.

The aim is to make sure that oversight includes analysis of the conditions that could alter the securitization's SRT classification, namely:

- if it meets the requirements of an effective risk transfer;
- if it complies with all prudential regulation requirements;
- if its risk parameters follow our methodology; and
- if its economic rationale meets Group-wide standards.

In today's macroeconomic landscape of geopolitical tension, market volatility and other events, we focused on protecting the Group's solvency and meet the internal objectives. We pinpointed and assessed the risks that could affect solvency and continuously monitored key metrics.

The capital risk function regularly assesses potential deviations in capital forecasts to set budget uncertainty levels. We oversee progress with the organic capital plan, securitization plan and other initiatives that impact on capital, as well as the supervisor's

review of capital calculation (Internal Model Investigations -IMIs-, On-Site Inspections -OSIs- and others).

In 2024, we continued to enhance monitoring of the achievement of subsidiaries' capital contribution targets to spot risk and opportunity relating to our capital targets for the year. We also checked the impact of market variables on capital levels. Against this backdrop, we continue to implement hedging policies to mitigate exchange rate volatility on our CET1 ratio.

The second and first line of defence set the solvency appetite limits, which were consistent with the Group's medium-low risk profile and resilient to stress conditions.

Regarding planning, in 2024 we performed a more detailed review of our Group and subsidiary recovery plans to enhance measures and hypotheses.

We introduced stricter standards to enhance reporting and governance of SRT securitization oversight during origination. To make monitoring more robust, subsidiaries became more involved in regular analysis and we drove further automation through use of the corporate tool.

At the end of December, our fully-loaded CET1 ratio was 12.8%, above our 12% target.

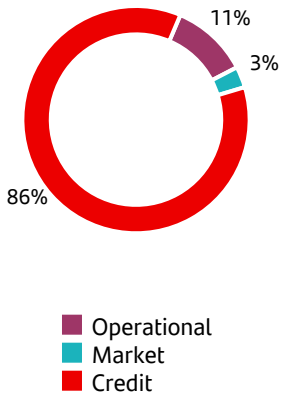
The fully-loaded CET1 ratio rose 51 bps. We achieved gross organic generation of 209 bps and recognized a 100 bps charge for shareholder remuneration in 2024 (consistent with the target payout of 50%) and a negative regulatory and model impact of 59 bps.

Under IFRS 9 transitional arrangements, the CET1 phased-in ratio at the end of December was 12.8% and the total phased-in capital ratio was 17.4%, comfortably meeting the Basel Committee's 9.6% and 13.9% minimum levels, respectively.

Throughout the year, we maintained all the Group's risk appetite metrics above the established solvency limits.

For more details, see section **3.5 'Capital management and adequacy. Solvency ratios'** in the 'Economic and financial review' chapter.

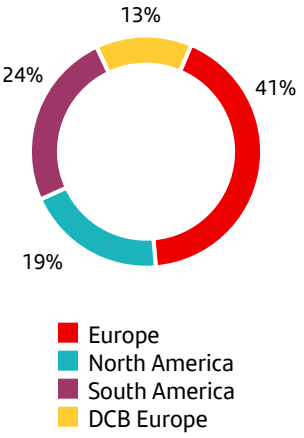
4.3 Key metrics



Banco Santander's strong capital position is consistent with our business model, balance sheet structure, risk profile and regulatory requirements. Our robust balance sheet and profitability enable us to finance growth and accumulate capital.

Our model of subsidiaries with autonomy over liquidity and capital enables us to mitigate risk. Our capital metrics are stable, with ratios that remain comfortably above regulatory requirements.

The distribution of risk-weighted assets (RWA) by risk type and by region at year end reflects the Group's core business in credit risk and geographic diversification:



RWA by risk type[A]

Dec.24 data

RWA by region[B]

Dec. 24 data

A. Credit risk included counterparty credit risk, securitizations and amounts below the thresholds for deduction.
B. Others, not included, represent 3% (Corporate centre)

5. OPERATIONAL RISK

5.1 Introduction

Operational risk is inherent in all products, activities, processes, and systems, as well as in all business and support areas. All employees are responsible for managing and controlling the operational risks generated by their activities.

Santander defines operational risk, according to the Basel framework, as the risk of loss resulting from inadequate or failed internal processes, people, or systems, or from external events. Also, it covers categories of risks such as fraud, technological, cyber, legal[9], and conduct risks are included.

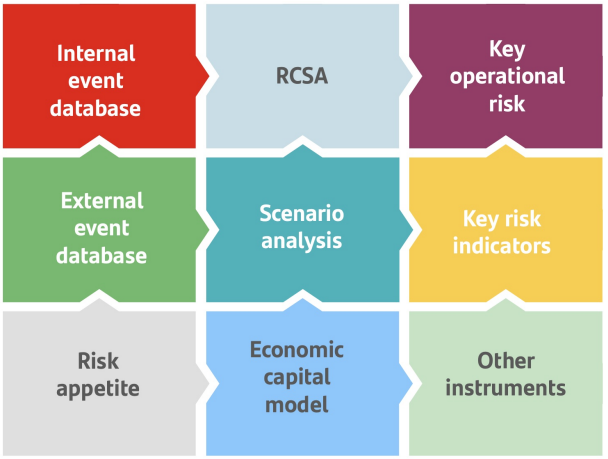
5.2 Operational risk management

Management and control model

Our operational risk and control model establishes the core components needed to manage and control this risk properly throughout the cycle according to advanced regulatory standards and best practices. Execution of the model supports the correct setting and update of management priorities as well as the definition and implementation of internal controls to mitigate risk throughout the organization.

In this section we first detail the risk management cycle, as well as the instruments we use to manage and control operational risk. We then focus on operational resilience and the core operational risks and their mitigation plans. Last, we describe how we use insurance as a risk transfer mechanism and operational risk management in the wholesale banking business.

The operational risk cycle comprises:



- **strategic planning:** this covers the activities necessary to define the Group's objective operational risk profile, including setting the risk appetite, estimating annual losses and reviewing the management perimeter;
- **identification and assessment of risks and internal controls:** this process aims to identify the risks and factors that may cause operational risk in the organization and assess their potential impact quantitatively or qualitatively;
- **ongoing monitoring of the operational risk profile**, to analyse available information regularly on the nature and extent of the risks incurred in the undertaking of the Group's activities through an adequate alerts system, based on tools, such as indicators and escalation procedures.
- **risk response decisions including risk mitigation and risk transfer measures:** operational risk can emerge in any Group procedure, so its management requires mitigation measures for risks considered unacceptable following identification and assessment.

  The analysis of operational risk exposure can conclude with the acceptance of that level of risk, the implementation of action plans to manage it, the transfer of risk through insurance or other outsourcing mechanisms or, alternatively, the discontinuation of the related activity.

  Against this backdrop, contingency and business continuity plans are key as they enable us to continue activity and limit losses in the event of severe business interruptions, which are particularly sensitive in financial markets. According to the EU Digital Operational Resilience Act (DORA), it is necessary to increase digital operational resilience such as the capacity to build, support and review operational integrity and reliability, contribute to keep networks and information systems secure, and continuously provide quality financial services even in the face of disruption.
- **disclosure and reporting** of information necessary for decision-making.

[9] Legal proceedings stemming from operational risk.

Additionally, at Grupo Santander, we have various tools that allow us to effectively manage and control risk throughout the management cycle, such as:

Internal event database

The internal events database collects and records internal operational risk events, whose impacts could be financial impact (e.g., losses and provisions, regardless of their amount) or non-financial impact (i.e. relating to regulation, customers and/or services). This information:

- enables us to conduct root-cause analysis;
- increases the awareness of risks for better operational risk management;
- enables the escalation of relevant operational risk events to senior risk executives in the shortest time possible;
- facilitates regulatory reporting;
- facilitates the development of the economic capital model within the internal capital adequacy assessment process (ICAAP).

External event database

This database contains quantitative and qualitative information about external operational risk events, which facilitates detailed analysis of relevant events in the industry; comparison with Group and subsidiaries' loss profiles; and preparation for the Risk control self-assessment (RCSA) exercises, insurance and scenario analysis.

It provides an additional source of information to internal events, which boosts operational risk management.

Scenario analysis

This is a tool to analyse highly unlikely events that could result in significant losses and establish appropriate mitigating measures based on the assessment and opinion of experts from business lines and risk managers. Scenario analysis results are also used as input to the economic capital models.

RCSA

The RCSA is an assessment of the operational risks and control environment associated with the Group's activities and operations. Its key aim is to assess inherent and residual operational risk, as well as the design and effectiveness of controls and whether they need to be strengthened or new mitigating actions need to be put in place.

It includes detailed reviews to identify cyber, technology, fraud, supplier and other risk factors that could generate operational risk or a failure to observe the law. The RCSA also covers regulatory compliance, conduct risk and financial crime.

Key operational risks (KORs)

Top-down assessment that considers senior managers' concerns and opinions about operational risk so that the rest of the organization can review them appropriately and we can include them in the RCSA.

Key risk indicators (KRIs)

These provide quantitative information about our risk exposure and control environment. The most relevant indicators are those related to the bank's main risk exposures, and are part of the operational risk appetite.

Risk appetite

It has the following structure:

- A global non-financial risk appetite statement, which asserts our commitment to controlling and limiting non-financial risk events that can result in financial losses; fraud events; operational and technological incidents; legal and regulatory infractions; issues associated with conduct; or reputational damage. This statement has associated loss and control environment metrics.
- Statements regarding technology risk, cyber risk, the cloud, fraud, financial crime compliance, product sales, regulatory compliance, model risk, data management, and supplier risk management, and their own forward-looking monitoring metrics.

Economic capital model

Our economic capital model for operational risk takes a loss distribution approach (LDA) that captures our operational risk profile and calculates economic capital based on information collected from the internal and external event databases and scenario analyses. We use it to determine operational risk economic capital and estimate expected and stressed losses to set operational risk appetite.

Moreover, we use other instruments to analyse and manage operational risk, such as the assessment of new products and services and transformation initiatives; business continuity plans (BCP); review of the management perimeter and corporate insurance policy coverage; recommendations from internal and external auditors and supervisors; and the quality assurance process.

Our management, assessment and reporting system for operational risk, Heracles, supports the operational risk programme and tools through a governance, risk and compliance (GRC) approach and provides information on our subsidiaries and the Group. Heracles also facilitates better operational risk management decisions by using a common set of taxonomies and methodological standards to allow for information consolidation, duplication prevention, and reporting simplification. Through Heracles, we aim for employees to have a timely, complete, and precise view of their operational risks.

Operational resilience and the business continuity plan

The digital transformation, which is ramping up due to the entry of new players with more digital business models, is revolutionizing how banks operate and presenting new business opportunities. At the same time, this structural change has increased exposure to emerging risks such as technology risk, cyber risk, and further dependency on third party suppliers, which heighten the potential exposure to events that could affect the services that we offer to customers.

Thus, regulation continues to focus on the importance of operational resilience through:

- the DORA Act, along with its implementing rules, which complements the perspective of risk related to Information and Communication Technologies (ICT). It encompasses any reasonably identifiable circumstance related to the use of networks and information systems that, if it occur, may compromise the security of networks, systems, tools, processes, operations, or the provision of services;
- the Basel Principles for Operational Resilience guidelines;
- the Building the UK Financial Sector's Operational Resilience rules published by the Bank of England (BoE), the Financial Conduct Authority (FCA) and the Prudential Regulation Authority (PRA);

These regulations require us to strengthen our ability to prevent and recover from disruptive events and verify that we can deliver services to our customers in all our businesses and maintain systemic stability.

To comply with the law and keep our services running, we have an operational resilience and business continuity management system (OR BCMS) that seeks to establish the continuity of services and business activities in all our subsidiaries should a disaster or major incident occur. It is a holistic management process that identifies potential threats and their impact to our operations and resources (people, apps, data, properties and others). It also defines the proper protocols and governance to provide an effective response and recovery in the shortest time possible.

Our operational resilience and business continuity application (ARK@) is vital to maintain and manage the information we use in this process.

In 2024, we continued to enhance and revise our BCMS to adapt it to the new Operational Resilience regulatory requirements, with particular emphasis on:

- critical services identification, establishing the impact tolerance for disruption for each of them, according to the bank's risk appetite, risk capacity and risk profile;
- the Group's board of directors approved operational resilience approach, considering our risk appetite and the tolerance for disruption to critical services;
- internal continuity strategies to minimize the impact on business activities derived from the potential disruptions to the services provided by critical suppliers;
- mandatory risk assessments and cost-benefit analyses in order to select the necessary continuity strategies for each contingency scenario identified;
- bolstering the tests we run every year to check our strategies and plans for every scenario, especially application outage;
- enhancing the methodology to manage and monitor the maturity level of subsidiary business continuity programmes.

Important mitigating measures

Mitigation measures aim to reduce or eliminate exposure to the main sources of risk that our internal and external tools uncover and to significant emerging or potential risks.

Below are the principal sources of operational risk (such as fraud, cyber risk, technology risk, supplier risk, and others) and their respective mitigation measures:

Fraud

The transformation and digitalization of the business has given rise to new risks and threats, such as more payment scams and fraud in loan applications.

To mitigate these risks, we enhanced control mechanisms and implemented new solutions, including:

- stronger authentication for customers;
- increased anti-fraud alerts in loan applications;
- transaction monitoring using advanced fraud prevention models.

Additional examples of controls that we are implementing for online banking fraud include:

→ strong customer authentication and signature to approve transactions;

→ behavioural biometrics and anti-malware protection;

→ identification and secure registration of customer devices.

Moreover, the second line of defence made progress with internal fraud management in 2024 by enhancing a related policy that applies to all Group subsidiaries and coordinating several activities to standardize how we manage these events, based on best practice and identified controls.

Cyber risk

At Santander, cyber risk management is an integral part of our operational risk control and management model. Our cybersecurity management is designed to align with international best practices and provide a framework to measure and monitor the cyber risk profile and control environment, including threats and incidents associated with the use of external service providers.

The increasing reliance on digital systems puts cybersecurity at the heart of managing non-financial risks in the financial industry. Our goal is to make Grupo Santander a cyberresilient organization, capable of preventing, detecting, and quickly responding to cyberattacks, while constantly improving and evolving our defences.

Ransomware in all its forms (data encryption and exfiltration) continues to be the prominent external threat. Moreover, distributed denial of service (DDoS) attacks associated with geopolitical tension and international conflicts in Ukraine and the Middle East, also continue to have a high incidence.

During 2024, multiple events were responded to, including those involving third-party service providers. For example, on May 14, 2024, Santander announced that it had become aware of unauthorized access to a Santander database hosted by an external provider, which included certain customer and employee information. Numerous measures were immediately implemented to manage the incident, such as blocking access to the database, strengthening fraud prevention, taking preventive actions to avoid a similar incident from occurring again, and maintaining direct contact with regulatory bodies and collaborating in the investigation with law enforcement agencies.

In this regard, we continue to improve risk management and develop controls in line with the Group's global cybersecurity framework and international best practices.

From the second line of defence perspective, there is a framework to measure and monitor the cyber risk profile and its control environment. The key aspects of our cyber risk oversight programme in 2024 were:

- the expansion of the services and scope of a global second line of defence Centre of Excellence for cyber risk, providing an opportunity to strengthen control risk activities while achieving efficiencies, simplification and harmonization;
- an update of internal regulation to align with new regulatory requirements (e.g. DORA Regulation);
- a review of our oversight procedures (risk indicators, risk appetite and reference risk);
- participation in the ECB's first Cyber Resilience Stress Test;
- the automation of dashboards to embed several sources of information and provide a consolidated view of cyber risk.

For more details on cyber security, see section **5 'Research, development and innovation (R&D&I)'** on 'Economic and financial review' chapter.

IT risk

Our aim to become the best open financial services platform on the back of digital transformation requires constant review, assessment and enhancement of our controls to mitigate and manage technological risk.

Despite a demanding environment under constant change, we are quickly adapting our business model and our technology to support the global businesses in their digital transformation by providing them with global platforms that draw on innovative capabilities to meet the new needs of our customers and new regulatory requirements. This also aims to strengthen our position as a digital bank with a global footprint that can adapt to the changing demands of the market.

For 2024, the key aspects of our IT Risk Management programme were:

- monitoring the implementation of actions to meet the requirements of DORA regulation, including a deep dive into the operational resilience scenario mitigation strategy in relation to data mismanagement;
- making key IT assets less obsolete to fit with our risk appetite;
- strengthening the Public Cloud control model by embedding essential controls within the risk and control self-assessment for the first time;
- continuing to enhance automation to correlate data, analyse and report on technology risks to facilitate the collection and consolidation of information, prioritize risk management, and enable more effective independent oversight;
- making headway with the implementation of automated solutions to analyse back-up and inventory controls that help enhance the monitoring and control of technological risk.

Supplier risk management

Our digitalization strategy sets out to offer our customers the best solutions and products in the market. This may lead to an increase in third-party services, cloud services and the large-scale use of new technologies.

In 2024, we boosted our supplier management model and internal control framework due to increased cyber risk, environmental (ESG) risks and regulatory requirements (especially DORA). We implemented a new IT platform to assess and manage the risks in outsourcing and third-party agreements.

We continued to bolster our methodologies and contractual frameworks to enhance the monitoring of third-party risk in our subsidiaries. Moreover, we used a risk-based approach that focused on suppliers that could increase the potential risk level in our operations and customer services in the Group's subsidiaries. We increased monitoring of those suppliers to check that:

- they have an appropriate control environment in accordance with established Group policies and that mitigate the risk level of the service provided;
- business continuity plans are in place to enable the delivery of the service even in the event of a disruption;
- the proper controls are in place to protect the information processed during the provision of services;
- contracts and third-party agreements include the required clauses to protect the interests of our customers and the Group, while providing coverage of the legal obligations in force;
- regular monitoring of these suppliers is carried out, with particular attention to service level agreements and the regular testing of their business continuity plans;
- exit strategies are defined, including reversion or migration plans, particularly for those services with a high impact on business continuity and difficult to replace.

We continue to embed our environmental, social and governance approach in our strategy and culture to build a more responsible bank. Because our suppliers may have an impact on the environment and broader society, we implemented a new certification procedure to verify that they follow the Group's ESG sustainability standards and criteria.

Other key mitigating actions

We are constantly improving our risk mitigation measures related to customer, products, and business practices. Santander has specific frameworks and policies on the marketing and selling of products and services; customer complaint handling and analysis; financial crime prevention; and compliance with new regulations.

For more details on compliance risk mitigation, see section **6.2 'Compliance risk management'.**

Insurance in operational risk management

Santander considers insurance a key component of operational risk management. The Corporate Insurance function is responsible for the use of risk transfer formulas to optimize and safeguard the bank's financial results.

We have global insurance programmes for property damage, civil liability, fraud, expenses arising from cybersecurity breaches, and third-party claims against directors and officers of the Group (D&O insurance). We supplement these global policies with a wide range of local insurance policies that adapt to the characteristics of each subsidiary and are taken out according to the insurance risk management model that the Corporate Insurance area implements in each market.

This area works with the Non-Financial Risk (NFR) function to perform continuous monitoring and oversight of the proper application of policies and procedures to manage risk that is insurable in our subsidiaries.

This collaboration is governed by:

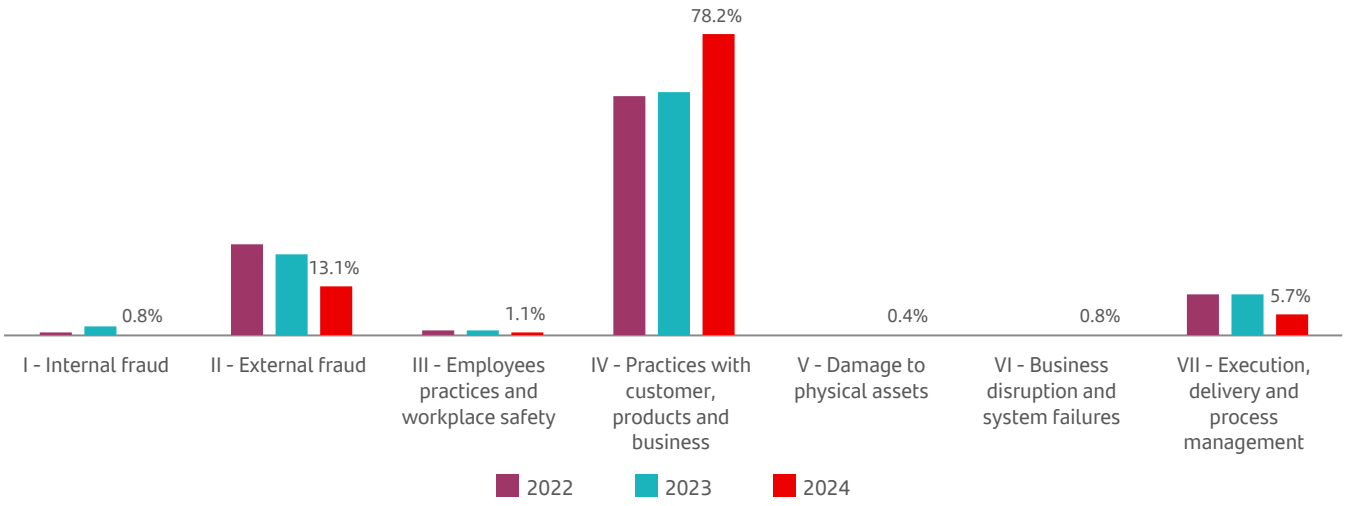
- NFR's participation as a permanent member in the quarterly corporate insurance forum;
- NFR's attendance at the quarterly claims forum, which monitors and enhances processes for loss recovery via insurance;
- procedures outlining the interaction model between NFR and Corporate Insurance, as well as other functions that correspond to the various insurance typologies (e.g., facilities, cybersecurity and, legal, among others). These procedures pursue the proper management of insurance throughout the entire process of identification, assessment, transfer, and retention of risk;
- twice-yearly coordination of the mapping of risks to insurance across the Group, with the objective of monitoring the effectiveness of insurance coverage, and identifying and correcting any potential gaps in coverage.

We continue to adapt how we use insurance to align our management with changes in the risk environment. Against this backdrop, we extended our analysis and added coverage related to climate change, cyber risk, the digital landscape and other elements to make sure that the policies and governance of the non-financial risk and corporate insurance functions respond to these and other emerging cross-cutting risks.

Analysis and oversight of controls in Corporate & Investment Banking (CIB)

Given the nature, specificity and complexity of financial markets, CIB must enhance operational risk management and control continuously. We implemented these enhancements in 2024:

- Enrichment of processes to drive automation and operational excellence in the services provided to our customers, based on a culture of quality that promotes the best CIB standards in every market;
- Reinforcement of the control framework for market activity by enhancing the design of controls, the quality of their execution, and other aspects. We continue to focus on the risk of unauthorized trading as a CIB risk management priority, for which we have clearly defined controls;
- Strengthening of the vendor risk management function through monitoring focused on critical and high risk services and targeted reviews of critical third-party processes to boost the risk profile and promote compliance with internal and regulatory requirements. We placed special emphasis in 2024 on meeting all the requirements set out under the DORA's Act;
- Strengthening cybersecurity control measures to protect against information leaks and cyber attacks in interactions with third parties (including SaaS[10] providers); controls over user access to systems (privileged user access); and technological contingency tests. In addition, we enhanced monitoring and challenge exercises to execute controls correctly.



[10] SaaS - Software as a Service

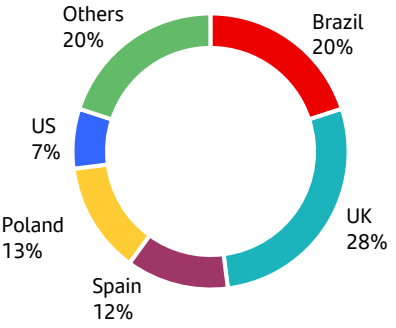
5.3 Key metrics

Net losses (including incurred losses and net provisions) as per Basel[11] risk categories in the last three years were:

Net losses by operational risk category[A]

(% o/total)

A. Does not include employees litigations in Brazil.



Santander considers employee litigation in Santander Brazil to be a staff expense. Our governing bodies (risk control committee, RSRCC and board of directors) continuously monitor expense levels with specific risk appetite metrics and take special actions to reduce them. These expenses are reported under the categories defined by the Basel Operational Risk framework.

In 2024, the most significant losses by category and geography are related to litigation in Santander Brazil, the UK, Poland and Spain. In the case of the UK, operational risk losses increased in 2024 due to the provision made for the case of vehicle financing commissions (see section on legal provisions in the consolidated financial statements). Excluding this case, UK losses would be lower compared to the previous year.

The net losses by country were:

Net losses by country[A]

(% o/total)

A. Does not include employees litigations in Brazil.

[11] The Basel categories incorporate risks which are detailed in section 6 'Compliance risk'.

6. COMPLIANCE RISK

6.1 Introduction

The compliance risk function is an independent control function within the second line of defence. It reports directly and regularly to the board of directors and its committees through the Group Chief Compliance Officer (CCO). It facilitates critical, independent debate, oversight and control in terms of corporate compliance, product governance, consumer protection, reputational risk, and financial crime. It also measures the impact of compliance and conduct risk on risk appetite. The compliance function regularly reports to the relevant governance bodies at management and board level, on compliance related risks and the effectiveness of the compliance programme in managing them. This function works closely with the wider risk team to promote a common risk and compliance culture.

Our compliance operating model and framework is well established and delivered consistently across the Group. It considers all applicable legal and regulatory requirements and expectations of the Group, and promotes well-defined ethical principles and good conduct requirements, for the benefit of employees, customers, shareholders and the communities we serve in.

In 2024 we focused on enhancing our operating model to strengthen the progression of our commitments, with specific focus on managing our financial crime risks in the face of ongoing geopolitical challenges, and delivering enhanced compliance support to the Group's global divisions.

6.2 Compliance risk management

We have a robust and consistent compliance operating model and framework to meet all legal and regulatory requirements at Group and subsidiary level. Programmes are risk-based and reflect the size and complexity of the Group. The key risks that we cover and describe in the current section include but are not limited to the following:

- Employee compliance: risk of non-compliance with legal and regulatory requirements as outlined in Grupo Santander's Code of Conduct, due to the behaviours and conduct of our employees. Every employee is expected to operate based on the highest ethical considerations and free of any conflict of interest at all times.
- Conduct risk: risk arising from inadequate practices in the Group's relationship with customers, including the way they are treated, as well as the products and services offered and their suitability for each customer. Inadequate treatment of customers includes the risk of not taking due account of the vulnerability or special circumstances and/or economic stress of customers, so that we act in their best interests and offer them viable solutions where possible.
- Reputational risk: risk of current or potential negative economic impact to the bank due to damage to the perception of the bank on the part of employees, customers, shareholders, investors and the wider community.
- Financial crime risk: risk that Santander is used or exploited to make funds or assets with illicit origin and/or that enable criminal activity to appear as legitimate, specifically through money laundering, terrorism financing, sanctions violations and such other crimes as bribery, corruption or fraud.

In addition, ESG factors[12] are cross-cutting in all the organization and managed according to our risk and compliance, and sustainability frameworks. From a compliance programme perspective, they mainly relate to FCC, conduct and reputational risk, where we continue to enhance the risk and compliance control environment in relation to the ESG management.

For more details on ESG factors management, see section'**2.3 Embedding climate in risk management**' in the 'Sustainability statement' chapter.

Corporate compliance

This function oversees and controls regulatory risk from employees, those related to personal data processing, securities markets (markets conduct) and regulatory disclosures to the Spain's stock markets authority, Comisión Nacional del Mercado de Valores (CNMV), and other regulatory bodies where Santander is a publicly traded company. The core elements of corporate compliance are:

[12] A set of potential negative impacts relating to ESG factors (environmental, social and governance), considered as material by the Group according to the corporate risk framework.

A. Employees

We promote a culture of ethics and compliance among our employees, with standards for preventing corporate financial crime risk, conflicts of interest and anti-competitive practices according to the General Code of Conduct (GCC). To support this, we operate Canal Abierto, Grupo Santander´s whistleblowing channel, through which employees and other stakeholders can anonymously and confidentially report financial and accounting irregularities, as well as violations of internal or external regulations and our corporate behaviours.

Employees' compliance

Canal Abierto

- → Provide a channel for employees to report unethical conduct and breaches of internal or external regulations.
- → Manage and investigate reported cases.
- → Promote a culture of speaking up and truly listening.

Training and awareness

- → Develop employee training programmes and awareness campaigns on corporate defense, anti-trust and employee compliance.
- → Issue messages about ethics to the entire Group to build relationships based on trust.

Disciplinary proceedings

- → Investigate conduct that is misaligned with our ethics and compliance principles.
- → Assess disciplinary measures.

Policies and procedures

- → Promote compliance with the GCC and enact special policies and procedures to enforce it.
- → Report to governing bodies regularly.

Appointments

- → Assess the suitability of the Group's board and senior management nominations.*

Queries about ethics

- → Manage queries from employees and members of governing bodies about ethics and internal regulation.

(*) Run by the Corporate Centre, Corporate Compliance, Legal and Internal Governance areas.

For more details on Canal Abierto, see section **'4.3 Ethical channels'** of the 'Sustainability statement' chapter.

B. Privacy

At Santander, we have a specialist office that enforces our corporate policy on personal data protection and sets out guidelines for all our subsidiaries. In 2024, we increased data protection awareness following the 14th of May incident related to the unauthorized access to a Santander database hosted by a third-party provider. We adopted coordinated and reinforced measures to strengthen our data protection culture and foster collective consciousness about the value and protection of personal data.

C. Market regulation

The Markets Conduct team within Corporate Compliance oversees enforcement of the Code of Conduct in Securities Markets (CCSM). It is also responsible for the control environment applicable to treasury shares transactions and Santander's buyback programmes and for monitoring the use and contribution of benchmarks.

In addition to the application of the CCSM, the risk of market abuse is primarily managed by the relevant business line, with support from CIB Compliance, as outlined below:

- The global control room function is responsible for preventing unlawful disclosures of inside information and transactional conflicts of interest.
- The surveillance function is responsible for: (i) monitoring the bank's activity in financial markets; (ii) deterring and detecting market abuse and other types of misconduct; and (iii) establishing monitoring systems for both the bank's orders and transactions in financial markets and for the communications of employees carrying out this activity.
- The CIB compliance function also oversees compliance with core international market regulations, including, but not limited to:
  - EU laws and regulations: monitoring of compliance with EU Regulations (for example, MiFID II and EMIR), with the focus in 2024 on regulatory reporting, inducements and Algorithmic Trading requirements.
  - UK laws and regulations: continued monitoring of divergences of UK vs. EU regulations.
  - US laws and regulations: monitoring of US compliance programmes and their global application, in particular Dodd-

Frank Swap Dealer and Security Based Swap Dealer; and the Volcker Rule.

D. Relevant Information

The core functions of Corporate Compliance's Relevant Information team are: (i) leading the assessment to decide whether a particular piece of information could be classified as inside or other relevant information; (ii) disclosing relevant information as well as key inside information on the Group to the markets, which can be found on both our website and the CNMV's; and (iii) reporting on transactions with treasury shares or significant holdings of Banco Santander, and on transactions and share-based remuneration schemes of executive directors and senior managers to the CNMV and other regulatory bodies in markets where Santander is a publicly traded company.

E. Automatic exchange of tax information between countries

The data management function oversees automatic tax disclosure between subsidiaries (pursuant to FATCA[13] and CRS[14]) by checking regular reporting obligations and execution of local action plans.

Key corporate compliance lines of action in 2024

Policies, procedures and guidelines

- Enhanced Santander's GCC to avoid conflicts of interest that could arise between Group professionals who have a family member within the Group.
- Revised Santander's CCSM to align its content to the current regulatory framework and best practices and to adopt an approach closer to the expectations of US regulators.

Risk management, methodologies and control

- Successfully completed the transition to the enhanced methodology of EURIBOR contribution set by the European Money Markets Institute.
- Implemented the amendments stemming from EMIR-Refit.
- Applied a control framework to the two buyback programmes carried out in the year (for an amount of EUR 1,459 million and EUR 1,525 million) to contribute to their compliance with applicable regulation.

Subsidiaries Oversight and Awareness

- Ongoing coordination to facilitate proactive identification, management and reporting of any data related risk.
- Established foundation for countries not affected by GDPR to apply similar standards through a comprehensive compliance program which manages personal data protection risks effectively.
- The focus of the Surveillance function was on the continued harmonization of global tools and processes across both trade and communications.
- Benchmark Oversight of subsidiaries and global businesses strengthened through the execution of Risk assessments, and through the advice to local units and businesses.

Conduct and reputational risk

The conduct and reputational risk function promotes suitable levels of consumer protection by fostering a good customer relationship culture throughout the overall customer lifecycle (from design of products, sales, post-sales and in all engagement throughout a customer's relationship with the Group) to protect consumers' rights and promote their fair treatment while managing and mitigating all potential conduct risks with them.

It also promotes a low reputational risk profile by defining criteria and controls to minimize risk that seek to prevent, mitigate and proactively manage stakeholder relationships within the Group.

A. Conduct risk

Customer conduct risk can potentially arise through failures in marketing processes, including product design (e.g. definition of target market and price), in sales (e.g. transparency and suitability) and post-sales (e.g. customer service and consideration of customers in special circumstances).

The first line of defence (i.e. business and its supporting functions), are responsible for identifying, mitigating, managing and resolving risks across all these phases and when dealing with customers. Compliance, as the second line of defence, advises the first line of defence of the global business and the local compliance teams on the implementation of the Group´s conduct risk management model and oversees the control environment and remediation plans, where applicable.

[13] Foreign Account Tax Compliance Act
[14] Common Reporting Standards

Key elements of the conduct risk management model

Internal regulation and governance

- Define principles and processes through a strong regulatory-based conduct risk management model.
- Oversee of local product governance forums and run the corporate one to mitigate conduct risk in the product and service approval.

Oversight of key processes

- Our products and services meet customer needs.
- Sales target the right markets with transparency, ensuring proper training, and customer-centric incentives.
- Our customer service and post-sale services are high-quality and fair.

Risk management

- Monitor results of marketing controls.
- Identify and assess risks using customer voice, risk management tools, and supervisory and sectorial information.
- Escalate issues and action plans.

Our conduct risk model promotes basing our actions on customers' interests, regulation, our values and our principles. That means driving a customer-centric culture throughout the marketing and servicing processes and retail customer relations with a Simple, Personal and Fair approach.

Key conduct risk lines of action in 2024

Implementation of responsible practices with end users

- Vulnerable customers policy implementation.
- Annual review of sales force remuneration, ensuring consistency with Group standards.
- Thematic review on fair lending practices for credit cards and overdrafts.
- Monitoring of responsible pricing, fraud management, and contact centre activities.

Contribution to the simplification strategy

- Conduct risk assessments of product catalogue simplification.
- Optimization of product approval processes.

Promoting best practices in digital strategy

- New guidelines to mitigate conduct risk and improve customer experience in digital sales.
- Policies for crypto and digital Assets and several initiatives approved after expert review.
- Ongoing collaboration in public discussions on digital assets.
- AI project in Brazil to analyse customer complaints better, enhancing depth and speed.

For more details on conduct with customers, see section '3.3 Our customers' of the 'Sustainability' chapter.

B. Reputational risk

Reputational risk is predominantly rooted in stakeholders' perception of the bank in every market where we operate. Reputational risk can arise from multiple sources: from business or business support activities, as a consequence of other risks, from the economic, social and political environment, or from events related to our competitors. Our reputation could also suffer if we are the subject of negative coverage in the media, whether merited or not.

Reputational risk applies to all Group activities and is identified, managed and mitigated by business and support functions, in particular the ones that engage with stakeholders. The second line of defence, in compliance, draws up policies, oversees the risks, challenges the first line of defence and report and escalate to the relevant governing bodies (compliance and conduct committee, CSRRC and board).

Our reputational risk model takes a preventive management and control approach, with effective handling of early warnings as well as procedures to identify, manage and monitor risk events. It also includes elements to identify, analyse and monitor key stakeholders' perception of Grupo Santander and the financial sector, and how that perception may change. Our model is also consistent with the overall risk management and control processes (risk profile, risk appetite, economic capital, emerging risks, and others).

Key reputational risk lines of action in 2024

Policies, procedures and guidelines

- → Reviewed models, policies and criteria in sensitive activities: the defence sector and subsidiaries oversight.
- → Collaborated with other functions to implement greenwashing guidelines, awareness and meet regulatory requirements.
- → Reviewed our humanitarian crisis management guidelines and set assessment criteria for Santander aid deployment.
- → Collaboration in definition of a protocol to mitigate reputational risk when restricting or ending business relationships due to FCC reasons.

Risk management, methodologies and control

- → Ran initiatives to share best practices with subsidiaries, including enhancements of collaborative tools.
- → Enhanced methodologies to quantify reputational risk for economic capital and developed a methodology to quantify reputational impact related to climate & environmental risks.

Subsidiaries oversight and reporting

- → Enhanced subsidiary oversight, governance and challenge processes.
- → Updated the methodology and processes for the control environment at Group and subsidiary-level (quality assurance, oversight perimeter, etc.).
- → Bolstered the process of risk reporting and consolidation in the corporation and subsidiaries for reputational risks, based on a forward-looking approach.

Financial Crime Compliance (FCC)

Financial crime risk arises from acts or the use of the Group's means, products and services for criminal or illegal activities.

The business functions form the first line of defence who is primarily responsible for identifying, managing, mitigating and reporting financial crime risk, taking into consideration the Group's risk culture. The Accountable Executive for FCC oversees that the business embraces, implements and executes the FCC Framework and FCC Programme effectively.

The FCC function, as a second line of defence, oversees financial crime risks and maintains suitable policies and procedures to manage the business activities within the Group's established risk appetite.

In addition, in 2024, we continued to focus on these priorities:

- Priority crime threats, geopolitical events, and focus on information sharing drove the general FCC Group activity for prevention and mitigation purposes against money laundering, terrorism financing and sanctions violation.
- Moreover, we focused on the growing risk in international financial sanctions in an increasingly global and interrelated environment, appropriate knowledge and updating customer due diligence files and, where appropriate, their structures and new businesses and services such as cryptoassets and payment gateways, coupled with the growing risks of fraud, and will continue to do so in the future.
- Continuous cooperation with law enforcement and competent authorities is key to disrupt threatening finance networks support the communities that the Group serves, and the Group is fully committed in this regard.

- Forged and maintained relationships with domestic financial intelligence units, law enforcement agencies and public financial institutions to enhance overall capabilities to prevent, mitigate and detect suspicious activities.
- Enhanced and developed methodologies, procedures, processes and systems to detect and mitigate financial crime, to respond correctly to existing and emerging threats.
- The ongoing FCC strategic programme enables a strong approach to the Group's control framework and operating model, embedding a dynamic model and continuous improvement of scenarios on internal systems such as transaction monitoring and sanctions screening.

Key FCC lines of action in 2024

Frameworks & policies

→ Continued evolution of AML policies and procedures as part of ongoing update of the AML/CFT framework regulation.

One FCC strategic program

→ Continued to build on the control framework in several units as a consequence of strengthening the control environment and implementing One FCC strategic program.

Financial Intelligence units

→ Enhanced information sharing activities through a new platform to feed and share information within the Group, enhancing functionality, confidentiality and security controls.

Oversight

→ Enhanced the methodology for the FCC unit's oversight to check that all subsidiaries follow a consistent approach to supervise and assess financial crime risk.

Trainings

→ Targeted training to introduce the new EU AML package and provided an online training module on sanctions.

Relationship with other associations

→ Banco Santander is a founding member of the Wolfsberg Group (association of 12 global banks that aims to develop financial services industry standards for financial crime) and is actively involved in its activities and initiatives.

For more details on FCC, see section **4.2.3 'Financial Crime Compliance (FCC)' in 'Sustainability statement'**.

7. MODEL RISK

7.1 Introduction

A model is a system, approach or a quantitative method that applies statistical, economic, financial or mathematical theories, techniques and assumptions to transform data into quantitative estimates.

We use models mainly for credit scoring/rating, performance, capital and provisioning, market and structural risk, operational, compliance and liquidity risk, and financial accounting and control, among others.

The use of models entails model risk, which is defined as the potential negative consequences of decisions based on poorly developed, poorly implemented or incorrectly used models. Model risk can lead to financial losses, inappropriate business or strategic decisions or damage to the Group's operations.

7.2 Model risk management

At Grupo Santander we have been measuring, managing and controlling model risk for years. The Model Risk area, which extends to both the corporation and the main subsidiaries, seeks to manage and supervise this risk.

For the proper management of model risk, we have clear internal regulations that establish the principles, responsibilities and processes to organise, approve, manage and govern models through their entire life cycle.

The intensity of model risk management and monitoring is relative to the importance of each model for Santander Group. Through the tiering process, we summarize and classify the level of importance of non-regulatory models. The regulatory models, given their particular relevance for the Group, follow the most intense control and management standards.

At Grupo Santander we define the following phases of the model's life cycle:

1. Identification

The identified models must be included in the scope of model risk control and, consequently, in the Group centralised inventory, a single platform based on an uniform taxonomy for all models used in the business units. This inventory is key for sound management, as it contains all relevant information of each model, enabling to closely monitor them according to their relevance and the tiering criteria.

2. Planning

An internal annual exercise approved by our subsidiaries' governance bodies[15] and reviewed in an aggregated form, which formulates strategic measures for models managed by the Model Risk area and pinpoints needs for any models to be developed, reviewed or implemented during the year.

3. Development

In this phase, the Model unit helps strengthen risk management by developing models and using data according to existing regulatory requirements.

[15] The subsidiaries' local governance bodies (including the local executive risk committee — ERC — or equivalent) approve the plan for the models under their remit. At corporate level, the subsidiaries' plans and global model plan are presented to the model approval forum (MAF) for review and to the ERC for approval.

This unit leads the development of models for all risk types, with the spotlight on complying with regulatory expectations (Internal Rating Based Approach — IRB —, IFRS9, Internal Model Approach — IMA —, and other models). To develop models, we have specialized local and global teams. The experts in each geography are responsible for the development of local models since they are well-versed in the particularities and needs of each unit, while the global experts define the modelling standards, develop global models and support the geographies on the application of these standards and on the development of their own models, where required.

Moreover, we use a boxification methodology that enables us to automate, standardize and maintain the quality of model development.

Throughout the year, we completed the final developments under the IRB Repair Program. Per supervisory requirements, we also delivered on the IRB strategy update, which sought to pursue the consistent use of IRB models in the Group's units. We will execute this strategy in the coming years. We built on models for stress tests, climate change risk management, and others.

At Santander, we believe in innovation, such as the responsible use of machine learning and generative artificial intelligence. Our aim is to delve deeper into these new techniques by running process enhancement and simplification initiatives.

4. Internal validation
Independent model validation is a regulatory requirement and key feature of our model risk management and control.

A specialist unit that is totally independent from developers and users issues technical assessments of internal model suitability. These assessments are expressed through a rating that summarizes the model risk associated to it. Validation intensity and frequency are well-defined and risk-driven.

We have an unique validation approach led by the Single Validation Office, which strengthen the second line of defence ensuring a consistent and standardised model risk management across the Group. It has allowed a greater decentralised organizational structure.

5. Approval
Before the model´s implementation and use, internal governing bodies[16] must approve it through a governance circuit in place for our model inventory, based on its level of importance.

6. Implementation and use
In this phase, we add new models to our IT systems. Because this is another source of model risk, technical teams and model owners test proper model integration based on methodology and expectations.

7. Monitoring and control
We regularly review models so that they are working correctly and that they are suitable for their purpose. Otherwise, they must be adapted and redesigned. Control teams must make sure models are managed according to the general model risk framework and other related internal rules.

Main activities in 2024

To strengthen the Group's model risk culture and position Santander as a benchmark in this area within the banking industry, in 2024 our strategy has focused on:

- implementation of the IV Next project for the evolution of the validation function, reinforcing the identification of root causes of incidents and the binding role of the Internal Validation teams;
- technological transformation and simplification of the function towards a more efficient model;
- continuous improvement of the IRB regulatory models to meet supervisory expectations and adaptation to the new FRTB regulatory framework;
- review of the model inventory from the point of view of the five global businesses, thus enabling effective model risk management aligned with the Group's strategy.

[16] The ERC, model approval forum (MAF), local model governance bodies or the model owner will approve models based on model type or use (regulatory or not); if the model is local or global; the type of amendment to the model; global tiering; and the powers delegated to each subsidiary.

8. STRATEGIC RISK

8.1 Introduction

Strategic risk is the risk of loss or damage arising from strategic decisions or their poor implementation, or the inability to adapt to a changing environment, which may impact the medium- and long-term interests of our key stakeholders.

Grupo Santander's business model is a key element of our strategic risk. It must be viable, sustainable and capable of generating results in line with our annual objectives and in a manner that is consistent with the Group's long-term vision.

Strategic risk has three key components:

1. **Business model risk**, which includes the risk of the model being out of date, becoming irrelevant and/or losing its capacity to continue generating the desired results.
2. **Strategy design risk**, which relates to the strategy and assumptions set out in the Group's long-term plan, considering that this plan may be unsuitable in its nature or because of its assumptions, which could result in the Group not achieving the expected results.
3. **Strategy execution risk**, which involves the three-year strategic plan and potential deviations from it due to internal and external factors, the lack of capacity to respond to changes in the business environment and the risks associated with corporate development transactions and the marketing of new products and services.

8.2 Strategic risk management

Our strategy and business model pillars are customer focus, our global scale with local presence, and geographical, business and product diversification. Our five global businesses are key to driving more value creation, profitability and shareholder remuneration, while helping us maintain a solid and diversified balance sheet thanks to our prudent risk management.

Grupo Santander views strategic risk as a transversal risk. We therefore have an operating model, to which the Group's subsidiaries refer to, that covers the governance, procedures and necessary tools for robust monitoring and control, all within our board-approved risk appetite.

We constantly monitor changes in competition, regulation, market conditions, our organization and other areas to determine the existence of mitigating factors, as well as action plans and the potential need to revise our strategy. The Strategic Risk function engages with key areas of the first and second lines of defence to ready mitigating measures for implementation when necessary.

Our strategic risk operating model is based on:

- Challenging strategic plans: With the support of other specialized areas within the Risk division, the Strategic Risk team challenges the three-year financial plan and long-term strategic plan by identifying potential threats that could undermine our objectives. In 2024, we bolstered this by defining a set of binding constraints that we embedded in the Group's three-year plan as well as by fully integrating our five global businesses into this process.
- Emerging risks: Santander proactively identifies, measures, monitors and manages risks that, under stressed scenarios, could have a significant impact on the Group's profitability, liquidity and solvency. In 2024, we updated the methodology we use to identify and assess these risks by enhancing its foresight component. For more details on the emerging risks we spotted in 2024, see the next section.
- Analysis of business model performance: To identify and assess the main threats to the bank's and our subsidiaries' business plan and strategic objectives in three areas:
  - Strategy execution: Assessing the risk of deviation from plans, targets and strategic initiatives.
  - Viability and sustainability: Assessing our position against competitors and the risk of failing to create shareholder value.
  - Business plan predictability: The risk of results becoming unpredictable and unstable over time.

In 2024, we simplified and strengthened our business model assessment methodology by reducing the number of metrics, dimensions and volatility, giving greater relevance to strategic execution, as well as reinforcing the backtesting of strategic planning

- Participation in the assessment and validation of proposals for new products and services prior to their release by verifying they are consistent with the Group's strategy and weighing up their risk against profitability.

- Corporate development transactions: Encouraging that the analysis of these transactions includes an assessment of their impact on the Group's risk profile and risk appetite.

- Monitoring strategic projects: The Group strategy committee sets out the strategic initiatives inventory every year. We jointly review progress of these initiatives performance twice a year, including an independent challenge from the second line of defence. In 2024, we launched several initiatives, such as those related to the use of Artificial Intelligence, to boost productivity and process automation and increase customer satisfaction. We are also promoting the interoperability of instant payment systems in Europe as a cross-border solution. Moreover, we continued to modernize the Group's core processes — based on cloud computing — to boost efficiency and strengthen our global strategy, which the five global businesses underpin.

The strategic risk function is responsible for providing a consolidated view of the exposure to this risk, providing an independent opinion and challenging the activities of the first line of defence. Senior management regularly receives the Strategic Risk Report, which includes an update on strategy execution, emerging risks, business model performance, corporate development transactions, product marketing, and strategic initiatives.

8.3 Emerging risks in 2024

Our emerging risks exercise aims to detect, assess and monitor risks that may have a significant impact on our business model, profitability and solvency under stressful conditions with low likelihood of occurrence.

Proactive emerging risk management is essential to avoid and mitigate potentially negative impacts on, and deviations from, targets through action plans drawn up in advance.

This involves both the first and second line of defence in our subsidiaries and at the corporate centre. We also embed identified risks in the idiosyncratic scenarios of the Group's Internal Capital Adequacy Assessment Process (ICAAP) and viability, recovery and resolution plans.

In 2024, the main emerging risk drivers were geopolitical and macroeconomic uncertainty in relation to the potential escalation of ongoing military conflicts and deteriorating US-China relations as well as technology risks such as possible service disruptions caused by key suppliers and cyber attacks.

We highlight the following emerging risks:

Geopolitical uncertainty

While this has always formed part of our analysis, it has recently become one of the most important elements to consider in weighing up the potential threats to Grupo Santander. In 2024, we considered these events:

- Potential escalation of the conflicts in Ukraine and the Middle East, which could lead to tighter monetary policy if energy prices and inflation soar.

- Potentially disruptive policies in the US (with an impact on the global economy) and Mexico following recent elections in both countries.

- China-US relations: with a possible shift in the balance of power between economic blocs, an increase in trade tensions related to technology exchange, and the situation involving Taiwan and the South China Sea.

Macroeconomic landscape

This includes threats that often arise from geopolitical events but that are not part of our central scenario and have a very low likelihood of occurrence according to our emerging risks methodology. For instance:

- Severe recession in Germany, caused by a loss of competitiveness and leadership (especially in the automotive sector), which could trigger a potential systemic recession in the EU.

- Potential increase in market volatility, which could generate a sharp deleveraging of non-bank financial institutions and lead to further price adjustments that may spill over to the real economy and the banking sector.

- Vast fiscal imbalance in the EU, political clashes among EU members, and slowdown or even regression in EU integration, which could lead to loss of confidence and higher risk premiums.

Macroeconomic and geopolitical uncertainty can potentially hinder our growth and profitability and diminish asset quality due to a slowdown in one or many of our markets, as well as impacting on our customers and the recoverability of loans and increasing our losses or additional provisioning needs.

In Grupo Santander, we carry out a proactive risk management and have robust risk policies and procedures to keep our risk profile within the limits set in our risk appetite statement. This, coupled with our geographical and business diversification, makes us more resilient to macroeconomic and geopolitical risk.

In addition, the constant reinforcement of mitigating measures helped reduce the potential severity of these risks. We performed these actions in 2024:

- Held frequent monitoring meetings, including special situation forums (where necessary) to review risk profile, with the spotlight on key indicators for its monitoring and control.

- Definition and implementation of playbooks to pursue a quick, forward-looking and proactive response to challenging circumstances.

- Adjusted limits and exposures in relation to our risk appetite (where necessary) and updated internal sovereign risk ratings.

- Continuous monitoring of the US's, China's and the EU's decisions on international trade and tariffs.

- Held asset-liability committee (ALCO) and market committee meetings to monitor structural, interest rate and FX risk, including the coverage of our capital ratios in all major currencies and, where necessary, adjusting our limits and exposure so that we remain within our risk appetite.

Growing legislative and regulatory pressure

An increase in requirements due to new laws and amendments or the extension of legislative measures in the markets where we operate could threaten our capitalization and solvency objectives, stymie profitability, and undermine our ability to extend credit. An example of this would be the potential extension of the windfall tax on banks in Spain.

The key mitigation measures for this risk are:

- Initiatives included under the capital plan such as mobilizing assets through securitization, portfolio sales and other means; and
- Multidisciplinary working groups in cooperation with banking associations, regulators and other stakeholders to anticipate and mitigate the possible outcomes of these measures.

Risks related to generative artificial intelligence (AI)

AI is a technology that aims to create intelligent systems that can operate with certain autonomy to generate results (such as predictions, recommendations or decisions) with impact in both physical and virtual environments.

The major AI risks relate to a potential decline in equality (algorithmic bias), privacy and data processing, design errors and cyber risk. We also consider climate risk due to the high computational intensity of these technologies.

We are firmly committed to promoting the transformation of the financial sector through the responsible use of AI that prioritizes transparency and customer protection.

That's why we set potential AI use cases under our risk management framework. Moreover, we have an AI policy with clearly defined roles and responsibilities, which aligns with the Group's risk appetite and the EU AI Act[17]. Additionally, it is necessary to consider the progressive entry into force of the AI Regulation in the EU (AI Act), which will have a high regulatory impact on the implementation and use of AI systems classified as high-risk. Our generative AI platform makes sure that the developments we undertake in the Group comply with our internal security and ethical control policies.

Potential disruption of a critical ICT[18] supplier

Digitalization is increasing banks' reliance on information and communication technology (ICT) and making them particularly vulnerable to potential disruptions and associated threats. This could result in the loss of data and disruption to our business.

Some of Grupo Santander's mitigating measures in this regard are comprehensive and strictly governed due diligence prior to ICT supplier onboarding, including supplier certification and regular monitoring and review; and exit strategies and business continuity plans for potential failures or disruptions, which we test regularly.

Central bank digital currencies (CBDC) and disintermediation risk

The digital versions of fiduciary currencies issued by central banks (central bank digital currency — CBDC), especially those that target retail customers, could impact on financial system stability if they replace traditional current accounts, which in turn could affect commercial banks' volume, structure and cost of funding. To mitigate CBDC risk, the Group:

- Actively participates in the debate on CBDC with domestic and international authorities to explain the risks to financial stability and propose solutions to mitigate them.
- Monitors central banks' CBDC projects to analyse their impact on the business or the possibility of developing new services for our customers to mitigate impact.
- Sets up multidisciplinary working groups with banking associations, think tanks, regulators and others to foresee and escalate, if necessary, potential CBDC impacts.

Risk of suffering a severe cyber attack

Our goal is to achieve a cyber-resilient organization capable of withstanding large-scale cyberattacks that could disrupt the normal functioning of the bank. In line with new regulatory requirements, the objective is to enhance all necessary capabilities to preserve the security of networks and information systems that underpin the continuous provision of financial services and their quality, even in the face of significant disruptions.

To achieve this, we have a governance and control framework that allows us to measure and monitor the cyber risk profile and its control environment, with the aim of maintaining a high level of digital operational resilience and an effective and prudent management of ICT-related risks.

For more details on the main cybersecurity risks, see 'Cyber risk' in section **5.2 'Operational risk management'.**

To counter these threats, Santander runs several counts with different initiatives described in section **'5. Research, development and innovation (R&D&i)'** of the 'Economic and financial review' chapter.

[17] European regulation on artificial intelligence.
[18] Information and communication technology.

GLOSSARY OF TERMS, ACRONYMS AND ABBREVIATIONS

2023 AGM	Annual general shareholders' meeting of Banco Santander held on 31 March 2023 at second call
2024 AGM	Annual general shareholders' meeting of Banco Santander held on 22 March 2024 at second call
2025 AGM	Annual general shareholders' meeting of Banco Santander called for 3 or 4 April 2025 at first or second call, respectively
A2A	Account-to-account
ABC	Anti-bribery and corruption
Act 10/2014	
Active customer	Those customers who comply with the minimum balance, income and/or transactionality requirements as defined according to the business area
ADR	American depositary receipts
ADS	American depositary shares
AEOI	Automatic Exchange of Information standard
AI	Artificial intelligence
ALCO	Assets and liabilities committee
ALM	Asset and liability management
AML	Anti-money laundering
API	Application programming interface
APM	Alternative performance measure
AuM	Assets under management
B2B	Business-to-business
B2C	Business-to-commerce
Banesto	Banco Español de Crédito, S.A.
BCMS	Business continuity management system
bn	Billion
BNPL	Buy now, pay later. Short-term financing that allows consumers to make purchases and pay for them at a future date
bps	Basis points
BREEAM	Building research establishment environmental assessment method
BRL	Brazilian real
BRRD	Directive 2014/59/EU establishing a framework for the recovery and resolution of credit institutions and investment firms, as amended from time to time
Bylaws	Bylaws of Banco Santander
CAE	Chief Audit Executive
CAO	Chief Accounting Officer
CapEx	Capital expenditure
CARF	*Conselho Administrativo de Recursos Fiscais* (Administrative Council for Tax Appeals)
CBDC	Central bank digital currency
CCO	Chief Compliance Officer
CCoB	Capital conservation buffer
CCPS	Contingent convertible preferred stock
CCR	Counterparty credit risk
CCSM	Code of Conduct in Securities Markets

CCyB	Countercyclical capital buffer
CDI	CREST Depositary Interests
CEO	Chief Executive Officer
CF	Corporate Finance
CFO	Chief Financial Officer
CFT	Combating the financing of terrorism
CHF	Swiss franc
CIB	Corporate & Investment Banking (primary business segment)
CNBV	*Comisión Nacional Bancaria y de Valores* (Mexican stock market authority)
CNMV	*Comisión Nacional del Mercado de Valores* (Spanish stock market authority)
CO_2e	Carbon dioxide equivalent
CoE	Cost of equity
COFINS	*Contribuiçao para Financiamiento da Seguridade Social* (Contribution for Social Security Financing)
Constant euros	Excluding exchange rates impact
Consumer	Digital Consumer Bank (primary business segment)
Costs in real terms	Costs excluding the effect of average inflation over the last twelve months
CPGF	Corporate product governance forum
CRD	Capital Requirements Directive
CRE	Commercial real estate
CRO	Chief Risk Officer
CRR	Regulation (EU) 575/2013 on prudential requirements for credit institutions and investment firms, as amended from time to time
CSLL	*Contribuçao Social sobre o Lucro Liquido* (Social Contribution on Net Profit)
CSRBB	Credit spread risk in the banking book
CSRD	Corporate Sustainability Reporting Directive. Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (as updated from time to time)
CVA	Credit valuation adjustment
DCBE	Digital Consumer Bank Europe (secondary business segment)
DCM	Debt capital markets
Digital customer	Every consumer of commercial banking services who has logged on to their personal online banking and/or mobile banking in the last 30 days
DNSH	Do no significant harm
DORA	Digital Operational Resilience Act. Regulation (EU) 2022/2554 of the European Parliament and of the Council of 14 December 2022 on Digital Operational Resilience for the Financial Sector and Amending Regulations (EC) No 1060/2009, (EU) No 648/2012, (EU) No 600/2014, (EU) No 909/2014 and (EU) 2016/1011
DTA	Deferred tax asset
DVA	Debt valuation adjustment
E&CC	Environmental and climate change related
E&S	Environmental and social
EAD	Exposure at default
EBA	European Banking Authority
EBITDA	Earnings before interest, taxes, depreciation and amortization
ECB	European Central Bank
