- Promotion of internal talent and geographic/functional mobility. fostering team diversity to reflect the diversity of the environments in which we operate.
- Continuously investing in the development of our risk professionals, fostering innovation and decision quality, and promoting a global mindset is key to strengthening organisational resilience.

The GSGM model also applies to the Group's global businesses. This gives us a global-local organization in which countries ultimately remain responsible for delivering the budget, the business and customer strategy, and financial management, while the global businesses lead shared initiatives through common operating models and shared technologies, improving local performance.

For more details on our relationship with our subsidiaries, see section 7. 'Group structure and internal governance' in the 'Corporate Governance' chapter.

1.4 Risk management processes and tools

In the following section, we describe Grupo Santander's main processes and tools to carry out effective risk management.

Risk appetite and structure of limits

Risk appetite is the aggregate level and types of risk we deem prudent for our business strategy, even in unforeseen circumstances.

It is expressed through qualitative statements and quantitative limits and metrics representative of the bank's desired risk profile, covering all material risks to which we are exposed.

To promote a comprehensive and forward-looking coverage of these risks, we apply common corporate methodologies for risk identification and assessment across geographies and activities, including emerging risk analysis and risk and control self-assessments (RCSA). These processes support the timely identification of structural and evolving risks, including those arising from geopolitical developments and broader macro-financial conditions, and inform the calibration and ongoing review of the Group's risk appetite.

For more details on these exercises see sections 'Management and control model' 5.2 Operational risk management' and '8.3 Emerging risks'.

Santander structures its risk appetite across five axes, which together provide a holistic view of the risks incurred in the development of our business model:

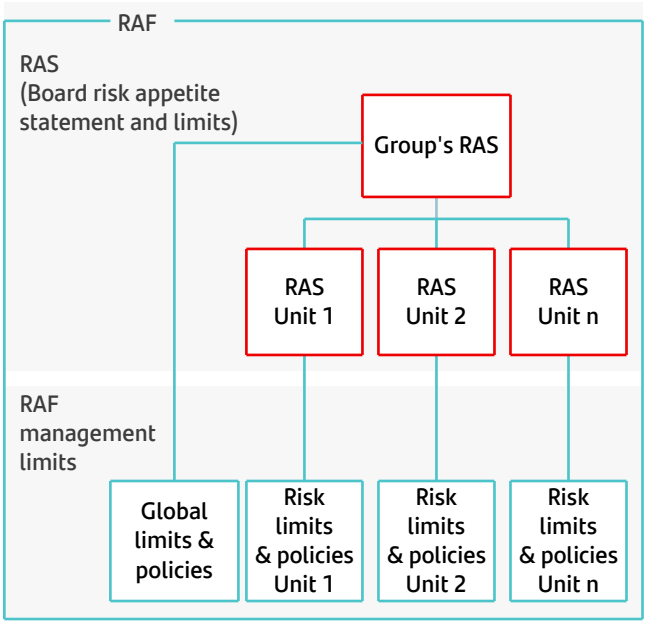
Risk Appetite axes	Key risks: Credit	Market	Liquidity	Structural	Operational	Financial Crime	Model	Reputational	Strategic
P&L volatility	Control of P&L volatility associated with business plan under baseline and stressed conditions								
Solvency	Control of capital ratios under baseline and stressed scenarios (aligned with the Internal capital adequacy assessment process - ICAAP)								
Liquidity	Control of liquidity ratios under base and stress scenarios (aligned with the Internal liquidity adequacy assessment process - ILAAP)								
Concentration	Control of concentration levels in customers, sectors and portfolios								
Non financial risks & control environment	Solid controls on non financial risks aimed to minimize financial, operative, technological losses, as well as legal and regulatory breaches, and conduct events or reputational damage								

The main elements underpinning Santander's risk appetite and defining our business model are:

- a medium-low, predictable target risk profile, customer focus, internationally diversified operations and a significant market share;
- stable, recurrent earnings and shareholder remuneration, sustained by a sound base of capital, liquidity and sources of funding;
- autonomous subsidiaries that are self-sufficient in terms of capital and liquidity to safeguard their risk profiles against compromising the Group's profile;
- an independent risk function and a senior management actively engaged in supporting a robust control environment and risk culture; and
- a conduct model that protects our customers and our 'Simple, Personal and Fair' culture.

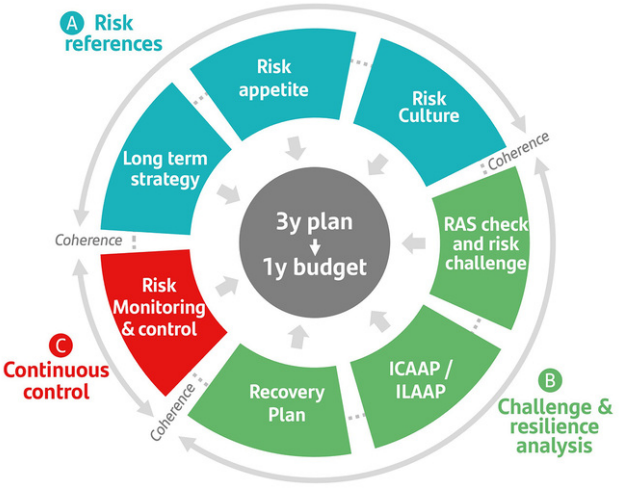
Risk appetite is governed throughout the Group by the following principles:

- **Risk appetite is part of the board's duties**. The board prepares the risk appetite statement (RAS) for the whole Group every year. Through a cascading-down process, each subsidiary's board also sets its own risk appetite.
- **Comprehensiveness and forward-looking approach**. Our appetite includes all material risks to which we are exposed and defines our target risk profile for the current and medium term, with a forward-looking view that considers stress scenarios.
- **Common standards embedded in the day-to-day risk management**. The Group shares the same risk appetite model, which sets common requirements for processes, metrics, governance bodies, controls and standards. This facilitates effective and traceable embedding of risk appetite into more granular management policies and limits across our subsidiaries.



RAF Risk appetite framework.

- **Continuous monitoring and adaptation**. Risk appetite is regularly monitored, reviewed and updated to reflect changes in market conditions, regulatory requirements and supervisory expectations. Compliance with risk appetite limits is monitored on a regular basis through dedicated reporting to senior management and the board and its committees. Breaches or potential breaches are subject to predefined escalation, remediation and follow-up processes, with oversight proportionate to their materiality through senior management and the Group's governing bodies.
- **Alignment with strategy and business plans**. Before approving the three-year strategic plans, annual budget, and capital and liquidity plans, the Group verifies their consistency with the limits set in the Risk Appetite Statement. We promote the alignment of strategic and business plans with our risk appetite by:
  - considering the risk appetite, long-term strategic view and the risk culture when drafting strategic and business plans.
  - challenging business and strategic plans against the risk appetite. Misalignments trigger a review of either the three-year strategic plan (to make sure we stay within RAS limits) or risk appetite limits, with independent governance.
  - continuous monitoring of risk appetite compliance through the three lines of defence model.



Through this framework, Santander establishes clear boundaries for risk-taking, promotes consistency between strategy and risk tolerance, and reinforces the board's oversight of the Group's risk profile. This approach underpins the resilience of our capital and liquidity position and supports the sustainable execution of our business model across the economic cycle.

Risk profile assessment (RPA)

At Grupo Santander we identify, assess and determine the risk profile for all risks arising from our activities. Our risk framework, which we review every year, defines the key risk types based on the main risk identification and assessment exercises.

Risk identification covers all processes to detect internal and external risks and vulnerabilities we face. These processes raise awareness among the responsible functions and form the starting point for managing and controlling those risks.

Risk assessment comprises the processes to determine, both quantitatively and qualitatively, the relevance of the risks identified. It considers both inherent risk, before mitigants and controls, and the level of residual risk.

We systematically assess the Group's risk profile and that of its subsidiaries using a single RPA methodology. This methodology rests on fundamental principles: shared accountability of all functions, efficiency, common methodologies, full coverage, materiality and a focus on corrective and mitigating actions.

Risk profile calculation uses a scoring system with four materiality categories (low, medium-low, medium-high and high). This system helps monitor the risk appetite approved by the board of directors. It also provides a global view of risks at a given point in time, identifies weaknesses in management and possible deviations from the business plan, and supports corrective action. This approach reflects prudent risk management, underpinned by strong capital ratios and sound liquidity levels.

We aim to maintain a stable medium-low risk profile in an environment marked by market volatility, the gradual decline in inflation and geopolitical tensions. Thanks to prudent and forward-looking management, we closed the year with strong profitability indicators, sound asset quality and a solid liquidity risk profile.

Scenario analysis

Scenario analyses enable us to measure the resilience of our balance sheet, financial statements and our capital adequacy under stressful conditions. We use the findings of these analyses to review our risk appetite and draw up actions to mitigate expected losses or, if needed, to reduce capital and liquidity.

Scenario analyses also enable senior management to comprehend the nature and scope of the vulnerabilities to which the Group is exposed in the execution of its business plan.

Our Research department plays a key role in determining scenarios, macroeconomic variables and other factors that can affect our risk profile in our markets.

We conduct a systematic review of our risk exposure under base, adverse and favourable scenarios that predict an impact on solvency and liquidity. These exercises are fundamental to our processes:

- **Regulatory exercises** based on EU and domestic supervisors' guidelines.

- **Business planning** to help set the Group's risk strategy and profile, with:
  - internal capital and liquidity adequacy assessment processes (ICAAP and ILAAP) that measure capital and liquidity in various scenarios;
  - budget and strategic planning when implementing a new risk approval policy, in assessing the risk profile or when monitoring specific portfolios and business lines;
  - our annual recovery plan, which specifies which tools Grupo Santander could use to survive a severe financial crisis. The plan's financial and macroeconomic stress scenarios have various levels of severity, plus idiosyncratic and/or systemic events; and
  - risk appetite, with stressed metrics to determine how much risk we want to expose ourselves to.
- **Recurrent risk management** also uses scenario analyses for:
  - provisions estimates, which involve adjusting the value of credit operations due to existing or prospective risk factors that have not been considered in the initial approval and rating process, both for individual customers and for the portfolio as a whole; and
  - regular credit, market and operational risk stress tests that simulate changes in expected losses to estimate required capital and absorb unexpected losses, as well as establishing appropriate mitigation measures.

For more details on scenario analysis, see sections 3.2 'Market risk management' and 3.6 'Liquidity risk management' and section 'Expected loss estimation' in Note 54 to the consolidated financial statement.

- **Climate change scenario analysis**, for which we have embedded the scenarios defined by the Intergovernmental Panel on Climate Change, which our Research department integrates and expands by adjusting them to more specific variables by country and sector to offer a more complete and tailored view of our portfolios.

  This enables us to boost our forward-looking capabilities to quantify the impact on our customers of a transition to a lower greenhouse gas emissions economic model, as well as potential physical risk events.

To make stress testing more consistent and robust:

- Our three lines of defence and senior management are involved in scenario analysis governance and oversight.
- The models we develop estimate future metric values (e.g. credit losses).
- Our backtesting and reverse stress exercises challenge model outcomes regularly.
- Our teams contribute expert opinions and a vast understanding of portfolios.
- And we thoroughly monitor models, scenarios, assumptions, results and mitigating management measures.

Amid an environment characterized by a high degree of macroeconomic and geopolitical uncertainty, driven by international tensions and the US government's trade policy, as well as a disinflation trend that is starting to translate into a gradual normalization of monetary policy by central banks, the Group has strengthened its use of scenario analysis as a key tool to identify, assess and manage risks. This environment is also shaped by resilient labour markets, early signs of slowdown in certain economies, developments in sectors that are relevant to the Group's business — such as real estate and automotive — and the materialization of climate events with potential financial impact.

Against this backdrop, the Group has strengthened its ability to anticipate and respond by identifying action points early and improving reporting and monitoring processes, in line with the prudence and consistency principles required by the applicable regulatory frameworks. The analysis has incorporated a granular view by geography and sector, with a particular focus on the customer segments most vulnerable to shifts in the macroeconomic environment and the occurrence of specific events, to support decision-making and preserve the Group's solvency.

During 2025, the Group intensified processes to identify, escalate and monitor risks linked to a volatile environment, while maintaining ongoing communication on the impacts arising from ongoing armed conflicts, trade tensions, supply chain disruptions, potential corrections in financial market valuations, exchange rate movements and the financial effects associated with adverse climate events. The Group also continued to embed in its management framework those emerging risks that could, directly or indirectly, affect its risk profile, consistent with regulatory requirements and supervisory best practices.

Risk reporting structure

To provide the governing bodies and senior management with a comprehensive and up-to-date view of the risk profile that supports sound decision-making, we produce regular consolidated reports on current and emerging risks. This is a dynamic, comprehensive report tailored to business needs, which prioritises and presents the most relevant risks in a timely manner.

Our reporting covers the main risk types defined in the corporate framework, together with any other key elements required for their proper assessment. It also provides a consolidated view of the overall risk set, while maintaining the quality and consistency of information in line with the corporate data framework.

The report's structure reflects an appropriate balance between data, analysis and qualitative commentary, and incorporates forward-looking metrics, risk appetite information, limits and emerging risks, among other aspects.

We continue to enhance the report by simplifying and automating processes, and by introducing controls that provide greater flexibility and adaptability to new needs.

In 2025, we continued to report and monitor all the impacts stemming from ongoing armed conflicts; escalated the various risks associated with a volatile macroeconomic and geopolitical environment; and considered emerging risks that could have a direct or indirect impact on the Group.

1.5 Internal control system

Our internal control system (ICS) comprises the risk and control processes that Grupo Santander's board of directors, senior management and all employees carry out within a scheme of individual responsibilities. Its aim is to provide reasonable assurance regarding operational effectiveness, the reliability of financial and non-financial reporting, compliance with internal policies, acting responsibly, and covering every process across the organization (business, risk and support areas).

Our ICS is consistent with the most demanding international standards and follows the guidelines set out by the Committee of Sponsoring Organisations of the Treadway Commission. It is based on these principles:

- **Tone at the top:** The board of directors oversees the integrity of the ICS, while senior management is responsible for its proper implementation. Both act as a channel to raise awareness of the ICS's importance across the organisation.
- **Risk control self-assessment (RCSA):** A process to assess Grupo Santander's ICS risks and controls that enables dynamic and proactive measurement of the likelihood and exposure of each operational risk linked to achieving the organization's objectives, including operational risks arising from the management of financial risks (credit, market, structural, etc.), once the operating effectiveness of the related controls has been assessed for mitigation or to reduce exposure.
- **Oversight:** Ongoing reviews of ICS effectiveness to manage any significant deterioration and monitor mitigation plans to support proper resolution. Oversight of ICS implementation helps maintain its effectiveness and supports continuous improvement.
- **Governance and reporting:** This supports the definition of accurate and timely information and communication processes for decision-making and sets out appropriate governance to regularly assess the status and development of the ICS.

To maintain an appropriate control environment, the first line of defence:

- identifies and documents risks and controls based on knowledge and understanding of its businesses and processes, assessing the risks inherent to its activities to achieve established objectives and the controls needed to mitigate them;
- maintains a dynamic ICS to reflect, at all times, the Group's reality, the risks affecting it, and the controls that mitigate them; and
- assesses risk exposure and the effectiveness of internal controls, defining and monitoring response strategies for undesired exposures and control deficiencies.

The Heracles internal control IT system supports all the above to drive a comprehensive view.

The second line of defence, through the internal control assurance function, is responsible for:

- setting criteria and methodologies and overseeing their implementation across the Group. This helps safeguard the suitability and integrity of internal controls that the functions establish to provide reasonable assurance over the achievement of defined objectives;
- overseeing and challenging ICS effectiveness, monitoring key deficiencies and undesired risk exposures, and executing mitigation plans properly; and
- reporting regularly an integrated view of the internal control environment to senior management and the governing bodies to enhance the organization's risk management.

The main RCSA conclusions and deficiencies are set out in a report presented to the CRO, the Chief Accounting Officer (CAO) and the governing bodies. The results formalize the identified deficiencies as well as their status and the plans designed for proper resolution. This report supports the Chief Executive Officer (CEO), the Chief Financial Officer (CFO) and the CAO in certifying ICS effectiveness in line with the requirements of the Sarbanes-Oxley Act.

2. Credit risk

2.1 Introduction

Credit risk is the risk of loss arising from the default on obligations or the deterioration in the credit quality of a customer or counterparty to which Grupo Santander has granted financing or with which it has entered into a contractual obligation. It is our most material risk, both in terms of exposure and capital consumption, and includes counterparty risk, country risk and sovereign risk.

2.2 Credit risk management

Grupo Santander's processes for identifying, analysing, deciding on and controlling credit risk rely on a comprehensive view of the credit risk cycle, which covers the transaction, the customer and the portfolio.

Identifying credit risk allows active management and effective control of portfolios. We identify and classify external and internal risks in each business in order to take corrective and risk-mitigating measures when needed, through the following processes:

1 Planning

Strategic commercial plans are a risk management and control tool the business and risk areas prepare for different credit portfolios. It helps us determine business targets, risk policies, infrastructure, to have a holistic view of the portfolios, and draw up actions plans aligned with our risk appetite statement.

2 Risk assessment and credit rating

Risk approval depends on the applicant's ability to repay the debt, for which we review their regular sources of income, including funds and net cash flows from any businesses. The credit quality assessment models are based on the credit rating engines for each of our segments.

3 Scenario analysis

Scenario analyses determine potential risks in credit portfolios; give us a better understanding of their performance under various macroeconomic and environmental conditions; and enable us to bring forward and employ management strategies to avoid future deviations from set targets.

4 Monitoring

Our holistic, regular monitoring of every customer enables us to track credit quality, spot risk trends early and check business performance against original plans, which are key to credit risk management.

5 Mitigation techniques

Our risk approval criteria rest on assessing borrowers' ability to meet their financial obligations. To do so, we analyse the funds or net cash flows generated by their business or their regular income, regardless of any guarantees or collateral we may require. We treat these as a secondary recovery route if the primary one fails, and their purpose is to calibrate our level of exposure and mitigate loss in the event of default.

6 Collections and recoveries

Global strategy for activities related to the debt recovery management process, under risk policies and independent oversight. This approach combines customer segmentation and digital tools to optimise collections, with a customer-centric focus throughout the credit cycle and geared towards maximising recoveries.

For more details on the credit cycle, see section 'Credit risk management' in Note 54 to the consolidated financial statement.

2.3 Key metrics[1]

In 2025, developments in the credit market were shaped by successive interest rate cuts in mature markets and some emerging economies and the start of a new cycle of credit growth. Against this backdrop, demand gradually recovered, with positive growth in the main geographies where we operate.

In retail banking, mortgage lending balances began to recover, supported by more favourable financial conditions and lower early repayments. Consumer lending maintained a positive performance during the year, as it is less sensitive to interest rate trends and benefitted from a resilient labour market. In the eurozone, the ECB's neutral-to-expansionary monetary policy stance has already fed through to mortgage and consumer portfolios. In the United Kingdom, rate cuts, stable house prices and support measures from the Bank of England drove greater credit activity.

In corporate lending, credit volumes grew in the first part of the year, in line with the expansion phase of the investment cycle. However, developments in US trade policy and geopolitical tensions, together with some weaker activity and external demand indicators, led to some slowdown in the second half of the year, especially in Latin America, where, after a strong first half, signs of moderation started to appear. In the United States, weaker labour market data and greater caution on the economic outlook prompted the Federal Reserve to cut interest rates. This helped sustain credit activity, although in a more prudent lending environment focused on lower-risk segments.

Our credit risk remained well diversified, with an appropriate balance between mature and emerging markets: Spain (26%), the United Kingdom (21%), the United States (12%) and Brazil (9%).

The distribution of credit risk by global businesses (including gross customer loans, guarantees and documentary credits) is shown below:

Main credit risk performance metrics from our activity with customers
Dec. 25 data

	Credit risk with customers[A] (EUR million)			Impaired loans (EUR million)			NPL ratio (%)		
	2025	2024	2023	2025	2024	2023	2025	2024	2023

2024 and 2023 data include the annual adjustment of the perimeter of the Global Customer Relationship Model between global businesses. Dos not affect Total Group. Total Group includes Corporate Centre.
A. Includes gross loans and advances to customers, guarantees and documentary credits
B. Loan-loss provisions net of post write-off recoveries (EUR 1,795 million in 2025).
C. Cost of risk calculated as the ratio of loan-loss provisions over the past 12 months / average customer loans and advances to customers over the last 12 months.

For more details on secondary segments, see section 2. 'Main aggregates and variations' in Note 54 to the consolidated financial statement.

Given that until the Poland disposal was completed in January 2026, the management of Santander Polska remained unchanged, all management metrics included in this report have been calculated including Poland, i.e. maintaining the same perimeter that existed at the time of the announcement of the Poland disposal. This reporting approach is consistent with the information used internally in management reporting, as well as with other public Group disclosures.

[1] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.

Credit quality during 2025 was as follows:

The **NPL ratio** stood at 2.91% (-14 bps vs. year-end 2024), mainly due to the Group's efforts to reduce its non-performing portfolio, which fell 2.5% to EUR 34,393 million. Declines in Europe led the improvement, supported by the strong performance of the portfolios and the execution of the NPL reduction plan. Gross customer exposure (total risk) grew 2.1% in the year to EUR 1,182 billion, driven mainly by the positive performance of the CIB business.

Under IFRS 9 requirements, Group **net loan-loss provisions** (LLPs) in December 2025 totalled EUR 12,411 million, a slight increase from the previous year (0.6%). Nevertheless, the higher LLPs in Corporate & Investment Banking (CIB) and Payments (mainly in Brazil, where measures have already been taken to contain this trend, and in Argentina, driven by the deterioration in the economy) were offset by: (i) the better performance in Retail & Commercial, supported by lower provisions in Spain, lower impairments in Brazil's consumer portfolio, and in Poland's Swiss-franc mortgage portfolio; (ii) Digital Consumer Bank, where, despite a less favourable performance in Germany, the US and Brazil delivered better performance during the year.

The **cost of risk** stood at 1.15%, flat regarding 2024 and in line with our target for the year, supported by the positive performance of net loan-loss provisions and total risk.

The **total NPL coverage ratio** decreased slightly to 66%, with impairment allowances of EUR 22,869 million. Coverage remained at comfortable levels, considering that more than 65% of the Group's portfolio is secured by collateral.

Our credit risk management performance within the five global businesses at December 2025was as follows:

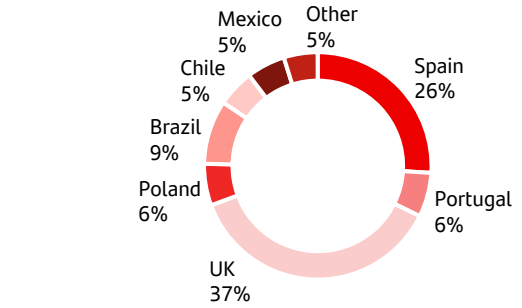
For more details on segments, see section '5.1 Description of segments during 2025' in the 'Economic and financial review' chapter.

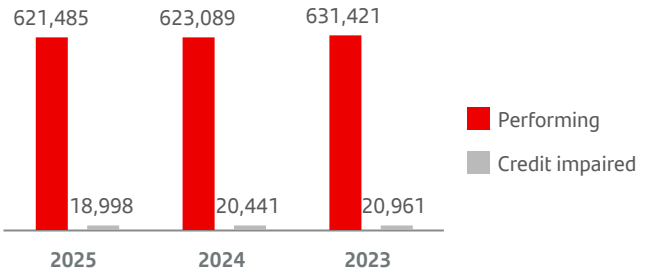
Retail & Commercial Banking

The retail portfolio mainly comprises high credit quality mortgage loans, around 90% of which have a loan-to-value (relationship between the loan amount and the appraised value of the collateral) below 80%, and a corporate portfolio where roughly 50% has real estate or other tangible collateral.

Portfolio distribution by geography and by performing loans and credit impaired

Dec. 25 data





At December 2025, gross customer credit exposure in Retail was distributed among mortgages (51%), corporates and institutions (24%), SMEs (14%) and other individuals (11%).

The **NPL ratio** fell by 21 bps during the year to 2.97%, supported by the reduction in impaired loans, driven by declines in Europe. Gross customer credit exposure (total risk) remained practically stable during the year.

The **cost of risk** improved by 5 bps versus 2024, to 0.88%, reflecting the good performance of LLPs, which decreased by 7% year-on-year, mainly drive by: (i) Spain, where the mortgage portfolio performed well, supported by lower interest rates and a resilient labour market; (ii) Poland, lower provisions for the Swiss franc mortgage portfolio; and (iii) Brazil, supported by currency depreciation and reflecting prudent risk management and a shift in the portfolio mix.

The **total NPL coverage ratio** rose slightly to 61%. Given that Retail includes the mortgage portfolios in Spain and the United Kingdom, which are backed by high-quality collateral, we consider coverage levels appropriate for the portfolio's risk profile.

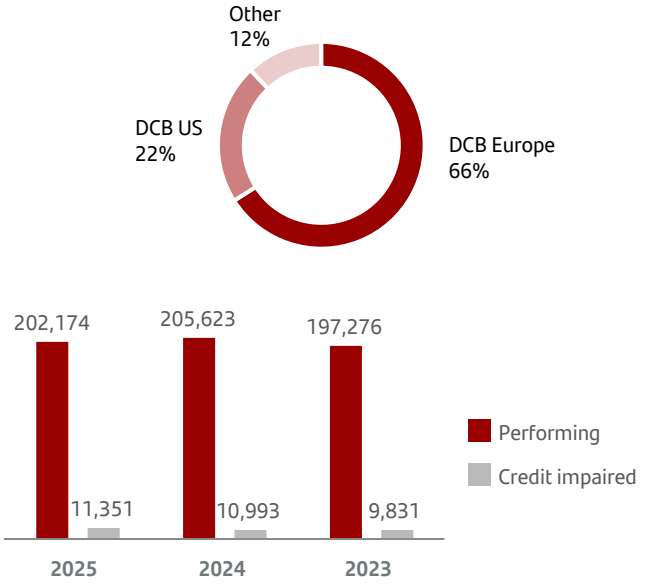
Digital Consumer Bank

This business comprises all consumer finance activity in Europe and the Americas, including Openbank, Open Digital Services and Santander Bank N.A Consumer. The portfolio mainly consists of vehicle finance loans, which account for close to 80% of the portfolio and are originated through strategic partnerships with car manufacturers, as well as leasing and personal loans.

With the arrival of Openbank, the US retail business continues to undergo a major transformation to become a digital bank with branches.

Portfolio distribution by geography and by performing loans and credit impaired

Dec. 25 data



The **NPL ratio** at year-end 2025 stood at 5.32%, 24 bps higher than in the same period in 2024, due to: (i) higher impaired loans, mainly in Germany (due to the macroeconomic environment and the credit quality deterioration of the corporates portfolio), Brazil and Argentina; (ii) decrease in gross customer exposure (total risk), linked to lower auto lending and to asset rotation initiatives in the US.

Net loan-loss provisions declined 2.3% year-on-year, mainly driven by better performance in the US and Brazil, with both benefiting from FX movements.

The **cost of risk** fell by 7 bps versus December 2024, to 2.10%, mainly due to a decline in provisions in the US (-13%), driven by resilient consumer behaviour, used car prices stable at high levels, capital relief measures.

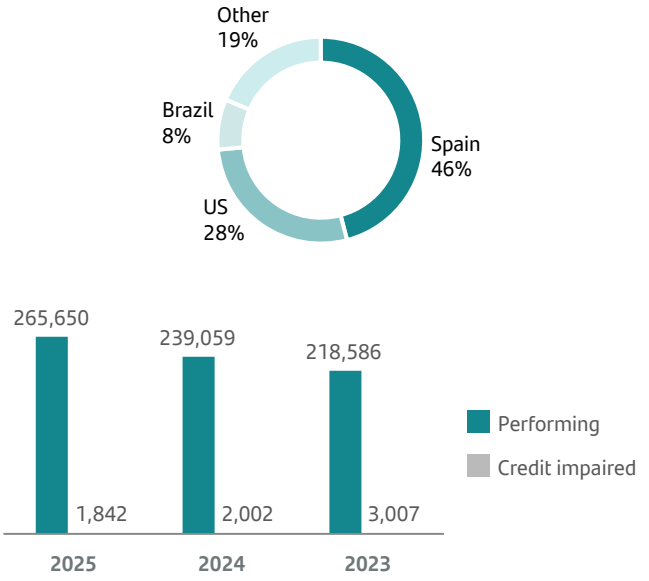
The **total NPL coverage ratio** at year-end 2025 stood at 71%, which we consider comfortable, given the positive impact of vehicle price trends and the higher share of secured loans in the portfolio, mainly in the US.

Corporate & Investment Banking

Corporate & Investment Banking is a wholesale business in which over 83% of our customers have a credit rating higher than 'investment grade'. It's a business with a strong component of advisory services and high value added solutions.

Portfolio distribution by geography and by performing loans and credit impaired

Dec. 25 data



During the year, CIB showed a strong ability to deliver profitable growth and maintain solid credit quality in a complex environment, while keeping its strategic focus on geographic and client diversification and on offering higher value-added products. By business line, growth was recorded across all lines (Global Markets, Global Banking and Global Transaction Banking).

The **NPL ratio** improved by 14 bps in the year, to 0.69%, after a reduction in impaired loans of EUR c. -160 million YoY across a range of clients and geographies, mainly in Europe and South America. In addition, gross customer credit exposure (total risk) increased by 11% over the year, mainly in the US and Spain, and to a lesser extent Mexico.

Net loan-loss provisions rose 70% compared with the same period of the previous year, mainly reflecting the performance of the business in Brazil in a more challenging macroeconomic environment, higher coverage for already impaired customers, and portfolio growth in the US.

The **cost of risk** increased by 5 bps versus December 2024 to 0.15% as the portfolio growth did not offset the increase in provisions.

The **total NPL coverage ratio** reached 48%, up 9 pp versus December 2024, driven by higher provisions in a more challenging economic and geopolitical environment.

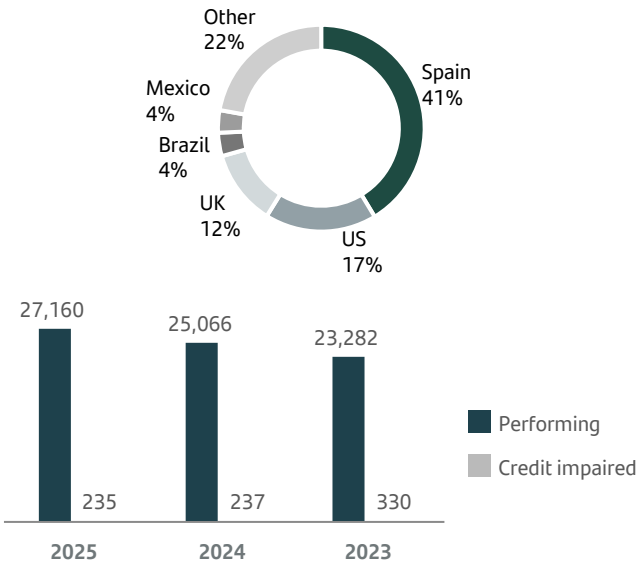
In 2025, CIB continued to strengthen the control environment amid portfolio growth and heightened regulatory and supervisory scrutiny, leveraging new technologies. Key initiatives included reinforcing the risk infrastructure —including organisation and governance, with a particular focus on the United States— upgrading credit risk systems and models, defining more robust frameworks in specific areas, and strengthening preventive risk management capabilities.

Wealth Management & Insurance

Includes the corporate unit of Private Banking and International Private Banking in Miami and Switzerland (Santander Private Banking), the asset management business (Santander Asset Management), the insurance business (Santander Insurance) and the unit that manages the investment platforms and stakes that complement Wealth's traditional business (the new vertical, Portfolio Investments).

Portfolio distribution by geography and by performing loans and credit impaired

Dec. 25 data



The **NPL ratio** closed at 0.86%, down 8 bps in the year, supported by an increase in gross customer exposure during the period (+8.3%), with a particular focus on the Middle East portfolio and the roll-out of secured lending in all core geographies, while impaired loans remained stable.

Net loan-loss provisions in 2025 totalled EUR 22 million, compared with EUR 44 million at year-end 2024.

The **cost of risk** rose by 10 bps in the year to 0.09%, driven by provisions and by the portfolio growth, with a focus on collateral-backed loans.

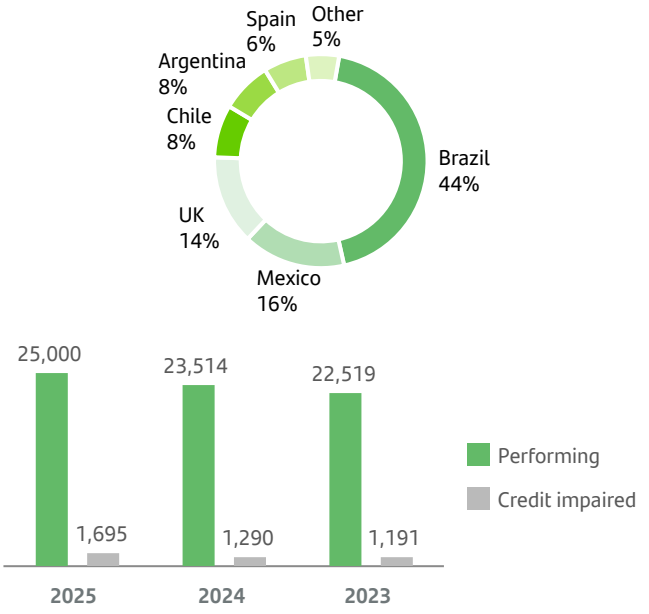
The **total NPL coverage ratio** remained stable over the year and stood at 71%, which remains at a comfortable level given the high share of the collateral-backed loan portfolio.

Payments

Payments brings together the Group's digital payment services. It offers global technology solutions for our banks and our customers in the open market. The portfolio groups our exposure to payment and transfer processor operations (PagoNxt) and the Cards businesses, which are typified by rapid turnover and profitability that is appropriate to their level of risk.

Portfolio distribution by geography and by performing loans and credit impaired

Dec. 25 data



At year-end 2025 the **NPL ratio** stood at 6.35%, +115 bps versus 2024, due to higher impaired loans, mainly in Brazil and Argentina. Meanwhile, gross customer exposure (total risk) grew by 8% compared to the same period of 2024, supported by strong commercial momentum across all countries, with a clear strategic focus on growth, service quality and technological transformation, to provide payments and cards customers with an improved experience.

Net loan-loss provisions reached EUR 2,027 million, concentrated mainly in Cards. In 2025, provisions increased 18% versus the same period of the prior year, mainly in South America.

The **cost of risk** rose by 55 bps over the year, to 7.91%, as higher provisions were not fully offset by portfolio growth. The early action measures aim to improve the quality and profitability of new production, supporting a risk profile that remains balanced against the portfolio's economic return.

The **total NPL coverage ratio** of impaired assets declined to 127%.

Reconciliation of key figures

Santander's 2025 consolidated financial statements disclose loans and advances to customers before and after loan-loss reserves. Credit risk with customers also includes off-balance sheet risk or contingent liabilities. This table shows the relationship between those concepts:

		Gross credit risk with customers[A] 1,181,945				
Gross credit risk with customers 1,181,945		Gross loans and advances to customers & others 1,098,453				Contingent liabilities 83,492
Loans and advances to customers (Gross)	=	Financial assets measured at amortized cost (Gross)[B]	+	Financial assets held for trading[B]	+	Financial assets at fair value (Gross)[B]
1,098,453		1,045,473		32,766		20,214
Loan-loss reserves	=	Loan-loss reserves		+		Loan-loss reserves
22,138		(22,021)				(117)
Net loans and advances to customers	=	Net financial assets measured at amortized cost	+	Financial assets held for trading	+	Net financial assets at fair value

A. Includes gross loans and advances to customers, guarantees and documentary credits.
B. Before loan-loss allowances.

Financial asset impairment

IFRS 9 introduced a substantial change in the approach to calculating impairment provisions for credit risk exposures, moving from an incurred loss model to an expected loss model. Under this new approach, provisions are recognised from the moment a transaction is originated, since credit risk exists from that moment and not only when defaults occur.

This change required a review of the models and methodologies used to estimate expected loss for customers and portfolios, incorporating the expected evolution of the economy and the residual life of different transactions.

The methodology to quantify expected credit losses – and therefore impairment provisions – is based on an unbiased, probability-weighted estimate of up to five future macroeconomic scenarios that could affect the ability to collect contractual cash flows. These scenarios take into account the time value of money, relevant information about past events, current conditions and projections of significant macroeconomic factors, such as GDP, house prices, unemployment rate and interest rates, among others.

The parameters used by the Group to calculate impairment provisions (mainly EAD[2], PD[3], LGD[4] and discount rate) build on our internal model infrastructure and the experience gained in regulatory and management environments. However, rather than simply adapting existing models, these parameters are specifically designed, updated and validated to comply with IFRS 9 requirements.

For more details on financial asset impairment and the calculation of provisions under IFRS 9, see section '2. Main aggregates and variations' in Note 54 to the consolidated financial statement.

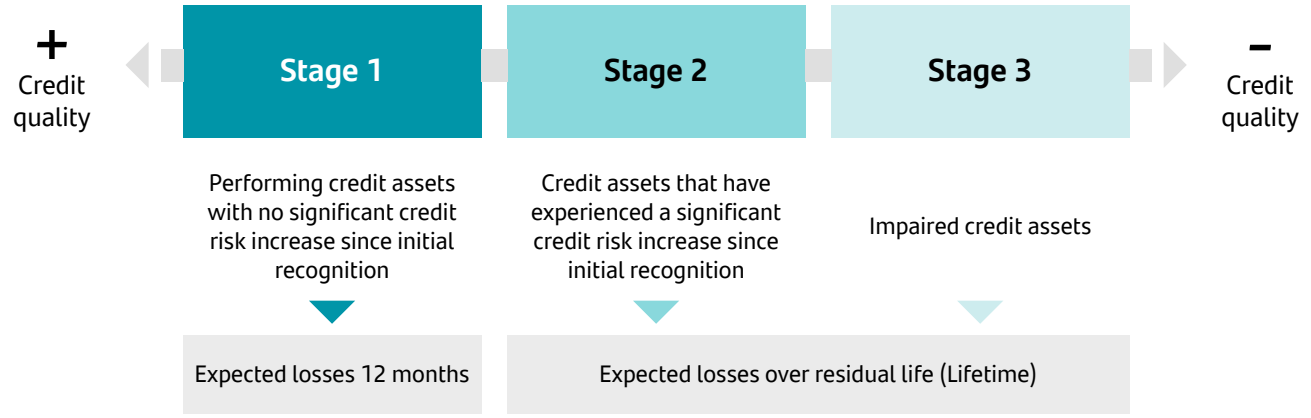
IFRS 9 classifies transactions based on how credit risk has evolved since origination to the analysis date, so we can determine both their accounting treatment and pricing. Transactions with different probabilities of default must carry different interest rates or margins that cover their expected loss.

[2] Exposure at Default.
[3] Probability of Default.
[4] Loss Given Default.

If a transaction has undergone a significant increase in credit risk since origination, the interest rate initially applied no longer covers its potential risk, so it requires a higher level of provisions. Under the standard, transactions fall into three groups or stages:

- **Stage 1** includes assets whose current credit risk has not increased relative to origination or initial recognition. Provisions are calculated to cover expected credit losses from possible defaults over the next 12 months.
- **Stage 2** includes assets that have not yet incurred credit losses but have shown a significant increase in credit risk since origination or initial recognition. Impairment provisions must cover potential loss over the lifetime of the exposure, during which losses may materialise.
- **Stage 3** includes assets where there is evidence of credit deterioration that will eventually materialise as credit losses. Provisions must cover potential loss over the lifetime of the exposure.

IFRS 9: Classification of exposures by credit quality and expected credit loss horizons



In addition, impairment provisions include expected credit losses over the expected remaining lifetime of those financial instruments originated or purchased credit-impaired (POCI).

The following table shows credit risk exposure by stage and geography:

Exposure by stage and geography[A, B]

EUR million. Dec. 25 data

	Stage 1	Stage 2	Stage 3	Total
Spain	243,864	15,415	5,915	265,194

A. Includes off-balance.

Forbearance

Our forbearance policy incorporates the regulatory requirements set out in the EBA Guidelines on the management of non-performing exposures and forbearance. The policy serves as a reference for implementation in our subsidiaries and reflects applicable supervisory expectations.

It sets the criteria to identify, classify and monitor these transactions, with the aim of applying maximum diligence in their granting and control. Forbearance solutions must aim to recover the amounts due, aligning payment obligations with the customer's current situation.

Forborne transactions must remain in the appropriate classification for a suitable period in order to capture the associated risk and confirm a reasonable recovery of repayment capacity. Under no circumstances should forbearance be used to delay the immediate recognition of losses or to mask non-payment risk.

In December 2025, the stock of forborne exposures continued to decline (by 7% in the year), to EUR 25,235 million, supported by good repayment performance in our main geographies, which offset higher activity in other regions. In credit quality terms, 53% of the portfolio is classified as non-performing, with a coverage ratio of 41%.

2.4 Other credit risk details[5]

Credit risk from financial markets activities

This section includes the credit risk generated by treasury activity with customers, particularly credit institutions, both through money market financing products and through products that carry counterparty risk, with the aim of meeting customer needs and those of the Group in its own balance sheet management.

Counterparty credit risk is the risk that may arise from a total or partial failure to meet the financial obligations contracted with the Bank, because a customer may default before the final settlement of cash flows. This risk usually increases the longer the period between the trade date and the settlement date. It is a bilateral credit risk, as it may affect both parties to the transaction, and its magnitude is uncertain, since it depends on the behaviour of market factors, which are inherently volatile.

Within counterparty credit risk exposure, an additional risk may arise, known as wrong-way risk. This occurs when exposure to a portfolio or counterparty increases at the same time as its credit quality deteriorates. In other words, wrong-way risk exists when default risk rises and, as a result, exposure to that counterparty also increases. Santander uses specific models to measure and control this risk.

Settlement risk arises when the settlement of a transaction involves a bilateral exchange of cash flows or assets between two counterparties. For example, when one counterparty buys US dollars in exchange for euros, settlement involves one party delivering euros and receiving an equivalent amount of dollars from the other. Settlement risk is the risk that either party may fail to meet its settlement obligations. To measure this risk, we have also developed a global infrastructure and specific models.

Effective management and control of counterparty risk requires an infrastructure that can measure current and potential exposure, at different aggregation and granularity levels, in an agile and dynamic way, and that can produce reports with sufficient detail to support understanding of exposures and decision-making.

We use two methodologies to measure exposure: mark-to-market (MtM, or replacement value in derivatives) plus potential future exposure (add-on), and Monte Carlo simulation, applied in certain countries and products. We also calculate capital at risk or unexpected loss, that is, the loss that represents economic capital net of collateral and recoveries, after deducting expected loss.

After markets close, we recalculate exposures by updating transactions to their new time horizon, refreshing potential future exposure and applying mitigation techniques (netting, collateral, among others). We then monitor exposures daily against the limits approved by senior management, within the risk appetite. We control this risk through a real-time integrated system that shows, at any time, the available exposure limit with any counterparty, in any product, tenor or subsidiary.

At Grupo Santander we carry out monthly stress tests on derivatives and securities financing transaction portfolios. These exercises form an integral part of the counterparty credit risk management process, help assess the resilience of exposures under adverse scenarios and support proper identification, measurement and control of the associated risks.

Counterparty risk exposures: over-the-counter (OTC) transactions and organized markets (OM)

At December 2025, total exposure on a management basis, in terms of positive market value after applying netting and collateral agreements for counterparty risk activities, stood at EUR 16,164 million (net credit equivalent risk of EUR 45,558 million). Despite our operating environment, exposure fell 13% year on year, mainly driven by lower risk with corporate clients and higher portfolio volumes with clearing houses and financial institutions.

Counterparty risk: exposure in terms of market value and credit risk equivalent, including the mitigation effect[A]

EUR million. Dec. 25 data

	2025	2024	2023
Market value with netting effect and collateral[B]	16,164	15,855	13,428
Net CRE[C]	45,558	52,604	48,372

A. Figures under internal risk management criteria. Listed derivatives have a market value of zero. No collateral is received for these types of transactions.
B. Includes the mitigation of netting agreements and deducting the collateral received.
C. CRE (credit risk equivalent): net value of replacement plus the maximum potential value, less collateral received.

[5] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.

The following table shows the breakdown, by notional amounts, of the different products that generate counterparty credit risk, mainly interest rate and foreign exchange (FX) hedging instruments:

Counterparty risk by nominal[A]

EUR million. Dec. 25 data

	2025	2024	2023
	Nominal	Nominal	Nominal
Credit derivatives[B]	74,592	45,628	24,528
Equity derivatives	40,599	28,431	20,326
Fixed income derivatives	11,414	17,567	4,793

Securities lending	**99%**	**1%**	**—%**	**—%**
Total counterparty risk	**50%**	**31%**	**11%**	**7%**

A. Figures under internal risk management criteria.
B. Credit derivatives acquired, including coverage of loans.
C. Refers to transactions involving listed derivatives (proprietary portfolio). Listed derivatives have a market value of zero. No collateral is received for these types of transactions.

Despite a decline in the credit quality of some counterparties, counterparty credit risk remains concentrated in high-quality names (90% of exposure is to counterparties rated A or above).

In notional terms, 97% of transactions with counterparty credit risk correspond to CIB clients, managed under its risk model.

The category commonly referred to in the industry as non-bank financial institutions (NBFIs) covers a broad range of entities, including asset managers, hedge funds, pension funds, insurance companies, sovereign wealth funds, broker-dealers and other investment or funding vehicles that operate outside the traditional banking sector. Within Grupo Santander's portfolio, this does not represent a material client segment. In addition, counterparty credit risk exposures to these entities account for only 4% of total notional.

Counterparty risk: Notional values by customer rating[A]

Dec. 25 data

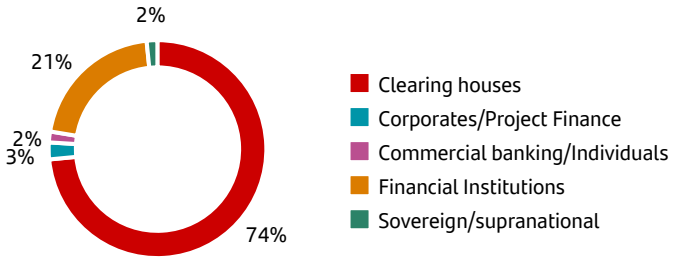
Rating	%
AAA	0.9%
AA	1.1%
A	87.7%
BBB	9.1%
BB	1.1%
B	0.1%
Other	0.01%

A. Ratings based on internally defined equivalences between internal ratings and credit agency ratings.

Transactions with clearing houses and financial institutions are carried out under netting and collateral agreements. We continue to promote coverage of the remaining activity under similar arrangements. As a general rule, the collateral agreements signed by Santander are bilateral, with a few exceptions, mainly with multilateral institutions and securitization funds, where they are unilateral in favour of the client.

Counterparty risk: Notional values by customer segment

Dec. 25 data



Collateral helps reduce counterparty risk and consists of liquid instruments with economic value that one counterparty posts or transfers to another to mitigate the credit risk arising from cross-risk derivative portfolios.

We periodically revalue transactions subject to collateral agreements (normally on a daily basis), applying the contractual parameters to quantify the amount of collateral (usually cash or securities) to be paid or received from the counterparty.

In a highly volatile environment, the processes we have in place – and their frequency – have proved effective for sound collateral management across the Group. Collateral received under the various types of agreements signed by the Group (Credit Support Annex – CSA, Overseas Securities Lending Agreement – OSLA, International Securities Market Association – ISMA, Global Master Repurchase Agreement – GMRA, etc.) is mainly cash (48%). The remaining collateral is subject to strict quality policies regarding issuer type and rating, debt seniority and the haircuts applied.

Given the risk associated with the credit exposure taken on with each counterparty, we incorporate an adjustment to the valuation of over-the-counter (OTC) derivatives when we calculate trading portfolio results.

The credit valuation adjustment (CVA) is a valuation adjustment applied to OTC derivatives to reflect the counterparty's credit risk over the life of the transactions. It represents the discount to the derivative's value that a buyer would require after taking into account the possibility of counterparty default. To calculate this metric we consider, among others, expected exposure, probability of default, loss given default and the discount factor curve.

We also apply a debt valuation adjustment (DVA), a similar adjustment to CVA that reflects the credit risk our counterparties assume on OTC derivatives when they trade with Santander. We calculate both CVA and DVA over the entire potential exposure period.

As at end-December 2025, CVA adjustments totalled EUR 224 million, down 17.6% versus 31 December 2024, while DVA adjustments totalled EUR 285 million, a 10.1% decrease over the same period. These declines mainly reflect credit market dynamics, with lower spread levels compared to December 2024, and, to a lesser extent, changes in the composition of certain derivatives portfolios. In addition, the reduction in CVA reflects developments in the calculation models applied to certain customers.

Counterparty risk, organized markets and clearing houses

The Group's policies seek, where possible, to anticipate the application of regulatory measures governing OTC derivatives, repos and securities lending, whether cleared through a central counterparty or remaining bilateral. With the standardisation of OTC activity and the increased use of internal electronic execution systems, new trades are largely cleared and settled through central counterparties in line with applicable regulation.

In addition, activity not cleared through a central counterparty is actively managed with the aim of optimising volumes, taking into account the margin and capital requirements imposed by regulation.

Although counterparty risk management does not contemplate credit risk for transactions executed on organised markets, we calculate regulatory credit exposure in accordance with Basel principles applicable to capital calculation.

The following table shows the share of centrally cleared activity within total counterparty risk as of December 2025:

Counterparty risk: Notional values by settlement channel and product[A]

Nominal in EUR million. Dec. 25 data

	Bilateral		CCP[B]		Organized markets[C]		Total
	Nominal	%	Nominal	%	Nominal	%

Credit derivatives

We use credit derivatives to hedge transactions, to support client business in financial markets and as part of our trading activity. The volume of this activity is small in notional terms (0.7% of counterparty risk notional) and is subject to a strong control environment and robust internal procedures to minimise operational risk.

Concentration risk

Concentration risk control is key to our management. We continuously monitor credit risk concentration by region and country, economic sector, customer type and other criteria.

The board sets concentration limits according to risk appetite. Accordingly, the executive risk committee develops risk policies and reviews the appropriate exposure levels so we can effectively manage credit risk concentration.

Because Santander is subject to the Capital Requirements Regulation (CRR) stipulations on large risks, exposure with a customer or group of associated customers will be considered 'large exposure' if its value is equal to, or greater than, 10% of eligible capital.

No large exposure should exceed 25% of the entity's eligible capital, including the credit risk reduction effect set out in the regulation.

The use of risk mitigation techniques resulted in no groups triggering those thresholds as at the end of December. 5.3% of total credit risk (including loans to customers and off-balance-sheet risk) is with the 20 'large exposure' groups, according to regulation on credit exposure. While 8.4% of total credit risk is with the 40 'large exposure' groups.

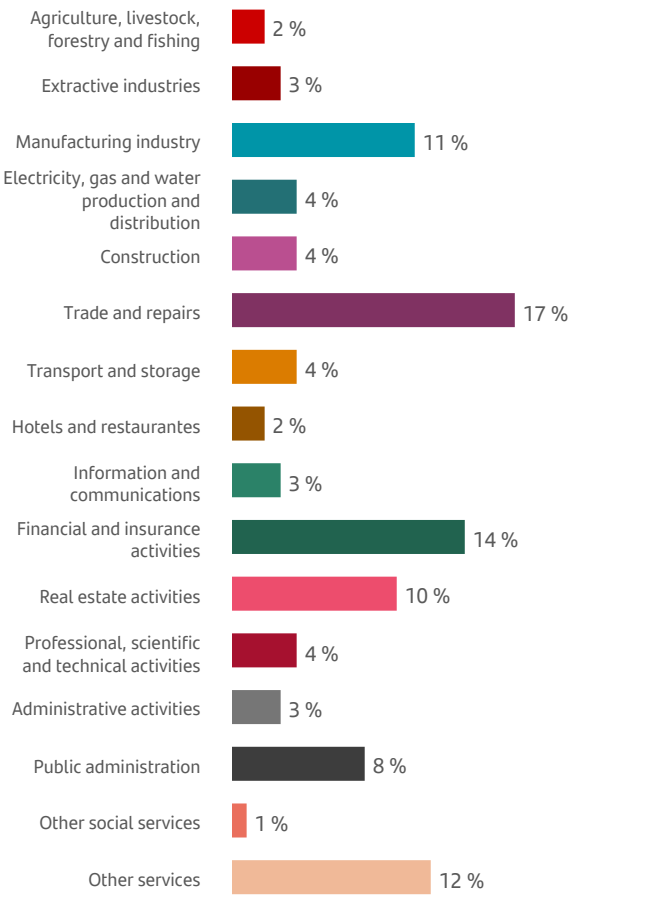
Our Risk division works closely with the Finance division on actively managing credit portfolios with credit derivatives, securitizations and other techniques to reduce exposure concentration and optimize risk-reward.

As indicated in the key metrics section of this chapter, our credit risk is diversified among our core markets (Spain 26%, the UK 21%, the US 12%, Brazil 9%, etc.). Grupo Santander is enhancing our markets with global businesses that will help boost local performance to add value.

In terms of sector diversification, 58% of our credit risk is with individuals, who are inherently highly diverse. It is also well distributed, with no significant concentration in a particular industry.

The chart below shows credit risk by industry as at December 2025:

Diversification by economic sector[A]



A. Includes total risk (gross) on balance for all clients with economic activity but excludes individuals and reverse repos.

Sectors identification and management

Grupo Santander conducts a regular review of exposure to customers operating in sectors that could be more affected by macroeconomic conditions (energy consumption, commodity prices, and key macroeconomic variables). This monitoring is complemented by the use of internal tools that allow projecting the behaviour and evolution of clients in each sector under different macroeconomic scenarios. It considers:

- Market information: Industries' stock market performance.
- Analysts' EBITDA[6] forecasts for the coming years.
- Internal information: Changes in credit exposure, defaults (in different timelines) and stagings.
- Our industry experts' opinion, based on specific details about our exposures and our relationships with customers.

[6] Earnings before interest, taxes, depreciation and amortisation.

In addition, we continued to strengthen our ability to analyse potential losses at the highest possible level of granularity by enhancing the methodology and sector projection tools, based on the resilience of each company's financial statements under different macroeconomic scenarios.

Country risk

Country risk is a component of credit risk that arises from transactions with customers residing in a particular country due to circumstances other than ordinary business risks. Its main elements are sovereign risk, transfer risk and other risks that may affect international financial activity (including wars, natural disasters and balance of payments crises, among others). To cover potential losses arising from these types of events, we integrate country risk into our models and provisioning estimation processes in accordance with applicable regulation.

We assume country risk very selectively in transactions that enhance our global relations with customers. And we follow highly cautious standards to manage it.

Sovereign risk and risk with government agencies

Sovereign risk arises from central bank transactions (including regulatory cash reserves), government bonds (public debt) and transactions with non-commercial government institutions funded exclusively by a state's budget revenue.

Our standard for sovereign risk differs somewhat from the EBA's standard for regular stress testing. In particular, the EBA does not consider deposits with central banks, exposures with insurance companies or indirect exposures from guarantees and other financial instruments. However, its standard does generally include public administrations (including regional and local authorities), not only those of central governments.

Management and control of the risk associated with sovereign risk transactions are carried out on an ongoing basis based on available information, such as reports by rating agencies and international organizations. We monitor each country where we have cross-border[7] and sovereign risk. We analyse events that could affect the country's political or institutional stability and assign its government or central bank a credit rating. This helps us set limits for transactions with sovereign risk.

In recent years, total sovereign risk exposure has remained in line with regulatory requirements and the strategy defined for its management. Changes in exposure by country reflect our liquidity management strategy and hedging of interest rate and FX risk. International exposure is diversified across countries with different macroeconomic expectations and therefore different growth, interest rate and exchange rate scenarios.

At the end of December 2025, total sovereign risk exposure was EUR 224,947 million, a 13% increase compared to 2024.

For more details on sovereign risk exposure, see section '4. Other credit risk aspects' in Note 54 to the consolidated financial statement.

At year-end 2025, our exposure to local sovereign risk not in the issuer country's official currency at the end of September 2025 was minor (EUR 4,908 million or 1.2% of total sovereign risk), based on our management criteria. Exposure to non-local sovereign issuers with cross-border risk was also minor[8] (EUR 17,002 million or 4% of total sovereign risk). The sovereign debt we hold in Latin America, which is recorded in local ledgers, is predominantly in local currency and short-term.

Additionally, our investment strategy for sovereign risk considers each country's credit quality to set the maximum exposure limits.

The table below shows exposure ratios by rating[9] at December 2025:

Exposure distribution by rating

	2025	2024	2023
AAA	18%	21%	18%
AA	17%	18%	19%
A	43%	41%	41%
BBB	14%	11%	12%
Lower than BBB	9%	9%	10%

[7] Risks with domestic public or private borrowers in foreign currency and originated outside the country.
[8] Countries that are not considered low risk by Banco de España.
[9] Internal ratings are applied.

3. Market, structural and liquidity risk

3.1 Introduction

This section describes how Grupo Santander managed and controlled market risk in 2025. It covers trading risk, liquidity and structural risks, as well as the main methodologies and metrics we applied.

Activities exposed to market risk include transactions in which we take on risk as a result of potential changes in market factors, such as interest rates, inflation rates, exchange rates, equity prices, credit spreads, commodity prices and volatility; the liquidity risk of our products and markets; and balance sheet liquidity risk. Thus, this includes trading risks and structural risks.

For more details on market factors see section 'Activities subject to market risk and types of market risk', in Note 54 to the consolidated financial statement.

We can partially or fully mitigate all these market risks with derivatives such as options, futures, forwards and swaps.

We consider other, more complex hedging risks, such as correlation risk, market liquidity risk, prepayment risk and the risks associated with insurance activities.

We also take into account balance sheet liquidity risk (for more detail, see 3.6 'Liquidity risk management'), as pension and actuarial risk also depend on market variables (for more details, see 3.8 'Pension and actuarial risk management' at the end of this section).

Grupo Santander promotes compliance with the obligations under the Fundamental Review of the Trading Book (FRTB) of the Basel Committee and its implementation at European level through the Capital Requirements Regulation II and the EBA guidelines on risks within the market risk perimeter.

In 2025 we continued to run these projects to provide our control teams with better tools to manage market risks (including capital consumption):

- Ran several initiatives to improve the calculation of capital requirements for market risk under the Fundamental Review of the Trading Book – Standard Approach (FRTB-SA). Specifically, we:
  - completed the calculation scope for entities and risk factors subject to capital requirements for market risk;
  - made the changes needed to adapt the calculation to CRR 3;
  - strengthened the control environment for metrics, static data and technical processes, with a comprehensive review of the data architecture to shorten calculation times and enable simulations;
  - reinforced the analysis and reporting layer for capital figures under FRTB-SA;
  - drafted the new regulatory reporting required by the EBA; and
  - strengthened the current governance framework for FRTB-SA processes by redefining the roles of certain forums, adapting internal regulations and setting new escalation criteria.
- Strengthened all processes related to the classification of financial instruments within the fair value hierarchy.
- Updated the stress testing programme for trading portfolios in line with regulatory expectations.
- Implemented new methodologies in all units for the calculation of valuation adjustments, using corporate tools and applying consistent criteria.
- Strengthened reporting to senior management on market risk matters, expanding the content and depth of analysis.
- Update of the risk appetite framework for market activities to meet supervisory expectations.
- Enhanced the governance framework for the approval and use of market risk models.

3.2 Market risk management

Market risk monitoring and control recognizes that risk may arise both from internal factors within the unit and from external elements. Thus, we address all potential sources of risk with a coordinated and consistent approach across all our subsidiaries.

We provide Group senior management with regular, comprehensive and accurate information that enables us to assess each subsidiary's risk profile and maintain an overall view of market risk for analysis and control.

Limits management and control system

The market risk function runs daily checks so that market positions remain within approved limits. It also assesses the performance of, and significant changes in, related metrics.

Limit setting follows a dynamic process that aligns with the risk appetite and that we set out each year in the limits plan approved by senior management, which applies to all subsidiaries.

We follow a prudent approach to market risk management, with limits defined for different metrics, including:

- value at risk (VaR) and stressed VaR (sVaR) limits;
- equivalent and/or nominal position limits;
- interest rate sensitivity limits;
- vega limits;
- limits for risk of delivery of short sales (bonds and equities);
- limits to reduce effective losses or protect profits during the year (loss trigger and stop loss);
- credit limits (limits for total exposure and jump-to-default by issuer); and
- origination limits.

These general limits include additional sub-limits to create a sufficiently granular structure so we can control the market risk factors that our trading activity is exposed to. To strengthen this control, we monitor subsidiaries' positions on a daily basis.

We define three levels of limits: global approval and control limits, global approval limits with local control, and local approval and control limits. Each business owner requests them based on business specifics and budget targets, in line with the risk-return relationship. Risk governance bodies approve them in accordance with the established processes.

Subsidiaries must adhere to approved limits. If a limit breach occurs, subsidiary business managers must provide a written explanation with an action plan to correct it.

Market risk-related capital requirements

We use internal and standard models to determine market risk-related capital requirements. We also use internal models to calculate regulatory capital for the trading books of our subsidiaries in Chile, Mexico and Spain, which helps diversify its positions).

In 2025, despite the delay of the FRTB application date, we continued to enhance market risk capital calculation, with a particular focus on adapting the current infrastructure to the new requirements of the regulatory framework. We also worked on adapting internal regulations and the reporting of market risk capital figures to meet supervisory expectations.

We rolled out all these improvements in our core markets through corporate tools, which significantly reduces manual processing and reliance on expert judgement.

We calculate the Group's consolidated regulatory capital under the market risk internal model as the total regulatory capital of the subsidiaries that have the ECB's approval. This approach is conservative as it does not capture capital savings from geographic diversification.

As a result of that ECB approval, we calculate regulatory capital for the trading activity perimeter using advanced methods and these key metrics: value at risk (VaR), stressed VaR, incremental risk charge (IRC) and risk not in model (RNIM), in line with CRR requirements.

Methodologies and key aspects

Value at Risk (VaR)

Our standard methodology for managing and controlling trading risk through VaR estimates the maximum expected loss at a 99% confidence level over a one-day horizon. We also apply statistical adjustments to incorporate recent events that affect risk levels in a timely manner. We use a two-year time window, or at least 520 days from the reference date, to calculate VaR.

We calculate two VaR figures every day and report the higher of the two. For one of them we apply an exponential decay factor that assigns less weight to older observations, while the other assigns the same weight to all observations.

At the same time, we calculate value at earnings (VaE), which measures the maximum potential gain at a specific confidence level and over a specific time horizon, using the same methodology as for VaR.

Historical simulation VaR offers many advantages as a risk metric because it expresses the portfolio's market risk in a single figure based on movements in market factors. However, it also has some limitations:

- Since VaR is calibrated to a specific confidence level, it does not capture potential loss levels beyond that threshold.
- The liquidity horizon of some products in the portfolio is longer than the one specified in the VaR model.
- VaR provides a static analysis of portfolio risk and is exposed to significant, albeit unlikely, daily changes.
- It is highly sensitive to the time window used.
- It cannot capture plausible, high-impact events if they do not occur within that time window.
- Some valuation parameters have no direct market input (such as correlations, dividends and recovery rates).
- It adjusts slowly to new volatilities and correlations, as the most recent data carry the same weight as older data.

We address some of these limitations by using stressed VaR and expected shortfall (ES), calculating VaR with exponential decay, applying conservative valuation adjustments, and performing analyses and backtesting to assess the accuracy of the VaR model.

Stressed VaR (sVaR) and Expected Shortfall (ES)

We calculate sVaR daily for our main portfolios using the same calculation methodology as for VaR, with the following exceptions:

- We use a time window of 260 observations (compared to 520 for VaR) from a continuous stress period for the portfolio. We perform the calculation for each key portfolio by analysing the historical behaviour of a subset of market risk factors (that we select under expert judgement) and of the most significant positions in the books.
- Unlike VaR, we obtain sVaR by taking the percentile with uniform weighting, rather than the highest percentile with exponential and uniform weighting.

We also calculate ES as the expected loss beyond VaR (in our case, at a 99% confidence level) by applying uniform weights to all observations. ES has the advantage of capturing the risk of low-probability, high-loss events (tail risk) and of being a sub-additive metric. According to the Basel Committee, ES at 97.5% is equivalent to the risk captured by VaR at a 99% confidence level.

Scenario analysis

The risk measures we use in the Group rely on assumptions that support day-to-day management and decision-making in the risk areas. They assume normal market conditions, continuous prices and sufficient liquidity. However, extreme moves or sharp, unexpected market changes may not be properly anticipated.

Scenario analysis helps us identify such unexpected outcomes and provides an estimate of how much capital we would need to absorb losses if such events occurred.

We regularly calculate and analyse various stress test scenarios for all the Group's and our subsidiaries' trading portfolios. The main ones include:

- Historical scenarios: we analyse portfolio performance under crisis conditions or significant market events that occurred in the past, estimating maximum losses based on existing positions.
- Hypothetical scenarios: we build extreme scenarios based on shocks to risk factors that have not necessarily occurred (for example, abrupt crises, worst-case scenarios, regulatory stress exercises or forward-looking scenarios). They take an ex-ante approach, in contrast to the ex-post nature of historical scenarios.
- Reverse stress test scenarios: we identify movements in market variables that would lead to a loss that could jeopardize the Group's continuity. They complement traditional scenarios and help detect vulnerabilities, hidden risks and interactions between factors.
- Climate change scenarios: we analyse the potential impact on trading portfolios of exposure to climate-sensitive activities, considering both physical and transition risks.
- Other stress test scenarios: we run additional tests every quarter to estimate losses or significant capital impacts under extreme market movements (for example, IRC scenarios, proxy scenarios in VaR calculation or valuation adjustment scenarios).

Calibration and backtesting

Regulation requires the VaR model to accurately reflect material risks. Since it relies on statistical techniques under normal conditions, estimated losses may differ from actual losses. We therefore regularly analyse and compare the model's accuracy to confirm its reliability.

We carry out internal backtesting exercises, VaR benchmarking measures and analyses of the assumptions of the portfolios of subsidiaries that use the internal market risk model. In geographies with an approved internal model, we perform regulatory backtesting that identifies exceptions (daily losses or gains that exceed VaR or Value at Earnings – VaE) and their impact on the calculation of regulatory capital.

Backtesting assesses the quality and effectiveness of the model. In our analyses we compare the daily VaR or VaE obtained on D-1 with the profit and loss (P&L) recorded on D: economic P&L, actual P&L, hypothetical P&L and theoretical P&L.

We apply backtesting daily in the subsidiaries and run additional internal, non-regulatory exercises on a daily, weekly or monthly basis, depending on each portfolio's level of granularity.

The number of exceptions is a key indicator of model performance. Regulatory backtesting covers a one-year period (250 days) and a 99% confidence level, which implies an expectation of between two and three exceptions per year. To determine regulatory capital, we calculate the regulatory K[10] coefficient based on the maximum number of exceptions observed between actual and hypothetical backtesting.

Analysis of positions, sensitivities and results

At Grupo Santander we use positions to determine the market value of trades in the portfolio, grouped by their main risk factor and taking into account the delta value of futures and options. We express these positions in each subsidiary's base currency and in the currency used to standardize the information. We monitor exposures daily to detect any issues and address them immediately.

Market risk sensitivity estimates the impact on the market value of an instrument or portfolio resulting from a change in a risk factor. We measure it through analytical approximations based on partial derivatives or through a full revaluation of the portfolio.

The daily P&L statement and loss account for the market risk area is a key indicator that helps identify the impact of changes in financial variables on the portfolios.

Derivatives activities and credit management

At Grupo Santander we pay particular attention to controlling derivatives and credit management activities due to their specific nature. We monitor them daily using specific metrics.

We monitor and review the sensitivity of underlying assets to price movements (delta and gamma), changes in volatility (Vega[11]) and the passage of time (theta). We also systematically analyse spread sensitivity, jump-to-default and position concentrations by rating level.

For the credit risk of trading portfolios, we calculate an additional metric — the incremental risk charge (IRC) — in line with Basel Committee recommendations and applicable regulation.

IRC covers both default risk and rating migration risk, which VaR does not capture adequately through changes in credit spreads. We mainly apply this metric to fixed income bonds (both sovereign and corporate), bond derivatives (forwards, options, etc.) and credit derivatives (credit default swaps, asset-backed securities, etc.). We calculate IRC from direct measurements of the loss distribution tails at the appropriate percentile (99.9%) over a one-year horizon and follow a Monte Carlo methodology with one million simulations.

[10] K: Parameter to calculate regulatory capital consumption for market risk.
[11] Vega represents the sensitivity of the value of a portfolio to changes in the value of market volatility.

Credit valuation adjustment (CVA) and debit valuation adjustment (DVA)

The Group calculates trading book results through CVA and DVA.

For more details on CVA and DVA see 'Credit risk from financial markets activities' in section 2.4 'Other credit risk details'

3.3 Key market risk metrics[12]

In 2025, overall trading risk levels remained relatively low and broadly in line with those of the previous year. We saw some temporary increases mainly driven by tariff negotiations with the United States, uncertainty around central banks' monetary policies, the geopolitical risk environment (Ukraine and the Middle East) and election periods in some Latin American markets. These isolated episodes of higher risk therefore reflected temporary periods of increased volatility in financial markets rather than a significant increase in positions in our trading portfolios.

Trading risks mainly arise from customer activity in non-complex instruments, most of which focus on interest rates and foreign exchange hedging.

During 2025, the use of limits for trading activities remained generally moderate. We set limits in line with the Group's risk appetite for this type of activity.

VaR analysis

The trading strategy focuses on customer-driven activity, minimizing any net directional risk exposure and maintaining diversification by geography and risk factor. This is reflected in the VaR of the CIB trading portfolio.

In 2025, VaR ranged between EUR 29.2 million and EUR 9.6 million, while average VaR stood at EUR 17.6 million, above the 2024 and 2023 levels (EUR 17.1 million and EUR 11.7 million, respectively). Market volatility contributed to keeping VaR above the average of the past three years throughout almost the entire period.

VaR at the end of December (EUR 18.7 million) was only EUR 0.03 million lower than at 2024 year-end, which still reflects high market volatility, ongoing geopolitical risk and concern about inflation trends, which could increase again as a result of new trade policies in the US.

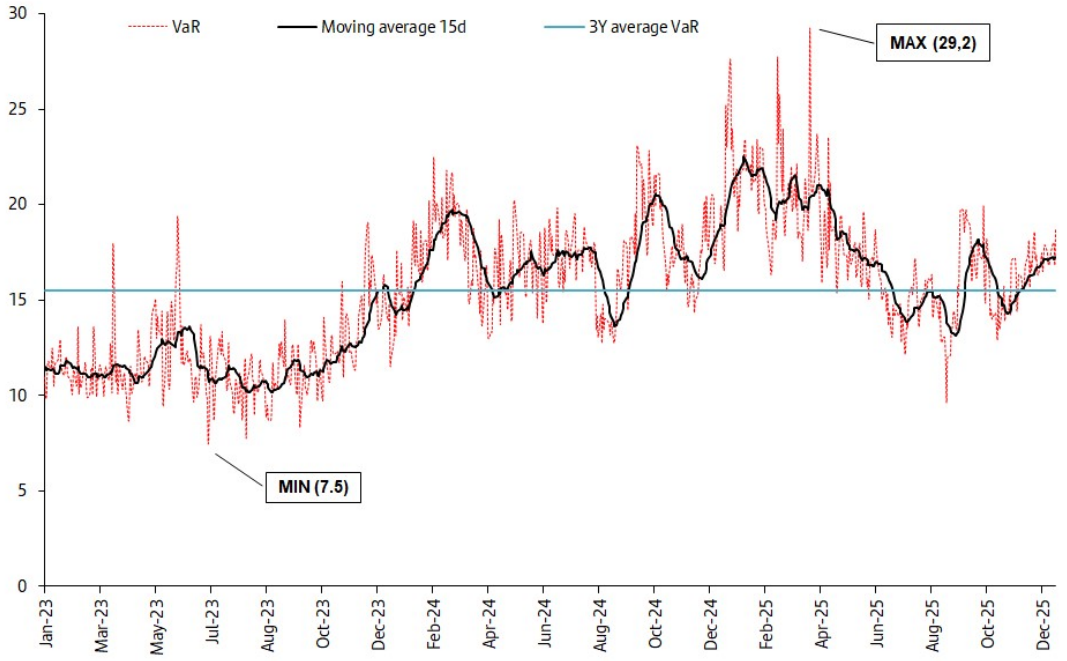
By risk factor, average VaR was higher for several risk factors and especially for foreign exchange risk, given the high volatility in some currencies such as the US dollar and the Argentine peso. Temporary jumps in VaR for the different factors usually stemmed from short-lived increases in market price volatility rather than from significant changes in positions.

By geographic area, average VaR in Europe exceeded the 2024 average, mainly due to interest rate and foreign exchange risk factors, while it remained below that level in North and South America.

For more details on VaR and expected shortfall (ES) by risk factor and region see table on section '2. Trading market risk management', in Note 54 to the consolidated financial statement

VaR 2023-2025

EUR million. VaR at 99% over a one day horizon



[12] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.

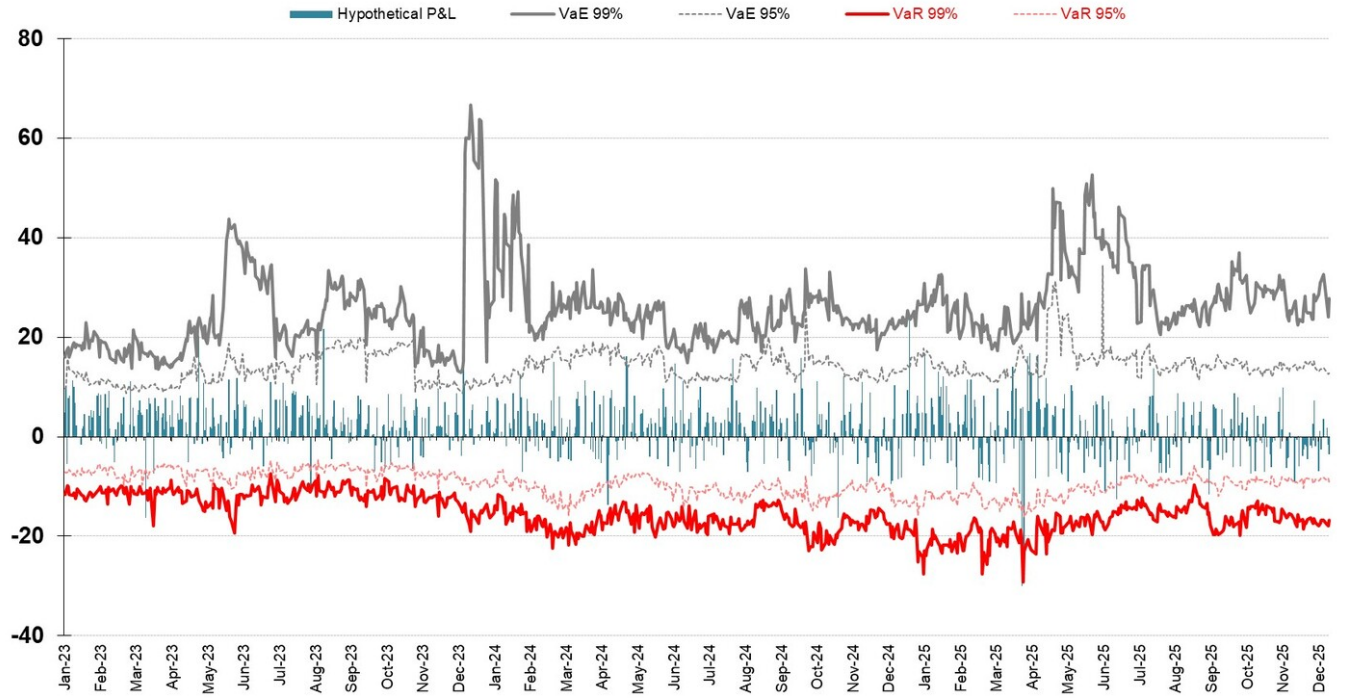
Backtesting

Actual losses may differ from those forecasted by VaR because of the above-mentioned limitations of this metric. At Santander we review the accuracy of the VaR calculation model to confirm its reliability (see 'Methodologies' in section 3.2 'Market risk management'). The main tests consist of backtesting exercises:

- In hypothetical P&L backtesting for the total portfolio, we observed two exceptions (daily loss higher than VaR or daily gain higher than VaE) to VaR at a 99% confidence level in 2025 — on 9 and 11 April — as a result of high market volatility, mainly driven by uncertainty about the potential impact of new trade policies in the United States. We did not observe any exceptions to VaE at a 99% confidence level in 2025.
- The outcome of the exercise in the past year aligns with the assumptions of the VaR calculation model.

Backtesting of trading portfolios: daily results vs. VaR for previous day

EUR million



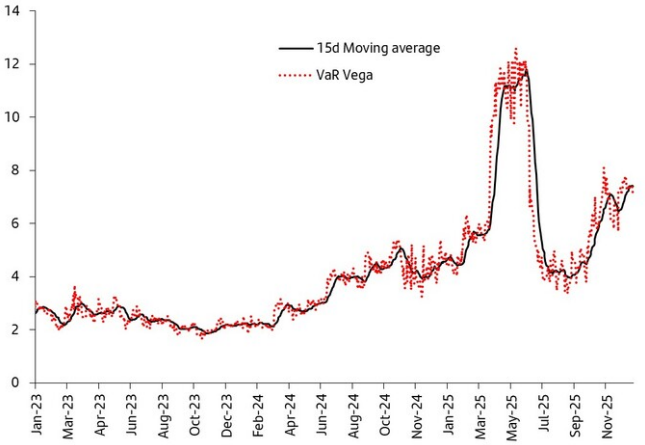
Derivatives risk management

Our derivatives business mainly involves selling investment products and providing risk hedging for customers. Our risk management aims to keep net open risk as low as possible. Transactions include equity, fixed income and foreign exchange options, primarily in Spain, Brazil, the United Kingdom, the United States and Mexico.

The following chart shows the trend in Vega VaR for the structural derivatives business over the past three years. In general, higher VaR levels relate to significant, temporary increases in market volatility, for example, due to changes in monetary policy in response to changes in inflation, periods of political uncertainty in some of our markets, or uncertainty around new US trade tariffs.

Change in risk over time (VaR) of structure derivatives

EUR million. VaR Vega at a 99% over a one day horizon



Average VaR mainly reflected equity risk, followed by foreign exchange and interest rate risk. Average risk in 2025 (EUR 6.5 million) exceeded the 2024 and 2023 levels amid trade and geopolitical tensions, as shown in the table below:

Financial derivatives. Risk (VaR) by risk factor

EUR million. VaR at a 99% over a one day horizon

	2025				2024		2023	
	Minimum	Average	Maximum	Latest	Average	Latest	Average	Latest
Total VaR Vega	**3.4**	**6.5**	**12.6**	**7.0**	**3.5**	**4.5**	**2.4**	**2.1**
Diversification effect	(0.9)	(1.3)	(2.4)	(1.8)	(2.0)	(1.7)	(1.9)	(1.2)
Interest rate VaR	0.6	0.9	1.8	0.7	1.3	0.9	2.0	1.5
Equity VaR	3.0	5.7	10.9	6.9	3.1	3.8	1.4	1.2
FX VaR	0.7	1.2	2.3	1.2	1.1	1.5	0.9	0.6
Commodity VaR	—	—	—	—	—	—	—	—

Santander's exposure to complex structured instruments or vehicles is very limited, which reflects our risk culture and prudent risk management. The Group's risk appetite caps total level 3 assets and liabilities (those whose fair value is measured using significant unobservable market inputs) at 5% of the Group's total assets and liabilities measured at fair value.

At the end of December, our exposures to hedge funds stood at EUR 115 million, all of them indirect as we act as counterparty in derivatives transactions.

We analyse the risk associated with these counterparties case by case and set collateralization levels according to each fund's characteristics and assets.

Our policy for approving new transactions in these products remains prudent and conservative, and senior management oversees it.

Scenario analysis

As for the results of the stress test scenarios, the following table shows the worst case (maximum volatility) outcome at the end of December.

Stress scenario: maximum volatility (worst case)

EUR million. Dec. 25 data

	Interest rate	Equities	Exchange rate	Credit spread	Commodities	Total
Total trading	**(128.3)**	**25.7**	**(80.3)**	**(119.5)**	**—**	**(302.4)**
Europe	(70.3)	28.2	(75.1)	(42.7)	—	(159.9)
North America	(37.2)	0.1	(2.2)	(76.8)	—	(116.1)
South America	(20.8)	(2.6)	(3.0)	—	—	(26.4)

The analysis shows that the Group would suffer an economic impact of EUR 302 million on its trading portfolios in mark-to-market terms if the worst-case stress movements were to materialize. The loss would mainly affect Europe (in foreign exchange in a euro appreciation scenario, followed by interest rates in an upward-rate scenario, and lastly in credit spreads in a widening scenario) and North America (mainly in credit spreads in a widening scenario, followed by interest rates in an downward-rate scenario).

Connection with balance sheet items

The following table sets out the items in Grupo Santander's consolidated position balance sheet that are subject to market risk, distinguishing between positions whose main risk metric is VaR and those whose risk we monitor using other metrics.

Risk metric values on the consolidated balance sheet

EUR million. Dec. 25 data

		Main market risk metrics		
Assets subject to market risk	**Balance sheet amount**	**VaR**	**Other**	**Main risk factors for 'Other' balance**
Cash, cash balances at central banks and other deposits on demand	152,281		152,281	Interest rate
Financial assets held for trading	252,318	252,318		
Non-trading financial assets mandatorily at fair value through profit or loss	7,761	5,815	1,946	Interest rate, spread
Financial assets designated at fair value through profit or loss	8,046	—	8,046	Interest rate, spread
Financial assets at fair value through other comprehensive income	74,612	2,281	72,331	Interest rate, spread
Financial assets measured at amortised cost	1,202,689		1,202,689	Interest rate, spread
Hedging derivatives	3,931		3,931	Interest rate, exchange rate
Changes in the fair value of hedged items in portfolio hedges of interest risk	50		50	Interest rate
Other assets	165,827			
Total assets	**1,867,515**			
Liabilities subject to market risk				
Financial liabilities held for trading	171,546	171,546		
Financial liabilities designated at fair value through profit or loss	42,148	—	42,148	Interest rate, spread
Financial liabilities at amortised cost	1,421,184		1,421,184	Interest rate, spread
Hedging derivatives	4,248		4,248	Interest rate, exchange rate
Changes in the fair value hedged items in portfolio hedges of interest rate risk	49		49	Interest rate
Other liabilities	115,592			
Total liabilities	**1,754,767**			
Total equity	**112,748**			

3.4 Structural balance sheet risk management

Structural risk is the risk that market or balance sheet movements will change the value or profit generation of assets or liabilities in the banking book.

It also includes risks related to insurance and pensions, as well as the risk that we may not have sufficient capital, in amount or quality, to meet internal business objectives, regulatory requirements or market expectations.

In 2025 we introduced improvements to provide control teams with better tools to manage structural balance sheet risks:

- We reviewed and expanded the scenarios we use to monitor structural interest rate risk by adding new historical scenarios and analysing how exposures change when we adjust the parameters of the most significant models.
- We strengthened controls over IRRBB reporting to make the data we submit regularly to supervisors more consistent.
- We reinforced oversight of model backtesting exercises to confirm that the parameters we applied remain appropriate.
- We enhanced the foreign exchange (FX) control framework by adding additional metrics to monitor the impact on capital of adverse exchange rate movements.

Limits management and control systems

Internal policies set by senior management define the control and oversight mechanisms for structural risk in line with regulatory requirements and our risk appetite. These mechanisms take into account the structural risk sub-types, as well as their implications, contingencies and interrelationships.

The structural risk function, part of the second line of defence, aims to promote that this risk is understood, controlled and reported to senior management in line with the established governance by:

- setting interest rate risk metrics and reviewing and challenging the structural risk appetite and the limits proposed by the first line of defence;
- overseeing structural risk management by the first line and verifying compliance with the established limits;
- reporting regularly to senior management on the risk profile and providing guidance to the business lines on any measures that need to be taken;

- assessing and challenging commercial proposals and providing senior management and business units with the information they need to understand interest rate risk in the Group's businesses and transactions; and
- establishing and updating models and policies and confirming that structural risk management procedures remain appropriate.

As with market risk, we have a framework that sets out the annual plan for establishing structural balance sheet risk limits in line with the risk appetite. The main limits are:

- Structural interest risk in the banking book:
  - Net interest income (NII) sensitivity limit over a one-year horizon.
  - Economic value of equity (EVE) sensitivity limit.
  - Limit of the negative impact on shareholder equity of changes to the value of assets carried at fair value in the banking book stemming from adverse movements in the market.
- Structural FX risk:
  - Limit on the net permanent position of the core capital ratio.
  - Limit on the individual hedge required for each currency.

We complement these limits with other triggers and alerts that monitor specific aspects of these risks and supplement the metrics described above. Business line risk managers must explain any excesses over limits or sub-limits and provide an action plan to correct them.

Methodologies and other key details

Structural interest rate risk
Within structural risk, interest rate risk in the banking book (IRRBB) is the main source of balance sheet risk.

We analyse the potential impact of interest rate changes to the currencies in which we operate on the economic value of equity (EVE) and net interest income (NII).As impacts will differ based on how rates move, it's therefore necessary to monitor and manage several interest rate risk sub-types, such as repricing risk, yield curve risk, basis risk and optionality risk (automatic and behavioural).

Depending on the balance sheet interest rate position and market conditions and outlook, we may need to take financial measures to achieve the risk profile that the Group defines.

We mainly monitor IRRBB through NII and EVE sensitivity metrics to interest rate movements.

- Net interest income and its sensitivities. NII is the difference between interest income on assets and interest expense on liabilities in the banking book over a given time horizon (typically one to three years, with one year as the Group standard). This metric helps identify short-term risks and complements the sensitivity of the economic value of equity (EVE).
- Economic value of equity and its sensitivities. EVE is the difference between the net present value of assets and the net present value of interest-bearing banking book liabilities, excluding equity and other non-interest-bearing instruments. This metric helps identify long-term risks and complements NII sensitivity.

Credit spread risk
Among the metrics we use to monitor credit spread risk in the banking book (CSRBB), the main ones are NII and EVE sensitivity to changes in spread curves, as well as the impact of stress scenarios on positions identified as subject to CSRBB.

Interest rate models
Interest rate risk metrics take into account how different financial products behave under stressed scenarios, where uncertainty is common and contractual terms may not be fulfilled. We have developed methodologies that help explain how these products would perform in such conditions. These are our key interest rate risk models:

- Treatment of liabilities without stated maturity. The Group's model shows balances of all accounts without maturity using stable and unstable volumes, settlement speed over time, customer and market types, and other variables.
- Prepayment treatment for certain assets. Prepayment risk mainly affects fixed-rate mortgages in subsidiaries where contractual rates are below market rates and customers have the incentive to pay off all or part of their mortgage early.

Structural exchange rate risk/hedging of results
We monitor these activities daily using position measures, VaR and results.

We introduced new limits to FX positions in the banking book in 2024, allowing us to complement the structural FX metrics and monitor exchange rate risk in full.

Structural equity risk
We measure equity positions, VaR and P&L.

3.5 Key structural balance sheet risk metrics[13]

The market risk profile inherent to the Group's balance sheet remained at moderate levels in 2025, in line with previous years.

The Finance division of each subsidiary manages the interest rate risk arising from its commercial banking activity and is responsible for managing structural risk driven by interest rate fluctuations.

Santander measures interest rate risk by analysing changes in the economic value of equity and in net interest income caused by changes in interest rates (both parallel and non-parallel), balance sheet composition, and shifts in customer behaviour. Once we have measured these risks, we decide whether to implement structural risk mitigation strategies using interest rate instruments, such as purchases of fixed income bond portfolios and derivatives, to keep the interest rate risk profile within the risk appetite.

Exposure across all subsidiaries remained moderate in 2025 relative to the annual budget and capital levels.

[13] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.

The NII and EVE sensitivities below are based on scenarios of parallel interest rate movements between ±100 bps.

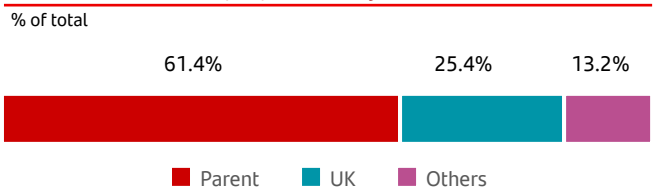
Structural interest rate risk

Europe

At the end of December, net interest income (NII) in our main balance sheets showed positive sensitivities to interest rate increases. At the same date, the economic value of equity (EVE) showed negative sensitivity to interest rate rises.

Also at the same date, under the scenarios described above, the most significant NII sensitivity risk related to the euro, at EUR 561 million; pound sterling, at EUR 169 million; the Polish zloty, at EUR 51 million; and the US dollar, at EUR 50 million; with all of them linked to interest rate cut risk.

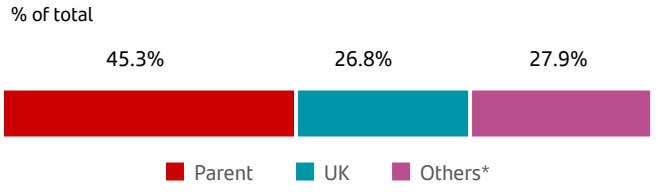
Net interest income (NII) sensitivity



* Other: Poland, Portugal and Digital Consumer Bank.

The most significant risk to the economic value of equity was concentrated in the euro yield curve, at EUR 1,087 million, in pound sterling, at EUR 614 million; the Polish zloty, at EUR 275 million; and the US dollar, at EUR 104 million, with all of them linked to interest rate increase risk.

Economic value of equity (EVE) sensitivity



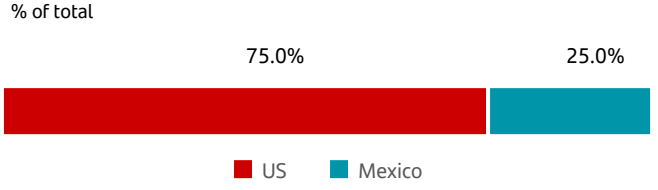
* Other: Poland, Portugal and Digital Consumer Bank.

North America

At the end of December, net interest income (NII) in our North American balance sheets showed positive sensitivity to interest rate increases in the United States and negative sensitivity to the same scenario in Mexico. In both cases, the economic value of equity (EVE) showed negative sensitivity to interest rate rises.

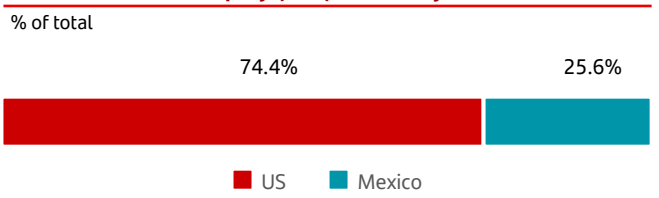
At the same date, the most significant risk to net interest income was concentrated mainly in the US (EUR 49 million).

Net interest income (NII) sensitivity



The most significant risk to the economic value of equity was concentrated in the US (EUR 570 million).

Economic value of equity (EVE) sensitivity

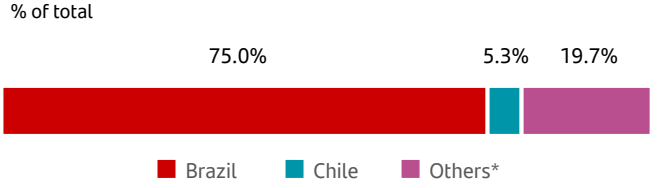


South America

We generally position economic value and net interest income in our main South American balance sheets for interest rate cuts.

At the end of December, the most significant risk to net interest income was mainly in Brazil (EUR 57 million).

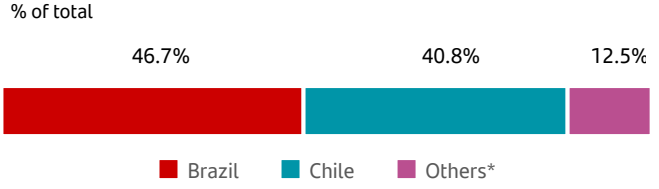
Net interest income (NII) sensitivity



* Other: Argentina, Peru, Uruguay and Colombia.

The most significant risk to the economic value of equity was mainly in Brazil (EUR 257 million) and Chile (EUR 225 million).

Economic value of equity (EVE)



* Other: Argentina, Peru, Uruguay and Colombia.

Structural foreign exchange rate risk/results hedging

Our structural foreign exchange risk mainly arises from foreign currency transactions linked to permanent financial investments, their results, and associated hedges. Our dynamic management of this risk aims to limit the impact of exchange rate movements on the core capital ratio. In 2025, hedging of the currencies that affect the core capital ratio remained close to 100%.

In December 2025, the largest permanent exposures (with their potential impact on equity) were, in this order, in pound sterling, US dollars, Brazilian reais, Mexican pesos, Polish zlotys and Chilean pesos.

The Group hedges part of these permanent positions with foreign exchange derivatives. The Finance division manages foreign exchange risk and hedges the expected results and dividends of subsidiaries whose functional currency is not the euro.

Structural equity risk

Grupo Santander holds equity positions both on its balance sheet (banking book) and in its trading portfolio. We classify these positions as equity instruments or investments, depending on the percentage of ownership or control.

At the end of December, the banking book equity and investment portfolio was diversified across securities from various countries, such as Spain, China, Morocco and Poland. Most of the portfolio was invested in the financial and insurance sectors. Other sectors with smaller allocations included real estate activities.

Structural equity positions are exposed to market risk. We calculate VaR for these positions using market price series or proxies. At the end of December, VaR at a 99% confidence level over a one-day horizon stood at EUR 147 million (EUR 127 million and EUR 171 million at year-end 2024 and 2023, respectively).

Structural VaR

We use a homogeneous metric such as VaR to monitor overall banking book market risk (excluding CIB trading activity, as described in section 3.3 'Key market risk metrics'). We distinguish between fixed income — taking into account interest rates and credit spreads in ALCO portfolios — foreign exchange, and equities.

Overall, structural VaR is not material in relation to our total asset volume or equity.

Structural VaR

EUR million. VaR at a 99% over a one day horizon.

	2025				2024		2023	
	Minimum	Average	Maximum	Latest	Average	Latest	Average	Latest
Structural VaR	**598.5**	**662.9**	**751.9**	**690.1**	**747.7**	**687.5**	**705.0**	**749.5**
Diversification effect	(155.9)	(258.4)	(265.6)	(206.6)	(386.4)	(268.6)	(416.6)	(444.7)
VaR Interest Rate[A]	158.3	177.3	205.8	177.6	412.0	235.2	348.4	380.2
VaR Exchange Rate	486.0	597.7	648.7	572.4	571.7	594.4	580.4	642.9
VaR Equities	110.1	146.3	163.0	146.7	150.4	126.5	192.8	171.1

A. Includes credit spread VaR on ALCO portfolios.

3.6 Liquidity risk management

Balance sheet liquidity risk is the risk that we may fail to meet payment obligations at maturity or only do so at excessive cost. Losses may arise from forced asset sales or margin impacts caused by mismatches between expected cash inflows and outflows.

The second line of defence is responsible for seeing that this risk is understood, controlled and reported to senior management and across the Group in line with the established governance by:

- defining liquidity risk and providing detailed assessments of current and emerging material liquidity risks;
- defining liquidity risk metrics and reviewing and challenging the risk appetite and the limits that the first line of defence proposes;
- assessing and challenging commercial/business proposals and providing senior management and business units with the information they need to understand the liquidity risk of Santander's businesses and transactions;
- overseeing liquidity risk management by the first line and assessing whether businesses remain within liquidity risk limits;
- reporting on compliance with risk appetite limits and any exceptions to the governance bodies (risk control committee, risk supervision, regulation and compliance committee and board);
- providing a consolidated view of liquidity risk exposures and the liquidity risk profile; and
- confirming that suitable liquidity procedures are in place to manage the business within the risk appetite limits.

Throughout 2025, market conditions remained stable. Debt markets operated normally and Grupo Santander met its funding targets.

Over the year we strengthened intraday liquidity risk controls to stay aligned with the ECB's best practice paper on intraday risk management. We also enhanced the liquidity early warning indicator framework by adding an indicator that captures media and social media activity related to the Group.

In addition, our subsidiaries maintained solid balance sheets and stable funding structures, supported by a broad customer deposit base that covers structural needs, with low reliance on short-term funding and liquidity metrics well above local, corporate and regulatory requirements and within risk appetite limits.

3.7 Key liquidity risk metrics

Our strong liquidity position relies on a decentralized model in which each subsidiary manages its liquidity autonomously. We measure liquidity risk with tools and metrics that capture the key risk factors. We calculate regulatory liquidity metrics in line with the criteria set out in the Regulation CRR II and the Directive CRD IV. For internal metrics, we define liquidity scenarios using a combination of observations from actual liquidity crises at other banks, regulatory assumptions, and expert judgement.

The Group's main monitoring metrics are:

Regulatory metrics

a. Liquidity coverage ratio (LCR) assesses the short-term resilience of our liquidity profile by making sure we have enough high-quality liquid assets to withstand a considerable market stress scenario for 30 calendar days. In 2025, the Group's LCR remained stable and well above the regulatory threshold.

b. Net stable funding ratio (NSFR) measures long-term liquidity risk. It is the ratio of available stable funding to required stable funding. In 2024, the NSFR of our core subsidiaries and the Group remained above the regulatory requirement of 100% and the internal risk appetite.

Internal metrics

a. Liquidity buffer: assesses whether liquid assets are enough for the bank to survive for set time horizons under several liquidity stress scenarios.

b. Wholesale counterparty concentration metric: measures the impact of our largest non-financial counterparties withdrawing deposited funds. We use it to measure the quality of our liquidity and to uncover excessive dependency on a small number of customers.

c. Structural asset encumbrance metrics: we calculate two types of metric — the asset encumbrance ratio, which measures the proportion of encumbered assets over the entity's total assets, and the structural asset encumbrance ratio, which measures the proportion of encumbered assets associated with structural funding (mainly long-term collateralized issuances and central bank funding).

d. Other additional liquidity indicators: the Group has defined a set of additional liquidity indicators that complement the above and help measure other liquidity risk factors not covered by them.

e. Liquidity risk scenario analysis: the Group has five standard scenarios:

i. An idiosyncratic scenario of events that are detrimental only to Santander.

ii. A local market scenario of events that are highly detrimental to Grupo Santander's base country's financial system or real economy.

iii. A global market scenario of events that are highly detrimental to the global financial system.

iv. A combined scenario of more severe idiosyncratic and local and global market events, occurring simultaneously in an interconnected manner.

v. Climate scenarios, with various stress situations based on the potential economic effects of climate change.

We use these stress test outcomes as tools to determine risk appetite and support business decision-making.

f. Early-warning liquidity indicators: the early warning system comprises quantitative and qualitative indicators that help identify, at an early stage, situations of liquidity stress or potential weaknesses in the funding and liquidity structure of Group entities. These indicators include both external measures, linked to market financial variables, and internal measures related to our own performance.

g. Intraday liquidity metrics: the Group applies the Basel regulatory definition to calculate a set of metrics and stress scenarios that support a high standard of intraday liquidity risk management and control.

For more details on liquidity metrics, see section 4.4 'Liquidity and funding management' in the 'Economic and financial review' chapter.

3.8 Actuarial, pension and insurance risk management

Actuarial risk

Actuarial risk in the Group mainly arises from biometric changes in the life expectancy of beneficiaries of defined benefit commitments and from unexpected increases in non-life benefits covered by those commitments.

We distinguish the following actuarial risks:

- **Life liability risk**: risk of loss due to changes in the value of pension obligation liabilities as a result of fluctuations in related risk factors: mortality/longevity, morbidity, surrender and lapse, expenses and catastrophe.
- **Non-life liability risk**: risk of loss due to changes in the value of non-life benefit liabilities the Group has undertaken with its employees, driven by fluctuations in related risk factors such as premium insufficiency, reserving risk and catastrophe risk.

Pension risk

In managing the risk of defined benefit employee pension funds, we assume the financial, market, credit and liquidity risks arising from the fund's assets and investments, as well as the market and actuarial risks associated with the liabilities, namely the pension obligations to our employees.

Our main goal in pension risk management and control is to identify, measure, mitigate and report all pension risk sources, while gradually reducing our exposure to this risk over the long term.

At Santander we measure pension risk using a VaR methodology and other approaches. We use this metric to set pension risk appetite limits and to calculate economic capital. Each year, we also estimate the combined losses on assets and liabilities under a stress scenario that includes changes in interest rates, exchange rates, inflation, quoted asset prices, real estate prices and credit spreads.

Most defined benefit plans are located in the United Kingdom, Brazil, Portugal, Spain and Germany.

In 2025, market developments had an overall positive effect on pension risk, mainly due to higher discount rates in our core markets. This effect was offset by rising inflation in markets with significant inflation exposure. Over the year, we continued to implement de-risking measures to reduce our exposure to actuarial and pension risks, taking advantage of the prevailing interest rate environment.

Insurance risk

Grupo Santander operates an insurance model based mainly on its own insurance companies and on agreements with insurance companies in which it holds a non-controlling interest (joint ventures).

These insurance companies take on several types of risk, including financial, non-financial and actuarial risks, in line with each entity's risk profile.

Our main goal in insurance risk management and control is to identify, measure, mitigate and report all risk sources in the insurance business so we can help meet the commitments we make to our policyholders and shareholders.

Thus, Santander constantly monitors the solvency of these entities by calculating regulatory solvency levels and checking that they remain within the established risk appetite, among other tools. We also track the most material risks on a continuous basis and, for the most significant ones, we carry out sensitivity analyses and stress scenarios to assess their potential impact.

In 2025, the risk profile of the insurance entities remained broadly in line with previous years.

4. Capital risk

4.1 Introduction

Within structural risk, Grupo Santander includes the risk of not having sufficient capital to absorb losses arising from its operations or to meet internal business objectives, regulatory requirements or market expectations.

As part of the second line of defence, we control and oversee the capital activities that the first line carries out, verifying that capital adequacy and its coverage fit our risk profile and the Group's strategy. We also oversee and monitor transactions that are considered significant risk transfer (SRT) transactions.

Capital activities are encompassed in the Group's capital framework and model and bring together different processes such as capital planning and adequacy, framed within the strategic plan and the Internal capital adequacy assessment process (ICAAP), as well as subsequent budget execution and monitoring, together with ongoing measurement, reporting and disclosure of capital information.

4.2 Capital risk management

We independently oversee the capital activities that the first line performs and group them into four key processes aimed at maintaining a solid level of capital and using it efficiently to meet internal solvency objectives and regulatory requirements in line with our risk profile.

Capital planning
Drawing up of a capital plan that is consistent with the strategic plan, sets solvency objectives, and identifies the measures needed for execution. The control function analyses the plan's feasibility by identifying, assessing and measuring the risks that could affect its achievement.

Capital adequacy
A process that evaluates — also under stress scenarios — capital levels in relation to the risks assumed, based on risk identification and assessment and the risk appetite framework.

Oversight under this process primarily aims to:

- help confirm that all relevant risks we are exposed to in the course of our activity are covered;
- verify that the results are reasonable and consistent with the business strategy, the macroeconomic and geopolitical environment, and system variables; and
- review that the methodologies and assumptions used are appropriate.

Capital risk measurement
An internal management process whose main outcome is the regular calculation of the metrics used in capital management, supervisory reports and market disclosure.

Ongoing oversight of the Group's capital measurement is another control function that the second line of defence carries out. We review capital metrics against previously defined thresholds and oversee compliance with the solvency risk appetite to help preserve levels above internal requirements, regulatory requirements and market expectations.

Origination (risk transfer initiatives)
A process to structure, govern and execute the initiatives originated in the Group to free up own resources, as well as their subsequent monitoring.

We oversee securitizations that the supervisor could consider significant risk transfer (SRT) transactions and whose objective is to release capital in accordance with Regulation (EU) 2017/2401 and 2017/2402, articles 243 to 245, on SRT, in which we act as originator.

Oversight is a prior step and an essential requirement for the execution of these securitizations (both synthetic and traditional) and applies to every transaction that may lead to a reduction in risk-weighted assets (RWA) under regulatory criteria.

The main purpose of this process is to contribute to securitization oversight by analysing the conditions that may affect their consideration as SRT, for example:

- that the transaction meets the requirements for an effective transfer of risk;
- that the operation complies with all prudential regulation requirements;
- that the risk parameters used in the transaction follow the defined methodology; and
- that the transaction's economic rationale fits the established standards.

In today's macroeconomic landscape — marked by geopolitical tensions and greater global uncertainty — we have identified and assessed the potential risks that could affect the Group's solvency levels and the achievement of internal objectives, and we continuously monitor the main metrics.

In capital planning, we regularly set uncertainty levels regarding budget execution and assess potential deviations from the projections made. Specifically, we oversee the progress of the organic capital generation plan, the securitization plan and other initiatives with impact on capital, and the supervisory reviews related to capital calculation.

In 2025, we continued to strengthen continuous monitoring of subsidiaries' capital contribution targets so that the risk function could make visible several risks and/or opportunities related to achieving the year's capital objectives. We also oversaw the impact of market variables on capital levels. The Group continues to apply hedging policies to mitigate exchange-rate volatility in the CET1 ratio.

In parallel, and within the risk appetite framework, together with the first line of defence, the function set solvency appetite limits, keeping calibration in line with an overall medium-low risk profile that is resilient to stress conditions.

In this context, in 2025 we introduced a new risk appetite metric that extended the scope of the SRTs metric to cover all Risk Transfer, strengthening a metric that is essential to preserve the robustness of capital ratios under both normal and stressed conditions.

We also introduced a new economic solvency metric to confirm that our capital base covers the requirements set by our economic capital model, which considers all risks to which the Group is exposed (Pillar 1 and Pillar 2).

With regard to planning exercises, during the year we continued to review the Recovery Plan, both at Group level and for subsidiaries, promoting certain improvements to measures and underlying assumptions.

Regarding oversight of SRT securitizations, we continued to enhance reporting and governance for corporate monitoring at the origination stage, with a higher degree of standardisation. In addition, we further strengthened transaction monitoring through greater involvement of subsidiaries in periodic analysis exercises and improved process automation by using a corporate tool.

4.3 Key metrics[14]

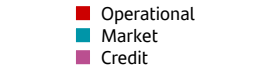
Santander has a strong capital position, consistent with its business model, balance sheet structure, risk profile and regulatory requirements. Our robust balance sheet and profitability enable us to finance growth and continue to accumulate capital.

Our model of subsidiaries with autonomy over capital and liquidity enables us to mitigate risk. Our capital metrics are stable, with ratios comfortably above regulatory requirements and at appropriate levels.

The distribution of risk-weighted assets (RWA) by risk type and by region at year-end reflects the Group's core business in credit risk and its geographic diversification:

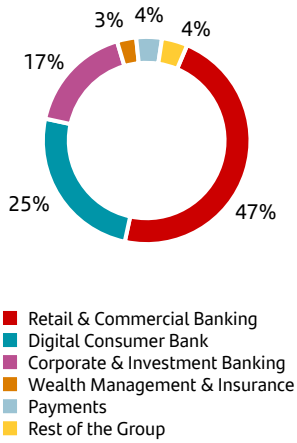
RWA by risk type[A]

Dec. 25 data



RWA by global business

Dec. 25 data



A. Credit risk included counterparty credit risk, securitizations and amounts below the thresholds for deduction.

Regarding the Group's solvency levels, the Common Equity Tier 1 (CET1) phased-in ratio at the end of December stood at 13.5%, well above the upper end of our operating range (12%–13%) and our 2025 target. This comfortably exceeds the minimum requirement set by the ECB, which stands at 9.8% in December 2025.

In addition, throughout the year, the CET1 ratio remained with a comfortable buffer above the risk appetite levels approved by the Bank's Board.

The increase in CET1 phased-in over the year was 0.7 pp, broken down as follows:

- Attributable profit: 223 bps of capital, partly offset by 121 bps corresponding to capital distribution, including shareholder remuneration and the cost of Additional Tier 1 (AT1) obligations.
- Net organic RWAs: -25 bps, resulting from business RWA growth net of risk transfer initiatives.
- Additionally, -16 bps from regulatory charges and +9 bps from markets and other.

For more details, see section 4.5 'Capital management and adequacy. Solvency ratios' in the 'Economic and financial review' chapter.

[14] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.

5. Operational risk

5.1 Introduction

Operational risk is present in all products, activities, processes and systems, and is inherent to all business and support areas of the Group. That's why all Santander employees are responsible for managing and controlling the operational risk that stems from our activities.

Santander defines operational risk as the risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events, including legal risk[15], regulatory and conduct compliance risks, model risk and risk categories such as fraud, technology and cyber.

5.2 Operational risk management

Management and control model

Our operational risk management and control model sets out the components we need to manage and control this risk throughout the entire management cycle, in line with advanced regulatory standards and industry best practice. Applying the model helps set and update management priorities properly and supports the definition and execution of internal controls to mitigate risk across the organization.

This section first describes the risk management cycle and the tools we use to manage and control operational risk. It then focuses on operational resilience and the main operational risks, together with their mitigation plans. Lastly, it describes aspects related to the use of insurance as a risk transfer mechanism and the management of operational risk in the wholesale banking business.

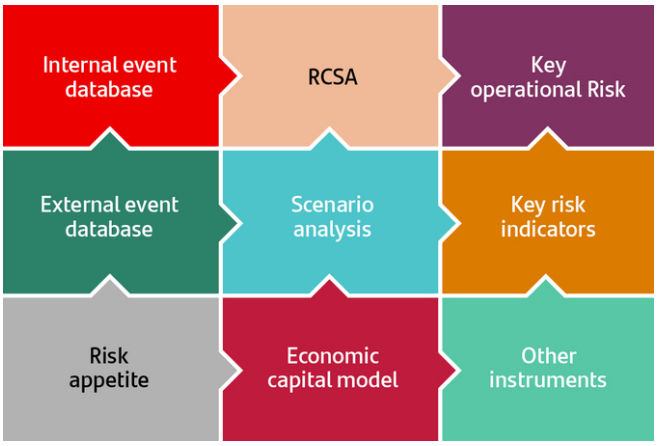
The operational risk cycle comprises the following phases:

- **Strategic planning**: This covers the activities needed to define the Group's target operational risk profile, including risk appetite setting, annual loss estimation, and review of the management perimeter.
- **Identification and assessment of risks and internal controls:** This aims to identify the risks and factors that may give rise to operational risk in the organization and to assess their potential quantitative and qualitative impact.
- **Ongoing monitoring of the operational risk profile:** This involves regular analysis of the available information on the nature and scope of the risks incurred in the course of the Group's activities, using an appropriate alert system based on tools such as indicators and escalation procedures.
- **Response decisions, including mitigation and risk transfer measures:** As operational risk may arise in any Group process, its management requires decisions on unacceptable risks after identification and assessment.

  The analysis of operational risk exposure may conclude with acceptance of the risk level, implementation of action plans to manage it, risk transfer through insurance or other outsourcing mechanisms, or, alternatively, the discontinuation of the related activity.

  Against this backdrop, contingency and business continuity plans play a key role as they enable the entity to maintain its activity and limit losses in the event of severe business interruptions, which are particularly sensitive in financial markets. Specifically, and in line with the EU's Digital Operational Resilience Regulation (DORA), the Group needs to strengthen its digital operational resilience to support the integrity and reliability of operations, protect the security of networks and information systems, and maintain the continuous delivery of financial services, even in the event of disruptions.
- **Disclosure and reporting** of information needed for decision-making.

Additionally, Grupo Santander has several tools that support effective management and control of risk throughout the management cycle, such as:



[15] Legal proceedings stemming from operational risk.

Internal event database
This database collects and records internal operational risk events that may have a financial impact (for example, losses and provisions, regardless of their amount) or a non-financial impact (such as regulatory, customer and/or service impact). This information:

- enables us to conduct root-cause analysis;
- promotes risk awareness to enhance management;
- supports the escalation of major events to senior risk management as quickly as possible;
- allows for regulatory reporting; and
- supports the development of the economic capital model within the ICAAP.

External event database
The external event database is a complementary source of information to internal events and helps bolster operational risk management. It contains quantitative and qualitative information on external operational risk events to enable detailed analysis of key industry events, comparison with the Group's and subsidiaries' loss profiles, and preparation of the operational risk and control self-assessment (RCSA) exercises, the analysis of potential insurance coverage, and scenario analysis.

Scenario analysis
This tool helps identify very low probability events that could result in significant losses and supports the definition of appropriate mitigation measures, based on the assessment and expert judgement of the business lines and risk managers. Scenario analysis results feed into the economic capital models.

Risk control self-assessment (RCSA)
The RCSA exercise consists of assessing the activities underlying the Group's various operations and quantifying their main risks and vulnerabilities. Its purpose is to assess operational risks in terms of inherent and residual risk, the design and effectiveness of controls, and the need for further enhancements to controls or new mitigation actions.

It also includes detailed reviews to identify cyber, technology, fraud and supplier management risk factors, as well as any others that may generate operational risk and/or regulatory breaches. RCSA incorporates reviews related to regulatory compliance, conduct risk and financial crime.

Key operational risks
A top-down assessment of operational risks that takes into account senior management's concerns and considerations regarding several aspects of operational risk so the organization can assess them properly and include them in the RCSA.

Key risk indicators
Metrics that measure specific aspects of risks and provide quantitative information on our exposure and control environment. The most significant indicators linked to the main risk factors form part of the operational risk appetite.

Risk appetite
This comprises the following structure:

- A global non-financial risk appetite statement, which reflects Grupo Santander's commitment to control and limit non-financial risk events that may lead to financial losses, fraud events, operational and technology incidents, legal and regulatory breaches, issues linked to employee conduct, or damage to reputation. This statement is linked to loss and control environment metrics.
- Specific statements on technology, cybersecurity, cloud, fraud, financial crime, product sales, regulatory compliance, model risk, data management and supplier management risks, each associated with its own forward-looking monitoring metrics.

Economic capital model
Santander's economic capital model for operational risk applies a loss distribution approach (LDA) that captures our operational risk profile and calculates economic capital based on information from the internal event database, external events and scenario analysis. We use it to determine economic capital for operational risk and to estimate expected and stressed loss, which helps set operational risk appetite.

We also use other tools to analyse and manage operational risk, including: the assessment of new products and services, transformation initiatives, business continuity plans, review of the management perimeter and the coverage of corporate insurance policies, recommendations from internal and external auditors and supervisors, and quality assurance for the operational risk programme.

Our operational risk management, assessment and reporting system (Heracles) supports our programmes and tools under a governance, risk and compliance approach and provides information at subsidiary and Group level. It also enhances management decision-making by using common taxonomies and methodological standards, while avoiding duplication and simplifying reporting. Through Heracles we help employees maintain an updated, complete and accurate view of their operational risks.

Operational resilience and business continuity plan

The digital transformation, accelerated by the entry of new players with more digital business models, is revolutionizing how banks operate. While these structural changes create new business opportunities, they also increase exposure to certain risks, such as technology and cyberrisk, and heighten dependence on external providers, which increases potential exposure to events that may affect our operations and the services we provide to customers.

For this reason, regulation continues to emphasize the importance of operational resilience through:

- the EU Digital Operational Resilience Act (DORA) and its implementing standards, which broaden the perspective on information and communication technology risk, understood as any reasonably identifiable circumstance related to the use of networks and information systems that, should it materialize, may compromise the security of networks and systems, tools or processes, operations or the delivery of services;

- the Basel Principles for Operational Resilience guidance; and
- The 'Building the UK financial sector's operational resilience' framework issued by the Bank of England, the Financial Conduct Authority and the Prudential Regulation Authority.

These regulations require us to strengthen our ability to prevent and recover from disruptive events and support the continued delivery of services to our customers across all our businesses, as well as preserve systemic stability.

To comply with these regulations and support the continuity of our customer services, we have an operational resilience and business continuity management system designed to support the continuity of services and activities across all our subsidiaries in the event of a disaster or major incident. It is a holistic management process that identifies potential threats and their impact on our operations and resources (people, applications, data, premises, among others) and defines appropriate protocols and procedures to enable an effective response and recovery in the shortest possible time.

Our operational resilience and business continuity application (ARK@) is essential to maintain and manage the information associated with this process.

In 2025, we continued to strengthen our business continuity management system, with particular focus on:

- identifying critical services and setting impact tolerances for the interruption of each of them in line with the Group's risk appetite and risk profile;
- drawing up internal continuity strategies or alternative procedures to minimize the impact on business activities of potential disruptions to services that critical suppliers provide;
- carrying out mandatory risk assessments and cost–benefit analyses to select the continuity strategies needed for each identified contingency scenario;
- strengthening the annual tests that cover all strategies and plans for each scenario (mainly scenarios of application and data unavailability); and
- enhancing the methodology to manage and monitor the maturity level of subsidiaries' business continuity programmes.

Main mitigating measures

Mitigation measures aim to reduce or eliminate exposure to the main risk drivers identified through internal tools and external sources, as well as to emerging or potentially material risks.

Below we describe the main operational risk drivers, such as fraud, cyberrisk, technology risk and supplier management risk, and their related mitigation measures.

Fraud

Business transformation and digitalisation, together with the emergence of artificial intelligence (AI), have given rise to new risks and threats, such as an increase in payment scams and fraud in credit origination. To mitigate these risks, we have strengthened control mechanisms and implemented new solutions, such as:

- the use of enhanced customer authentication;
- reinforced anti-fraud alerts in origination; and
- transaction monitoring that draws on advanced fraud prevention models.

Other examples of fraud controls we are introducing in online banking include:

- strong customer authentication and signing to approve transactions;
- behavioural biometrics and anti-malware protection; and
- secure identification and registration of customer devices.

Cyberrisk

At Santander, cyberrisk management is an integral part of our risk management and control model. Our cybersecurity management approach is aligned with international best practices and provides a framework to measure and supervise the cyberrisk profile and control environment, including threats and incidents associated with the use of external service providers.

The growing reliance on digital systems places cybersecurity at the core of managing non-financial risks in the financial industry. Our goal is to make Grupo Santander a cyber-resilient organization, capable of preventing, detecting and quickly responding to cyberattacks, while continuously improving and evolving our defences.

Ransomware, in all its forms—including data encryption and exfiltration—remains one of the most significant external threats, with growing sophistication and a broader range of techniques. These techniques are progressively shifting towards non-traditional targets, such as the supply chain, software development processes and identity-based vectors. The risk of distributed denial-of-service (DDoS) attacks also remains, particularly in contexts of heightened geopolitical tensions.

Against this backdrop, recent changes to the Group's structure — driven in particular by developments in the business in Poland (see section 9. 'New reporting structure from 1 January 2026' in the 'Economic and financial review' chapter) and the United Kingdom (see section 2. 'Significant events in 2025' in the 'Economic and financial review' chapter) — call for increased focus on mitigating these cyber risks. These approaches rely on close collaboration across the Group's different organisations, strengthened oversight of transformation processes to identify and mitigate potential risks, and the adoption of robust, tailored cybersecurity measures that are embedded across change processes end to end.

In this context, multiple events have been responded to in recent years, including those involving third-party service providers. For example, on May 14, 2024, Santander announced that it had become aware of unauthorized access to a Santander database, which included certain customer and employee information hosted by a third-party provider. During 2025, no cybersecurity events materially affected the Group's operations or customer data.

From the second line of defence perspective, we have a framework to measure and monitor the cyberrisk profile and its control environment. The key aspects of our cyberrisk oversight programme in 2025 were:

- extending the scope and perimeter of the second line of defence global centre of excellence for cyberrisk, which helps strengthen risk control activities and improve efficiency, simplification and harmonization;
- reviewing oversight processes (risk indicators, risk appetite, reference risks, controls and dashboards); and
- automating and enhancing dashboards by integrating numerous information sources and providing a consolidated view of cyberrisk.

For more details on cybersecurity, see section '7. Technological innovation: artificial intelligence, cybersecurity and fintech ecosystem' in the 'Economic and financial review' chapter.

IT risk

The ambition to make Santander an open financial services platform, driven by digital transformation, requires ongoing review, assessment and enhancement of our controls to manage and mitigate technology risk.

We continue to operate in a demanding and constantly changing environment. Thus, we keep adapting our business model and technology rapidly to support global businesses in their digital transformation, providing them with global platforms that integrate innovative capabilities to meet new customer needs and comply with new regulatory requirements. This effort aims to build a global digital bank that can adapt to changing market demands.

The most salient aspects of our IT risk management programme in 2025 were:

- monitoring the automation of technology-event classification to align with DORA criteria;
- ongoing reduction of obsolescence in key technology assets to make our risk appetite more demanding;
- focusing on the evolution of indicators to improve monitoring of continuity testing and the quality and integrity of inventories;
- designing a methodology to test new IT controls under the process standardization initiative led by the first line of defence, together with its application to established processes.
- we continued to enhance automation to correlate data, identify inconsistencies and outstanding actions, and analyse and report on technology risks, which helps collect and consolidate information, prioritize risk management activities and support more effective independent oversight; and
- making headway with the implementation of automated solutions to analyse controls related to events and changes, strengthening the supervision and control of technology risk.

Supplier risk management

Our digitalization strategy seeks to offer customers the best solutions and products in the market. This may involve an increase in services provided by third parties, greater use of cloud services, and a more intensive use of new technologies.

In 2025, we strengthened our supplier and outsourcing risk management model and the internal control framework in response to an increasingly demanding regulatory environment — particularly the entry into force of DORA and the update of the EBA Guidelines — and to rising risks linked to the cyber environment, sustainability and the complexity of global supply chains. During the year, we continued to stabilize and progressively adopt the technology platform implemented in 2024, which is a key component for integrated management of third-party risks across the Group.

We continued to strengthen our methodologies and contractual frameworks to enhance the oversight of supplier risk in our subsidiaries. We also apply a risk-based approach that pays particular attention to those suppliers that may pose a higher level of risk to our operations and customer services in the Group's subsidiaries. Against this backdrop, we intensified oversight of these suppliers so that they:

- maintain an appropriate control environment, in line with Group policies, and mitigate the risk level of the service provided;
- have business continuity plans that support service delivery in the event of disruptive events;
- maintain appropriate controls to protect sensitive information processed during service delivery;
- insert clauses in contracts and agreements with third parties to protect the interests of our customers and the Group, while meeting current legal obligations;
- are subject to ongoing supervision and monitoring, with a particular focus on service level agreement follow-up and regular testing and review of business continuity plans and related provider tests; and
- put exit strategies in place, including service reversal or migration plans, for services that have a material impact on business continuity and are complex to replace.

At Grupo Santander, we continue to embed sustainability factors risk factors in our strategy and culture to build a more sustainable bank. We have reinforced our certification process, in order to verify whether our suppliers follow the Group's sustainability standards and criteria, given their potential impact on the environment and broader society.

Other key mitigating actions

We are continuously improving mitigation measures related to customer practices, products and business. Santander has specific frameworks and policies on the sale and marketing of products and services, management and analysis of customer complaints, financial crime prevention and compliance with new regulations.

For more details on compliance risk mitigation, see section 6.2 'Compliance risk management'.

Insurance in operational risk management

At Santander, we consider insurance as an important element in operational risk management. The corporate insurance function is responsible for optimizing protection of the income statement through risk-transfer mechanisms.

The Group's global insurance programmes cover physical damage to tangible assets, civil liability, fraud, costs arising from cybersecurity incidents, and third-party claims against Group executives. We supplement these global programmes with a wide range of local policies tailored to each subsidiary's specific circumstances and contracted in line with the insurable risk management model rolled out by the corporate insurance function in each market.

This function, together with the Non-Financial Risks (NFR) area, continuously monitors and oversees the correct application of policies and procedures for managing insurable risk in the entities. Collaboration between both functions is based on:

- NFR's participation, as a permanent member, in the quarterly own-insurance forum;
- NFR's participation in the quarterly claims forum, which monitors and boosts loss recovery through insurance;
- procedures that define the interaction model between NFR and Corporate Insurance, as well as with other functions involved in different types of insurance (real estate, cybersecurity, legal and others), to support appropriate management throughout the identification, assessment, transfer and retention of risk; and
- coordinated, twice-yearly mapping of risks and insurance in the Group to monitor the effectiveness of existing coverage and identify and correct any gaps.

We continue to adapt our use of insurance to align our management approach with changes in the risk environment. As a result, we broadened our analysis and implemented coverage related to climate change, cyberrisk, the digital environment and other elements, so that NFR and Corporate Insurance policies and governance respond to these and other emerging transversal risks.

At the end of 2025, **Santander received Zurich Insurance's Risk Management Award.**

This award recognises companies in Spain that lead the implementation of innovative risk management strategies, strengthening their security and resilience.

In this fourth edition, Banco Santander won the award due to the strong integration of the risk function across the organisation, its advanced risk treatment and transfer mechanisms, and the milestones achieved and projects underway.

Analysis and oversight of controls in Corporate & Investment Banking (CIB)

CIB must continuously enhance the management and control of operational risks linked to its activities due to the nature, specificity and complexity of financial markets. In 2025, it made progress primarily in these areas:

- Optimizing processes and driving automation and operational excellence in the services we provide to our customers, based on a quality culture that promotes the highest management standards in all geographies where CIB operates.
- Strengthening the control framework over market activities, improving control design and execution quality. Unauthorized trading risk remains one of CIB's main management focus areas, for which strict controls are in place.
- Reinforcing third-party risk governance and oversight, tightening control of critical and high-risk services and broadening the scope to include highly dependent suppliers and single points of failure, whose disruption would have a material operational impact. We strengthened risk reviews, checks on critical processes and mitigation measures, while also checking full compliance with DORA requirements.

On cybersecurity controls, we enhanced protection measures against information leaks and cyber attacks in connections with third parties (including SaaS[16] providers), strengthened user access controls to systems (privileged user access), reinforced technology contingency testing, and implemented new controls to meet new DORA requirements. In addition, we stepped up supervisory and challenge exercises to confirm proper control execution.

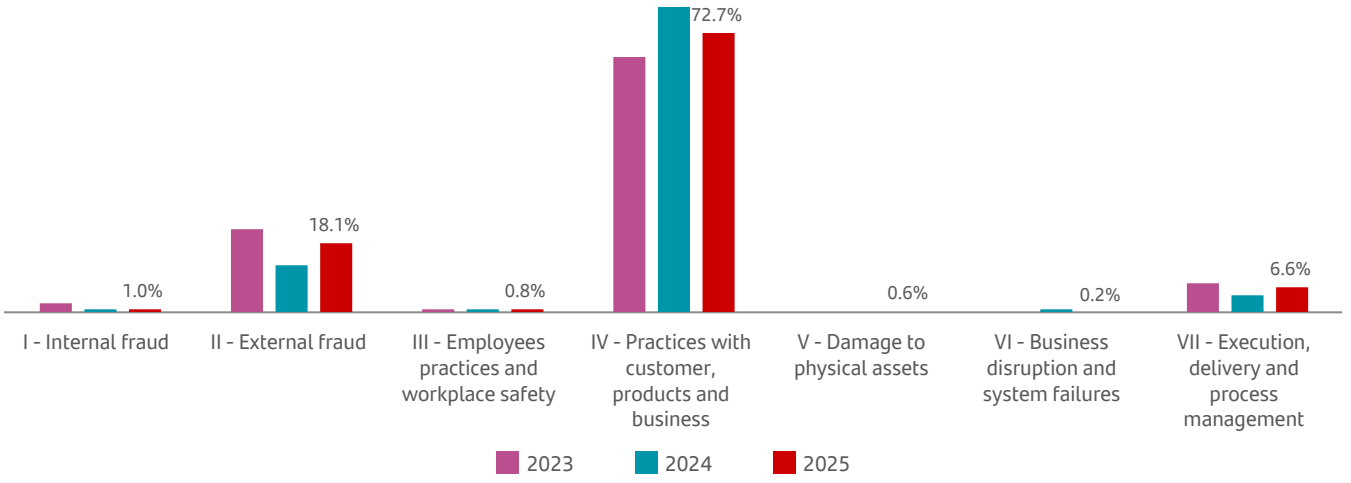
[16] SaaS - Software as a Service

5.3 Key metrics[17]

The distribution of net losses (including incurred losses and net provision charges) by Basel[18] operational risk categories over the past three years is as follows:

Net losses by operational risk category[A]

(% o/total). Dec. 25 data



A. Does not include employees litigations in Brazil.

Santander considers employee litigation in Santander Brasil as a personnel expense. Our governance bodies (risk control committee, risk supervision, regulation and compliance committee and board of directors) continuously monitor expense levels using specific risk appetite metrics and adopt special measures to reduce them. These expenses are reported under the categories defined by the Basel framework for operational risk.

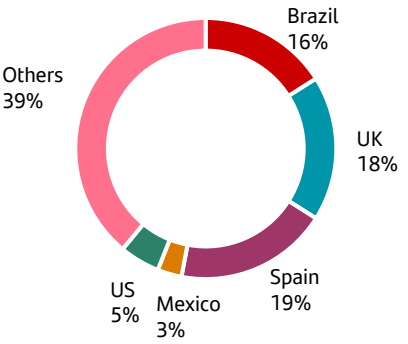
In 2025, the most significant losses by category and geography relate to litigation in Santander Brasil, the UK, Poland and Spain. During the year, operational risk losses in the UK remain affected by provisions recognised for the Motor Finance (motor finance commissions) case.

For more information on operational risk losses, see Grupo Santander's Prudential Relevance Report (Pillar 3).

The net losses by country were:

Net losses by country[A]

(% o/total). Dec. 25 data



A. Does not include employees litigations in Brazil.

[17] Certain figures contained in this section have been subject to rounding to enhance their presentation. Accordingly, in certain instances, the sum of the numbers in a column or a row in tables contained in this report may not conform exactly to the total given for that column or row.
[18] The Basel categories incorporate risks which are detailed in section 6 'Compliance risk'.

6. Compliance risk

6.1 Introduction

The compliance function is an independent control function within the second line of defence. It reports directly and regularly to the board of directors and its committees through the Group CCO. It facilitates critical, independent debate, oversight and control in terms of corporate compliance, conduct and reputational risk, and financial crime. This includes reporting on compliance-related risks and the effectiveness of the compliance programme in managing them. The function works closely with the wider risk team to support and promote a common risk and compliance culture.

Our compliance operating model and framework are well established and delivered consistently across the Group. They consider applicable legal and regulatory requirements and expectations of the Group, and promote well-defined ethical principles and good conduct requirements for the benefit of employees, customers, shareholders and the communities we serve.

During 2025, we continued consolidating and strengthening its programme to deliver resilient and effective compliance management in the face of increasing geopolitical uncertainty and ongoing regulatory change. Key priorities include reinforcing oversight of compliance and financial crime risks across the Group, enhancing the use of data analytics and technology to support risk identification and reporting and driving greater consistency and coordination across global compliance teams.

These actions aim to keep the function forward-looking, risk-based and aligned with both internal expectations and external supervisory standards.

6.2 Compliance risk management

We have a robust and consistent framework to meet legal and regulatory requirements at Group and subsidiary level. The underlying core programmes are risk-based and reflect the size and complexity of the Group. The key risks covered in this section include:

- Employees compliance: risk of non-compliance with legal and regulatory requirements as outlined in Grupo Santander's General Code of Conduct (GCC), due to the behaviours and conduct of our employees. Every employee is expected to operate on the basis of the highest ethical considerations and to be free of any conflict of interest at all times.
- Conduct risk: risk arising from inadequate practices in the Group's relationship with customers, including how they are treated and the suitability of products and services. Inadequate treatment includes the risk of not taking due account of customer vulnerability, so that we act in their best interests and offer viable solutions where possible.
- Reputational risk: risk of current or potential negative economic impact due to damage to the perception of the bank among employees, customers, shareholders, investors and the wider community.
- Financial crime risk: risk arising from the potential misuse of the Group's resources, products or services for criminal or illicit purposes, including money laundering, terrorism financing, breaches or circumvention of international sanctions programmes, financing of the proliferation of weapons of mass destruction and other crimes, such as corruption, bribery, etc.

Corporate compliance

This function oversees and controls regulatory risk relating to employees, personal data processing, securities markets (markets conduct) and regulatory disclosures to the Spanish securities market authority, Comisión Nacional del Mercado de Valores, (CNMV), and other regulatory bodies where Santander is a publicly traded company.

The core elements of corporate compliance are:

A. Employees

We promote a culture of ethical behaviour and compliance among our employees, with standards for preventing corporate financial crime risk, conflicts of interest and anti-competitive practices according to the GCC. To support this, we operate Canal Abierto, Grupo Santander's whistleblowing channel, through which employees and other stakeholders can anonymously and confidentially report financial and accounting irregularities, as well as breaches of internal or external regulations and corporate behaviours.

Employees' compliance

Canal Abierto

- Provide a channel for employees to report unethical conduct and breaches of internal or external regulations.
- Promote a culture of speaking up and truly listening.
- Investigate conduct that is misaligned with our ethics and compliance principles, and take the necessary measures when appropriate.

Training and awareness

- Develop employee training programmes and awareness campaigns on corporate defense, antitrust and employee compliance.
- Provide ongoing communications about ethics and expected employee conduct to the entire Group to build relationships based on trust.

Policies and procedures

- Promote compliance with the Group's GCC and enact specific policies and procedures to enforce it.
- Report to governing bodies regularly.

Queries about ethics

- Manage queries from employees and governing bodies members about ethics and internal regulation.

For more details on Canal Abierto, see section '4.3 Ethical channels' in the 'Sustainability statement' chapter.

B. Privacy

At Santander, we have a specialist office that enforces our corporate policy on personal data protection and sets out guidelines for all our subsidiaries. We have a comprehensive framework designed to effectively manage the oversight of personal data privacy within the Group.

C. Market regulation

The Markets Conduct team within corporate compliance oversees the application of the Code of Conduct in Securities Markets (CCSM), particularly personal account dealing activity by Grupo Santander employees and directors. It is also responsible for the control environment applicable to transactions in treasury shares and Santander's share buy-back programmes, and for monitoring the use of and contribution to benchmarks.

In addition to applying the CCSM, the risk of market abuse is primarily managed with support from CIB Compliance, as outlined below:

- The surveillance function is responsible for: (i) monitoring the bank's activity in financial markets; (ii) deterring and detecting market abuse and other types of misconduct; and (iii) establishing monitoring systems for both the bank's orders and transactions in financial markets and for the communications of employees carrying out this activity.
- The global control room function is responsible for preventing unlawful disclosures of inside information and transactional conflicts of interest.
- The CIB Compliance function also oversees ongoing adherence to global regulatory frameworks and effective implementation of new requirements across jurisdictions. In 2025, focus areas include regulatory reporting, inducements, and algorithmic trading under MiFID II and EMIR[19], alongside continued oversight of Dodd-Frank and the Volcker Rule. The function maintains proactive monitoring of upcoming reforms to support consistent, well-governed compliance across the Group's operations.

D. Relevant Information

The Corporate Compliance's Relevant Information team is responsible for: (i) leading the assessments to decide whether a particular piece of information should be classified as inside or other relevant information; (ii) disclosing relevant information, as well as inside information on the Group, to the markets via both our website and the CNMV's website; and (iii) reporting on transactions with treasury shares or significant holdings of Banco Santander, and on transactions and Santander share-based remuneration schemes of executive directors and senior managers to the CNMV and to other regulatory bodies in markets where Santander is a publicly traded company.

[19] European Market Infrastructure Regulation.

E. Automatic exchange of tax information between countries

The data management function oversees automatic tax disclosure between subsidiaries (pursuant to FATCA[20] and CRS[21]) by checking regular reporting obligations and execution of local action plans.

Key corporate compliance lines of action in 2025

Policies, procedures and guidelines

- Revamped CCSM to align its content with best practices and supervisory expectations, including those of US authorities.

Subsidiaries Oversight and Awareness

- Progress on defining the Binding Corporate Rules control framework to facilitate international data transfers from the EU to third countries.

Enhancement of controls and reporting

- Implemented a common whistleblowing channel solution in eight of Group's main subsidiaries, managed by an external provider, to support consistent management of the whistleblowing channels across the Group.
- Enhanced risk reporting by providing the board with a global view of breaches of the Code, including Canal Abierto cases and those received by other means (mainly by People & Culture).
- Revised the Canal Abierto policy and procedure to harmonise the criteria for managing the Group's whistleblowing channels.

Conduct and reputational risk

The conduct and reputational risk function promotes appropriate levels of consumer protection by fostering a customer-centric culture throughout the entire customer lifecycle (product design, marketing, and post-sales) and across all interactions with the Group.

In addition, the function helps maintain a low reputational risk profile through the definition of criteria and controls to minimize risk, enabling the analysis, mitigation and proactive management of relationships with stakeholders.

A. Conduct risk

Conduct risk related to customers may arise in various processes, such as product design, marketing, sales and customer interactions and service during the post-sales phase.

The Group maintains a robust and well-established conduct risk management framework for its identification, assessment, monitoring and escalation. The model aims to proactively detect behaviours or practices that could lead to regulatory breaches, customer detriment, or reputational damage. It also establishes processes that enable a comprehensive understanding of risk exposure and vulnerabilities across the Group.

[20] Foreign Account Tax Compliance Act
[21] Common Reporting Standards

Key elements of the conduct risk management model

Internal regulation and governance

- Define principles and processes through a strong regulatory-based conduct risk management model.
- Oversee local product-approval activity and chair the Product Governance Corporate Forum to mitigate conduct risk in the approval of products and services.

Oversight of key processes

- Priority focus that our products and services meet customer needs.
- Sales targeted at appropriate markets in a transparent manner, supported by appropriate training and customer-focused incentives.
- Aim for high-quality customer service and post-sale support, promoting fair treatment.

Risk management

- Monitor marketing performance.
- Identify and assess risks using customer voice, risk management tools, and supervisory and sectorial information.
- Escalate issues and oversee action plans.

Key conduct risk lines of action in 2025

Implementation of responsible practices with end users

- Conduct thematic analyses on relevant sector risks to assess potential exposure and controls within the Group. Monitor locally defined action plans arising from other thematic reviews.
- Development of ESG and Corporate Sustainability Reporting Directive -aligned metrics on transparency and accessibility.
- Enhancement of the formal complaints/other dissatisfactions management processes, following a risk-based approach to improve accessibility and efficiency in dissatisfaction management, with shorter response times, better data capture, strengthened follow-up, while maintaining fair and appropriate treatment and attention to the customer voice.

Contribution to the simplification strategy

- Simplification of key identification and monitoring processes (risk control self-assessment – RCSA – and key risk indicators), to support a more efficient, risk-based approach.
- Continuous enhancement of the product-approval process, adopting a risk-based approach that increases local autonomy within the Group's governance and oversight framework.
- Contribution to the simplification of the Group's product catalogue to strengthen customer protection, transparency and fair outcomes.

Promoting best practices in digital strategy

- Establishment of a compliance centre of excellence for digital assets, artificial intelligence (IA), Banking as a Service (BaaS) and payments, strengthening oversight and governance in fast-evolving technologies (e.g., crypto assets, AI). This initiative aligns with our broader strategy to embed compliance and ethical considerations at the core of innovation. The centre provides specialised expertise to support adherence to applicable laws, ethical standards and internal policies in our blockchain, digital asset and AI activities.

For more details on conduct with customers, see section '3.3 Our customers' in the 'Sustainability' chapter.

B. Reputational risk

Reputational risk primarily derives from stakeholders' perception of the bank in the markets where we operate. It can arise from multiple sources: business or business support activities, as a consequence of other risks; the economic, social and political environment, or from events related to our competitors. Our reputation may also be affected by negative media coverage, whether merited or not.

Reputational risk applies to all Group activities and is identified, managed and mitigated by business and support functions, particularly those that engage with stakeholders. The second line of defence, within compliance, sets policies, oversees the risks, challenges the first line, and reports and escalates to the relevant governing bodies (Group compliance committee, board risk committee and the board).

Our reputational risk model takes a preventive management and control approach, with effective handling of early-warnings and procedures to identify, manage and monitor risk events. It also includes elements to identify, analyse and monitor key stakeholders' perception of Grupo Santander and the financial sector, and how those perceptions may evolve. The model is consistent with the Group's overall risk management and control processes (risk profile, risk appetite, economic capital, and emerging risks, among others).

Key reputational risk lines of action in 2025

Policies, procedures and guidelines

- → Santander fully supports nations' right to defend their freedom and territories. At a time when many nations, especially in Europe, need to strengthen their defence and build resilience in response to growing political tension, Santander has updated our Defence Policy. The revised policy reaffirms Santander's commitment to provide financial solutions and support for companies which are involved in defence and related sectors. We believe this is a responsible approach, and one that will help create jobs, boost innovation and support economic growth.
- → Update of the Sensitive-activities policy, including detailed criteria to assess the Group's participation in certain activities that may generate reputational risk exposure, strengthening the control environment.
- → Review of the reputational risk event management guidelines to improve assessment accuracy.

Risk management, methodologies and control

- → Review and update of risk appetite metrics.
- → Implementation of a comprehensive assessment of reputational risks for all Group units.

Subsidiaries oversight and reporting

- → Enhancement of oversight, governance and challenge processes of units.
- → Continuation of the global forum for Group-countries discussion on new processes and reputational risk management.

For more details on Grupo Santander stakeholders, see section '1.3 Stakeholders engagement' in the 'Sustainability statement' chapter.

Financial Crime Compliance (FCC)

Financial crime risk can arise from criminal acts or from the use of the Group's products, services, or operations for illegal activities. It refers to the potential misuse of these to facilitate unlawful conduct, including money laundering, terrorist financing, associated predicate offences, or breaches of international sanctions regimes.

Business functions form the first line of defence, and are primarily responsible for identifying, managing, mitigating and reporting financial crime risk, in line with the Group's risk culture. The accountable executive for FCC oversees the effective implementation and execution by each business of the FCC framework and programme.

The FCC function, as part of the second line of defence, oversees financial crime risks across the Group and maintains the policies and procedures necessary to manage the business activities within the established risk appetite. It is responsible for designing and monitoring the FCC programme, setting minimum compliance standards, and advising and challenging the first line, maintaining alignment with Group-wide policies and regulatory expectations. The FCC function also coordinates closely with other control functions and engages regularly with relevant authorities.

In 2025 the FCC Function continued to strengthen the Group's capacity to prevent, detect, and respond to financial crime risks through a robust and risk-based programme. The focus remained on consolidating a resilient control environment, enhancing oversight and analytics capabilities, and promoting a proactive and integrated approach to risk management across all businesses and jurisdictions. Particular attention was given to the evolving regulatory landscape, including active engagement in the development of future EU anti-money laundering (AML) regulatory standards. The Group also advanced the automation and digitalization of key FCC processes to promote greater efficiency, consistency, and responsiveness in oversight activities.

In parallel, the FCC function reinforced collaboration with domestic and international authorities and law enforcement agencies to enhance information sharing and the ability to detect and disrupt financial crime. Continued efforts were made to anticipate and address emerging risks, so that controls and customer due diligence processes remain robust, risk-based, and aligned with regulatory expectations.

These initiatives underscore Santander's ongoing commitment to fostering a strong financial crime compliance culture and to supporting the integrity and transparency of the financial system in which it operates.

Key FCC lines of action in 2025

Frameworks & policies

- Further development of the internal regulatory framework, to maintain alignment with emerging financial crime threats and typologies (e.g., fraud) and to provide the Group with an adaptable infrastructure and control framework to appropriately manage risks arising from innovation (e.g., crypto assets).

One FCC strategic program

- The Group continued to enhance its financial crime control framework through the One FCC strategic programme, which integrates FCC tools and processes, aligned with the internal regulatory framework across all FCC pillars. The programme also piloted the supervised use of artificial intelligence to complement existing control processes, exploring more efficient and effective ways to strengthen operational execution and risk-management capabilities.

Financial Intelligence units

- The FCC function plays a key role in strengthening the Group's financial crime prevention capabilities through the ongoing execution of the annual financial crime threat assessment, the issuance of Financial Intelligence Unit (FIU) alerts, and the continuous monitoring of geopolitical developments.
- In line with international priorities to combat the financing networks linked to Foreign Terrorist Organisations (FTOs) and to the trafficking of synthetic drugs such as fentanyl, a dedicated task force was established to enhance risk identification and response capabilities in this area. This initiative, supported by close collaboration across relevant geographies and enhanced information-sharing within the FIU network, helps reinforce the Group's ability to anticipate and mitigate emerging financial crime risks of global concern.

Financial crime oversight

- To further strengthen oversight effectiveness, the Group and local FCC oversight teams continued to evolve their methodologies towards a more risk-based and outcome-oriented approach. Independent assessments were conducted to evaluate adherence to the Group's FCC risk management framework and policies, supporting operation within the board-approved risk appetite across all obliged entities.
- These efforts were supported by the development and deployment of dedicated oversight tools designed to enhance consistency, efficiency, and depth across all FCC pillars.

Trainings and awareness

- Targeted training sessions were delivered to raise awareness and promote a consistent understanding of regulatory developments across all Santander obliged entities, reinforcing the Group's commitment to a sound and cohesive financial crime compliance culture.
- Furthermore, the FCC function enhanced awareness and responsiveness across the Group through the regular dissemination of alerts, regulatory and sanctions updates, and timely communications on significant developments, thereby supporting a proactive, informed, and cohesive financial crime compliance culture.

Regulatory and Supervisory Developments

- Close monitoring of the evolving Anti-Money Laundering Authority (AMLA) framework, to support internal alignment with anticipated regulatory requirements and to contribute to the development of robust and actionable Regulatory Technical Standards (RTS) through ongoing industry collaboration.

For more details on FCC, see section 4.2.3 'Financial Crime Compliance (FCC)' in the 'Sustainability statement' chapter.

7. Model risk

7.1 Introduction

A model is a system, approach or quantitative method that applies statistical, economic, financial or mathematical theories, techniques and assumptions to transform data into quantitative estimates.

We use models mainly in credit origination (scoring/rating) and credit behaviour, for capital and provisioning calculations, to measure market, structural, liquidity, operational and compliance risk, and for accounting and financial control, among other purposes.

The use of models gives rise to model risk, which is the potentially adverse consequences of decisions based on poorly developed, inadequately implemented or incorrectly used models. Model risk may lead to financial losses, inappropriate business or strategic decisions, or harm to Grupo Santander's operations.

7.2 Model risk management

At Grupo Santander we have been measuring, managing and controlling model risk for many years. The Model Risk area, which covers both the parent company and the main subsidiaries, focuses on the control, management and oversight of this risk.

To manage model risk properly, we have clear internal regulations that set out the principles, responsibilities and processes to organize, approve, manage and govern models throughout their life cycle.

We classify models according to their relevance, taking into account both a global and a local perspective of materiality and recognizing the diversity of circumstances and regulatory requirements across geographies and business lines. The intensity of model risk management and oversight depends on this classification and on other factors such as technical complexity or the level of risk each model represents for Grupo Santander. Given their particular importance to the Group, regulatory models follow the most intensive monitoring and management standards.

Grupo Santander follows these stages of the model life cycle:

1. Identification
We include all identified models within the scope of model risk control and, therefore, in the Group's centralized inventory, a single platform based on a uniform taxonomy for all models used in the business units. This inventory is a key element for effective management of this risk as it contains detailed information on each model and enables close monitoring in line with its significance.

2. Planning
This is an internal annual exercise that the subsidiaries' governance bodies approve and that we review on an aggregated basis. It sets out a strategic action plan and identifies the needs related to the models within the scope of the function to be developed, validated and implemented during the year.

Subsidiaries' management bodies, including the local executive risk committee (ERC) or an equivalent body, approve the model plan for their remit. At corporate level, the subsidiaries' plans, together with the global model plan, are submitted to the model approval forum for review and to the ERC for approval.

3. Development
In this phase, the model's unit helps strengthen risk management by developing models and using data in line with current regulatory requirements.

This unit leads model development for all types of risk, with a particular focus on meeting regulatory expectations (internal ratings-based approach – IRB –, IFRS 9 and internal model approach – IMA –, among others). It operates with specialist local and global teams. Experts in each geography develop local models, drawing on their knowledge of each unit's specific features and needs, while global experts define modelling standards, develop cross-cutting models and support geographies in applying these standards and/or in model development itself, where appropriate.

We also apply a boxification methodology that facilitates task encapsulation and automation in model development, fostering process standardization, and maintains quality.

In 2025 we delivered the first updates, following the IRB Repair Program, of the main IRB models in Europe, aligning them with supervisory expectations. We also continued to implement the IRB strategy, which aims to reinforce consistency in IRB application across portfolio types in all Group subsidiaries. In addition, we carried out regular updates of the model families commonly used in management.

At Santander we drive innovation, including the responsible use of machine learning and generative artificial intelligence. Our priority in modelling is to deepen the use of these new techniques by promoting initiatives that enhance and simplify processes.

4. Validation
Independent model validation is a regulatory requirement and a key pillar of model risk management and control. A specialist team that operates fully independently from developers or users issues technical opinions on the suitability of internal models. These validation opinions result in a rating that summarizes the model risk associated with each model. We clearly define the intensity and frequency of validation activities and follow a risk-based approach.

We have set up a supervisory framework within the internal validation function to strengthen control and safeguard the traceability, integrity, consistency and homogeneity of validation results. Under this framework, we apply ex ante and ex post checks before formally publishing the outcome, depending on the relevance and complexity of the model, and promote standardized practices at Group level in line with internal policies and standards.

5. Approval
Before implementation and use, each model must be presented to the internal governance bodies for approval. To this end, we have defined governance for our model inventory based on model significance.

Models will be approved by the ERC, model approval forum, local model governance bodies or by model owners, depending on such factors as: model type or use (regulatory or non-regulatory), whether the model is local or global, the type of model change, model classification, and/or the powers delegated to each subsidiary.

6. Implementation and use
We integrate newly developed models into IT systems, which can also pose model risk. Technical teams and model owners run tests to confirm that implementation matches the methodological design and delivers the expected results.

7. Monitoring and control
Model control and monitoring aims to review whether models operate properly and remain fit for purpose. Otherwise, we adapt or redesign them. Control teams also work to keep model risk management aligned with the principles and rules set out in the overarching model risk framework and related internal policies.

This recurring process seeks to keep the entity's model risk at appropriate levels and, more specifically, within the defined risk appetite limits.

Main activities in 2025

To strengthen model risk culture across the Group and position Santander as a leading bank in this area, we focused our 2025 strategy on:

- technological transformation and process redesign towards a more efficient, integrated and global operating model that enhances agility and consistency in validation by incorporating new technologies and tools;
- ongoing enhancement of regulatory IRB models to align them with supervisory expectations, implementation of the Group's IRB strategy and adaptation to the new FRTB regulatory framework. We created a global regulatory office to coordinate regulatory initiatives and promote consistent and coherent management in all of the Group's markets; and
- expansion of the model risk scope to cover artificial intelligence systems by adapting and evolving on internal processes to support sound and responsible management of these models. We promote compliance with regulatory requirements, particularly the EU AI Act, and with industry good practice.

8. Strategic risk

8.1 Introduction

Strategic risk is the risk of losses or damage arising from strategic decisions or their poor implementation, that affect the medium and long term interests of our key stakeholders, or from an inability to adapt to changes in the environment.

Grupo Santander's business model is a key element of our strategic risk. It must be viable, sustainable and capable of generating results in line with our annual objectives and in a manner that is consistent with the Group's long-term vision.

Strategic risk has three key components:

1. **Business model risk:** This includes, among other things, the risk that the business model becomes obsolete, loses relevance or stops generating the expected results.

2. **Risks associated with the institution's strategic plans,** including both the long-term strategic plan and the three-year financial plan, encompassing the risk that the plan may be inherently inadequate or based on assumptions which could result in the non-achievement of the expected outcomes.

3. **Strategy execution risk:** Linked to the implementation of the three-year strategic plan, this covers potential deviations due to internal or external factors, the lack of capacity to respond to changes in the business environment, and the risks associated with corporate development transactions and the marketing of new products and services.

8.2 Strategic risk management

The pillars of our business model and, therefore, our strategy, are customer focus, our global scale combined with local leadership, and diversification by business and geography. Our five global businesses play a key role in increasing value creation, profitability and sustainable shareholder returns, while we keep a strong and diversified balance sheet through prudent risk management.

At Grupo Santander we treat strategic risk as a transversal risk. To manage it, we use an operating model that brings together the governance, procedures and tools needed to monitor and control this risk, in line with our risk appetite statement. This model also serves as a reference for our subsidiaries.

We continuously monitor changes in the environment (competition, regulation, market conditions, and others) and within the organization itself by analysing potential risks and their mitigating factors. The strategic risk function engages with key areas in the first and second lines of defence with the aim of having these mitigating measures ready to deploy when required.

Our strategic risk operating model rests on these processes:

- **Challenging strategic plans:** The strategic risk function, supported by specialist teams within the Risk division, challenges the long-term strategic plan and the three-year financial plan by identifying potential threats that could jeopardize the achievement of our objectives.

  During 2025, we strengthened the challenge of the three-year financial plan both in our global businesses and the Group's subsidiaries. We did so under the new planning structure, which has two phases: a first top-down phase, in which the global businesses set their key priorities and ambition level for the projected metrics; and a second bottom-up phase, in which the subsidiaries join the process so that their targets align with the ambition level defined in the first phase.

- **Emerging risks:** We identify, assess, monitor and proactively manage potential risks that, under stressed scenarios, could have a material impact on the Group's profitability, liquidity or solvency.

  Throughout 2025, we moved towards a more pragmatic approach, with a particular focus on geopolitical risks, which we fully embedded in our day-to-day management.

  In the following section, we describe the main emerging risks identified in 2025.

- **Analysis of business model development:** We assess and identify the main threats to the Group and its subsidiaries' business plan and strategic objectives. This analysis covers three dimensions:

  - Strategy execution: Assessment of the risk of deviation from established plans and objectives, together with the execution status of strategic projects.

  - Viability and sustainability: Assessment of our relative position versus competitors and the risk of not creating value for shareholders.

  - Predictability of the business plan: Risk that results may not remain predictable and stable over time.

    In 2025, we continued to focus our monitoring on value creation. As a result, we added further risk-adjusted profitability metrics under the shareholder value added (SVA) approach.

- **Corporate development transactions:** We help make sure that transactions of this nature include an assessment of their impact on the Group's risk profile and risk appetite.

  The following transactions were particularly significant in 2025: (i) the acquisition of TSB Banking Group plc, which will strengthen Santander's presence in the UK retail banking market; (ii) the sale of 49% of Santander Bank Polska, which will generate significant capital gains and further strengthen the Group's CET1 capital ratio, along with the acquisition of 100% of Santander Consumer Bank Polska; and (iii) the merger of Openbank and Santander Consumer Finance, with the objective that all European consumer finance businesses progressively operate under the Openbank brand.

- **Assessment and validation of new products and services:** We support pre-launch reviews of proposals for new products and services to align them with the Group's strategy, with a particular focus on their risk-return profile.

  In 2025, we continued to drive digital and consumer finance initiatives, such as Zinia.

- **Monitoring strategic projects:** We take part in preparing and updating the annual inventory of strategic projects (defined by the strategy committee), assessing removals and new entries based on their progress, impact and importance. We also carry out a twice-yearly review of their performance, providing an independent view that supports their alignment with the Group's strategic priorities and risk appetite.

  In 2025, we prioritized cross-Group initiatives aimed at boosting efficiency and global coordination, including the development of the operating model for corporate functions and progress in the transformation towards a new way of working based on an agile organizational approach, in order to accelerate execution and the achievement of key objectives.

Additionally, the strategic risk function provides a consolidated view of our exposure to this risk, provides an independent opinion and challenges first-line activities. To do so, it regularly submits the Strategic Risk Report to senior management, which covers the monitoring of our strategy execution, emerging risks, business model performance, the analysis of corporate development transactions, the launch of new products, and the monitoring of strategic projects.

8.3 Emerging risks in 2025

Through our emerging risk exercise, we identify, assess and monitor risks that, under low-probability stress scenarios, could have a significant impact on Grupo Santander's business model, profitability or solvency.

Proactive management of these risks is key to avoid or mitigate their negative effects and deviations from the targets set, through the implementation of previously defined action plans.

The first and second lines of defence, both in our subsidiaries and at the corporate centre, take part in this process. The risks we identify also feed into the idiosyncratic scenarios used in exercises such as the ICAAP and in the Group's viability, recovery and resolution plans.

During 2025, against a global backdrop marked by geopolitical uncertainty, trade tensions among major powers and the conflicts in Ukraine and the Middle East, the Group stepped up its focus on managing these risks. As part of this effort, we strengthened monitoring through the use of geopolitical risk heat maps to assess the potential impact of these risks on our portfolios. This exercise covers all our subsidiaries and businesses and incorporates existing exposures by portfolio and by economic sector. Throughout the year, we updated this monitoring with analysis of internal and external early warning indicators to assess developments. This analysis supports decisions, where applicable, on activating the relevant playbooks based on the different indicators and adopting specific measures for certain sectors, portfolios or individual clients.

In addition to macroeconomic and geopolitical risks, other emerging risks that stood out in 2025 were: those related to new technologies, AI and cryptoassets; those linked to critical service providers; and the risk of disintermediation associated with central bank digital currencies (CBDCs), particularly the digital euro.

Below we describe the main emerging risks identified in 2025:

Geopolitical risks

Escalation of tariffs and uncertainty in global trade

A resurgence of global trade tensions, with the US stepping up protectionist measures and reigniting tariff disputes, could lead to reciprocal measures such as export controls. This would create risks for global supply chains, add inflationary pressures, and weigh on economic confidence.

As a result, uncertainty in international trade would increase, affecting growth forecasts, investment flows and market stability, and leading to lower output mainly in the US, but also with global spillovers for its trading partners.

Military conflicts: Ukraine and the Middle East

In Europe, the potential rise in hybrid warfare actions by Russia — including cyber-attacks, sabotage and disinformation campaigns — would steadily increase geopolitical risk, and could undermine the resilience of critical infrastructure and fuel higher volatility and economic uncertainty in the region.

In the Middle East, the possible resumption and potential escalation of conflict create an additional source of global vulnerability that could disrupt commodity markets, energy supply chains and key trade routes. These tensions could translate into further inflationary pressures, a deterioration in financial conditions, and weaker global growth prospects.

Macroeconomic risks

Persistently low economic growth

The slowdown in global growth is a key risk for financial stability, especially in Europe. Persistently weak growth, together with low credit demand, margin compression and a decline in investment, could significantly amplify systemic vulnerabilities and become a material threat to global financial stability.

The combination of insufficient economic growth and a much more complex European regulatory framework than in the US is weighing on the competitiveness of European companies and creating challenges for innovation. Against this backdrop, progress towards smart regulation is essential to support efficient capital

allocation and promote productive investment, particularly in strategic areas such as technological innovation, digitalization, and the energy transition.

Potential correction in financial markets, private credit and excessive sovereign debt

Overvaluation of certain assets, the rapid growth of private credit and high sovereign debt levels increase the risk of an abrupt correction in global financial markets. A sudden change in investor risk appetite — for example, triggered by disruptions in areas such as AI, private credit or US regional banks — could lead to sharp falls in asset prices.

Tensions would intensify if highly leveraged or less liquid financial intermediaries were forced into fire sales, which would significantly tighten global financial conditions.

To manage macroeconomic and geopolitical risks, Grupo Santander applies risk policies and processes designed to keep our risk profile within the limits defined in our risk appetite statement. Together with our geographic and business diversification, this makes us more resilient. In addition, our models incorporate the effect arising from macroeconomic and geopolitical risks, strengthening our forward-looking analysis and our ability to anticipate potential impacts. To mitigate these risks, we carried out the following actions throughout 2025:

- Ongoing monitoring of the macroeconomic and socio-political environment, focusing on key indicators that can trigger the escalation of events and specific risks to the special situations committees.
- Stronger monitoring of early-warning indicators and risk-management playbooks to enable a rapid response to changes in macroeconomic conditions and reinforce operational capacity.
- Adjustment of limits and exposures to reflect our risk appetite, along with updates to our internal sovereign risk ratings.
- Proactive portfolio reviews to reduce exposure to cyclically vulnerable sectors, where needed.
- Strengthening of our scenario analysis capabilities by increasing their granularity.

Other emerging risks

Risks related to new technologies, AI and cryptoassets

In addition, the Group monitors and manages those risks arising from the emergence or large-scale adoption of new technologies, such as artificial intelligence and those related to digital assets. On the one hand, these initiatives create significant opportunities in terms of innovation, efficiency gains, new products and services, among others.

On the other hand, they may create new risks or have a cross-cutting impact on existing ones. Moreover, their novel nature means they are generally subject to incomplete, evolving and fragmented regulation across the different jurisdictions in which the Group operates.

Santander is progressing in adopting the benefits of these technologies under a strong risk control framework that includes, among other elements: the use of corporate risk management tools (risk appetite, emerging risk oversight, governance and policies, etc.); upskilling/reskilling of employees so they develop the capabilities needed to address digital challenges; monitoring regulation through specialist teams and participation in industry groups.

Potential disruption of critical information and communication technologies service providers

Digitalization continues to increase financial institutions' dependence on information and communication technologies. This brings growing exposure to potential disruptions, operational failures or prolonged outages that could affect service delivery and business continuity. At the same time, sector concentration in mainly US-based global providers — such as cloud service providers (CSPs) — is developing in a context which the EU is promoting various initiatives linked to technological autonomy and sovereignty.

Grupo Santander applies several mitigating measures, among others: extensive due diligence subject to strict governance before onboarding these providers, including certification, ongoing monitoring and regular reviews, as well as exit strategies and business continuity plans in case of potential failures or disruptions, which we test regularly.

Central bank digital currencies and disintermediation risk for banks

Digital versions of fiat currencies issued by central banks (CBDCs), such as the European Central Bank's (ECB) digital euro project, could have impacts on banking intermediation and payment activity, and influence lending capacity with potential macroeconomic implications. If citizens held digital euros directly with the central bank, this could affect deposit dynamics and certain patterns in the use of financial services.

Grupo Santander closely follows the development of the digital euro to assess its potential implications and opportunities and takes part in technical discussions and industry forums to anticipate the most important aspects of its design. Analysis focuses particularly on the digital euro, since the development of a retail CBDC has stalled in other jurisdictions (for example, the United States) due to recent regulatory decisions, which places the European project as the main reference in this area.

Glossary of terms, acronyms and abbreviations

2023 AGM	Annual general shareholders' meeting of Banco Santander held on 31 March 2023 at second call
2023 Investor Day	Investor Day held by Banco Santander in London on 28 February 2023

However, in all matters of interpretation of information, views or opinions, the original language version of our report takes precedence over this translation.

Independent auditor's report on the consolidated annual accounts

To the shareholders of Banco Santander, S.A.

Report on the consolidated annual accounts

Opinion

We have audited the consolidated annual accounts of Banco Santander, S.A. (the Parent company) and its subsidiaries (the Group), which comprise the balance sheet as at 31 December 2025, and the income statement, statement of recognised income and expense, statement of changes in total equity, statement of cash flows and related notes, all consolidated, for the year then ended.

In our opinion, the accompanying consolidated annual accounts present fairly, in all material respects, the equity and financial position of the Group as at 31 December 2025, as well as its financial performance and cash flows, all consolidated, for the year then ended, in accordance with International Financial Reporting Standards as adopted by the European Union (IFRS-EU) and other provisions of the financial reporting framework applicable in Spain.

Basis for opinion

We conducted our audit in accordance with legislation governing the audit practice in Spain. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the consolidated annual accounts* section of our report.

We are independent of the Group in accordance with the ethical requirements, including those relating to independence, that are relevant to our audit of the consolidated annual accounts in Spain, in accordance with legislation governing the audit practice. In this regard, we have not rendered services other than those relating to the audit of the accounts, and situations or circumstances have not arisen that, in accordance with the provisions of the aforementioned legislation, have affected our necessary independence such that it has been compromised.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated annual accounts of the current period. These matters were addressed in the context of our audit of the consolidated annual accounts as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key audit matters	How our audit addressed the key audit matters

Estimation of impairment of financial assets at amortised cost - loans and advances to customers – for credit risk

The models used to estimate the expected credit losses, especially the updates made to consider the current macroeconomic environment, entail a high complexity by incorporating estimates and judgments.

These estimates require an elevated component of judgement by management and are one of the most significant and complex estimates in the preparation of the consolidated annual accounts as at December 31, 2025 included herein, therefore they have been considered one of the key audit matters.

The main judgements and assumptions used by management are the following:

- The estimation of the Probability of Default (PD) and Loss Given Default (LGD) parameters.
- Identification and classification of the staging criteria of loans and advances to customers.
- The definition and evaluation of updates and adjustments to the expected credit loss models to adapt the parameters estimated to the conditions and current environment.
- The main assumptions used in the determination of the coverage over expected credit losses estimated individually.

The Group's loans and advances to customers lending business is concentrated in the global businesses of Retail & Commercial Banking, Digital Consumer Bank and Corporate & Investment Banking, and eight key markets (Brazil, Chile, Spain, United States, Mexico, Portugal, United Kingdom and the consumer finance business in Europe).

As a result, for the year ended 2025 the Group has recognised an amount of EUR 12,517 million of impairment of financial assets at amortised cost.

We have obtained, in collaboration with our credit risk and economic forecasting experts, an understanding of management's process to estimate the impairment of financial assets at amortised cost - loans and advances to customers - over the estimation of impairment of financial assets assessed collectively and individually, including the potential climate and geopolitical risk impact, on which we have made inquiries to management as part of our understanding audit procedures.

In regards with the internal control, we have focused on testing the design and operating effectiveness of key controls over the following processes:

- Calculation methodologies, calibrations, monitoring and back-testing of the expected credit loss models performed by management.
- Compliance with regulation and internal policies, and the functionality of the internal expected credit loss models approved by management, including the review process of models performed by the Internal Validation Team.
- Reliability of the data sources used in the calculations and the suitability of the expected credit loss models taking into account the conditions and current environment.
- Review process and approval of the macroeconomic variables used in the projections for the calculation of expected credit losses, as well as the updates to the models made by management derived from the conditions and current macroeconomic environment.
- Periodic review process of borrowers to determine the proper staging criteria.
- Review process of the expected credit loss coverage calculation derived from the principal models and portfolios, as well as any adjustments deemed necessary, where applicable.

Please refer to Notes 2, 10 and 54 of the consolidated annual accounts as at December 31, 2025.

- Loan collateral assignment and valuation process associated with mortgage collateral operations, including collateral recovery process.

In addition, in collaboration with our credit risk, economic forecasting and real estate valuation experts we performed the following tests of details:

- Tests of principal models with respect to: i) calculation and segmentation methods; ii) methodology used for the estimation of the expected credit loss parameters; iii) retrospective review of the model's performance; iv) data and main assumptions used, v) staging criteria and vi) information related to scenarios and their assumptions.
- Evaluation of the updates to the expected credit loss models made by management due to the conditions and current macroeconomic environment.
- Verification of the correct consideration of the collaterals in the estimate of the impairment of loans, especially those that are classified as doubtful.
- Reperformance of the collective provision calculation based on the expected credit loss models parameters, as well as any adjustments deemed necessary, where applicable.
- Obtaining a sample of individual credit files to determine the adequacy of their accounting and classification, expected loss estimation methodologies, and, where appropriate, corresponding impairment.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Goodwill impairment assessment

The goodwill impairment assessment is an exercise that requires a high degree of judgement and estimation therefore it has been considered one of the key audit matters.

Due to their relevance to the Group, management monitors goodwill, particularly the Santander US Auto Cash Generating Unit (CGU) and assesses goodwill for impairment at the end of each annual reporting period or whenever there is any indication of impairment.

We have obtained, in collaboration with our valuation experts, an understanding of the process performed by management to assess the recoverable amount.

In regards with the internal control, we have focused on testing the design and operating effectiveness of key controls over the following processes:

- Definition of the Group's CGUs.

The assumptions used by management to estimate the value in use of the Cash-Generating Units (CGUs) includes financial projections, discount rates and perpetual growth rates. Such valuations, and some of these assumptions, are performed by management's experts.

The amount of the Group's consolidated goodwill balance as at December 31, 2025 is EUR 11,958 million.

Please refer to Notes 2 and 17 of the consolidated annual accounts as at December 31, 2025.

- Methodology used by management for the goodwill impairment assessment, including the controls in place to supervise the process and the related approvals.
- Budgeting process on which the projections used in the discounted cash flow projections are based on.
- Management's capability of reliable prediction through the comparison of previous years' estimations and impairment assessments with the actual results.
- Review process of the reasonableness of the discount rates and perpetual growth rates used by management's experts.
- Review process of the mathematical accuracy of the valuation models used by management experts.

We also conducted tests of details to evaluate the discounted cash flow projections used by management in their estimation, including the budgetary compliance of the main CGUs and the evaluation of the reasonableness of the assumptions, such as discount rates and perpetual growth rates.

In addition, we have performed, among others, the following tests of details:

- Verifying the mathematical accuracy of the goodwill impairment test, including the discounted cash flow projections.
- Comparing the fair value of the CGUs associated with listed entities to their recoverable amount.
- Obtain and evaluate the valuation reports regarding the goodwill impairment test performed by management's internal and external experts.
- Verifying the adequacy of the information disclosed in the consolidated annual accounts in accordance with applicable regulations.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Litigation provisions and contingencies

The Group is party to a range of tax, civil and legal proceedings - administrative and judicial - which primarily arise in the ordinary course of its operations. Also, there are other situations not yet subject to any judicial process that, however, have required the recognition of provisions, such as aspects of conduct with clients and the possible compensation that could be derived.

These procedures generally take a long period of time to run their course, giving rise to complex processes in accordance with the applicable legislation across the different jurisdictions where the Group operates. In addition, the estimate of provisions requires the use of judgements by management, which are subject to uncertainty regarding the outcome of the proceedings. For these reasons, it has been considered one of the key audit matters.

Management decides when to recognize a provision for these contingent liabilities, based on an estimate using certain procedures consistent with the nature of the uncertainty of the obligations.

Among these provisions, mainly related to operations of the global businesses of Retail & Commercial Banking, Digital Consumer Bank and Corporate & Investment Banking, the most significant are those that cover the tax and civil proceedings in Brazil and those that cover the legal proceedings in Brazil, Spain, Mexico and the United Kingdom.

The amount of the litigation provisions and contingencies as at December 31, 2025 is EUR 4,714 million.

Please refer to Notes 2 and 25 of the consolidated annual accounts as at December 31, 2025.

We have obtained, in collaboration with our experts in legal and tax matters, an understanding of the estimation process performed by management for litigation provisions and contingencies.

In regards with the internal control, we have focused on testing the design and operating effectiveness of key controls over the following processes:

- Additions, logs and updates over the completeness of the legal matters in the systems.
- Accuracy of the key data, maintained in the systems, used in the calculation of the litigations provisions and contingencies.
- Assessment of the criteria used to estimate the expected losses from litigation provisions and contingencies and evaluation of the adequacy over the calculation of the provisions for legal or tax procedures and their recognition.
- Major minutes reconciliation of the tax inspections and the amounts accounted for.

In addition, we have performed the following tests of details:

- Analysis for reasonableness of the expected outcomes of the most significant tax and legal proceedings.
- Assessment of possible contingencies relating to compliance with the tax obligations for all the years open to inspection, of the communications with the regulatory bodies and analysis of the ongoing regulatory inspections.
- Sending, obtaining and analysing, if any, audit confirmation letters from external and internal lawyers and external tax advisors who work with the Group or performing alternative procedures if confirmations are not received.
- Analysis of the recognition and reasonableness of the provisions recorded.

- Verifying the adequacy of the information disclosed in the consolidated annual accounts in accordance with applicable regulations.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Information systems

The Group's financial information is highly dependent on information technology (IT) systems in the geographies where it operates, therefore an adequate control of these systems is crucial to ensuring correct data processing.

In this context, it is vital to evaluate aspects such as the organization of the Group's Technology and Operations department, controls over software maintenance and development, physical and logical security controls, controls over computer operations and the management's response to cybersecurity risks, therefore it has been considered one of the key audit matters.

In this respect, management continues monitoring the internal controls over IT systems, including third-party services and the access controls that support the Group's technology processes.

We have evaluated, in collaboration with our IT system specialists, the internal controls over the IT systems, databases and applications that support the Group's financial reporting.

For this purpose, we have performed procedures over the design and operating effectiveness of key controls and test of details related to:

- The function of the IT governance framework.
- Access and logical security controls over the applications, operating systems and databases that support the relevant financial information.
- Application development and change management.
- Maintenance of computer operations, including obtaining an understanding of management's response to cybersecurity risks.

In addition, considering the monitoring carried out by management over its internal controls over IT systems, our approach and audit plan included the following aspects:

- Evaluation of the monitoring made by management as part of its internal control environment of the Group, including third-party services internal control.
- Testing of the design and operating effectiveness of the controls implemented by management, including access controls.

In the procedures described above, no relevant exceptions were identified related to this matter.

Other information: Consolidated directors' report

Other information comprises only the consolidated directors' report for the 2025 financial year, the formulation of which is the responsibility of the Parent company's directors and does not form an integral part of the consolidated annual accounts.

Our audit opinion on the consolidated annual accounts does not cover the consolidated directors' report. Our responsibility regarding the consolidated directors' report, in accordance with legislation governing the audit practice, is to:

a) Verify only that the consolidated statement of non-financial information, certain information included in the Annual Corporate Governance Report and the Annual Report on Directors' Remuneration, as referred to in the Auditing Act, have been provided in the manner required by applicable legislation and, if not, we are obliged to disclose that fact.

b) Evaluate and report on the consistency between the rest of the information included in the consolidated directors' report and the consolidated annual accounts as a result of our knowledge of the Group obtained during the audit of the aforementioned financial statements, as well as to evaluate and report on whether the content and presentation of this part of the consolidated directors' report is in accordance with applicable regulations. If, based on the work we have performed, we conclude that material misstatements exist, we are required to report that fact.

On the basis of the work performed, as described above, we have verified that the information mentioned in section a) above has been provided in the manner required by applicable legislation and that the rest of the information contained in the consolidated directors' report is consistent with that contained in the consolidated annual accounts for the 2025 financial year, and its content and presentation are in accordance with applicable regulations.

Responsibility of the directors and the audit committee for the consolidated annual accounts

The Parent company's directors are responsible for the preparation of the accompanying consolidated annual accounts, such that they fairly present the consolidated equity, financial position and financial performance of the Group, in accordance with IFRS-EU and other provisions of the financial reporting framework applicable to the Group in Spain, and for such internal control as the aforementioned directors determine is necessary to enable the preparation of consolidated annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated annual accounts, the Parent company's directors are responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the aforementioned directors either intend to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

The Parent company's audit committee is responsible for overseeing the process of preparation and presentation of the consolidated annual accounts.

Auditor's responsibilities for the audit of the consolidated annual accounts

Our objectives are to obtain reasonable assurance about whether the consolidated annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with legislation governing the audit practice in Spain will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated annual accounts.

As part of an audit in accordance with legislation governing the audit practice in Spain, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated annual accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Parent company's directors.

- Conclude on the appropriateness of the Parent company's directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated annual accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the consolidated annual accounts, including the disclosures, and whether the consolidated annual accounts represent the underlying transactions and events in a manner that achieves fair presentation.

- Plan and perform the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the Group as a basis for forming an opinion on the consolidated annual accounts. We are responsible for the direction, supervision and review of the audit work performed for purposes of the group audit. We remain solely responsible for our audit opinion.

We communicate with the Parent company's audit committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Parent company's audit committee with a statement that we have complied with ethical requirements relating to independence and we communicate with the aforementioned those matters that may reasonably be considered to threaten our independence and, where applicable, the safeguards adopted to eliminate or reduce such threat.

From the matters communicated with the Parent company's audit committee, we determine those matters that were of most significance in the audit of the consolidated annual accounts of the current period and are therefore the key audit matters.

We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter.

Report on other legal and regulatory requirements

European single electronic format

We have examined the digital files of the European single electronic format (ESEF) of Banco Santander, S.A. and its subsidiaries for the 2025 financial year that comprise an XHTML file which includes the consolidated annual accounts for the financial year and XBRL files with tagging performed by the entity, which will form part of the annual financial report.

The directors of Banco Santander, S.A. are responsible for presenting the annual financial report for the 2025 financial year in accordance with the formatting and markup requirements established in the Delegated Regulation (EU) 2019/815 of 17 December 2018 of the European Commission (hereinafter the ESEF Regulation).

Our responsibility is to examine the digital files prepared by the Parent company's directors, in accordance with legislation governing the audit practice in Spain. This legislation requires that we plan and execute our audit procedures in order to verify whether the content of the consolidated annual accounts included in the aforementioned digital files completely agrees with that of the consolidated annual accounts that we have audited, and whether the format and markup of these accounts and of the aforementioned files has been effected, in all material respects, in accordance with the requirements established in the ESEF Regulation.

In our opinion, the digital files examined completely agree with the audited consolidated annual accounts, and these are presented and have been marked up, in all material respects, in accordance with the requirements established in the ESEF Regulation.

Report to the audit committee of the Parent company

The opinion expressed in this report is consistent with the content of our additional report to the audit committee of the Parent company dated 24 February 2025.

Appointment period

The General Ordinary Shareholders' Meeting held on 4 April 2025 appointed us as auditors of the Group for a period of one year, for the year ended 31 December 2025.

Previously, we were appointed by resolution of the General Ordinary Shareholders' Meeting for a period of three years and we have audited the accounts continuously since the year ended 31 December 2016.

Services provided

Services provided to the Group for services other than the audit of the accounts are disclosed in note 47 to the consolidated annual accounts.

PricewaterhouseCoopers Auditores, S.L. (S0242)

Julián González Gómez (20179)

Notes to the consolidated financial statements

Banco Santander, S.A., and Companies composing Grupo Santander

Notes to the consolidated financial statements (consolidated annual accounts) for the year ended 31 December 2025.

1. Introduction, basis of presentation of the consolidated financial statements (consolidated annual accounts) and other information

a) Introduction

Banco Santander, S.A. ('the parent' or 'Banco Santander'), is a private-law entity subject to the rules and regulations applicable to banks operating in Spain, where it was constituted and currently maintains its legal domicile, which is paseo de Pereda, numbers 9 to 12, 39004, Santander, Spain.

The principal headquarters of Banco Santander are located in Ciudad Grupo Santander, Avenida Cantabria s/n, 28660, Boadilla del Monte, Madrid, Spain.

The corporate purpose of Banco Santander, S.A. mainly entails carrying out all kinds of activities, operations and services inherent to the banking business in general and permitted by current legislation, and the acquisition, holding, enjoyment and disposal of all kinds of securities.

In addition to the operations carried on directly by it, Banco Santander is the head of a group of subsidiaries that engage in various business activities and which compose, together with it, Grupo Santander ('Santander' or 'the Group'). Therefore, Banco Santander is obliged to prepare, in addition to its own separate financial statements, the Group's consolidated financial statements, which also include the interests in joint ventures and investments in associates.

At 31 December 2025, Grupo Santander consisted of 755 subsidiaries of Banco Santander, S.A. In addition, other 191 companies are associates of the Group, joint ventures or companies of which the Group holds more than 5% (excluding the Group companies of negligible interest with respect to the fair presentation that the annual accounts must express).

Grupo Santander consolidated financial statements for 2023 were approved by the shareholders at the group´s annual general meeting on 22 March 2024. Grupo Santander consolidated financial statements for 2024 were approved by the shareholders at the group´s annual general meeting on 4 April 2025. The Group's 2025 consolidated financial statements, the financial statements of the parent and of substantially all the Group companies have not been approved yet by their shareholders at the respective annual general meetings. However, Banco Santander board of directors considers that the aforementioned financial statements will be approved without any significant changes.

b) Basis of presentation of the consolidated financial statements

Under Regulation (EC) n.º 1606/2002 of the European Parliament and of the Council of 19 July 2002 all companies governed by the law of an EU Member State and whose securities are admitted to trading on a regulated market of any Member State must prepare their consolidated financial statements for the years beginning on or after 1 January 2005 in conformity with the International Financial Reporting Standards ('IFRS') previously adopted by the European Union ('EU-IFRS').

In order to adapt the accounting system of Spanish credit institutions with the principles and criteria established by the IFRS adopted by the European Union ('EU-IFRS'), the Bank of Spain published circular 4/2017, dated 27 November 2017, on Public and Confidential Financial Reporting Standards and Financial Statement Formats and the following regulations.

Particularly, during 2025 and 2023, the Bank of Spain published Circulars 1/2025 of 19 December of 2025, and 1/2023 of 24 February of 2023, amending Circular 4/2017 of 27 November to credit institutions on Public and Confidential Financial Reporting Standards and Financial Statement Formats.

Grupo Santander consolidated financial statements for 2025 were authorised by the Bank's directors (at the board meeting on 24 February 2026) in accordance with International Financial Reporting Standards as adopted by the European Union and with Bank of Spain circular 4/2017 and subsequent modifications, and Spanish corporate and commercial law applicable to the Group, using the basis of consolidation, accounting policies and measurement bases set forth in note 2, accordingly, they present fairly the Group's equity and financial position at 31 December 2025, 2024 and 2023 and the consolidated results of its operations and the consolidated cash flows in 2025, 2024 and 2023. These consolidated annual accounts have been prepared on the basis of the accounting records held by Banco Santander and by each of the other companies of the Group, and include the adjustments and reclassifications required to standardise the accounting policies and valuation criteria applied by Grupo Santander.

The notes to the consolidated financial statements contain additional information to that presented in the consolidated balance sheet, consolidated income statement, consolidated statement of recognised income and expense, consolidated statement of changes in total equity and consolidated statement of cash flows. The notes provide, in a clear, relevant, reliable and comparable manner, narrative descriptions and breakdowns of these statements.

The figures of the consolidated annual accounts are presented in millions of euros unless another alternative monetary unit is indicated, rounded to the nearest million unit.

Adoption of new standards and interpretations issued

The following modifications came into force and were adopted by the European Union in 2025:

- IAS 21 Effects of changes in foreign currency exchange rates: IAS 21 established the requirements to apply when there is a temporary lack of interchangeability between two currencies, but did not give indications when this situation was not temporary. Given this scenario, IAS 21 has been modified establishing the criteria to identify these situations, specifying how entities should estimate the spot exchange rate, the methodologies and data to be considered, as well as the associated disclosure requirements. This modification was applied in advance by the Group on 31 December 2024. For more information, see Note 2.a.iv.

The application of the aforementioned amendment to accounting standards and interpretations did not have any material effects on Grupo Santander consolidated financial statements.

Likewise, at the date of approval of these consolidated annual accounts, the following standards which effectively came into force have effective dates after 31 December 2025:

- Amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures: (i) amendments to classification and measurement requirements related to the assessment of contractual cash flows of certain financial assets (with ESG characteristics, non-recourse or contractually linked); (ii) an accounting policy option for the derecognition of financial liabilities settled through an electronic payment system is included; (iii) the disclosure requirements related to equity instruments designated at fair value through other comprehensive income are amended; (iv) disclosure requirements are included for financial instruments with contingent characteristics that may modify their contractual cash flows. These amendments will be applicable from 1 January 2026.

- Amendments to IFRS 9 and IFRS 7 - Nature-dependent electricity contracts for electricity contracts dependent on energy sources and susceptible to variations due to uncontrollable factors, such as weather conditions, this modification: (i) clarifies the application of the 'own use' requirements; (ii) allows hedge accounting if these contracts were used as hedging instruments; and, (iii) adds new filing requirements for greater clarity on the impact of these contracts. These modifications will be applicable form 1 January 2026.

- IFRS 18 Presentation and Disclosure in Financial Statements, which replaces IAS 1 Presentation of Financial Statements, (i) improves the comparability of the income statement by defining its structure into three categories (operating, investing, and financing) and presenting defined subtotals, including operating profit; (ii) breaks down in the financial statements certain management-defined performance measures related to the income statement; and (iii) improves the aggregation of information for disclosure in the financial statements or notes. The new standard will be applicable from 1 January 2027.

- Amendments to IFRS Improvement Cycle: introduces minor amendments, effective from 1 January 2026, to the following standards:

  - IFRS 1 First-time Adoption of International Financial Reporting Standards, for hedge accounting in first adoption.

  - IFRS 7 Financial Instruments: Disclosures: updated references and alignment with IFRS 13, as well as clarifications in the Implementation Guidance.

  - IFRS 9 Financial Instruments: amendment to apply derecognition criteria to lease liabilities recorded by the lessee and replacement of the term 'transaction price' with 'the amount determined in accordance with IFRS 15'.

  - IFRS10 Consolidated Financial Statements: Determining a 'de facto agent'.

  - IAS 7 Statement of Cashflows: replacing the term 'cost method' with 'cost'.

Finally, at the date of approval of these consolidated annual accounts, the following standards which effectively come into force after 31 December 2025 had not yet been adopted by the European Union:

- IFRS 19 Subsidiaries without Public Accountability: Disclosures: this new standard works alongside other IFRS Accounting Standards. An eligible subsidiary applies the requirements in other IFRS Accounting Standards except for the disclosure requirements and instead applies the reduced disclosure requirements in IFRS 19. A subsidiary is eligible if: (i) it does not have public accountability; and (ii) it has an ultimate or intermediate parent that produces consolidated financial statements available for public use that comply with IFRS Accounting Standards. Applicable from 1 January 2027.

- IFRS 19 Subsidiaries without Public Accountability: Disclosures: these new amendments help eligible subsidiaries reduce disclosures related to IFRS standards and amendments issued between February 2021 and May 2024. With these amendments, IFRS 19 reflects the IFRS changes that will take effect up to 1 January 2027, when IFRS 19 will become applicable.

- Amendments to IAS 21 The effects of Changes in Foreign Exchange Rates: Translation to a Hyperinflationary Presentation Currency: establishes how to translate financial statements when the presentation currency is subject to hyperinflation. Requires converting all amounts, including comparatives, at the closing exchange rates and restating them in accordance with IAS 29. Furthermore, introduces additional disclosures to enhance comparability and reduce diversity in practice. Applicable from 1 January 2027, with early application permitted.

Grupo Santander is currently analyzing the possible effects of these new standards and interpretations, and unless expressly indicated otherwise, no significant impacts are expected from their application.

During 2025, the Group completed the project to adapt its accounting policies relating to hedging transactions to the hedge accounting requirements set out in IFRS 9 (see Note 2.d.v). The main impacts of this change on the accounting for hedging relationships are primarily due to: (i) the mandatory separation of the time value of options (when the hedged risk is the intrinsic value); (ii) and the optional separation of the forward element of foreign exchange forward contracts for all hedges, as well as (iii) the separation of the foreign currency basis spread of a foreign exchange derivative for each hedging relationship. The application of these options to hedges designated before 31 December 2024 did not have a material impact on the Group's consolidated statement of financial position or consolidated profit or loss.

All accounting policies and measurement bases with a material effect on the consolidated financial statements for 2025 were applied in the preparation of these consolidated annual accounts.

c) Use of accounting estimates

The consolidated results and the determination of consolidated equity are sensitive to the accounting policies, measurement bases and estimates used by Banco Santander in preparing the consolidated financial statements.

The main accounting policies and measurement bases are set forth in note 2.

In the consolidated financial statements estimates were occasionally made by the senior management of Grupo Santander in order to quantify certain of the assets, liabilities, income, expenses and obligations reported herein. These estimates, which were made on the basis of the best information available, relate basically to the following:

- The impairment losses on certain assets: it applies to financial assets at fair value through other comprehensive income, financial assets at amortised cost, non-current assets held for sale, investments, tangible assets and intangible assets (see Notes 6, 7, 10, 12, 13, 16, 17, 18 and 54).
- The assumptions used in the actuarial calculation of the post-employment benefit liabilities and commitments and other obligations (see Note 25).
- The useful life of the tangible and intangible assets (see Notes 16 and 18).
- The measurement of the impairment in goodwill arising on consolidation (see Note 17).
- The calculation of provisions and the consideration of contingent liabilities (see Note 25).
- The fair value of certain unquoted assets and liabilities (see Notes 6, 7, 8, 9, 10, 11, 20, 21 and 22).
- The recoverability of deferred tax assets (see Note 27).
- The fair value of the identifiable assets acquired and the liabilities assumed in business combinations in accordance with IFRS 3 (see Note 17).
- The measurement of assets under reinsurance contracts and liabilities under insurance contracts (see Note 15).

To update the previous estimates, the Group's management has taken into account the current macroeconomic scenario, characterized by persistent geopolitical tensions and changing financial conditions, as well as the evolution of monetary and fiscal policies in major economies. The analysis also considers developments in interest rates, credit spreads, and currency movements, along with labor market trends in the geographies where the Group operates.

The Group's management has evaluated in particular the uncertainties caused by the current environment in relation to credit risk, maintaining active oversight of clients in geographies and sectors more exposed to international trade tensions, global geopolitical uncertainty and the impact of public debt containment policies or fiscal stimulus measures, liquidity and market risks, taking into account the best available information, to estimate the impact on the credit portfolio's impairment provision, and in the debt instruments' interest rates and valuation, developing in the notes the main estimates made during the period ended December 31, 2025 (see notes 10, 17, 50 and 54).

Although these estimates have been made on the basis of the best information available at the end of the year 2025, and considering information updated at the date of preparation of these consolidated annual accounts, it is possible that events that may take place in the future may make it necessary to modify them (upwards or downwards) in the coming years, which would be done, if appropriate, in a prospective manner, recognising the effects of the change in estimate in the corresponding consolidated income statement.

d) Information relating to 2024 and 2023

The information contained in the consolidated financial statements for the financial years 2024 and 2023 was prepared with the standards in force in said years, and exclusively for comparative purposes with the information relating to the year ended 31 December 2025.

The information in the consolidated income statement from 2024 and 2023 has been restated, as a result of the agreement for the sale of Santander Bank Polska S.A. by Grupo Santander, as required by IFRS 5 (see, mainly, Notes 3 and 37, as well as the rest of the notes of the profit and loss account).

Additionally, the segment information corresponding to the years ended 31 December 2024 and 2023 has been restated, in accordance with the changes in the segments' composition of Grupo Santander, as required by IFRS 8 (see note 52).

In order to interpret the changes in the balances with respect to 31 December 2025, it is necessary to take into consideration the exchange rate effect arising from the volume of foreign currency balances held by Grupo Santander in view of its geographic diversity (see note 52.b) and the impact of the appreciation/depreciation of the various currencies against the euro in 2025, based on the exchange rates at the end of 2025: Mexican peso (2.05%), US dollar (-11.62%), Brazilian real (-0.47%), Argentinian peso (-37.23%), Sterling pound (-4.99%), Chilean peso (-2.57%), and Polish zloty (1.30%); as well as the evolution of the comparable average rates: Mexican peso (-8.95%), US dollar (-4.15%), Brazilian real (-7.86%), Sterling pound (-1.20%), Chilean peso (-4.90%) and Polish zloty (1.56%).

e) Capital management

i. Regulatory and economic capital

Credit institutions must comply with a set of minimum capital and liquidity requirements. These minimum requirements are regulated by the European Capital Requirements Regulation (CRR), which is directly applicable within the Spanish legal framework, and by the Capital Requirements Directive (CRD).

On 19 June 2024, the final texts of the update to the banking package were published in the Official Journal of the European Union: Regulation (EU) 2024/1623 (hereinafter, CRR 3), which amends the CRR with regard to requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the floor on risk-weighted assets (known as the output floor), as well as Directive (EU) 2024/1619 (hereinafter, CRD VI), which amends the CRD as regards supervisory powers, sanctions, third-country branches, and environmental, social and governance risks.

The update to the banking package aims, on the one hand, to implement the final Basel III reforms and, on the other, to strengthen the harmonisation of banking supervision within the European Union (EU).

CRR 3, applicable since 1 January 2025, introduce greater risk sensitivity into standardised approaches, reduce the variability of risk-weighted assets among banks using internal models to calculate capital requirements, and enhance comparability across banks.

Under CRD VI, the ambition to achieve more robust supervision and to safeguard financial stability is reflected in a set of rules affecting fit-and-proper requirements, an extended scope resulting from the revision of certain definitions, and new provisions regarding the establishment of third-country branches in the EU, with the aim of achieving greater regulatory harmonisation and improved supervision of this type of entity.

Although most CRR 3 provisions apply since 1 January 2025, for certain provisions the regulator has established a gradual implementation (phase-in) period until 2030 in order to give the industry sufficient time to build up the capital required to meet the requirements on a fully loaded basis.

Regarding Market Risk, the European Commission and the European Parliament have approved an additional 12-month delay to the entry into force of the new market risk capital framework, or FRTB, until 1 January 2027. Beyond this date, the CRR 3 does not allow for any further delay, as postponements are limited to two years. This delay also covers other provisions, such as the separation between the trading book and the banking book, the internal risk transfer regime, etc.

The CRR 3/CRD VI package contains 140 mandates for the EBA to develop Level 2 or Level 3 legislation (regulatory technical standards, implementing technical standards and guidelines—RTS, ITS and GL, for their acronyms) and to issue opinions and reports to further specify certain aspects of the regulation. In this context, the EBA published its roadmap (EBA Roadmap) at the end of 2023, structuring the implementation of the banking package around four sequential phases, under which the authority will address the various mandates in an orderly manner based on their latest legal application dates (up to four years after the entry into force of CRR 3 and CRD VI). In addition, at the end of 2024, the EBA published its 2025 work programme, setting out the guidelines for addressing these mandates during the year. This has resulted in the publication of various consultations throughout the year on RTS, ITS and Guidelines, such as, for example:

- Regulatory Technical Standards (RTS) on off-balance-sheet exposures and unconditionally cancellable commitments
- Regulatory Technical Standards (RTS) on material changes to IRB models and model extensions
- Revision of the Guidelines on the revised definition of default
- Regulatory Technical Standards (RTS) and Implementing Technical Standards (ITS) on operational risk

In its 2025 Work Programme, the EBA undertook, among other initiatives, the revision of the SREP Guidelines, the consultation for which was published on 24 October, with the aim of updating them based on three pillars: legislative changes (CRR 3 and CRD VI, IRRBB/CSRBB, DORA, etc.), lessons learned, and structural changes intended to improve the usability of the Guidelines. The consultation period was set to run until early February 2026, and following the conclusion of the consultation process, the Guidelines are expected to enter into force on 1 January 2027.

On 28 July 2025, the ECB published a revised version of its Guide to Internal Models, with the objective of reflecting the regulatory changes introduced by CRR 3 in relation to internal models for credit, counterparty credit and market risk; clarifying supervisory expectations for internal models that make use of machine learning; and enhancing transparency and supervisory harmonisation. This revision builds on the experience accumulated by the ECB since the first publication of the Guide in 2019.

On 25 July 2025, the ECB also published the final Guide on Options and Discretions, following a consultation process launched in November 2024. The Guide introduces clarifications and adjustments to the treatment of market risk and operational risk, as well as to the conditions under which minority interests may be included in group capital, among other aspects.

Regarding resolution regulation, institutions are required to maintain an adequate funding structure to ensure that, in the event of financial distress, they hold sufficient liabilities to absorb losses and either restore viability or be resolved while safeguarding depositor protection and financial stability. To this end, global systemically important institutions are subject to minimum loss-absorbing capacity requirements, namely Total Loss-Absorbing Capacity (TLAC) and the Minimum Requirement for own funds and Eligible Liabilities (MREL), as regulated under CRR 3 and the Bank Recovery and Resolution Directive (BRRD).

On 25 October 2022, a regulation on the prudential treatment of global systemically important institutions was published, amending both the CRR and the BRRD with respect to the prudential treatment of G-SIBs with a multiple point of entry (MPE) resolution strategy, as well as the methods for the indirect subscription of eligible instruments (daisy chains) for the purpose of meeting MREL requirements. This regulation, known as the Resolution 'Quick Fix', pursues two main objectives:

- The inclusion in the BRRD and CRR 3 of references to third-country subsidiaries allowing for adjustments to the deduction for holdings of TLAC instruments issued by such subsidiaries, based on excess TLAC/MREL at subsidiary level, as well as adjustments in cases where the aggregate own funds and eligible liabilities requirements of a G-SIB under an MPE strategy exceed the theoretical requirements of the same group under a single point of entry (SPE) strategy. This adjustment is therefore based on a comparison between the two possible resolution strategies.

- The introduction of a deduction regime for holdings of MREL instruments through entities within the same resolution group other than the resolution entity. The Regulation establishes a deduction at the level of the intermediate entity within the daisy chain that repurchases the instruments. As a result, the intermediate entity is required to issue an equivalent amount, thereby transferring internal MREL needs to the resolution entity, which will cover them with external MREL.

In this context, in 2025 the EBA published the Final Report on the draft Implementing Technical Standards (ITS) on resolution planning, aimed at further harmonising reporting requirements.

Regarding Deposit Guarantee Schemes (DGS), these are regulated under the Deposit Guarantee Schemes Directive (DGSD), which has not undergone substantial amendments since its publication in 2014. The Directive aims to harmonise DGS across Member States to ensure stability and consistency across countries. It establishes an appropriate framework to improve depositor access to DGS through a clear scope of coverage, short repayment periods, enhanced information, and robust funding requirements. The Directive has been transposed into Spanish law through Royal Decree 2606/1996, as amended by Royal Decree 1041/2021.

To ensure the protection of depositors, DGS collect financial resources through contributions from their members, which must be paid at least annually. These annual contributions are determined based on the number of covered deposits and the risk profile of the institutions affiliated with the DGS. The methodology for calculating contributions is set out in the EBA Guidelines (EBA/GL/2023/02).

In June 2025, the Council and the European Parliament reached a political agreement, which still needs to be finalized at a technical level as a prerequisite for its final formal approval.

Within the sustainability field from a prudential perspective, the implementation of the CRR 3/CRD VI package has progressed, introducing specific requirements to integrate environmental, social and governance (ESG) risks into the prudential framework. With the aim of assessing whether a specific prudential treatment is warranted, the CRR establishes three mandates: to assess the availability of ESG risk data; to evaluate the effective risk profile of exposures affected by environmental or social factors; and to analyse the potential effects on financial stability of differentiated prudential treatment, with a view to possible legislative proposals by 31 December 2026.

In addition, the CRR 3/CRD VI package introduces disclosure requirements on ESG risks, reporting of ESG risk exposures to competent authorities, and an obligation for institutions to develop specific plans for managing financial risks arising from ESG factors, including those related to transition trends.

In this context, the EBA published in January 2025 the Guidelines on the Management of ESG Risks, fulfilling the CRD VI mandate to structurally integrate ESG risks into the European prudential framework. These Guidelines set out minimum standards and reference methodologies for the identification, measurement, management and monitoring of ESG risks, as well as their proper integration into internal governance processes, risk appetite frameworks and strategic planning. The Guidelines also specify minimum requirements for the development of transition plans, which must include metrics, quantifiable targets and time-bound milestones aligned with institutions' sustainability strategies and prudential requirements. Their application will be mandatory from 11 January 2026, consolidating a prudential framework that strengthens the systematic consideration of ESG risks in supervisory and risk management processes.

At the international level, the Basel Committee on Banking Supervision (BCBS) has continued to advance work on ESG-related standards. In June 2025, the Committee published a voluntary framework for the disclosure of climate-related financial risks, aimed at guiding internationally active banks in the provision of qualitative and quantitative information on their exposures to physical and transition risks. The framework acknowledges the still nascent state of climate data availability, consistency and quality, and therefore adopts a flexible approach that allows for the use of different metrics and methodologies. While its adoption will depend on jurisdictional decisions, the Committee considers this framework an important step towards enhancing transparency and international comparability of climate risk disclosures and intends to monitor its implementation with a view to potential future revisions.

In the digital field, due to the increase in international crypto assets activities, the EU is moving forward with the integration of Basel standards on crypto-assets through the mandate set out in CRR 3, which will enable the establishment of a harmonised prudential treatment once the legislative process is completed. In fulfilment of the CRR 3 mandate, the EBA has finalised and published the draft Regulatory Technical Standards (RTS) applicable to the calculation of own funds requirements for crypto-asset exposures.

At 31 December 2025 Grupo Santander met the minimum capital requirements established by current legislation (see note 54.d). Additionally, it should be noted that the Group has filed an appeal with the Court of Justice of the European Union (CJEU) requesting the annulment of a decision by the European Central Bank (ECB) related to the treatment of deferred tax assets generated at Banco Santander Brasil, which, if resolved favourably, would have a positive impact of approximately 20 basis points on the Group's CET1, using the amounts at the end of the year.

f) Environmental impact

In view of the business activities carried on by the Group entities, the Group does not have any environmental liability, expenses, assets, provisions or contingencies that might be material with respect to its consolidated equity, financial position or results (see note 54.a).

g) Events after the reporting period

On 9 January 2026, after obtaining the necessary regulatory approvals and fulfilling the conditions for closing, the Group completed the sale of 49% of the share capital of Santander Bank Polska S.A. and 50% of the share capital of Santander Towarzystwo Funduszy Inwestycyjnych S.A. (TFI, the asset management business in Poland) to Erste Group Bank AG for a total cash amount of approximately EUR 7,000 million. The transaction generated a net capital gain of approximately EUR 1,900 million, which will be recognized in the consolidated income statement for the 2026 financial year. Santander holds the 9.7% of Santander Polska's share capital.

The transaction resulted in the loss of effective control over the entity, and therefore, effective as of 9 January 2026, Santander Bank Polska S.A. will cease to be consolidated using the global integration method in the Group's consolidated financial statements from that date forward.

Additionally, on 3 February 2026, Banco Santander, S.A. ('Santander') announced that it had reached an agreement to acquire Webster Financial Corporation ('Webster'), the parent company of Webster Bank, N.A., for approximately USD 12,200 million (around EUR 10,300 million). Webster shareholders will receive USD 48.75 in cash and 2.0548 Santander shares for each Webster share, resulting in a total consideration of USD 75 per Webster share. Completion of the transaction is expected to take place in the second half of 2026 subject to the customary conditions for this type of operations, including obtaining the relevant regulatory approvals and the approvals of both Webster's and Santander's shareholders.

2. Accounting policies

The accounting policies applied in preparing the consolidated financial statements were as follows:

a) Foreign currency transactions

i. Presentation currency

Banco Santander's functional and presentation currency is the euro. Also, the presentation currency of the Group is the euro.

ii. Translation of foreign currency balances

Foreign currency balances are translated to euros in two consecutive stages:

- Translation of foreign currency to the functional currency (currency of the main economic environment in which the entity operates).
- Translation to euros of the balances held in the functional currencies of entities whose functional currency is not the euro.

Translation of foreign currency to the functional currency

Foreign currency transactions performed by consolidated entities (or entities accounted for using the equity method) not located in European Monetary Union ('EMU') countries are initially recognised in their respective currencies. Monetary items in foreign currency are subsequently translated to their functional currencies using the closing rate.

Furthermore:

- Non-monetary items measured at historical cost are translated to the functional currency at the exchange rate at the date of acquisition.
- Non-monetary items measured at fair value are translated at the exchange rate at the date when the fair value was determined.
- Income and expenses are translated at the average exchange rates for the year for all the transactions performed during the year. When applying this criterion, the Group considers whether there have been significant changes in the exchange rates in the year which, in view of their materiality with respect to the consolidated financial statements taken as a whole, would make it necessary to use the exchange rates at the transaction date rather than the aforementioned average exchange rates.
- The balances arising from non-hedging forward foreign currency/foreign currency and foreign currency/euro purchase and sale transactions are translated at the closing rates prevailing in the forward foreign currency market for the related maturity.

Translation of functional currencies to euros

The balances in the financial statements of consolidated entities (or entities accounted for using the equity method) whose functional currency is not the euro are translated to euros as follows:

- Assets and liabilities, at the closing rates.
- Income and expenses, at the average exchange rates for the year.
- Equity items, at the historical exchange rates.

iii. Recognition of exchange differences

The exchange differences arising on the translation of foreign currency balances to the functional currency are generally recognised at their net amount under 'Exchange differences, net' in the consolidated income statement, except for exchange differences arising on financial instruments at fair value through profit or loss, which are recognised in the consolidated income statement without distinguishing them from other changes in fair value, and for exchange differences arising on non-monetary items measured at fair value through equity, which are recognised under 'Other comprehensive income–Items that may be reclassified to profit or loss–Exchange differences' except for exchange differences on equity instruments, where the option to irrevocably elect to be measured at fair value through changes in accumulated other comprehensive income, which are recognised in accumulated 'Other Comprehensive Income - Items not to be reclassified to profit or loss - Changes in fair value of equity instruments measured at fair value' through other comprehensive income (see note 29).

The exchange differences arising on the translation to euros of the financial statements denominated in functional currencies other than the euro are recognised in 'Other comprehensive income–Items that may be reclassified to profit or loss–Exchange differences' in the consolidated balance sheet, whereas those arising on the translation to euros of the financial statements of entities accounted for using the equity method are recognised in equity under 'Other comprehensive income–Items that may be reclassified to profit or loss and Items not reclassified to profit or loss–Other recognised income and expense' of investments in subsidiaries, joint ventures and associates (see note 29), until the related item is derecognised, at which time they are recognised in profit or loss.

Exchange differences arising on actuarial gains or losses when converting to euros the financial statements denominated in the functional currencies of entities whose functional currency is different from the euro are recognised under equity 'Other comprehensive income–Items not reclassified to profit or loss–Actuarial gains or (-) losses' on defined benefit pension plans (see note 29).

iv. Entities located in hyperinflationary economies

When a subsidiary operates in a country with hyperinflationary economy, IAS 29 Financial Information in Hyperinflationary Economies is applied, which means that:

- Historical cost of non-monetary assets and liabilities and of the various items of equity have to be adjusted to reflect the changes in the purchasing power of the currency due to inflation from their date of acquisition or incorporation into the consolidated balance sheet.
- The different items of the income statement are adjusted by the inflationary index since their generation, with a balancing entry in 'Other comprehensive income'.
- The loss on the net monetary position is recorded in the income for the year against 'Accumulated Other comprehensive income'.
- All components of the financial statements of the subsidiary are translated at the closing exchange rate.

The deterioration of the economic situation in Argentina over the last years caused, among other impacts, a significant increase in inflation, which by the end of 2018 had reached 48% per year (147% accumulated in three years). This led the Group to conclude that it was necessary to apply IAS 29 Financial Information in Hyperinflationary Economies to its activities in the country in question in its consolidated financial statements from that year on.

In 2024, Grupo Santander decided to apply an alternative exchange rate for the conversion of its Argentine business in the preparation of its consolidated annual accounts. This decision stemmed from the divergence observed between the official exchange rate and certain macroeconomic variables, primarily inflation, coupled with the fact that for certain transactions, such as the repatriation of dividends, the exchange rate implied in orderly transactions between market participants did not correspond to the official exchange rate. As of 31 December 2024, the alternative exchange rate used was based on the CCL dollar ('*contado con liquidación*'), which is the exchange rate resulting from the sale in US dollars of local bonds denominated in Argentine pesos (bonds with dual peso dollar/denomination). At that date, this rate did not differ significantly from other market rates.

From the second quarter of 2025, and considering the liberalization of the foreign exchange market and the elimination of restrictions on the purchase of foreign currency by individuals, and the value of this CCL dollar exchange rate did not differ significantly from other market rates and the official exchange rate, Grupo Santander started using the official exchange rate as a reference once again.

Inflation during 2025, according to the national consumer price index published by the National Statistics and Census Institute, was 31.5% for the year (117.8% at 31 December 2024). The official exchange rate as 31 December 2025 was 1,706.38 Argentine pesos per euro (1,071.16 Argentine pesos per euro at 31 December 2024). The exchange rate applied by the Group as at 31 December 2024 was 1,232.39 Argentine pesos per euro.

At 31 December 2025, no other country in which the consolidated and associated entities of Grupo Santander are located is considered to have a hyperinflationary economy in accordance with the criteria established in this regard by the International Financial Reporting Standards adopted by the European Union.

v. Exposure to foreign currency risk

Grupo Santander hedges a portion of its long-term foreign currency positions using foreign exchange derivative financial instruments (see note 36). Also, the Group manages foreign exchange risk dynamically by hedging its short-term position (with a potential impact on profit or loss) in order to limit the impact of currency depreciations while optimising the cost of financing the hedges.

The following tables show the sensitivity of the consolidated income statement and consolidated equity to percentage changes of ± 1% in the foreign exchange rate positions arising from investments in Grupo Santander companies with currencies other than the euro (with its hedges) and in their results (with its hedges), in which the Group maintains significant balances.

The estimated effect on the consolidated equity attributable to Grupo Santander and on consolidated profit and loss account of a 1% appreciation of the euro against the corresponding currency is as follows:

EUR million

	Effect on consolidated equity			Effect on consolidated profit		
Currency	**2025**	**2024**	**2023**	**2025**	**2024**	**2023**
US dollar	(135.0)	(168.4)	(136.9)	(2.5)	(3.9)	(3.4)
Chilean peso	(8.8)	(15.3)	(35.3)	(4.3)	(2.1)	(2.3)
Pound sterling	(88.1)	(96.5)	(79.1)	(7.6)	(4.4)	(3.1)
Mexican peso	(32.5)	(33.9)	(36.4)	(0.5)	(0.5)	(0.1)
Brazilian real	(141.2)	(144.1)	(175.7)	(0.8)	(4.3)	(6.5)
Polish zloty	(12.8)	(25.1)	(48.8)	—	(0.4)	—
Argentine peso	(21.3)	(18.3)	(7.5)	(3.7)	(6.6)	(4.2)

Similarly, the estimated effect on the Group's consolidated equity and on consolidated profit and loss account of a 1% depreciation of the euro against the corresponding currency is as follows:

EUR million

	Effect on consolidated equity			Effect on consolidated profit		
Currency	**2025**	**2024**	**2023**	**2025**	**2024**	**2023**
US dollar	137.8	171.8	139.7	2.5	4.0	3.4
Chilean peso	9.0	15.6	36.0	4.4	2.2	2.3
Pound sterling	89.9	98.4	80.7	7.7	4.5	3.1
Mexican peso	33.1	34.6	37.1	0.5	0.5	0.1
Brazilian real	144.0	147.0	179.3	0.9	4.3	6.6
Polish *zloty*	13.0	25.6	49.8	—	0.4	—
Argentine peso	21.7	18.7	7.7	3.8	6.7	4.2

The above data were obtained as follows:

a) Effect on consolidated equity: in accordance with the accounting policy detailed in note 2.a.iii, foreign exchange rate impact arising on the translation to euros of the financial statements in the functional currencies of the Group entities whose functional currency is not the euro are recognised in consolidated equity. The potential effect that a change in the exchange rates of the related currency would have on the Group's consolidated equity was therefore determined by applying the aforementioned change to the net value of each unit's assets and liabilities - including, where appropriate, the related goodwill- and by taking into consideration the offsetting effect of the hedges of net investments in foreign operations.

b) Effect on consolidated profit: the effect was determined by applying the up and down movements in the average exchange rates of the year, as indicated in note 2.a.ii (except in the case of Argentina, which is a hyperinflationary economy and has applied the closing exchange rate), to translate to euros the income and expenses of the consolidated entities whose functional currency is not the euro, taking into consideration, where appropriate, the offsetting effect of the various hedging transactions in place.

The estimates used to obtain the foregoing data were performed considering the effects of the changes in the exchange rate in standalone basis not considering the effect of the performance of other variables whose changes would affect equity and profit or loss, such as variations in the interest rates of the reference currencies or other market factors. Accordingly, all variables other than the exchange rate variations were kept constant with respect to their positions at 31 December 2025, 2024 and 2023.

b) Basis of consolidation

i. Subsidiaries

Subsidiaries are defined as entities over which the Bank has the capacity to exercise control. The Bank controls an entity when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

The financial statements of the subsidiaries are fully consolidated with those of the Bank. Accordingly, all balances and effects of the transactions between consolidated companies are eliminated on consolidation.

On acquisition of control of a subsidiary, its assets, liabilities and contingent liabilities are recognised at their acquisition-date fair values. Any positive differences between the acquisition cost and the fair values of the identifiable net assets acquired are recognised as goodwill (see note 17). Negative differences are recognised in profit or loss on the date of acquisition.

Additionally, the share of third parties of Grupo Santander equity is presented under 'Non-controlling interests' in the consolidated balance sheet (see note 28). Their share of the profit for the year is presented under 'Profit attributable to non-controlling interests' in the consolidated income statement.

The results of subsidiaries acquired during the year are included in the consolidated income statement from the date of acquisition to year-end. Similarly, the results of subsidiaries for which control is lost during the year are included in the consolidated income statement from the beginning of the year to the date of disposal.

At 31 December 2025, apart from the structured consolidated entities, Grupo Santander does not control any company in which it maintains a percentage of direct participation in its share capital of less than 50% and in where other elements exist which, considered together, would grant give it decision-making power over its relevant activities.

The appendices contain significant information on the subsidiaries.

ii. Interests in joint ventures

Joint ventures are deemed to be entities that are not subsidiaries but which are jointly controlled by two or more unrelated entities. This is evidenced by contractual arrangements whereby two or more parties have interests in entities so that decisions about the relevant activities require the unanimous consent of all the parties sharing control.

In the consolidated financial statements, investments in joint ventures are accounted for using the equity method, i.e. at the Group's share of net assets of the investee, after taking into account the dividends received therefrom and other equity eliminations. The profits and losses resulting from transactions with a joint venture are eliminated to the extent of the Group's interest therein.

The appendices contain relevant information on the joint ventures.

iii. Associates

Associates are entities over which Banco Santander is in a position to exercise significant influence, but not control or joint control. It is presumed that Banco Santander exercises significant influence if it holds 20% or more of the voting power of the investee.

In the consolidated financial statements, investments in associates are accounted for using the equity method, with the same criteria applicable to shares in joint ventures.

There are certain investments in entities which, although Grupo Santander owns 20% or more of their voting power, are not considered to be associates because the Group is not in a position to exercise significant influence over them. As of 31 December 2024 and 2023, the investment in Project Quasar Investments 2017, S.L. was in this situation, despite maintaining a 49% stake in the share capital. The rest of the investments are not significant for the Group.

There are also certain investments in associates where the Group owns less than 20% of the voting rights, as it is determined that it has the capacity to exercise significant influence over them. The impact of these companies is immaterial in the Group's consolidated financial statements.

The appendices contain significant information on the associates.

iv. Structured entities

In some cases, Grupo Santander incorporates entities, or holds ownership interests therein, to enable its customers to access certain investments, or for the transfer of risks or other purposes. Those entities are called 'structured entities' and they are characterized by the fact that since the voting, or similar power is not a key factor in deciding who controls the entity. The control is determined by using internal criteria and procedures and taking into consideration the applicable legislation, as described above. Specifically, for those entities to which this policy applies (mainly investment funds and pension funds), the Group analyses the following factors:

- Percentage of ownership held by Grupo Santander; 20% is established as the general threshold.
- Identification of the fund manager, and verification as to whether it is a company controlled by the Group since this could affect Grupo Santander ability to direct the relevant activities.
- Existence of agreements between investors that might require decisions to be taken jointly by the investors, rather than by the fund manager.
- Existence of currently exercisable removal rights (possibility of removing the manager from his position), since the existence of such rights might limit the manager's power over the fund, and it may be concluded that the manager is acting as an agent of the investors.
- Analysis of the fund manager's remuneration regime, taking into consideration that a remuneration regime that is proportionate to the service rendered does not, generally, create exposure of such importance as to indicate that the manager is acting as the principal. Conversely, if the remuneration regime is not proportionate to the service rendered, this might give rise to an exposure that would lead the Group to a different conclusion.

These structured entities also include the securitisation special purpose vehicles, which are consolidated in the case of the Special Purpose Vehicles (SPVs) over which, being exposed to variable yield, it is considered that the Group continues to exercise control.

The exposure associated with unconsolidated structured entities, additional to investments in the equity of investment funds (note 8), are not material with respect to the Group's consolidated financial statements.

v. Business combinations

A business combination is the bringing together of two or more separate entities or economic units into one single entity or group of entities.

Business combinations whereby Grupo Santander obtains control over an entity or a business are recognised for accounting purposes as follows:

- Grupo Santander measures the cost of the business combination, which is normally the consideration transferred, defined as the acquisition-date fair values of the assets transferred, the liabilities incurred to the former owners of the acquiree and the equity instruments issued, if any, by the acquirer. In cases where the amount of the consideration to be transferred has not been definitively established at the acquisition date, but rather depends on future events, any contingent consideration is recognised as part of the consideration transferred and measured at its acquisition-date fair value. Moreover, acquisition-related costs do not for these purposes form part of the cost of the business combination.
- The fair values of the assets, liabilities and contingent liabilities of the acquired entity or business, including any intangible assets identified in the business combination which might not have been recognised by the acquiree, are estimated and recognised in the consolidated balance sheet; the Group also estimates the amount of any non-controlling interests and the fair value of the previously held equity interest in the acquiree.
- Any positive difference between the aforementioned items is recognised as discussed in note 2.m. Any negative difference is recognised under 'Negative Goodwill' recognised in the consolidated income statement.

Goodwill is only calculated and recognised once, when control of a business or an entity is obtained.

vi. Changes in the levels of ownership interests in subsidiaries

Acquisitions and disposals not giving rise to a change in control are recognised as equity transactions, and no gain or loss is recognised in the income statement and the initially recognised goodwill is not remeasured. The difference between the consideration transferred or received and the decrease or increase in non-controlling interests, respectively, is recognised in reserves.

Similarly, when control over a subsidiary is lost, the assets, liabilities and non-controlling interests and any other items recognised in 'Other Comprehensive income' of that company are derecognised from the consolidated balance sheet, and the fair value of the consideration received and of any remaining equity interest is recognised. The difference between these amounts is recognised in profit or loss.

c) Classification of financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or an equity instrument of another entity.

The following transactions are not treated for accounting purposes as financial instruments:

- Investments in associates and joint venture when accounted for using the equity method in accordance with IAS 28 (see note 13).
- Rights and obligations under employee benefit plans recognized in accordance with IAS 19 (see note 25).
- Insurance contracts and the rights and obligations directly arising from them, within the scope of IFRS 17 (see note 15).
- Contracts and obligations relating to employee remuneration based on own equity instruments accounted for in accordance with IFRS 2 (see note 34).

i. Classification of financial assets for measurement purposes

Financial assets are classified into the various categories used for management and measurement purposes, unless they have to be presented as 'Non-current assets held for sale' or they relate to 'Cash, cash balances at central banks and other deposits on demand', 'Changes in the fair value of hedged items in portfolio hedges of interest rate risk (asset side)', 'Hedging derivatives and Investments', which are reported separately.

Classification of financial instruments: the classification criteria for financial assets depends on the business model for their management and the characteristics of their contractual flows.

Grupo Santander business models refer to the way in which it manages its financial assets to generate cash flows. In defining these models, the Group takes into account the following factors:

- How key entity staff are assessed and reported on the performance of the business model and the financial assets held in the business model.
- The risks that affect the performance of the business model (and the financial assets held in the business model) and, specifically, the way in which these risks are managed.
- The way in which business managers are remunerated.
- The frequency, the calendar and volume of sales in previous years, as well as expectations of future sales and the reasons of the sales.

The analysis of the characteristics of the contractual cash flows of financial assets requires an assessment of the congruence of these flows with a basic loan agreement. The Group determines if the contractual cash flows of its financial assets that are only principal and interest payments on the outstanding principal amount at the beginning of the transaction. This analysis takes into consideration four factors (performance, contractual clauses, contractually linked products and currencies). Furthermore, among the most significant judgements used by the Group in carrying out this analysis, the following ones are included:

- The return on the financial asset, in particular in cases of periodic interest rate adjustments where the term of the reference rate does not coincide with the frequency of the adjustment. In these cases, an assessment is made to determine whether or not the contractual cash flows differ significantly from the flows without this change in the time value of money, establishing a tolerance level of 5%.

- When contractual clauses that may modify the cash flows of the financial asset exist, the structure of the cash flows before and after the activation of such clauses is analysed, regardless of the probability of occurrence of the contingent event. The evaluation of contractual flows of financial assets with characteristics associated with ESG (Environmental, Social and Governance) is included in this analysis.

- Financial assets whose cash flows have different priority for payment due to a contractual link to underlying assets (e.g. securitization instruments or similar structures) require a look-through analysis by the Group so as to review that both the financial asset and the underlying assets are only principal and interest payments and that the exposure to credit risk of analyzed segment does not exceed the average exposure of the underlying assets of the instrument.

Depending on these factors, the financial assets classify for measurement as: (i) at amortised cost, (ii) at fair value with changes in other comprehensive income or (iii) at fair value with changes through profit and loss. IFRS 9 also establishes an option to irrevocably designate an instrument at fair value with changes in profit or loss, when doing so eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as 'accounting asymmetry') that would otherwise arise from measuring assets or liabilities or recognising gains and losses on different bases.

Grupo Santander uses the following criteria for the classification of the financial debt instruments:

- Amortised cost: financial instruments managed under a business model whose objective is to hold the financial assets to collect contractual principal and interest flows. This category includes instruments for which there are no frequent or significant unjustified sales and fair value is not a key element in the management of these assets and contractual conditions they give rise to cash flows on specific dates, which are only payments of principal and interest on the outstanding principal amount. In this sense, justified sales are considered to be those related to an (i) increase in the credit risk of the asset, (ii) unanticipated funding needs (stress case scenarios) and (iii) those close to maturity . Additionally, the characteristics of its contractual flows represent substantially a 'basic financing agreement'.

- Fair value with changes in other comprehensive income: financial instruments held in a business model whose objective is to collect principal and interest cash flows and the sale of these assets, where fair value is a relevant factor in their management. Additionally, the contractual cash flow characteristics substantially represent a 'basic financing agreement'.

- Fair value with changes in profit or loss: financial instruments included in a business model different from the above, where fair value is a key element in the management of these assets, and the contractual flows of the financial instruments do not substantially represent a 'basic financing agreement'. In this section it can be enclosed the portfolios classified under 'Financial assets held for trading', 'Non-trading financial assets mandatorily at fair value through profit or loss' and 'Financial assets at fair value through profit or loss'. In this regard, most of the financial assets presented in the category of 'Financial assets designated at value reasonable with change in results' are instruments financial services that, not being part of the portfolio of negotiation, are contracted jointly with other financial instruments that are recorded in the category of 'held for trading', and that by both are recorded at fair value with changes in results, so your record in any other category would produce accounting asymmetries.

Equity instruments will be classified at fair value under IFRS 9, with changes in profit or loss, unless the Group decides, for non-trading assets, to classify them at fair value with changes in other comprehensive income (irrevocably) at initial recognition.

ii. Classification of financial assets for presentation purposes

Financial assets are classified by nature into the following items in the consolidated balance sheet:

- Cash, cash balances at Central Banks and other deposits on demand: cash balances and balances receivable on demand relating to deposits with central banks and other credit institutions.

- Loans and advances: includes the debit balances of all credit and loans granted by the Group, other than those represented by securities or securitized, as well as the finance lease receivables and other debit balances of a financial nature in favour of the Group such as cheques drawn on credit institutions, balances receivable from clearing houses and settlement agencies for transactions on the stock exchange and organised markets, bonds given in cash, capital calls, fees and commissions receivable for financial guarantees and debit balances arising from transactions not originating in banking transactions and services, such as the collection of rentals and similar items. They are classified, on the basis of the institutional sector to which the debtor belongs, into:

  - Central banks: credit of any nature, including deposits and money market transactions received from the Bank of Spain or other central banks.

  - Credit institutions: credit of any nature, including deposits and money market transactions, in the name of credit institutions.

  - Customers: includes the remaining credit, including money market transactions through central counterparties.

- Debt securities: bonds and other securities that represent a debt for their issuer, that that accrue interest or equivalent returns implemented in securities or in book entries.

- Equity instruments: financial instruments issued by other entities, such as shares, which have the nature of equity instruments for the issuer, other than investments in subsidiaries, joint ventures or associates. Investment fund units are included in this item.

- Derivatives: includes the fair value in favour of the Group of derivatives which do not form part of hedge accounting, including embedded derivatives separated from hybrid financial instruments.

- Repurchase agreements and reverse repurchase agreements: Purchases of financial instruments under a non-optional resale (repurchase) agreement at a fixed price (repos) are recognised in the consolidated balance sheet as financing granted, based on the nature of the debtor, under 'Loans and advances with central banks', 'Loans and advances to credit institutions' or 'Loans and advances to customers. Differences between the purchase and sale prices are recognised as interest over the contract term.

- Changes in the fair value of hedged items in portfolio hedges of interest rate risk: this item is the balancing entry for the amounts credited to the consolidated income statement in respect of the measurement of the portfolios of financial instruments which are effectively hedged against interest rate risk through fair value hedging derivatives.

- Hedging derivatives: Includes the fair value in favour of the Group of derivatives, including embedded derivatives separated from hybrid financial instruments, designated as hedging instruments in hedge accounting.

iii. Classification of financial liabilities for measurement purposes

Financial liabilities are initially classified into the various categories used for management and measurement purposes, unless they have to be presented as 'Liabilities associated with non-current assets held for sale' or they relate to 'Hedging derivatives' or the changes in the fair value of hedged items in portfolio hedges of interest rate risk (liability side), which are reported separately.

In most cases, changes in the fair value of financial liabilities designated at fair value through profit or loss, caused by the entity's credit risk, are recognized in other comprehensive income, unless this treatment results in an accounting asymmetry, in which case the full effect is recognized in the profit or loss for the period.

Financial liabilities are included for measurement purposes in one of the following categories:

- Financial liabilities held for trading (at fair value through profit or loss): this category includes financial liabilities incurred for the purpose of generating a profit in the near term from fluctuations in their prices, financial derivatives not designated in accounting hedging relationships, and financial liabilities arising from the outright sale of financial assets temporarily acquired or received on loan (short positions).

- Financial liabilities designated at fair value through profit or loss: financial liabilities are included in this category when they provide more relevant information, either because this eliminates or significantly reduces recognition or measurement inconsistencies (accounting mismatches) that would otherwise arise from measuring assets or liabilities or recognising the gains or losses on them on different bases, or because a group of financial liabilities or financial assets and liabilities is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information about the group is provided on that basis to the Group's key management personnel.

Liabilities may only be included in this category on the date when they are incurred or originated.

- Financial liabilities at amortised cost: financial liabilities, irrespective of their instrumentation and maturity, not included in any of the above-mentioned categories which arise from the ordinary borrowing activities carried on by financial institutions.

iv. Classification of financial liabilities for presentation purposes

Financial liabilities are classified by nature into the following items in the consolidated balance sheet:

- Deposits: includes all repayable balances received in cash by Grupo Santander, other than those instrumented as marketable securities and those having the substance of subordinated liabilities (amount of the loans received, which for credit priority purposes are after common creditors), except for the debt instruments issued. This item also includes cash bonds and cash consignments received the amount of which may be invested without restriction. Deposits are classified on the basis of the creditor's institutional sector into:

  - Central banks: deposits of any nature, including credit received and money market transactions received from the Bank of Spain or other central banks.

  - Credit institutions: deposits of any nature, including credit received and money market transactions in the name of credit institutions.

  - Customer: includes the remaining deposits, including money market transactions through central counterparties.

- Marketable debt securities: includes the amount of bonds, debentures and other debt represented by marketable securities, other than those having the substance of subordinated liabilities (amount of the loans received, which for credit priority purposes are after common creditors, and includes the amount of the financial instruments issued by the Group which, having the legal nature of capital, do not meet the requirements to qualify as equity, such as certain preferred shares issued). This item includes the component that has the consideration of financial liability of the securities issued that are compound financial instruments.

- Derivatives: includes the fair value, with a negative balance for the Group, of derivatives, including embedded derivatives separated from the host contract, which do not form part of hedge accounting.

- Short positions: includes the amount of financial liabilities arising from the outright sale of financial assets acquired under reverse repurchase agreements or borrowed.

- Other financial liabilities: includes the amount of payment obligations having the nature of financial liabilities not included in other items (includes, among others, the balance of lease liabilities recognized in accordance with IFRS 16), and liabilities under financial guarantee contracts, unless they have been classified as non-performing.

- Repurchase agreements and reverse repurchase agreements: Sales of financial instruments under a non-optional resale (repurchase) agreement at a fixed price (repos) are recognised in the consolidated balance sheet as financing received, based on the nature of the creditor, under 'Deposits from central banks', 'Deposits from credit institutions' or 'Customer deposits'. Differences between the purchase and sale prices is recorded as interest accrued over the life of the contract, using the effective interest rate method.

- Changes in the fair value of hedged items in portfolio hedges of interest rate risk: this item is the balancing entry for the amounts charged to the consolidated income statement in respect of the measurement of the portfolios of financial instruments which are effectively hedged against interest rate risk through fair value hedging derivatives.

- Hedging derivatives: includes the fair value of the Group's liability in respect of derivatives, including embedded derivatives separated from hybrid financial instruments, designated as hedging instruments in hedge accounting.

- The preference shares contingently convertible into ordinary shares eligible as Additional Tier 1 capital (PPCC) -perpetual shares, which may be repurchased by the issuer in certain circumstances, the interest on which is discretionary, and would convert into variable number of newly issued ordinary shares if the capital ratio of the Bank or its consolidated group falls below a given percentage (trigger event), as those two terms are defined in the related issue prospectuses are recognised for accounting purposes by the Group as compound instruments in accordance with IAS 32. The liability component reflects the issuer's obligation to deliver a variable number of shares and the equity component reflects the issuer's discretion in relation to the payment of the related coupons. In order to effect the initial allocation, the Group estimates the fair value of the liability as the amount that would have to be delivered if the trigger event were to occur immediately and, accordingly, the equity component, calculated as the residual amount, is zero. In view of the aforementioned discretionary nature of the payment of the coupons, they are deducted directly from equity.

- Capital perpetual preference shares (PPCA), with the possibility of purchase by the issuer in certain circumstances, whose remuneration is discretionary, and which will be amortised permanently, totally or partially, in the event that the bank or its consolidated group submits a capital ratio lesser than a certain percentage (trigger event), as defined in the corresponding prospectuses, are accounted for by the Group as equity instruments.

- Derivatives embedded in other financial instruments or in other host contracts are accounted for separately as derivatives if their risks and characteristics are not closely related to those of the host contracts, provided that the host contracts are not classified as financial assets/liabilities designated at fair value through profit or loss or as 'Financial assets/liabilities held for trading'.

d) Measurement of financial assets and liabilities and recognition of fair value changes

In general, financial assets and liabilities are initially recognised at fair value which, in the absence of evidence to the contrary, is deemed to be the transaction price.

In this regard, IFRS 9 states that regular way purchases or sales of financial assets shall be recognised and derecognised on the trade date or on the settlement date. Grupo Santander has opted to make such recognition on the trading date or settlement date, depending on the convention of each of the markets in which the transactions are carried out. For example, in relation to the purchase or sale of debt securities or equity instruments traded in the Spanish market, securities market regulations stipulate their effective transfer at the time of settlement and, therefore, the same time has been established for the accounting record to be made.

The fair value of instruments not measured at fair value through profit and loss is adjusted by transaction costs. Subsequently, and on the occasion of each accounting close, they are valued in accordance with the following criteria:

i. Measurement of financial assets

Financial assets are measured at fair value are valued mainly at their fair value without deducting any transaction cost for their sale.

The fair value of a financial instrument on a given date is taken to be the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. The most objective and common reference for the fair value of a financial instrument is the price that would be paid for it on an active, transparent and deep market (quoted price or market price). At 31 December 2025, there were no significant investments in quoted financial instruments that had ceased to be recognised at their quoted price because their market could not be deemed to be active.

If there is no market price for a given financial instrument, its fair value is estimated on the basis of the price established in recent transactions involving similar instruments and, in the absence thereof, of valuation techniques commonly used by the international financial community, taking into account the specific features of the instrument to be measured and, particularly, the various types of risk associated with it.

All derivatives are recognised in the balance sheet at fair value from the trade date. If the fair value is positive, they are recognised as an asset and if the fair value is negative, they are recognised as a liability. The fair value on the trade date is deemed, in the absence of evidence to the contrary, to be the transaction price. The changes in the fair value of derivatives from the trade date are recorded in the consolidated income statement. Specifically, the fair value of financial derivatives traded in organised markets included in the portfolios of financial assets or liabilities held for trading is deemed to be their daily quoted price and if, for exceptional reasons, the quoted price cannot be determined on a given date, these financial derivatives are measured using methods similar to those used to measure derivatives.

The fair value of derivatives is taken to be the sum of the future cash flows arising from the instrument, discounted to present value at the date of measurement (present value or theoretical close) using valuation techniques commonly used by the financial markets: net present value, option pricing models and other methods.

The amount of debt securities and loans and advances under a business model whose objective is to collect the principal and interest flows are valued at their amortised cost, as long as they comply with the 'SPPI' (Solely Payments of Principal and Interest) test, using the effective interest rate method in their determination. Amortised cost refers to the acquisition cost of a corrected financial asset or liability (more or less, as the case may be) for repayments of principal and the part systematically charged to the consolidated income statement of the difference between the initial cost and the corresponding reimbursement value at expiration. In the case of financial assets, the amortised cost includes, in addition, the corrections to their value due to the impairment. In the loans and advances covered in fair value hedging transactions, the changes that occur in their fair value related to the risk or the risks covered in these hedging transactions are recorded.

The effective interest rate is the discount rate that exactly matches the carrying amount of a financial instrument to all its estimated cash flows of all kinds over its remaining life.

For fixed rate financial instruments, the effective interest rate coincides with the contractual interest rate established on the acquisition date plus, where applicable, the fees and transaction costs that, because of their nature, form part of their financial return. In the case of floating rate financial instruments, the effective interest rate coincides with the rate of return prevailing in all connections until the next benchmark interest reset date.

Equity instruments and contracts related with these instruments are measured at fair value. However, in certain circumstances the Group estimates cost value as a suitable estimate of the fair value. This can happen if the recent event available information is not enough to measure the fair value or if there is a broad range of possible measures and the cost value represents the best estimates of fair value within this range.

The amounts at which the financial assets are recognised represent, in all material respects, the Group's maximum exposure to credit risk at each reporting date. Also, Grupo Santander has received collateral and other credit enhancements to mitigate its exposure to credit risk, which consist mainly of mortgage guarantees, cash collateral, equity instruments and personal security, assets leased out under finance lease and full-service lease agreements, assets acquired under repurchase agreements, securities loans and credit derivatives.

ii. Measurement of financial liabilities

In general, financial liabilities are measured at amortised cost, as defined above, except for those included under 'Financial liabilities held for trading' and 'Financial liabilities designated at fair value through profit or loss' and financial liabilities designated as hedged items (or hedging instruments) in fair value hedges, which are measured at fair value. The changes in credit risk arising from financial liabilities designated at fair value through profit or loss are recognised in accumulated other comprehensive income, unless they generate or increase an accounting mismatch, in which case changes in the fair value of the financial liability in all respects are recognised in the income statement.

iii. Valuation techniques

The financial instruments at fair value determined on the basis of published price quotations in active markets (level 1) include government debt securities, private-sector debt securities, derivatives traded in organised markets, securitised assets, shares, short positions and fixed-income securities issued.

In cases where price quotations cannot be observed, management makes its best estimate of the price that the market would set, using its own internal models, described in note 50. In most cases, these internal models use data based on observable market parameters as significant inputs (level 2) and, in cases, they use significant inputs not observable in market data (level 3). In order to make these estimates, various techniques are employed, including the extrapolation of observable market data. The best evidence of the fair value of a financial instrument on initial recognition is the transaction price, unless the fair value of the instrument can be obtained from other market transactions performed with the same or similar instruments or can be measured by using a valuation technique in which the variables used include only observable market data, mainly interest rates.

iv. Recognition of fair value changes

As a general rule, changes in the carrying amount of financial assets and liabilities are recognised in the consolidated income statement. A distinction is made between the changes resulting from the accrual of interest and similar items, (which are recognised under Interest income or Interest expense, as appropriate), and those arising for other reasons, which are recognised at their net amount under 'Gains/losses on financial assets and liabilities'.

Adjustments due to changes in fair value arising from:

- 'Financial assets at fair value with changes in other comprehensive income' are recorded temporarily, in the case of debt instruments in 'Other comprehensive income - Elements that can be reclassified to profit or loss - Financial assets at fair value with changes in other comprehensive income', while in the case of equity instruments are recorded in 'other comprehensive income - Elements that will not be reclassified to line item - Changes in the fair value of equity instruments valued at fair value with changes in other comprehensive income'.

  Exchange differences on debt instruments measured at fair value with changes in other comprehensive income are recognised under 'Exchange Differences, net' of the consolidated income statement. Exchange differences on equity instruments, in which the irrevocable option of being measured at fair value with changes in other comprehensive income has been chosen, are recognised in 'Other comprehensive income - Items that will not be reclassified to profit or loss - Changes in the fair value of equity instruments measured at fair value with changes in other comprehensive income'.

- Items charged or credited to 'Items that may be reclassified to profit or loss – Financial assets at fair value through other comprehensive income' and 'Other comprehensive income – Items that may be reclassified to profit or loss – Exchange differences in equity' remain in the Group's consolidated equity until the asset giving rise to them is impaired or derecognised, at which time they are recognised in the consolidated income statement.

- Unrealized capital gains on financial assets at fair value through other comprehensive income classified as 'Non-current assets held for sale' because they form part of a disposal group or a discontinued operation that are recorded in the equity balancing entry 'Other accumulated comprehensive income - Items that can be reclassified in income - Non-current assets as held for sale.

v. Hedging transactions

The objective of hedge accounting is to represent in the financial statements the effect of an entity's risk management activities when it uses financial instruments to manage exposures arising from specific risks that could affect profit or loss or other comprehensive income (in the case of investments in equity instruments for which the entity has opted to represent changes in the fair value of other comprehensive income).

As described in Note 1.b, the Group has adopted IFRS 9 for hedge accounting prospectively, while continuing to apply IAS 39 for fair value hedges in portfolios where the hedged risk is interest rate risk. This change has not resulted in any modifications to the accounting treatment of hedges designated under IAS 39, which remain unchanged in both their designation and accounting treatment.

For a hedging relationship to meet the requirements set out in IFRS 9, it must meet the following conditions:

1. Instruments that can be designated as hedging instruments include all derivative financial instruments or non-derivative financial instruments measured at fair value through profit or loss, or a combination thereof. In the case of foreign exchange risk hedges, any type of non-derivative financial instrument can also be designated, regardless of its measurement method.

2. Items that can be designated as covered items are all those that are recognized assets or liabilities, firm commitments, highly probable anticipated transactions, and net investments abroad.

3. At the start of coverage, a formal designation and documentation of the hedging relationship must be made, which will include the entity's risk management strategy and objective, identification of the hedging instrument and the covered item, the nature of the covered risk, the methodology for measuring effectiveness, which includes an analysis of the sources of ineffectiveness, and the coverage ratio.

   The main sources of ineffectiveness based on the risk covered are:

   a. Interest rate risk: mismatches in time horizons, principal, repricing and payment dates, time value of options, modifications in the hedged item or the hedging instrument.

   b. Exchange rate risk: in addition to the above, the difference between the interest rates of the two currencies that represents the net cost or benefit of switching cash flows between two currencies with different interest rates.

4. The hedging relationship must be effective, for which there must be an economic relationship between the hedged item and the hedging instrument, credit risk must not have a dominant effect on changes in the value of the economic relationship between the hedging instrument and the hedged item, and the hedging ratio must coincide with that used by the entity in its management.

The Group assesses these effectiveness requirements, at the time of designation and on each submission date, through:

- The economic relationship between the hedged item and the hedging instrument is demonstrated through a qualitative test, and in the event of non-compliance, through quantitative tests that compare the market value of the hedged items—corresponding to the hedged risk—and the hedging instruments. Likewise, a quantitative analysis of variations in the market values of the hedging instrument and the hedged item is performed prospectively.

- The hedge ratio is determined based on the proportion between the amount of the hedged item and the amount of the instrument actually designated by the Group in each hedging relationship.

- The credit risk domain assessment is performed through an analysis of the credit exposure of the hedged items and the hedging instruments.

Accounting hedges are classified and recorded according to the type of risk they cover, based on the following criteria:

- Fair value hedges: These are hedges against exposure to changes in the fair value of the hedged item, attributable to a specific risk.

  The differences arising from both the hedging instruments and the hedged items (due to the hedged risk) are recognized directly in the consolidated profit and loss account.

When the fair value hedge is discontinued, the adjustments previously recorded in the hedged item are charged to profit or loss using the effective interest rate method recalculated at the date the hedge ceases to be covered, and must be fully amortized at maturity.

In fair value hedges of interest rate risk of a portfolio of financial instruments (macro hedges), regulated by IAS 39, the gains or losses arising from the valuation of the hedging instruments are recognized directly in the consolidated profit and loss account, while the gains or losses due to changes in the fair value of the hedged amount (attributable to the hedged risk) are recognized in the consolidated profit and loss account using as a counterpart the headings 'Changes in the fair value of hedged items' of a portfolio with interest rate risk hedge (asset or liability), as appropriate.

- Cash flow hedges: These are hedges against exposure to changes in cash flows attributable to a specific risk associated with the hedged item.

  The effective portion of the change in the value of the hedging instrument is temporarily recorded in the equity account 'Other accumulated comprehensive income - Items that may be reclassified in profit or loss - Hedging derivatives. Cash flow hedges (effective portion)' until the hedged item affects profit or loss. From that point onward, it will be recorded in the consolidated profit or loss account for the same period as the hedged item, except in cases where it is required to be included in the cost of the non-financial asset or liability, or the anticipated transactions are ultimately recognized as non-financial assets or liabilities.

  When cash flow hedges are discontinued, the accumulated result of the hedging instrument recognized in the equity heading 'Other accumulated global result' (while the hedge was effective) will continue to be recognized in that heading until the hedged transaction occurs, at which time it will be recorded in profit or loss, unless it is expected that the transaction will not take place, in which case it is recorded immediately in profit or loss.

- Net investment hedges of a foreign operation: This is a hedge of the amount corresponding to the reporting entity's share of the net assets of said operation.

  The effective portion of the hedging instrument is temporarily recorded in the equity account 'Other accumulated comprehensive income - Items that may be reclassified in profit or loss - Net investment hedges' in foreign operations until the gains or losses on the hedged item are recognized in profit or loss.

To measure ineffectiveness, the Group compares the valuation of the hedging instrument with the valuation of the hedged item based on the hedged risk, using different methodologies such as the proxy method or the hypothetical derivative method. The ineffective portion of the cash flow and net investment hedge relationships in foreign operations is recorded directly in the consolidated profit and loss account, under the heading 'Net gains or losses from hedge accounting'.

The Group discontinues accounting for hedging relationships when the hedging instrument expires, is sold, or when the hedging relationship becomes ineffective because it is no longer aligned with the risk management objective. In that case, the derivative is then treated as a trading derivative.

If a hedging relationship ceases to meet the effectiveness requirements, but the risk management objective remains, the Group will assess whether to rebalance or adjust the hedging ratio to meet the effectiveness requirements again without discontinuing the hedging relationship.

A hedging instrument is generally designated in its entirety, as the factors contributing to its fair value are interdependent. However, IFRS 9 allows certain parts of a hedging instrument to be excluded from its fair value:

a. Separating the intrinsic value and the time value of an option and designating only the intrinsic element as the hedging instrument, which is mandatory if the intrinsic value is designated;

b. Separating the forward and spot elements of a forward contract and designating only the spot element as the hedging instrument, which will be determined for each hedging relationship. and

c. Separate the foreign currency basis spread of a currency derivative and exclude it from the designation of the hedging instrument, as determined for each hedging relationship.

Separating these components will improve the effectiveness of the hedge and allows for alternative accounting treatment for the excluded component. This treatment consists of recording the changes in value under the heading 'Other accumulated comprehensive income – Undesignated items' and recording this component in the consolidated profit or loss statement, depending on the nature of the hedged item, either over a period of time or at the time the hedged transaction occurs.

Additionally, if the entity manages the credit risk of all or part of a financial instrument through the use of credit derivatives, there is the option of designating a fair value credit exposure through profit or loss, provided that the derivative matches the name and priority of the financial instrument being hedged. This designation may be made at the initial recognition of the designated financial instrument or subsequently, with the designation being documented. From its designation, fair value variations (for all its risks, not exclusively credit risk) will be recorded in the consolidated profit and loss account.

e) Derecognition of financial assets and liabilities

The accounting treatment of transfers of financial assets depends on the extent to which the risks and rewards associated with the transferred assets are transferred to third parties:

1. If the Group transfers substantially all the risks and rewards to third parties unconditional -sale of financial assets, sale of financial assets under an agreement to repurchase them at their fair value at the date of repurchase, sale of financial assets with a purchased call option or written put option that is deeply out of the money, securitisation of assets in which the transferor does not retain a subordinated debt or grant any credit enhancement to the new holders, and other similar cases-, the transferred financial asset is derecognised and any rights or obligations retained or created in the transfer are recognised simultaneously.

2. If the Group retains substantially all the risks and rewards associated with the transferred financial asset -sale of financial assets under an agreement to repurchase them at a fixed price or at the sale price plus interest, a securities lending agreement in which the borrower undertakes to return the same or similar assets, and other similar cases-, the transferred financial asset is not derecognised and continues to be measured by the same criteria as those used before the transfer. In this case, the following items are recognised:

a. An associated financial liability, which is recognised for an amount equal to the consideration received and is subsequently measured at amortised cost, unless it meets the requirements for classification under 'Financial liabilities designated at fair value through profit or loss'.

b. The income from the transferred financial asset not derecognised and any expense incurred on the new financial liability, without offsetting.

3. If the Group neither transfers nor retains substantially all the risks and rewards associated with the transferred financial asset -sale of financial assets with a purchased call option or written put option that is not deeply in or out of the money, securitisation of assets in which the transferor retains a subordinated debt or other type of credit enhancement for a portion of the transferred asset, and other similar cases- the following distinction is made:

a. If the transferor does not retain control of the transferred financial asset, the asset is derecognised and any rights or obligations retained or created in the transfer are recognised.

b. If the transferor retains control of the transferred financial asset, it continues to recognise it for an amount equal to its exposure to changes in value and recognises a financial liability associated with the transferred financial asset. The net carrying amount of the transferred asset and the associated liability is the amortised cost of the rights and obligations retained, if the transferred asset is measured at amortised cost, or the fair value of the rights and obligations retained, if the transferred asset is measured at fair value.

Accordingly, financial assets are only derecognised when the rights to the cash flows they generate have expired or when substantially all the inherent risks and rewards have been transferred to third parties. Similarly, financial liabilities are only derecognised when the obligations they generate have been extinguished or when they are acquired with the intention either to cancel them or to resell them.

Regarding contractual modifications of financial assets, Grupo Santander distinguishes two main categories depending on whether the new conditions result in the disposal of the asset (and recognition of a new one) or imply the continuation of the original instrument with the new modified terms:

- Contractual modifications for commercial or market reasons, which are generally carried out at the request of the debtor to apply current market conditions to the debt. The new contract is considered a new transaction and, consequently, it is necessary to derecognize the original financial asset and recognize a new financial asset subject to the classification and measurement requirements established by IFRS 9. The new financial asset will be recorded at fair value and, if applicable, the difference between the carrying amount of the asset derecognized and the fair value of the new asset will be recognized in profit or loss.

- Modifications due to refinancing or restructuring, in which the payment conditions are modified to allow a customer that is experiencing financial difficulties (current or foreseeable) to meet its payment obligations and that, if such modification had not been made, it would be reasonably certain that it would not be able to meet such payment obligations. In this case, the modification does not result in the derecognition of the financial asset, but rather the original financial asset is maintained and does not require a new assessment of its classification and measurement. When assessing credit impairment, the current credit risk (considering the modified cash flows) should be compared with the credit risk at initial recognition. The gross carrying amount of the financial asset (the present value of the renegotiated or modified contractual cash flows that are discounted at the original effective interest rate of the financial asset) should be recalculated, with a gain or loss recognized in profit or loss for the difference.

f) Offsetting of financial instruments

Financial asset and liability balances are offset, i.e. reported in the consolidated balance sheet at their net amount, only if the Group entities currently have a legally enforceable right to set off the recognised amounts and intend either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

g) Impairment of financial assets

i. Definition

Grupo Santander associates an impairment in the value to financial assets measured at amortised cost, debt instruments measured at fair value with changes in other comprehensive income, lease receivables, assets from contracts and loan commitments and the financial guarantees issued that are not measured at fair value through profit or loss.

The impairment for expected credit losses is recorded with a charge to the consolidated income statement for the period in which the impairment arises. In the event of occurrence, the recoveries of previously recognised impairment losses are recorded in the consolidated income statement for the period in which the impairment no longer exists or is reduced.

In the case of purchased or originated credit-impaired assets, the Group only recognizes at the reporting date the changes in the expected credit losses during the life of the asset since the initial recognition as a credit loss. In the case of assets measured at fair value with changes in other comprehensive income, the changes in the fair value due to expected credit losses are charged in the consolidated income statement of the year where the change happened, reflecting the rest of the valuation in other comprehensive income.

As a rule, the expected credit loss is estimated as the difference between the contractual cash flows to be recovered and the expected cash flows discounted using the original effective interest rate. In the case of purchased or originated credit-impaired assets, this difference is discounted using the effective interest rate adjusted by credit rating.

Depending on the classification of financial instruments, which is mentioned in the following sections, the expected credit losses may be along 12 months or during the life of the financial instrument:

- 12-month expected credit losses: arising from the potential default events, as defined in the following sections that are estimated to be likely to occur within the 12 months following the reporting date. These losses will be associated with financial assets classified as 'normal risk' as defined in the following sections.
- Expected credit losses over the life of the financial instrument: arising from the potential default events that are estimated to be likely to occur throughout the life of the financial instruments. These losses are associated with financial assets classified as 'normal risk under watchlist' or 'doubtful risk'.

With the purpose of estimating the expected life of the financial instrument all the contractual terms have been taken into account (e.g. prepayments, duration, purchase options, etc.), being the contractual period (including extension options) the maximum period considered to measure the expected credit losses. In the case of financial instruments with an uncertain maturity period and a component of undrawn commitment (e.g.: credit cards), the expected life is estimated through quantitative analyses to determine the period during which the entity is exposed to credit risk, also considering the effectiveness of management procedures that mitigate such exposure (e.g. the ability to unilaterally cancel such financial instruments, etc.).

The following constitute effective guarantees:

a) Mortgage guarantees on housing as long as they are first duly constituted and registered in favour of the entity. The properties include:

i. Buildings and building elements, distinguishing among:
   - Houses.
   - Offices, stores and multi-purpose premises.
   - Rest of buildings such as non-multi-purpose premises and hotels.

ii. Urban and developable ordered land.

iii. Rest of properties that classify as: buildings and building elements under construction, such as property development in progress and halted development, and the rest of land types, such as rustic lands.

b) Collateral guarantees on financial instruments in the form of cash deposits, debt securities or equity instruments issued by creditworthy issuers.

c) Other types of real guarantees, including properties received in guarantee and second and subsequent mortgages on properties, as long as the entity demonstrates its effectiveness. When assessing the effectiveness of the second and subsequent mortgages on properties the entity will implement particularly restrictive criteria. It will take into account, among others, whether the previous charges are in favour of the entity itself or not and the relationship between the risk guaranteed by them and the property value.

d) Personal guarantees, as well as the incorporation of new owners, covering the entire amount of the financial instruments and implying direct and joint liability to the entity of persons or other entities whose solvency is sufficiently proven to ensure the repayment of the loan on the agreed terms.

The different aspects that the Group considers for the evaluation of effective guarantees are set out below in relation to the individual analysis.

ii. Financial instruments presentation

For the purposes of estimating the impairment amount, and in accordance with its internal policies, the Group classifies its financial instruments (financial assets, commitments and guarantees) measured at amortised cost or fair value through other comprehensive income in one of the following categories:

- Normal Risk ('stage 1'): includes all instruments that do not meet the requirements to be classified in the rest of the categories.
- Normal risk under watchlist ('stage 2'): includes all instruments that, without meeting the criteria for classification as doubtful or default risk, have experienced significant increases in credit risk since initial recognition.

In order to determine whether a financial instrument has increased its credit risk since initial recognition and is to be classified in stage 2, the Group considers the following criteria:

	Changes in the risk of a default occurring through the expected life of the financial instrument are analysed and quantified with respect to its credit level in its initial recognition. With the purpose of determining if such changes are considered as significant, with the consequent classification into stage 2, each Group unit has defined the quantitative thresholds to consider in each of its portfolios taking into account corporate guidelines ensuring a consistent interpretation in all units.
Quantitative criteria	Within the quantitative thresholds, two types are considered: A relative threshold is those that compare current credit quality with credit quality at the time of origination in percentage terms of change. In addition, an absolute threshold compares both references in total terms, calculating the difference between the two. These absolute/relative concepts are used homogeneously (with different values) in all geographies. The use of one type of threshold or another (or both) is determined in accordance with the process described in note 54, below, and is marked by the type of portfolio and characteristics such as the starting point of the average credit quality of the portfolio.
Qualitative criteria	In addition to the quantitative criteria indicated, various indicators are used that are aligned with those used by the Group in the normal management of credit risk. Irregular positions of more than 30 days and renewals are common criteria in all Group units. In addition, each unit can define other qualitative indicators, for each of its portfolios, according to the particularities and normal management practices in line with the policies currently in force (i.e. use of management alerts, etc.). The use of these qualitative criteria is complemented with the use of an expert judgement, under the corresponding governance.

In the case of forbearances, instruments classified as 'normal risk under watchlist' may be generally reclassified to 'normal risk' in the following circumstances: at least two years have elapsed from the date of reclassification to that category or from its forbearance date, the client has paid the accrued principal and interest balance, and the client has no other instruments with more than 30 days past due balances.

- Doubtful Risk ('stage 3'): includes financial instruments, overdue or not, in which, without meeting the circumstances to classify them in the category of default risk, there are reasonable doubts about their total repayment (principal and interests) by the client in the terms contractually agreed. Likewise, off-balance-sheet exposures whose payment is probable and their recovery doubtful are considered in stage 3. Within this category, two situations are differentiated:

  - Doubtful risk for non-performing loans: financial instruments, irrespective of the client and guarantee, with balances more than 90 consecutive days on material arrears for principal, interest or expenses contractually agreed.

    This category also includes all loan balances for a client when the operations with more than 90 consecutive days on material arrears are greater than 20% of the amounts pending collection.

    These instruments may be reclassified to other categories if, as a result of the collection of part of the past due balances, the reasons for their classification in this category do not remain and the client does not have balances more than 90 consecutive days on material arrears in other loans.

  - Doubtful risk for reasons other than non-performing loans: this category includes doubtful recovery financial instruments that are not more than 90 consecutive days on material arrears.

Grupo Santander considers that a financial instrument to be doubtful for reasons other than delinquency when one or more combined events have occurred with a negative impact on the estimated future cash flows of the financial instrument. To this end, the following indicators, among others, are considered:

a) Negative net equity or decrease because of losses of the client's net equity by at least 50% during the last financial year.

b) Continued losses or significant decrease in revenue or, in general, in the client's recurring cash flows.

c) Generalised delay in payments or insufficient cash flows to service debts.

d) Significantly inadequate economic or financial structure or inability to obtain additional financing by the client.

e) Existence of an internal or external credit rating showing that the client is in default.

f) Existence of overdue customer commitments with a significant amount to public institutions or employees.

These financial instruments may be reclassified to other categories if, as a result of an individualised study, reasonable doubts do not remain about the total repayment under the contractually agreed terms and the client does not have balances of 90 days on material arrears.

In the case of forbearances, instruments classified as doubtful risk may be reclassified to the category of 'normal risk under watchlist' when the following circumstances are present: a minimum period of one year has elapsed from the forbearance date, the client has paid the accrued principal and interest amounts, and the client has no other loan balances of 90 days on material arrears.

- Default Risk: includes all financial assets, or part of them, for which, after an individualised analysis, their recovery is considered remote due to a notorious and irrecoverable deterioration of their solvency.

  In any event, except in the case of financial instruments with effective collateral covering a substantial portion of the transaction amount, the Group generally consider as remote the following:

  - Those operations that, after an individualized analysis, are categorized as unsustainable debt, assuming an irrecoverability of such debt.

  - Transactions classified as doubtful due to non-performing loans with recovery costs that exceed the amounts receivable.

  - The operations on which the award is executed. The queue of these operations shall be included under default risk, as the recovery of the flows, provided that no further guarantees associated with the operation remain after the award of the property.

- Those operations on which a deduction is made, the portion of the operation corresponding to that deduction, will be given as a balance at the time of signature.

A financial asset amount is maintained in the balance sheet until they are considered as a 'default risk', either all or a part of it, and the write-off is registered against the balance sheet.

In the case of operations that have only been partially derecognised, for forgiveness reasons or because part of the total balance is considered unrecoverable, the remaining amount shall be fully classified in the category of 'doubtful risk', except where duly justified.

The classification of a financial asset, or part of it, as a 'default risk' does not involve the disruption of negotiations and legal proceedings to recover the amount.

iii. Impairment valuation assessment

Grupo Santander has policies, methods and procedures in place to hedge its credit risk, both due to the insolvency attributable to counterparties and its residence in a specific country.

These policies, methods and procedures are applied in the concession, study and documentation of financial assets, commitments and guarantees, as well as in the identification of their impairment and in the calculation of the amounts needed to cover their credit risk.

The impairment represents the best estimation of the financial assets expected credit losses at the balance sheet date, assessed both individually and collectively.

- Individually: for the purposes of estimating the provisions for credit risk arising from the insolvency of a financial instrument, the Group individually assesses impairment by estimating the expected credit losses on those financial instruments that are considered to be significant and with sufficient information to make such an estimate.

  Therefore, this classification mostly includes wholesale banking customers —Corporations, specialised financing— as well as some of the largest companies —Chartered and real estate developers— from retail banking. The determination of the perimeter in which the individualised estimate is applied is detailed in a later section.

  The individually assessed impairment estimate is equal to the difference between the gross carrying amount of the financial instrument and the estimated value of the expected cash flows receivable discounted using the original effective interest rate of the transaction. The estimate of these cash flows takes into account all available information on the financial asset and the effective guarantees associated with that asset. This estimation process is detailed below.

- Collectively: the Group also assesses impairment by estimating the expected credit losses collectively in cases where they are not assessed on an individual basis. This includes, for example, loans with individuals, sole proprietors or businesses in retail banking subject to a standardised risk management.

  For the purposes of the collective assessment of expected credit losses, the Group has consistent and reliable internal models. For the development of these models, instruments with similar credit risk characteristics that are indicative of the debtors' capacity to pay are considered.

  The credit risk characteristics used to group the instruments are, among others: type of instrument, debtor's sector of activity, geographical area of activity, type of guarantee, aging of past due balances and any other factor relevant to estimating the future cash flows.

Grupo Santander performs retrospective and monitoring tests to evaluate the reasonableness of the collective estimate.

On the other hand, the methodology required to estimate the expected credit loss due to credit events is based on an unbiased and weighted consideration by the probability of occurrence of a series of scenarios, considering a range of three to five possible future scenarios, depending on the characteristics of each unit, which could have an impact on the collection of contractual cash flows, always taking into account the time value of money, as well as all available, reasonable and sustainable information on past events, current conditions and forecasts of the evolution of macroeconomic scenarios that are shown to be relevant for the estimation of this amount (for example: GDP (Gross Domestic Product), housing price, unemployment rate, etc.).

The estimation of expected losses requires expert judgment and the support of historical, current and future information. The probability of loss is measured considering past events, the present situation and future trends of macroeconomic scenarios.

Grupo Santander uses forward-looking information in both internal risk management and prudential regulation processes, so that for the calculation of the impairment loss allowance, various scenarios are incorporated that take advantage of the experience with such information, thus ensuring consistency in obtaining the expected loss.

The complexity of the estimation in this exercise has been derived from the current macroeconomic scenario as a consequence of the complex geopolitical situation, as well changes in inflations levels and interest rates, which has generated uncertainty in economic evolution.

Grupo Santander has internally ensured the criteria to be followed for guarantees received from government bodies, both through credit lines and other public guarantees, so that when they are adequately reflected in each of the contracts, they are recognised as mitigating factors of the potential expected losses, and therefore of the provisions to be recognised, based on the provisions of the applicable standard (IFRS 9 Par. B5.5.55). Furthermore, where applicable, these guarantees are appropriately reflected in the mitigation of the significant increase in risk, considering their nature as personal guarantees.

For the estimation of the parameters used in the estimation of impairment provisions -EAD (exposure at default), PD (probability of default), LGD (loss given default)-, the Group based its experience in developing internal models for the estimation of parameters both in the regulatory area and for management purposes, adapting the development of the impairment provision models under IFRS 9.

- Exposure at default: is the amount of estimated risk incurred at the time of the counterparty's analysis.
- Probability of default: is the estimated probability that the counterparty will default on its principal and/or interest payment obligations.
- Loss given default: is the estimate of the severity of the loss incurred in the event of non-compliance. It depends mainly on the updating of the guarantees associated with the operation and the future cash flows that are expected to be recovered.

In any case, when estimating the flows expected to be recovered, portfolio sales are included. It should be noted that due to the Group's recovery policy and the experience observed in relation to the prices of past sales of assets classified as stage 3 and/or default risk, there is no substantial divergence between the flows obtained from recoveries after performing recovery management of the assets with those obtained from the sale of portfolios of assets discounting structural expenses and other costs incurred.

The definition of default implemented by the Group for the purpose of calculating the impairment provision models is based on the definition in Article 178 of Regulation 575/2013 of the European Union (CRR), which is fully aligned with the requirements of IFRS 9, which considers that a 'default' exists in relation to a specific customer/contract when at least one of the following circumstances exists: the entity considers that there are reasonable doubts about the payment of all its credit obligations or that the customer/contract is in an irregular situation for more than 90 consecutive days past due material balances with respect to any significant credit obligation.

Grupo Santander aligned partially and voluntarily during 2022 the accounting definition of Stage 3, as well as the calculation of impairment provision models, to the New Definition of Default, incorporating the criteria defined by the EBA in its implementation guide of the definition of default, capturing the economic deterioration of the operations (days in default - on a daily basis - and materiality thresholds - minimum amount in arrears). The alignment of criteria was done taking into account the criteria of IFRS 9 as well as the accounting principles of unbiased presentation of financial information. Grupo Santander registered an increase in the default rate at around 19 basis points, with no material impact on the provision figures for credit risk.

In addition, the Group considers the risk generated in all cross-border transactions due to circumstances other than the usual commercial risk of insolvency (sovereign risk, transfer risk or risks arising from international financial activity, such as wars, natural catastrophes, balance of payments crisis, etc.).

IFRS 9 includes a series of practical solutions that can be implemented by entities, with the aim of facilitating its implementation. In order to achieve a complete and high-level implementation of the standard, and following the best practices of the industry, the Group applies these practical solutions adapting them to their own characteristics and circumstances:

- Rebuttable presumption that the credit risk has increased significantly, when payments are more than 30 days past due: this threshold is used as an additional, but not primary, indicator of significant risk increase.
- Assets with low credit risk at the reporting date: the Group adopts this practice prioritizing its reduced and punctual use and its systematic and periodic justification through quantitative evidence.

This information is provided in more detail in note 54.b.

iv. Detail of individual estimate of impairment

For the individual estimate of the assessment for impairment of the financial asset, the Group has a specific methodology to estimate the value of the cash flows expected to be collected:

- Recovery through the debtor's ordinary activities (going approach).
- Recovery through the execution and sale of the collateral guaranteeing the operations (gone approach).

Gone approach:

a. Evaluation of the effectiveness of guarantees

Grupo Santander assesses the effectiveness of all the guarantees associated considering the following:

- The time required to execute these guarantees.
- Grupo Santander's ability to enforce or assert these guarantees in its favour.
- The existence of limitations imposed by each local unit´s regulation on the foreclosure of collateral.

Under no circumstances the Group considers that a guarantee is effective if its effectiveness depends substantially on the solvency of the debtor, as could be the case:

- Promises of shares or other securities of the debtor himself when their valuation may be significantly affected by a debtor's default.
- Personal cross-collateralisation: when the guarantor of a transaction is, at the same time, guaranteed by the holder of that transaction.

The different types of effective guarantees have been detailed in section i. Definition

b. Valuation of guarantees

Grupo Santander assesses the guarantees on the basis of their nature in accordance with the following:

- Mortgage guarantees on properties associated with financial instruments, using complete individual valuations carried out by independent valuation experts and under generally accepted valuation standards. If this is not possible, alternative valuations are used with duly documented and approved internal valuation models.
- Personal guarantees are valued individually on the basis of the guarantor´s updated information.
- The rest of the guarantees are valued based on current market values.

c. Adjustments to the value of guarantees and estimation of future cash flow inflows and outflows

Grupo Santander applies a series of adjustments to the value of the guarantees in order to improve the reference values:

- Adjustments based on the historical sales experience of local units for certain types of assets.
- Individual expert adjustments based on additional management information.

Likewise, to adjust the value of the guarantees, the time value of money is taken into account based on the historical experience of each of the units, estimating:

- Period of adjudication.
- Estimated time of sale of the asset.

In addition, the Group takes into account all those cash inflows and outflows linked to that guarantee until it is sold:

- Possible future income commitments in favour of the borrower which will available after the asset is awarded.
- Estimated foreclosure costs.
- Asset maintenance costs, taxes and community costs.
- Estimated marketing or sales costs.

Finally, since it is considered that the guarantee will be sold in the future, the Group applies an additional adjustment ('index forward') in order to adjust the value of the guarantees to future valuation expectations.

v. Impairment individual assessment scope

Grupo Santander determines the perimeter over which it makes an estimate of the assessment for impairment on an individual basis based on a relevance threshold set by each of the geographical areas and the stage in which the operations are located. In general, the Group applies the individualised calculation of expected losses to the significant exposures classified in stage 3, although Banco Santander, S.A. has also extended its analyses to some of the exposures classified in stage 2.

It should be noted that, in any case and irrespective of the stage in which their transactions are carried out, for customers who do not receive standardised treatment, a relational risk management model is applied, with individualised treatment and monitoring by the assigned risk analyst. In addition to wholesale customers (Santander Corporate & Investment Banking or SCIB) and large companies, this relational management model also includes other segments of smaller companies for which there is information and capacity for more personalised and expert analysis and monitoring. As indicated in the Group's wholesale credit model, the individual treatment of the client facilitates the continuous updating of information. The risk assumed must be followed and monitored throughout its life cycle, enabling anticipation and action to be taken in the event of possible impairments. In this way, the customer's credit quality is analysed individually, taking into account specific aspects such as his competitive position, financial performance, management, etc. In the wholesale risk management model, every customer with a credit risk position is assigned a rating, which has an associated probability of customer default.

Thus, individual analysis of the debtor triggers a specific rating for each customer, which determines the appropriate parameters for calculating the expected loss, so that it is the rating itself that initially modulates the necessary coverage, adjusting the severity of the possible loss to the guarantees and other mitigating factors that the customer may have available. In addition, if as a result of this individualised monitoring of the customer, the analyst finally considers that his coverage is not sufficient, he has the necessary mechanisms to adjust it under his expert judgement, always under the appropriate governance.

h) 'Non-current assets' and 'liabilities associated with non-current assets held for sale'

Non-current assets held for sale' includes the carrying amount of individual items, disposal groups or items forming part of a business unit earmarked for disposal (discontinued operations), whose sale in their present condition is highly likely to be completed within one year from the reporting date. Therefore, the recovery of the carrying amount of these items -which can be of a financial nature or otherwise- will foreseeably be effected through the proceeds from their disposal.

Specifically, property or other non-current assets received by the consolidated entities as total or partial settlement of their debtors' payment obligations to them are deemed to be 'Non-current assets held for sale', unless the consolidated entities have decided to make continuing use of these assets.

'Liabilities associated with non-current assets held for sale' includes the balances payable arising from the assets held for sale or disposal groups and from discontinued operations.

'Non-current assets and disposal groups of items that have been classified as held for sale' are generally recognised at the date of their allocation to this category and are subsequently valued at the lower of their fair value less costs to sell or its book value. 'Non-current assets and disposal groups of items that are classified as held for sale' are not amortised as long as they remain in this category.

The valuation of the portfolio of non-current assets held for sale has been made in compliance with the requirements of International Financial Reporting Standards in relation to the estimate of the fair value of tangible assets and the value-in-use of financial assets.

The value of the portfolio is determined as the sum of the values of the individual elements that compose the portfolio, without considering any total or batch grouping in order to correct the individual values.

For the purposes of its consideration in initial recognition, the Group obtains, at the time of award, the fair value of the corresponding asset by requesting an appraisal from external valuation agencies.

Grupo Santander has in place a corporate policy that ensures the professional competence and the independence and objectivity of the external appraisal agencies, in accordance with the regulations, which require appraisal agencies to meet independence, neutrality and credibility requirements, so that the use of their estimates does not reduce the reliability of its valuations.

This policy establishes that all the appraisal companies and agencies with which the Group works in Spain should be registered in the Official Register of the Bank of Spain and that the appraisals performed by them should follow the methodology established in Order ECO/805/2003, of 27 March. The main appraisal companies and agencies with which the Group worked in Spain in 2025 are as follows: Tinsa Tasaciones Inmobiliarias, S.A.U., Sociedad de Tasación, S.A., Global Valuation, S.A.U., Instituto de Valoraciones, S.A., Euroevaluaciones, S.A. and Valoraciones Mediterráneo, S.A.

Also, this policy establishes that the various subsidiaries abroad work with appraisal companies that have recent experience in the area and the type of asset under appraisal and meet the independence requirements established in the corporate policy. They should verify, inter alia, that the appraisal company is not a party related to the Group and that its billings to the Group in the last twelve months do not exceed 15% of the appraisal company's total billings.

At 31 December 2025 the fair value less costs to sell of non-current assets held for sale exceeded their carrying amount by EUR 551 million (EUR 553 million at 31 December 2024); however, in accordance with the accounting standards, this unrealised gain could not be recognised.

Banco Santander, in compliance with Bank of Spain Circular 4/2017, and subsequent amendments, on public and private financial reporting standards and financial statement models, has developed a methodology that enables it to estimate the fair value and costs of sale of assets foreclosed or received in payment of debts. This methodology is based on the classification of the portfolio of foreclosed assets into different segments. Segmentation enables the intrinsic characteristics of Banco Santander's portfolio of foreclosed assets to be differentiated, so that assets with homogeneous characteristics are grouped by segment.

Thus, the portfolio is segmented into (i) finished assets of a residential and tertiary nature, (ii) developments in progress and (iii) land.[1]

In determining the critical segments in the overall portfolio, assets are classified on the basis of the nature of the asset and its stage of development. This segmentation is made in order to seek the liquidation of the asset (which should be carried out in the shortest possible time).

When making decisions, the situation and/or characteristics of the asset are fundamentally taken into account, as well as the evaluation of all the determining factors that favour the recovery of the debt. For them, the following aspects are analyzed, among others:

- The time that has elapsed since the adjudication.
- The transferability and contingencies of the foreclosed asset.
- The economic viability from the real estate point of view with the necessary investment estimate.
- The expenses that may arise from the marketing process.
- The offers received, as well as the difficulties in finding buyers.

In the case of real estate assets foreclosed in Spain, which represent 76% of the Group's total non-current assets held for sale, the valuation of the portfolio is carried out by applying the following models:

- Market Value Model used in the valuation of finished properties of a residential nature (mainly homes and car parks) and properties of a tertiary nature (offices, commercial premises and multipurpose buildings). For the valuation of finished assets whose availability for sale is immediate, a market sale value provided by a third party external to Banco Santander is considered, calculated under the AVM methodology by the comparable properties method adjusted by our experience in selling similar assets, given the term, price, volume, trend in the value of these assets and the time elapsing until their sale and discounting the estimated costs of sale.

  The market value is determined on the basis of the definition established by the International Valuation Standards drawn up by the IVSC (International Valuation Standards Council), understood as the estimated amount for which an asset or a liability should be exchanged on the measurement date between a willing buyer and a willing seller, in an arm's length transaction, after appropriate marketing, and in which the parties have acted with sufficient information, prudently and without coercion.

  The current market value of the properties is estimated on the basis of automated valuations obtained by taking comparable properties as a reference; simulating the procedure carried out by an appraiser in a physical valuation according to Order ECO 805/2003: selection of properties and obtaining the unit value by applying homogenisation adjustments. The selection of the properties is carried out by location within the same real estate cluster and according to the characteristics of the properties, filtering by type[2], surface area range and age. The model enables a distinction to be made within the municipality under study as to which areas are similar and comparable and therefore have a similar value in the property market, discriminating between which properties are good comparators and which are not.

  Adjustments to homogenize the properties are made according to: (i) the age of the property according to the age of the property to be valued, (ii) the deviation of the built area from the common area with respect to the property to be valued and (iii) by age of the date of capture of the property according to the price evolution index of the real estate market.

  In addition, for individually significant assets, complete individual valuations are carried out, including a visit to the asset, market analysis (data relating to supply, demand, current sale or rental price ranges and supply-demand and revaluation expectations) and an estimate of expected income and costs.

1. The assets in a situation of 'stopped development' are included under 'land

2. Assets qualified as protected housing are taken into account. The maximum legal value of these assets is determined by the VPO module, obtained from the result of multiplying the State Basic Module (MBE) by a zone coefficient determined by each autonomous community. To carry out the valuation of a protected property, the useful surface area is used in accordance with current regulations.

For this segmentation of assets, when they are completed, the real costs are known and the actual expenses for the marketing and sale of the asset must be taken into account. Therefore, Banco Santander uses the actual costs in its calculation engine or, failing that, those estimated on the basis of its observed experience.

- Market Value Model according to Evolution of Market Values used to update the valuation of developments in progress. The valuation model estimates the current market value of the properties based on complete individual valuations by third parties, calculated from the values of the feasibility studies and development costs of the promotion, as well as the selling costs, distinguishing by location, size and type of property. The inputs used in the valuation model for residential assets under construction are actual revenues and costs.

  For this purpose, in order to calculate the investment flows, Banco Santander considers, on the basis of the feasibility studies, the expenditure required for construction, the professional fees relating to the project and to project management, the premiums for mandatory building insurance, the developer's administrative expenses, licenses, taxes on new construction and fees, and urban development charges.

  With respect to the calculation of income flows, Banco Santander takes into account the square metres built, the number of homes under construction and the estimated selling price over 1.5 years.

  The market value will be the result of the difference between the income flows and the investment flows estimated at each moment.

- Land Valuation model. The methodology followed by the Group regarding land valuation consists of updating the individual reference valuation of each of the land on an annual basis, through updated valuation valuations carried out by independent professionals and following the methodology established in the Order ECO/805/2003, of 27 March, whose main verifications in the case of land valuation, regardless of the degree of urbanisation of the land, correspond to:

  - Visual verification of the assessed property.
  - Registry description.
  - Urban planning.
  - Visible easements.
  - Visible state of occupation, possession, use and exploitation.
  - Protection regime.
  - Apparent state of preservation.
  - Correspondence with cadastral property.
  - Existence of expropriation procedure, expropriation plan or project, administrative resolution or file that may lead to expropriation.
  - Expiry of the urbanization or building deadlines.
  - Existence of a procedure for failure to comply with obligations.
  - Verification of surfaces.

For the purposes of valuation, the land will be classified in the following levels:

- Level I: It will include all the lands that do not belong to level II.
- Level II: It shall include land classified as undeveloped where building is not allowed for uses other than agriculture, forestry, livestock or linked to an economic exploitation permitted by the regulations in force. Also included are lands classified as developable that are not included in a development area of urban planning or that, in such an area, the conditions for its development have not been defined.

  In those cases where the Group does not have an updated reference value through an ECO valuation for the current year, we use as a reference value the latest available ECO valuation reduced or corrected by the average annual coverage ratio of the land on which we have obtained an updated reference value, through an ECO valuation.

  Grupo Santander applies a discount to the aforementioned reference values that takes into account both the discount on the reference value in the sales process and the estimated costs of marketing or selling the land; discount on reference value = % discount on sales + % marketing costs being:

- % discount on Sales: = 100 - (sales price / updated appraisal value).
- marketing costs: calculated on the basis of our historical experience in sales and in accordance with the marketing management fees negotiated with our suppliers of this type of service.

In this way the Group obtains the corrected market value, an amount that we compare with the net cost of each piece of land to determine its correct valuation and conclude with our valuation process.

In addition, in relation to the previously mentioned valuations, less costs to sell, are contrasted with the sales experience of each type of asset in order to confirm that there is no significant difference between the sale price and the valuation.

Impairment losses on an asset or disposal group arising from a reduction in its carrying amount to its fair value (less costs to sell) are recognised under 'Gains or (losses) on non-current assets held for sale not classified as discontinued operations' in the consolidated income statement.

The gains on a non-current asset held for sale resulting from subsequent increases in fair value (less costs to sell) increase its carrying amount and are recognised in the consolidated income statement up to an amount equal to the impairment losses previously recognised.

i) Assets under reinsurance contracts and Liabilities under insurance contracts

The Group has prepared the accounting policy that establishes the criteria for recording insurance contracts, in accordance with IFRS 17. This standard defines insurance contracts as contracts under which one party accepts a significant insurance risk from another party by agreeing to compensate the policyholder if a specific uncertain future event negatively affects the policyholder.

IFRS 17 requires a level of aggregation of contracts that the Group identifies in portfolios of contracts with similar risks and that are managed jointly. The Group then divides each portfolio into a minimum of three groups: (i) contracts that are onerous on initial recognition; (ii) contracts that, upon initial recognition, have no significant possibility of subsequently becoming onerous; and (iii) any remaining contract.

For contracts that are considered not to be onerous, a profit margin is recognized in the profit and loss account (referred to as 'Contractual Service Margin' or 'CSM') throughout the period in which the entity performs the service. However, if at the time of initial recognition, or during the period in which the entity performs the service, the contract is onerous, the entity recognizes the loss in the income statement.

Contract limits define the term up to which compliance cash flows must be considered in order to measure an insurance contract. Fulfilment cash flows comprise an unbiased, probability-weighted estimate of future cash flows, a discount adjustment to the present value to reflect the time value of money for monetary and financial risks, and a risk adjustment for non-fulfilment risks. financial. The identification of the contractual limit under IFRS 17 is essential not only for measuring the fulfilment cash flows of a group of contracts, but also for determining the applicable measurement model, in case the contractual limits are identified in a year or more.

Cash flows are within the contractual limit of an insurance contract if they arise from substantial rights and obligations that exist during the reporting period, in which the entity can obligate the insurance policyholder to pay premiums or in which the entity has a substantive obligation to provide services to the insured.

The Group has carried out an analysis of the limits of insurance and reinsurance contracts under IFRS 17, separately, generally applying the General Model (Building Block Approach) to all contracts, except those eligible to be valued by the Simplified Model (Premium Allocation Approach), or the Variable Commission Approach ('VCA' or Variable Fee Approach).

The general model measures a group of contracts as the sum of the fulfilment cash flows and the Contractual Service Margin. The CSM represents benefits not yet recorded that the entity will recognize as providing services under the insurance contract.

Insurance contracts with direct participation apply the VCA as a modified version of the General Model. This should reduce the volatility of results due to the asymmetry between the accounting treatment of the profit and losses of the underlying items attributable to the policyholders and the accounting treatment of the liability owed to those policyholders.

Another aspect considered in measuring the present value of the future cash flows of a group of insurance contracts is the discount rate applied to reflect the time value of money and the financial risks related to those cash flows. The Group has established a generally chosen methodology and guarantees that the calculation components have a homogeneous basis, previously approved by the Group, establishing the base curves provided by the Group and allowing adjustments to these curves based on the expert criteria of each local address.

Likewise, measuring compliance cash flows requires a risk adjustment for non-financial risk. Risk adjustment for non-financial risk is the compensation necessary to withstand uncertainty about the amount and timing of cash flows arising from non-financial risks. If a change in the assumptions occurs, it could affect the income statement or the Other comprehensive income, depending on its nature. The risks covered by the risk adjustment for non-financial risk are insurance risk and other non-financial risks, such as interruption risk and expense risk.

j) Tangible assets

Tangible assets includes the amount of buildings, land, furniture, vehicles, computer hardware and other fixtures owned by the consolidated entities or acquired under finance leases. Tangible assets are classified by use as follows:

i. Property, plant and equipment for own use

Property, plant and equipment for own use – including tangible assets received by the consolidated entities in full or partial satisfaction of financial assets representing receivables from third parties which are intended to be held for continuing use and tangible assets acquired under finance leases– are presented at acquisition cost, less the related accumulated depreciation and any estimated impairment losses (carrying amount higher than recoverable amount).

Depreciation is calculated, using the straight-line method, on the basis of the acquisition cost of the assets less their residual value. The land on which the buildings and other structures stand has an indefinite life and, therefore, is not depreciated.

The annual tangible asset depreciation charge is recognised in the consolidated income statement and are essentially equivalent to the following amortization percentages (determined based on the years of estimated useful life, on average, of the different elements):

	Average annual rate
Buildings for own use	2.4%
Furniture	9.5%
Fixtures	9.5%
Office and IT equipment	23.6%
Lease use rights	Less than the lease term or the useful life of the underlying asset

At the end of each reporting period, consolidated entities assess whether there is any indication that the carrying amount of an asset exceeds its recoverable amount, in which case they write down the carrying amount of the asset to its recoverable amount and adjust future depreciation charges in proportion to its adjusted carrying amount and to its new remaining useful life, if the useful life needs to be re-estimated.

Similarly, if there is an indication of a recovery in the value of a tangible asset, the consolidated entities recognise the reversal of the impairment loss recognised in prior periods and adjust the future depreciation charges accordingly. In no circumstances may the reversal of an impairment loss on an asset raise its carrying amount above that which it would have if no impairment losses had been recognised in prior years.

The estimated useful lives of the items of property, plant and equipment for own use are reviewed at least at the end of the reporting period with a view to detecting significant changes therein. If changes are detected, the useful lives of the assets are adjusted by correcting the depreciation charge to be recognised in the consolidated income statement in future years on the basis of the new useful lives.

Upkeep and maintenance expenses relating to property, plant and equipment for own use are recognised as an expense in the period in which they are incurred, since they do not increase the useful lives of the assets.

ii. Investment property

'Investment property' reflects the net values of the land, buildings and other structures held either to earn rentals or for obtaining profits by sales due to future increase in market prices.

The criteria used to recognise the acquisition cost of investment property, to calculate its depreciation and its estimated useful life and to recognise any impairment losses thereon are consistent with those described in relation to property, plant and equipment for own use.

In the case of investment properties that support obligations to pay a return directly linked to fair value, or to the returns of certain assets including the investment property itself, such properties are measured using the fair value model.

In order to evaluate the possible impairment Grupo Santander determines periodically the fair value of its investment property so that, at the end of the reporting period, the fair value reflects the market conditions of the investment property at that date. This fair value is determined annually, taking as benchmarks the valuations performed by independent experts. The methodology used to determine the fair value of investment property is selected based on the status of the asset in question; thus, for properties earmarked for lease, the valuations are performed using the sales comparison approach, whereas for leased properties the valuations are made primarily using the income capitalisation approach and, exceptionally, the sales comparison approach.

In the sales comparison approach, the property market segment for comparable properties is analysed, inter alia, and, based on specific information on actual transactions and firm offers, current prices are obtained for cash sales of those properties. The valuations performed using this approach are considered as Level 2 valuations.

In the income capitalisation approach, the cash flows estimated to be obtained over the useful life of the property are discounted taking into account factors that may influence the amount and actual obtainment thereof, such as: (i) the payments that are normally received on comparable properties; (ii) current and probable future occupancy; (iii) the current or foreseeable default rate on payments. The valuations performed using this approach are considered as Level 3 valuations, since significant unobservable inputs are used, such as current and probable future occupancy and/or the current or foreseeable default rate on payments.

iii. Assets leased out under an operating lease

'Property, plant and equipment' - Leased out under an operating lease reflects the amount of the tangible assets, other than land and buildings, leased out by the Group under an operating lease.

The criteria used to recognise the acquisition cost of assets leased out under operating leases, to calculate their depreciation and their respective estimated useful lives and to recognise the impairment losses thereon are consistent with those described in relation to property, plant and equipment for own use.

k) Accounting for leases

The main aspects contained in the regulation (IFRS 16) adopted by the Group are included below:

When the Group acts as lessee, it recognises a right-of-use asset representing its right to use the underlying leased asset with a corresponding lease liability on the date on which the leased asset is available for use by the Group.

Each lease payment is allocated between liability and finance charge. The finance charge is allocated to the income statement during the term of the lease in such a way as to produce a constant periodic interest rate on the remaining balance of the liability for each year.

The right-of-use asset is depreciated over the useful life of the asset or the lease term, whichever is shorter, on a straight-line basis. If the Group is reasonably certain to exercise a purchase option, the right-of-use asset is amortized over the useful life of the underlying asset.

Assets and liabilities arising from a lease are initially measured at present value. Lease liabilities include the net present value of the following lease payments:

- Fixed payments (including inflation-linked payments), less any lease incentive receivable.
- Variable lease payments that depend on an index or rate.
- The amounts expected to be paid by the lessee under residual value guarantees.
- The exercise price of a purchase option if the lessee is reasonably certain that it will exercise that option.
- Lease termination penalty payments, if the term of the lease reflects the lessee's exercise of that option.

Lease payments are discounted using the interest rate implicit in the lease. When this interest rate cannot be obtained, the interest rate used in these cases, is the lessee's incremental borrowing rate at the related date. For this purpose, the entity has calculated this incremental borrowing rate taking as reference the listed debt instruments issued by the Group; in this regard, the Group has estimated different interest rate curves depending on the currency and economic environment in which the contracts are located.

In order to construct the incremental borrowing rate, a methodology has been developed at the corporate level. This

methodology is based on the need for each entity to consider its economic and financial situation, for which the following factors must be considered:

- Economic and political situation (country risk).
- Credit risk of the company.
- Monetary policy.
- Volume and seniority of the company's debt instrument issues.

The incremental borrowing rate is defined as the interest rate that a lessee would have to pay for borrowing, given a similar period to the duration of the lease and with similar security, the funds necessary to obtain an asset of similar value to the right-of-use asset in a similar economic environment. The Group entities have a wide stock and variety of financing instruments issued in different currencies to that of the euro (pound, dollar, etc.) that provide sufficient information to be able to determine an 'all in rate' (reference rate plus adjustment for credit spread at different terms and in different currencies). In circumstances, where the leasing company has its own financing, this has been used as the starting point for determining the incremental borrowing rate. On the other hand, for those Grupo Santander entities that do not have their own financing, the information from the financing of the consolidated subgroup to which they belong was used as the starting point for estimating the entity's curve, analysing other factors to assess whether it is necessary to make any type of negative or positive adjustment to the initially estimated credit spread.

Right-of-use assets are valued at cost which includes the following:

- The amount of the initial measurement of the lease liability.
- Any lease payment made at or before the commencement date less any lease incentive received.
- Any initial direct costs.
- Restoration costs.

The Group recognises the payments associated with short-term leases and leases of low-value assets on a straight-line basis as an expense in the income statement. Short-term leases are leases with a lease term less than or equal to 12 months (a lease that contains a purchase option is not a short term lease).

l) Intangible assets

Intangible assets are identifiable non-monetary assets (separable from other assets) without physical substance which arise as a result of a legal transaction or which are developed internally by the consolidated entities.

Only assets whose cost can be measured reliably and it is likely that the consolidated entities obtain future economic benefits are recognised.

Intangible assets are recognised initially at acquisition or production cost and are subsequently measured at cost less any accumulated amortisation and any accumulated impairment losses.

i. Goodwill

Any excess of the cost of the investments in the consolidated entities and entities accounted for using the equity method over the corresponding underlying carrying amounts acquired, adjusted at the date of first-time consolidation, is allocated as follows:

a. If it is attributable to specific assets and liabilities of the companies acquired, by increasing the value of the assets (or reducing the value of the liabilities) whose fair values were higher (lower) than the carrying amounts at which they had been recognised in the acquired entities' balance sheets.

b. If it is attributable to specific intangible assets, by recognising it explicitly in the consolidated balance sheet provided that the fair value of these assets within twelve months following the date of acquisition can be measured reliably.

c. The remaining amount is recognised as goodwill, which is allocated to one or more cash-generating units (CGU) (a cash-generating unit is the smallest identifiable group of assets that, as a result of continuing operation, generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets). The cash-generating units represent the Group's geographical and/or business segments.

Goodwill (only recognised when it has been acquired by consideration) represents, therefore, a payment made by the acquirer in anticipation of future economic benefits from assets of the acquired entity that are not capable of being individually identified and separately recognised.

At the end of each annual reporting period or whenever there is any indication of impairment goodwill is reviewed for impairment (i.e. a reduction in its recoverable amount to below its carrying amount) and, if there is any impairment, the goodwill is written down with a charge to 'Impairment or reversal of impairment on non-financial assets, net - Intangible assets' in the consolidated income statement.

An impairment loss recognised for goodwill is not reversed in a subsequent period.

In the event of sale or departure of an activity that is part of a CGU, the part of the goodwill that can be assigned to said activity would be written-off, taking as a reference the relative value of the same over the total of the CGU at the time of sale or abandonment. If applicable, the distribution by currency of the remaining goodwill will be performed based on the relative values of the remaining activities.

ii. Other intangible assets

Other intangible assets includes the amount of identifiable intangible assets, such as purchased customer lists and computer software.

Other intangible assets can have an indefinite useful life -when, based on an analysis of all the relevant factors, it is concluded that there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows for the consolidated entities- or a finite useful life, in all other cases.

Intangible assets with indefinite useful lives are not amortised, but rather at the end of each reporting period or whenever there is any indication of impairment the consolidated entities review the remaining useful lives of the assets in order to determine whether they continue to be indefinite and, if this is not the case, to take the appropriate steps.

Intangible assets with finite useful lives are amortised over those useful lives using methods similar to those used to depreciate tangible assets.

The intangible asset amortisation charge is recognised under 'Depreciation and amortisation' in the consolidated income statement.

In both cases the consolidated entities recognise any impairment loss on the carrying amount of these assets with a charge to 'Impairment or reversal of impairment on non-financial assets, net - Intangible assets in the consolidated' income statement.

The criteria used to recognise the impairment losses on these assets and, where applicable, the reversal of impairment losses recognised in prior years are similar to those used for tangible assets (see note 2.k).

Internally developed computer software

Internally developed computer software is recognised as an intangible asset if, among other requisites (basically the Group's ability to use or sell it), it can be identified and its ability to generate future economic benefits can be demonstrated.

Expenditure on research activities is recognised as an expense in the year in which it is incurred and cannot be subsequently capitalised into the carrying amount of the intangible asset.

m) Other assets

Other assets' in the consolidated balance sheet includes the amount of assets not recorded in other items, the breakdown being as follows:

- Inventories: this item includes the amount of assets, other than financial instruments, that are held for sale in the ordinary course of business, that are in the process of production, construction or development for such purpose, or that are to be consumed in the production process or in the provision of services. Inventories include land and other property held for sale in the property development business.

  Inventories are measured at the lower of cost and net realisable value, which is the estimated selling price of the inventories in the ordinary course of business, less the estimated costs of completion and the estimated costs required to make the sale.

  Any write-downs of inventories -such as those due to damage, obsolescence or reduction of selling price- to net realisable value and other impairment losses are recognised as expenses for the year in which the impairment or loss occurs. Subsequent reversals are recognised in the consolidated income statement for the year in which they occur.

  The carrying amount of inventories is derecognised and recognised as an expense in the period in which the revenue from their sale is recognised.

- Other: this item includes the balance of all prepayments and accrued income (excluding accrued interest, fees and commissions), the net amount of the difference between pension plan obligations and the value of the plan assets with a balance in the entity's favour, when this net amount is to be reported in the consolidated balance sheet, and the amount of any other assets not included in other items.

n) Other liabilities

'Other liabilities' includes the balance of all accrued expenses and deferred income, excluding those related to interests and fees on financial instruments, as well as the amount of any other liabilities not included in other categories.

o) Provisions and contingent liabilities (assets)

When preparing the financial statements of the consolidated entities, Banco Santander makes a distinction between:

- Provisions: credit balances covering present obligations at the reporting date arising from past events which could give rise to a loss for the consolidated entities, which is considered to be likely to occur and certain as to its nature but uncertain as to its amount and/or timing.

- Contingent liabilities: possible obligations that arise from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more future events not wholly within the control of the consolidated entities. They include the present obligations of the consolidated entities when it is not probable that an outflow of resources embodying economic benefits will be required to settle them. The Group does not recognise the contingent liability. The Group will disclose a contingent liability, unless the possibility of an outflow of resources embodying economic benefits is remote.

  Irrevocable contingent payments (ICPs), corresponding to payment facilities allowed under the annual contributions of certain levies, are recorded in accordance with the definitions mentioned above. In this regard, on 14 November 2025, the Group learned that the CJEU had definitively resolved the dispute concerning the CPI contributions made by a financial institution to the Single Resolution Fund, upholding the judgment of the General Court of 25 October 2023, which ruled against said financial institution regarding its request for the return of guarantees linked to irrevocable payment commitments for a Group entity whose license had been withdrawn. In light of this ruling, it was concluded that it was not necessary to modify the accounting entries that the Santander Group has made when using these facilities to make contributions corresponding to this levy or to other similar levies that also allow for such contributions.

- Contingent assets: possible assets that arise from past events and whose existence is conditional on, and will be confirmed only by, the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the Group. Contingent assets are not recognised in the consolidated balance sheet or in the consolidated income statement, but rather are disclosed in the notes, provided that it is probable that these assets will give rise to an increase in resources embodying economic benefits.

Grupo Santander's consolidated financial statements include all the material provisions with respect to which it is considered that it is more likely than not the obligation will have to be settled. In accordance with accounting standards, contingent liabilities must not be recognised in the consolidated financial statements, but must rather be disclosed in the Notes.

Provisions (which are quantified on the basis of the best information available on the consequences of the event giving rise to them and are reviewed and adjusted at the end of each year) are used to cater for the specific obligations for which they were originally recognised. Provisions are fully or partially reversed when such obligations cease to exist or are reduced.

Provisions are classified according to the obligations covered as follows (see note 25):

- Provision for pensions and similar obligations: includes the amount of all the provisions made to cover post-employment benefits, including obligations to pre-retirees and similar obligations.
- Provisions for contingent liabilities and commitments: include the amount of the provisions made to cover contingent liabilities -defined as those transactions in which the Group guarantees the obligations of a third party, arising as a result of financial guarantees granted or contracts of another kind- and contingent commitments -defined as irrevocable commitments that may give rise to the recognition of financial assets.
- Provisions for taxes and other legal contingencies and Other provisions: include the amount of the provisions recognised to cover tax and legal contingencies and litigation and the other provisions recognised by the consolidated entities. Other provisions includes, inter alia, any provisions for restructuring costs and environmental measures.

p) Own equity instruments

Own equity instruments are those meeting both of the following conditions:

- The instruments do not include any contractual obligation for the issuer (i) to deliver cash or another financial asset to a third party; or (ii) to exchange financial assets or financial liabilities with a third party under conditions that are potentially unfavourable to the issuer.
- The instruments will or may be settled in the issuer's own equity instruments and are: (i) a non-derivative that includes no contractual obligation for the issuer to deliver a variable number of its own equity instruments; or (ii) a derivative that will be settled by the issuer through the exchange of a fixed amount of cash or another financial asset for a fixed number of its own equity instruments.

Transactions involving own equity instruments, including their issuance and cancellation, are charged directly to equity.

Changes in the value of instruments classified as own equity instruments are not recognised in the consolidated financial statements. Consideration received or paid in exchange for such instruments, including the coupons on preference shares contingently convertible into ordinary shares and the coupons associated with CCPP, is directly added to or deducted from equity.

q) Equity-instrument-based employee remuneration

Own equity instruments delivered to employees in consideration for their services, if the instruments are delivered once the specific period of service has ended, are recognised as an expense for services (with the corresponding increase in equity) as the services are rendered by employees during the service period. At the grant date the services received (and the related increase in equity) are measured at the fair value of the equity instruments granted. If the equity instruments granted are vested immediately, Grupo Santander recognises in full, at the grant date, the expense for the services received.

When the requirements stipulated in the remuneration agreement include external market conditions (such as equity instruments reaching a certain quoted price), the amount ultimately to be recognised in equity will depend on the other conditions being met by the employees (normally length of service requirements), irrespective of whether the market conditions are satisfied.

If the conditions of the agreement are met but the external market conditions are not satisfied, the amounts previously recognised in equity are not reversed, even if the employees do not exercise their right to receive the equity instruments.

r) Recognition of income and expenses

The most significant criteria used by Grupo Santander to recognise its income and expenses are summarised as follows:

i. Interest income, interest expenses and similar items

Interest income, interest expenses and similar items are generally recognised on an accrual basis using the effective interest method. Dividends received from other companies are recognised as income when the consolidated entities' right to receive them arises.

ii. Commissions, fees and similar items

Fee and commission income and expenses are recognised in the consolidated income statement using criteria that vary according to their nature. The main criteria are as follows:

- Fee and commission income and expenses relating to financial assets and financial liabilities measured at fair value through profit or loss are recognised when paid.
- Those arising from transactions or services that are performed over a period of time are recognised over the life of these transactions or services.
- Those relating to services provided in a single act are recognised when the single act is carried out.

iii. Non-finance income and expenses

They are recognised for accounting purposes when the good is delivered or the non-financial service is rendered. To determine the amount and timing of recognition, a five-step model is followed: identification of the contract with the customer, identification of the separate obligations of the contract, determination of the transaction price, distribution of the transaction price among the identified obligations and finally recording of income as the obligations are satisfied.

iv. Deferred collections and payments

These are recognised for accounting purposes at the amount resulting from discounting the expected cash flows at market rates.

v. Loan arrangement fees

Loan arrangement fees, mainly loan origination, application and information fees, are accrued and recognised in income over the term of the loan.

s) Financial guarantees

Financial guarantees are considered contracts that require the issuer to make specific payments to reimburse the creditor for the loss it incurs when a specific debtor defaults on its due date payment obligation in accordance with the original or modified conditions of debt instrument, regardless of its legal form, which may be, among others, a deposit, financial guarantee, insurance contract or credit derivative.

Grupo Santander initially recognises the financial guarantees provided on the liability side of the consolidated balance sheet at fair value, which is generally the present value of the fees, commissions and interest receivable from these contracts over the term thereof, and simultaneously the Group recognises the amount of the fees, commissions and similar interest received at the inception of the transactions and a credit on the asset side of the consolidated balance sheet for the present value of the fees, commissions and interest outstanding.

Financial guarantees, regardless of the guarantor, instrumentation or other circumstances, are reviewed periodically so as to determine the credit risk to which they are exposed and, if appropriate, to consider whether a provision is required. The credit risk is determined by application of criteria similar to those established for quantifying impairment losses on debt instruments carried at amortised cost (described in note 2.g above).

The provisions made for these transactions are recognised under 'Provisions - Provisions for commitments and guarantees given in the consolidated balance sheet' (see note 25). These provisions are recognised and reversed with a charge or credit, respectively, to 'Provisions or reversal of provisions', net, in the consolidated income statement.

t) Assets under management and investment and pension funds managed by the Group

Assets owned by third parties and managed by the consolidated entities are not presented on the face of the consolidated balance sheet. The investment funds and pension funds managed by the consolidated companies are also not presented in the Group's consolidated balance sheet, as they are owned by third parties.

The commissions generated by these activities are included in the balance of the 'Commission income' chapter of the consolidated profit and loss account.

Note 2.b.iv describes the internal criteria and procedures used to determine whether control exists over the structured entities, which include, inter alia, investment funds and pension funds.

u) Post-employment benefits

Under the collective agreements currently in force and other arrangements, the Spanish banks included in the Group and certain other Spanish and foreign consolidated entities have undertaken to supplement the public social security system benefits accruing to certain employees, and to their beneficiary right holders, for retirement, permanent disability or death, and the post-employment welfare benefits.

Grupo Santander's post-employment obligations to its employees are deemed to be defined contribution plans when the Group makes pre-determined contributions (recognised under Personnel expenses in the consolidated income statement) to a separate entity and will have no legal or effective obligation to make further contributions if the separate entity cannot pay the employee benefits relating to the service rendered in the current and prior periods. Post-employment obligations that do not meet the aforementioned conditions are classified as defined benefit plans (see note 25).

Defined contribution plans

The contributions made in this connection in each year are recognised under 'Personnel expenses' in the consolidated income statement.

The amounts not yet contributed at each year-end are recognised, at their present value, under 'Provisions - Provision for pensions' and similar obligations on the liability side of the consolidated balance sheet.

Defined benefit plans

Grupo Santander recognises under 'Provisions - Provision for pensions and similar obligations on the liability side of the consolidated balance sheet' (or under 'Other assets' on the asset side, as appropriate) the present value of its defined benefit post-employment obligations, net of the fair value of the plan assets.

Plan assets are defined as those that will be directly used to settle obligations and that meet the following conditions:

- They are not owned by the consolidated entities, but by a legally separate third party that is not a party related to the Group.
- They are only available to pay or fund post-employment benefits and they cannot be returned to the consolidated entities unless the assets remaining in the plan are sufficient to meet all the benefit obligations of the plan and of the entity to current and former employees, or they are returned to reimburse employee benefits already paid by Grupo Santander.

If Grupo Santander can look to an insurer to pay part or all of the expenditure required to settle a defined benefit obligation, and it is practically certain that said insurer will reimburse some or all of the expenditure required to settle that obligation, but the insurance policy does not qualify as a plan asset, the Group recognises its right to reimbursement -which, in all other respects, is treated as a plan asset- under 'Insurance contracts linked to pensions' on the asset side of the consolidated balance sheet.

Grupo Santander will recognise the following items in the income statement:

- Current service cost, (the increase in the present value of the obligations resulting from employee service in the current period), is recognised under 'Staff costs'.
- The past service cost, which arises from changes to existing post-employment benefits or from the introduction of new benefits and includes the cost of reductions, is recognised under 'Provisions or reversal of provisions'.
- Any gain or loss arising from a liquidation of the plan is included in the 'Provisions or reversion of provisions'.
- Net interest on the net defined benefit liability (asset), i.e. the change during the period in the net defined benefit liability (asset) that arises from the passage of time, is recognised under 'Interest expense' and similar charges ('Interest and similar income' if it constitutes income) in the consolidated income statement.

The remeasurement of the net defined benefit liability (asset) is recognised in 'Other comprehensive income' under Items not reclassified to profit or loss and includes:

- Actuarial gains and losses generated in the year, arising from the differences between the previous actuarial assumptions and what has actually occurred and from the effects of changes in actuarial assumptions.
- The return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset).
- Any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).

v) Other long-term employee benefits

Other long-term employee benefits, defined as obligations to pre-retirees -taken to be those who have ceased to render services at the entity but who, without being legally retired, continue to have economic rights vis-à-vis the entity until they acquire the legal status of retiree-, long-service bonuses, obligations for death of spouse or disability before retirement that depend on the employee's length of service at the entity and other similar items, are treated for accounting purposes, where applicable, as established above for defined benefit post-employment plans, except that actuarial gains and losses are recognised under 'Provisions or reversal of provisions', net, in the consolidated income statement (see note 25).

w) Termination benefits

Termination benefits are recognised when there is a detailed formal plan identifying the basic changes to be made, provided that implementation of the plan has begun, its main features have been publicly announced or objective facts concerning its implementation have been disclosed.

x) Income tax

The expense for Spanish income tax and other similar taxes applicable to the foreign consolidated entities is recognised in the consolidated income statement, except when they arise from a transaction whose results are recognised directly in equity, in which case the related tax effect is recognised in equity.

The current income tax expense is calculated as the sum of the current tax resulting from application of the appropriate tax rate to the taxable profit for the year (net of any deductions allowable for tax purposes), and of the changes in deferred tax assets and liabilities recognised in the consolidated income statement.

'Deferred tax assets' and liabilities include temporary differences, which are identified as the amounts expected to be payable or recoverable on differences between the carrying amounts of assets and liabilities and their related tax bases, and tax loss and tax credit carryforwards. These amounts are measured at the tax rates that are expected to apply in the period when the asset is realised or the liability is settled.

'Tax assets' include the amount of all tax assets, which are broken down into current -amounts of tax to be recovered within the next twelve months- and deferred -amounts of tax to be recovered in future years, including those arising from tax loss or tax credit carryforwards.

Tax liabilities' includes the amount of all tax liabilities (except provisions for taxes), which are broken down into current -the amount payable in respect of the income tax on the taxable profit for the year and other taxes in the next twelve months- and deferred -the amount of income tax payable in future years.

Deferred tax liabilities are recognised in respect of taxable temporary differences associated with investments in subsidiaries, associates or joint ventures, except when the Group is able to control the timing of the reversal of the temporary difference and, in addition, it is probable that the temporary difference will not reverse in the foreseeable future. In this regard, no deferred tax liabilities of EUR 321.9 million were recognised in relation to the taxation that would arise from the undistributed earnings of certain Group holding companies, in accordance with the legislation applicable in those jurisdictions.

Deferred tax assets are only recognised for temporary differences to the extent that it is considered probable that the consolidated entities will have sufficient future taxable profits against which the deferred tax assets can be utilised, and the deferred tax assets do not arise from, in its initial recognition of (i)a business combination, (ii) an operation that does not affect either the tax result or the accounting result or (iii) on the date of the transaction, does not generate deductible and taxable temporary differences for the same amount (in which case assets and deferred tax liabilities). Other deferred tax assets (tax loss and tax credit carryforwards) are only recognised if it is considered probable that the consolidated entities will have sufficient future taxable profits against which they can be utilised.

Differences generated by the different accounting and tax treatment of any of the income and expenses recorded directly in equity to be paid or recovered in the future are accounted for as temporary differences.

The deferred tax assets and liabilities are reassessed at the reporting date in order to ascertain whether any adjustments need to be made on the basis of the findings of the analyses performed.

Regarding taxes on profits arising from the application of tax laws for the implementation of the Pillar Two model rules, including those related to national minimum complementary taxes, the Group applies the mandatory and temporary exception to the recognition of deferred tax assets and liabilities derived from said tax laws (see note 27.f).

y) Residual maturity periods

In note 51 it is provided an analysis of the maturities of the balances of certain items in the consolidated balance sheet.

Santander Group has recorded as 'time liabilities' those recognised financial liabilities in which the counterparty may require payments.

Likewise, when Grupo Santander has committed to having amounts available at different maturity periods, these amounts have been recorded in the first year in which they may be required.

Additionally, for the financial guarantee contracts issued, the Group has recorded the maximum amount of the financial guarantee issued in the first year in which the guarantee can be executed.

z) Consolidated statement of recognised income and expense

This statement presents the income and expenses generated by the Group as a result of its business activity in the year, and a distinction is made between the income and expenses recognised in the consolidated income statement for the year and the other income and expenses recognised directly in consolidated equity.

Accordingly, this statement presents:

a. Consolidated profit for the year.

b. The net amount of the income and expenses recognised in 'Other comprehensive income' under items that will not be reclassified to profit or loss.

c. The net amount of the income and expenses recognised in Other comprehensive income under items that may be reclassified subsequently to profit or loss.

d. The income tax incurred in respect of the items indicated in b and c above, except for the valuation adjustments arising from investments in associates or joint ventures accounted for using the equity method, which are presented net.

e. Total consolidated recognised income and expense, calculated as the sum of a) to d) above, presenting separately the amount attributable to the parent company and the amount relating to non-controlling interests.

The statement presents the items separately by nature, grouping together items that, in accordance with the applicable accounting standards, will not be reclassified subsequently to profit and loss since the requirements established by the corresponding accounting standards are met.

aa) Statement of changes in total equity

This statement presents all the changes in equity, including those arising from changes in accounting policies and from the correction of errors. Accordingly, this statement presents a reconciliation of the carrying amount at the beginning and end of the year of all the consolidated equity items, and the changes are grouped together on the basis of their nature into the following items:

a. Adjustments due to changes in accounting policies and to errors: include the changes in consolidated equity arising as a result of the retrospective restatement of the balances in the consolidated financial statements, distinguishing between those resulting from changes in accounting policies and those relating to the correction of errors.

b. Income and expense recognised in the year: includes, in aggregate form, the total of the aforementioned items recognised in the consolidated statement of recognised 'Income and expense'.

c. Other changes in equity: includes the remaining items recognised in equity, including, inter alia, increases and decreases in capital, distribution of profit, transactions involving own equity instruments, equity-instrument-based payments, transfers between equity items and any other increases or decreases in consolidated equity.

ab) Consolidated statement of cash flows

The following terms are used in the consolidated statements of cash flows with the meanings specified:

- Cash flows: inflows and outflows of cash and cash equivalents, which are short-term, highly liquid investments that are subject to an insignificant risk of changes in value, irrespective of the portfolio in which they are classified.

  Grupo Santander classifies as cash and cash equivalents the balances recognised under 'Cash, cash balances at central banks' and 'Other deposits on demand' in the consolidated balance sheet.

- Operating activities: the principal revenue-producing activities of credit institutions and other activities that are not investing or financing activities.

- Investing activities: the acquisition or disposal of long-term assets and other investments not included in cash and cash equivalents.

- Financing activities: activities that result in changes in the size and composition of the equity and liabilities that are not operating activities.

During 2025 Grupo Santander received interest amounting to EUR 109,840 million (EUR 117,046 and EUR 101,029 in 2024 and 2023, respectively) and paid interest amounting to EUR 57,737 million (EUR 61,091 and EUR 50,954 in 2024 and 2023, respectively).

Also, dividends received and paid by the Group are detailed in notes 4, 28 and 40, including dividends paid to minority interests (non-controlling interests)

3. Grupo Santander

a) Banco Santander, S.A., and international Group structure

The growth of Grupo Santander in the last decades has led Banco Santander to also act, in practice, as a holding entity of the shares of the various companies in its Group, and its results are becoming progressively less representative of the performance and earnings of the Group. Therefore, each year the bank determines the amount of the dividends to be distributed to its shareholders on the basis of the consolidated net profit, while maintaining the Group's objectives of capitalisation and taking into account that the transactions of the Bank and of the rest of the Group are managed on a consolidated basis (notwithstanding the allocation to each company of the related net worth effect).

At the international level, the various banks and other subsidiaries, joint ventures and associates of the Group are integrated in a corporate structure comprising various holding companies which are the ultimate shareholders of the banks and subsidiaries abroad.

The purpose of this structure, all of which is controlled Banco Santander, is to optimise the international organisation from the strategic, economic, financial and tax standpoints, since it makes it possible to define the most appropriate units to be entrusted with acquiring, selling or holding stakes in other international entities, the most appropriate financing method for these transactions and the most appropriate means of remitting the profits obtained by the group's various operating units to Spain.

The Appendices provide relevant data on the consolidated group companies and on the companies accounted for using the equity method.

b) Acquisitions and disposals

Following is a summary of the main acquisitions and disposals of ownership interests in the share capital of other entities and other significant corporate transactions performed in the last three years or pending to be completed:

i. Agreement for the sale of 49% of Santander Bank Polska S.A. and accelerated placement of ordinary shares

On 5 May 2025, Banco Santander announced an agreement to sell approximately 49% of the share capital of Santander Bank Polska S.A. (Santander Polska) to Erste Group Bank AG at a price of 584 zlotys per share, as well as the 50% of Santander Towarzystwo Funduszy Inwestycyjnych S.A. (TFI, the asset management business in Poland) owned directly by Banco Santander, S.A., for a total amount of approximately EUR 7,000 million. Following the transaction and the accelerated placement of ordinary shares announced on 2 December 2025, of 3,576,626 ordinary shares of Santander Polska, representing approximately 3.5% of its share capital, for a total import of EUR 407 million, Santander will hold 9.7% of Santander Polska's share capital (58.7% as of 31 December 2025). The transaction was completed on 9 January 2026 (see Note 1.g. Introduction, basis of presentation of the consolidated annual accounts, and other information, subsequent events).

As a result of the agreement, the Group has reclassified the assets of Santander Polska and TFI in the consolidated balance sheet as of 31 December 2025, to the heading 'Non-current assets held for sale', and their liabilities to the heading 'Liabilities associated with non-current assets held for sale'. Furthermore, the effect of these businesses on the profit and loss account for the 2025 financial year has been classified under the heading 'Profit/(loss) after tax from discontinued operations' (see Note 12), with the same classification being applied for comparative purposes in the profit and loss accounts for the 2024 and 2023 financial years.

As part of this transaction, on 23 December 2025, Santander Consumer, S.A. acquired 60% of Santander Consumer Bank Polska, which was owned by Santander Polska, for PLN 3,105 million (EUR 726 million). This transaction had no significant impact on the Group's consolidated financial statements.

ii. Agreement for the acquisition of TSB Banking Group plc

On 1 July 2025, Banco Santander announced an agreement with Banco de Sabadell, S.A. for the acquisition of TSB Banking Group plc for approximately GBP 2,650 million (EUR 3,100 million) plus the results generated by this business between 31 March 2025, and the closing of the transaction.

The completion of the transaction is subject to the usual conditions for this type of deal, including obtaining the relevant regulatory authorizations.

iii. Agreement for the sale of the stake in Caceis

On 19 December 2024, Grupo Santander signed an agreement with Crédit Agricole S.A. for the sale of its 30.5% stake in the share capital of CACEIS. As a result of the above, as of 31 December 2024, this participation was reclassified, at its carrying value, from the line item 'investments' to the line item 'Non-current assets held for sale' in the balance sheet (see Note 6). The transaction was formalized in 2025 after obtaining the relevant regulatory approvals, generating a profit before taxes of EUR 231 million registered in the line item 'Gains or losses on non-current assets held for sale not classified as discontinued operations' of the income statement. Following the completion of the planned transaction, Crédit Agricole S.A. holds the 100% of CACEIS's share capital.

The joint depositary, custody and related asset servicing services of Santander and CACEIS in Latin America is not included in the scope of the transaction and continues to be jointly controlled by Santander and CACEIS.

iv. Accelerated placement of ordinary shares of Santander Bank Polska

On 10 September 2024, Banco Santander, S.A. announced an accelerated placement of 5,320,000 ordinary shares of its subsidiary Santander Bank Polska S.A., representing approximately 5.2% of its share capital, at a price of PLN 463 (EUR 108) per ordinary share. The transaction was settled on September 13, with the total transaction amounting to PLN 2,463 million (EUR 575 million). Banco Santander will continue to hold a majority stake in Santander Bank Polska S.A. of 62.2% of the share capital (prior to this transaction, the percentage of participation was 67.4%).

This sale has resulted in an increase in reserves and valuation adjustments of EUR 158 million and EUR 57 million, respectively, and an increase in minority equity of EUR 360 million.

v. Tender offers for shares of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México

On 21 October 2022, Banco Santander, S.A. ('Banco Santander') announced that it intends to make concurrent cash tender offers to acquire all of the shares of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México ('Santander Mexico') in Mexico (Shares) and United States (American Depositary Shares ('ADSs')) which were not owned by Grupo Santander, which amount to approximately 3.76% of Santander Mexico's share capital.

The offers were launched on 7 February 2023 and were originally scheduled to close on 8 March 2023. On 1 March 2023, Banco Santander announced its decision to extend the expiration date of the offers so that they could be concluded on 10 April 2023. Finally, after the offers' closing, 3.6% of the capital accepted the offer, which raised the Group's stake in Santander México from 96.2% to 99.8%.will be settled on 13 March 2023.

Shareholders who participated in the offerings received 24.52 Mexican pesos (approximately EUR 1.20) per Share and USD 6.6876 in cash for each ADS (i.e., the equivalent in United States dollars of 122.6 Mexican pesos in cash for each ADS at the US dollar/Mexican peso exchange rate on the expiration date of 10 April 2023),which corresponded to the book value of the Santander México share according to the quarterly report of Santander México corresponding to the fourth quarter of the year 2022 in accordance with applicable legislation, with a total disbursement by Banco Santander of approximately EUR 300 million.

The operation led to an increase of EUR 13 million in Reserves and a decrease of EUR 313 million in minority interests.

Once the offers were concluded and settled, Banco Santander proceeded to: (i) withdraw the ADSs from the listing on the New York Stock Exchange ('NYSE') and the Shares from the registry before the Securities and Exchange Commission ('SEC') in the United States and; (ii) cancel the registration of the Shares in the National Securities Registry of the National Banking and Securities Commission ('CNBV') and withdraw the listing of the Shares in the Mexican Stock Exchange, S.A.B. de C.V. ('BMV'). Said cancellation was approved by the extraordinary general shareholders' meeting of Santander México held on 30 November 2022, with the favourable vote of the holders of the shares that represent more than 95% of the shares of Santander Mexico, as required by the Mexican Securities Market Law.

Pursuant to Mexican law, on 12 May 2023, Banco Santander and Santander México established a trust (the 'Repurchase Trust'), to which the holders of the Shares that remain outstanding after the conclusion of the offers, to sell said Shares to the repurchase trust, at the same cash price that would have been paid to them in the Mexican offer with respect to the same. At the end of the year, said trust was liquidated and the Group's effective participation amounts to 99.98%.

c) Offshore entities

Spanish regulation

According to current Spanish regulation (Law 11/2021, of 9 July; Royal Decree 1080/1991, of 5 July; and Order HFP/115/2023, of 9 February), at year-end 2025 Grupo Santander has three branches in the non-cooperative jurisdictions of Jersey, the Isle of Man and the Cayman Islands (offshore entities). The Group also has a subsidiary in Guernsey, which is in the process of being wound up and is tax resident in the United Kingdom, and is therefore subject to its tax regime.

i. Offshore branches

As previously mentioned, Grupo Santander has three offshore branches in the non-cooperative jurisdictions of the Cayman Islands, the Isle of Man and Jersey. They report to, and consolidate balance sheets and income statements with, their respective foreign headquarters. They are taxed either with their headquarters (the Cayman Islands branch in Brazil) or in the territories they are located (Jersey and the Isle of Man, pertain to the UK).

These three offshore branches have a total of 147 employees as of December 2025.

ii. Subsidiaries in non-cooperative jurisdictions that are tax resident in the United Kingdom (UK)

Grupo Santander also has a subsidiary incorporated in the non-cooperative jurisdiction of Guernsey, which is not deemed an offshore entity because it operated exclusively from the UK and is tax resident there, and is therefore subject to UK tax law. This subsidiary is in the process of being liquidated as of December 31, 2025.

Additionally, during 2025 a subsidiary incorporated in Bermuda and tax resident in the United Kingdom, was liquidated.

iii. Other offshore holdings

From Brazil, Grupo Santander manages Santander Brazil Global Investment Fund SPC, a segregated portfolio company located in the Cayman Islands. The Group also holds minority, non-controlling financial interests in entities located in non-cooperative jurisdictions, including, among others, Klar Holdings Limited in the Cayman Islands.

The European Union (EU)

Santander has no presence in any of the 11 jurisdictions included on the EU Council's blacklist of non-cooperative jurisdictions for tax purposes as of 31 December 2025. Additionally, the EU grey list comprises another 11 jurisdictions which have sufficiently committed to fully adapting their legislation to international tax standards, subject to monitoring by the EU. Within these grey-list jurisdictions, Santander operates only in Morocco through one subsidiary and holds a minority interest in a financial institution tax resident in that jurisdiction.

Organization for Economic Cooperation and Development (OECD)

Grupo Santander has no presence in any jurisdictions non-compliant with both OECD standards on transparency and exchange of information for tax purposes (the automatic exchange of information AEOI standard and the exchange of information on request EOIR standard), according to the last annual reports of the OECD Global Forum on Transparency and Exchange of Information for Tax Purposes, released on 2 December 2025.

However, Vietnam —a jurisdiction where Santander has a subsidiary— does not comply with the EOIR standard. Meanwhile, The Bahamas and Chile —jurisdictions where Santander is also present—, although they have complete legal and regulatory frameworks in place for the implementation of the AEOI standard, they still need to improve the effectiveness of this standard.

Santander presence in offshore territories at the end of 2025 is as follows:

Group presence in non-cooperative jurisdictions

	Group presence in non-cooperative jurisdictions	
Regulatory framework	**Subsidiaries**	**Branches**
Spanish legislation[a]	—	3[b]
Council of the EU blacklist	—	—
OECD[c]	—	—
2025	**—**	**3**
2024	**—**	**3**

a Additionally, there is one subsidiary constituted in Guernsey (in the process of winding up), but resident for tax purposes in the UK.
b The Group has three branches in Jersey, the Isle of Man and the Cayman Islands. These jurisdictions are not included in the European Union's October 2025 blacklist and fully comply with both OECD international standards on transparency and exchange of information for tax purposes (AEOI and EOIR).
c Jurisdictions non-compliant with both OECD standards (AEOI and EOIR).

Grupo Santander has the right mechanisms (risk management, supervision, verification and review plans, and regular reporting) to prevent reputational, tax and legal risks in entities resident in non-cooperative jurisdictions. Grupo Santander also maintains its policy of limiting and reducing its presence in non-cooperative jurisdictions when possible.

PwC member firms audited the financial statements of Grupo Santander's offshore entities in 2025, 2024 and 2023.

4. Distribution of Banco Santander's profit, shareholder remuneration scheme and earnings per share

a) Distribution of Banco Santander's profit and shareholder remuneration scheme

The distribution of the Bank's current annual results that the board of directors will propose for approval by the shareholders at the annual general meeting is as follows:

EUR million	
To dividends	3,520
Dividend paid at 31 December[A]	*1,699*
Complementary dividend[B]	*1,821*
To voluntary reserves[C]	7,593
Net profit for the year	**11,113**

A. Total amount paid as interim dividend, at the rate of EUR 11.5 fixed cents per eligible share (recorded in 'Shareholders' equity - Interim dividends').
B. Fixed complementary dividend of EUR 12.5 gross cents per eligible share, payable in cash as from 5 May 2026. The total amount has been estimated on the assumption that, as a result of the partial implementation of the buyback program announced on February 3, 2026, the number of the Bank's outstanding shares eligible for the dividend will be 14,568,470,446 and that, as envisaged, the capital increase submitted to the 2026 general meeting under item 6.C of the agenda will not be executed before 5 May 2026. Therefore, the total amount of the complementary dividend may be lower if more shares than initially envisaged are acquired under the buy-back programme, or higher if fewer shares are acquired under the buy-back programme or if the capital increase submitted to this general meeting under item 6.C of the agenda is executed before 5 May 2026.
C. Estimated amount corresponding to a complementary dividend of EUR 1,821,058,805.75. To be increased or reduced by the same amount by which the total amount of the final dividend is lower or higher, respectively, than its estimated amount.

The transcribed proposal comprises the part of the 2025 shareholder remuneration policy that is implemented through cash dividends (the interim dividend paid in November 2025 of EUR 11.5 cents per share with dividend entitlement, approved by the board of directors on September 30, 2025, and the complementary dividend expected to be paid as of 5 May 2026, of EUR 12.5 cents per share with the dividend entitlement, proposed by the board of directors on 24 February 2026, and therefore subject to approval by the general meeting).

The remuneration policy also provides for shareholder remuneration through the implementation of share buyback programmes, to which an amount equivalent to 25% of the Group's underlying profit will be allocated. The first programme charged to 2025 results, amounting to approximately amount of EUR 1,700 million, was completed between August 2025 and December 2025. In addition, in 2025 Banco Santander announced its objective of allocating at least EUR 10,000 million to share buybacks in respect of 2025 and 2026 results and expected excess capital. As part of this objective, on 4 February 2026 a second buyback programme was launched for a maximum total amount of EUR 5,030 million, of which EUR 1,830 million corresponds to an amount equivalent to c.25% of the Group's underlying profit in the second half of 2025, and the remaining EUR 3,200 million corresponds to c.50% of the capital released following completion of the sale of the 49% stake in Santander Bank Polska. A capital reduction resolution is also being submitted to the general meeting to enable the cancellation of the treasury shares acquired under this second buyback programme.

The accounting statement, prepared by the Bank pursuant to legal requirements, evidencing the existence of sufficient liquidity for the payment of the interim dividend on the date and for the amount mentioned above, was as follows:

EUR million

	31 August 2025
Profit before taxes	6,193
Tax expense	635
Dividends paid in cash	—
Distributable maximum amount	**5,558**
Available liquidity	96,923

Finally, and although it does not form part of the remuneration charged to the 2025 financial year, it is hereby stated that, in execution of the resolution of the general meeting held on 4 April 2025, on 2 May 2025 the Bank paid a final cash dividend of EUR 11 cents per share charged to the results of the 2024 financial year. Finally, also charged to the results of 2024, the Bank implemented two repurchase programs. The first of them for a maximum amount of EUR 1,525 million, was completed in December 2024, and the second, for a maximum amount of EUR 1,587 million, was completed in June 2025.

b) Earnings/loss per share from continuing and discontinued operations

i. Basic earnings / loss per share

Basic earnings/loss per share are calculated by dividing the net profit attributable to the Group, adjusted by the after-tax amount of the remuneration of contingently convertible preference shares (PPCC) recognised in equity and the capital perpetual preference shares (PPCA) (see note 23), if applicable, by the weighted average number of ordinary shares outstanding during that period, excluding the average number of own shares held through that period.

Accordingly:

	2025	2024	2023
Profit (Loss) attributable to the Parent (EUR million)	14,101	12,574	11,076
Remuneration of PPCC and PPCA (EUR million) (note 23)	(622)	(620)	(492)
	13,479	**11,954**	**10,584**
Of which:			
Profit (Loss) from discontinued operations (non controlling interest net) (EUR million)	962	822	717
Profit (Loss) from continuing operations (non-controlling interest and PPCC and PPCA net) (EUR million)	*12,517*	*11,132*	*9,867*
Weighted average number of shares outstanding	14,890,304,840	15,497,607,269	16,172,084,714
Basic earnings (Loss) per share (euros)	**0.905**	**0.771**	**0.654**
Of which, from discounted operations (euros)	**0.065**	**0.053**	**0.044**
Basic earnings (Loss) per share from continuing operations (euros)	**0.840**	**0.718**	**0.610**

ii. Diluted earnings / loss per share

Diluted earnings/loss per share are calculated by dividing the net profit attributable to the Group, adjusted by the after-tax amount of the remuneration of contingently convertible preference shares recognised in equity (PPCC) recognised in equity and the capital perpetual preference shares (PPCA) (see note 23), by the weighted average number of ordinary shares outstanding during the year, excluding the average number of treasury shares and adjusted for all the dilutive effects inherent to potential ordinary shares (share options, and convertible debt securities).

Accordingly, diluted earnings/loss per share were determined as follows:

	2025	2024	2023
Profit (Loss) attributable to the Parent (EUR million)	14,101	12,574	11,076
Remuneration of PPCC and PPCA (EUR million) (Note 23)	(622)	(620)	(492)
Dilutive effect of changes in profit for the period arising from potential conversion of ordinary shares	—	—	—
	13,479	**11,954**	**10,584**
Of which:			
Profit (Loss) from discontinued operations (net of non-controlling interests) (EUR million)	962	822	717
Profit (Loss) from continuing operations (net of non-controlling interests and PPCC and PPCA) (EUR million)	*12,517*	*11,132*	*9,867*
Weighted average number of shares outstanding	14,890,304,840	15,497,607,269	16,172,084,714
Dilutive effect of options/rights on shares	85,269,647	70,110,570	75,180,407
Adjusted number of shares	14,975,574,487	15,567,717,839	16,247,265,121
Diluted earnings (Loss) per share (euros)	**0.900**	**0.768**	**0.651**
Of which, from discounted operations (euros)	**0.064**	**0.053**	**0.044**
Diluted earnings (Loss) per share from continuing operations (euros)	**0.836**	**0.715**	**0.607**

5. Remuneration and other benefits paid to the Bank's directors and senior managers

The following section contains qualitative and quantitative disclosures on the remuneration paid to the members of the board of directors —both executive and non-executive directors— and senior managers for 2025 and 2024.

a) Remuneration of Directors

i. Bylaw-stipulated emoluments

The annual general meeting held on 22 March 2013 approved an amendment to the Bylaws, whereby the remuneration of directors in their capacity as board members became an annual fixed amount determined by the annual general meeting. This amount shall remain in effect unless the shareholders resolve to change it at a general meeting. However, the board of directors may elect to reduce the amount in any years in which it deems such action justified.

The maximum remuneration established by the annual general meeting was EUR 6 million in 2025 (EUR 6 million in 2024), with two components: (a) an annual emolument and (b) attendance fees.

The specific amount payable for the above-mentioned items to each of the directors is determined by the board of directors. For such purpose, it takes into consideration the positions held by each director on the board, their membership of the board and the board committees and their attendance to the meetings thereof, and any other objective circumstances considered by the board.

The total Bylaw-stipulated emoluments earned by the directors in 2025 amounted to EUR 5.3 million (EUR 5.4 million in 2024).

Annual allotment

For 2025, the board of directors, upon recommendation of the remuneration committee, approved a 3% increase in the annual allotments payable to the chair and members of the board and its committees (including the executive committee), as well as to the lead independent director and the non-executive Vice Chair . Accordingly, each director received, in respect of 2024 and 2025, the amounts corresponding to their service on the board and its committees, with such amounts determined by the specific position held, as detailed in the table below.

Amount per director in euros	2025	2024
Members of the board of directors	100,940	98,000
Members of the executive committee	175,100	170,000
Members of the audit committee	44,290	43,000
Members of the appointments committee	28,840	28,000
Members of the remuneration committee	28,840	28,000
Members of the risk supervision, regulation and compliance committee	44,290	43,000
Members of the responsible banking, sustainability and culture committee	28,840	28,000
Members of the innovation and technology committee	28,840	28,000
Chair of the audit committee	72,100	70,000
Chair of the appointments committee	51,500	50,000
Chair of the remuneration committee	51,500	50,000
Chair of the risk supervision, regulation and compliance committee	72,100	70,000
Chair of the responsible banking, sustainability and culture committee	51,500	50,000
Chair of the innovation and technology committee	72,100	70,000
Lead independent director[A]	113,300	110,000
Non-executive Vice Chair	30,900	30,000

A. Glenn Hutchins has been allocated EUR 700,000 (including annual allowances and attendance fees) in minimum total annual pay set for the required time and dedication to perform his roles.

Attendance fees

The directors receive fees for attending board and committee meetings, excluding executive committee meetings, where no attendace fees are received.

In line with the adjustment to the annual allotments, the board of directors approved a 3% increase for 2025 in attendance fees compared with 2024.

Accordingly, attendance fees for meetings of the board and its committees (with the exception of the Executive Committee, for which no attendance fees are payable) amounted, for the last two years, to the totals set out in the table below:

Attendance fees per director per meeting in euros	2025	2024
Board of directors	2,785	2,704
Audit committee and risk supervision, regulation and compliance committee	1,821	1,768
Other committees (excluding executive committee)	1,606	1,560

ii. Salaries

The executive directors receive salaries. In accordance with the policy approved by the annual general meeting, salaries are composed of a fixed annual remuneration and a variable one, which consists in a unique incentive, which is a deferred variable remuneration plan linked to multi-year objectives, which establishes the following payment scheme:

- 40% of the variable remuneration amount, determined at year-end on the basis of the achievement of the established objectives, is paid immediately.
- The remaining 60% is deferred over five years, provided that the conditions of permanence in the Group and non-concurrence of the malus clauses are met, and subject to long term metrics, taking into account the following accrual scheme:
  - The accrual of the first and second portion (20% of total variable compensation, paid in 2027 and 2028) will be conditional on none of the malus clauses being triggered.
  - The accrual of the third, fourth and fifth portion (40% of total variable compensation and paid in 2029, 2030 and 2031), is linked to objectives related to the period 2025—2027 and the metrics and scales associated with these objectives. The fulfilment of the objectives determines the percentage to be paid of the deferred amount in these three annuities, and these targets can reduce these amounts and the number of deferred instruments, or increase them up to a maximum achievement ratio of 125%, so executives have the incentive to exceed their targets.

In accordance with current remuneration policies, the amounts already paid will be subject to a possible recovery (clawback) by the Bank during the period set out in the policy in force at each moment.

Payment of the approved incentive is paid 40% in cash and the remaining 60% in instruments, consisting of Banco Santander shares and restricted stock units (RSUs) of PagoNxt, split as:

◦ the amount of PagoNxt RSUs set for each year; and

◦ the rest, all in shares of Banco Santander.

Comparative of executive remuneration (Chair and CEO)

The target bonus of the Executive Chair and the CEO for 2025 remains unchanged compared to 2024.

Variable contributions to pensions were not modified in 2025, so the amounts are the 22% of the 30% of the last three assigned bonus' average.

In assessing individual performance, the Board considered the Grupo Santander's strong results for 2025, reflecting continued delivery of our strategic plan. Attributable profit reached EUR 14,101 million in 2025, up 12% year-on-year (or +16% in constant euros), with a TSR during the year of 132% (+60% in relative terms vs. our peer group).

The Board also evaluated the leadership of the Executive Chair and the Chief Executive Officer in delivering these results and advancing the Group's strategic priorities. Taking these factors into account, it determined that both executives achieved an 'Exceptional' level of performance and approved the corresponding variable remuneration.

Moreover, the ratio of executive directors' total remuneration to underlying attributable profit fell to 0.17% from 0.18% in 2024.

iii. Detail by director

The detail, by bank director, of the short-term (immediate) and deferred (not subject to long-term goals) remuneration for 2025 and 2024 is provided below:

EUR thousand

	2025								
	Bylaw-stipulated emoluments								
	Annual emolument								
	Board[F]	Executive committee	Audit committee	Nomination committee	Remuneration committee[1]	Risk supervision, regulation and compliance oversight committee[2]	Responsible banking, sustainability and culture committee	Innovation and technology committee	Attendance fees and commissions

A. All amounts received were reimbursed to Fundación Botín.
B. Director and member of the nomination committee, responsible banking, sustainability and culture committee and innovation and technology committee since 27 June 2024.
C. Director since 27 June 2024.
D. Stepped down as director on 22 March 2024.
E. Stepped down as director on 27 June 2024.
F. Also includes emoluments for other roles in the board.

Changes in the chairship or membership of the committees:
1. Antonio Weiss was appointed member of the remuneration committee on 1 January 2025.
2. José Antonio Álvarez was appointed member of the risk supervision, regulation and compliance oversight committee on 1 January 2025.

Other remuneration includes EUR 1,000 thousand for the role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings for Luis Isasi. For José Antonio Álvarez, this amount includes remuneration as strategic advisor of Grupo Santander, life and health insurance contributions (EUR 678 thousand) and part of the former supplement for having waived the death and disability policy (EUR 12 thousand).

	2025									2024
	Short-term and deferred (not subject to long-term goals) salaries of executive directors									
		Variable - immediate payment		Deferred variable						
	Fixed	In cash	In instruments	In cash	In instruments	Total	Pension contribution	Other remuneration	Total	Total

Antonio Weiss[C]	—	—	—	—	—	—	—	—	180	72
Bruce Carnegie-Brown[D]	—	—	—	—	—	—	—	—	—	78
Ramiro Mato[E]	—	—	—	—	—	—	—	—	—	271
Total 2025	**6,585**	**3,387**	**3,387**	**1,693**	**1,694**	**16,746**	**2,461**	**5,001**	**29,462**	**—**
Total 2024	**6,585**	**3,130**	**3,130**	**1,877**	**1,879**	**16,601**	**2,444**	**5,815**	**—**	**30,214**

Footnotes in previous table.

Following is the detail by executive director of the salaries linked to multi-year objectives at their fair Value, which will only be received if the conditions of permanence in the Group, non-applicability of malus clauses and achievement of the established objectives are met (or, as the case may be, of the minimum thresholds thereof, with the consequent reduction of amount agreed-upon at the end of the year) in the terms described in Note 46.

EUR thousand

	2025				2024
	Variable subject to long-term objectives[1]				
	In cash	In shares	In RSUs	Total	Total
Ana Botín	701	1,893	210	2,804	2,332
Héctor Grisi	484	1,277	176	1,938	1,611
Total	**1,185**	**3,170**	**386**	**4,742**	**3,943**

1. Corresponds with the fair value of the maximum amount they are entitled to in a total of 3 years: 2029, 2030 and 2031, subject to conditions of continued service, with the exceptions provided, and to the non-applicability of malus clauses and achievement of the objectives established. The face value of the three aforementioned deferred amounts is EUR 6,774 thousand for 2025 (EUR 4,006 thousand for Ana Botín and EUR 2,768 thousand for Héctor Grisi).

The fair value has been determined at the grant date based on the valuation report of an independent expert, Willis Towers Watson. Based on the design of the plan for 2025 and the levels of achievement of similar plans in comparable entities, the fair value considered is 70% of the variable remuneration subject to long-term objectives. (see note 46).

Note 5.e below includes disclosures on the shares delivered from the deferred remuneration schemes in place in previous years and for which delivery conditions were met, as well as on the maximum number of shares that may be received in future years in connection with the aforementioned 2025 and 2024 variable remuneration plans.

b) Remuneration of the board members as representatives of the Bank

By resolution of the executive committee, all the remuneration received by the Bank's directors who represent the Bank on the boards of directors of listed companies in which the Bank has a stake, paid by those companies and relating to appointments made on or after 18 March 2002, accrues to the Group. In 2025 the Bank's directors did not receive any remuneration in respect of these representative duties.

On the other hand, in their personal capacity, in 2025 Homaira Akbari was paid USD 100 thousand (EUR 85 thousand) as member of the board of Santander Consumer USA Holdings, Inc. and EUR 200 thousand as member of the board of PagoNxt S.L., and José Antonio Álvarez and Henrique de Castro were each paid the same EUR 200 thousand as members of the board of PagoNxt S.L. (Henrique de Castro also received EUR 15 thousand as member of the nomination committee of PagoNxt, S.L.). Likewise, Pamela Walkden was paid GBP 100 thousand (EUR 115 thousand) as member of Santander UK plc and Santander UK Group Holdings; and Belén Romana EUR 157 thousand as member of the Board of Santander Insurance, S.L.

Likewise, Luis Isasi was paid EUR 1,000 thousand as non-executive Chair of the Santander España business unit and for attending its board and committee meetings (amounts paid by Banco Santander, S.A.).

And finally, José Antonio Álvarez, as strategic adviser of Grupo Santander, received fixed remuneration of EUR 1,750 thousand. In addition, he received the life and health insurance contributions, and the part of the former supplement for having waived the death and disability policy.

c) Post-employment and other long-term benefits

In 2012, the contracts of Ana Botín and other members of the Bank's senior management with defined benefit pension commitments were modified to transform these commitments into a defined contribution system, which covers the contingencies of retirement, disability and death. From that moment on, the Bank makes annual contributions to their pension system for their benefit.

This system gives them the right to receive benefits upon retirement, regardless of whether or not they are active at the Bank at such time, based on contributions to the system, and replaced their previous right to receive a pension supplement in the event of retirement.

The initial balance for Ana Botín in the new defined benefits system corresponded to the market value of the assets from which the provisions corresponding to the respective accrued obligations had materialised on the date on which the old pension commitments were transferred into the new benefits system.

Since 2013, the Bank has made annual contributions to the benefits system for executive directors and other members of executive team, in proportion to their respective pensionable bases, until they leave Grupo Santander or until their retirement within the Group, death, or disability.

The benefit plan system is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A., and the economic rights of the foregoing directors under this plan belong to them regardless of whether or not they are active at the Bank at the time of their retirement, death or disability.

In accordance with the provisions of the remuneration regulations, contributions made calculated on variable remuneration are subject to the discretionary pension benefits regime. Under this regime, contributions are subject to malus clauses and clawback according to the policy in force at any given time and during the same period in which the variable remuneration is deferred.

Furthermore, they must be invested in bank shares for a period of five years from the date when the executive director leaves the Group, regardless of whether or not they leave to retire. Once that period has elapsed, the amount invested in shares will be reinvested, along with the remainder of the cumulative balance corresponding to the executive director, or it will be paid to the executive director or to their beneficiaries in the event of a contingency covered by the benefits system.

As per the director´s remuneration policy approved at the 23 March 2018 general shareholder´s meeting, the system was changed with a focus on:

- Aligning the annual contributions with practices of comparable institutions.
- Reducing future liabilities by eliminating the supplementary benefits scheme in the event of death (death of spouse or parent) and permanent disability of serving directors.
- Not increasing total costs for the Bank.

The changes to the system were the following:

- Fixed and variable pension contributions were reduced to 22% of the respective pensionable bases. The gross annual salaries and the benchmark variable remuneration were increased in the corresponding amount with no increase in total costs for the Bank. The pensionable base for the purposes of the annual contributions for the executive directors is the sum of fixed remuneration plus 30% of the average of their last three variable remuneration amounts. This means complying with Circular 2/2016 of the Bank of Spain, standard 41, on pension benefits, by which a part of not less than 15% of the total contribution must be based on variable components.
- The death and disability supplementary benefits were eliminated since 1 April 2018. A fixed remuneration supplement (included in other remuneration in section a.iii in this note) was implemented the same date. During 2025, this fixed remuneration supplement has expired both for Ana Botín and José Antonio Álvarez, in line with the age of 65 initially set at the time this remuneration component was approved.
- The total amount insured for life and accident insurance was increased.

The provisions recognised in 2025 and 2024 for retirement pensions were as follows:

EUR thousand

	2025	2024
Ana Botín	1,341	1,339
Héctor Grisi	1,120	1,105
Total	**2,461**	**2,445**

Following is a detail of the balances relating to each of the directors under the welfare system as of 31 December 2025 and 2024:

EUR thousand

	2025	2024
Ana Botín	65,027	54,731
Héctor Grisi	2,033	1,299
José Antonio Álvarez	23,178	20,326
Total	**90,238**	**76,356**

d) Insurance

The Group pays for life insurance policies for the Bank's directors, who will be entitled to receive benefits if they are declared disabled. In the event of death, the benefits will be payable to their heirs. The premiums paid by the Group are included in the 'Other remuneration' column of the table shown in Note 5.a.iii above. Also, the following table provides information on the sums insured for the Bank's directors:

Insured capital

EUR thousand

	2025	2024
Ana Botín	20,659	21,525
Héctor Grisi	12,600	12,600
José Antonio Álvarez	10,500	11,215
Total	**43,759**	**45,340**

The insured capital has been modified in 2018 for Ana Botín as part of the pension systems transformation set out in note 5.c) above, which has encompassed the elimination of the supplementary benefits systems (death of spouse and death of parent) and the increase of the life and accident insurance annuities.

During 2025 and 2024, the Group has disbursed a total amount of EUR 8.3 million and EUR 13.5 million, respectively, for the payment of civil-liability insurance premiums. These premiums correspond to several civil-liability insurance policies that hedge, among others, directors, senior management and other managers and employees of the Group and the Bank itself, as well as its subsidiaries, in light of certain types of potential claims of third parties. For this reason, it is not possible to disaggregate or individualize the amount that correspond to the directors and executives.

As of 31 December 2025 and 2024, no life insurance commitments exist for the Group in respect of any other directors.

e) Deferred variable remuneration systems

The following information relates to the maximum number of shares to which the executive directors are entitled at the beginning and end of 2025 and 2024 due to their participation in the deferred variable remuneration systems, which instrumented a portion of their variable remuneration relating to 2025 and prior years, as well as on the deliveries, in shares or in cash, made to them in 2025 and 2024 once the conditions for the receipt thereof had been met (see Note 46):

i) Deferred variable compensation plan linked to multiannual objectives

In the annual shareholders meeting of 18 March 2016, with the aim of simplifying the remuneration structure, improving the ex-ante risk adjustment and increasing the incidence of long-term objectives, the bonus plan (deferred and conditioned variable compensation plan) and ILP were replaced by one single plan.

The variable remuneration of executive directors and certain executives (including senior management) corresponding to 2025 has been approved by the board of directors and implemented through the tenth cycle of the deferred variable remuneration plan linked to multi-year objectives. The application of the plan was authorised by the annual general meeting of shareholders, as it entails the delivery of shares to the beneficiaries.

As indicated in section a.ii of this note, 60% of the variable remuneration amount is deferred over five years for executive directors, to be paid, where appropriate, provided that the conditions of permanence in the Group, according to the following accrual scheme:

- The accrual of the first and second parts (instalments in 2027 and 2028) is conditional on none of the malus clauses being triggered.
- The accrual of the third, fourth and fifth parts (instalments in 2029, 2030 and 2031) is linked to non-concurrence of malus clauses and the fulfilment of certain objectives related to the 2025- 2027 period. These objectives and their respective weights are:
  - Banco Santander's consolidated Return on tangible equity (RoTE) target in 2027 (weight of 30%).
  - Relative performance of Banco Santander's total shareholder return (TSR) in 2025-2027 in respect of the weighted TSR of a peer group comprising 9 credit institutions, with the appropriate TSR ratio based on the group's TSR among its peers (weight of 50%).
  - Four sustainability metrics, which have different weighting (with a total weight of 20%).

The degree of compliance with the above objectives determines the percentage to be applied to the deferred amount in these three annuities, with a maximum achievement ratio of 125%, so executives have the incentive to exceed their targets.

Both the immediate payment and the two first deferrals (short-term part) are paid 50% in cash and the remaining 50% in instruments. The last three deferrals (conditioned to long-term metrics) are paid 25% in cash and 75% in instruments.

The accrual of deferred amounts (whether or not subject to performance measures) is conditioned, in addition to the permanence of the beneficiary in the Group, to non-occurrence, during the period prior to each of the deliveries, of any the circumstances giving rise to the application of malus as set out in the Group's remuneration policy in its chapter related to malus and clawback. Likewise, the amounts already paid of the incentive will be subject to clawback by the Bank in the cases and during the term foreseen in said policy, and in accordance with the terms and conditions foreseen in it.

Malus and clawback clauses are triggered by poor financial performance of Banco Santander, a division or area, or exposures from staff as a result of an executive(s)'s management of, at least, one of these factors:

i. Significant failures in risk management committed by the entity, or by a business unit or risk control.

ii. The increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures.

iii. Regulatory sanctions or judicial sentences from events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity.

iv. Irregular conduct, whether individual or collective. In this regard, the negative effects derived from the marketing of inappropriate products and the responsibilities of the people or bodies that made those decisions will be specially considered.

In addition to the existing policy on malus and clawback clauses of our remuneration policy, the addendum to our remuneration policy entitled 'Financial Statement Restatement Compensation' regulates the recoupment of compensation received by the executive directors of Banco Santander, S.A., and senior management, in the event of a financial restatement (according to the regulation) resulting from material noncompliance with financial reporting requirements under US federal securities laws.

The maximum amount of shares to be delivered under the plan is within the maximum amount of the award to be delivered in shares (EUR 11.5 million) approved at the 2025 AGM for executive directors. At its meeting on 25 November 2025 and pursuant to the powers granted by shareholders at the 2025 AGM, the board agreed to amend the calculation period used to determine the number of shares to be delivered from 50 to 30 trading sessions (under no circumstances may the number of shares exceed the maximum approved at the AGM), as the board considered that this better reflects market practice and enables us to offset share price volatility. Thus, the number of shares to be delivered under the 2025 policy has been calculated with the weighted average daily volume of weighted average listing prices of Banco Santander shares in the 30 trading sessions prior to the Friday (not inclusive) before 4 February 2025 (the date on which the board approved the 2025 bonus for executive directors), which was EUR 10.261 per share. According to an independent experts' valuation, the price per PagoNxt, S.L. RSU equals EUR 61.07.

ii) Shares assigned by deferred variable remuneration plans

The following table shows the number of Santander shares assigned to each director already in service and pending delivery as of 1 January 2024, 31 December 2024 and 31 December 2025, as well as the gross shares that were delivered to them in 2024 and 2025, either in the form of an immediate payment or a deferred payment. In this case after having been appraised by the board, at the proposal of the remuneration committee, that the corresponding one-fifth of each plan had accrued. They come from the deferred conditional and linked to multi-year objectives in 2019, 2020, 2021, 2022, 2023, 2024 and 2025 were formalized.

Share-based variable remuneration

	Maximum number of shares to be delivered at January 1,2024	Shares delivered in 2024 (immediate payment 2023 variable remuneration)	Shares delivered in 2024 (deferred payment 2022 variable remuneration)	Shares delivered in 2024 (deferred payment 2021 variable remuneration)	Shares delivered in 2024 (deferred payment 2020 variable remuneration)	Shares delivered in 2024 (deferred payment 2019 variable remuneration)	Variable remuneration 2024 (Maximum number of shares to be delivered)

2. The levels of achievement of the multi-year metrics of the long-term variable remuneration plans:

1) Seventh cycle of the deferred multi-year objectives variable remuneration plan (2022): 115.2% of achievement for the period 2022-2024.
a. RoTE metric for 2024 year-end period at 150%. Weight of 40.0%.
b. Relative TSR metric in 2022-2024 period at 83% of achievement. Weight of 40.0%.
c. Sustainability metrics at 25% of achievement. Weight of 20.0%.

2) Sixth cycle of the deferred multi-year objectives variable remuneration plan (2021): 91.6% of achievement for the period 2021-2023.
a. CET1 metric at 100% of achievement for 2023 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 100%). Weight of 33.3%.
c. TSR metric at 25% of achievement (target of 33 to 66 percentile). Weight of 33.3%.

3) Fifth cycle of the deferred multi-year objectives variable remuneration plan (2020): 83.0% of achievement for the period 2020-2022.
a. CET1 metric at 100% of achievement for 2022 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 10%). Weight of 33.3%.
c. TSR metric at 0% of achievement (minimum target of 33% not reached). Weight of 33.3%

Furthermore, the maximum number of RSUs of PagoNxt, S.L. to be delivered under the current plan (and subject to regulatory ratio compliance) is 9,415 and 7,909 units for Ana Botín and Héctor Grisi, respectively.

In addition, the table below shows the cash delivered in 2025 and 2024, by way of either immediate payment or deferred payment, in the latter case once the Board had determined, at the proposal of the remuneration committee, that one deferral relating to each plan had accrued:

EUR thousand

	2025		2024	
	Cash paid (immediate payment 2024 variable remuneration)	Cash paid (deferred payments from 2023, 2022, 2021 and 2020 variable remuneration)	Cash paid (immediate payment 2023 variable remuneration)	Cash paid (deferred payments from 2022, 2021, 2020 and 2019 variable remuneration)
Ana Botín	1,851	1,759	1,780	1,419
Héctor Grisi	1,279	366	1,220	863
José Antonio Álvarez	—	815	—	945
Total	**3,130**	**2,940**	**3,000**	**3,228**

iii) Information on former members of the board of directors

The chart below includes information on the maximum number of shares to which former members of the board of directors, are entitled for their participation in the various deferred variable remuneration systems, which instrumented a portion of their variable remuneration relating to the years in which they were executive directors. Also set forth below is information on the deliveries, whether in shares or in cash, made in 2025 and 2024 to former board members, upon achievement of the conditions for the receipt thereof (see note 46):

Maximum number of shares to be delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2019)	—	24,490
Deferred conditional variable remuneration plan and linked to objectives (2020)	35,511	71,024
Deferred conditional variable remuneration plan and linked to objectives (2021)	137,400	206,100

Number of shares delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2018)	—	29,860
Deferred conditional variable remuneration plan and linked to objectives (2019)	24,490	24,490
Deferred conditional variable remuneration plan and linked to objectives (2020)	35,512	35,512
Deferred conditional variable remuneration plan and linked to objectives (2021)	68,700	12,911

In addition, EUR 724 thousand and EUR 650 thousand relating to the deferred portion payable in cash of the aforementioned plans were paid each in 2025 and 2024.

f) Loans

Grupo Santander's direct risk exposure to the bank's directors and the guarantees provided for them are detailed below. These transactions were made on terms equivalent to those that prevail in arm's-length transactions or the related compensation in kind was recognized:

EUR thousand

	2025			2024

C. Director since 27 June 2024.
D. Ceased as director of Banco Santander, S.A. on 27 June 2024 .

g) Senior management

The table below includes the amounts relating to the short-term remuneration of the members of senior management at 31 December 2025 and those at 31 December 2024, excluding the remuneration of the executive directors, which is detailed above.

EUR thousand

		Short-term salaries and deferred remuneration							
			Variable remuneration (bonus) - Immediate payment		Deferred variable remuneration				
Year	Number of persons	Fixed	In cash	In instruments[2]	In cash	In instruments[3]	Pensions	Other remuneration[1]	Total
2025	15	19,255	9,179	9,180	4,306	4,306	4,910	6,456	57,592
2024	14	16,466	7,376	7,377	3,319	3,320	4,520	7,153	49,531

1.Includes other remuneration items such as life and medical insurance premiums and localization aids and lastly RSUs from PagoNxt S.L., for the work of one director in said entity.
2. The amount of immediate payment for 2024 is 894,587 shares (1,611,965 Santander shares in 2024).
3. The deferred amount in instruments not linked to long-term objectives for 2024 is 416,410 shares (725,399 Santander shares in 2024).

In addition to the amounts reflected in the table, salary remunerations amounting to EUR 4,118 thousand were granted in the form of buyouts and sign-on awards, related to the recruitment of new members who joined this employee group during the year.

In 2025, the ratio of variable to fixed pay components was 134% of the total for senior managers, well within the maximum limit of 200% set by 2024 AGM.

Also, the detail of the breakdown of the remuneration linked to long-term objectives of the members of senior management at 31 December 2025 and 31 December 2024 is provided below. These remuneration payments shall be received, as the case may be, in the corresponding deferral periods, upon achievement of the conditions stipulated for each payment (see note 46):

EUR thousand

		Variable remuneration subject to long-term objectives[1]		
Year	Number of people	Cash payment	Instrument payment	Total
2025	15	4,521	4,522	9,043
2024	14	3,485	3,486	6,971

1. Relates to the fair value of the maximum annual amounts for years 2029, 2030 and 2031 of the tenth cycle of the deferred conditional variable remuneration plan (2028, 2029 and 2030 for the ninth cycle of the deferred variable compensation plan linked to annual objectives for the year 2024). The face value of the three aforementioned deferred amounts is EUR 12,919 thousand for 2025.

Additionally, members of senior management who stepped down from their roles in 2025 consolidated salary remuneration and other remuneration for a total amount of EUR 2,905 thousand (EUR 12,303 thousand in 2024). In 2025 rights regarding variable pay subject to long-term objectives amounted to EUR 342 thousand (EUR 633 thousand were generated in 2024 for this collective).

The maximum number of Santander shares that the members of senior management at each plan grant date (excluding executive directors) were entitled to receive as of 31 December 2025 and 31 December 2024 relating to the deferred portion under the various plans then in force is the following (see note 46):

Maximum number of shares to be delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2019)	—	71,294
Deferred conditional variable remuneration plan and linked to objectives (2020)	145,704	370,522
Deferred conditional variable remuneration plan and linked to objectives (2021)	486,863	966,680
Deferred conditional variable remuneration plan and linked to objectives (2022)	891,305	1,430,464
Deferred conditional variable remuneration plan and linked to objectives (2023)	934,609	1,395,815
Deferred conditional variable remuneration plan and linked to objectives (2024)	1,601,213	—

Since the conditions established in the corresponding deferred share-based remuneration schemes for prior years had been met, the following number of Santander shares was delivered in 2025 and 2024 to the senior management, in addition to the payment of the related cash amounts:

Number of shares delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2018)	—	57,730
Deferred conditional variable remuneration plan and linked to objectives (2019)	54,249	71,294
Deferred conditional variable remuneration plan and linked to objectives (2020)	145,704	185,261
Deferred conditional variable remuneration plan and linked to objectives (2021)	243,433	351,777
Deferred conditional variable remuneration plan and linked to objectives (2022)	266,390	357,615
Deferred conditional variable remuneration plan and linked to objectives (2023)	233,652	1,212,984
Deferred conditional variable remuneration plan and linked to objectives (2024)	1,399,679	—

As indicated in note 5.c above, senior management participate in the benefit system created in 2012, which covers the contingencies of retirement, disability and death. Banco Santander makes annual contributions to the benefit plans of its senior managers. In 2012, the contracts of the senior managers with benefit pension commitments were amended to transform them into a contribution system. The system, which is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A., gives senior managers the right to receive benefits upon retirement, regardless of whether or not they are active at Banco Santander at such time, based on contributions to the system. This new system replaced their previous right to receive a pension supplement in the event of retirement. In the event of pre-retirement, and up to the retirement date, senior managers appointed prior to September 2015 are entitled to receive an annual allowance.

In addition, further to applicable remuneration regulations, from 2016 (inclusive), a discretionary pension benefit component of at least 15% of total remuneration in contributions to the pension system has been included. Under the regime corresponding to these discretionary benefits, the contributions that are calculated on variable remunerations are subject to malus and clawback clauses, subject to policies applicable at each time, and during the same period in which the variable remuneration is deferred.

Likewise, the annual contributions calculated on variable remunerations must be invested in Bank shares for a period of five years from the date that the senior manager leaves the Group, regardless of whether or not they leave to retire. Once that period has elapsed, the amount invested in shares will be reinvested, along with the remainder of the cumulative balance corresponding to the senior manager, or it will be paid to the senior manager or to their beneficiaries in the event of a contingency covered by the benefits system.

The contracts of some members of senior management were modified at the beginning of 2018 with the same objective and changes indicated in section c of this note for Ana Botín. The modifications, which are aimed at aligning the annual contributions with the practices of comparable institutions and reducing the risk of future obligations by eliminating the supplementary scheme for death (widowhood and orphanhood) and permanent disability in service without increasing the costs to the bank, are as follows:

- Contributions to the pensionable bases were reduced. Gross annual salaries were increased in the corresponding amount.
- The death and disability supplementary benefits were eliminated since 1 January 2018 for some members of senior management and since 1 April 2018 for executive directors. A fixed remuneration supplement reflected in other remuneration in the table above was implemented on the same date.
- The amounts insured for life and accident insurance were increased.

All of the above was done without an increase in total cost for the Bank.

The balance as of 31 December 2025 in the pension system for those who were part of senior management at year end amounted to EUR 51 million (EUR 51 million at 31 December 2024).

The net charge to income corresponding to pension amounted to EUR 4.9 million in 2025 (EUR 4.5 million in 31 December 2024).

In 2025 and 2024 there have been no payments in the form of a single payment of the annual voluntary pre-retirement allowance.

Additionally, the capital insured by life and accident insurance at 31 December 2025 of this group amounts to EUR 78 million (EUR 83 million at 31 December 2024).

h) Post-employment benefits to former directors and former senior executive vice presidents

The post-employment benefits and settlements paid in 2025 to former directors of the Bank, other than those detailed in note 5.c amounted to EUR 5.6 million and EUR 5.6 million in 2024, respectively. Also, the post-employment benefits and settlements paid in 2025 to former executive vice presidents amounted to EUR 16 million and EUR 12.7 million in 2024, respectively.

Contributions to insurance policies that hedge pensions to previous members of the Bank's board of directors, amounted to EUR 0.17 million in 2025 (EUR 0.17 million in 2024). Likewise, contributions to insurance policies that hedge pensions for previous senior managers amounted to EUR 1.3 million in 2025 (EUR 2.3 million in 2024).

No releases or charges were recorded in the consolidated income statement for pension commitments and similar obligations held by the Group with previous former members of the bank's board of directors or former members of senior management in 2025 and 2024.

In addition, 'Provisions - Pension Fund and similar obligations' in the consolidated balance sheet as at 31 December 2025 included EUR 43 million in respect of the post-employment benefit obligations to former Directors of the Bank (EUR 46 million at 31 December 2024) and EUR 108 million corresponding to former members of senior management (EUR 96 million at 31 December 2024).

i) Pre-retirement and retirement

The board of directors approved an amendment to the contracts of executive directors whereby they ceased to have the right to pre-retire in case of termination of his contract.

j) Contract termination

The executive directors and members of senior management have indefinite-term employment contracts. Executive directors or senior managers whose contracts are terminated voluntarily or due to breach of duties are not entitled to receive any economic compensation. If Banco Santander terminates the contract for any other reason, they will be entitled to the corresponding legally-stipulated termination benefit, without prejudice to any compensation that may for non-competition obligations, as detailed in the directors' remuneration policy.

If Banco Santander were to terminate her contract, Ana Botín would have to remain at Banco Santander's disposal for a period of 4 months in order to ensure an adequate transition, and would receive her fixed salary during that period.

k) Information on investments held by the directors in other companies and conflicts of interest

None of the members of the board of directors have declared that they or persons related to them may have a direct or indirect conflict of interest with the interests of Banco Santander, S.A., as set forth in article 229 of the Corporate Enterprises Act.

6. Loans and advances to central banks and credit institutions

The detail, by classification, type and currency, of Loans and advances to central banks and credit institutions in the consolidated balance sheets is as follows:

EUR million

CENTRAL BANKS	2025	2024	2023
Classification			
Financial assets held for trading	14,632	12,966	17,717

	300,026	**283,497**	**243,203**

The increase in the year of the debt securities portfolio under the heading 'Financial assets at fair value with changes in other comprehensive income' is mainly due to the increase in exposure to sovereign debt, as a result of greater activity in the markets business, both its own and for distribution to clients.

Likewise, the increase in the debt securities portfolio under the heading 'Financial assets at amortized cost' is due to the continuation of the strategy started in year 2022 in which two new business models were created for the optimization of excess liquidity and the management of the maturity of the balance sheet credit and deposit portfolios.

At 31 December 2025, 2024 and 2023 the gross exposure by impairment stage of the book assets amounted to EUR 196,509 million, EUR 196,514 million and EUR 176,697 million in stage 1; EUR 1,480 million, EUR 597 million and EUR 203 million in stage 2, and EUR 842 million, EUR 701 million and EUR 461 million in stage 3, respectively.

In addition, at 31 December 2025, the Group had EUR 8 million (EUR 44 million at 31 December 2024) of exposure in assets purchased with impairments, which correspond mainly to the business combinations carried out by the Group with any additional impairment signs.

b) Breakdown

The breakdown, by origin of the issuer, of debt securities at 31 December 2025, 2024 and 2023, net of impairment losses, is as follows:

EUR million

	2025				2024				2023

During 2025, France's rating for sovereign issuances has been modified from AA- to A+. During 2024, Portugal's rating for sovereign issuances was modified from BBB+ to A-. For the year 2023, the distribution of the exposure by rating level of the previous table was not affected by ratings reviews of the sovereign issuers.

The detail, by type of financial instrument, of private fixed-income securities at 31 December 2025, 2024 and 2023, net of impairment losses, is as follows:

EUR million

	2025	2024	2023
Securitised mortgage bonds	10,514	10,709	9,310
Other asset-backed bonds	14,073	11,624	10,243
Floating rate debt	18,721	17,323	15,376
Fixed rate debt	20,508	22,175	22,221
Total	**63,816**	**61,831**	**57,150**

c) Impairment losses

The changes in the impairment losses on debt securities are summarised below:

EUR million

	2025	2024	2023
Balance at beginning of year	349	286	226
Net impairment losses for the year[A]	182	226	24
Of which:			
Impairment losses charged to income	*238*	*234*	*36*
Impairment losses reversed with a credit to income	*(56)*	*(8)*	*(12)*
Assets written off	—	(131)	0
Exchange differences and other items	(11)	(32)	36
Balance at end of year	**520**	**349**	**286**
Of which:			
By geographical location of risk:			
European Union	*26*	*23*	*22*
America	*494*	*326*	*264*

A. Of the EUR 182 million corresponding to net provisions for the year ended 31 December 2025 (EUR 226 million and EUR 24 million at 31 December 2024 and 2023, respectively), EUR 182 million relates to financial assets at amortized cost (EUR 227 million and EUR 23 million at 31 December 2024 and 2023, respectively) and EUR 0 million relates to financial assets designated at fair value through other comprehensive income (EUR -1 million and EUR 1 million at 31 December 2024 and 2023, respectively).

At 31 December 2025, 2024 and 2023 the loan loss provision by impairment stage of the assets accounted for under IFRS9 amounted to EUR 62 million, EUR 39 million and EUR 30 million in stage 1, EUR 66 million, EUR 9 million and EUR 8 million in stage 2, and EUR 392 million, EUR 301 million and EUR 248 million in stage 3, respectively.

8. Equity instruments

a) Breakdown

The detail, by classification and type, of Equity instruments in the consolidated balance sheets is as follows:

EUR million

	2025	2024	2023
Classification			
Financial assets held for trading	22,030	16,636	15,057
Non-trading financial assets mandatorily at fair value through profit or loss	5,815	4,641	4,068
Financial assets designated at fair value through other comprehensive income	2,281	2,193	1,761
	30,126	**23,470**	**20,886**
Type			
Shares of Spanish companies	5,083	3,730	3,540
Shares of foreign companies	21,633	17,153	15,185
Shares of investment funds	3,410	2,587	2,161
	30,126	**23,470**	**20,886**

Note 29 contains a detail of the 'Other comprehensive income', recognised in equity, on 'Financial assets designated at fair value through other comprehensive income'.

b) Changes

The changes in 'Financial assets at fair value through other comprehensive income' were as follows:

EUR million

	2025	2024	2023
Balance at beginning of the year	2,193	1,761	1,941
Net additions (disposals)	(81)	(35)	11
Changes in the fair value of equity instruments measured at fair value through other comprehensive income (EIGR)[A]	245	447	(162)
Changes in the RV hedged with micro-hedging transactions	(76)	20	(29)
Balance at end of year	**2,281**	**2,193**	**1,761**

A. They do not include fair value movements for currency risk hedged with hedging instruments.

c) Notifications of acquisitions of investments

The notifications of the acquisitions and disposals of holdings in investees made by the Bank in 2025, in compliance with Article 155 of the Spanish Limited Liability Companies Law and Article 105 of Spanish Securities Market Law 24/1998, are listed in appendix IV.

9. Trading derivatives (assets and liabilities) and short positions

a) Trading Derivatives

The detail, by type of inherent risk, of the fair value of the trading derivatives arranged by the Group is as follows (see note 11):

EUR million

	2025		2024		2023	
	Debit balance	Credit balance	Debit balance	Credit balance	Debit balance	Credit balance
Interest rate risk	29,550	23,728	30,834	24,754	31,480	26,014
Currency risk	24,755	20,508	29,395	29,110	22,834	23,094
Price risk	1,858	2,279	1,765	1,632	1,279	904
Other risks	2,192	5,453	2,106	2,257	735	577
	58,355	**51,968**	**64,100**	**57,753**	**56,328**	**50,589**

b) Short positions

Following is a breakdown of the short positions (liabilities):

EUR million

	2025	2024	2023
Borrowed securities			
Debt instruments	2,938	2,566	3,263
Of which:

In addition, at 31 December 2025, the Group had EUR 307 million (EUR 515 million at 31 December 2024 and EUR 694 million at 31 December 2023) of exposure in assets purchased with impairment of which EUR 46 million still show signs of additional impairment, which correspond mainly to the business combinations carried out by the Group.

c) Impairment losses on loans and advances to customers at amortised cost and at fair value through other comprehensive income

The changes in the impairment losses on the assets making up the balances of financial assets at amortised cost and at fair value through other comprehensive income - Loans and advances - Customers:

EUR million

	2025	2024	2023
Amount at beginning of the year	22,125	22,788	22,684
Impairment losses charged to income for the year	14,144	13,428	13,805
Of which:			
Impairment losses charged to profit or loss	*24,935*	*22,761*	*20,608*
Impairment losses reversed with a credit to profit or loss	*(10,791)*	*(9,333)*	*(6,803)*
Change of perimeter	—	—	(48)
Write-off of impaired balances against recorded impairment allowance	(13,266)	(13,212)	(13,847)
Exchange differences and other changes	(1,845)	(879)	194
Amount at end of the year	**21,158**	**22,125**	**22,788**
Which correspond to:			
Impaired assets	*13,527*	*14,088*	*14,238*
Other assets	*7,631*	*8,037*	*8,550*
Of which:			
Individually calculated	*2,359*	*2,258*	*2,951*
Collective calculated	*18,799*	*19,867*	*19,837*

In addition, provisions for debt securities amounting to EUR 182 million were recorded at 31 December 2025 (provisions amounting to EUR 226 million and EUR 24 million as of 31 December 2024 and 2023, respectively), written-off assets recoveries have been recorded in the year amounting to EUR 1,791 million at 31 December 2025 (EUR 1,600 million and EUR 1,587 million at 31 December 2024 and 2023, respectively).

With this, the impairment recorded in Impairment or reversal of impairment at financial assets not measured at fair value through profit or loss and net gains and losses from changes: 'Financial assets at fair value through other comprehensive income' and 'Financial assets at amortised cost (IFRS 9) and, Loans and receivables (IAS 39)'; amounts EUR 12,535 million at 31 December 2025 (EUR 12,136 million and EUR 12,298 million at 31 December 2024 and 2023, respectively).

Following is the movement of the loan loss provision broken down by impairment stage of loans and advances to customers during 2025, 2024 and 2023:

2025

EUR million

	Stage 1	Stage 2	Stage 3	Total
Loss allowance at the beginning of the year	3,293	4,744	14,088	22,125
Transfers				
To stage 2 from stage 1	(847)	2,734		1,887
To stage 3 from stage 1	(701)		4,931	4,230

Net changes of the exposure and modifications in the credit risk	875	(557)	7,212	7,530
Write-offs	—	—	(13,847)	(13,847)
FX and other movements	20	(127)	47	(60)
Loss allowance at the end of the year	**3,596**	**4,954**	**14,238**	**22,788**

d) Impaired assets and assets with unpaid past-due amounts

The detail of the changes in the balance of the financial assets classified as 'Financial assets Loans to customers' considered to be impaired due to credit risk is as follows:

EUR million

	2025	2024	2023
Balance at beginning of year	33,731	34,094	32,888
Net additions	13,648	13,779	14,944
Written-off assets	(13,266)	(13,212)	(13,847)
Changes in the scope of consolidation	—	17	(59)
Exchange differences and other	(2,536)	(947)	168
Balance at end of year	**31,577**	**33,731**	**34,094**

This amount, after deducting the related allowances, represents the Group's best estimate of the discounted value of the flows that are expected to be recovered from the impaired assets.

At 31 December 2025, the Group's written-off assets totalled EUR 51,435 million (EUR 49,939 million and EUR 48,138 million at 31 December 2024 and 2023, respectively).

Set forth below for each class of impaired asset are the gross amount, associated allowances and information relating to the collateral and/or other credit enhancements obtained at 31 December 2025:

EUR million

	Gross amount	Allowance recognised	Estimated collateral value[A]
Without associated real collateral	13,846	8,133	—
With real estate collateral	7,777	1,759	5,657
With other collateral	9,954	3,635	5,424
Total	**31,577**	**13,527**	**11,081**

A. Including the estimated value of the collateral associated with each loan. Accordingly, any other cash flows that may be obtained, such as those arising from borrowers' personal guarantees, are not included.

When classifying assets in the previous table, the main factors considered by the Group to determine whether an asset has become impaired are the existence of amounts past due —assets impaired due to arrears— or other circumstances that may arise which will not result in all contractual cash flows being recovered, such as a deterioration of the borrower's financial situation, the worsening of its capacity to generate funds or difficulties experienced by it in accessing credit.

e) Transferred credits

'Loans and advances to customers' includes, inter alia, the securitised loans transferred to third parties on which the Group has retained the risks and rewards, albeit partially, and which therefore, in accordance with the applicable accounting standards, cannot be derecognised. This is mainly due to mortgage loans, loans to companies and consumer loans in which the group retains subordinate financing and/or grants some kind of credit enhancement to new holders.

Securitisation is used as a tool for the management of regulatory capital and as a means of diversifying the Group's liquidity sources.

The breakdown of securitized loans held on the balance sheet, according to the nature of the financial instrument in which they are originated, is shown below:

EUR million

	2025	2024	2023
Retained on the balance sheet	80,072	80,824	75,738
Of which			
Securitised mortgage assets	*19,640*	*17,782*	*16,994*
Of which: UK assets	*10,236*	*9,034*	*6,096*
Other securitised assets	*60,432*	*63,042*	*58,744*
Total[A]	**80,072**	**80,824**	**75,738**

A. Note 22 details the liabilities associated with these securitisation transactions.

At 31 December 2025, Grupo Santander had loans that had been fully derecognised and for which it retained servicing amounting to EUR 12,174 million (EUR 14,919 million and EUR 13,923 million at 31 December 2024 and 2023, respectively).

11. Trading derivatives

The detail of the notional amounts and the market values of the trading derivatives held by the Group in 2025, 2024 and 2023 is as follows:

EUR million

	2025		2024		2023	
	Notional amount	Market value	Notional amount	Market value	Notional amount	Market value
Trading derivatives						
Interest rate risk						
Forward rate agreements	1,995,070	(32)	1,992,413	13	829,913	3
Interest rate swaps	6,166,278	6,324	6,127,812	6,364	5,381,966	5,514
Options, futures and other derivatives	470,659	(472)	377,285	(297)	398,519	(51)

Foreign currency options	160,421	441	221,159	528	77,934	288
Currency swaps	682,350	2,526	625,765	(838)	586,405	(581)
Securities and commodities derivatives and other	98,588	(547)	78,328	554	68,664	619
Total	**10,250,140**	**6,387**	**9,978,141**	**6,347**	**7,837,818**	**5,739**

12. Non-current assets held for sale and liabilities associated with non-current assets held for sale

a) Breakdown

The detail of Non-current assets held for sale in the consolidated balance sheets is as follows:

EUR million	2025	2024	2023
Tangible assets	**2,850**	**2,851**	**2,991**
Foreclosed assets	2,487	2,621	2,773
Of which property assets in Spain	*1,705*	*1,896*	*2,138*
Other tangible assets held for sale	363	230	218
Entities held for sale	**72,148**	**1,137**	**—**
Caceis (Note 3)	—	1,137	—
Santander Bank Polska S.A. (Note 3)	72,148	—	—
Other assets	**13**	**14**	**23**
Total non-current assets held for sale	**75,011**	**4,002**	**3,014**

EUR million	2025	2024	2023
Entities held for sale			
Santander Bank Polska S.A. (Note 2)	62,995	—	—
Total Liabilities associated with non-current assets held for sale	**62,995**	**—**	**—**

At 31 December 2025, the provisions recognised for the total non current assets held for sale totalled EUR 2,357 million (EUR 2,606 million and EUR 2,956 million at 31 December 2024 and 2023, respectively). The charges recorded in those years amounted to EUR 131 million, EUR 163 million and EUR 139 million, respectively, and the recoveries during these exercises are amounted to EUR 59 million, EUR 71 million and EUR 88 million, respectively.

b) Assets and liabilities from entities held for sale

The following is the consolidated balance sheet and consolidated summary cash flow statements for the Polish business held for sale:

EUR million

Condensed consolidated balance sheet	2025
Cash, cash balances at central banks and other deposits on demand	2,515
Financial assets held for trading	1,956
Financial assets designated at fair value through other comprehensive income	8,173
Financial assets at amortised cost	55,642
Intangible assets	1,335
Tax assets	1,224
Other assets	1,303
Total assets	**72,148**

EUR million

Condensed consolidated balance sheet	2025
Financial liabilities held for trading	842
Financial liabilities at amortised cost	59,704
Provisions	603
Tax liabilities	1,335
Other liabilities	511
Total liabilities	**62,995**

EUR million

Other comprehensive income	2025
Items that will not be reclassified to profit or loss	56
Actuarial gains or losses on defined benefit pension plans	—
Changes in the fair value of equity instruments measured at fair value through other comprehensive income	56
Items that may be reclassified to profit or loss	(590)
Hedges of net investments in foreign operations (effective portion)	(522)
Exchange differences	(164)
Cash flow hedges (effective portion)	98
Debt instruments at fair value with changes in other comprehensive income	8
Share in other income and expenses recognised in investments, joint ventures and associates	(10)

EUR million

Condensed consolidated statements of cash flows	2025	2024	2023
A) Cash flows from operating activities	1,405	1,705	352
B) Cash flows from investing activities	(98)	(96)	(91)
C) Cash flows from financing activities	(1,301)	(1,194)	(591)
D) Effect of foreign exchange rate differences	20	27	143
E) Net increase/(decrease) in cash and cash equivalents	**26**	**442**	**(187)**

At 31 December 2025, the written-off assets totalled EUR 2,339 million from the Polish business held for sale.

Consistent with the Group´s management model, the amounts related to the business held for sale in Poland are primarily reported within the Retail & Commercial Banking segment for primary segment information purposes. Additionally, a separate breakdown for the Poland geography is presented as a secondary segment.

In addition, see the consolidated summary profit and loss accounts for the business for sale in Poland in Note 37.

13. Investments

a) Breakdown

The detail, by company, of Investments is as follows:

EUR million

	2025	2024	2023
Associated entities	**5,096**	**5,216**	**5,682**
Merlin Properties, SOCIMI, S.A.[A]	1,830	1,803	1,621
Zurich Santander Insurance America, S.L. - Consolidated	940	884	936
Metrovacesa, S.A.	748	841	899
CNP Santander	399	397	423
Pluxee Beneficios Brasil S.A. [A]	295	309	—
Caceis (Notes 3 and 12)	—	—	1,139

Exchange differences and other changes	(54)	(140)	20
Balance at end of year	**7,052**	**7,277**	**7,646**

A. Includes the acquisition of 20% of Pluxee Beneficios Brasil S.A. and the capital increase of Merlin Properties, SOCIMI, S.A carried out in 2024.
B. Stakes of Santander Bank Polska S.A. and Caceis (Notes 3 and 12).

c) Impairment adjustments

During the years 2025, 2024 and 2023 there was no evidence of significant impairment in the Group's associated interests.

d) Other information

A summary of the financial information at the end of December 2025 of the main associates and joint ventures (obtained from the information available at the date of preparation of the consolidated financial statements) is shown below:

EUR million

	Associates					Joint ventures

A. Data as of 31 December 2024, latest accounts available.

14. Insurance contracts linked to pensions

The detail of Insurance contracts linked to pensions in the consolidated balance sheets is as follows:

EUR million

	2025	2024	2023
Assets relating to insurance contracts covering post-employment benefit plan obligations:			
Banco Santander, S.A.	67	81	93
	67	**81**	**93**

15. Liabilities under insurance contracts

The detail of Liabilities under insurance contracts and reinsurance assets in the consolidated balance sheets (see note 2.i) is as follows:

EUR million

	2025	2024	2023
Liabilities under insurance contracts	**18,737**	**17,829**	**17,799**
Liability for Remaining Coverage (LRC)	18,291	17,377	17,333
Liabilities relating to insurance contracts measured under BBA/VFA	18,194	17,292	17,262
Current value of future cashflows (PVFCF)	*17,461*	*16,614*	*16,627*
Risk adjustment for non-financial risk (RA)	*186*	*199*	*211*
Contractual service margin (CSM)	*547*	*479*	*424*
Liabilities relating to insurance contracts measured under PAA	97	85	71
Liability for incurred claims (LIC)	446	452	466

The balance of liabilities under insurance contracts reflected in the consolidated balance sheet includes the following elements:

- Liability for Remaining Coverage (LRC): amount of obligations provisioned to meet the fulfilment of future services assigned to the group on a date for a specific coverage period.
  - Liabilities relating to insurance contracts measured under BBA/VFA, formed from the sum of the following elements:
    - Current value of future cashflows (PVFCF): present value of future inflow and outflow cash flows weighted by their probability of occurrence.
    - Risk adjustment for non-financial risk (RA): reflects compensation for the uncertainty of cash flows by quantifying the amount necessary to compensate for unexpected losses in liability flows.
    - Contractual service margin (CSM): future benefit to be recognized during the coverage period.
  - Liabilities relating to insurance contracts measured under PAA, valued using the premium allocation method, represent the portion of premiums written for the remaining hedge net of acquisition expenses.
- Liability for Incurred Claims (LIC): amount of obligations provisioned to meet the fulfilment of past services assigned to the group on a date.

The insurance activity is carried out mainly in the life insurance sector in its life-savings modality. Within the amount of liabilities for insurance contracts, Individual Life Annuities are the product that has the greatest weight in the consolidated balance sheet. This product consists of life annuities where the client contributes a single premium and receives a constant and periodic insured income (monthly, quarterly, semi-annual or annual) until his death where, at that time, the beneficiaries will receive the insured capital of 102% or 101% of the premium contributed.

The income and expenses recorded in the profit and loss account for the insurance activity, including reinsurance income and expenses, are not material in the Group's consolidated annual accounts.

16. Tangible assets

a) Changes

The changes in Tangible assets in the consolidated balance sheets were as follows:

Construction in progress and other items	244	(49)	(44)	151	—
Balance at 31 December 2023	**26,243**	**(12,637)**	**(198)**	**13,408**	**2,183**
Land and buildings	15,113	(5,516)	(353)	9,244	1,882
IT equipment and fixtures	5,283	(3,926)	—	1,357	23
Furniture and vehicles	4,963	(3,130)	—	1,833	13
Construction in progress and other items	297	(47)	(48)	202	—
Balance at 31 December 2024	**25,656**	**(12,619)**	**(401)**	**12,636**	**1,918**
Land and buildings	14,067	(5,359)	(304)	8,404	1,536
IT equipment and fixtures	4,204	(3,003)	(10)	1,191	13
Furniture and vehicles	5,548	(3,746)	(1)	1,801	7
Construction in progress and other items	322	(21)	(34)	267	—
Balance at 31 December 2025	**24,141**	**(12,129)**	**(349)**	**11,663**	**1,556**

The carrying amount at 31 December 2025 in the foregoing table includes the following approximate amounts EUR 6,545 million (EUR 6,531 million at 31 December 2024 and EUR 7,119 million at 31 December 2023) relating to property, plant and equipment owned by group entities and branches located abroad.

c) Tangible assets - Leased out under an operating lease

Grupo Santander has assets leased out under operating leases where the company is the lessor and do not meet the accounting requirements to be classified as finance leases. The net cost of these leases is recorded as an asset and depreciated on a straight-line basis over the contractual term of the lease to the expected residual value.

The expected residual value and, consequently, the monthly depreciation expense may change during the term of the lease. The Group estimates expected residual values using independent data sources and internal statistical models. It also assesses the estimate of the residual value of these leases and adjusts the depreciation rate in line with the change in the expected value of the asset at the end of the lease.

Grupo Santander periodically assesses its investment in operating leases for impairment in certain circumstances, such as a systemic and material decrease in the values of used vehicles. If assets leased out under operating leases are deemed to be impaired, impairment is measured as the amount by which the carrying amount of the assets exceeds the fair value as estimated by discounted cash flows.

Of the 14,753 EUR million that the Group had assigned to operating leases at 31 December 2025 (18,576 EUR and 19,518 EUR at 31 December 2024 and 2023, respectively), EUR 7,227 million (EUR 11,336 and EUR 12,525 at 31 December 2024 and 2023, respectively) relate to vehicles of Santander US Auto's business. The variable lease payments of various items of this business are not significant.

In addition, the maturity analysis of the assets leased out under operating leases from Santander US Auto, is as follows:

EUR million

Maturity Analysis	2025
2025	3,988
2026	4,228
2027	1,332
2028	330

d) Tangible assets - Investment property

The fair value of investment property at 31 December 2025, 2024, 2023 amounted to EUR 1,194, 1,041 and 1,163 million, respectively. A comparison of the fair value of investment property at 31 December 2025, 2024 and 2023 with the net book value shows gross unrealised gains of EUR 172, 166 and 207 million, respectively, attributed completely to the group.

The rental income earned from investment property and the direct costs related both to investment properties that generated rental income in 2025, 2024 and 2023 and to investment properties that did not generate rental income in those years are not material in the context of the consolidated financial statements.

17. Intangible assets – Goodwill

The detail of goodwill, based on the cash-generating units giving rise thereto, is as follows:

EUR million

	2025	2024	2023
Banco Santander (Brasil)	3,031	3,079	3,679
SAM Investment Holdings Limited	1,444	1,444	1,444
Santander Consumer Germany	1,304	1,304	1,304
Santander Portugal	1,040	1,040	1,040
Santander España	998	998	998
Santander US Auto	943	1,068	1,003
Santander Holding USA (ex. Auto)	765	865	814
Santander UK	609	641	612
Banco Santander - Chile	470	482	516
Grupo Financiero Santander (México)	463	453	523

Other companies	354	335	369
Total Goodwill	**11,958**	**13,438**	**14,017**

The changes in goodwill were as follows:

EUR million

	2025	2024	2023
Balance at beginning of year	13,438	14,017	13,741
Additions	19	30	56
Of which:			
Ebury Partners	—	—	*45*
Impairment losses	(4)	(4)	(20)
Transfer to Assets held for sale (Notes 3 y 12)	(1,176)	—	—
Exchange differences and other items	(291)	(605)	240
Balance at end of year	**11,958**	**13,438**	**14,017**

Grupo Santander has goodwill generated by cash-generating units located in non-euro currency countries (mainly Brazil, Poland, the United States, the United Kingdom, Chile, Mexico, Norway and Sweden) and, therefore, this gives rise to exchange differences on the translation to euros, at closing rates, of the amounts of goodwill denominated in foreign currencies. Accordingly, in 2025 there was a decrease of EUR 291 million (a decrease of EUR 605 million in 2024 and an increase of EUR 240 million in 2023), due to exchange differences and other items which, pursuant to current standards, were recognised with a change to 'Other comprehensive income - Items that may be reclassified to profit or loss - Exchange differences in other comprehensive income in the consolidated statement of recognised income and expense' (see note 29.d).

At least once per year (or whenever there is any indication of impairment), Grupo Santander performs an analysis of the potential impairment of its recorded goodwill with respect to its recoverable amount. The first step that must be taken in order to perform this analysis is the identification of the cash-generating units, which are the Group's smallest identifiable groups of assets that generate cash inflows that are largely independent of the cash flows of other assets or groups of assets.

The amount to be recovered of each cash-generating unit is determined taking into consideration the carrying amount (including any fair value adjustment arising on the business combination) of all the assets and liabilities of all the independent legal entities composing the cash-generating unit, together with the related goodwill.

The amount to be recovered of the cash-generating unit is compared with its recoverable amount in order to determine whether there is any impairment.

Grupo Santander assesses the existence of any indication that might be considered to be evidence of impairment of the cash-generating unit by reviewing information including the following (i) certain macroeconomic variables that might affect its investments (population data, political situation, economic situation —including banking concentration level—, among others) and (ii) various microeconomic variables comparing the investments of the Group with the financial services industry of the country in which the cash-generating unit carries on most of its business activities (balance sheet composition, total funds under management, results, efficiency ratio, capital adequacy ratio, return on equity, among others).

Regardless of whether there is any indication of impairment, every year the Group calculates the recoverable amount of each cash-generating unit to which goodwill, has been allocated and, to this end, it uses price quotations, market references (multiples), internal estimates and valuations performed by internal and external experts.

Firstly, the Group determines the recoverable amount by calculating the fair value of each cash-generating unit on the basis of the quoted price of the cash-generating units, if available.

In addition, the Group performs estimates of the recoverable amounts of certain cash-generating units by calculating their value in use using discounted cash flow projections. The main assumptions used in this calculation are (i) earnings projections based on the financial budgets approved by the Group's directors which cover between three and five year periods (unless a longer time horizon can be justified), (ii) discount rates determined as the cost of capital taking into account the risk-free rate of return plus a risk premium in line with the market and the business in which the units operate and (iii) constant growth rates used in order to extrapolate earnings in perpetuity which do not exceed the long-term average growth rate for the market in which the cash-generating unit in question operates.

The cash flow projections used by Group management to obtain the values in use are based on the financial budgets approved by both local management of the related local units and the Group's directors. The Group's budgetary estimation process is common for all the cash-generating units. The local management teams prepare their budgets using the following key assumptions:

a) Microeconomic variables of the cash-generating unit: management takes into consideration the current balance sheet structure, the product mix and the business decisions taken by local management in this regard.

b) Macroeconomic variables: growth is estimated on the basis of the changing environment, taking into consideration expected GDP growth in the unit's geographical location and forecast trends in interest and exchange rates. These data, which are based on external information sources, are provided by the Group's economic research service.

c) Past performance variables: in addition, management takes into consideration in the projection the difference (both positive and negative) between the cash-generating unit's past performance and budgets.

During 2025, the Group has recognised impairment losses of EUR 4 million of immaterial goodwill that has been recorded under the heading 'Impairment or reversal of the impairment of non-financial assets - Intangible assets' (EUR 4 million and EUR 20 million in 2024 and 2023, respectively). Goodwill is deducted from CET1 for regulatory purposes, so an impairment of goodwill has no impact on the Group's capital ratios.

Following is a detail of the main assumptions taken into account in determining the recoverable amount, at 2025 year-end, of the most significant cash-generating units which were valued using the discounted cash flow method:

	2025		
	Projected period	Discount rate[A]	Nominal perpetual growth rate
Santander UK	5 years	12.4%	2.5%
Santander US Auto	3 years	11.5%	3.0%
Santander Holding USA (ex. Auto)[B]	5 years	13.6%	3.5%
Santander Consumer Germany	5 years	9.5%	2.5%
SAM Investment Holdings, Limited	5 years	11.5%	2.5%
Santander Portugal	5 years	10.6%	2.5%

A. Post-tax discount rate.
B. Weighted information of the main assumptions of the segments to which goodwill has been allocated.

The discount and nominal perpetual growth rates taken into account in 2024 and 2023 are presented below for comparison purposes:

	Discount rate[A]		Nominal perpetual growth rate	
	2024	2023	2024	2023
Santander UK	11.8%	11.9%	2.5%	2.5%
Santander Bank Polska	12.9%	13.2%	5.0%	5.0%
Santander US Auto	12.2%	12.8%	3.0%	3.0%
Santander Holding USA (ex. Auto)[B]	13.4%	13.4%	3.5%	3.5%
Santander Consumer Germany	9.1%	9.7%	2.0%	2.3%
SAM Investment Holdings, Limited	11.6%	11.6%	2.5%	2.5%
Santander Portugal	10.2%	11.2%	2.5%	2.5%

A. Post-tax discount rate.
B. Weighted information of the main assumptions of the segments to which goodwill has been allocated.

The variations reflected in the assumptions used in 2025 are mainly a consequence of the current macroeconomic scenario, as well as the level of inflation.

Given the degree of uncertainty of the above key assumptions on which the recoverable amount of the cash-generating units is based, the Group performs a sensitivity analysis which consisted of adjusting +/- 50 basis points the discount rate, adjusting +/- 50 basis points the growth rate in perpetuity and reducing the cash flow projections by 5%. These changes in the key assumptions in isolation mean that the recoverable amount of all the cash-generating units continues to exceed their amount to be recovered and have been considered by the Group as reasonably possible changes in the business operations of the cash-generating units are not contemplated.

The recoverable amount of Banco Santander - Chile and Banco Santander (Brasil) was calculated as the fair values of the aforementioned cash-generating units obtained from the quoted market prices of their shares at year-end. This value exceeded the amount to be recovered. A significant reduction in the quoted market prices of these cash generating unit could result in an indication of impairment which in turn may lead to a goodwill impairment charge in the future.

18. Intangible assets - Other intangible assets

The detail of Intangible assets - Other intangible assets in the consolidated balance sheets and of the changes therein in 2025, 2024, and 2023 is as follows:

EUR million

c) Notes and other securities

The notes of the Group (see Note 22.a) were issued basically by Santander Consumer Finance, S.A., Santander UK plc, Banco Santander (México), S.A. Institución de Banca Múltiple, Grupo Financiero Santander México, Banco Santander, S.A., Santander Consumer Bank AG, Banque Stellantis France, Banco Santander - Chile and Banco Santander S.A. - Uruguay.

d) Guarantees

Set forth below is information on the liabilities secured by assets:

EUR million

	2025	2024	2023
Asset-backed securities	55,031	49,723	37,717
Of which, mortgage-backed securities	*5,961*	*4,377*	*3,019*
Other mortgage securities	51,438	50,141	49,478
Of which: mortgage-backed bonds	*22,624*	*22,631*	*24,619*
Covered bonds (non mortgage and export financing)	1,728	995	764
	108,197	**100,859**	**87,959**

The main characteristics of the assets securing the aforementioned financial liabilities are as follows:

1. Asset-backed securities

a. Mortgage-backed securities- these securities are secured by mortgage assets (see Note 10.e) with average maturities of more than ten years that must: be a first mortgage for acquisition of principal or second residence, be current in payments, have a loan-to-value ratio below 80% and have a liability insurance policy in force covering at least the appraisal value. The value of the financial liabilities broken down in the foregoing table is lower than the balance of the assets securing them —securitised assets retained on the balance sheet— mainly because the Group repurchases a portion of the bonds issued, and in such cases they are not recognised on the liability side of the consolidated balance sheet.

b. Other asset - backed securities: includes asset-backed securities, notes issued by securitization funds collateralized mainly by mortgage loans that do not meet the above requirements and other loans (mainly personal loans with an average maturity of five years and loans to SMEs with average maturities of seven years) and private issues of Santander Consumer USA Holdings Inc. collateralized by vehicles assigned under operating leases.

2. Other mortgage securities include mainly:

a. Mortgage-backed bonds with average maturities of more than ten years that are secured by a portfolio of mortgage loans and credits (included in secured loans —see note 10.b—) which must: not be classified as of procedural stage; have available appraisals performed by specialised entities; have a loan-to-value (LTV) ratio below 80% in the case of home loans and below 60% for loans for other assets and have sufficient liability insurance.

b. Other debt securities issued as part of the Group's liquidity strategy in the UK, mainly covered bonds in the UK secured by mortgage loans and other assets.

Grupo Santander has a balance corresponding to mortgage bonds at 31 December 2025 of EUR 22,624 million (all of them issued in euros), which correspond to issues of Banco Santander, S.A. (with an outstanding face value of EUR 22,360 million).

The issuing entity may repay the mortgage bonds early, if this has been expressly established in the final conditions of the issue in question and in the conditions established there.

None of the mortgage bonds issued by Banco Santander have replacement assets involved.

During 2023, the Bank of Spain has published Circular 1/2023 of 4 February , which modifies Circular 4/2017, repealing the breakdown in the annual accounts and the information related to internal accounting development and management control.

Additionally, Banco Santander, S.A. issues internationalization certificates, which are securities whose capital and interest are guaranteed by loans and credits that are linked to the financing of export contracts or the internationalization of companies.

The fair value of the guarantees received by the Group (financial and non-financial assets) which the Group is authorised to sell or pledge even if the owner of the guarantee has not defaulted is scantly material taking into account the Consolidated financial statements as a whole.

23. Subordinated liabilities

a) Breakdown

The detail, by currency of issue, of Subordinated liabilities, deposits and marketable debt securities, in the consolidated balance sheets is as follows:

	EUR million			2025	
Currency of issue	2025	2024	2023	Outstanding issue amount in foreign currency (million)	Annual interest rate (%)
Euro	11,402	14,999	13,684	11,402	4.55%
US dollar	9,750	13,425	11,300	11,462	6.53%
Brazilian real	4,354	3,600	2,518	28,117	16.30%
Pound sterling	1,347	1,409	1,353	1,176	4.28%
Other currencies	2,434	2,380	2,057		
Balance at end of year	**29,287**	**35,813**	**30,912**		

Note 51 contains a detail of the residual maturity periods of subordinated liabilities at each year-end.

b) Changes

The movement in the balance of subordinated liabilities in the last three years were as follows:

EUR million

	2025	2024	2023
Balance at beginning of year	35,813	30,912	25,926
Net inclusion of entities in the Group	—	—	(40)
Issuances[A]	2,287	7,001	7,007
Of which:			
Banco Santander, S.A.	*1,862*	*5,625*	*5,610*
Banco Santander (Brasil) S.A.	*375*	*1,338*	*1,112*
Banque Stellantis France	*—*	*25*	*150*
Redemptions and repurchases[A]	(7,110)	(2,572)	(1,781)
Of which:			
Banco Santander, S.A.	*(6,754)*	*(2,433)*	*(1,000)*

Santander UK plc	*—*	*—*	*(702)*
Banque Stellantis France	*—*	*—*	*(78)*
Exchange differences and other movements	(1,703)	472	(200)
Balance at end of year	**29,287**	**35,813**	**30,912**

A. The balance relating to issuances, redemptions and repurchases (EUR 4,823 million), together with the interest paid in remuneration of these issuances including PPCC (EUR 1,560 million), is included in the cash flow from financing activities.

c) Other disclosures

This caption includes contingent convertible or redeemable preferred participations, as well as other subordinated financial instruments issued by consolidated companies, which do not qualify as equity (preferred shares).

Preferred shares do not have voting rights and are non-cumulative. They have been subscribed by third parties outside the Group, and except for the issuances of Santander UK plc, the rest are redeemable by decision of the issuer, according to the terms of each issue.

Banco Santander's contingently convertible preferred participations are subordinated debentures and rank after common creditors and any other subordinated credit that by law and/or by their terms, to the extent permitted by Spanish law, ranks higher than the contingently convertible preferred participations. Their remuneration is conditioned to the obtainment of sufficient distributable profits, and to the limitations imposed by the regulations on shareholders' equity, and they have no voting rights. The other issues of Banco Santander, S.A. mentioned in this caption are also subordinated debentures and, for credit ranking purposes, they rank behind all the common creditors of the issuing entities and ahead of any other subordinated credit that ranks pari passu with the Bank's contingently convertible preferred participations.

The main issuances of subordinated debt securities, broken down by company, are detailed below:

Issuances by Banco Santander, S.A.

On 1 December 2025, Banco Santander, S.A. has proceeded to redeem in advance all the issued subordinated obligations: 'EUR 60,000,000', with original maturity date on December 2026 and with ISIN code XS1492669509.

On 19 November 2025, Banco Santander, S.A. carried out an issuance for an amount of USD 1,500 million with ISIN code US05971KAA79.

On 24 September 2025, Banco Santander, S.A. proceeded to redeem in advance all the issued subordinated obligations: 'EUR 50,000,000 Fixed/Floating', with original maturity date on March 2029 and with ISIN code XS1585005314.

On 5 August 2025, Banco Santander, S.A. proceeded to redeem in advance the subordinated debt issuances with ISIN code XS1384064587, for a nominal amount of EUR 1,500 million, with a coupon of 3.250% and original maturity date on April 2026 and with ISIN code XS1548444816, for a nominal amount of EUR 1,000 million, with a coupon of 3.125% and original maturity date on January 2027.

On 2 July 2025, Banco Santander, S.A. proceeded to repurchase for their subsequent redeem in advance the contingently convertible preferred shares with ISIN code XS2102912966, for a total nominal amount of EUR 466.6 million and which are traded on the market of the Irish Stock Exchange 'Global Exchange Market', leaving the amount in circulation at EUR 1,033.4 million.

On 2 July 2025, Banco Santander, S.A. carried out a placement of preference shares contingently convertible into newly issued ordinary shares of the Bank (PPCC), for a nominal amount of EUR 1,500 million with ISIN code XS3100756637 . The Issuance has been made at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, has been set at 6% quarterly for the first six years, being reviewed every five years thereafter by applying a margin of 381.9 basis points over the five-year mid-swap rate.

On 18 March 2025, Banco Santander, S.A. carried out an issuance for an amount of EUR 1,500 million with ISIN code XS1201001572.

On 17 February 2025, Banco Santander, S.A. prepaid EUR 600.8 million out of a total of EUR 1,500 million of the transaction with ISIN XS138406464587 following the tender announcement launched on 6 February 2025.

On 17 February 2025, Banco Santander, S.A. prepaid EUR 563.6 million euros out of a total of EUR 1,000 million of the transaction with ISIN XS1548444816 following the tender announcement launched on 6 February 2025.

On 1 August 2024, Banco Santander, S.A. carried out a placement of preference shares contingently convertible into newly issued ordinary shares of the Bank (PPCC), for a nominal amount of USD 1,500 million (valued at EUR 1,356 million). The issuance has been made at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, has been set at 8% annually for the first ten years, being reviewed every five years thereafter by applying a margin of 391.1 basis points over the 5-year mid-swap rate.

On 20 May 2024, Banco Santander, S.A., proceeded to partially redeem in advance the contingently convertible preferred shares with ISIN code XS1793250041, for a total nominal amount of EUR 1,312 million and which are traded on the market of the Irish Stock Exchange 'Global Exchange Market' (the 'PPCC'), leaving the amount in circulation at EUR 187.6 million.

On 20 May 2024, Banco Santander, S.A. carried out a placement of preference shares contingently convertible into newly issued ordinary shares of the Bank (PPCC), for a nominal amount of EUR 1,500 million. The Issuance has been made at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, has been set at 7% annually for the first six years, being reviewed every five years thereafter by applying a margin of 443.2 basis points over the 5-year mid-swap rate.

On 14 March 2024, Banco Santander, S.A. issued subordinated obligations for an amount of USD 1,250 million (valued at EUR 1,158 million) for a term of 10 years. The issuance was made at par and the issue coupon was set at 6.35% per year, payable bi-annually.

On 8 February 2024, Banco Santander, S.A., proceeded to prepay all of the contingently convertible Tier 1 preferred shares with ISIN code XS1951093894, for a total nominal amount of USD 1,200 million (valued at EUR 1,110 million) and that were traded on the Irish Stock Exchange 'Global Exchange Market' (the 'PPCC').

On 22 January 2024, Banco Santander, S.A. issued subordinated bonds for an amount of EUR 1,250 million for a term of 10 years and 3 months. The issue was carried out at 99.74% and the issue coupon was set at 5% per year for the first 5 years and 3 months, with an amortization option in April 2029, reviewing the coupon, in case of non-amortization, at a fixed rate equivalent to a margin of 250 points plus the 5-year Euro swap rate.

On 29 December 2023, Banco Santander, S.A., proceeded to prepay all the Tier 1 Contingently Convertible Preferred Securities with ISIN code XS1692931121 for a total nominal amount of EUR 1,000 million and which were traded on the Irish Stock Market 'Global Exchange Market' (the 'PPCC').

On 21 November 2023, Banco Santander, S.A., carried out a placement of two series of contingently convertible preferred shares into newly issued ordinary shares of the Bank, for a total nominal amount of USD 1,150 million (EUR 1,054 million at the exchange rate on the day of issue) and USD 1,350 million (EUR 1,235 million at the exchange rate on the day of issue), respectively.

The issue was carried out at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, was set (i) for the first Series at 9.625% annually for the first five years and six months, being reviewed every five years thereafter by applying a margin of 530.6 basis points on the five-year UST rate (5-year UST), and (ii) for the second Series at 9.625% annually for the first ten years, being reviewed thereafter every five years, applying a margin of 529.8 basis points on the five-year UST rate.

On 8 August 2023, Banco Santander, S.A. carried out an issuance of subordinated obligations for an amount of 2,000 million dollars (1,821 million euros at the exchange rate on the day of issuance). The issue was carried out at par coupon was set at 6.921% per year, payable semiannually during the 10-year life of the operation.

On 23 May 2023, Banco Santander, S.A. issued subordinated bonds for an amount of 1,500 million euros for a term of 10 years and 3 months. The issue was carried at 99.739% and the coupon of the issue was set at 5.75% annually for the first 5 years and 3 months, with the option of amortization in August 2028, revising the coupon, in case of non-amortization, at a margin of 285 points plus the Euro Swap type 5 years.

On 25 April 2022, Banco Santander, S.A. proceeded to prepay all the Tier 1 Contingently Convertible Preferred Securities with ISIN code XS1602466424 and common code 160246642 in circulation, for a total nominal amount of EUR 750 million and which were traded on the Irish Stock Market 'Global Exchange Market' (the 'PPCC').

On 22 November 2021, Banco Santander, S.A. issued subordinated debentures for a term of eleven years, with a redemption option on the tenth anniversary of the issue date, in the amount of USD 1,000 million (EUR 1,007 million at the exchange rate on the day of issue). The issue bears interest at an annual rate of 3.225%, payable semi-annually, for the first ten years. This issue has an early redemption option in the tenth year from the issue date and if the redemption is not executed in the tenth year, the coupon is repriced at a margin of 160 points over the one-year US government bond.

On 4 October 2021, Banco Santander, S.A. issued subordinated debentures for a term of eleven years, with a redemption option on the sixth anniversary of the issue date, amounting to GBP 850 million (EUR 887 million at the exchange rate on the day of issue). The issue bears interest at an annual rate of 2.25%, payable annually for the first six years (then repricing at a margin of 165 points over the 5-year UK government bond).

On 21 September 2021, Banco Santander, S.A. carried out a placement of preferential shares contingently convertible into newly issued ordinary shares of the Bank ('PPCC') for a nominal amount of EUR 1,000 million (issue placed on the market EUR 997 million). The issuance was carried out at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, was set at 3.625% per year for the first eight years, being reviewed every five years applying a margin of 376 basis points over the 5-year Mid-Swap Rate.

On 12 May 2021, Banco Santander, S.A. placed the issue of preference shares contingently convertible into newly issued ordinary shares of the Bank, previously announced, for a total nominal amount of EUR 1,578 million, issued in a Series in Dollars of USD 1,000 million (EUR 828 million at the exchange rate on the day of issue) and a Series in Euros for an amount of EUR 750 million. The issuance was carried out at par and the remuneration of the PPCC, whose payment is subject to certain conditions and is also discretionary, was set (i) for the Series in Dollars at 4.750% per annum for the first six years, being revised every five years applying a margin of 375.3 basis points over the 5-year UST rate and (ii) for the Series in Euros by 4.125% per annum for the first seven years, being revised every five years applying a margin of 431.1 basis points over the applicable 5-year euro mid-swap.

On 3 December 2020, Banco Santander, S.A. issued subordinated debentures with a ten-year term of USD 1,500 million (EUR 1,222 million at the date of issue). The issue bears interest at an annual rate of 2.749%, payable semiannually.

On 22 October 2020, it carried out a ten-year subordinated debenture issue for an amount of EUR 1,000 million. The issue bears interest at an annual rate of 1.625%, payable annually.

On 14 January 2020, it carried out a placement of contingently convertible preferred participations into newly issued ordinary shares of the Bank (the 'PPCCs'), excluding the pre-emptive subscription rights of its shareholders and for a nominal amount of EUR 1,500 million (the 'Issuance' and the 'PPCCs'). The Issuance was made at par and the remuneration of the PPCCs, the payment of which is subject to certain conditions and is also discretionary, was set at 4.375% per annum for the first six years, revised every five years thereafter by applying a margin of 453.4 basis points over the 5-year mid-Swap Rate (5-year mid-Swap Rate).

On 8 February 2018, a ten-year subordinated debenture issuance of EUR 1,250 million was carried out. The issue accrues annual interest of 2.125% payable annually.

Issuances by Banco Santander (Brasil) S.A.

In early December 2025, Brazil closed a Tier 2 subordinated debt issuance in its local market with a 10-year term and the first call date at 5 years, for an amount of BRL 2.4 billion. The issuance price was 10y CDI + 65 bps.

At September 2024, Brazil issued AT1 Financial Notes (PerpNC5) in its local market for an amount of BRL 7,600 million at CDI + 140% (equivalent to UST +222 bps).

At the beginning of October 2023, Banco Santander (Brasil) S.A. carried out an issuance of Subordinated Financial Bills (TIER II) in its local market for a 10-year term, with a repurchase option as of the fifth anniversary of the issuance date, in the amount of BRL 6,000 million. The issue price was CDI 2% per annum, payable at maturity.

Issuance by Santander Bank Polska S.A.

At 28 November 2024, Santander Bank Polska S.A proceeded to repay subordinated debt ISIN XS0531310182 for EUR 100 million. The debt was originally fully subscribed by the EBRD at 5 August 2010.

The accrued interests from the subordinated liabilities during 2025 amounted to EUR 1,486 million (EUR 1,357 million and EUR 1,010 million during 2024 and 2023, respectively).

In addition, interests from the PPCC and PPCA during 2025 amounted to EUR 622 million (EUR 620 million and EUR 492 million in 2024 and 2023, respectively).

24. Other financial liabilities

The detail of Other financial liabilities in the consolidated balance sheets is as follows:

EUR million

	2025	2024	2023
Trade payables	1,452	1,452	1,783
Clearing houses	794	776	1,269
Tax collection accounts:			
Public Institutions	*6,271*	*6,156*	*4,986*
Factoring accounts payable	274	226	272
Unsettled financial transactions	3,860	7,421	6,412
Lease liabilities (note 2.k)	1,822	2,202	2,400
Other financial liabilities	21,645	21,683	23,065
	36,118	**39,916**	**40,187**

Note 51 contains a detail of the residual maturity periods of other financial liabilities at each year-end.

Lease liabilities

The cash outflow of leases in 2025 was EUR 510 million (EUR 684 million and EUR 738 in 2024 and 2023, respectively).

The analysis of the maturities of lease liabilities at 31 December 2025, 2024 and 2023 is shown below:

EUR million

	2025	2024	2023
Maturity Analysis - Discounted payments			
Within 1 year	466	526	586
Between 1 and 3 years	619	868	918
Between 3 and 5 years	315	405	480
Later than 5 years	422	403	416
Total discounted payments at the end of the year	**1,822**	**2,202**	**2,400**

During 2025, 2024 and 2023 there were no significant variable lease payments not included in the valuation of lease liabilities.

25. Provisions

a) Breakdown

The detail of Provisions in the consolidated balance sheets is as follows:

EUR million

	2025	2024	2023
Provision for pensions and other obligations post-employments	1,656	1,731	2,225
Other long term employee benefits	993	915	880
Provisions for taxes and other legal contingencies	2,989	2,717	2,715

c) Provision for pensions and other obligations post –employments and Other long term employee benefits

The detail of Provisions for pensions and similar obligations is as follows:

EUR million

	2025	2024	2023
Provisions for post-employment plans - Spanish entities	602	674	770
Provisions for other similar obligations - Spanish entities	927	852	817
Of which pre-retirements	*916*	*839*	*805*
Provisions for post-employment plans - United Kingdom	26	28	76
Provisions for post-employment plans - Other subsidiaries	1,028	1,029	1,379
Provisions for other similar obligations - Other subsidiaries	66	63	63
Provision for pensions and other obligations post -employments and Other long term employee benefits	**2,649**	**2,646**	**3,105**
Of which defined benefits	*2,637*	*2,638*	*3,097*

i. Spanish entities - Post-employment plans and other similar obligations

At 31 December 2025, 2024 and 2023, the Spanish entities had post-employment benefit obligations under defined contribution and defined benefit plans. In addition, in various years some of the consolidated entities offered certain of their employees the possibility of taking pre-retirement and, therefore, provisions are recognised each year for the obligations to employees taking pre-retirement -in terms of salaries and other employee benefit costs- from the date of their pre-retirement to the agreed end date.

In 2023, the provisions made to cover the commitments with 502 employees covered by early retirement and incentivized dismissals plan amounted to EUR 160 million.

In 2024, the provisions made to cover the commitments with 826 employees covered by early retirements and incentivized dismissals amounted to EUR 303 million.

In 2025, the provisions made to cover the commitments with 1,238 employees covered by early retirements and incentivized dismissals amounted to EUR 389 million.

The expenses incurred by the Spanish companies in 2025, 2024 and 2023 in respect of contributions to defined contribution plans amounted to EUR 130 million, EUR 126 million and EUR 116 million, respectively.

The amount of the defined benefit obligations was determined on the basis of the work performed by independent actuaries using the following actuarial techniques:

1. Valuation method: projected unit credit method, which sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately.

2. Actuarial assumptions used: unbiased and mutually compatible. Specifically, the most significant actuarial assumptions used in the calculations were as follows:

	Post-employment plans			Other similar obligations		
	2025	2024	2023	2025	2024	2023
Annual discount rate	3.75%	3.00%	3.35%	3.75%	3.00%	3.35%
Mortality tables	PER2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1
Cumulative annual CPI growth	2.00%	2.00%	2.00%	2.00%	2.00%	2.00%
Annual salary increase rate	1.25%[A]	1.25%[A]	1.25%[A]	N/A	N/A	N/A
Annual social security pension increase rate	2.12%	2.12%	2.12%	N/A	N/A	N/A
Annual benefit increase rate	N/A	N/A	N/A	0%	0%	0 %

A. Corresponds to the group's defined-benefit obligations.

The discount rate used for the flows was determined by reference to high-quality corporate bonds (at least AA in euros) matching the durations of the commitments. From the bond portfolio considered, callable, putable and sinkable bonds, which could distort the rates, are excluded.

Any changes in the main assumptions could affect the calculation of the obligations. At 31 December 2025, if the discount rate used had been decreased or increased by 50 basis points (bp), there would have been an increase or decrease in the present value of the post-employment obligations of 4.02% (-50 bp) to -3.75% (+50 bp),respectively, and an increase or decrease in the present value of the long-term obligations of 1.15% (-50 bp) to -1.15% (+50 bp), respectively.

These changes would be offset in part by increases or decreases in the fair value of the assets and insurance contracts linked to pensions.

3. The estimated retirement age of each employee is the first at which the employee is entitled to retire or the agreed-upon age, as appropriate.

The fair value of insurance contracts was determined as the present value of the related payment obligations, taking into account the following assumptions:

	Post-employment plans			Other similar obligations		
	2025	2024	2023	2025	2024	2023
Expected rate of return on plan assets	3.75%	3.00%	3.35%	3.75%	3.00%	3.35%
Expected rate of return on reimbursement rights	3.75%	3.00%	3.35%	N/A	N/A	N/A

The funding status of the defined benefit obligations in 2025 and the two preceding years is as follows:

EUR million

	Post-employment plans			Other similar obligations		
	2025	2024	2023	2025	2024	2023
Present value of the obligations						
To current employees	34	49	51	—	—	—
Vested obligations to retired employees	1,610	1,850	1,936	—	—	—
To pre-retirees employees		—	—	919	844	812
Long-service bonuses and other benefits		—	—	11	13	12
	1,644	**1,899**	**1,987**	**930**	**857**	**824**
Less - Fair value of plan assets	1,058	1,234	1,235	3	5	7
Provisions - Provisions for pensions	**586**	**665**	**752**	**927**	**852**	**817**
Of which:

In view of the conversion of the defined-benefit obligations to defined-contribution obligations, the Group will not make material current contributions in Spain in 2026 to fund its defined-benefit pension obligations.

The plan assets and the insurance contracts linked to pensions are instrumented mainly through insurance policies.

The following table shows the estimated benefits payable at 31 December 2025 for the next ten years:

EUR million	
2026	461
2027	391
2028	331
2029	274
2030	223
2031 to 2035	672

ii. United Kingdom

At the end of each of the last three years, the businesses in the United Kingdom had post-employment benefit obligations under defined contribution and defined benefit plans. The expenses incurred in respect of contributions to defined contribution plans amounted to EUR 92 million in 2025 (EUR 98 million in 2024 and EUR 87 million in 2023).

The amount of the defined benefit obligations was determined on the basis of the work performed by independent actuaries using the following actuarial techniques:

1. Valuation method: projected unit credit method, which sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately.

2. Actuarial assumptions used: unbiased and mutually compatible. Specifically, the most significant actuarial assumptions used in the calculations were as follows:

	2025	2024	2023
Annual discount rate	5.58%	5.54%	4.63%
Mortality tables	'S4 Light' tables weighted 105% males/101% females and CMI_2024 projection [LTR=1.25%, A=0.25%, H=1] with both Age-Period and Cohort convergence periods equal to core values except increased to 20 years for ages 80 to 100 and then tapering down to nil by age 120	The S3 Middle tables weighted at 84% of the CMI_2023 projection with an initial addition of 0.25%, smoothing parameter 7 and improving 1.25%.	The S3 Middle tables weighted at 84% of the CMI_2022 projection with an initial addition of 0.25%, smoothing parameter 7 and improving 1.25%.
Cumulative annual CPI growth	2.9%	3.11%	3.02%
Annual salary increase rate	1.00%	1.00%	1.00%
Annual pension increase rate	2.78%	3.04%	2.96%

The discount rate used for the flows was determined by reference to high-quality corporate bonds (at least AA in pounds sterling) that coincide with the terms of the obligations.

Any changes in the main assumptions could affect the calculation of the obligations. At 31 December 2025, if the discount rate used had been decreased or increased by 50 basis points, there would have been an increase or decrease in the present value of the obligations of 5.82% (-50 bp) and -5.28% (+50 bp), respectively. If the inflation assumption had been increased or decreased by 50 basis points, there would have been an increase or decrease in the present value of the obligations of 4.23% (+50 bp) and -4.14% (-50 bp), respectively. These changes would be offset in part by increases or decreases in the fair value of the assets.

The funding status of the defined benefit obligations in 2025 and the two preceding years is as follows:

EUR million	2025	2024	2023
Present value of the obligations	8,164	8,898	9,451
Less-			
Fair value of plan assets	8,740	9,400	10,208
Provisions - Provisions for pensions	**(576)**	**(502)**	**(757)**
Of which:			
Internal provisions for pensions	*25*	*28*	*76*
Net assets for pensions	*(601)*	*(530)*	*(833)*

The amounts recognised in the consolidated income statements in relation to the aforementioned defined benefit obligations are as follows:

EUR million

	2025	2024	2023
Current service cost	9	13	14
Interest cost (net)	(31)	(40)	(62)
Provisions or reversal of provisions, net			
Cost of services provided	—	—	—
Others	—	—	—
	(22)	**(27)**	**(48)**

In addition, in 2025 'Other comprehensive income – Items not reclassified to profit or loss – Actuarial gains or (-) losses on defined benefit pension plans has increased by EUR 117 million with respect to defined benefit obligations (increase of EUR 475 and of EUR 687 million in 2024 and 2023, respectively).

The changes in the present value of the accrued defined benefit obligations were as follows:

EUR million

	2025	2024	2023
Present value of the obligations at beginning of year	8,898	9,451	8,982
Net incorporation of companies into the Group	—	—	(28)
Current service cost	9	13	14
Interest cost	465	438	436
Benefits paid	(469)	(465)	(428)
Benefits paid by settlements	—	—	(9)
Contributions made by employees	3	7	6
Past service cost	—	—	—
Actuarial (gains)/losses	(304)	(965)	281
Demographic actuarial (gains)/losses	*(91)*	*(133)*	*(59)*
Financial actuarial (gains)/losses	*(213)*	*(832)*	*340*
Exchange differences and other items	(438)	419	197
Present value of the obligations at end of year	**8,164**	**8,898**	**9,451**

The changes in the fair value of the plan assets were as follows:

EUR million

	2025	2024	2023
Fair value of plan assets at beginning of year	9,400	10,208	10,152
Net incorporation of companies into the Group	—	—	(41)
Expected return on plan assets	496	478	498
Benefits paid	(469)	(465)	(434)
Contributions	203	182	225
Actuarial gains/(losses)	(421)	(1,440)	(406)
Exchange differences and other items	(469)	437	214
Fair value of plan assets at end of year	**8,740**	**9,400**	**10,208**

In 2026 the Group expects to make current contributions to fund these obligations for amounts similar to those made in 2025.

The main categories of plan assets as a percentage of total plan assets are as follows:

	2025	2024	2023
Equity instruments	—	—	—
Debt instruments	67%	66%	62%
Properties	11%	14%	12%
Other	22%	20%	26%

The following table shows the estimated benefits payable at 31 December 2025 for the next ten years:

EUR million

2026	576
2027	485
2028	503
2029	527
2030	545
2031 to 2035	2,801

iii. Other foreign subsidiaries

Certain of the consolidated foreign entities have acquired commitments to their employees similar to post-employment benefits.

At 31 December 2025, 2024 and 2023, these entities had defined-contribution and defined-benefit post-employment benefit obligations. The expenses incurred in respect of contributions to defined contribution plans amounted to EUR 110 million in 2025 (EUR 133 million at 31 December 2024 and EUR 107 million at 31 December 2023).

The actuarial assumptions used by these entities (discount rates, mortality tables and cumulative annual CPI growth) are consistent with the economic and social conditions prevailing in the countries in which they are located.

Specifically, the discount rate used for the flows was determined by reference to high-quality corporate bonds, except in the case of Brazil where there is no extensive corporate bond market and, accordingly the discount rate was determined by reference to the series B bonds issued by the Brazilian National Treasury Secretariat for a term coinciding with that of the obligations. In Brazil the discount rate used was between 10.52% and 10.65%, the CPI 3.00% and the mortality table the AT-2000, AT-2000 Basic y AT-2000 S10.

Any changes in the main assumptions could affect the calculation of the obligations. At 31 December 2025, if the discount rate used had been decreased or increased by 50 basis points, there would have been an increase or decrease in the present value of the obligations of 3.92% (-50 bp) and -3.53% (+50 bp), respectively. These changes would be offset in part by increases or decreases in the fair value of the assets.

The funding status of the obligations similar to post-employment benefits and other long-term benefits in 2025 and the two preceding years is as follows:

EUR million

	2025	Of which business in Brazil	2024	2023
Present value of the obligations	6,886	*4,569*	6,903	8,485
Less-				
Of which: with a charge to the participants	*152*	*152*	*157*	*114*

Fair value of plan assets at end of year	**6,284**	**6,502**	**7,787**

In 2026 the Group expects to make contributions to fund these obligations for amounts similar to those made in 2025.

The main categories of plan assets as a percentage of total plan assets are as follows:

	2025	2024	2023
Equity instruments	14%	13%	11%
Debt instruments	79%	79%	83%
Properties	1%	1%	1%
Other	6%	7%	5%

The following table shows the estimated benefits payable at 31 December 2025 for the next ten years:

EUR million	
2026	746
2027	736
2028	740
2029	744
2030	747
2031 to 2035	3,790

d) Provisions for taxes and other legal contingencies and Other provisions

'Provisions - Provisions for taxes and other legal contingencies' and 'Provisions - Other provisions', which include, inter alia, provisions for restructuring costs and tax-related and non-tax-related proceedings, were estimated using prudent calculation procedures in keeping with the uncertainty inherent to the obligations covered. The definitive date of the outflow of resources embodying economic benefits for the Group depends on each obligation. In certain cases, these obligations have no fixed settlement period and, in other cases, depend on the legal proceedings in progress.

The detail, by geographical area, of Provisions for taxes and other legal contingencies and Other provisions is as follows:

EUR million

	2025	2024	2023
Recognised by Spanish companies	2,033	1,924	1,921
Recognised by other EU companies	310	694	433
Recognised by other companies	2,650	2,433	2,280
Of which:			
Brazil	*1,530*	*1,445*	*1,618*
United Kingdom [A]	*736*	*654*	*373*
	4,993	**5,051**	**4,634**

A. Of which GBP 461 million (EUR 528.1 million) correspond to the Financial Conduct Authority (FCA) review of the Vehicle Finance Market as detailed in note 25.e.ii.

Set forth below is the detail, by type of provision, of the balance at 31 December 2025, 2024 and 2023 of Provisions for taxes and other legal contingencies and Other provisions.

The types of provision were determined by grouping together items of a similar nature:

EUR million

	2025	2024	2023
Provisions for taxes	720	727	745
Provisions for employment-related proceedings (Brazil)	594	458	611
Provisions for other legal proceedings	1,675	1,532	1,359
Provision for customer remediation	826	1,001	454
Provision for restructuring	279	589	596
Other	899	744	869
	4,993	**5,051**	**4,634**

Relevant information is set forth below in relation to each type of provision shown in the preceding table.

The provisions for taxes include provisions for tax-related proceedings.

The provisions for employment-related proceedings (Brazil) relate to claims filed by trade unions, associations, the prosecutor's office and ex-employees claiming employment rights to which, in their view, they are entitled, particularly the payment of overtime and other employment rights, including litigation concerning retirement benefits. The number and nature of these proceedings, which are common for banks in Brazil, justify the classification of these provisions in a separate category or as a separate type from the rest. The Group calculates the provisions associated with these claims in accordance with past experience of payments made in relation to claims for similar items. When claims do not fall within these categories, a case-by-case assessment is performed and the amount of the provision is calculated in accordance with the status of each proceeding and the risk assessment carried out by the legal advisers.

The provisions for other legal proceedings include provisions for court, arbitration or administrative proceedings (other than those included in other categories or types of provisions disclosed separately) brought against Grupo Santander companies.

The provisions for customer remediation include mainly the estimated cost of payments to remedy errors relating to the sale of certain products in the UK, the CHF mortgage portfolio of Poland, as well as the estimated amount related to the floor clauses of Banco Popular Español, S.A.U in Spain. To calculate the provision for customer remediation, the best estimate of the provision made by management is used, which is based on the estimated number of claims to be received and, of these, the number that will be accepted, as well as the estimated average payment per case.

The provisions for restructuring include only the costs arising from restructuring processes carried out by the various Group companies.

Lastly, the Other heading contains very atomized and individually insignificant provisions, such as the provisions to cover the operational risk of the different offices of the Group.

Qualitative information on the main litigation is provided in Note 25 e to the consolidated financial statements.

The Group's general policy is to record provisions for tax and legal proceedings in which the Group assesses the chances of loss to be probable and the Group does not record provisions when the chances of loss are possible or remote. Grupo Santander determines the amounts to be provided for as its best estimate of the expenditure required to settle the corresponding claim based, among other factors, on a case-by-case analysis of the facts and the legal opinion of internal and external counsel or by considering the historical average amount of the loss incurred in claims of the same nature. The definitive date of the outflow of resources embodying economic benefits for the Group depends on each obligation. In certain cases, the obligations do not have a fixed settlement term and, in others, they depend on legal proceedings in progress.

Regarding their variations in fiscal year 2025, in provisions for labour processes and others of a legal nature, EUR 524 million and EUR 185 million were recorded in Brazil in 2025, making payments of EUR 384 million and EUR 159 million, respectively.

e) Litigation and other matters

i. Tax-related litigation

At 31 December 2025 the main tax-related proceedings concerning the Group were as follows:

- Legal actions filed by Banco Santander (Brasil) S.A. and other Group entities to avoid the application of Law 9.718/98, which modifies the basis to calculate Programa de Integraçao Social (PIS) and Contribuição para Financiamento da Seguridade Social (COFINS), extending it to all the entities income, and not only to the income from the provision of services. In relation of Banco Santander (Brasil) S.A. process, in 2015 the Federal Supreme Court (FSC) admitted the extraordinary appeal filed by the Federal Union regarding PIS, and dismissed the extraordinary appeal lodged by the Brazilian Public Prosecutor's Office regarding COFINS contribution, confirming the decision of Federal Regional Court favourable to Banco Santander (Brasil) S.A. of August 2007. The Federal Supreme Court also admitted the appeals related to the other Group entities both for PIS and COFINS. On June 13, 2023, the Federal Supreme Court ruled unfavorably 2 cases through General Repercussion (Theme 372), including Banco Santander (Brasil) S.A. case. The Bank has filed a new appeal, considering the possible loss as a contingent liability. The cases of the other Group entities are no longer susceptible of appeal and a provision has been recognized for the amount of the estimated loss.

- Banco Santander (Brasil) S.A. and other Group companies in Brazil have appealed against the assessments issued by the Brazilian tax authorities questioning the deduction of loan losses in their income tax returns (Imposto sobre a Renda das Pessoas Jurídicas - IRPJ - and Contribuçao Social sobre o Lucro Liquido - CSLL-) in relation to different administrative processes of various years on the ground that the requirements under the applicable legislation were not met. The appeals, which involves several cases, are pending decision in different administrative and judicial instances. No provision was recognised in connection with the amount considered to be a contingent liability.

- Banco Santander (Brasil) S.A. and other Group companies in Brazil are involved in administrative and legal proceedings against several municipalities that demand payment of the Service Tax on certain items of income from transactions not classified as provisions of services. There are several cases in different judicial instances. A provision was recognised in connection with the amount of the estimated loss.

- Banco Santander (Brasil) S.A. and other Group companies in Brazil are involved in administrative and legal proceedings against the tax authorities in connection with the taxation for social security purposes of certain items which are not considered to be employee remuneration. There are several cases in different judicial instances. A provision was recognised in connection with the amount of the estimated loss.

- In May 2003 the Brazilian tax authorities issued separate infringement notices against Santander Distribuidora de Títulos e Valores Mobiliarios, Ltda. (DTVM, actually Santander Brasil Tecnología S.A.) and Banco Santander (Brasil) S.A. in relation to the Provisional Tax on Financial Movements (Contribuição Provisória sobre Movimentação Financeira) of the years 2000 to 2002. The administrative discussion ended unfavourably for both companies, and on July 3, 2015, filed a lawsuit requesting the cancellation of both tax assessments. The lawsuit was judged unfavourably in first instance. Therefore, both plaintiffs appealed to the court of second instance. In December 2020, the appeal was decided unfavourably and the judgement was appealed before the higher courts. This case fell within the scope of the Comprehensive Transaction Programme (Programa de Transaçao Integral) established by the Ministry of Finance, and in 2025 a final settlement was reached. The amounts paid under the terms of the Transaction were fully provisioned.

- In December 2010 the Brazilian tax authorities issued an infringement notice against Santander Seguros S.A. (Brasil), (currently Zurich Santander Brasil Seguros e Previdência S.A.), as the successor by merger to ABN AMRO Brasil dois Participações S.A., in relation to income tax (IRPJ and CSLL) for 2005, questioning the tax treatment applied to a sale of shares of Real Seguros, S.A. The administrative discussion ended unfavourably, and the CARF decision has been appealed at the Federal Justice. As the former parent of Santander Seguros S.A. (Brasil) (currently Zurich Santander Brasil Seguros e Previdência S.A.), Banco Santander (Brasil) S.A. is liable in the event of any adverse outcome of this proceeding. No provision was recognised in connection with this proceeding as it is considered to be a contingent liability.

- In November 2014 the Brazilian tax authorities issued an infringement notice against Banco Santander (Brasil) S.A. in relation to corporate income tax (IRPJ and CSLL) for 2009 questioning the tax-deductibility of the amortisation of the goodwill of Banco ABN AMRO Real S.A. performed prior to the absorption of this bank by Banco Santander (Brasil) S.A., but accepting the amortisation performed after the merger. The Bank appealed before the Higher Chamber of CARF, and a final favourable decision was obtained in April 2024. No provision was recognised in connection with this proceeding as it was considered to be a contingent liability.

- Banco Santander (Brasil) S.A. has also appealed against infringement notices issued by the tax authorities questioning the tax deductibility of the amortisation of the goodwill arising on the acquisition of Banco Comercial e de Investimento Sudameris S.A from years 2007 to 2012. In May and October 2024, the appeal related to period 2009 to 2012 was finally rejected by the CARF and the resolution was appealed at the Federal Justice. No provision was recognised in connection with this matter as it was considered to be a contingent liability.

- Banco Santander (Brasil) S.A. and other companies of the Group in Brazil are undergoing administrative and judicial procedures against Brazilian tax authorities for not admitting tax compensation with credits derived from other tax concepts, not having registered a provision for the amount considered to be a contingent liability.

- Banco Santander (Brasil) S.A. is involved in appeals in relation to infringement notices initiated by tax authorities regarding the offsetting of tax losses in the CSLL of year 2009 and 2019. The appeals are pending decision at the administrative level. No provision was recognised in connection with this matter as it is considered to be a contingent liability.

- Banco Santander (Brasil) S.A. filed a suspensive judicial measure aiming to avoid the withholding income tax (Imposto sobre a Renda Retido na Fonte - IRRF), on payments derived from technology services provided by Group foreign entities. A favorable decision was handed down and an appeal was filed by the tax authority at the Federal Regional Court, where it awaits judgment. No provision was recognized as it is considered to be a contingent liability.

- Brazilian tax authorities have issued infringement notices against Getnet Adquirência e Serviços para Meios de Pagamento S.A and Banco Santander (Brasil) S.A. as jointly liable in relation to corporate income tax (IRPJ and CSLL) for 2014 to 2018 questioning the tax-deductibility of the amortization of the goodwill from the acquisition of Getnet Tecnologia Proces S.A., considering that the company would not have complied with the legal requirements for such amortization. The tax assessment notices were appealed to the CARF. In 2024, the CARF issued a favourable partial decision on both infraction notices. In December 2024, the tax authorities issued a new infringement notice for 2019 and 2020. No provision was recognized as it is considered to be a contingent liability.

The total amount for the aforementioned Brazil lawsuits that are fully provisioned is EUR 553 million, and for lawsuits that qualify as contingent liabilities is EUR 5,040 million.

At the date of approval of these consolidated annual accounts, there are other less significant tax disputes.

ii. Non-tax-related proceedings

At 31 December 2025 the main non-tax-related proceedings concerning the Group were as follows:

- Payment Protection Insurance (PPI): AXA France IARD and AXA France Vie (former GE Capital Corporation Group entities, known as Financial Insurance Company Ltd (FICL) and Financial Assurance Company Ltd (FACL), acquired by AXA SA in 2015) (together, AXA France) brought a claim against (i) Santander Cards UK Limited (formerly known as GE Capital Bank Limited (GECB), which was acquired by Banco Santander, S.A. in 2008 and subsequently transferred to Santander UK plc); and (ii) Santander Insurance Services UK Limited (a Banco Santander, S.A. subsidiary) (SISUK and together with GECB the Santander Entities). The claim relates to the allocation of liability for compensation and associated costs in respect of a large number of PPI policies distributed by GECB pre-2005, which were underwritten by FICL and FACL.

  On 25 July 2025, the Commercial Court of England and Wales handed down its judgment in relation to the claim brought by AXA France (the Judgment). It found against SISUK in relation to AXA France's claim pursuant to an indemnity in an agency agreement entered into between GECB, FICL and FACL in 2000 and novated by GECB to SISUK in 2010. It also found GECB negligent in the sale of PPI policies, but this element of the claim was time barred to PPI policies sold in the period between 2002 and 2005 and overlaps with the indemnity claim. The Judgment required the Santander Entities to pay GBP 515 million plus interest of GBP 162 million.

  In October 2025 the Santander Entities obtained permission to appeal the findings in the Judgment relating to the application of the indemnity arising from PPI sales occurring before the indemnity had been agreed in December 2000 (Santander Appeal). In January 2026, AXA France obtained permission to cross-appeal the Commercial Court's rejection of AXA France's contribution claim made under the Civil Liability (Contribution) Act 1978 (the AXA France's cross appeal). A decision on the Santander Appeal and AXA France's cross appeal is expected in the second half of 2026.

  With respect to the Santander Appeal and AXA France's cross-appeal, there are points of legal interpretation to be resolved and, in the case of the cross-appeal, factual points to be determined. The significant uncertainties make it difficult to predict the timing or the final impact of the resolution of the appeals for the Group.

  No customers have suffered loss as a consequence of the claim brought by AXA France or the Judgment, nor does it impact upon past redress paid to customers for PPI complaints.

- Motor Finance Broker Commissions: following the Financial Conduct Authority's (FCA) Motor Market review in 2019 which resulted in a change in rules in January 2021, Santander Consumer (UK) plc (SCUK) has received several of county court claims and complaints in respect of its historical use of discretionary commission arrangements (DCAs) prior to the 2021 rule changes. In January 2024, the FCA commenced a review of the use of DCAs between lenders and credit brokers (the FCA Review). Pending the conclusion of its review, the FCA paused the handling of motor finance commission related complaints. The pause is currently in place until 31 May 2026, reflecting the extended timeline of the FCA's Review and subsequent Consultation (see below).

  After the Court of Appeal's decision rendered on 25 October 2024 within the judicial proceedings followed against DCAs of other financial entities, as of 31 December 2024, the Santander UK group Holdings recognised a provision of GBP 293.0 million (EUR 353.3 million). This provision was determined based upon the information then available. It included estimates for operational and legal costs and potential awards based on various scenarios and used a range of assumptions, including the possible outcome of the appeal to the Supreme Court in 2025 of the Court of Appeal's decision. On 1 August 2025, the Supreme Court handed down its judgment stating that motor dealers acting as credit brokers do not owe fiduciary or disinterested duties to their customers and, as a consequence, commission payments by lenders to motor dealers would not be unlawful on that basis. In addition, the Supreme Court held that an unfair relationship under s.140A of the Consumer Credit Act 1974 had arisen in one of the cases on its facts and awarded the amount of the commission paid by the lender plus interest at a commercial rate as the remedy. It also confirmed that the test for unfairness of the relationship with borrower was highly fact sensitive and it outlined a series of non-exhaustive factors to consider in assessing unfair relationships in this context (indicating that no or partial disclosure was not necessarily enough on its own to constitute an unfair relationship).

  Following the Supreme Court's judgment, on 3 August 2025, the FCA announced that it aimed to publish a consultation on an industry wide redress scheme in early October (the Consultation). Further to the publication of the FCA's Consultation on 7 October 2025, the Santander UK group submitted its comments on 12 December 2025 and continues to engage constructively with the FCA. The FCA has stated that its intention is to publish the industry wide redress scheme no later than in March 2026.

  In light of the proposed sectoral scheme and taking into account the objections raised and the uncertainty surrounding both the final decision to be adopted by the FCA and the outcome of any potential legal challenges, the Santander UK group has reviewed the potential impact on SCUK in relation to the vehicle finance market. The range of scenarios has been updated, which has resulted in an additional estimated charge of GBP 183 million (EUR 213.6 million). As of 31 December 2025, the total provision amounts to GBP 461 million (EUR 528.1 million). This continues to include estimates for operational and legal costs and potential awards reflecting an increased likelihood of a higher number of cases than had previously been predicted as eligible for redress as well as an increased possibility that a remedy is sought to be imposed which extends beyond reversing any damaging financial consequences caused by any unfair relationships. The provision is based on various scenarios using a range of assumptions, including potential changes to the proposed scheme following responses to the Consultation or publication of the FCA's final scheme rules.

  There continue to be significant uncertainties as to the nature, extent and timing of redress payments. Therefore, while the ultimate financial impact of this matter could materially differ from the amount of the provision as of this date, such impact is not expected to be material for the Group as of the date of these financial statements.

- Delforca: dispute arising from equity swaps entered into by Gaesco (now Delforca 2008, S.A. (Delforca)) on shares of Inmobiliaria Colonial, S.A. Banco Santander, S.A. is claiming to Delforca before the Court of Barcelona in charge of the bankruptcy proceedings, a total of EUR 66 million from the liquidation resulting from the early termination of financial transactions due to Delforca's non-payment of the equity swaps. In the same bankruptcy proceedings, Delforca and Mobiliaria Monesa, S.A., parent of Delforca (Monesa) have in turn claimed the Bank to repay EUR 57 million, which the Bank received for the enforcement of the agreed guarantee, as a result of the aforementioned liquidation. On 16 September 2021 the Commercial Court Number 10 of Barcelona has ordered Delforca to pay the Bank EUR 66 million plus EUR 11 million in interest and has dismissed the claims filed by Delforca. This decision was appealed by Delforca, Monesa and the bankruptcy administrator. On 15 November 2023 the Provincial Court of Barcelona rendered a judgment dismissing the appeals filed by Delforca, Monesa and the bankruptcy administrator. Delforca and Monesa (not the bankruptcy administrator) filed an appeal in cassation, that was rejected in November 2025 by the First Chamber of Supreme Court and, as a result, the appeal and first instance judgments in favor of the Bank have been confirmed.

  Separately, Monesa, filed in 2009 a civil procedure with the Courts of Santander against the Bank claiming damages that have not been specified to date. The procedure is suspended.

- 'Planos Económicos': like the rest of the banking system in Brazil, Santander Brazil has been the target of customer complaints and collective civil suits stemming mainly from legislative changes and its application to the retribution of bank deposits (economic plans). At the end of 2017, an agreement was reached between regulatory entities and the Brazilian Federation of Banks (Febraban) with the purpose of closing the lawsuits and was approved by the Supremo Tribunal Federal (the STF and the Collective Agreement). Discussions focused on specifying the amount to be paid to each affected client according to the balance in their notebook at the time of the application of the plan. Finally, the total value of the payments will depend on the number of adhesions there may be and the number of savers who have proved the existence of the account and its balance on the date the indexes were changed. In November 2018, the STF ordered the suspension of all economic plan proceedings for two years from May 2018. On 29 May 2020, STF approved the extension of the Collective Agreement for 5 additional years starting from 3 June 2020. Condition for this extension was to include in the Collective Agreement actions related to the 'Collor I Plan'. On May 2025, the STF issued the judgment recognizing the constitutionality of the Bresser, Verão, Collor I and II plans, guaranteeing savers the receipt of the amounts established in the Collective Agreement and setting a deadline of 24 months for new adhesions. As of 31 December 2025, the provision recorded for the economic plan proceedings amounts to EUR 155.3 million.

- Banco Popular´s acquisition: after the declaration of the resolution of Banco Popular, some investors filed claims against the EU's Single Resolution Board decision, and the FROB's resolution executed in accordance with the aforementioned decision. Likewise, numerous civil lawsuits were filed against Banco Santander, S.A. alleging that the information provided by Banco Popular was erroneous and requesting from Banco Santander, S.A. the restitution of the price paid for the acquisition of the investment instruments or, where appropriate, the corresponding compensation.

  In relation to the direct appeals filed before the General Court of the European Union (EGC) and the Court of Justice of the European Union (CJEU), all appeals were either dismissed or discontinued. Currently there are no ongoing appeals. On 4 February 2026, the National Court issued its first rulings dismissing the actions brought against the FROB's decision, in application of the judgments of the EGC and the CJEU.

  In the civil proceedings, several Spanish judges referred to the CJEU a number of preliminary questions that have already been resolved. In particular, in the judgments of 5 May 2022 (C-410/20) and 5 September 2024 (C-775/22, C-779/22, C-794/22), the CJEU stated that Directive 2014/59/EU on bank resolution prevents shareholders, subordinated debt holders, and holders of equity instruments converted into shares bringing actions against a financial institution subject to a resolution proceeding or against its successor after the resolution, claiming liability for the information contained in the prospectus, under Directive 2003/71/EC, or actions seeking the nullity of the contract of subscription of capital instruments, which, given its retroactive effects, would result in the refund of the value of such securities, plus the interest accrued as of the date of execution of the contract. In its 11 September 2025 resolution (C-687/23), the CJEU declared that the above referred TJUE resolutions do not apply to actions pursued prior to the entity's resolution. There are currently no other preliminary questions under consideration.

  On 4 March 2024, in the context of preliminary proceedings 42/2017, the Central Court of Instruction No. 4 issued a ruling transforming the proceedings into Summary Proceedings and terminating the investigation phase. This ruling considers that the circumstantial evidence resulting from the investigation which could constitute a crime is basically the following: (i) an alleged misrepresentation in the prospectus of the 2016 capital increase of Banco Popular; (ii) an alleged misrepresentation in the annual accounts of Banco Popular for 2015, the interim financial statements for 2016 and the annual accounts for 2016; and (iii) the offer to the market of a distorted amount of regulatory capital, after the capital increase of 2016 (for allegedly having been granted by Banco Popular financing to clients for the subscription of shares in the aforementioned capital increase, without discounting it from the regulatory capital). According to the aforementioned ruling, these facts could constitute the crimes of fraud of investors (art. 282 of the Criminal Code) and accounting falsehood (art. 290 of the Criminal Code). All appeals filed against the ruling have been dismissed.

The accusing parties, including the Public Prosecutor's Office, filed their indictment briefs on 28 October 2024, which included requests for compensation for civil liability and the request that not only the defendants but also several entities are held liable for such compensation, including Banco Santander, S.A., the auditing firm and several insurance companies. Following the filing of the indictment briefs, on 22 November 2024, the Court (Investigating Judge) issued an order for the opening of the oral trial against the defendants and civil liability parties, including Banco Santander, S.A. as a possible civil liable party. However, in line with what was determined by the Spanish National Court and confirmed by the Supreme Court concerning the hypothetical succession of Banco Popular by Banco Santander, S.A., the oral trial has not been opened against the Bank as possible direct civil liable party.

The order to open the oral trial states that the plaintiffs have requested compensation for civil liability for a total amount of EUR 2,277.65. Additionally, the order rejects the imposition of the guarantee requested by several of the accusing parties, considering that it is unnecessary to secure the outcome of the trial. The defendants and potential civil liable parties submitted their defense writs on 4 February 2025. After that, the proceedings will be forwarded to the Criminal Chamber of the National Court for the oral trial.

Regarding civil liability, the Bank considers that it has no subsidiary civil liability in light of the CJEU's judgments of 5 May 2022 (C-410/20), 5 September 2024 (C-775/22, C-779/22, C-794/22) and 11 September 2025 (C-687/23 and C-447/23). Notwithstanding the foregoing, the Spanish National Court has stated that this issue shall be resolved within the ongoing proceedings.

The estimated cost of any compensation to shareholders and bondholders of Banco Popular recognized in the 2017 accounts amounted to EUR 680 million, of which EUR 535 million were applied to the commercial loyalty program. On 15 December 2024, Banco Santander, S.A., proceeded to redeem in advance voluntarily all bonds in circulation regarding such commercial action. The CJEU judgements of 5 May 2022 (C-410/20), 5 September 2024 (C-775/22, C-779/22, C-794/22) and 11 September 2025 (C-687/23 and C-447/23) referred above, represented a very significant reduction in the risk associated with these claims.

- German shares investigation: the Cologne Public Prosecution Office is conducting an investigation against the Bank and other group entities based in the UK - Santander UK plc, Santander Financial Services Plc and Cater Allen International Limited -, in relation to a particular type of tax dividend linked transactions known as cum-ex transactions.

  The Group is cooperating with the German authorities. According to the state of the investigations, the result, and the effects for the Group, which may potentially include the imposition of material financial consequences (penalties, and/or disgorgement of proceeds) cannot be anticipated. For this reason, the Bank has not recognized any provisions in relation to the potential imposition of financial liabilities.

- Banco Santander, S.A. was sued in a legal proceeding in which the plaintiff alleges that the Bank breached his contract as CEO of the institution: in the lawsuit, the claimant mainly requested a declaratory ruling upholding the existence, validity and effectiveness of such contract and its enforcement together with the payment of certain amounts. For the case that the main request is not granted, the claimant sought a compensation for a total amount of approximately EUR 112 million or, an alternative relief for other minor amounts. Banco Santander, S.A. answered to the legal action stating that the conditions to which the appointment of that position was subject to were not met; that the executive services contract required by law was not concluded; and that in any case, the parties could terminate the contract without any justified cause. On 17 May 2021, the plaintiff reduced his claims for compensation to EUR 61.9 million.

  On 9 December 2021, the Court upheld the claim and ordered the Bank to compensate the claimant in the amount of EUR 67.8 million. By court order of 13 January 2022, the Court corrected and supplemented its judgment, reducing the total amount to be paid by the Bank to EUR 51.4 million and clarifying that part of this amount (buy out) was to be paid under the terms of the offer letter, i.e., entirely in Banco Santander shares, within the deferral period for this type of remuneration at the plaintiff's former employer and subject to the performance metrics or parameters of the plan in force at the Bank, which was that of 2018. As explained in note 5 of the report of the consolidated annual accounts of the year 2022, the degree of performance of these objectives was 33.3%.

  The Bank filed an appeal against the judgment before the Madrid Court of Appeal, which was opposed by the plaintiff. At the same time, the plaintiff filed an application for provisional enforcement of the judgment in the First Instance Court. A court order was issued ordering enforcement of the judgment, and the Bank deposited in the court bank account the full amount provisionally awarded to the claimant, including interest, for an approximate sum of EUR 35.5 million, within the voluntary compliance period.

  On 6 February 2023, Banco Santander was notified with the judgment of 20 January 2023 by which the Madrid Court of Appeal partially upheld the appeal filed by the Bank. The judgment has reduced the amount to be paid by EUR 8 million, which, to the extent that this amount was already paid in the provisional partial enforcement of the judgement of First Instance Court, must be returned to the Bank together with other amounts for interest, which the appeal judgement also rejects. The plaintiff deposited circa EUR 9.6 million. This amount was received by the Bank on 11 July 2023.

  On 11 April 2023, the Bank filed an extraordinary appeal for procedural infringement and an appeal in cassation against the Madrid Court of Appeal's judgment before Spanish Supreme Court. The extraordinary and cassation appeals submitted by the Bank were accepted on 26 March 2025 and are pending to be resolved. Existing provisions cover the estimated risk of loss.

- CHF Polish Mortgage Loans: In October 2019, the CJEU rendered its decision in relation to the effects of the potential unfairness of certain contractual clauses in CHF-Indexed loan agreements. The CJEU established that it for the national courts to determine the invalidity of a contract where it cannot be maintained without the clause declared unfair and where no supplementary provisions exist that would allow the contract to be maintained. Subsequently, in June 2023, the CJEU confirmed that the effects of such invalidity must be determined in accordance with national law, interpreted in the light of Directive 93/13/EEC, and that claims by financial institutions exceeding the reimbursement of the loan principal and, where applicable, default interest, are contrary to the objectives of that Directive.

  In April 2024, the Civil Chamber of the Polish Supreme Court issued a judgment confirming that clauses relating to the mechanism for determining the exchange rate declared abusive cannot be replaced by alternative provisions and that, in the absence of a binding exchange rate, the contract is not enforceable for the parties. With regard to the effects of invalidity, the Supreme Court confirmed the existence of independent restitution claims for each party and ruled out the possibility of claiming interest or other amounts for the use of the funds. Nevertheless, certain aspects of this judgment have been subject to internal debate within the Supreme Court itself, reflecting the complexity and evolving nature of the jurisprudential framework

  In this context, Santander Bank Polska S.A. and Santander Consumer Bank S.A. estimate legal risk using a model that considers different possible outcomes and regularly review court rulings on this matter in order to assess changes in case law, including the impact of the aforementioned Supreme Court judgment. Settlements are being reached both with customers who have already initiated legal proceedings and with customers who have not yet filed a claim. The model used to calculate provisions for legal risks considers the evolution and expected development of such settlements.

  As of 31 December 2025, the total amount adjusted against the gross carrying amount of loans in accordance with IFRS 9, together with the provisions recognised under IAS 37, amounts to PLN 5,874.3 million (EUR 1,391.9 million), of which PLN3,191.7 million (EUR 756.3 million) corresponds to adjustments to the gross carrying amount under IFRS 9 and PLN 2,682.6 million (EUR 635.6 million) to provisions recognised under IAS 37. The adjustment to gross carrying amount in accordance with IFRS9 during 2025 amounted to PLN 99.7 million (EUR 23.6 million), and the additional provisions recognised under IAS 37 amounted to PLN 1245.3 million (EUR 293.8 million). Other costs related to the dispute amounted to PLN 730.5 million (EUR 172.4 million). IAS 37.

  As of the same date, Santander Bank Polska S.A. held a portfolio of mortgages denominated in or indexed to CHF amounting to approximately PLN 2,642.0 million (EUR 626.0 million) and recognised provisions of PLN 4,766.4 million (EUR 1,129.4 million) to cover the CHF mortgage portfolio. Santander Consumer Bank S.A. (Poland), in turn, held a portfolio of mortgages denominated in or indexed to CHF amounting to approximately PLN 735.9 million (EUR 174.4 million) and recognised provisions of PLN 1,107.9 million (EUR 262.5 million) to cover this portfolio.

  Notwithstanding the above, as detailed in Note 3 b), in January 2026 the Group sold a 49% stake in Santander Bank Polska S.A., which ceased to be consolidated within the Group's perimeter as of that date.

  The Group continues to monitor the evolution of legal proceedings and to periodically review the adequacy of the provisions recognised, which represent the best estimate of the risk existing as of the reporting date.

- Banco Santander Mexico: dispute regarding a testamentary trust constituted in 1994 by Mr. Roberto Garza Sada in Banca Serfin (currently Santander Mexico) in favor of his four sons in which he affected shares of Alfa, S.A.B. de C.V. (respectively, Alfa and the Trust). During 1999, Mr. Roberto Garza Sada instructed Santander México in its capacity as trustee to transfer 36,700,000 shares from the Trust's assets to his sons and daughters and himself. These instructions were ratified in 2004 by Mr. Roberto Garza Sada before a Notary Public.

  Mr. Roberto Garza Sada passed away on 14 August 2010 and subsequently, in 2012, his daughters filed a complaint against Santander Mexico alleging it had been negligent in its trustee role. The lawsuit was dismissed at first instance in April 2017 and on appeal in 2018. In May 2018, the plaintiffs filed an appeal (*recurso de amparo*) before the First Collegiate Court of the Fourth Circuit based in Nuevo León, which ruled in favor of the plaintiffs on 7 May 2021, annulling the 2018 appeal judgment and condemning Santander Mexico to the petitions claimed, consisting of the recovery of the amount of 36,700,000 Alfa shares, together with dividends, interest and damages.

  Since 2021, Santander Mexico has filed before the Supreme Court of Justice of the Nation a constitutional review challenge (*recurso de revisión constitucional*) against the referred decision which was initially rejected by the Supreme Court; and several appeals (*recursos de reclamación*) against such rejection. On 25 June 2025, one of the appeals filed by the Bank was accepted, and this decision was extended to a remaining one, which will now be resolved. In case that these appeals are resolved favorably to the Bank, the Supreme Court will decide on the merits of the constitutional review against the judgment which condemned the Bank.

  In parallel to the foregoing, the Bank also filed an amparo against the judgment favorable to the plaintiffs rendered by the First District Court in the State of Nuevo León before the Collegiate Courts if such State, and in 2024, the Bank requested the Supreme Court of Justice of the Nation to take up and resolve the matter through the faculty of attraction, what is pending.

The challenges and appeals filed by the Bank imply that the judgment rendered in favour of the plaintiffs is not final, and Santander México believes that the actions taken should prevail and reverse the decision against it. The impact of a potential unfavorable resolution for Santander México will be determined in a subsequent proceeding and will also depend on the additional actions that Santander México may take in its defense, so it is not possible to determine it at this time. At the current stage of the proceedings, the provisions recorded are considered sufficient to cover the risks deriving from this claim.

- Mortgage Expenses: in December 2015 the Spanish Supreme Court ruled that mortgage clauses relating to the payment of fees associated to formalizing the mortgage were abusive. On 27 November 2018, the Supreme Court agreed that the taxpayer of the documented legal acts stamp duty tax (IAJD) on the mortgage loans should be the borrower. On 9 November 2018, RDL 17/2018 came into force and modified the Law of the IAJD, establishing that the taxpayer is the Bank. On 23 January 2019, the Supreme Court ruled the distribution of the same must be 50% between the Bank and the borrower in public notary expenses and agency expenses. The Supreme Court also ruled that the Bank must pay 100% of the Registry. On 26 October 2020, the Supreme Court ruled that the Bank is fully responsible for the management expenses; and on 27 January 2021, the Supreme Court ruled that the Bank is also responsible for the valuation expenses.

  In relation to the statute of limitations, on 25 April 2024, two judgments were rendered (cases C-561/21 and C-484/21) in which the Court of Justice of the European Union (CJEU) stated that the commencement of the statute of limitations for the reimbursement action of the mortgage expenses derived from the annulment of the clause, shall be fixed on the moment when the consumer has an effective knowledge of the abusive nature of the clause and its effects and that this date must not be fixed (a) on the date of payment of such expense nor of the execution of the agreement; (b) when the Supreme Court has handed down judgments stating the abusive nature of a clause similar to the one included in the consumer contract; nor (c) when the CJEU has handed down judgments confirming that the statute of limitations for the reimbursement action of the amounts derived from the annulment of contractual provisions is valid subject to its compliance with the principles of equivalence and effectiveness.

  The Supreme Court has confirmed this criterion in its 14 June 2024 judgment, establishing that the public dissemination of case-law declaring the abusive nature of a clause does not necessarily give rise to the limitation period of the reimbursement action derived from similar clauses. However, the 4 July 2024 judgment, rendered in the case C-450/22, the CJEU has established that it cannot be excluded a priori that, as a consequence of the occurrence of an objective event or of a notorious event, such as the amendment of the applicable legislation or a widely disseminated and debated development of jurisprudence, the court considers that the average consumer's overall perception of the floor clause has changed during the reference period and has enabled him to become aware of the potentially significant economic consequences arising from such clause. A further preliminary question concerning the statute of limitations of the reimbursement action derived from the annulment of mortgage expenses has been raised before the CJEU by the First Instance Court No 8 of La Coruña.

  In December in 2024, the Supreme Court handed down two additional judgments regarding statute of limitations, in which it determines that the date to be considered for the purposes of the application of Directive 93/1994 and, consequently, the statute of limitations detailed in its previous judgments, is 31 December 1994 (i.e. the date when the deadline for its transposition ended). This is based on the principle of interpretation in accordance with directives not transposed (applicable once their transposition period has expired). The recorded provision includes the best estimate of Group's liability for this matter.

Banco Santander and the other Group companies are subject to claims and, therefore, are party to certain judicial and administrative proceedings incidental to the normal course of their business including those in connection with lending activities, relationships with employees and other commercial or tax matters additional to those referred to here.

With the information available to it, the Group considers that, at 31 December 2025, it had reliably estimated the obligations associated with each proceeding and had recognized, where necessary, sufficient provisions to cover reasonably any liabilities that may arise as a result of these tax and legal risks. Disputes in which risk and/or provisions have been registered but are not disclosed is justified on the basis that it would be prejudicial to the proper defense of the Group. Subject to the qualifications made, it also believes that any liability arising from such claims and proceedings will not have, overall, a material adverse effect on the Group's business, financial position, or results of operations.

26. Other liabilities

The detail of Other liabilities in the consolidated balance sheets is as follows:

EUR million

	2025	2024	2023
Transactions in transit	707	910	767
Accrued expenses and deferred income	9,018	9,003	9,136
Other	6,212	6,431	7,695
	15,937	**16,344**	**17,598**

27. Tax matters

a) Consolidated Tax Group

According to current Spanish regulation, the Tax Consolidated Group includes Banco Santander, S.A. as the parent company and, as subsidiaries, those Spanish subsidiaries that meet the requirements established by the regulations on the taxation of consolidated groups.

The other Group companies file income tax returns in accordance with the tax regulations applicable to them.

b) Years open for review by the tax authorities

In relation to the partial scope tax audit of Corporate Income Tax for fiscal year 2020 and Value Added Tax for fiscal years 2020 to 2022, initiated in April 2024, in December 2025 the Spanish tax authorities issued a Corporate Income Tax assessment, which has been appealed before the Central Economic-Administrative Court, and the VAT assessments were still pending at the close of the financial year.

The main appeals filed against assessments issued in prior audits remain pending before the Central Economic-Administrative Court (Corporate Income Tax and Value Added Tax for fiscal years 2017 to 2019) and before the National Appellate Court (Corporate Income Tax for fiscal years 2003 to 2015). Banco Santander, S.A., as the parent company of the Tax Consolidated Group, considers, based on the advice of its external legal counsel, that the adjustments made should not have a significant impact on the consolidated annual accounts, as there are strong arguments for defense in the appeals filed against these assessments. Consequently, no provision has been recognized in this respect. Furthermore, it should be noted that, in those cases where it was considered appropriate, the available mechanisms have been used to avoid international double taxation.

At the date of approval of these consolidated annual accounts, subsequent years up to and including 2025, are subject to review.

The other entities have the corresponding years open for review, pursuant to their respective tax regulations.

Due to possible different interpretations which can be made of the tax regulations, the outcome of the tax audits of the rest of years subject to review might give rise to contingent tax liabilities which cannot be objectively quantified. However, the Group's tax advisers consider that it is unlikely that such tax liabilities will materialize, and that in any event the tax charge arising therefrom would not materially affect the Group's consolidated financial statements.

c) Reconciliation

The reconciliation of the income tax expense calculated at the tax rate applicable in Spain (30%) to the income tax expense recognised and the detail of the effective tax rate are as follows:

EUR million

	2025	2024	2023
Consolidated profit (loss) before tax:			
From continuing operations	18,681	17,347	15,005
From discontinued operations	1,950	1,680	1,454
	20,631	19,027	16,459
Income tax at tax rate applicable in Spain (30%)	6,189	5,708	4,938
By the effect of application of the various tax rates applicable in each country[A]	(103)	115	(100)
Of which:			
Brazil	*264*	*413*	*198*
United Kingdom	*(42)*	*(53)*	*(51)*
United States	*(60)*	*(25)*	*(28)*
Chile	*(36)*	*(33)*	*(28)*
Poland	*(224)*	*(183)*	*(164)*
Effect of profit or loss of associates and joint ventures	(207)	(213)	(184)
USA electric vehicle leasing incentives	(203)	(258)	(259)
Global minimum tax Pillar Two	6	14	—
Effect of reassessment of deferred taxes	(101)	68	—
Permanent differences and other	(450)	(151)	(119)
Income tax	**5,131**	**5,283**	**4,276**
Effective tax rate	24.87%	27.77%	25.98%
Of which:			
Continuing operations	*4,723*	*4,844*	*3,880*
Discontinued operations (Note 37)	*408*	*439*	*396*
Of which:			
Current taxes	*5,666*	*4,855*	*5,568*
Deferred taxes	*(535)*	*428*	*(1,292)*
Income tax (receipts)/payments	4,954	5,880	5,214

A. Calculated by applying the difference between the tax rate applicable in Spain and the tax rate applicable in each jurisdiction to the profit or loss contributed to the Group by the entities which operate in each jurisdiction.

d) Tax recognised in equity

In addition to the income tax recognised in the consolidated income statement, the Group recognised the following amounts in consolidated equity in 2025, 2024 and 2023:

EUR million

	2025	2024	2023
Other comprehensive income			
Items not reclassified to profit or loss	**115**	**85**	**358**
Actuarial gains or (-) losses on defined benefit pension plans	63	172	302

Total	**(325)**	**139**	**(561)**

e) Deferred taxes

'Tax assets' in the consolidated balance sheets includes debit balances with the Public Treasury relating to deferred tax assets. 'Tax liabilities' includes the liability for the Group's various deferred tax liabilities.

In accordance with EU Regulation 575/2013 on prudential requirements for credit institutions and investment firms (CRR), and subsequently amended by EU Regulation 2019/876 of the European Parliament and of the Council, those deferred tax assets that do not rely on future profitability arising from temporary differences (referred to hereinafter as 'monetizable deferred tax assets'), meeting certain conditions, should not be deducted from regulatory capital and should not be risk-weighted at 250% according to the thresholds set out in Article 48 of the said Regulation, but shall apply a risk weight of 100% under Article 39.

The detail of deferred tax assets, by classification as monetizable or non-monetizable assets, and of deferred tax liabilities at 31 December 2025, 2024 and 2023 is as follows:

EUR million

	2025		2024		2023	
	Monetizable[A]	Other	Monetizable[A]	Other	Monetizable[A]	Other

A. In 2023, the Spanish Economic Administrative Court ruled that in 2017 the requirements for the conversion of part of the monetizable assets of Popular Group into a credit against the Tax Administration were met, allowing the conversion to EUR 995 million. Banco Santander was refunded without impact on results. The favourable Economic Administrative Court decision was declared harmful to the public interests and challenged at the National Appellate Court by the Tax Administration. The estimation of this appeal, which is pending at the National Appellate Court, would imply that Grupo Santander should repay the amount refunded and would, once again, credit these monetizable assets with no impact on results except for late payment interests. However, it is considered that there are strong defense arguments in relation to this appeal.

Grupo Santander only recognises deferred tax assets for temporary differences or tax loss and tax credit carryforwards where it is considered probable that consolidated entities that generated them will have sufficient future taxable profits against which they can be utilised.

The deferred tax assets and liabilities are reassessed at the reporting date in order to ascertain whether any adjustments need to be made on the basis of the findings of the analyses performed.

These analyses take into consideration all evidence, both positive and negative, of the recoverability of such deferred tax assets, among which we can find, (i) the results generated by the different entities in previous years, (ii) the projections of results of each entity or fiscal group, (iii) the estimation of the reversal of the different temporary differences according to their nature and (iv) the period and limits established under the applicable legislation of each country for the recovery of the different deferred tax assets, thus concluding on the ability of each entity or fiscal group to recover the deferred tax assets registered.

The projections of results used in this analysis are based on the financial planning approved by both the local directions of the corresponding units and by the Group's directors. The Group's budget estimation process is common for all units. The Group's management prepares its financial planning based on the following key assumptions:

a) Microeconomic variables of the entities that make up the fiscal group in each location: the existing balance structure, the mix of products offered and the commercial strategy at each moment defined by local directions are taken into account, based on the competition, regulatory and market environment.

b) Macroeconomic variables: estimated growths are based on the evolution of the economic environment considering the expected evolution in the gross domestic product of each location, and the forecasts of interest rates, inflation and exchange rates fluctuations. These data are provided by the Group's Studies Service.

Additionally, the Group performs retrospective contrasts (backtesting) on the variables projected in the past. The differential behaviour of these variables with respect to the real market data is considered in the projections estimated in each fiscal year. Thus, and in relation to Spain, the deviations identified by the Directors in recent past years are due to a combination of exogenous factors, mainly the changing impact of the macroeconomic environment and competition, and management actions, such as the acceleration of restructuring plans, investment in digitalisation, and the optimisation of capital and shareholder returns.

Finally, and given the degree of uncertainty of these assumptions on the referred variables, the Group conducts a sensitivity analysis of the most significant assumptions considered in the deferred tax assets' recoverability analysis, considering any reasonable change in the key assumptions on which the projections of results of each entity or fiscal group and the estimation of the reversal of the different temporary differences are based.

In relation to Spain, the sensitivity analysis has consisted of making reasonable changes to the key assumptions, including adjusting 50 basis points for growth (gross domestic product) and adjusting 50 basis points for inflation.

Relevant information is set forth below for the main countries which have recognised deferred tax assets:

Spain

The deferred tax assets recognised at the Consolidated Tax Group total EUR 7,183 million, of which EUR 5,069 million were for monetizable temporary differences with the right to conversion into a credit against the tax administration as explained before, EUR 1,433 million for other temporary differences and EUR 681 million for tax losses and credits.

Brazil

The deferred tax assets recognised in Brazil total EUR 7,465, of which EUR 5,606 million were for monetizable temporary differences, EUR 1,150 for other temporary differences and EUR 709 for tax losses and credits.

Mexico

The deferred tax assets recognized in Mexico total EUR 1,542, of which EUR 1,511 were for temporary differences and EUR 31 for tax losses and credits.

United States

The deferred tax assets recognised in the United States total EUR 1,026, of which EUR 253 were for temporary differences and EUR 773 for tax losses and credits.

The Group estimates that the recognised deferred tax assets for temporary differences, tax losses and credits in the different jurisdictions could be recovered in a maximum period of 15 years.

The changes in Tax assets - Deferred and Tax liabilities - Deferred in the last three years were as follows:

EUR million

	Balance at 1 January 2025	(Charge)/ Credit to income	Foreign currency balance translation differences and other items	(Charge)/Credit to asset and liability valuation adjustments	Reclassification no-current asset held for sale	Acquisition for the year (net)	Balance at 31 December 2025

Also, the Group did not recognise deferred tax assets amounting to approximately EUR 11,240 million of which EUR 6,420 million relate to tax losses, EUR 3,430 million to tax credits, and EUR 1,390 million to other concepts.

f) Global Minimum Tax Pillar Two

The Global Minimum Tax Model Rules, known as Pillar Two and approved in 2021 by the OECD Inclusive Framework, require multinational groups with revenues exceeding EUR 750 million to be subject to a minimum tax rate of 15% on adjusted accounting profit, calculated on a jurisdiction-by-jurisdiction basis. The OECD has complemented these rules through the approval of administrative guidance and a document on transitional safe harbours applicable to fiscal years 2024 to 2026. In January 2026, the application of the transitional safe harbours was extended for an additional year, and new permanent safe harbours were approved with the aim of simplifying the application of the Model Rules and implementing the 'side-by-side agreement' reached in June 2025 within the G7, which will apply from 2026 to multinational groups with a U.S. parent company.

In the European Union, in December 2022, the Council approved Directive (EU) 2022/2523 on ensuring a global minimum level of taxation for multinational enterprise groups and large scale domestic groups in the Union, setting 1 January 2024 as the entry-into-force date of the new minimum taxation. The Directive implements the OECD Inclusive Framework Pillar Two rules within the European Union, while also extending their application to large domestic groups.

In Spain, on 20 December 2024, Law 7/2024 was approved, establishing a Supplementary Tax to ensure a global minimum level of taxation for multinational groups and large domestic groups, effective as from 1 January 2024. This Law transposes Directive (EU) 2022/2523 and also establishes a domestic supplementary tax aligned with the Pillar Two rules. In April 2025, Royal Decree 252/2025 was published, approving the implementing regulations of the Law.

With regard to other jurisdictions, the rules on the new global minimum tax are already in force in most of the main geographies in which the Group operates, with the exception of Mexico, Chile, and Argentina.

The Pillar Two rules require calculating, in each jurisdiction in which the Group operates, the effective tax rate resulting from comparing income tax expense with accounting profit, both subject to certain adjustments. If, in a given jurisdiction, this rate is below 15%, Banco Santander, as the ultimate parent entity, must pay the difference to the Spanish tax authorities as a supplementary tax, unless a domestic supplementary tax aligned with the Pillar Two rules (a qualified domestic tax) has been approved in that jurisdiction, in which case the amount will be paid to the local tax authorities.

Both Banco Santander, S.A., as the ultimate parent entity, and the subsidiaries resident in jurisdictions where a qualified domestic tax has been approved, have estimated the supplementary taxes accrued, taking into account the application of the transitional safe harbours in fiscal years 2024 and 2025.

These safe harbours mean that the supplementary tax, whether at the level of the parent entity or in jurisdictions that have adopted a qualified domestic tax, is not payable provided that any of the following conditions are met: (i) the effective tax rate calculated based on country-by-country reporting data exceeds 15% in 2024 and 16% in 2025; (ii) the Group's presence in a jurisdiction is not significant if below EUR 10 million and profit before tax is below EUR 1 million; or (iii) profit before tax is lower than the amount resulting from the sum of tangible fixed assets and employee expenses adjusted by a certain percentage that varies annually.

This supplementary tax expense recognized by the Group has not been significant, as the effective tax rates calculated in accordance with the Pillar Two rules in most of the jurisdictions in which the Group operates are above 15%. Nevertheless, the new regulations require the provision of a large amount of information to the tax authorities in the jurisdictions where the Group is present, broken down on an entity-by-entity basis, which involves a significant administrative burden.

g) Tax reforms

In 2025 and prior years, the following significant tax reforms were approved:

In Spain, in 2022, Law 38/2022 was approved, establishing a temporary levy payable by credit institutions and financial credit institutions in fiscal years 2023 and 2024. The levy amounted to 4.8% of the sum of net interest income and net fees and commissions from the activity carried out in Spain in the previous year. The payment obligation arose on the first day of each fiscal year. The expense recognized for this temporary levy amounted to EUR 224 million in 2023 and EUR 334 million in 2024. However, the tax authorities have audited both years and consider that an additional amount is payable due to differences in the criteria applied in determining the taxable base, which are currently being discussed by the Bank. Furthermore, the Law established, for 2023, a 50% limitation on the inclusion of individual tax losses in the taxable base of the Tax Consolidated Group, setting a 10-year period for the reversal of this positive adjustment.

On 20 December 2024, Law 7/2024 was approved, which, among other tax measures, introduced a tax on the net interest margin and commissions earned in Spanish territory by certain financial institutions, with accrual on 1 January of fiscal years 2025, 2026 and 2027. The taxable base, with certain changes compared to that of the temporary levy, is now calculated on an individual basis for each financial institution, and the tax liability is determined in accordance with a progressive rate scale ranging from 1% to 7%, after applying certain deductions. On 24 December 2024, Royal Decree-Law 9/2024 was published in the Official State Gazette, amending certain technical aspects of the tax and postponing its accrual to 31 January of those fiscal years. This Royal Decree-Law was abolished on 22 January 2025 and, therefore, no expense was recognized for the new tax in respect of 2024 income in accordance with the legislation in force at that time (EUR 392 million were paid during the year). In 2025, the expense corresponding to income accrued during the financial year, recognised as income tax, amounts to €353 million and will be paid in 2026. The Group considers that both the temporary levy and the tax on net interest margin and fees and commissions are contrary to the Spanish and European Union constitutional and legal principles and has therefore disputed the corresponding self-assessments, requesting a refund of the amounts paid.

Additionally, the aforementioned Law 7/2024 once again establishes, for fiscal years 2024 and 2025, a 50% limitation on the inclusion of individual tax losses in the taxable base of the Tax Consolidated Group, setting a 10-year period for the reversal of this positive adjustment. Likewise, this Law reintroduces the limits provided for in Royal Decree-Law 3/2016—which was declared unconstitutional by the Constitutional Court ruling of 18 January 2024—on the utilization of monetizable deferred tax assets and the offsetting of tax losses (with the limit reduced from 70% to 25%), as well as on the application of deductions to avoid double taxation (50%), and also reinstates the mandatory reversal of impairments on shareholdings that were deductible in prior years by third parties, regardless of any recovery in the value of the investees.

In Brazil, Law 14,467 enacted in 2022 with effect from 2025, amends the rules on the tax deductibility of credit provisions in financial institutions, bringing those rules closer to the accounting recognition criterion. In 2024, Law 15,078 was published, allowing the recovery of the accumulated balance of provisions of nondeductible loans at the end of 2024 within a seven-year period (with the option to extend to ten years) from January 2026.

In 2025, several Legislative Decrees and decisions of the Federal Supreme Court were published concerning the Financial Transactions Tax (IOF), amending the applicable rules and setting new rates for its various categories: (i) IOF Credit (local loans to legal entities increased from 1.88% to a maximum of 3.37% per annum); (ii) IOF Insurance (a 5% rate was introduced on the excess of certain contributions to life insurance policies); and (iii) IOF Foreign Exchange (payments for the import of services and royalties paid abroad rose from 0.38% to 3.5%).

In December 2023, Congress approved Constitutional Amendment 132/2023 on indirect taxation reform, initiating the legislative development process, which culminated in the enactment of Supplementary Laws 214/2025 in January 2025 and 227/2026 in January 2026. This reform replaces the various existing indirect taxes in Brazil, -applicable at the federal, regional and municipal levels-, with two taxes administered at federal level (contribution on goods and services and selective tax) and other administered at regional and municipal levels (tax on goods and services). The new system will be gradually implemented over a transitional period of 8 years (from 2026 to 2033).

In 2024, Law No. 14.973/2024 partially extended, until 31 December 2027, an optional social contribution regime for employees applicable to certain sectors of activity, allowing such contributions to be calculated as a percentage of gross income (ranging from 1% to 4.5%, depending on the sector), rather than under the general regime, which applies a 20% rate to employee payroll.

In November 2025, Law No. 15.270 was published which, among other measures, introduced a 10% withholding tax on ordinary dividends paid abroad as from 1 January 2026.

In December 2025, Supplementary Law No. 224 was enacted, which, among other measures: (i) increased the withholding tax on Interest on equity (juros sobre o capital próprio) from 15% to 17.5%; (ii) raised the CSLL rate applicable to non-bank financial institutions as from 1 April 2026 on a gradual basis: payment institutions to 12% in 2026 and 2027, and 15% as from 2028; and credit, financing and capitalisation companies to 17.5% in 2026 and 2027, and 20% as from 2028 (the rate for banks remains at 20% and for other financial institutions at 15%), and (iii) introduced an automatic 10% reduction in the amount of certain federal tax incentives as from 2026.

In Argentina, as from 23 December 2024, Tax for an Inclusive and Solidarity Argentina (PAIS), which imposed certain foreign currency purchasing operations in order to make payments abroad, has been eliminated. Likewise, General Resolution (AFIP) No. 5,554 repeals, with effect from 1 September 2024, the obligation to withhold VAT and income tax on electronic payments.

In Chile, Law 27,713 on Tax Compliance Obligations was published in October 2024, amending, among other instruments, the Tax Code, the Income Tax Law and the Value Added Tax Law. Additionally, in July 2024, Law No. 21,681 was published, which, among other measures, introduced a new Substitute Tax of Final Tax, allowing the distribution of taxable profits at a fixed rate of 12% until 31 January 2025, thereby reducing the fiscal cost of such distributions.

In Mexico, the Federal Revenue Law for Fiscal Year 2026 was published in November 2025, limiting the deductibility of contributions paid to the Institute for the Protection of Bank Savings (IPAB) to 25% of their amount and amending the tax treatment of loan loss provisions, bringing them into line with the regime applicable to other entities.

In the United States, Law 119-21 ('One, Big, Beautiful Bill Act') was passed in July 2025, introducing significant regulatory changes. Notable among these are the repeal of tax credits linked to electric vehicles as from 1 October 2025 (while preserving those already generated), the elimination of the obligation to capitalise and amortise the costs of in-house software development (which will now be deductible), and the reintroduction of accelerated tax depreciation for investments in certain tangible assets.

In Portugal, a gradual reduction of the corporate income tax rate has been approved, falling from 20% in 2025 to 19% in 2026, 18% in 2027 and 17% in 2028 and subsequent years. Including the municipal surtax of up to 1.5% and the state surtax of up to 9%, this results in an aggregate combined rate of 30.50%, 29.50%, 28.50% and 27.50%, respectively.

In Poland, one of the most significant changes to the tax framework is the increase in the corporate income tax rate for banks, from 19% to 30% in 2026, followed by a reduction to 26% in 2027 and 23% in 2028 and subsequent years.

In Germany, the Tax Investment Programme to Strengthen Germany's Economic Base was passed in July. It provides for a gradual annual one-percentage-point reduction in the corporate income tax rate from 2028, falling from the current 15% to 10% by 2032. In Germany, the combined corporate income tax and municipal trade tax rate—which also applies to business profits—is currently 32.45% and will decrease to 27.18% by 2032.

h) Other information

In compliance with the disclosure requirement established in the listing rules instrument 2005 published by the UK Financial Conduct Authority, it is hereby stated that shareholders of the Bank resident in the United Kingdom will be entitled to a tax credit for taxes paid abroad in respect of withholdings that the Bank has to pay on the dividends to be paid to such shareholders if the total income of the dividend exceeds the amount of exempt dividends of GBP 500 for the year 2025/26 (GBP 500 for the year 2024/25). The shareholders of the Bank resident in the United Kingdom who hold their ownership interest in the Bank through Santander Nominee Service will be informed directly of the amount thus withheld and of any other data they may require to complete their tax returns in the United Kingdom. The other shareholders of the Bank resident in the United Kingdom should contact their bank or securities broker.

Banco Santander, S.A., is part of the Large Business Forum and has adhered since 2010 to the Code of Good Tax Practices in Spain. Also Santander UK is a member of the HMRC's (His Majesty's Revenue and Customs) Code of Practice on Taxation in the United Kingdom and Santander Portugal has adhered to the Code of Good Tax Practices in Portugal, actively participating in the cooperative compliance programs being developed by these Tax Administrations.

28. Non-controlling interests

Non-controlling interests include the net amount of the equity of subsidiaries attributable to equity instruments that do not belong, directly or indirectly, to the Bank, including the portion attributed to them of profit for the year.

a) Breakdown

The detail, by Group company, of 'Equity - Non-controlling interests' is as follows:

EUR million

	2025	2024	2023
Santander Bank Polska S.A.	2,670	2,320	1,934
Grupo PSA	1,815	1,725	1,590
Banco Santander - Chile	1,422	1,364	1,379
Banco Santander (Brasil) S.A.	1,397	1,257	1,493
Other companies[A]	875	890	1,315
	8,179	**7,556**	**7,711**
Profit/(Loss) for the year attributable to non-controlling interests	1,399	1,170	1,107
Of which:			
Grupo PSA	*230*	*217*	*285*
Banco Santander - Chile	*313*	*271*	*235*
Banco Santander (Brasil) S.A.	*184*	*233*	*182*
Santander Bank Polska S.A.	*604*	*413*	*347*
Other companies	*68*	*36*	*58*
TOTAL	**9,578**	**8,726**	**8,818**

A. It included, as of 31 December 2023, perpetual Santander UK plc equity instruments convertible at the option of Santander UK plc into preferred shares of the entity itself amounting EUR 576 million. During 2024, the last outstanding issuance held by third parties for GBP 500 million (EUR 590 million) was redeemed.

b) Changes

The changes in Non-controlling interests are summarised as follows:

EUR million

	2025	2024	2023
Balance at beginning of year	8,726	8,818	8,481
Other comprehensive income	73	(461)	297
Other	779	369	40
Profit attributable to non-controlling interests	*1,399*	*1,170*	*1,107*
Modification of participation rates[A]	*339*	*395*	*(258)*
Change of perimeter	*(5)*	*(8)*	*(364)*
Dividends paid to minority shareholders	*(896)*	*(660)*	*(748)*
Changes in capital and other concepts[B]	*(58)*	*(528)*	*303*
Balance at end of year	**9,578**	**8,726**	**8,818**

A. Include the effects of the accelerated placements of 3.5% and 5.2% of the share capital of Santander Bank Polska S.A. in 2025 and 2024, respectively, and the public offer for the acquisition of shares of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México that occurred in 2023 (see note 3.b).

B. Includes the effects of the amortization of AT1 UK by EUR 590 million at closing of fiscal year 2024.

The foregoing changes are shown in the consolidated statement of changes in total equity.

c) Other information

The financial information on the subsidiaries with significant non-controlling interests at 31 December 2025 is summarised below:

EUR million[A]

	Santander Bank Polska S.A.	Banco Santander (Brasil) S.A.	Banco Santander - Chile	Grupo PSA
Total assets	78,186	209,453	68,205	47,826
Total liabilities	70,380	193,380	62,604	43,717
Net assets	**7,806**	**16,073**	**5,601**	**4,109**
Total income	3,724	12,602	2,714	1,305
Total profit	**1,528**	**2,388**	**1,043**	**460**

A. Information prepared using corporate management criteria, which may not coincide with those published individually by each entity.

29. Other comprehensive income

The balances of 'Other comprehensive income' include the amounts, net of the related tax effect, of the adjustments to assets and liabilities recognised in equity through the consolidated statement of recognised income and expense. The amounts arising from subsidiaries are presented, on a line by line basis, in the appropriate items according to their nature.

Respect to items that may be reclassified to profit or loss, the consolidated statement of recognised income and expense includes changes in other comprehensive income as follows:

- Revaluation gains (losses): includes the amount of the income, net of the expenses incurred in the year, recognised directly in equity. The amounts recognised in equity in the year remain under this item, even if in the same year they are transferred to the income statement or to the initial carrying amount of the assets or liabilities or are reclassified to another line item.
- Amounts transferred to income statement: includes the amount of the revaluation gains and losses previously recognised in equity, even in the same year, which are recognised in the income statement.
- Amounts transferred to initial carrying amount of hedged items: includes the amount of the revaluation gains and losses previously recognised in equity, even in the same year, which are recognised in the initial carrying amount of assets or liabilities as a result of cash flow hedges.
- Other reclassifications: includes the amount of the transfers made in the year between the different 'Other comprehensive income' items.

a) Breakdown of Other comprehensive income - Items that will not be reclassified in results and Items that can be classified in results

EUR million[A]

	2025	2024	2023
Other comprehensive income	**(37,974)**	**(36,595)**	**(35,020)**
Items that will not be reclassified to profit or loss	**(4,121)**	**(4,757)**	**(5,212)**

Share in other income and expenses recognised in investments, joint ventures and associates	(395)	(427)	(319)

A. Net amount of taxes and minorities

b) Other comprehensive income- Items not reclassified to profit or loss – Actuarial gains or (-) losses on defined benefit pension plans

'Other comprehensive income —Items not reclassified to profit or loss— Actuarial gains or (-) losses on defined benefit pension plans' include the actuarial gains and losses and the return on plan assets, less the administrative expenses and taxes inherent to the plan, and any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset), attributed to the group net of taxes.

In 2025, the amount of actuarial losses (net of actuarial gains) recognized in the consolidated statement of recognised income was EUR 73 million, which corresponds to:

- In first place, due to the addition against equity of 2025 amounting to EUR 220 million - see note 25.b -, with the following breakdown:
  - Increase of EUR 117 million in the cumulative actuarial losses relating to the Group´s businesses in the UK, mainly due to the evolution of the asset portfolio. These losses have been partially offset by the evolution experienced in the discount rate-increase from 5.54% to 5.58%- in long-term inflation -decrease from 3.11% to 2.90%- and in other demographic hypotheses.
  - Increase of EUR 116 million in accumulated actuarial losses corresponding to the Group's business in Brazil, mainly due to the collective experience and the evolution of the asset portfolio. These losses have been partially offset by the evolution experienced by the discount rate -increase from 10.58% to 10.65% in the main pension benefits and 10.50% to 10.52% in medical benefits-.
  - Decrease of EUR 33 million in the accumulates actuarial losses relating to the Group´s entities in Spain, mainly due to the evolution experienced by the discount rate -increase from 3.00% to 3.75%-.
  - Increase of EUR 20 million in the accumulated actuarial losses corresponding to the Group's businesses in other geographical areas.
- In second place, due to the evolution of exchange rates, a EUR 147 million decrease.

c) Other comprehensive income - Items that will not be reclassified in results - Changes in the fair value of equity instruments measured at fair value with changes in other comprehensive income

Since the entry into force of IFRS 9, no impairment analysis is performed of equity instruments recognised under 'Other comprehensive income'. IFRS 9 eliminates the need to carry out the impairment estimate on this class of equity instruments and the reclassification to profit and loss on the disposal of these assets, being recognised at fair value with changes in equity.

The following is a breakdown of the composition of the balance as of 31 December 2025, 2024 and 2023 under 'Other comprehensive income - Items that will not be reclassified to profit or loss - Changes in the fair value of equity instruments measured at fair value with changes in other global result' depending on the geographical origin of the issuer:

d) Other comprehensive income - Items that may be reclassified to profit or loss - Hedge of net investments in foreign operations (effective portion) and exchange differences

The change in 2025 reflects the depreciation of the US dollar, pound sterling, Argentine peso, Chilean peso and Brazilian real and the positive effect of the appreciation of the Mexican peso, whereas the change in 2024 reflected the positive effect of the appreciation of pound sterling, the US dollar and Polish zloty and the negative effect of the depreciation of the Brazilian real, Argentine peso, Mexican peso and Chilean peso. The change in 2023 reflected the positive effect of the appreciation of the Brazilian real, pound sterling, Polish zloty and the Mexican peso and the negative effect of the depreciation of the US dollar, Argentine peso and Chilean peso.

Of the change in the balance in these years, a loss of EUR 287 million, a loss of EUR 568 million and a profit of EUR 249 million in 2025, 2024 and 2023, respectively relate to the measurement of goodwill.

The detail, by country is as follows:

EUR million

	2025	2024	2023
Net balance at end of year	(32,818)	(30,377)	(28,194)
Of which:

e) Other comprehensive income -Items that may be reclassified to profit or loss - Hedging derivatives – Cash flow hedges (Effective portion)

Other comprehensive income – Items that may be reclassified to profit or loss - Cash flow hedges includes the gains or losses attributable to hedging instruments that qualify as effective hedges. These amounts will remain under this heading until they are recognised in the consolidated income statement in the periods in which the hedged items affect it.

f) Other comprehensive income - Items that may be reclassified to profit or loss – Changes in the fair value of debt instruments measured at fair value with changes in other comprehensive income

Includes the net amount of unrealised changes in the fair value of assets classified as Changes in the fair value of debt instruments measured at fair value with changes in other comprehensive income (see note 7).

The breakdown, by type of instrument and geographical origin of the issuer, of 'Other comprehensive income – Items that may be reclassified to profit or loss - Changes in the fair value of debt instruments measured at fair value with changes in other comprehensive income' at 31 December 2025, 2024 and 2023 is as follows:

The Group estimates the expected losses on debt instruments measured at fair value with changes in other comprehensive income. These losses are recorded with a charge to the consolidated income statement for the period.

At the end of the year 2025, the Group recorded a provision of EUR 29 million under the heading 'Impairment or reversal of impairment on financial assets not measured at fair value through profit or loss'. In 2024, the Group did not record any provision in this regard and at the end of the year 2023, the Group recorded EUR 24 million.

g) Other comprehensive income - Items that may be reclassified to profit or loss and Items not reclassified to profit or loss - Other recognised income and expense of investments in subsidiaries, joint ventures and associates

At 31 December 2025, the heading includes a negative amount of EUR 394 million (EUR 428 million and EUR 318 million in 2024 and 2023, respectively). Of the variation in the balance of said years, a gain of EUR 17 million, EUR 45 million EUR 44 million and has been transferred to results in the years 2025, 2024 and 2023, respectively.

30. Shareholders' equity

The changes in Shareholders' equity are presented in the consolidated statement of changes in total equity. Significant information on certain items of Shareholders' equity and the changes during the year are set forth below.

31. Issued capital

a) Changes

At 31 December 2022, Banco Santander's share capital consisted of EUR 8,397 million, represented by 16,794,401,584 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

On 21 March 2023, there was a capital reduction amounting EUR 170,203,286 through the redemption of 340,406,572 shares, corresponding to the share buyback programme carried out in 2022 and ended in January 2023.

Likewise, on 30 June 2023, there was a capital reduction of EUR 134,924,476.50 through the redemption of 269,848,953 shares, corresponding to the share buyback programme during the first half of 2023.

Therefore, Banco Santander's share capital at 31 December 2023 consisted of EUR 8,092 million, represented by 16,184,146,059 shares of EUR 0.50 of nominal value each and all of them of a unique class and series; including 286,842,316 shares corresponding to the first buyback programme of 2023 (see note 1.g.).

On 5 February 2024, a capital reduction of EUR179,283,743.50 took place through the redemption of 358,567,487 shares, corresponding to the share buyback programme carried out in 2023 and ended in January 2024.

On 1 July 2024, a capital reduction of EUR 165,652,500 took place through the redemption of 331,305,000 shares, corresponding to he share buyback programme carried out between February and June 2024.

On 20 December 2024, a capital reduction of EUR 170,890,625 took place through the redemption of 341,781,250 shares, corresponding to he share buyback programme carried out during the second semester of 2024.

Therefore, Banco Santander's share capital at 31 December 2024 consisted of EUR 7,576 million, represented by 15,152,492,322 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

On 3 June 2025, there was a capital reduction amounting to EUR 133,583,475 through the redemption of 267,166,950 shares, corresponding to the share buyback programme carried out between February and June 2025.

On 23 December 2025, a capital reduction of EUR 98,002,935 took place through the redemption of 196,005,870 shares, corresponding to the share buyback programme carried out during the second semester of 2025.

Aforementioned operations have not entailed the return of contributions to the shareholders as Banco Santander was the owner of the redeemed shares.

Therefore, Banco Santander's share capital at 31 December 2025 consisted of EUR 7,345 million, represented by 14,689,319,502 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

Banco Santander's shares are listed on the Spanish Stock Market Interconnection System and on the New York, London, Mexico and Warsaw Stock Exchanges, and all of them have the same features and rights. Santander shares are listed on the London Stock Exchange under Crest Depository Interest (CDI), each CDI representing one Bank's share. They are also listed on the New York Stock Exchange under American Depositary Shares (ADS), each ADS representing one share. Additionally, Banco Santander's shares were listed on the traditional listing of the Mexican Stock Exchange (BMV) and since 29 December 2023, they were listed only in the International Quotation System of said stock exchange.

As of 31 December 2025, no Banco Santander shareholder individually held more than 3% of its total share capital (which is the threshold generally provided for in Spanish regulations for mandatory notification of a significant participation in a listed company). Even though at 31 December 2025, certain custodians appeared in our shareholder registry as holding more than 3% of our share capital, we understand that those shares were held in custody on behalf of other investors, none of whom exceeded that threshold individually. These custodians were State Street Bank (13.90%), Chase Nominees Limited (7.50%), The Bank of New York Mellon Corporation (7.18%),Citibank (6.40%), BNP Paribas (3.74%), Caceis Bank (3.57%) y The Northern Trust (3.06%).

At 31 December 2025, neither Banco Santander's shareholder registry nor the CNMV's registry showed any shareholder residing in a non-cooperative jurisdiction with a shareholding equal to, or greater than, 1% of our share capital (which is the other threshold applicable under Spanish regulations).

b) Other considerations

Under Spanish law, only shareholders at the general meeting have the authority to increase share capital. However, they may delegate the authority to approve or execute capital increases to the board of directors. Banco Santander´s Bylaws are fully aligned with Spanish law and do not establish any different conditions for share capital increases.

At 31 December 2025 the shares of the following companies were listed on official stock markets: Banco Santander - Chile; Banco Santander (Brasil) S.A. and Santander Bank Polska S.A.

At 31 December 2025 the number of Banco Santander shares owned by third parties and managed by Group management companies (mainly portfolio, collective investment undertaking and pension fund managers) or jointly managed was 33 million shares, which represented 0.22% of Banco Santander's share capital (40 and 36 million shares, representing 0.26% and 0.22% of the share capital in 2024 and 2023, respectively). In addition, the number of Banco Santander shares owned by third parties and received as security was 28 million shares (equal to 0.19% of the Bank's share capital).

At 31 December 2025 the capital increases in progress at Group companies and the additional capital authorised by their shareholders at the respective general meetings were not material at Group level (see appendix V)

32. Share premium

Share premium includes the amount paid up by the Bank's shareholders in capital issues in excess of the par value.

The Corporate Enterprises Act expressly permits the use of the share premium account balance to increase capital at the entities at which it is recognised and does not establish any specific restrictions as to its use.

The change in the balance of share premium corresponds to the capital reductions detailed in note 31.a).

The decreased produced in 2023 by an amount of EUR 1,595 million was the consequence of the difference between the purchase value of the redeemed shares (EUR 1,900 million) and the par value of said shares (EUR 305 million) (see note 4.a and consolidated statements of changes in total equity) as a consequence of the capital decreases described in note 31.a.

The decrease produced in 2024 by an amount of EUR 3,778 million was the consequence of the difference between the purchase value of the redeemed shares (EUR 4,294 million) and the par value of said shares (EUR 516 million) (see note 4.a and consolidated statements of changes in total equity) as a consequence of the capital decreases described in note 31.a.

The decrease produced in 2025 by an amount of EUR 3,055 million has been the consequence of the difference between the purchase value of the redeemed shares (EUR 3,287 million) and the par value of said shares (EUR 231 million) (see note 4.a and consolidated statements of changes in total equity) as a consequence of the capital decreases described in note 31.a.

Likewise, in accordance with the applicable legislation, a reserve has been provided in 2024 for amortized capital charged to the issue premium for an amount equal to the nominal value of said amortized shares ascending to EUR 231 million (EUR 516 million and EUR 305 million euros in 2024 and 2023 respectively).

33. Accumulated retained earnings

a) Definitions

The balance of 'Equity - Accumulated gains and Other reserves' includes the net amount of the accumulated results (profits or losses) recognised in previous years through the consolidated income statement which in the profit distribution were allocated in equity, the expenses of own equity instrument issues, the differences between the amount for which the treasury shares are sold and their acquisition price, as well as the net amount of the results accumulated in previous years, generated by the result of non-current assets held for sale, recognised through the consolidated income statement.

b) Breakdown

The detail of Accumulated retained earnings and Reserves of entities accounted for using the equity method is as follows:

EUR million

	2025	2024	2023
Restricted reserves	**3,328**	**3,084**	**2,899**

Reserves of subsidiaries	**47,937**	**47,249**	**47,669**
Reserves of entities accounted for using the equity method	**1,643**	**1,831**	**1,762**
	84,427	**76,350**	**68,363**

A. The board of directors has proposed to the general shareholders' meeting the reclassification of the excess that the amount of the balance of the legal reserve account shows over the figure that is equivalent to 20% of the resulting share capital after the executed capital reductions, to be included in the voluntary reserves account.

B. In accordance with the commercial regulations in force in Spain.

i. Legal reserve

Under the Consolidated Spanish Corporate Enterprises Act, 10% of net profit for each year must be transferred to the legal reserve. These transfers must be made until the balance of this reserve reaches 20% of the share capital. The legal reserve can be used to increase capital provided that the remaining reserve balance does not fall below 10% of the increased share capital amount.

Consequently, once again, after the capital reductions described in note 31 had been carried out, the balance of the legal reserve met the percentage of 20% of the share capital, and at 31 December 2025 the Legal reserve was at the stipulated level.

ii. Reserve for treasury shares

According to the Corporate Enterprises Act, an unavailable reserve equivalent to the amount for which Banco Santander's shares owned by subsidiaries are recorded. This reservation shall be freely available when the circumstances which have obliged its constitution disappear. In addition, this reserve covers the outstanding balance of loans granted by the Group with Banco Santander's share guarantee and the amount equivalent to the credits granted by the Group companies to third parties for the acquisition of own shares.

iii. Revaluation reserve Royal Decree Law 7/1996, of 7 June

The balance of Revaluation reserve Royal Decree-Law 7/1996 can be used, free of tax, to increase share capital. From 1 January 2007, the balance of this account can be taken to unrestricted reserves, provided that the monetary surplus has been realised. The surplus will be deemed to have been realised in respect of the portion on which depreciation has been taken for accounting purposes or when the revalued assets have been transferred or derecognised.

If the balance of this reserve were used in a manner other than that provided for in Royal Decree law 7/1996, of 7 June, it would be subject to taxation.

iv. Reserves of subsidiaries

The detail, by company, of Reserves of subsidiaries, based on the companies' contribution to the Group (considering the effect of consolidation adjustments) is as follows:

EUR million

	2025	2024	2023
Banco Santander (Brasil) S.A. (Consolidated Group)	16,085	15,107	14,512
Santander UK Group	7,973	8,576	8,700
Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México	4,977	5,248	5,684
Santander Consumer Finance Group	4,804	4,729	4,344
Banco Santander - Chile	4,560	4,250	4,112
Banco Santander Argentina S.A.	3,217	2,892	2,813
Banco Santander Totta, S.A. (Consolidated Group)	2,726	2,766	2,626
Santander Bank Polska S.A.	2,875	2,890	2,535
Grupo Santander Holdings USA	63	187	1,893
Santander Investment, S.A.	1,424	1,217	1,215
Santander Seguros y Reaseguros, Compañía Aseguradora, S.A.	845	836	1,044
Banco Santander International SA (former Banco Santander (Suisse) S.A)	450	397	346
Other companies and consolidation adjustments	(2,062)	(1,846)	(2,155)
	47,937	**47,249**	**47,669**
Of which, restricted	*4,722*	*4,175*	*3,870*

34. Other equity instruments and own shares

a) Equity instruments issued not capital and other equity instruments

Other equity instruments includes the equity component of compound financial instruments, the increase in equity due to personnel remuneration, and other items not recognised in other 'Shareholders' equity' items.

On 8 September 2017, Banco Santander, S.A. issued contingent redeemable perpetual bonds (the fidelity bonds) amounting to EUR 981 million nominal value EUR - 686 million fair value -.

On 15 December 2024, Banco Santander, S.A., proceeded to redeem in advance voluntarily all of said bonds in circulation.

Additionally, at 31 December 2025 the Group had other equity instruments amounting to EUR 273 million.

b) Own shares

'Shareholders' equity - Own shares' includes the amount of own equity instruments held by all the Group entities.

Transactions involving own equity instruments, including their issuance and cancellation, are recognised directly in equity, and no profit or loss may be recognised on these transactions. The costs of any transaction involving own equity instruments are deducted directly from equity, net of any related tax effect.

At 31 December 2023, the number of treasury shares held by the Group was 297,815,673 (1.84% of the issued share capital).

During 2024, 930,610,636 shares of the Bank were acquired at an average price of EUR 4.34 per share, of which 403,030,171 relate to the Share Buyback Programme carried out during the first half of 2025, and 341,781,250 relate to the Share Buyback Programme started in September. Likewise, 1,031,653,737 shares were amortised (note 31) and 181,243,113 shares at an average price of EUR 4.22 per share were transferred, of which 22,167,105 shares correspond to the donation made by Banco Santander to Fundación Banco Santander with extraordinary character.

At 31 December 2024, the number of treasury shares held by the Group was 15,529,459 (0.102% of the issued share capital).

During 2025, 584,363,745 shares of the Bank have been acquired at an average price of EUR 6.98 per share, of which 267,166,950 relate to the Share Buyback Programme carried out during the first half of 2025, and 196,005,870 relate to the new Share Buyback Programme started in August. Likewise, 463,172,820 shares have been amortised (note 31) and 125,643,093 shares at an average price of EUR 6.48 per share have been transferred.

At 31 December 2025, the Group holds 11,077,291 shares of the Bank's issued share capital (0.075%).

The effect on equity, net of tax, arising from the purchase and sale of Bank shares is of EUR 34 million profit in 2025 (EUR 8 million and EUR 13 million profit in 2024 and 2023, respectively).

35. Memorandum items

Memorandum items relates to balances representing rights, obligations and other legal situations that in the future may have an impact on net assets, as well as any other balances needed to reflect all transactions performed by the consolidated entities although they may not impinge on their net assets.

a) Guarantees and contingent commitments granted

Contingent liabilities includes all transactions under which an entity guarantees the obligations of a third party and which result from financial guarantees granted by the entity or from other types of contracts. The detail is as follows:

	2025	2024	2023
Loans commitment granted	**321,234**	**302,861**	**279,589**
Of which impaired	*345*	*511*	*406*
Financial guarantees granted	**17,449**	**16,901**	**15,435**
Of which impaired	*332*	*217*	*578*
Financial guarantees	17,437	16,887	15,400
Credit derivatives sold	12	14	35
Other commitments granted	**148,118**	**134,493**	**113,273**
Of which impaired	*668*	*793*	*542*
Technical guarantees	62,161	61,551	57,363
Other	85,957	72,942	55,910

The breakdown as at 31 December 2025 of the exposures and the provision fund out of balance sheet by impairment stage is EUR 464,215 million and EUR 338 million (EUR 435,147 million and EUR 305 million in 2024 and EUR 398,243 million and EUR 302 million in 2023) in stage 1, EUR 21,241 million and EUR 206 million (EUR 17,587 million and EUR 192 million in 2024 and EUR 8,528 million and EUR 174 million in 2023) in stage 2 and EUR 1,345 million and EUR 169 million (EUR 1,521 million and EUR 213 million in 2024 and EUR 1,526 million and EUR 226 million in 2023) in stage 3, respectively.

Income from guarantee instruments is recognised under 'Fee and commission income' in the consolidated income statements and is calculated by applying the rate established in the related contract to the nominal amount of the guarantee.

i. Loan commitments granted

Loan commitments granted: firm commitments of grating of credit under predefined terms and conditions, except for those that comply with the definition of derivatives as these can be settled in cash or through the delivery of issuance of another financial instrument. They include stand-by credit lines and long-term deposits.

ii. Financial guarantees granted

Financial guarantees includes, inter alia, financial guarantee contracts such as financial bank guarantees, credit derivatives sold, and risks arising from derivatives arranged for the account of third parties.

iii. Other commitments granted

Other contingent liabilities include all commitments that could give rise to the recognition of financial assets not included in the above items, such as technical guarantees and guarantees for the import and export of goods and services.

b) Memorandum items

i. Off-balance-sheet funds under management

The detail of off-balance-sheet funds managed by the Group and by joint ventures is as follows:

EUR million

	2025	2024	2023
Investment funds	197,346	178,840	165,174
Pension funds	16,112	15,646	14,831
Assets under management	43,974	35,999	29,732
	257,432	230,485	209,737

ii. Non-managed marketed funds

Additionally, at 31 December 2025 there are non-managed marketed funds totalling EUR 73,173 million (EUR 62,002 million and EUR 50,036 million at 31 December 2024 and 2023, respectively).

c) Third-party securities held in custody

At 31 December 2025 the Group held in custody debt securities and equity instruments totalling EUR 306,723 million (EUR 292,216 million and EUR 268,338 million at 31 December 2024 and 2023, respectively) entrusted to it by third parties.

36. Hedging derivatives

Grupo Santander, within its financial risk management strategy, and in order to reduce asymmetries in the accounting treatment of its operations, enters into hedging derivatives on interest, exchange rate, credit risk or variation of stock prices, depending on the nature of the risk covered.

Based on its objective, Grupo Santander classifies its hedges in the following categories:

- Cash flow hedges: cover the exposure to the variation of the cash flows associated with an asset, liability or a highly probable forecast transaction. This cover the variable-rate issues in foreign currencies, fixed-rate issues in non-local currency, variable-rate interbank financing and variable-rate assets (bonds, commercial loans, mortgages, etc.).

- Fair value hedges: cover the exposure to the variation in the fair value of assets or liabilities, attributable to an identified and hedged risk. This covers the interest risk of assets or liabilities (bonds, loans, bills, issues, deposits, etc.) with coupons or fixed interest rates, interests in entities, issues in foreign currencies and deposits or other fixed rate liabilities.

- Hedging of net investments abroad: cover the exchange rate risk of the investments in subsidiaries domiciled in a country with a different currency from the functional one of the Group.

The following tables contains the detail of the hedging derivatives according to the type of hedging, the hedge risk and the main products used as of 31 December 2025, 2024 and 2023:

EUR million

	2025				
		Carrying amount

Considering the main entities or groups within the Group by the weight of their hedging, the main types of hedging that are being carried out in Santander UK Group Holdings plc group and Banco Santander, S.A.

Santander UK Group Holdings plc group enters into fair value and cash flow hedging derivatives depending on the exposure of the underlying. Only designated risks are hedged and therefore other risks, such as credit risk, are managed but not hedged. When contracting derivatives, Santander UK applies the same credit risk management procedures that it uses for ordinary lending activity.

Within fair value hedges, Santander UK Group Holdings plc group has portfolios of assets and liabilities at fixed rate that are exposed to changes in fair value due to changes in market interest rates. These positions are managed by contracting mainly interest rate swaps. Effectiveness is assessed by comparing the changes in the fair value of these portfolios generated by the hedged risk with the changes in the fair value of the derivatives contracted.

Santander UK Group Holdings plc group also has access to international markets to obtain financing by issuing fixed-rate debt or investing in fixed rate debt of other issuers, in its functional currency and other currencies. As such, they are exposed to changes in interest rates and exchange rates, mainly in EUR and USD. This risk is mitigated with cross currency swaps e interest rate swaps in which they pay a fixed rate and receive a variable rate. Effectiveness is evaluated using linear regression techniques to compare changes in the fair value of the debt at interest and exchange rates with changes in the fair value of interest rate swaps or cross currency swaps.

Within the cash flow hedges, Santander UK Group Holdings plc group has portfolios of assets and liabilities at variable rates, normally at SONIA or BoE base rate. To mitigate this market rate variability risk, it contracts interest rate swaps.

As Santander UK Group Holdings plc group obtains financing in the international markets, it assumes a significant exposure to currency risk mainly USD and EUR. In addition, it also holds debt securities for liquidity purposes which assume exposure mainly in JPY, CAD and CHF. To manage this exchange rate risk, Spot, Forward y Cross Currency Swap are contracted to match the cash flow profile and the maturity of the estimated interest and principal repayments of the hedged item.

Effectiveness is assessed by comparing changes in the fair value of the derivatives with changes in the fair value of the hedged item attributable to the hedged risk by applying a hypothetical derivative method using linear regression techniques.

It also has inflation risk hedges, which arise from UK bonds linked to UK inflation and are hedged using inflation swaps.

Effectiveness is assessed by comparing changes in the fair value of the inflation swap with the changes in the fair value of the hedged item attributable to the hedged risk, applying the hypothetical derivative method using linear regression techniques.

In addition, within the hedges that cover equity risk, Santander UK Group Holdings plc group offers employees the opportunity to purchase shares of the Bank at a discount under the Sharesave Scheme, exposing the Bank to share price risk. As such, options are purchased allowing them to purchase shares at a pre-set price.

Banco Santander, S.A. covers the risks of its balance sheet in a variety of ways. On the one hand, documented as fair value hedges, it covers the interest rate and foreign exchange risk of fixed-income portfolios at a fixed rate (REPOs are included in this category). Resulting, in an exposure to changes in their fair value due to variations in market conditions based on the various risks hedged, which has an impact on Banco Santander's income statement.

To mitigate these risks, Banco Santander contracts derivatives, mainly Interest Rate Swaps, Cross Currency Swaps, Cap&floors and Forex Forward.

On the other hand, the interest and exchange rate risk of loans granted to corporate clients at a fixed rate or variable rate is covered. These hedges, are carried out through interest rate swaps, cross currency swaps and exchange rate derivatives (forex swaps and forex forward).

In addition, Banco Santander, S.A. manages the interest and exchange risk of debt issues in its various categories (issuing covered bonds, perpetual, subordinated and senior bond) and in different currencies, denominated at fixed rates, and therefore subject to changes in their fair value. These issues are covered through interest rate swaps and cross currency swaps.

The methodology used by Banco Santander, S.A. to measure the effectiveness of fair value hedges is based on comparing the market values of the hedged items (based on the objective risk of the hedge) and of the hedging instruments in order to analyse whether the changes in the market value of the hedged items are offset by the market value of the hedging instruments, thereby mitigating the hedged risk and minimizing volatility in the income statement.

Prospectively, the same analysis is performed, measuring the theoretical market values in the event of parallel variations in the market curves of a positive basis point.

There is a macro hedge of structured loans in which the interest rate risk of fixed-rate loans (mortgage, personal or with other guarantees) granted to legal entities in commercial or corporate banking and wealth clients in the medium-long term is hedged. This hedge is instrumented as a macro hedge of fair value, the main hedging instruments being Interest Rate Swap and Cap&floors. In case of total or partial cancellation or early repayment, the customer is obliged to pay/receive the cost/income of the cancellation of the interest rate risk hedge managed by the Bank.

Regarding cash flow hedges, the objective is to hedge the cash flow exposure to changes in interest rates and exchange rates.

For retrospective purposes, the hypothetical derivative methodology is used to measure effectiveness. By means of this methodology, the hedged risk is modelled as a derivative instrument -not real-, created exclusively for the purpose of measuring the effectiveness of the hedge, and which must comply with the fact that its main characteristics coincide with the critical terms of the hedged item throughout the period for which the hedging relationship is designated. This hypothetical derivative does not incorporate characteristics that are exclusive to the hedging instrument. Additionally, it is worth mentioning that any risk component not associated with the hedged objective risk and effectively documented at the beginning of the hedge is excluded for the purpose of calculating the effectiveness. The market value of the hypothetical derivative that replicates the hedged item is compared with the market value of the hedging instrument, verifying that the hedged risk is effectively mitigated and that the impact on the income statement due to potential ineffectiveness is residual.

Prospectively, the variations in the market values of the hedging instrument and the hedged item (represented by the hypothetical derivative) are measured in the event of parallel shifts of a positive basis point in the affected market curves.

There is another macro-hedge, this time of cash flows, the purpose of which is to actively manage the risk-free interest rate risk (excluding credit risk) of a portion of the floating rate assets of Banco Santander, S.A., through the arrangement of interest rate derivatives whereby the bank exchanges floating rate interest flows for others at a fixed rate agreed at the time the transactions are arranged. The items affected by the Macro-hedging have been designated as those in which their cash flows are exposed to interest rate risk, specifically the floating rate mortgages of the Banco Santander, S.A. network referenced to Euribor 12 Months or Euribor Mortgage, with annual renewal of rates, classified as sound risk and which do not have a contractual floor (or, if not, this floor is not activated). The hedged position affecting the Macro Cash Flow Hedge at the present time is near to EUR 5,000 million.

Regarding net foreign investments hedges, basically, they are allocated in Banco Santander, S.A. and Santander Consumer Finance Group. Grupo Santander assumes as a priority risk management objective to minimize -to the limit determined by the Group's Financial Management- the impact on the calculation of the capital ratio of its permanent investments included within the Group's consolidation perimeter, and whose shares or equity interests are legally denominated in a currency other than that of the Group's parent company. For this purpose, financial instruments (generally derivatives) are contracted to hedge the impact on the capital ratio of changes in forward exchange rates. Grupo Santander mainly hedges the risk for the following currencies: BRL, CLP, MXN, CAD, COP, CNY, GBP, CHF, NOK, USD, PLN, UYU and PEN. The instruments used to hedge the risk of these investments are forex swaps, forex forward and spot currency purchases/sales.

For this type of hedges, ineffectiveness scenarios are considered to be of low probability, given that the hedging instrument is designated considering the position determined and the spot rate at which the position is located.

The following table sets out the maturity profile of the hedging instruments used in Grupo Santander non-dynamic hedging strategies:

Other geographies

Consumer Group entities mainly have loans portfolios at fixed interest rates and are therefore, exposed to changes in fair value due to movements in market interest rates. The entities manage this risk by contracting interest rate swaps in which they pay a fixed rate and receive a variable rate. Interest rate risk is the only one hedged and, therefore, other risks, such as credit risk, are managed but not hedged by the entities. The interest rate risk component is determined as the change in fair value of fixed rate loans arising solely from changes in a reference rate. This strategy is designated as a fair value hedge and its effectiveness is assessed by comparing changes in the fair value of loans attributable to changes in reference interest rates with changes in the fair value of interest rate swaps.

In addition, in order to access international markets with the aim of obtaining sources of financing, some Consumer Group´s entities issue fixed rate debt in their own currency and in other currencies that differ from their functional currency. Therefore, they are exposed to changes in both interest rates and exchange rates, which they mitigate with derivatives (interest rate swaps, fx forward and cross currency swaps) in which they receive a fixed interest rate and pay a variable interest rate, implemented with a fair value hedge.

The cash flow hedges of the Grupo Santander´s entities hedge the foreign currency risk of loans and financing.

Finally, it has hedges of net investments abroad to hedge the foreign exchange risk of the shareholding in NOK, CNY, PLN, CAD and CHF currencies.

Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México, applies accounting hedges for both fair value and cash flows through micro-hedging structures to mitigate risks arising from fluctuations in interest rates and exchange rates.

In its cash flow hedges, the Bank is primarily exposed to exchange rate risk stemming from portfolios of Mexican government bonds issued in a currency other than its functional currency, Brazilian government bonds denominated in reais, US Treasury bonds in dollars, and fixed-rate debt issuances in USD. These exposures are mitigated through fixed-rate cross-currency swaps and FX forward contracts, using different currency combinations (MXN, USD, and BRL) depending on the nature of each portfolio.

The Bank also maintains exposures to interest rate risk associated with bank loans and commercial loans, both fixed-rate and floating-rate. To manage this risk, interest rate swaps are used, whereby the Bank exchanges fixed-rate cash flows for variable-rate cash flows or vice versa, in order to stabilize future cash flows.

In its fair value hedges, Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México holds portfolios of long-term, fixed-rate commercial loans and Mexican government bonds, denominated in both local and non-functional currencies. These portfolios are exposed to changes in fair value resulting from fluctuations in market interest rates and, where applicable, exchange rates. These exposures are mitigated through interest rate swaps and cross-currency swaps, designated as hedging instruments.

Only interest rate and exchange rate risks are hedged, while other risks, such as credit risk, are managed by the entity but are not designated as hedged risks within the hedging relationships. The effectiveness of the hedges is assessed by comparing the changes in the fair value of the hedged items attributable to the hedged risk with the changes in the fair value of the derivative instruments.

Banco Santander (Brasil) S.A. has fair value and cash flow hedges to mitigate risks arising from market interest rate fluctuations.

In market risk hedging, the Bank protects recognized assets and liabilities against changes in interest rates, exchange rates, and inflation. The risk management methodology segments exposures by risk factor (BRL/USD exchange rate risk, BRL fixed interest rate risk, USD foreign exchange coupon risk, inflation risk, among others). To mitigate these risks, the Bank primarily uses interest rate swaps, currency swaps, and futures contracts, designated as hedging instruments within hedge accounting structures. The results derived from hedging instruments and hedged items are recognized directly in the income statement.

In cash flow hedging, Banco Santander (Brasil) S.A. hedges its exposure to cash flow variability, primarily associated with interest payments and exchange rate movements, arising from assets and liabilities denominated in foreign currency or at variable rates. To this end, futures contracts and interest rate swaps are used to provide predictability to future cash flows. The effective portion of the change in the value of the hedging instruments is temporarily recognized in equity and reclassified to profit or loss when the anticipated transaction occurs, while the ineffective portion is recognized directly in profit or loss. As of December 31, 2025, no amounts corresponding to the ineffective portion have been recorded.

Additionally, Banco Santander - Chile uses fair value hedges with cross currency swaps, interest rate swaps and call money swaps to hedge its exposure to changes in the fair value of the hedged item attributable to interest rates. The aforementioned hedging instruments modify the effective cost of long-term issues, from a fixed interest rate to a variable interest rate.

In addition, it also makes cash flow hedges in which it uses cross currency swaps to cover the risk of variability of flows attributable to changes in the interest rate of bonds and interbank loans issued at variable rates, as well as to cover the variation of foreign currency, mainly in United States dollars. To hedge the inflation risk present in certain items, it uses both forwards and cross currency swaps.

At Santander Bank, National Association, Interest Rate Swaps are used to leave commercial loans at a fixed rate at a variable rate in USD indexed to 1-month Libor or SOFR, under cash flow hedges.

Regarding the hedged items, the following table shows the detail of the type of hedging, the risk that is hedged and which products are being hedged at 31 December 2025, 2024 and 2023. The products that are being hedged are mainly borrowed deposits, financial deposits, loans, government bonds as assets and financial bonds as liabilities:

	EUR million							
	31 December 2025

37. Discontinued operations

As a result of the agreement for the sale of part of the Polish business, the effect of these businesses on the consolidated income statement of 2025 has been classified under the line item 'Profit/(loss) after tax from discontinued operations', with the same classification applied for comparative purposes in the consolidated income statement of years 2024 and 2023 (see Note 3).

a) Breakdown

The following is a breakdown of the heading 'Profit/loss after tax from discontinued operations' at 31 December of 2025, 2024 and 2023:

EUR million	2025	2024	2023
Entities held for sale			
Santander Bank Polska (Note 3)	1,542	1,241	1,058
Profit/loss after tax from discontinued operations	**1,542**	**1,241**	**1,058**

b) Gains or losses from entities held for sale

The following are the consolidated summary profit and loss accounts for the business held for sale in Poland:

EUR million

Condensed consolidated income statements	2025	2024	2023
Interest margin	3,006	2,881	2,611
Dividend income	4	4	3
Investments accounted for using the equity method	28	24	22
Net commissions	685	634	562
Net trading income	74	62	68
Other operating results	(77)	(109)	(94)
Total income	**3,720**	**3,496**	**3,172**
Administrative expenses, depreciation and amortisation cost	(1,014)	(885)	(793)
Impairment of financial assets [A]	(285)	(508)	(658)
Other results and provisions	(471)	(423)	(267)
Profit before taxes	**1,950**	**1,680**	**1,454**
Tax expense	(408)	(439)	(396)
Profit of the year	**1,542**	**1,241**	**1,058**

A. Of which EUR 144 million correspond to renegotiations or contractual modifications at 31 December 2025 (EUR 334 and 457 million at 31 December 2024 and 2023, respectively).

38. Interest income

Interest and similar income in the consolidated income statement comprises the interest accruing in the year on all financial assets with an implicit or explicit return, calculated by applying the effective interest method, irrespective of measurement at fair value; and the rectifications of income as a result of hedge accounting. Interest is recognised gross, without deducting any tax withheld at source.

The detail of the main interest and similar income items earned in 2025, 2024 and 2023 is as follows:

EUR million

	2025	2024	2023
Loans and advances, customers	70,830	74,900	67,879
Debt instruments	15,890	15,431	13,955
Loans and advances, central banks and credit institutions	7,599	8,195	7,229
Other interest [A]	7,391	10,486	12,679
	101,710	**109,012**	**101,742**

A. Mainly include the rectification of income originating from accounting hedges as well as interest on balances in central banks and on demand credit institutions.

Most of the interest and similar income was generated by the Group's financial assets that are measured either at amortised cost or at fair value through other comprehensive income.

39. Interest expense

Interest expense and similar charges in the consolidated income statement includes the interest accruing in the year on all financial liabilities with an implicit or explicit return, including remuneration in kind, calculated by applying the effective interest method, irrespective of measurement at fair value; the rectifications of cost as a result of hedge accounting; and the interest cost attributable to provisions recorded for pensions.

The detail of the main items of interest expense and similar charges accrued in 2025, 2024 and 2023 is as follows:

EUR million

	2025	2024	2023
Customer deposits	31,735	35,714	32,457
Debt securities issued and subordinated liabilities	15,066	14,612	12,671
Marketable debt securities	*13,580*	*13,255*	*11,661*
Subordinated liabilities (note 23)	*1,486*	*1,357*	*1,010*
Central banks and credit institution deposits	8,151	9,381	9,360
Lease Liabilities	107	122	127
Provisions for pensions (note 25)	91	105	93
Other interest expense	4,212	5,291	6,384
	59,362	**65,225**	**61,092**

Most of the interest expense and similar charges was generated by the Group's financial liabilities that are measured at amortised cost.

40. Dividend income

Dividend income includes the dividends and payments on equity instruments out of profits generated by investees after the acquisition of the equity interest.

The detail of income from dividends as follows:

EUR million

	2025	2024	2023
Dividend income classified as:			
Financial assets held for trading	556	521	414
Non-trading financial assets mandatorily at fair value through profit or loss	57	71	68
Financial assets at fair value through other comprehensive income	102	118	86
	715	**710**	**568**

41. Commission income

Commission income comprises the amount of all fees and commissions accruing in favour of the Group in the year, except those that form an integral part of the effective interest rate on financial instruments.

The detail of fee and commission income is as follows:

EUR million

	2025	2024	2023
Coming from collection and payment services			
Bills	209	220	232
Demand accounts	1,359	1,411	1,372
Cards	4,039	4,067	4,146
Orders	607	657	656
Cheques and other	140	138	128
	6,354	**6,493**	**6,534**
Coming from non-banking financial products			
Investment funds	1,428	1,389	1,037

Insurance	2,782	2,865	2,669
	4,448	**4,448**	**3,884**
Coming from Securities services			
Securities underwriting and placement	602	586	502
Securities trading	654	452	331
Administration and custody	402	370	354
Asset management	385	254	341
	2,043	**1,662**	**1,528**
Other			
Foreign exchange	848	705	678
Commitments and financial guarantees	718	713	621
Commitment fees	504	491	497
Structure Finance	902	709	551
Corporate Finance	243	213	136
Loans granted	259	318	259
Loan Servicing activities	118	130	45
Other fees and commissions	950	952	911
	4,542	**4,231**	**3,698**
	17,387	**16,834**	**15,644**

42. Commission expense

Commission expense shows the amount of all fees and commissions paid or payable by the Group in the year, except those that form an integral part of the effective interest rate on financial instruments.

The detail of commission expense is as follows:

EUR million

	2025	2024	2023
Cards	1,744	1,816	1,858
By collection and return of effects	30	30	24
Financial guarantees and other commitments	359	323	282
Brokerages and intermediaries	130	181	204
Sales of insurance and funds	456	453	352
Other fees and commissions	1,692	1,655	1,429
	4,411	**4,458**	**4,149**

43. Gains or losses on financial assets and liabilities

The following information is presented below regarding the gains or losses recorded for financial assets or liabilities:

a) Breakdown

The detail, by origin, of Gains/losses on financial assets and liabilities:

EUR million

	2025	2024	2023
Gains or losses on financial assets and liabilities not measured at fair value through profit or loss, net	127	(117)	96
Financial assets at amortized cost	(89)	(190)	(3)
Other financial assets and liabilities	216	73	99
Of which debt instruments	*133*	*50*	*51*
Gains or losses on financial assets and liabilities held for trading, net[A]	1,017	1,344	2,316
Gains or losses on non-trading financial assets and liabilities mandatory at fair value through profit or loss	1,106	495	198
Gains or losses on financial assets and liabilities measured at fair value through profit or loss, net[A]	(307)	691	(92)
Gains or losses from hedge accounting, net	12	14	69
	1,955	**2,427**	**2,587**

A. Includes the net result obtained by transactions with debt securities, equity instruments, derivatives and short positions included in this portfolio when the Group jointly manages its risk in these instruments.

As explained in note 44, the above breakdown should be analysed in conjunction with the 'Exchange differences, net':

EUR million

	2025	2024	2023
Exchange differences, net	407	(216)	(22)

b) Financial assets and liabilities at fair value through profit or loss

The detail of the amount of the asset balances is as follows:

EUR million

	2025	2024	2023
Loans and receivables:	80,218	72,931	51,072
Central banks	14,632	12,966	17,717
Credit institutions	26,380	27,722	14,520
Customers	39,206	32,243	18,835
Debt instruments	101,707	85,990	66,079
Equity instruments	27,845	21,277	19,125
Derivatives	58,355	64,100	56,328
	268,125	**244,298**	**192,604**

Grupo Santander mitigates and reduces this exposure as follows:

- With respect to derivatives, the Group has entered into framework agreements with a large number of credit institutions and customers for the netting-off of asset positions and the provision of collateral for non-payment.

  At 31 December 2025 the exposure to credit risk of the derivatives presented in the balance sheet is not significant because they are subject to netting and collateral agreements (see note 51.d).

- Loans and advances to credit institutions and Loans and advances includes reverse repos amounting to EUR 71,129 million at 31 December 2025.

  Also, mortgage-backed assets totalled EUR 1,597 million.

- Debt instruments include EUR 80,908 million of Spanish and foreign government securities.

  At 31 December 2025 the amount of the change in the year in the fair value of financial assets at fair value through profit or loss attributable to variations in their credit risk (spread) was not material.

The detail of the amount of the liability balances is as follows:

EUR million

	2025	2024	2023
Deposits	106,003	87,374	80,503
Central banks	15,471	15,074	9,017
Credit institutions	28,482	27,909	19,597
Customer	62,050	44,391	51,889
Marketable debt securities	11,686	7,554	5,371
Short positions	44,015	35,830	26,174
Derivatives	51,968	57,753	50,589
Other financial liabilities	22	—	—
	213,694	**188,511**	**162,637**

At 31 December 2025, the amount of the change in the fair value of financial liabilities at fair value through profit or loss attributable to changes in their credit risk during the year is not material.

In relation to liabilities designated at fair value through profit or loss where it has been determined at initial recognition that the credit risk is recorded in accumulated 'Other comprehensive income' (see 'Statement of recognised income and expense') the amount that the Group would be contractually obliged to pay on maturity of these liabilities at 31 December 2025 is EUR 1,281 million higher than their carrying amount (EUR 1,851 million higher at 31 December 2024 and EUR 866 million higher at 31 December 2023, no significant impact on results as its fair value is covered by hedging operations.

Within Deposits, there are repurchase agreements amounting to EUR 75,562 million at 31 December 2025.

44. Exchange differences, net

Exchange differences shows basically the gains or losses on currency dealings, the differences that arise on translations of monetary items in foreign currencies to the functional currency.

Grupo Santander manages the currencies to which it is exposed together with the arrangement of derivative instruments and, accordingly, the changes in this line item should be analysed together with those recognised under 'Gains/losses on financial assets and liabilities' (see note 43).

45. Other operating income and expenses

Other operating income and Other operating expenses in the consolidated income statements include:

EUR million

	2025	2024	2023
Other operating income	**1,583**	**846**	**1,137**
Non- financial services	738	654	752
Other operating income	845	192	385
Other operating expense	**(2,070)**	**(2,258)**	**(2,766)**
Non-financial services	(650)	(498)	(674)
Other operating expense:	(1,420)	(1,760)	(2,092)
Of which, credit institutions deposit guarantee fund and single resolution fund	*(478)*	*(481)*	*(1,083)*
	(487)	**(1,412)**	**(1,629)**

In the 2025 and 2024 financial years, it was decided that there will not be contribution in Spain to the Single Resolution Fund, as well as a decrease in the contribution to the Deposit Guarantee Fund, by the Single Resolution Board (SRB) and the Deposit Guarantee Fund Management Committee, respectively.

The amount of the Group recognises in relation to income from sub-leases of rights of use is not material.

46. Staff costs

a) Breakdown

The detail of Staff costs is as follows:

EUR million

	2025	2024	2023
Wages and salaries	10,328	10,541	10,018
Social Security costs	1,680	1,644	1,576
Additions to provisions for defined benefit pension plans (note 25)	41	45	42
Contributions to defined contribution pension funds	332	354	307
Other Staff costs	1,252	1,241	1,332
	13,633	**13,825**	**13,275**

b) Headcount

The number of employees of Grupo Santander at 31 December 2025, 2024 and 2023 is 198,403, 206,753 and 212,764, respectively. For the years 2025, 2024 and 2023 the average number of employees of the Group is 203,572, 209,371 and 211,135 , respectively, being the average number of employees of Banco Santander, S.A. 23,207, 23,839 and 24,061, of which 17, 15 and 16 are executive directors and Senior management, respectively.

The functional breakdown (final employment), by gender, at 31 December 2025 is as follows:

Functional breakdown by gender

	Senior executives[A]				Other executives[B]				Other employees			
	Men	Women	Others	Not declared	Men	Women	Others	Not declared	Men	Women	Others	Not declared
Europe	918	426	—	—	8,778	5,052	—	10	31,404	37,094	3	39
North America	181	64	—	—	3,859	2,630	—	4	14,555	18,517	2	1
South America	284	142	—	—	4,678	3,398	—	1	30,472	35,890	—	1
	1,383	**632**	**—**	**—**	**17,315**	**11,080**	**—**	**15**	**76,431**	**91,501**	**5**	**41**

A. Senior Executives includes employees with job profiles under the following harmonized management levels: Senior Executive VP. Executive VP and VP.
B. Other Executives includes Directors, Mangers, Experts and Branch Managers.
Note: This includes employees related to the Group's business held for sale in Poland.

The labour relations between employees and the various Group companies are governed by the related collective agreements or similar regulations.

The number of Group employees with disabilities at 31 December 2025, 2024 and 2023, was 4,854, 4,828 and 4,701, respectively.

Likewise, the average number of employees of Banco Santander, S.A. with disabilities, equal to or greater than 33%, during 2025 was 419 (435 and 428 employees during 2024 and 2023). At the end of fiscal year 2025, there were 413 employees (432 and 436 employees at 31 December, 2024 and 2023, respectively).

An employee with disabilities is considered to be a person who is recognised by the State or the company in each jurisdiction where the Group operates and that entitles them to receive direct monetary assistance, or other types of aid such as, for example, reduction of their taxes. In the case of Spain, employees with disabilities have been considered to be those with a degree of disabilities greater than or equal to 33%.

c) Share-based payments

The main share-based payments granted by the Group in force at 31 December, 2025, 2024 and 2023 are described below.

i. Bank

The variable remuneration policy for the Bank's executive directors and certain executive personnel of the Bank and of other Group companies includes Bank share-based payments, the implementation of which requires, in conformity with the law and the Bank's Bylaws, specific resolutions to be adopted by the general meeting.

Were it necessary or advisable for legal, regulatory or other similar reasons, the delivery mechanisms described below may be adapted in specific cases without altering the maximum number of shares linked to the plan or the essential conditions to which the delivery thereof is subject.

These adaptations may involve replacing the delivery of shares with the delivery of cash amounts of an equal value.

The plans that include share-based payments are as follows: (i) Deferred and Conditional Variable Remuneration Plan; (ii) Deferred Multiyear Objectives Variable Remuneration Plan; (iii) Digital Transformation Award, (iv) Digital Transformation Award 2022, Digital Transformation Award 2023 and (vi) PagoNxt incentive Plan 2024 and 2025 for Santander executives. The characteristics of the plans are set forth below:

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(i) Deferred and conditional variable remuneration plan (2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 and 2025)	The purpose of these cycles is to defer a portion of the variable remuneration of the beneficiaries over a period of three years for the sixth cycles, over three or five years for the fifth, seventh, eighth, ninth, tenth and eleventh cycles, and over four or five years for the twelfth cycle, for it to be paid, where appropriate, in cash and in Santander shares. The other portion of the variable remuneration is also to be paid in cash and Santander shares, upon commencement of the cycles, in accordance with the rules set forth below. Beneficiaries: • Executive directors and certain executives (including senior management) and employees who assume risk, who perform control functions or receive an overall remuneration which puts them on the same remuneration level as executives and employees who assume risks (fifth cycle). • In the case of the sixth, seventh, eighth, ninth, tenth, eleventh twelfth, thirteenth, fourteenth and fifteenth cycle the beneficiaries are Material Risk Takers (Identified staff) that are not beneficiaries of the Deferred Multiyear Objectives Variable Remuneration Plan.	For the fifth and sixth cycles (2015 to 2016), the accrual of the deferred compensation is conditioned, in addition to the requirement that the beneficiary remains in the Group's employ, with the exceptions included in the plan regulations on none of the following circumstances existing during the period prior to each delivery, pursuant to the provisions set forth in each case in the plan regulations: • Poor financial performance of the Group. • Breach by the beneficiary of internal regulations, including, in particular, those relating to risks. • Material restatement of the Group's consolidated financial statements, except when it is required pursuant to a change in accounting standards. • Significant changes in the Group's economic capital or risk profile In the case of the seventh, eighth, ninth, tenth, eleventh, twelfth, thirteenth, fourteenth and fifteenth cycles, the accrual of deferred compensation is conditioned, in addition to the permanence of the beneficiary in the Group, with the exceptions contained in the plan's regulations, to non-occurrence of a poor performance of the entity as a whole or of a specific division or area of the entity or of the exposures generated by the personnel: i. significant failures in risk management by the entity , or by a business unit or risk control unit. ii. the increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures. iii. Regulatory sanctions or judicial sentences for events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity. iv. Irregular behaviours, whether individual or collective, considering in particular the negative effects derived from the marketing of inappropriate products and the responsibilities of the persons or bodies that made those decisions.	Fifth cycle (2015): • Executive directors and members of the Identified Staff with total variable remuneration higher than 2.6 million euros: 40% paid immediately and 60% deferred over 5 years deferral period. • Division managers, country heads (of countries which represent at least 1% of Group's economic capital), other executives of the Group with a similar profile and members of the Identified Staff with total variable remuneration between 1.7 million euros (1.8 million in fourth cycle) and 2.6 million euros: 50% paid immediately and 50% deferred over 5 years (fifth cycle) • Other beneficiaries: 60% paid immediately and 40% deferred over 3 years. Sixth cycle (2016): • 60% of bonus will be paid immediately and 40% deferred over a three year period. Seventh, eighth, ninth, tenth and eleventh cycle (2017, 2018, 2019, 2020 and 2021): • Beneficiaries of these plans with target total variable remuneration higher or equal to 2.7 million euros: 40% paid immediately and 60% deferred over 5 years • Beneficiaries of these plans with target total variable remuneration between 1.7 million euros and 2.7 million euros: 50% paid immediately and 50%paid over 5 years • Other beneficiaries of these plans: 60% paid immediately and 40% deferred over 3 years. Twelfth (2022), thirteenth (2023),fourteenth (2024) and fifteenth (2025) cycle: • Beneficiaries of these plans with target total variable remuneration higher or equal to 2.7 million euros: 40% paid immediately and 60% deferred over 5 years • Beneficiaries of these plans with target total variable remuneration between 1.7 million euros and 2.7 million euros: 50% paid immediately and 50% paid over 5 years • Other beneficiaries of these plans: 60% paid immediately and 40% deferred over 4 years.

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(ii)Deferred Multiyear Objectives Variable Remuneration Plan (2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 and 2025)	The aim is simplifying the remuneration structure, improving the ex ante risk adjustment and increasing the impact of the long-term objectives on the Group's most relevant roles. The purpose of these cycles is to defer a portion of the variable remuneration of the beneficiaries over a period of three or five years (four or five years for the seventh cycle) for it to be paid, where appropriate, in cash and in Santander shares; the other portion of the variable remuneration is also to be paid in cash and Santander shares (regarding the instruments part, executive directors in the seventh cycle have the opportunity to choose all in share options or half in share options and half in shares), upon commencement of the cycles, in accordance with the rules set forth below. The accrual of the last third of the deferral (in the case of 3 years deferral), the last 2 fourths (in the case of 4 years deferral) and the last three fifths (in the case of 5 years deferral) is also subject to long-term objectives. **Beneficiaries** Executive directors, senior management and certain executives of the Group's first lines of responsibility.	In 2016 the accrual is conditioned, in addition to the permanence of the beneficiary in the Group, with the exceptions contained in the plan's regulations, to non-occurrence of the following circumstances during the period prior to each of the deliveries in the terms set forth in each case in the plan's regulations: i. Poor performance of the Group. ii. Breach by the beneficiary of the internal regulations, including in particular that relating to risks. iii. Material restatement of the Group's consolidated financial statements, except when appropriate under a change in accounting regulations. iv. Significant changes in the Group's economic capital or risk profile. In 2017, 2018, 2019, 2020 and 2021 the accrual is conditioned, in addition to the beneficiary' permanence in the Group, with the exceptions contained in the plan's regulations, to the non-occurrence of poor financial performance from the entity as a whole or of a specific division or area thereof or of the exposures generated by the personnel, taking into account the following factors: v. Significant failures in risk management committed by the entity, or by a business unit or risk control unit. vi. the increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures. vii. Regulatory sanctions or court rulings for events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity. viii. Irregular behaviours, whether individual or collective, considering in particular negative effects derived from the marketing of inappropriate products and responsibilities of persons or bodies that made those decisions. Paid half in cash and half in shares. In the seventh cycle, and only for executive directors: half in cash and 25% in share options and 25% in shares (unless the director chooses to receive options only). The maximum number of shares to be delivered is calculated by taking into account the weighted average daily volume of weighted average prices for the fifteen trading sessions prior to the previous Friday (excluding) on the date on which the board decides the bonus for the Executive directors of the Bank. In the eighth cycle, and for all Identified Staff: half in cash and 25% in shares and 25% in share options, or half in cash and half in shares, according to each executive´s choice. In the ninth and tenth cycle, half in cash and half in shares.	First cycle (2016): • Executive directors and members of the Identified Staff with total variable remuneration higher than or equal to 2.7 million euros: 40% paid immediately and 60% deferred over a 5 year period. • Senior managers, country heads of countries representing at least 1% of the Group´s capital and other members of the identified staff whose total variable remuneration is between 1.7 million and 2.7 million euros: 50% paid immediately and 50% deferred over a 5 year period. • Other beneficiaries: 60% paid immediately and 40% deferred over a 3 year period. The second, third, fourth, fifth and sixth cycles (2017, 2018, 2019,2020 and 2021 respectively) are under the aforementioned deferral rules, except that the variable remuneration considered is the target for each executive and not the actual award. In 2016 the metrics for the deferred portion subject to long-term objectives (last third or last three fifths, respectively, for the cases of three years and five years deferrals) are: • Earnings per share (EPS) growth in 2018 over 2015. • Relative Total Shareholder Return (TSR) in the 2016-2018 period measured against a group of credit institutions. • Compliance with the fully-loaded common equity tier 1 ('CET1') ratio target for financial year 2018. • Compliance with Grupo Santander's underlying return on risk-weighted assets ('RoRWA') growth target for financial year 2018 compared to financial year 2015. In the second, third, fourth, fifth and sixth cycle (2017, 2018, 2019, 2020 and 2021) the metrics for the deferred portion subject to long-term objectives (last third or last three fifths, respectively, for the cases of three years and five years deferrals) are: • EPS growth in 2019, 2020, 2021, 2022 and 2023 (over 2016, 2017, 2018, 2019 and 2020, for each respective cycle) • Relative Total Shareholder Return (TSR) measured against a group of 17 credit institutions (second and third cycles) in the periods 2017-2019 and 2018-2019, respectively, and against a group of 9 entities (fourth, fifth and sixth cycle) for the 2019-2021, 2020-2022 and 2010-2023 period. • Compliance with the fully-loaded common equity tier 1 ('CET1') ratio target for financial years 2019, 2020, 2021,2022 and 2023, respectively. In the seventh (2022), eighth cycle (2023), ninth (2025) and tenth cycle (2025), the metrics for the deferred portion subject to long-term objectives (two last fourths and last three fifths, for the cases of four years and five years deferrals) are: • Banco Santander's consolidated Return on tangible equity (RoTE) target in 2024 (7th cycle), 2025 (8th cycle), 2026 (9th cycle) and 2027 (10th cycle). • Relative Total Shareholder Return (TSR) measured against a group of 9 credit institutions for the period 2022-2024 (7th cycle), 2023-2025 (8th cycle), 2024-2026 (9th cycle) and 2025-2027 (10th cycle). • Progress level in the public targets of our Sustainability agenda.

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(iii) Digital Transformation Award (2019, 2020 and 2021)	The 2019, 2020 and 2021 Digital Transformation Incentive (the 'Digital Incentive') is a variable remuneration system that includes the delivery of Santander shares and share options. The aim of the Digital Incentive is to attract and retain the critical skill sets to support and accelerate the digital transformation of the Group. By means of this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent. The number of beneficiaries is limited to a maximum of 250 employees and the total amount of the incentive is limited to 30 million euros.	The funding of this incentive is subject to meeting important milestones that are aligned with the Group´s digital roadmap and have been approved by the board of directors, taking into account the digitalization strategy of the Group, with the aim of becoming the best open, responsible global financial services platform. Performance of 2019 incentive was measured based on achievement of the following milestones: (i) Launch of a Global Trade Services (GTS) platform; (ii) launch of a Global Merchant Services (GMS) platform; (iii) migration of our fully digital bank, OpenBank, to a 'next generation' platform and launch in 3 markets; (iv) extension of SuperDigital in Brazil to at least one other country; (v) and launch of our international payments app based on blockchain Pago FX to non-Santander customers. The milestones for the 2020 Digital Transformation Award were: (i) rolling out the global merchant services (GMS) platform in 3 new geographies, enhancing the platform functionality and achieving volume targets for transactions and participating merchants; (ii) doing the commercial rollout of the global trade services (GTS) platform in 8 new geographies, enhancing platform functionality, and achieving volume targets for on-boarded clients and monthly active users; (iii) launching OpenBank in a new market and migrating the retail banking infrastructure to 'new-mode' bank; (iv) launch the global platform SuperDigital in at least 4 countries, driving target active user growth; (v) deploying machine learning across pre-defined markets for 4 priority use cases, rolling out Conversion Rate Optimization (Digital marketing) for at least 40 sales programs, delivering profit targets, and driving reduction of agent handled calls in contact centers; (vi) successfully implementing initiatives related to on-board and identity services, common API (application programming interface) layer, payment hubs, mobile app for SMEs and virtual assistant services; and (vii) launching the PagoFX global platform in at least 4 countries. The milestones for 2021 were: (i)in relation to Pago Nxt Consumer payment platform: implementation of Superdigital platform in seven countries, acquisition of over 1.5 million active customer base and accelerating growth through B2B (business to business) and B2B2C (business to business to customer) partnerships, acquiring more than 50% of the new customers through these channels, which are more cost-effective; (ii)in relation to Digital Consumer Bank: launching online API for checkout lending in the European Union and completion of controllable items for Openbank launch in USA; (iii)in relation to One Santander strategy: implementation in Europe of One Common Mobile Experience and, specifically, implementation of Europe ONE app for individual customers in at least three of the four countries by December 2021; and be among the three-top rated entities in terms of Mobile NetPromoter Score (Mobile NPS) in at least two of the four countries by December 2021; (iv) In relation to cloud adoption: host 75% of migratable virtual machines on cloud technology (either public cloud or OHE) by December 2021. For these purposes, mainframes, physical servers and servers with non-x86 operating systems will be considered non-migratable.	The Digital Incentive is structured 50% in Santander shares and 50% in options over Santander shares, taking into account the fair value of the option at the moment in which they are granted. For Material Risk Takers subject to five years deferrals, the Digital Incentive (shares and options over shares) shall be delivered in thirds, on the third, fourth and fifth anniversary from their granting. For Material Risk Takers subject to three years deferrals and employees not subject to deferrals, delivery shall be done on the third anniversary from their granting. Any delivery of shares, either directly or via exercise of options overs shares, will be subject generally to the Group's general *malus* & *clawback* provisions as described in the Group's remuneration policy and to the continuity of the beneficiary within the Grupo Santander. In this regard, the board may define specific rules for non-Identified Staff. Vested share options can be exercised until maturity, with all options lapsing after ten years (for granting the 2019 incentive) and eight years (for granting the 2020 and 2021 incentive). The total achievement for 2021 Digital Incentive was 77.5% (85% en 2020 and 83% en 2019).

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation base
(iv) Digital Transformation Award (2022)	The board of directors approved the 2022 Digital Transformation Incentive. It is a variable remuneration scheme splits in two different blocks: • The first one, with the same mechanism than previous years, that delivers Santander shares and share options if the group hits major milestones on its digital roadmap. This is aimed at a group of up to 250 (is limited to 30 million euros)employees whose functions are deemed essential to Santander's growth. • And the second one, which delivers PagoNxt, S.L. RSUs and premium prices options (PPOs), and is aimed at up to 50 employees (and limited to 15 million euros) whose roles are considered key to PagoNxt's success. The aim of the Digital Incentive is to attract and retain the critical skill sets to support and accelerate the digital transformation of the Group. By means of this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	Performance of the first block of the incentive shall be measured based on achievement of the following milestones: i. Edelweiss: Our Santander future retail architecture EDELWEISS will mean moving from our current Core centric banking architecture towards a Customer and Data-Centric Core supported by lean Record Processing engines. ii. Simplification: Speed up the simplification of our technology platform and business model by Reducing the total number of applications in production and reducing number of products in the regions. iii. Agile: Agile ways of working enable a better and faster reaction to customers' needs and is based on a value-driven delivery that increases efficiency by reducing time-to-market and development costs, and increasing quality. People working in Agile are more collaborative, engaged, empowered and creative. iv. In Digital Consumer Bank: a) To create the BNPL platform connected to at least one merchant in Netherlands and Germany, and to make sure the platform is ready to connect in Spain. b) To support the definition of Openbank US's IT digital strategy and achieve 2022 milestones in it. c) To have the new leasing platform connected to dealers in Italy. d) To expand the Wabi B2B online business to Germany. To execute the first B2B deal with an Original Equipment Manufacturer or mobility player in at least one country. To expand coches.com business and platform to Portugal. And in regard to the second block of digital incentive: the consolidation of PagoNxt Core Perimeter.	The first block of thee Digital Incentive is structured 50% in Santander shares and 50% in options over Santander shares, taking into account the fair value of the option at the moment in which they are granted. For Material Risk Takers subject to five years deferrals, the Digital Incentive (shares and options over shares) shall be delivered in thirds, on the third, fourth and fifth anniversary from their granting. For Material Risk Takers subject to three years deferrals and employees not subject to deferrals, delivery shall be done on the third anniversary from their granting. Any delivery of shares, either directly or via exercise of options overs shares, will be subject generally to the Group's general *malus* & *clawback* provisions as described in the Group's remuneration policy and to the continuity of the beneficiary within the Grupo Santander. In this regard, the board may define specific rules for non-Identified Staff. Vested share options can be exercised until maturity, with all options lapsing after ten years. The total achievement for 2022 Digital Incentive was 96.5%. The second block of Digital Incentive is structures in restricted stock units (RSUs) and premium priced Options (PPOs) of PagoNxt S.L. in a percentage determined by the internal category of the beneficiary. The total achievement for 2022 was 100%.

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation base
(v) Digital Transformation Award (2023)	The board of directors approved the 2023 Digital Transformation Incentive. It is a variable remuneration scheme which delivers PagoNxt, S.L. RSUs and premium prices options (PPOs), and is aimed at up to 50 employees (and limited to 15 million euros) whose roles are considered key to PagoNxt's success. With this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	And the performance conditions were focus on key digital projects related with PagoNxt's main businesses (Trade, Merchant and Payments) in its core geographies.	This incentive is structures in restricted stock units (RSUs) and premium priced Options (PPOs) of PagoNxt S.L. in a percentage determined by the internal category of the beneficiary. The average achievement for 2023 was 88%.

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation base
(vi) PagoNxt incentive Plan 2024 and 2025 for Santander executives)	The board of directors approved the PagoNxt incentive Plan 2024 and 2025 Incentive. It is a variable remuneration scheme which delivers PagoNxt, S.L. RSUs, and is aimed at approximately to 50 - 60 employees whose roles are considered key to PagoNxt's success. With this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	And the performance conditions were focus on key digital projects related with PagoNxt's main businesses (Trade, Merchant and Payments) in its core geographies.	This incentive is structures in restricted stock units (RSUs) of PagoNxt S.L. in a percentage determined by the internal category of the beneficiary. The average achievement for 2024 was 77% and 85% in 2025.

ii. Santander UK plc

The long-term incentive plans on shares of the Bank granted by management of Santander UK plc to its employees are as follows:

	Number of shares (in thousand)	Exercise price in pounds sterling[A]	Year granted	Employee group	Number of persons[B]	Date of commencement of exercise period	Date of expiry of exercise period
Plans outstanding at 01/01/2023	**29,988**						
Options granted (sharesave)	7,175	2.78	2023	Employees	4,752	01/11/23	01/11/26
						01/11/23	01/11/28
Options exercised	(5,980)	1.7					
Options cancelled (net) or not exercised	(4,044)	2.53					
Plans outstanding at 31/12/2023	**27,139**						
Options granted (sharesave)	4,991	3.36	2024	Employees	4,107	01/11/24	01/11/27
						01/11/24	01/11/29
Options exercised	(4,004)	2.29					
Options cancelled (net) or not exercised	(2,437)	2.37					
Plans outstanding at 31/12/2024	**25,689**						
Options granted (sharesave)	3,324	6.35	2025	Employees	4,637	01/11/25	01/11/28
Options exercised	(9,966)	1.9					
Options cancelled (net) or not exercised	(1,554)	2.88					
Plans outstanding at 31/12/2025	**17,493**						

A. At 31 December, 2025, 2024 and 2023, the euro/pound sterling exchange rate was 1.15, 1.21 and 1.15 , respectively.
B. Number of accounts/contracts. A single employee may have more than one account/contract.

In 2008 the Group launched a voluntary savings scheme for Santander UK employees (Sharesave Scheme) whereby employees who join the scheme see deducted between GBP 5 and GBP 500 from their net monthly pay over a period of three or five years. At the end of the chosen period, the employee may choose between collecting the amount contributed, the interest accrued and a bonus (tax-exempt in the United Kingdom) or exercising options on shares of the Bank in an amount equal to the sum of such three amounts at a fixed price. The exercise price will be the result of reducing by up to 20% the average purchase and sale prices of the Bank shares in the three trading sessions prior to the approval of the scheme by the UK tax authorities (HMRC). This approval must be received within 21 to 41 days following the publication of the Group's results for the first half of the year. This scheme was approved by the board of directors, at the proposal of the appointments and remuneration committee, and, since it involved the delivery of Bank shares, its application was authorized by the Annual General Meeting held on June 21, 2008. Also, the scheme was authorized by the UK tax authorities (HMRC) and commenced in September 2008. In subsequent years, at the Annual General Meetings held on June 19, 2009, June 11, 2010, June 17, 2011, March 30, 2012, March 22, 2013, March 28, 2014, March 27, 2015, March 18, 2016, April 7, 2017, March 23, 2018, April 12, 2019, April 3, 2020 and March 26, 2021, respectively, the shareholders approved the application of schemes previously approved by the board and with similar features to the scheme approved in 2008.

iii. Fair value

The fair value of the performance share plans was calculated as follows:

a) Deferred variable compensation plan linked to multi-year objectives 2023, 2024 and 2025:

The Group calculates at the grant date the fair value of the plan based on the valuation report of an independent expert, Willis Towers Watson. According to the design of the plan for 2023, 2024 and 2025 and the levels of achievement of similar plans in comparable entities, it has been considered that the fair value is 70%.

b) Santander UK sharesave plans:

The fair value of each option at the date of grant is estimated using an analytical model that also reflects the correlation between EUR and GBP. This model uses assumptions on the share price, the EUR/GBP FX rate, the EUR/GBP risk-free interest rate, dividend yields, the expected volatilities of both the underlying shares and EUR/GBP for the expected lives of options granted. The weighted average grant-date fair value of options granted during the year was GBP 0.44 (GBP 0.23 and GBP 0.33 reported in 2024 and 2023, respectively).

47. Other general administrative expenses

a) Breakdown

The detail of Other general administrative expenses is as follows:

EUR million

	2025	2024	2023
Technology and systems	2,298	2,539	2,389
Property, fixtures and supplies (note 2.k)	803	797	774
Technical reports	712	724	796
Advertising	517	512	574
Taxes other than income tax	543	554	568
Communications	367	387	400
Surveillance and cash courier services	314	337	325
Per diems and travel expenses	250	232	213
Insurance premiums	86	95	88
Other administrative expenses	2,010	1,968	2,144
	7,900	**8,145**	**8,271**

The payments associated with short-term leases (leases less than or equal to 12 months) and leases of low-value assets, that the Group recognises as an expense in the income statement is not material.

b) Technical reports and other

Technical reports include the fees from the various Group companies (detailed in the accompanying appendices) for the services provided by their respective auditors, with the following detail:

EUR million

	2025	2024	2023
Audit	118.5	122.3	117.5
Audit-related services	15.0	13.6	8.6
Tax services	0.1	0.9	1.6
All other	7.1	7.4	5.9
Total	**140.7**	**144.2**	**133.6**

Additionally, the firm BDO has performed audit and audit-related services totaling EUR 1.9 million.

The audit services and main non-audit services included for each item in the above breakdown are detailed as follows:

- Audit services: audit of the individual and consolidated financial statements of Banco Santander and its subsidiaries (of which PwC or another network firm is the external auditor); audit of the interim consolidated financial statements of Banco Santander; integrated audits prepared in order to file the Form 20-F with the SEC and the internal control audits (SOx) for required Group's entities; limited reviews of financial statements; and regulatory reports required to the external auditors regarding several Grupo Santander entities.
- Audit-related services: issuance of comfort letters, verification services of financial and non-financial information required by regulators, and other reviews of documentation to be submitted to domestic or foreign authorities that, due to their nature, the external auditor typically provides.
- Tax services: tax compliance and advisory services provided to Group companies outside Spain, which have no direct effect on the audited financial statements and are permitted in accordance with the applicable independence regulations.
- Other services: agreed-upon procedure reports, assurance reports and special reports performed under the accepted profession's standards; as well as other reports required by the regulators.

The 'Audit' heading includes the fees for the year's audit, regardless of the date the audit was completed. Any subsequent adjustments, which are not significant, are shown in this note for each year for comparison purposes. The fees corresponding to the rest of the services are shown by reference to when the audit committee approved them.

The services commissioned from the Group's auditors meet the independence requirements under applicable European and Spanish law, the SEC rules and the Public Company Accounting Oversight Board (PCAOB), applicable to the Group, and did not involve in any case the performance of any work that is incompatible with the auditor's role.

Lastly, the Group commissioned services from audit firms other than PwC amounting to EUR 155.9 million in 2025 (EUR 206.2 million and EUR 174.1 million in 2024 and 2023, respectively).

c) Number of branches

The number of offices according to their geographical location at 31 December 2025, 2024 and 2023 is as follows:

Number of branches

	Group		
	2025	2024	2023
Spain [A]	1,674	1,877	1,924
Group	5,450	6,209	6,594
	7,124	**8,086**	**8,518**

A. Includes branches in Spain of the Digital Consumer Bank business.

Note: Branches corresponding to the Group's business held for sale in Poland are included.

Note: The figures for 2025 and 2024 include CartaSur points of sale and banking service points (PAB) in Argentina and exclude operational points that do not provide customer service in Colombia.

48. Gains or losses on non financial assets, net

The detail of Gains/ (losses) on disposal of assets not classified as non-current assets held for sale is as follows:

EUR million

	2025	2024	2023
Gains			
Tangible and intangible assets	65	48	53
Investments	17	360	285
	82	**408**	**338**
Losses			
Tangible and intangible assets	(41)	(36)	(26)
Investments	(41)	(4)	—
	(82)	**(40)**	**(26)**
	—	**368**	**312**

49. Gains or losses on non-current assets held for sale not classified as discontinued operations

The detail of Gains/(losses) on non-current assets held for sale not classified as discontinued operations is as follows:

EUR million

Net balance	2025	2024	2023
Tangible assets	(6)	(24)	(20)
Impairment (Note 12)	*(72)*	*(92)*	*(51)*
Gain (loss) on sale (Note 12)	*66*	*68*	*31*
Other gains and other losses	232	(3)	—
Caceis (Note 3)	*231*	—	—
	226	**(27)**	**(20)**

50. Fair value of financial instruments

a) Details

The following table summarises the fair values, at the end of each of the years indicated, of the financial assets and liabilities listed below, classified according to the different valuation methodologies used by the Group to determine their fair value:

EUR million

	2025			2024			2023		
	Published price quotations in active markets (level 1)	Internal Models (level 2 and 3)	Total	Published price quotations in active markets (level 1)	Internal Models (level 2 and 3)	Total	Published price quotations in active markets (level 1)	Internal Models (level 2 and 3)	Total
Financial assets held for trading	106,560	145,758	252,318	88,147	142,106	230,253	67,842	109,079	176,921
Non-trading financial assets mandatorily at fair value through profit or loss	2,407	5,354	7,761	2,037	4,093	6,130	1,765	4,145	5,910
Financial assets designated at fair value through profit or loss	2,860	5,186	8,046	2,744	5,171	7,915	2,746	7,027	9,773
Financial assets at fair value through other comprehensive income	52,589	22,023	74,612	67,680	22,218	89,898	64,631	18,677	83,308
Hedging derivatives (assets)	—	3,931	3,931	—	5,672	5,672	—	5,297	5,297
Financial liabilities held for trading	37,192	134,354	171,546	29,974	122,177	152,151	20,298	101,972	122,270
Financial liabilities designated at fair value through profit or loss	—	42,148	42,148	—	36,360	36,360	25	40,342	40,367
Hedging derivatives (liabilities)	—	4,248	4,248	—	4,752	4,752	—	7,656	7,656
Liabilities under insurance contracts	—	18,737	18,737	—	17,829	17,829	—	17,799	17,799

Grupo Santander has developed a formal process for the systematic valuation and management of financial instruments, which has been implemented worldwide across all the Group's units. The governance scheme for this process distributes responsibilities between two independent divisions: Treasury (development, marketing and daily management of financial products) and Risk (on a periodic basis, validation of pricing models and daily risk certification of market data, computation of risk metrics, new transaction approval policies, management control of market risk and implementation of fair value adjustment policies).

The approval of new products follows a sequence of steps (request, development, validation, integration in corporate systems and quality assurance) before the product is brought into production. This process ensures that pricing systems have been properly reviewed and are stable before they are used.

The following subsections set forth the most important products and families of derivatives, and the related valuation techniques and inputs, by asset class:

Interest rate and inflation

The fixed income asset class includes basic instruments such as interest rate forwards, interest rate swaps and cross currency swaps, which are valued using the net present value of the estimated future cash flows discounted taking into account basis (swap and cross currency spreads) determined on the basis of the payment frequency and currency of each leg of the derivative. Vanilla options, including caps, floors and swaptions, are priced using the Black-Scholes model, which is one of the benchmark industry models. More exotic derivatives are priced using more complex models which are generally accepted as standard across institutions.

These pricing models are fed with observable market data such as deposit interest rates, futures rates, cross currency swap and constant maturity swap rates, and basis spreads, on the basis of which different yield curves, depending on the payment frequency, and discounting curves are calculated for each currency. In the case of options, implied volatilities are also used as model inputs. These volatilities are observable in the market for cap and floor options and swaptions, and interpolation and extrapolation of volatilities from the quoted ranges are carried out using generally accepted industry models. The pricing of more exotic derivatives may require the use of non-observable data or parameters, such as correlation (among interest rates and cross-asset), mean reversion rates and prepayment rates, which are usually defined from historical data or through calibration.

Inflation-related assets include zero-coupon or year-on-year inflation-linked bonds and swaps, valued with the present value method using forward estimation and discounting. Derivatives on inflation indices are priced using standard or more complex internal models. Valuation inputs of these models consider inflation-linked swap spreads observable in the market and estimations of inflation seasonality, on the basis of which a forward inflation curve is calculated. Also, implied volatilities taken from zero-coupon and year-on-year inflation options are also inputs for the pricing of more complex derivatives.

Equity and foreign exchange

The most important products in these asset classes are forward and futures contracts; they also include vanilla, listed and OTC (Over-The-Counter) derivatives on single underlying assets and baskets of assets. Vanilla options are priced using the standard Black-Scholes model and more exotic derivatives involving forward returns, average performance, or digital, barrier or callable features are priced using generally accepted industry models or internal models, as appropriate. For derivatives on illiquid stocks, hedging takes into account the liquidity constraints in models.

The inputs of equity models consider yield curves, spot prices, dividends, asset funding costs (repo margin spreads), implied volatilities, correlation among equity stocks and indices, and cross-asset correlation. Implied volatilities are obtained from market quotes of European and American-style vanilla call and put options. Various interpolation and extrapolation techniques are used to obtain continuous volatility for illiquid stocks. Dividends are usually estimated for the mid and long term. Correlations are implied, when possible, from market quotes of correlation-dependent products. In all other cases, proxies are used for correlations between benchmark underlyings or correlations are obtained from historical data.

The inputs of foreign exchange models include the yield curve for each currency, the spot foreign exchange rate, the implied volatilities and the correlation among assets of this class. Volatilities are obtained from European call and put options which are quoted in markets as of-the-money, risk reversal or butterfly options. Illiquid currency pairs are usually handled by using the data of the liquid pairs from which the illiquid currency can be derived. For more exotic products, unobservable model parameters may be estimated by fitting to reference prices provided by other non-quoted market sources.

Credit

The most common instrument in this asset class is the credit default swap (CDS), which is used to hedge credit exposure to third parties. In addition, models for first-to-default (FTD), n-to-default (NTD) and single-tranche collateralised debt obligation (CDO) products are also available. These products are valued with standard industry models, which estimate the probability of default of a single issuer (for CDS) or the joint probability of default of more than one issuer for FTD, NTD and CDO.

Valuation inputs are the yield curve, the CDS spread curve and the recovery rate. For indices and important individual issuers, the CDS spread curve is obtained in the market. For less liquid issuers, this spread curve is estimated using proxies or other credit-dependent instruments. Recovery rates are usually set to standard values. For listed single-tranche CDO, the correlation of joint default of several issuers is implied from the market. For FTD, NTD and internal CDO, the correlation is estimated from proxies or historical data when no other option is available.

Valuation adjustment for counterparty risk or default risk

The Credit valuation adjustment (CVA) is a valuation adjustment to over-the-counter (OTC) derivatives as a result of the risk associated with the credit exposure assumed to each counterparty.

The CVA is calculated taking into account potential exposure to each counterparty in each future period. The CVA for a specific counterparty is equal to the sum of the CVA for all the periods. The following inputs are used to calculate the CVA:

- Expected exposure: including for each transaction the mark-to-market (MtM) value plus an add-on for the potential future exposure for each period. Mitigating factors such as collateral and netting agreements are taken into account, as well as a temporary impairment factor for derivatives with interim payments.
- Severity: percentage of final loss assumed in a counterparty credit event/default.
- Probability of default: for cases where there is no market information (the CDS quoted spread curve, etc.), proxies based on companies holding exchange-listed CDS, in the same industry and with the same external rating as the counterparty, are used.
- Discount factor curve.

The Debit Valuation Adjustment (DVA) is a valuation adjustment similar to the CVA but, in this case, it arises as a result of the Group's own risk assumed by its counterparties in OTC derivatives.

The CVA at 31 December 2025 amounted to EUR 224 million (resulting in a decrease of 17.6% compared to 31 December 2024) and DVA amounted to EUR 285 million (resulting in a decrease of 10.1% compared to 31 December 2024). These decreases are primarily due to the performance of credit markets, with lower spreads compared to December 2024, and secondarily to changes in the composition of certain derivatives portfolios. Furthermore, the observed reduction in CVA is influenced by changes in the calculation models applicable to certain clients.

The CVA at 31 December 2024 amounted to EUR 272 million (resulting in a decrease of 7.2% compared to 31 December 2023) and DVA amounted to EUR 317 million (resulting in a decrease of 3.9% compared to 31 December 2023). These decreases are mainly due to the declines in the EUR and USD interest rate markets, lower inflation and the movements in credit markets whose spread levels have reduced moderately compared to those of December 2023.

The CVA at 31 December 2023 amounted to EUR 293 million (decrease of 16.5% compared to 31 December 2022) and DVA amounted EUR 330 million (decrease of 9.3% compared to 31 December 2022). These decreases are mainly due to movements in credit markets whose spread levels have reduced moderately compared to those of December 2022, partially offset by the upward movement in interest rates.

In addition, the Group amounts the funding fair value adjustment (FFVA) is calculated by applying future market funding spreads to the expected future funding exposure of any uncollateralised component of the OTC derivative portfolio. This includes the uncollateralised component of collateralised derivatives in addition to derivatives that are fully uncollateralised. The expected future funding exposure is calculated by a simulation methodology, where available. The FFVA impact is not material for the consolidated annual accounts as of 31 December 2025, 2024 and 2023.

During 2025, the Group has continued to apply the criteria for classifying financial instruments within the levels of the fair value hierarchy established to comply with regulatory expectations. These criteria, based on information from the price contributors and real market transactions, represent a significant reduction in the use of expert judgement to determine observability and allow the measurement of the significance of non-observable valuation inputs based on objective criteria.

There has been an increase in instruments classified as Level 3, especially during the last quarter of the year. This increase is due to higher holding volumes of some of these instruments in the portfolio due to new trading activity. No significant reclassifications were detected due to changes in the market observability of the valuation inputs for the remaining positions. The main increases include long-term repo/reverse repo transactions, illiquid equities in non-trading portfolios, and syndicated loans with an HTC&S business model for which there is no observable market price based on the criteria used.

Valuation adjustments due to model risk

The valuation models described above do not involve a significant level of subjectivity, since they can be adjusted and recalibrated, where appropriate, through internal calculation of the fair value and subsequent comparison with the related actively traded price. However, valuation adjustments may be necessary when market quoted prices are not available for comparison purposes.

The sources of risk are associated with uncertain model parameters, illiquid underlying issuers, and poor quality market data or missing risk factors (sometimes the best available option is to use limited models with controllable risk). In these situations, the Group calculates and applies valuation adjustments in accordance with common industry practice. The main sources of model risk are described below:

- In the interest rate markets, the sources of model risk include interest rate indexes correlations, basis spread modelling, the risk of calibrating model parameters and the treatment of near-zero or negative interest rates. Other sources of risk arise from the estimation of market data, such as volatilities or yield curves, whether used for estimation or cash flow discounting purposes.
- In the stock markets, the sources of model risk include forward skew modelling, the impact of stochastic interest rates, correlation and multi-curve modelling. Other sources of risk arise from managing hedges of digital callable and barrier option payments. Also worthy of consideration as sources of risk are the estimation of market data such as dividends and correlation for quanto and composite basket options.
- For specific financial instruments relating to home mortgage loans secured by financial institutions in the UK (which are regulated and partially financed by the Government) and property asset derivatives, the main input is the Halifax House Price Index (HPI). In these cases, risk assumptions include estimations of the future growth and the volatility of the HPI, the mortality rate and the implied credit spreads.
- Inflation markets are exposed to model risk resulting from uncertainty around modelling the correlation structure among various Consumer Price Index (CPI) rates. Another source of risk may arise from the bid-offer spread of inflation-linked swaps.
- The currency markets are exposed to model risk resulting from forward skew modelling and the impact of stochastic interest rate and correlation modelling for multi-asset instruments. Risk may also arise from market data, due to the existence of specific illiquid foreign exchange pairs.
- The most important source of model risk for credit derivatives relates to the estimation of the correlation between the probabilities of default of different underlying issuers. For illiquid underlying issuers, the CDS spread may not be well defined.

Set forth below are the financial instruments at fair value whose measurement was based on internal models (levels 2 and 3) at 31 December 2025, 2024 and 2023:

EUR million

A. Level 2 internal models use data based on observable market parameters, while level 3 internal models use significant non-observable inputs in market data.
B. Includes mainly temporary acquisitions/disposals of assets with corporate clients and, to a lesser extent, with central banks.
C. Includes mainly syndicated loans under the HTC&S business model.
D. Includes, mainly, short-term deposits that are managed based on their fair value.

b) Financial Instruments (level 3)

Set forth below are the Group's main financial instruments measured using unobservable market data as significant inputs of the internal models (level 3):

- HTC&S (Held to collect and sale) syndicated loans classified in the fair value category with changes in other comprehensive income, where the cost of liquidity is not directly observable in the market, as well as the prepayment option in favour of the borrower.
- Repos and reverse repos classified as financial assets held for trading, whose valuation uses significant unobservable inputs, mainly associated with credit adjustments, liquidity and certain specific characteristics of the counterparty and the collateral.
- Illiquid equity in non-trading portfolios, classified at fair value through profit or loss and at fair value through equity.
- Instruments in Santander UK's portfolio (loans, debt securities and derivatives) linked to the House Price Index (HPI). Even if the valuation techniques used for these instruments may be the same as those used to value similar products (present value in the case of loans and debt securities, and the Black-Scholes model for derivatives), the main factors used in the valuation of these instruments are the HPI spot rate, the growth and volatility thereof, and the mortality rates, which are not always observable in the market and, accordingly, these instruments are considered illiquid.
- Callable interest rate derivatives (Bermudan-style options) where the main unobservable input is mean reversion of interest rates.
- Trading derivatives on interest rates, taking as an underlying asset titling and with the amortization rate (CPR, Conditional prepayment rate) as unobservable main entry.
- Derivatives from trading on inflation in Spain, where volatility is not observable in the market.
- Equity volatility derivatives, specifically indices and equities, where volatility is not observable in the long term.
- Derivatives on long-term interest rate and FX in some units (mainly South America) where for certain underlyings it is not possible to demonstrate observability to these terms.
- Debt instruments referenced to certain illiquid interest rates, for which there is no reasonable market observability.

The measurements obtained using the internal models might have been different if other methods or assumptions had been used with respect to interest rate risk, to credit risk, market risk and foreign currency risk spreads, or to their related correlations and volatilities. Nevertheless, the Bank considers that the fair value of the financial assets and liabilities recognised in the consolidated balance sheet and the gains and losses arising from these financial instruments are reasonable.

The net amount recognised in profit and loss in 2025 arising from models whose significant inputs are unobservable market data (level 3) amounted to EUR 469 profit (EUR 523 million and EUR 404 million profit in 2024 and 2023, respectively).

1. Valuation techniques

The table below shows the effect, at 31 December 2025, 2024 and 2023 on the fair value of the main financial instruments classified as level 3 of a reasonable change in the assumptions used in the valuation. This effect was determined by applying the probable valuation ranges of the main unobservable inputs detailed in the following table:

2025

A. For each instrument, the valuation technique, the unobservable inputs are shown in the 'Main observable inputs' column under probable scenarios, variation range, average value and impact resulting from valuing the position in the established maximum and minimum range.
B. The breakdown of impacts is shown by type of instrument and unobservable inputs.
C. The estimation of the range of variation of the unobservable inputs has been carried out taking into account plausible movements of said parameters depending on the type of instrument.
D. Zero impacts from fully hedged or back-to-back transactions have not been included in this exercise.

A. At 31 December 2025, Grupo Santander had other financial liabilities that amounted to EUR 36,096 million, EUR 39,916 million in 2024 and EUR 40,187 million in 2023.

The main valuation methods and inputs used in the estimates at 31 December 2025 of the fair values of the financial assets and liabilities in the foregoing table were as follows:

- Financial assets at amortised cost: the fair value was estimated using the present value method. The estimates were made considering factors such as the expected maturity of the portfolio, market interest rates, spreads on newly approved transactions or market spreads -when available-.
- Financial liabilities at amortised cost:

i) Deposits: the fair value of short term and on demand deposits was taken to be their carrying amount. Factors such as the expected maturity of the transactions and the Group's current cost of funding in similar transactions are consider for the estimation of long term deposits fair value. It had been used also current rates offered for deposits of similar remaining maturities.

ii) Marketable debt securities and subordinated liabilities: the fair value was calculated based on market prices for these instruments -when available- or by the present value method using market interest rates and spreads, as well as using any significant input which is not observable with market data if applicable.

iii) The fair value of cash, cash balances at central banks and other deposits on demand was taken to be their carrying amount since they are mainly short-term balances.

d) Offsetting of financial instruments

Following is the detail of financial assets and liabilities that were offset in the consolidated balance sheets as of 31 December 2025, 2024 and 2023:

	31 December 2025		
	EUR million		
Assets	Gross amount of financial assets	Gross amount of financial assets offset in the balance sheet	Net amount of financial assets presented in the balance sheet
Derivatives	117,733	(55,447)	62,286
Reverse repurchase agreements	217,509	(76,535)	140,974
Total	**335,242**	**(131,982)**	**203,260**

	31 December 2024

Total	**358,968**	**(167,383)**	**191,585**

At 31 December 2025, Grupo Santander has offset other items amounting to EUR 632 million (EUR 811 million and EUR 910 million at 31 December 2024 and 2023, respectively).

At 31 December 2025 the balance sheet shows the amounts EUR 192,621 million (EUR 176,198 million and EUR 151,044 million at 31 December 2024 and 2023) on derivatives and repos as assets and EUR 220,296 million (EUR 209,121 million and EUR 180,539 million at 31 December 2024 and 2023, respectively) on derivatives and repos as liabilities that are subject to netting and collateral arrangements.

52. Primary and secondary segments reporting

Grupo Santander bases segment reporting on financial information presented to the chief operating decision maker, which excludes certain statutory results items that distort year-on-year comparisons and are not considered for management reporting. This financial information (underlying basis) is computed by adjusting reported results for the effects of certain gains and losses (e.g. capital gains, write-downs, impairment of goodwill, etc.). These gains and losses are items that management and investors ordinarily identify and consider separately to better understand the underlying trends in the business.

Grupo Santander has aligned the information in this note with the underlying information used internally for management reporting and with that presented in Grupo Santander's other public documents.

Grupo Santander executive committee has been selected to be its chief operating decision maker. Grupo Santander's operating segments reflect its organizational and managerial structures. Grupo Santander 's executive committee reviews internal reporting based on these segments to assess performance and allocate resources.

The segments are split by global business and country in which profits are earned. Santander prepares the information by aggregating the figures for Grupo Santander's global businesses and countries, relating it to both the accounting data of the business units integrated in each segment and that provided by management information systems. The same general principles as those used in Grupo Santander are applied.

The main changes, which have been applied to management information for all periods included in the annual accounts, relate to the following:

1. Investment platforms (Investment Platforms Unit) and certain stakes in companies, mainly in the real estate sector, that were previously recorded in Retail & Commercial Banking or Corporate & Investment Banking have been incorporated into Wealth Management & Insurance. Grupo Santander have therefore incorporated a new vertical, Portfolio Investments, focusing on the management of said investment platforms and stakes that complement Wealth's traditional business.

2. Some profit sharing criteria between Retail & Commercial Banking and Cards have been improved, aligning criteria across the Group.

3. Grupo Santander has completed the usual annual adjustment of the perimeter of the Global Customer Relationship Model between Retail & Commercial Banking and Corporate & Investment Banking and between Retail & Commercial Banking and Wealth Management & Insurance.

4. In secondary segments, the board of directors approved the dissolution of the regional structures. As a result, the Group will no longer report regional information and the secondary segments are structured into the 10 main units (nine countries and DCB Europe), the Corporate Centre and 'Rest of the Group', which includes everything that is not already included in the mentioned units.

The above-mentioned changes have no impact on the Group's reported consolidated financial statements.

a) Primary segments

This primary level of segmentation, which is based on the Group's management structure, comprises six reportable segments: five operating areas plus the Corporate Centre. The operating areas are:

- Retail & Commercial Banking (Retail): area that integrates the retail banking and commercial banking business (individuals, SMEs and corporates), except private banking clients and business originated in the consumer finance and the cards businesses. Detailed financial information is provided on Spain (Retail Spain), the UK (Retail UK), Mexico (Retail Mexico) and Brazil (Retail Brazil), which represent the majority of the total Retail business.

- Digital Consumer Bank (Consumer): comprises all business originated in the consumer finance companies, plus Openbank, Open Digital Services (ODS) and SBNA Consumer. Detailed financial information is provided on Europe (DCB Europe) and US (DCB US).

- Corporate & Investment Banking (CIB): this business, which includes Global Transactional Banking, Global Banking (Global Debt Finance and Corporate Finance) and Global Markets, offers products and services on a global scale to corporate and institutional customers, and collaborates with other global businesses to better serve our broad customer base.

- Wealth Management & Insurance (Wealth): includes the corporate unit of Private Banking and International Private Banking in Miami and Switzerland (Santander Private Banking), the asset management business (Santander Asset Management), the insurance business (Santander Insurance) and the unit that manages the investment platforms and stakes that complement Wealth's traditional business (the new vertical, Portfolio Investments).

- Payments: comprises the Group's digital payments solutions, providing global technology solutions for the banks and new customers in the open market. It is structured in two businesses: PagoNxt (Getnet, Ebury and PagoNxt Payments) and Cards (cards platform and business in the countries where Group operates).

In addition to these operating units, both primary and secondary, Grupo Santander continues to maintain the area of Corporate Centre, that includes the centralized activities relating to equity stakes in financial companies, financial management of the structural exchange rate position, assumed within the sphere of Grupo Santander's assets and liabilities committee, as well as management of liquidity and of shareholders' equity via issuances.

As Grupo Santander's holding entity, this area manages all capital and reserves and allocations of capital and liquidity with the rest of businesses. It also incorporates amortization of goodwill but not the costs related to the Grupo Santander's central services (charged to the areas), except for corporate and institutional expenses related to the Grupo Santander's functioning.

There are no customers located in any of the areas that generate income exceeding 10% of Total income.

The main masses of the balance sheets of the different segments, summarized, are indicated below:

A. Net interest income includes the net amount of the profit and loss account items 'Interest income' and 'Interest expense'. It is presented this way because it is how it is presented to the main operational decision maker.
B. Gains (losses) on financial transactions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Gain or losses on financial assets and liabilities not measured at fair value through profit or loss, net, Gain or losses on financial assets and liabilities held for trading, net, Gains or losses on non-trading financial assets and liabilities mandatorily at fair value through profit or loss, net, Gain or losses on financial assets and liabilities measured at fair value through profit or loss, net, Gain or losses from hedge accounting, net and Exchange differences, net.
C. Other operating income includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Dividend income; Income from companies accounted for using the equity method, Other operating income, Other operating expenses, Income from assets under insurance or reinsurance contracts and Expenses from liabilities under insurance or reinsurance contracts.
D. Net Operating Income is used for the Group's internal reporting and management reporting purposes but is not a line item in the statutory consolidated income statement.
E. Net loan-loss provisions refers to Impairment or reversal of impairment at financial assets not measured at fair value through profit or loss and net gains and losses from changes line item in the statutory income statement. Additionally, includes a release of EUR 24 million mainly corresponding to the results by commitments and contingent risks includes in the line of the statutory income statement of provisions or reversal of provisions.
F. Other gains (losses) and provisions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Provisions or reversal of provisions except a release of EUR 24 million mainly corresponding to the results by commitments and contingent risks; Impairment of investments in joint ventures and associates, net; Impairment on non-financial assets, net; Gains or losses on non-financial assets, net; Negative goodwill recognised in results and Gains or losses on non-current assets held for sale not classified as discontinued operations.

b) Secondary segments

Grupo Santander proceeded to the dissolution of the regional management structures at the beginning of 2025, including at this secondary level the main geographical units. Detailed financial information is provided on Spain, the UK, Portugal, Poland, DCB Europe, which includes Santander Consumer Finance (the entire consumer finance business in Europe), Openbank in Europe and ODS, the US, which includes the holding company (SHUSA) and the businesses of Santander Bank (SBNA), Santander Consumer USA (SC USA), the specialized business unit Banco Santander International, the New York branch and Santander US Capital Markets (SanCap), Mexico, Brazil, Chile and Argentina. Information is also provided on the Corporate Centre and 'Rest of the Group', which brings together everything that is not included in the aforementioned geographical units or the Corporate Centre.

With regard to the balance sheet, due to the required segregation of the various business units (included in a single consolidated balance sheet), the amounts lent and borrowed between the units are shown as increases in the assets and liabilities of each business. These amounts relating to intra-Group liquidity are eliminated and are shown in the Intra-Group eliminations column in the table below in order to reconcile the amounts contributed by each business unit to the consolidated Grupo Santander's balance sheet.

There are no customers located in a place different from the location of the Group's assets that generate revenues in excess of 10% of ordinary revenues.

The main masses of the balance sheets of the different secondary segments, summarized, are indicated below:

A. Net interest income includes the net amount of the profit and loss account items 'Interest income' and 'Interest expense'. It is presented this way because it is how it is presented to the main operational decision maker.
B. Gains (losses) on financial transactions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Gain or losses on financial assets and liabilities not measured at fair value through profit or loss, net, Gain or losses on financial assets and liabilities held for trading, net, Gains or losses on non-trading financial assets and liabilities mandatorily at fair value through profit or loss, net, Gain or losses on financial assets and liabilities measured at fair value through profit or loss, net, Gain or losses from hedge accounting, net and Exchange differences, net.
C. Other operating income includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Dividend income; Income from companies accounted for using the equity method, Other operating income, Other operating expenses, Income from assets under insurance or reinsurance contracts and Expenses from liabilities under insurance or reinsurance contracts.
D. Net Operating Income is used for the Group's internal reporting and management reporting purposes but is not a line item in the statutory consolidated income statement.
E. Net loan-loss provisions refers to Impairment or reversal of impairment at financial assets not measured at fair value through profit or loss and net gains and losses from changes line item in the statutory income statement. Additionally, includes a release of EUR 24 million mainly corresponding to the results by commitments and contingent risks included in the line provisions or reversal of provisions, net of the statutory income statement.
F. Other gains (losses) and provisions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Provisions or reversal of provisions except a release of EUR 24 million mainly corresponding to the results by commitments and contingent risks; Impairment of investments in joint ventures and associates, net; Impairment on non-financial assets, net; Gains or losses on non-financial assets, net; Negative goodwill recognized in results and Gains or losses on non-current assets held for sale not classified as discontinued operations.

c) Reconciliations of reportable segment results

The tables below reconcile the statutory basis results to the underlying results for each of the periods presented as required by IFRS 8. For the purposes of these reconciliations, all material reconciling items are separately identified and described.

Grupo Santander assets and liabilities for management reporting purposes do not differ from the statutory reported figures and therefore are not reconciled.

Attributable profit/(loss) to the parent	**14,101**	**—**	**—**	**14,101**

A. Net interest income includes the net amount of the profit and loss account items 'Interest income' and 'Interest expense'. It is presented this way because it is how it is presented to the main operational decision maker.
B. Gains (losses) on financial transactions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Gain or losses on financial assets and liabilities not measured at fair value through profit or loss, net, Gain or losses on financial assets and liabilities held for trading, net, Gains or losses on non-trading financial assets and liabilities mandatorily at fair value through profit or loss, net, Gain or losses on financial assets and liabilities measured at fair value through profit or loss, net, Gain or losses from hedge accounting, net and Exchange differences, net.
C. Other operating income includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Dividend income; Income from companies accounted for using the equity method, Other operating income, Other operating expenses, Income from assets under insurance or reinsurance contracts and Expenses from liabilities under insurance or reinsurance contracts.
D. Net Operating Income is used for the Group's internal reporting and management reporting purposes but is not a line item in the statutory consolidated income statement.
E. Net loan-loss provisions refers to Impairment or reversal of impairment at financial assets not measured at fair value through profit or loss and net gains and losses from changes line item in the statutory income statement. Additionally, includes an addition of EUR 47 million mainly corresponding to the results by commitments and contingent risks includes in the line of the statutory income statement of provisions or reversal of provisions.
F. Other gains (losses) and provisions includes the following line items in the statutory income statement, which are presented net for internal reporting and management reporting purposes: Provisions or reversal of provisions except for an addition of EUR 47 million mainly corresponding to results from commitments and contingent risks; Impairment of investments in joint ventures and associates, net; Impairment on non-financial assets, net; Gains or losses on non-financial assets, net; Negative goodwill recognized in results and Gains or losses on non-current assets held for sale not classified as discontinued operations.

Explanation of adjustments:

- In accordance with IFRS 5 requirements, in the statutory profit, results subject to the Poland disposal have been reported under the line 'Profit or loss after tax from discontinued operations' (see Note 3). However, in the underlying profit, the results from Poland have been reclassified so that they are reported line by line and disaggregated in each of the corresponding line items.
- A capital gain of EUR 231 million, from the sale of Santander's remaining 30.5% stake in CACEIS (see Note 3).
- Charges of EUR 467 million (EUR 231 million net of taxes and minority interests) after updating the macroeconomic parameters in Brazil's credit provisioning models.

- Temporary levy on revenue in Spain in the first quarter, totalling EUR 224 million, which was moved from total income to other gains (losses) and provisions.

- Additional provisions for specific cases in the wholesale portfolio of Brazil for an amount of EUR 235 million, net of tax and non-controlling interests (EUR 474 million recorded in net loan-loss provisions, EUR 213 million positive impact in tax and EUR 26 million in non-controlling interests).

53. Related parties

The parties related to the Group are deemed to include, in addition to its associates and joint ventures, the Bank's key management personnel (the members of its board of directors and the senior management, together with their close family members) and the entities over which the key management personnel may exercise significant influence or control.

Following below is the balance sheet balances and amounts of the Group's income statement corresponding to operations with the parties related to it, distinguishing between associates and joint ventures, members of the Bank's board of directors, the Bank's senior management, and other related parties. Related-party transactions were made on terms equivalent to those that prevail in arm's-length transactions or, when this was not the case, the related compensation in kind was recognized.

54. Risk management

a) Risk principles and culture

The principles on which Grupo Santander's risk management and control are based are detailed below. They take into account regulatory requirements, best market practices and are mandatory:

1. **All employees are responsible for risk management**. They must understand the risks arising from their activities and take ownership for managing them.

2. **Senior management involvement.** Through conduct, actions and communications, senior management promotes consistent risk management, fosters our risk culture, and oversees that the risk profile remains within the appetite set.

3. **Independence:** Risk management and control functions operate independently according to our three-lines-of-defence model, with clearly defined roles and responsibilities.

4. **Holistic, forward-looking approach:** We take a comprehensive approach to risk management and control that extends to all businesses and risk types that could have a material impact. This approach is forward-looking and considers trends across several time horizons and scenarios.

5. **Corporate oversight of subsidiaries:** Banco Santander sets minimum risk management and control standards through reference documents. Subsidiaries are responsible for translating these standards into their own internal policies and procedures.

1. Key risk types

Grupo Santander's risks categorization allows effective risk management, control and reporting, and includes, among others the following risk types:

- **Credit risk** is the risk of loss arising from the failure of a customer or counterparty to meet its obligations to which the Santander Group has provided financing or entered into a contractual commitment, or from the deterioration of their credit quality.

- **Market risk** is the risk incurred as a result of the effect of changes in market factors interest rates, exchange rates, equities and commodities, among others, may have on profits or capital.

- **Liquidity risk** is the risk incurred because of adverse movements in the factors that determine the market value of financial instruments, such as interest rates, exchange rates, equity prices and commodities, among others.

- **Structural Risk** is the risk of changes in the value or margin generation of the assets or liabilities in the banking book resulting from changes in market and behavioural factors. It also includes risks associated with insurance and pension activities, as well as the risk of not having an adequate amount or quality of capital to meet internal business objectives, regulatory requirements, or market expectations.

- **Capital risk**, included within the scope of structural risk, is the risk that arises from the possibility of having an inadequate quantity or quality of capital to meet internal business objectives, regulatory requirements or market expectations.

Grupo Santander also takes into account, on an ongoing basis in its risk management, operational (includes fraud, technological, cyber, legal and conduct risks), financial crime (includes, among others, money laundering, terrorism financing, violation of international sanctions, corruption, bribery and tax evasion), model, reputational and strategic risks.

These risks may be affected by a range of factors that we identify and assess in line with regulatory requirements and industry practice, including: geopolitical developments (international conflicts, economic and monetary decisions, new regulations or trade tensions); digital and transformation initiatives linked to technological change or shifts in business models; and sustainability factors — environmental (natural and climate-related, including extreme events and resource scarcity, as well as those arising from the transition to a more sustainable economy), social (relating to people's rights, welfare and interests) and governance, both within Grupo Santander and among our counterparties.

In particular, from an environmental and climate perspective, the relevant elements cover, on the one hand, those stemming from the physical effects of climate change and, on the other, those linked to the transition towards a more sustainable economy, including legislative and regulatory, technological or behavioural changes among economic agents.

Given the nature of its operations, the Group has no environment-related liabilities, expenses, assets or contingencies that may be material to its consolidated equity, financial situation and results.

According to market consensus and our materiality assessment, exposure in the sectors where environmental factors may have the most impact mainly relate to wholesale customers. Our management of these customers considers environmental aspects in the preliminary assessment, credit origination and the preparation and review of their credit ratings, which influence the parameters we use to calculate their probability of default (PD). Thus, we embed the most material climate factors in our assessments and in capital loss and provisions calculations.

Moreover, to cover and anticipate potential future losses from severe climate events, such as the Valencia DANA or Hurricane Milton in Florida, we have set overlays whose amount to date has not been material to the Group's total loan loss reserves.

Grupo Santander has enhanced its methodological framework to quantify and assess transition and physical risks in credit losses for climate impacts that are not specifically captured through the forward-looking component implemented under the IFRS 9 framework. We assess these risks under several scenarios published by the NGFS, which explore varying assumptions on shifts in climate policies, emissions, temperatures and physical risk impacts. We take a proportionality approach by assessing the impact on the Group's core markets and portfolios, especially non-financial entities and mortgage products.

Regarding impact on companies' credit quality, the model assesses the transmission of customers' physical and transition climate risk through defined channels (sector GVA, GHG emissions, carbon price, regional GDP, or collateral valuations).

For mortgage products, climate risk appears mainly through a deterioration in collateral values, as reflected in the loan-to-value ratio, which is the main transmission channel into LGD.

These methodologies enable us to embed potential climate-event impacts on credit losses in credit risk management. Against this backdrop, we carried out both internal capital self-assessment exercises and regulatory stress tests.

In light of the above and based on the best information available at the date of these consolidated annual financial statements, we also assessed the potential additional impact of climate and environmental risks on the Group's equity, financial situation and results in 2025. We did not identify any significant or material impacts.

2. Risk and compliance governance

Grupo Santander robust risk and compliance governance structure allows us to conduct effective oversight in line with our risk appetite. It stands on three lines of defence, a structure of committees and strong Group-subsidiary relations, guided by our risk culture, Risk Pro.

2.1 Lines of defence

Grupo Santander model of three lines of defence effectively manages and controls risks:

- **First line**: formed business functions, as well as all other functions that generate risk, constitute the first line of defence. They must establish an appropriate environment to manage all risks associated with the business and support compliance with internal policies and regulation. Risk management must operate within the approved risk appetite and associated limits. The first line executes mitigation plans for risks where weaknesses are identified in its control environment.

- **Second line:** formed by the risk and compliance functions, independently oversees and challenges the risk management activities that the first line carries out. Its role is to help verify that we manage risks in line with the established risk appetite and to promote a strong risk culture across the organization.

- **Third line:** formed by Internal Audit is a permanent function, independent of any other functions or units, whose objective is to provide the Management Body and the senior management with independent assurance on the quality and effectiveness of internal control, risk management (current or emerging) and governance processes and systems, thereby helping to protect the company's value, solvency, and reputation.

Risk, Compliance and Internal Audit are sufficiently separate and autonomous functions, with direct access to the board and its committees. The risk and compliance functions report to the risk supervision, regulation and compliance committee and the internal audit function reports to the audit committee.

2.2 Risk committee structure

The **board of directors** has final oversight of risk and compliance management and control to promote a sound risk culture and review and approve risk appetite and frameworks, with support from its risk, regulation and compliance committee (RSRCC) and its executive committee. The Group's risk governance keeps risk control and risk-taking areas separate.

Our governance structure also includes key roles and executive committees that strengthen oversight and support the effective performance of the control function.

The **Group chief risk officer (CRO)**, who leads the application and execution of risk strategy and promotes proper risk culture, is in charge of overseeing all risks and challenging and advising business lines on risk management.

The **Group chief compliance officer (CCO)** leads the application and execution of the compliance and conduct risk strategy and reports the status of risks being monitored in order to provide the Chief Risk Officer with a comprehensive view of all risks.

The CRO and the CCO report directly to both the risk supervision, regulation and compliance committee and the board of directors.

The executive risk, risk control and compliance and conduct committees are executive committees with powers delegated from the board.

Furthermore, the executive-level committees delegate part of their responsibilities to forums and/or standing meetings to manage and control each risk type.

Their responsibilities include:

- Inform the CRO, the CCO, the risk control committee and the compliance and conduct committee if risks are being managed within risk appetite;

- Conduct regular follow-ups for each key risk type; and

- Overseeing the measures adopted to meet supervisor's and auditor's expectations.

Besides, Grupo Santander, in order to establish an adequate control environment for the management of each risk types, the risk and compliance functions have effective internal regulation to create the right environment to manage and control all risks.

Grupo Santander may introduce additional governance measures for special situations to reinforce the monitoring of all risks, with particular focus on trends in key macroeconomic indicators and liquidity, the identification of vulnerable sectors/customers, and the strengthening of cybersecurity, among other aspects. Activating these special-situations forums helps the Group address the effects of the geopolitical and macroeconomic environment with resilience.

2.3 The Group's relationship with subsidiaries

Grupo Santander subsidiaries' risk and compliance management and control model is consistent with the frameworks approved by the Group board of directors. Subsidiaries adhere to the frameworks through their own boards and can only adapt to higher standards according to local law and regulation.

As part of Santander's aggregated risk oversight, we challenge and review subsidiaries' internal regulations and activities. This enables us to maintain a common risk management and control model across the Group.

The risk and compliance functions support the businesses and oversee risks at both global and local levels. In addition, over the year we continued to strengthen the Group–subsidiary relationship model, leveraging our global scale to identify synergies under a common operating model and shared platforms. The model promotes process simplification and the reinforcement of control mechanisms to support the growth of our businesses.

Santander's Group–subsidiary governance model (GSGM) sets out the principles that govern the relationship between Group key roles and the subsidiaries, which helps safeguard the independence of local second lines. The CRO and CCO take part in the appointment, objectives, performance reviews and remuneration of their local counterparts, which helps confirm that they are controlling risks appropriately.

We continue to strengthen the relationship between the Group and its subsidiaries through close cooperation among our subsidiaries to develop common initiatives more efficiently, such as:

- Transformation of organizational structures, sharing benchmarks across countries and contributing to the function's strategic vision to promote the rollout of more advanced risk-management infrastructures and practices.
- Exchange of best practices to strengthen processes and drive innovation.
- Promotion of internal talent and mobility, both geographic and functional, as well as fostering diversity within teams to reflect the diversity of the environments in which we operate.
- Developing our risk professionals, improving innovation, the quality of decisions, and fostering a global mindset is key to enhance organizational resilience and reinforcing a global mindset.

The GSGM model also applies to the Group's global businesses. This gives us a global-local organization in which countries ultimately remain responsible for delivering the budget, the business and customer strategy, and financial management, while the global businesses lead shared initiatives through common operating models and shared technologies, improving local performance.

3. Management processes and tools

Grupo Santander has these effective risk management processes and tools:

3.1 Risk appetite and structure of limits

Risk appetite is the aggregate level and types of risk that Grupo Santander deems prudent for our business strategy, even in unforeseen circumstances. Risk appetite is governed throughout the Group by the following principles:

- **Risk appetite is part of the board's duties**. The board prepares the risk appetite statement (RAS) for the whole Group every year. Through a cascading-down process, each subsidiary's board also sets its own risk appetite.
- **Comprehensiveness and forward-looking approach**. Our appetite includes all material risks to which we are exposed and defines our target risk profile for the current and medium term, with a forward-looking view that considers stress scenarios.
- **Common standards embedded in the day-to-day risk management**. The Group shares the same risk appetite model, which sets common requirements for processes, metrics, governance bodies, controls and standards. This facilitates effective and traceable embedding of risk appetite into more granular management policies and limits across our subsidiaries..
- **Continuous monitoring and adaptation**. Risk appetite is regularly monitored, reviewed and updated to reflect changes in market conditions, regulatory requirements and supervisory expectations. Compliance with risk appetite limits is monitored on a regular basis through dedicated reporting to senior management and the board and its committees. Breaches or potential breaches are subject to predefined escalation, remediation and follow-up processes, with oversight proportionate to their materiality through senior management and the Group's governing bodies.
- **Alignment with strategy and business plans**. Before approving the three-year strategic plans, annual budget, and capital and liquidity plans, the Group verifies their consistency with the limits set in the Risk Appetite Statement. We promote the alignment of strategic and business plans with our risk appetite by:
  - considering the risk appetite, long-term strategic view and the risk culture when drafting strategic and business plans.
  - challenging business and strategic plans against the risk appetite. Misalignments trigger a review of either the three-year strategic plan (to make sure we stay within RAS limits) or risk appetite limits, with independent governance.
  - continuous monitoring of risk appetite compliance through the three lines of defence model.

The main elements underpinning Grupo Santander's risk appetite and defining our business model are:

- a medium-low, predictable target risk profile, customer focus, internationally diversified operations and a significant market share;
- stable, recurrent earnings and shareholder remuneration, sustained by a sound base of capital, liquidity and sources of funding;
- autonomous subsidiaries that are self-sufficient in terms of capital and liquidity to safeguard their risk profiles against compromising the Group's profile;
- an independent risk function and a senior management actively engaged in supporting a robust control environment and risk culture; and
- a conduct model that protects our customers and our Simple, Personal and Fair culture.

The risk appetite is expressed through qualitative statements and limits on metrics representative of the bank's risk profile at present and under stress. Those metrics cover all risk types according to our corporate risk framework. Grupo Santander articulates them in five axes that provide the Bank with a holistic view of all risks it incurs in the development of its business model. These five axes are applicable to all Santander's key risk types, and comprise:

- P&L volatility: control of P&L volatility of business plan under baseline and stressed conditions (under normal and stressed conditions).
- Solvency: control of capital ratios under baseline and stressed scenarios (aligned with ICAAP).
- Liquidity: control of liquidity ratios under base and stress scenarios (aligned with ILAAP).
- Concentration: control of credit concentration on top clients, portfolios and industries.
- Non financial risk and control environment: robust control on non financial risks aimed to minimize events which could lead to financial loss, operative, technological, legal and regulatory breaches, conduct issues or reputational damage.

b) Credit risk

1. Introduction to the credit risk treatment

Grupo Santander takes a holistic view of the credit risk cycle, including the transaction, the customer and the portfolio, in order to identify, analyse, control and decide on credit risk.

Credit risk identification facilitates active and effective portfolio management and control. Grupo Santander identify and classify external and internal risk in each business to adopt any corrective or mitigating measures through:

1.1. Planning

Planning allows to set business objectives and define concrete action plans, integrating the risk appetite statement into portfolio management.

Strategic commercial plans (SCPs) are the management and control tool that the Business and Risk areas define for credit portfolios, with support from the other functions involved (Finance, Management Control, among others). They set out the commercial strategy, risk policies, and the resources and infrastructure required, providing a holistic view of portfolio management.

They also provide an up-to-date view of portfolio credit quality, enable risk measurement, support the execution of internal controls over the defined strategy, allow for periodic monitoring, and help detect material deviations or potential impacts, facilitating the adoption of corrective measures when necessary.

SCPs are aligned with subsidiaries' risk appetite and capital objectives, as well as those of the Group, and are approved and overseen by local senior management before being reviewed and ratified at Group level.

1.2. Risk assessment and credit rating

Credit risk approval criteria focus on borrowers' ability to meet their financial obligations. The assessment uses statistical models and an analysis of the net funds or cash flows generated by economic activity, or of regular income, to determine customers' repayment capacity in a consistent and sustainable manner.

Some statistical credit quality assessment models feed into decision engines to deliver a credit risk assessment quickly and in a consistent, standardised way. These engines support faster and more uniform decision-making, reduce manual errors, apply the same assessment criteria to all customers, and provide traceability and support regulatory compliance. These ratings have multiple uses in risk management, including the origination process (application of limits and pre-approvals), risk monitoring, and as an input to transaction pricing.

These credit rating models may be:

- Rating: from mathematical algorithms that have a quantitative model based on balance sheet ratios or macroeconomic variables or behavioural information, and a qualitative module supplemented by the credit analyst's expert judgement. It is used for large corporates, corporates, institutional and SME segments (with individualised treatment).
- Scoring: an automated system that assesses credit applications based on the information provided (admission scoring) or customers' credit profiles based on their relationship with the institution (behavioural scoring). Both are complemented by other available information (for example, from external databases). The system automatically assigns each customer an individual score, which then supports the subsequent decision. It is used for individuals and small businesses with no assigned analyst.

The Group's parameter estimation models rely on econometric models built on historical default and loss data from the portfolios. The Group uses them to calculate economic and regulatory capital, and IFRS 9 provisions, at operation, customer and portfolio level.

A rigorous governance framework covers the ongoing monitoring and continuous calibration of these models to assess their suitability, predictive power, performance and granularity, as well as compliance with credit policies.

In addition, the Group reviews ratings using the latest available financial information and other relevant data.

Grupo Santander´s limits, pre-classifications and pre-approvals processes determine the level of risk the Group can take on with each customer. Automated processes approve and monitor these decisions. Approved limits must align with expected profitability. To support this, we use profitability estimation and risk-based pricing tools that contribute to sustainable portfolio growth.

Grupo Santander applies various limits models to each segment:

- Large corporate groups are subject to a pre-classification model based on a system for measuring and monitoring economic capital. Pre-classification models express the level of risk Grupo Santander is willing to assume in transactions with customers/ groups.
- In the corporate segment, for customers that meet certain predefined criteria (including internal rating and profitability), the Group applies a pre-classification model for the main products related to the customer's recurring business. The model operates through the setting of internal nominal limits, which define the level of risk to take on with each customer based, among other factors, on their repayment capacity and leverage.

  Corporate transactions that exceed certain limits or have specific features must be handled through the approval process for an ad hoc proposal.

- For individual customers and SMEs with low turnover, Grupo Santander manages large volumes of credit transactions using automated decision models that assess each case and assign a limit per customer and transaction.

1.3. Scenario analysis

Grupo Santander´s scenario analyses determine the potential risks in its credit portfolios and provide a better understanding of our portfolios' performance under various macroeconomic conditions. They allow us to anticipate management strategies that will avoid future deviations from defined plans and targets.

They simulate the impact of alternative scenarios in portfolios' credit parameters (PD, LGD) and expected credit losses. Grupo Santander compares findings with portfolios' credit profile indicators to find the right measures for managers to take. Credit risk management of portfolios and SCPs incorporate scenario analyses.

1.4. Monitoring

Regular, holistic monitoring of customers and portfolios is an essential element of the Group's credit risk management, as it enables continuous monitoring of credit quality, early identification of potential impairment and analysis of business performance against predefined plans and objectives.

The monitoring process systematically analyses changes in credit exposures, customers' financial and qualitative characteristics, and any relevant changes in their risk classification. This preventive approach draws on transactional information, behavioural indicators and advanced analytics tools, including early-warning engines, which support early identification of potential deterioration and the implementation of specific actions at both customer and portfolio level, based on the assigned monitoring level.

Monitoring adapts to customer segmentation and the applicable management approach:

- in the large corporate segment, monitoring is carried out jointly by the commercial managers and the risk analysts, which provides an up-to-date, comprehensive view of the customer's credit quality at all times and supports the early identification of any potential deterioration.
- In the commercial banking, institutions and SMEs with an assigned a credit analyst, he teams carry out enhanced monitoring of customers whose risk profile or specific circumstances require it. This includes the periodic review of their internal ratings based on relevant financial, behavioural and environmental indicators.
- Monitoring of individual customers, businesses and smaller SMEs follows a system of automatic alerts to detect shifts in portfolios' performance.

The Group structures this process for customers with an assigned analyst through the SCAN (Santander Customer Assessment Note) monitoring framework. SCAN assigns a specific monitoring level to each customer, sets the related operating policies, defines concrete management actions, identifies accountable owners and establishes a review frequency aligned with the customer's risk profile and relevance.

In addition, the Group has aggregated control and analysis procedures that track portfolio performance, identify material deviations from strategic plans or defined alert thresholds, and help prioritise management focus areas. The process is complemented by contingency plans (risk playbooks), which support the early identification and management of impacts from external factors — such as macroeconomic, sector or market changes — and, where appropriate, trigger corrective measures, including adjustments to risk policies.

1.5. Credit risk mitigation techniques

Risk approval criteria generally focus on borrowers' ability to meet their financial obligations, without prejudice to any collateral that the Bank may require. Collateral and guarantees provided by the obligor in favour of the Bank aim to modulate the level of exposure.

To determine ability to pay, the Group analyses funds or cash flows from businesses or other regular income, not including guarantors or loan collateral which are always considered at credit approval as a secondary means of recourse.

A guarantee is an additional protection mechanism in a credit transaction, intended to mitigate loss in the event of a failure to meet the payment obligation. The Group applies different credit risk mitigation techniques depending, among other factors, on the customer and product type. Some are specific to an individual transaction (e.g., real estate guarantees), while others apply to a set of transactions (e.g., derivatives netting or collateral arrangements). These techniques may be grouped into personal guarantees, real guarantees and hedges using credit derivatives.

The correct acceptance of these mitigation techniques is established by verifying their legal enforceability in all jurisdictions. The entire process is subject to internal control and effective monitoring of the valuation of the guarantees, especially real estate guarantees.

1.6. Collections & recoveries management

Recovery activity is a relevant function within Grupo Santander's risk management and control framework, as it contributes to portfolio quality as one of the key pillars supporting the Bank's development, growth and business sustainability. Collections and debt recovery management is a specific, ongoing focus to keep portfolio quality within the expected levels.

The Collections and Recoveries area defines a global management strategy, based on an end-to-end approach and general lines of action for subsidiaries. Recovery management operates under policies and an independent control environment defined by the risk function, aligned with regulatory requirements and with the Group Santander conduct risk management model. The Group carries out this activity in line with strategies defined by the recovery function, in coordination with the Risk areas.

The recovery strategy combines advanced customer segmentation and the intensive use of digital tools. This supports the optimisation of mass portfolio management and provides tailored support for customers who require individual treatment. The customer remains the focus, and recovery strategies are defined in the context of the relationship with the customer, prioritising the customer's viability. As a result, teams manage the customer holistically across all phases of the cycle.

The function's approach covers the entire credit cycle, prioritising solutions that support customer viability. Even after the asset is written off (failed risk), the Group continues to carry out the necessary actions to maximise recovery. The failed risk category includes debt instruments, whether past due or not, for which, following an individual assessment, recovery is considered remote due to a significant and irreversible deterioration in the solvency of the exposure or the holder. Classification in this category entails the full or partial cancellation of the exposure's gross carrying amount and its derecognition from the balance sheet, without implying that the Group stops negotiations and legal proceedings to recover the amount.

2. Main aggregates and variations

Below are the main aggregates relating to credit risk from our activities with customers:

Main credit risk performance metrics from activity with customers[A]

December data

	Credit risk with customers (EUR million)[B]			Credit impaired (EUR million)			NPL ratio (%)		
	2025	2024	2023	2025	2024	2023	2025	2024	2023
Spain	302,271	285,883	278,569	5,915	7,672	8,529	1.96	2.68	3.06

A. Management perimeter according to the reported segments.
B. Includes gross loans and advances to customers, guarantees and documentary credits.
C. Loan-loss provisions net of post write-off recoveries (EUR 1,795 million in 2025).
D. Provisions to cover losses due to impairment of loans in the last 12 months / average customer loans and advances of the last 12 months.

Information on the estimation of impairment losses

The calculation of provisions for credit risk losses is performed at financial asset level, estimating potential credit losses through the difference between the contractual cash flows and the expected cash flows, ensuring that the results are adequate considering the status of the transaction, economic conditions and available forward-looking information.

The IFRS 9 impairment model applies to financial assets valued at amortized cost; debt instruments valued at fair value with changes in other comprehensive income; leasing receivables; and commitments and guarantees not valued at fair value.

The portfolio of financial instruments subject to IFRS 9 has three credit risk categories (or stages) according to the status of each instrument in relation to its level of credit risk:

- Stage 1: financial instruments with no significant increase in risk since initial recognition – the impairment provision reflects expected credit losses from defaults over the 12 months from the reporting date.
- Stage 2: financial instruments with a significant credit risk increase since initial recognition but no materialized impairment event – the impairment provision reflects expected losses from defaults over the financial instrument's residual life.
- Stage 3: financial instruments with true signs of impairment as a result of one or more events resulting in a loss – the impairment provision reflects expected losses for credit risk over the instrument's expected residual life.

The classification of financial instrument in the IFRS 9 stages is carried out in accordance with the guidelines through the risk management policies of the subsidiaries, which are consistent with the Group's policies.

Estimation of expected loss

The Group uses parameters (mainly EAD, PD, LGD and the discount rate) to calculate impairment provisions. These parameters build on the infrastructure of internal models used to calculate regulatory capital and on regulatory and management expertise, and they also reflect each financial asset's stage classification.

However, these parameters are not a simple adaptation of existing models. We designed and validated them specifically in line with IFRS 9 requirements and guidance from bodies such as the EBA, , National Competent Authority (NCA), Bank for International Settlements (BIS) or Global Public Policy Committee (GPPC). Their development incorporates forward-looking information, a point-in-time (PIT) approach, multiple scenarios and lifetime loss estimation through lifetime PD, among other elements.

Determination of significant increase in credit risk (SICR)

To determine classification in Stage 2, the Group assesses whether a SICR has occurred since the initial recognition of the exposures. The Group performs this assessment under common principles applicable across the Group, reviewing all financial instruments subject to this analysis and taking into account the specific features of each portfolio and product type through a range of quantitative and qualitative indicators.

Expert judgement from analysts supports the SICR assessment. Analysts set the thresholds within an integrated management framework and in line with the approved corporate governance. The principles are as follows:

- Universality: all financial instruments subject to a credit rating must be assessed for their possible SICR.
- Proportionality: the definition of the SICR must take into account the particularities of each portfolio.
- Materiality: its implementation must be also consistent with the relevance of each portfolio so as not to incur in unnecessary costs or efforts.
- Holistic vision: the approach selected must be a combination of the most relevant credit risk aspects (e.g. quantitative and qualitative).
- Application of IFRS 9: the approach must take into consideration IFRS 9 characteristics, focusing on a comparison with credit risk at initial recognition, as well as considering forward-looking information.
- Risk management integration: the criteria must be consistent with those metrics considered in the day-to-day risk management.
- Documentation: appropriate documentation must be prepared.

The techniques are summarised below:

- Stability of stage 2: in the absence of significant changes in the portfolios credit quality, the volume of assets in stage 2 should maintain a certain stability as a whole.
- Economic reasonableness: at transaction level, stage 2 is expected to be a transitional rating for exposures that could eventually move to a deteriorating credit status at some point or stage 3, as well as for exposures that have suffered credit deterioration and whose credit quality is improving and returns to stage 1.
- Predictive power: it is expected that the SICR definition avoids, as far as possible, direct migrations from stage 1 to stage 3 without having been previously classified in stage 2.
- Time in stage 2: it is expected that the exposures do not remain categorized as stage 2 for an excessive time.

The application of the aforementioned techniques, conclude in the setting of one or several thresholds for each portfolio in each geography. Likewise, these thresholds are subject to a regular review by means of calibration tests, which may entail updating the thresholds types or their values.

Identifying a significant increase in credit risk: when classifying financial instruments under stage 2, Santander considers:

- Quantitative criteria: Grupo Santander reviews and quantifies changes in the risk of default during their expected life based on their credit risk level on initial recognition.

For the purposes of assessing significant changes when financial instruments are classified in Stage 2, each subsidiary has set quantitative thresholds for its portfolios in line with Group guidelines, seeking a consistent interpretation across all our geographies. The calibration principles for these thresholds are set out in the previous paragraph and may result in two types of thresholds:

- Relative. Thresholds that compare current credit quality with credit quality at origination, expressed as a percentage change.
- Absolute. Thresholds that compare current credit quality with credit quality at origination, expressed as an absolute change.

In addition, in line with the ECB's supervisory expectations, the Group has set a 200% cap on the relative threshold, known as the 'threefold increase'. As a result, exposures whose credit quality has deteriorated by more than 200% in relative terms — using an approach analogous to the relative threshold described in the previous paragraph — transfer from Stage 1 to Stage 2.

Meeting any of the absolute thresholds, the relative thresholds or the 200% cap on the relative threshold (threefold increase) on an individual basis results in the transfer of the financial instrument exposure from Stage 1 to Stage 2.

In addition, the Group may apply the Low Credit Risk Exemption at the reporting date, so that certain exposures that continue to meet this condition may remain in Stage 1. This exemption applies only to quantitative significant increase in credit risk criteria; therefore, qualitative criteria are not eligible for exemption. The Group uses it on a limited basis, documents it and reviews it periodically. When an exposure no longer meets the low credit risk condition, it transfers to Stage 2 in line with the criteria above.

- Qualitative criteria: several indicators aligned with ordinary credit risk management indicators (e.g. past due for over 30 days, forbearance, early warning indicators system, etc.). Each subsidiary has defined these indicators for their portfolios, with special attention to reinforcing these qualitative criteria through expert judgment and aligning them to the criteria used in management.

  When the presumption of a significant deterioration of credit risk is removed, due to a sufficient improvement of the credit quality, the obligor can be re-classified to stage 1, without any probationary period in stage 2.

- Definition of default: Santander incorporated the new definition to provisions calculation according to the EBA's guidelines; the Group is also considering applying it to prudential framework. In addition, the default definition and stage 3 have been aligned.

  This definition considers the following criteria to classify exposures as stage 3: financial instruments with one or more payments more than 90 consecutive days past due, representing at least 1% of the client's total exposure or the identification of other criteria demonstrating, even in the absence of defaults, that it is unlikely that the counterparty is unlikely to meet all of its financial obligations.

  Grupo Santander applies the default criteria to all exposures of the impaired client. Where an obligor belongs to a group, the default criteria may also be applied to all exposures of the group.

  The default classification is maintained during the 3-month test period following the disappearance of all default indicators described above, and this period is extended to one year for forbearances that have been classified as default.

- Expected life of financial instruments: Santander estimates the expected life of financial instruments according to their contractual terms (e.g. prepayments, duration, purchase options, etc.).

  The contractual period (including extension options) is the maximum time frame for measuring the expected credit loss. If financial instruments have an undefined maturity period and undrawn amounts (e.g. credit cards), Santander estimates its expected life based on the total exposure period and effective management practices to mitigate exposure.

1. Forward-looking vision

Estimating expected credit losses (ECL)requires significant expert judgement and the incorporation of historical, current and forward-looking information. Expected loss estimates are therefore based on an unbiased, probability-weighted likelihood of up to five possible future scenarios that could affect the collection of contractual cash flows. These scenarios consider the time value of money, relevant information available on past events, current conditions and forecasts of the macroeconomic factors considered important in estimating this amount (e.g. GDP, house prices and the unemployment rate, among others).

Santander uses forward-looking information in internal management and regulatory processes under several scenarios. The Group's guidelines and governance seek synergy and consistency between these different processes.

2. Additional elements

Additional elements will be required when necessary because they have not been captured under the two previous elements. This has included, among others, the analysis of sectors most affected if their impacts are not sufficiently captured by the macroeconomic scenarios. Also collective analysis techniques, when the potential impairment in a group of clients cannot be identified individually.

With the elements indicated above, Grupo Santander has evaluated in each of the geographical areas the evolution of the credit quality of its customers, for the purposes of classifying them into stages and consequently calculating expected loss.

Management overlays

During 2025, the Group strengthened coverage across its portfolios by implementing overlays, mainly in Brazil, Chile and Mexico, where it increased the PMA buffer to anticipate the impact of the year's model recalibrations, as well as other potential deviations.

In addition, the Group gradually released the adjustments related to climate events, such as the Valencia dana experienced in late October 2024, in the case of Santander Spain and the Spanish DCB office.

Overall, the amount of overlays at year-end 2025 remains immaterial compared with the Group's total allowance for credit losses.

Exposure and loan-loss reserves

Then, considering the most relevant units of the Group (United Kingdom, Spain, United States, Brazil, also Chile, Mexico, Portugal, Poland, Argentina and Santander Consumer Finance), which represent approximately 96% of the total Group's provisions. The table below shows the loan-loss reserves associated with each stage as of 31 December 2025, 2024 and 2023. In addition, depending on the transactions credit quality, the exposure is divided into four categories according to Standard & Poor's rating scale:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	121,023	2,295	—	123,318
From A+ to BB	383,494	15,188	—	398,682
From BB- to B-	300,108	47,292	—	347,400
CCC and below	8,146	17,733	32,664	58,543
Total exposure [B]	**812,771**	**82,508**	**32,664**	**927,943**
Loan-losses reserves[C]	**3,147**	**4,915**	**13,900**	**21,962**

Exposure and loan-loss reserves by stage

EUR million

	2024			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	108,977	2,599	—	111,576
From A+ to BB	431,544	16,600	—	448,144
From BB- to B-	288,302	45,129	—	333,431
CCC and below	10,431	17,088	32,901	60,420
Total exposure[B]	**839,254**	**81,416**	**32,901**	**953,571**
Loan-losses reserves[C]	**3,276**	**4,715**	**13,669**	**21,660**

Exposure and loan-loss reserves by stage

EUR million

	2023			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	147,065	2,261	—	149,326
From A+ to BB	421,449	13,910	—	435,359
From BB- to B-	262,954	41,237	—	304,191
CCC and below	11,829	19,376	33,838	65,043
Total exposure [B]	**843,297**	**76,784**	**33,838**	**953,919**
Loan-losses reserves[C]	**3,592**	**5,055**	**14,131**	**22,778**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

The remaining units that form the totality of the Group exposure, account for EUR 93,731 million: EUR 89,094 million in stage 1; EUR 3,528 million in stage 2; and EUR 1,109 million in stage 3 (in 2024 EUR 80,541 million in stage 1; EUR 2,534 million in stage 2, and EUR 874 million in stage 3. In 2023, EUR 68,788 million in stage 1; EUR 1,504 million in stage 2, and EUR 658 million in stage 3), and loan-loss reserves totalled EUR 759 million, of which: EUR 213 million in stage 1; EUR 152 million for stage 2, and EUR 394 million in stage 3 (in 2024, EUR 165 million, EUR 117 million and EUR 295 million and in 2023, EUR 199 million, EUR 73 million and EUR 161 million in stage 1, stage 2 and stage 3, respectively).

The remaining exposure, including all financial instruments not included before, amounts to EUR 834,911 million (EUR 665,476 million in 2024 and EUR 598,385 million in 2023), and it includes all undrawn authorized lines (loan commitments).

As of 31 December 2025, the Group had EUR 334 million net of provisions (EUR 559 million and EUR 743 million at 31 December 2024 and 2023, respectively) of purchased credit-impaired assets, which relate mainly to the business combinations carried out by the Group.

In relation to the evolution of credit risk provisions, the Group, together with its main geographies, monitors them through sensitivity analyses that assess the impact of changes in macroeconomic scenarios and their key variables on the allocation of financial assets across stages and on the measurement of credit risk provisions.

Additionally, based on consistent macroeconomic scenarios, the Group also performs stress tests and sensitivity analysis in a regular basis, such as ICAAP, strategic plans, budgets and recovery and resolution plans. In this sense, a prospective view of the sensitivity of each of the Group's loan portfolio is created in relation to the possible deviation from the base scenario, considering both the macroeconomic developments in different scenarios and the three year evolution of the business. These tests include potentially adverse and favourable scenarios.

3. Detail of the main geographical areas

Following is the risk information related to the most relevant geographies in exposure and credit risk allowances.

This information includes sensitivity analysis, consisting on simulations of +/-100 bp in the main macroeconomic variables. A set of specific and complete scenarios is used in each geography, where different shocks that affect both the reference macroeconomic variable as well as the rest of the parameters is simulated, with different intensities. These shocks collect mainly the most relevant risks and may be originated by productivity, tax, wages or exchange and interest rates factors.

Sensitivity is measured as the average variation on expected loss corresponding to the aforementioned movement of +/-100 bp. Following a conservative approach, the negative movements take into account one additional standard deviation in order to reflect the potential higher variability of losses.

3.1. United Kingdom

Portfolio overview

Credit risk with customers in the UK remained stable in EUR 244,303 million. This credit risk represents 21% of Santander's loan portfolio.

At 1.08%, the NPL ratio decreased 25 bps in comparison to the year end of 2024, due to the good performance in the mortgage portfolio.

Mortgage portfolio

Because of its size, Grupo Santander closely monitor Santander UK's mortgage portfolio for the entity itself and the Group.

As of 31 December 2025, the mortgage portfolio of Santander UK remained stable, at local currency, and reached EUR 192,047 million. It comprises residential mortgages granted to new and existing customers which are first lien mortgages. There are no second or more liens on mortgaged properties.

Originations have increased in 2025 compared to 2024, a sign of a more active housing market due to lower interest rates and less pressure on households' purchasing power. The housing market returned to growth in 2025, with a higher level of transactions and price increases compared to 2024.

Under Santander's risk management principles, a property must be appraised independently before we can approve a new mortgage. In line with market practices and the law, we get updated values of properties used as mortgage collateral from an independent agency's automatic appraisal system.

Santander UK's wide range of mortgages include:

- Interest-only loans (21%): Customers pay interest every month and repay the principal at maturity. These mortgages, which are common in the UK, require borrowers to have an appropriate repayment vehicle, such as a pension plan or an investment fund. To mitigate inherent risk, Santander UK has restrictive approval requirements, such a maximum loan-to-value ratio of 50% and an assessment of the ability to pay both interest and capital.
- Flexible loans (2%): Loan agreements allow borrowers to modify monthly payments or draw down additional funds up to a set limit under various conditions.
- Buy-to-let (9%): Buy-to-let mortgages account for a small portion of the total portfolio and are subject to strict risk approval policies.

Santander's NPL ratio highlights the resilience of the mortgage portfolio in a challenging economic environment and an intensely competitive market. It stood at 0.87% at the end of December 2025 (-20 bps YoY).

At 31 December 2025, 82% of the mortgage portfolio had an LTV lower than 70%.

Information on the estimation of impairment losses

The detail of Santander's UK exposure and loan-loss reserves associated with each of the stages at 31 December 2025, 2024 and 2023, is shown below.

In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality[A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	29,963	381	—	30,344

Exposure and loan-loss reserves by stage

EUR million

	2023			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	46,236	1,273	—	47,509
From A+ to BB	145,884	10,850	—	156,734
From BB- to B-	13,588	13,995	—	27,583
CCC and below	—	—	3,518	3,518
Total exposure [B]	**205,708**	**26,118**	**3,518**	**235,344**
Loan-loss reserves[C]	**172**	**498**	**396**	**1,066**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

For the estimation of expected losses, prospective information is taken into account. Specifically, Santander UK considers four macroeconomic scenarios, which are updated periodically. The evolution forecasted in 2025 for the next five years of the main macroeconomic indicators used by Santander UK to estimate expected losses is presented below:

	2026 - 2030			
Variables	**Pessimistic scenario 2**	**Pessimistic scenario 1**	**Base scenario**	**Optimistic scenario**
Interest rate	2.4%	3.5%	3.3%	3.0%
Unemployment rate	7.3%	5.8%	4.5%	4.2%
Housing price change	(2.9%)	(0.2%)	2.9%	4.4%
GDP growth	(0.02%)	0.2%	1.4%	2.4%

Each of the macroeconomic scenarios is associated with a given weight. In terms of allocation, Santander UK associates the highest weighting to the base scenario, while it associates the lowest weightings to the most extreme or severe scenarios. In addition, at 31 December 2025, 2023 and 2022, the weights used by Santander UK reflect the future prospects of the British economy in relation to its current political and economic position so that higher weights are assigned for negative scenarios:

	2025	2024	2023
Pessimistic scenario 3		20%	20%
Pessimistic scenario 2	10%	10%	10%
Pessimistic scenario 1	25%	25%	10%
Base scenario	50%	50%	50%
Optimistic scenario	15%	15%	10%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios, as of December 2025, is as follows:

	Change in Provision	
	Mortgages	Corporates
GDP Growth		
-100 bps	11.6%	3.9%
+100 bps	(2.9%)	(1.4%)
Housing price change		
-100 bps	7.3%	6.0%
+100 bps	(3.5%)	(1.6%)
Unemployment rate		
-100 bps	(12.3%)	(2.5%)
+100 bps	23.7%	5.7%

With regard to Stage 2 classification, Santander UK applies quantitative criteria based on identifying an increase in lifetime probability of default (PD) for the transaction that exceeds both an absolute and a relative threshold. The PDs used in this assessment are adjusted to the transaction's remaining term and annualised to facilitate the definition of thresholds that cover the full range of transaction maturities. The relative threshold is common across all portfolios, and Santander UK considers that a transaction exceeds this threshold when its lifetime PD increases by 100% compared to the PD at initial recognition. The absolute threshold, by contrast, differs across portfolios depending on the characteristics of the transactions.

In addition, each portfolio has a set of specific qualitative criteria indicating that the exposure has experienced a significant increase in credit risk, irrespective of the evolution of its PD since initial recognition. Among other criteria, Santander UK considers that a transaction shows a significant increase in credit risk when it is more than 30 days past due. It also has implemented early warning indicator system to support Stage 2 classification. These criteria align with the risk management practices of each portfolio.

3.2. Spain

Portfolio overview

Santander España's credit risk totalled EUR 302,271 million (26%% of Grupo Santander's total). It is appropriately diversified among products and customer segments.

The NPL ratio was 1.96%, 73 bps lower than in December 2024. This decrease was driven by the portfolio's strong performance, supported by the execution of the NPL reduction plan.

The NPL coverage ratio increased slightly to 55% (+2 p.p. year-on-year). The cost of risk decreased to 0.44% (-7 bps vs. December 2024), driven by the strong performance of the SME and corporate portfolios, partly offset by the performance of the individuals portfolio.

Macroeconomic projections suggest the economy will moderate its growth pace slightly, but will remain dynamic and well above the eurozone average, as the Spanish economy has largely been supported by stronger domestic demand amid a weaker-than-expected external sector.

Residential mortgage portfolio

Residential mortgages in Spain, including Santander Consumer Finance business, amounted to EUR 60,002 million in 2025 (EUR 59,316 million and EUR 61,097 million in 2024 and 2023, respectively), 99.64% of which have a mortgage guarantee (99.65%and 99.65% in 2024 and 2023, respectively).

	2025	
EUR Million	Gross amount	Of which: impaired
Home purchase loans to families	60,002	625
Without mortgage collateral	215	7
With mortgage collateral	59,787	618

	2024	
EUR Million	Gross amount	Of which: impaired
Home purchase loans to families	59,316	789
Without mortgage collateral	208	11
With mortgage collateral	59,108	778

	2023	
EUR Million	Gross amount	Of which: impaired
Home purchase loans to families	61,097	924
Without mortgage collateral	215	16
With mortgage collateral	60,882	908

The NPL ratio for the residential mortgages portfolio stood at 1.03%, with a reduction of 29 bps, compared to 31 December 2024, mainly due to by portfolio sales, although credit risk registered an increase of 1.2% compared to December 2024.

The mortgage portfolio for the acquisition of homes in Spain is characterised by its medium-low risk profile, which limits expectations of any potential additional impairment:

- Principal is repaid on all mortgages from the start.
- Early repayment is common so the average life of the transaction is well below that of the contract.
- High quality of collateral, concentrated almost exclusively in financing for first homes.
- The average affordability rate is reduce to 22% (24% and 24% in 2024 and 2023, respectively).
- The 94% of the portfolio has a LTV below 80% calculated as total risk/latest available house appraisal.
- All customers applying for a residential mortgage are subject to a rigorous credit risk and viability assessment, analysing whether their income is sufficient to meet all repayments and will remain stable over the term of the loan.

Breakdown of the credit with mortgage guarantee to households for house acquisition, according to the percentage that the total risk represents on the amount of the latest available valuation (loan to value):

	2025					
	Loan to value ratio					
EUR Million	Less than or equal to 40%	More than 40% and less than 60%	More than 60% and less than 80%	More than 80% and less than or equal to 100%	More than 100%	Total
Gross amount	17,191	20,310	18,811	2,812	663	59,787
Of which impaired	*122*	*158*	*151*	*84*	*103*	*618*

In November 2022, Royal Decree-Law 19/2022 was published, which establishes a Code of Good Practices in response to the rise in interest rates on mortgage loans for primary residences and Royal Decree-Law 6/2012 of protection measures for mortgage debtors without resources. The code of good practices is focused on granting capital grace periods and extending the term of the operations. The requests made have not been significant.

Corporate & SME financing

Credit risk with SME and corporates in commercial banking amounted to EUR 99,395 million, lower than December 2024, mainly due to the fall in the portfolio of SMEs of 10.1%. This portfolio accounting for 33% of the total, compared to 41% of CIB's portfolio, which from 2022 includes branches in Europe.

Most of the portfolio corresponds to clients who have been assigned a credit analyst, who performs continuous management of said clients during all phases of the risk cycle. The portfolio is broadly diversified and not concentrated by sector of activity.

The ICO loans that were granted as a result of the pandemic (25,428 million euros) are being repaid normally and there is a balance of EUR 10,857 million, so they now represent only around 3.6% of Santander Spain's total portfolio. During 2025, Santander Spain maintained its support and close engagement with SMEs and the self-employed through the various support lines, which were significantly less material than the post-pandemic programmes (Líneas ICO Empresas y Emprendedores, Línea ICO Internacional y Rehabilitación de vivienda).

In the case of delinquent operations with ICO guarantee, the transfer of the overdue guaranteed amounts will take place as the guarantee is executed, regardless of whether the guarantor is subrogated to the right to receive said amounts, according to the regulation of these guarantees. The de-recognition of the transferred guaranteed amounts will entail the recognition, at its fair value, of a collection right against the guarantor.

The portfolio's NPL ratio stood at 4.10% in December 2025. The NPL ratio decreased by 97 bps compared to December 2024, largely due to a proactive effort to reduce the stock of NPLs in the SME portfolio, through proactive management of non-performing exposures supported by portfolio sales and the management of specific cases.

Real estate activity

Santander has specialized teams that are in charge of managing real estate business production and risk areas that cover the entire life cycle of these operations.

The changes in gross property development loans to customers were as follows:

EUR million

	2025	2024	2023
Balance at beginning of year	**2,545**	**2,433**	**2,327**
Foreclosed assets	—	—	(1)
Net variation	441	112	115
Written-off assets	(2)	—	(8)
Balance at end of year	**2,984**	**2,545**	**2,433**

The NPL ratio of this portfolio (considering only the on balance amount) ended the year at 1.04% (compared with 2.28% and 3.04% at December 2024 and 2023, respectively) . The table below shows the distribution of the portfolio. The coverage ratio of the real estate doubtful exposure in Spain stands at 35.48% (36.21% and 39.19% in 2024 and 2023, respectively).

	2025		
EUR Million	**Gross amount**	**Excess of gross exposure over maximum recoverable amount of effective collateral**	**Specific allowance**
Financing for construction and property development (including land) (business in Spain)	2,984	211	17
Of which impaired	31	—	11
Memorandum items written-off assets	240	—	—

Memorandum items: Data from the public consolidated balance sheet

	2025
EUR Million	**Carrying amount**
Total loans and advances to customers excluding the Public sector (business in Spain) (Book value)	240,609
Total consolidated assets (Total business) (Book value)	1,867,515
Impairment losses and credit risk allowances. Coverage for unimpaired assets (business in Spain)	1,086

At year-end, the distribution of this portfolio was as follows:

	2025
EUR Million	**Loans: gross amount**
1. Without mortgage guarantee	14
2. With mortgage guarantee	2,970
2.1 Completed buildings	976
2.1.1 Residential	658
2.1.2 Other	318
2.2 Buildings and other constructions under construction	1,981
2.2.1 Residential	1,913
2.2.2 Other	68
2.3 Land	13
2.3.1 Developed consolidated land	9
2.3.2 Other land	4
Total	**2,984**

Foreclosed properties

At 31 December 2025, the net balance of these assets amounted to EUR 1,898 million (EUR 2,131 million and EUR 2,448 million at 31 December 2024 and 2023, respectively), gross amount of EUR 4,258 million (EUR 4,823 million and EUR 5,506 million at 31 December 2024 and 2023, respectively); recognised allowance of EUR 2,360 million (EUR 2,692 million and EUR 3,058 million at 31 December 2024 and 2023, respectively).

The following table shows the detail of the assets foreclosed by the businesses in Spain at the end of 2025:

	2025			
EUR Million	Gross carrying amount	Valuation adjustments	Of which impairment losses on assets since time of foreclosure	Net Carrying amount
Property assets arising from financing provided to construction and property development companies	**3,843**	**2,144**	**1,591**	**1,699**
Of which:				
Completed buildings	*481*	*324*	*282*	*157*
Residential	*129*	*71*	*60*	*58*
Other	*352*	*253*	*222*	*99*
Buildings under construction	*107*	*49*	*35*	*58*
Residential	*—*	*—*	*—*	*—*
Other	*107*	*49*	*35*	*58*
Land	*3,255*	*1,771*	*1,274*	*1,484*
Developed land	*776*	*429*	*260*	*347*
Other land	*2,479*	*1,342*	*1,014*	*1,137*
Property assets from home purchase mortgage loans to households	**334**	**172**	**119**	**162**
Other foreclosed property assets	**81**	**44**	**36**	**37**
Total property assets	**4,258**	**2,360**	**1,746**	**1,898**

In addition, the Group has shareholdings in entities holding foreclosed assets amounting to EUR 36 million and equity instruments foreclosed or received in payment of debts amounting to EUR 10 million.

In recent years, the Group has considered foreclosure to be an option to resolve cases of default instead of legal proceedings. The Group initially recognises foreclosed assets at the lower of the carrying amount of the debt (net of provisions) and the fair value of the foreclosed asset (less estimated costs to sell). Subsequent to initial recognition, the assets are measured at the lower of fair value (less costs to sell) and the amount initially recognised.

The fair value of this type of assets is determined by the market value (appraisal) adjusted with discounts obtained according to internal valuation methodologies based on the entity's sales experience in goods with similar characteristics.

The management of real estate assets on the balance sheet is carried out through companies specializing in the sale of real estate that is complemented by the structure of the commercial network. The sale is realised with at prices in accordance with the market situation and the offer of wholesale buyers.

The gross movement in foreclosed properties were as follows (EUR billion):

	EUR Billion		
	2025	2024	2023
Gross additions	0.1	0.1	0.3
Disposals	(0.7)	(0.8)	(1.2)
Difference	(0.6)	(0.7)	(0.9)

Information on the estimation of impairment losses

The detail of Santander Spain exposure and loan-loss reserves associated with each of the stages at 31 December, 2025, 2024 and 2023, is shown below. In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**

Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	46,827	48		46,875
From A+ to BB	101,079	780		101,859
From BB- to B-	33,905	9,789		43,694
CCC and below	1,513	4,517	7,536	13,566
Total exposure[B]	**183,324**	**15,134**	**7,536**	**205,994**
Loan-loss reserves[C]	**300**	**663**	**2,959**	**3,922**

A. Detail of credit quality ratings calculated for Group management purposes. Excluding the SCIB branches business
B. Total exposure includes loan balances (drawn amounts) and off balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines *(loan commitments)*.

For the estimation of the expected losses, the prospective information is taken into account. Specifically, Santander Spain considers three macroeconomic scenarios, which are updated periodically. The projected evolution for a period of five years of the main macroeconomic indicators used by Santander Spain for estimating expected losses as of 2025, is presented below:

	2026-2030		
Variables	**Pessimistic scenario**	**Base scenario**	**Optimistic scenario**
Interest rate	2.7%	2.5%	2.3%
Unemployment rate	12.1%	9.7%	8.2%
Housing price change	3.3%	4.1%	4.7%
GDP growth	0.2%	1.6%	2.4%

Each macroeconomic scenarios is associated with a given weight. As for its allocation, Santander Spain associates the Base scenario with the highest weight, while associating the lower weights to the most extreme scenarios:

	2025	2024	2023
Pessimistic scenario	30%	30%	30%
Base scenario	40%	40%	40%
Optimistic scenario 1	30%	30%	30%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios, at December 31 2025, is as follows:

	Change in Provision		
	Mortgages	**Corporates**	**Others**
GDP Growth			
-100 bps	8.5%	1.1%	2.1%
+100 bps	(3.6%)	(0.9%)	(1.9%)
Housing price change			
-100 bps	8.4%	1.5%	3.4%
+100 bps	(6.7%)	(0.7%)	(1.8%)
Unemployment rate			
-100 bps	(6.0%)	(1.5%)	(3.7%)
+100 bps	14.7%	1.8%	4.7%

To determine Stage 2 classification, Santander Spain applies quantitative criteria based on identifying increases in the lifetime PD of an exposure above a relative or absolute threshold. The threshold differs by portfolio depending on the characteristics of the exposures, and an exposure is considered to exceed the threshold when its lifetime PD increases by a set amount compared with the PD at initial recognition. Santander Spain calibrates these thresholds periodically, as described in previous paragraphs. In addition, Santander Spain applies a backstop to the relative threshold across all portfolios. As a result, Santander Spain classifies contracts as Stage 2 when their current PD has increased by more than two times compared with the PD at origination.

Santander Spain also considers specific qualitative criteria that indicate a significant increase in credit risk, regardless of how the PD has evolved since initial recognition. Among other criteria, Santander Spain considers that an exposure shows a significant increase in credit risk when it is more than 30 days past due or when its early warning system so determines.

3.3. United States

Portfolio overview

Santander US's credit risk stood at EUR 147,303 million at the end of December 2025. It makes up 12.5% of Grupo Santander's total credit risk.

The NPL ratio grew to 4.85% (+14 bps in the year) due to a higher stock of delinquencies and lower portfolio growth, and the cost of risk decreased to 1.63% (-19 bps in the year).

Santander US includes the following business units:

Santander Bank, National Association (SBNA)

In 2025 lending amounted to EUR 45,491 million (representing 4% of the Group's credit risk) and presents a reduction of 15% in 2025, mainly due to the transfer of the CIB portfolio to the New York branch.

The NPL ratio increased to 2.67% (+46 bps vs December 2024, while the cost of risk rose to 0.93% (+2 bps in the year), mainly driven by the Consumer Finance portfolio.

Activity in the individuals segment is primarily focused on auto financing and leasing, as well as credit card origination. During 2025, the teams continued to develop the operating and systems capabilities that will enable the asset product offering to be expanded in the future through the Openbank brand.

The Commercial segment comprises seven business lines, including Commercial Real Estate, Santander Real Estate Capital, Commercial Equipment Vehicle Finance, and Commercial and Industrial. The portfolio shows a slight downward trend in exposure, driven, on the one hand, by a strategy that prioritises risk-adjusted profitability over volume growth and, on the other, by the gradual run-down of the real estate and dealer portfolios.

The credit risk profile of the Commercial Real Estate and dealer portfolios shows some deterioration, mainly due to structural uncertainties affecting these sectors, as well as the impact of an interest-rate environment that remains elevated and developments in commercial and tariff policies, which continue to weigh on the financial capacity of certain customers.

Information on the estimation of impairment losses

The detail of Santander Bank, National Association exposure and loan-loss reserves associated with each of the stages at 31 December, 2025, 2024 and 2023 is shown below. In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	1,622	24	—	1,646
From A+ to BB	7,352	728	—	8,080
From BB- to B-	28,758	4,459	—	33,217
CCC and below	779	861	1,158	2,798
Total exposure[B]	**38,511**	**6,072**	**1,158**	**45,741**
Loan-loss reserves[C]	**277**	**325**	**202**	**804**

Exposure and loan-loss reserves by stage

EUR million

	2024			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	4,215	277	—	4,492

Total exposure [B]	**50,666**	**4,424**	**894**	**55,984**
Loan-loss reserves[C]	**409**	**335**	**141**	**885**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off-balance (letters of credit + guarantees) and excludes REPO, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

For the estimation of expected losses, prospective information is taken into account. Specifically, Santander Bank, National Association considers four macroeconomic scenarios, which are updated periodically. The evolution projected in 2025 for a period of five years of the main macroeconomic indicators used Santander Bank, National Association to estimate expected losses is presented below:

	2026-2030			
Variables	**Pessimistic scenario 2**	**Pessimistic scenario 1**	**Base scenario**	**Optimistic scenario**
Interest rate (annual averaged)	1.8%	2.6%	3.2%	3.0%
Unemployment rate	6.4%	5.0%	4.2%	3.7%
House price change	0.2%	0.7%	1.3%	2.1%
GDP growth	1.7%	1.9%	2.0%	2.7%
Manheim growth[A]	(0.6%)	(0.1%)	0.3%	0.1%

A. US used vehicle price car index.

Each of the macroeconomic scenarios is associated with a given weight. As for its allocation, Santander Bank, National Association associates the highest weighting to the Base scenario, while associates the lowest weightings to the most extreme scenarios:

	2025	2024	2023
Pessimistic scenario 2	18%	18%	18%
Pessimistic scenario 1	20%	20%	20%
Base scenario	33%	33%	33%
Optimistic scenario	30%	30%	30%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios as of 2025 is as follows:

	Change in Provision		
	Mortgages	**Corporates**	**Auto**
GDP Growth			
-100 bps	13.6%	10.9%	2.8%
+100 bps	(10.6%)	(7.7%)	(2.0%)
Housing price change			
-100 bps	26.9%	18.7%	5.0%
+100 bps	(12.9%)	(9.3%)	(2.5%)
Unemployment rate			
-100 bps	(41.6%)	(25.9%)	(7.9%)
+100 bps	53.9%	39.5%	11.8%
Manheim index			
-100 bps	—	—	1.8%
+100 bps	—%	—%	(1.4%)

For the Stage 2 classification determination, this year SBNA implemented, within the Auto portfolio, a system based on the comparison of PD to determine whether there has been a significant increase in credit risk. SBNA set both relative and absolute thresholds, segmented by the customer's credit profile, and also established a backstop to the relative threshold. As a result, SBNA will classify as Stage 2 those contracts whose current PD has increased by more than two times compared to their PD at origination.

For the remaining retail portfolios, SBNA uses the FICO (Fair Isaac Corporation) score as a quantitative criterion as a proxy for PD, considering the score at origination and its current value, and setting different limits or cut-off points depending on each portfolio's characteristics. A significant increase in risk requires changes in the score of around 120 bps and 20 bps.

For wholesale portfolios, SBNA uses the transaction's rating as a proxy for PD, considering the rating at origination and its current rating, and setting thresholds for different rating bands depending on each portfolio's characteristics.

In addition, SBNA defines specific qualitative criteria to identify exposures that have recorded a significant increase in credit risk. Among other criteria, Santander Bank, National Association considers that a transaction presents a significant increase in credit risk when it has arrears positions for more than 30 days or when a system of early warning indicators determines it.

Santander Consumer USA Inc.

Santander Consumer USA Inc. (SC USA) presents higher risk indicators than other Santander US units due to the nature of its business, which focuses on auto finance via loans and leasing.

At 31 December 2025, lending amounted to EUR 25,318 million (representing 2.1% of the Group) and presents a decrease of 17.5% regarding December 2024.

Regarding the NPL ratio, it increased to 22.08% (+340 bps in the year); and the cost of risk stood at 6.10% (-51 bps YoY).

NPL coverage ratio fell to 53% (-885 pp in the year), in line with the percentages of transfers from default to bad debts, which are at historically low levels.

The business focuses on optimising the profitability-to-risk relationship through pricing management aligned with each customer's credit quality and each transaction, while also strengthening dealer processes and the dealer experience. 2025 was marked by uncertainty stemming from tariff policy and fiscal stimulus measures, as well as the end of the exclusivity agreement with Stellantis.

Information on the estimation of impairment losses

The detail of Santander Consumer USA Inc. exposure and loan-loss reserves associated with each of the stages at 31 December 2025, 2024 and 2023, is shown below. In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	—	—	—	—
From A+ to BB	54	—	—	54
From BB- to B-	10,167	947	—	11,114

Loan-loss reserves[C]	**630**	**1,006**	**1,908**	**3,544**

Exposure and loan-loss reserves by stage

EUR million

	2023			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	—	—	—	—
From A+ to BB	99	0	—	99
From BB- to B-	12,120	395	—	12,515
CCC and below	6,754	4,237	5,272	16,263
Total exposure [B]	**18,973**	**4,632**	**5,272**	**28,877**
Loan-loss reserves[C]	**597**	**1,019**	**1,712**	**3,328**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off-balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

For the expected losses estimation, prospective information should be taken into account. Specifically, SC USA considers four macroeconomic scenarios, periodically updated over a 5-year time horizon.

The evolution forecasted in 2025 for a period of five years of the main macroeconomic indicators used by in SC USA in the estimation of expected losses is shown below:

	2026-2030			
Variables	**Pessimistic scenario 2**	**Pessimistic scenario 1**	**Base scenario**	**Optimistic scenario**
Interest rate (annual averaged)	1.8%	2.6%	3.2%	3.0%
Unemployment rate	6.4%	5.0%	4.2%	3.7%
House price change	0.2%	0.7%	1.3%	2.1%
GDP growth	1.7%	1.9%	2.0%	2.7%
Manheim[A] index	(0.6%)	(0.1)	0.3%	0.1%

A. US used vehicle price car index.

Each of the macroeconomic scenarios is associated with a given weight. Santander Consumer USA Inc. associates the highest weighting to the Base scenario, whereas it associates the lowest weightings to the most extreme or acid scenarios:

	2025	2024	2023
Pessimistic scenario 2	18%	18%	18%
Pessimistic scenario 1	20%	20%	20%
Base scenario	33%	33%	33%
Optimistic scenario	30%	30%	30%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios at the end of 2025 is as follows:

	Change in provision
	SC Auto
Manheim index	
-100 bps	1.0%
+100 bps	(0.8%)
Unemployment Rate	
-100 bps	(4.9%)
+100 bps	7.0%
House Price Change	
-100 bps	3.1%
+100 bps	(1.6%)
GDP growth	
-100 bps	1.7%
+100 bps	(1.2%)

In relation to the Stage 2 classification determination, SC USA implemented a new system based on the comparison of PDs at origination and current PD, replacing the previous approach based on the FICO (Fair Isaac Corporation) score. SC USA established a set of absolute and relative thresholds, segmented based on the customer's credit profile. Finally, it introduced a backstop to the relative threshold whereby contracts whose current PD has increased by more than two times compared to their PD at origination are classified as Stage 2.

Additionally, for each portfolio, a series of specific qualitative criteria are defined, which indicate that the exposure has experienced a significant increase in credit risk, regardless of the evolution of its PD since the initial recognition. Among other criteria, the entity considers that a transaction has experienced a significant increase in credit risk when it has past-due positions for more than 30 days. These criteria align with the risk management practices of each portfolio.

3.4. Banco Santander (Brasil) S.A.

Portfolio overview

Santander Brasil's credit risk amounted to EUR 105,410 million, increasing 1% from 2024. Minus the exchange rate effect, it grew by 1.3%. As of December 2025, Santander Brasil accounts for 9% of Grupo Santander's loan book.

The NPL ratio went from 6.14% in December 2024 to 6.82% in December 2025, and the coverage ratio increased from 82.8% to 83.4%.

As of 31 December 2025 loan-loss provisions reached EUR 4,409 million, a 2% year-on-year decrease. Cost of risk increased from 4.51% in 2024 to 4.73% in 2025.

In 2025, the Brazilian economy is moderating compared to the previous year. Several factors drive this performance: reduced fiscal support, a more restrictive monetary policy and a less favourable external environment.

The labour market still shows resilience, which has helped prevent a sharp deterioration in household consumption. However, some indicators suggest that this labour-market momentum is starting to cool, with private-sector employment growth gradually easing.

Inflation is expected to close the year at around 4.8%, with a trend towards further moderation in 2026. A moderate appreciation of the Brazilian real and weaker domestic demand contribute to this price moderation. The Brazilian real exchange rate remains a source of uncertainty, together with public debt sustainability and the need for fiscal adjustments to contain financial imbalances. From a sectoral perspective, the agricultural sector and certain industrial segments continue to provide relevant support, although the overall slowdown and the effects of tighter monetary conditions limit their contribution to aggregate growth.

Against this backdrop, although Brazil retains a relatively solid base — a robust labour market and competitive export sectors — 2025 is shaping up as a transition year, with the economy slowing and facing multiple structural challenges (inflation, exchange rate, debt and monetary policy) that condition its performance.

The retail segment (without Consumer Finance), which represents 37% of Santander Brazil's total portfolio, mainly comprises mortgages and credit cards (29% and 26% of the total portfolio, respectively). Thanks to the risk mitigation measures implemented in origination and portfolio management, cost of risk has been kept at 4.7%, despite the high SELIC rate and inflation running above the official target, which reduces individuals' repayment capacity.

In the SME segment, which represents 11% of total risk exposure, the Bank maintained the restrictive origination measures adopted in recent years, particularly for the higher-risk profiles with weaker performance. Teams continuously review and adjust strategies to keep credit quality within expected levels. Overall, they achieved this during the year, with an acceptable performance of new business indicators.

In Brazil's corporate segment, 2025 was marked by an uncertain geopolitical backdrop and some weaknesses in the local economy, notably high interest rates that have affected the repayment capacity of more leveraged companies. In this environment, the portfolio's growth slowed and NPL and cost of risk levels increased.

Information on the estimation of impairment losses

The detail of Banco Santander (Brasil) S.A. exposure and loan-loss reserves associated with each of the stages at 31 December 2025, 2024 and 2023, is shown below. In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves

EUR million	2025			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	16,898	1,513	—	18,411
From A+ to BB	29,179	1,253	—	30,432
From BB- to B-	36,089	7,035	—	43,124
CCC and below	1,217	3,801	7,151	12,169

Loan-loss reserves[C]	**687**	**860**	**3,766**	**5,313**

Exposure and loan-loss reserves

EUR million

	2023			
Credit quality [A]	**Stage 1**	**Stage 2**	**Stage 3**	**Total**
From AAA to AA-	20,670	468	—	21,138
From A+ to BB	38,869	751	—	39,620
From BB- to B-	36,107	4,177	—	40,284
CCC and below	1,153	3,735	7,479	12,367
Total exposure[B]	**96,799**	**9,131**	**7,479**	**113,409**
Loan-loss reserves[C]	**722**	**1,078**	**4,538**	**6,338**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off-balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

For the expected losses estimation, prospective information is taken into account. Particularly, Santander Brazil considers three macroeconomic scenarios, periodically updated. The evolution for a period of five years of the main macroeconomic indicators used to estimate the expected losses in Santander Brazil is as follows:

	2026-2030		
Variables	**Pessimistic scenario**	**Base scenario**	**Optimistic scenario**
Interest rate (annual averaged)	11.5%	10.9%	10.3%
Unemployment rate	8.0%	6.5%	5.4%
House price change	1.1%	5.9%	10.3%
GDP growth	(0.2%)	1.9%	3.8%
Burden income	27.0%	26.8%	26.1%

Each macroeconomic scenario is associated with a given weight. Regarding its assignation, Brazil links the highest weight to the base scenario whilst links the lowest weights to the most extreme scenarios:

	2025	2024	2023
Pessimistic scenario	13%	13%	10%
Base scenario	75%	75%	80%
Optimistic scenario	13%	13%	10%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios is at the end of 2025 as follows:

	Change in provision		
	Individuals	**SME**	**Other**
GDP growth			
-100 bps	1.3%	2.9%	2.6%
+100 bps	(0.7%)	(1.3%)	(1.4%)
Unemployment rate			
+100 bps	(1.9%)	(3.8%)	(4.5%)
+100 bps	2.8%	6.2%	6.3%
Interest rate (SELIC)			
-100 bps	(0.6%)	(1.6%)	(0.9%)
+100 bps	1.7%	4.0%	3.5%

Regarding the Stage 2 classification determination, Santander Brasil assesses whether the increase in lifetime PD over the expected life of the transaction exceeds the combined effect of an absolute and a relative threshold. These thresholds vary by portfolio, depending on the characteristics of the transactions. A transaction is deemed to breach the threshold when its lifetime PD increases by a specified amount compared to the PD recorded at initial recognition.

The absolute and relative threshold levels are recalibrated periodically and depend on the type of portfolio to which they apply. In addition, Santander Brasil has implemented a backstop to the relative threshold across all portfolios: contracts whose current PD doubles the PD at origination are automatically classified as Stage 2.

4. Other credit risk aspects

4.1. Credit risk by activity in the financial markets

This section covers credit risk from treasury, with money market financing and counterparty risk products to satisfy the needs of customers (especially credit institutions) and the Group.

Counterparty credit risk is defined as the risk that could arise from a total or partial failure to meet the financial obligations entered into with the entity, because a customer may default before the final settlement of the transaction's cash flows. This risk usually increases the longer the period between the trade date and the settlement date. It is a bilateral credit risk that can affect both parties to the transaction, and its magnitude is uncertain, as it depends on volatile market factors.

Within counterparty credit risk exposure, an additional risk known as wrong-way risk may arise. It occurs when exposure to a portfolio or counterparty increases at the same time as its credit quality deteriorates. In other words, wrong-way risk exists when default risk increases and, as a result, the exposure to the counterparty also increases. Santander has specific models to measure and control this risk.

Settlement risk arises when the settlement of a transaction involves a bilateral exchange of flows or assets between two counterparties. For example, when a counterparty buys dollars in exchange for euros, settlement involves one party delivering euros and receiving an equivalent amount of dollars from the other. Settlement risk is the risk that one of the parties fails to meet its settlement obligations. We have also developed a global infrastructure and specific models to measure this risk.

To manage and control counterparty risk, it is essential to have an infrastructure that allows measuring current and potential exposure at different levels of aggregation and granularity in an agile and dynamic way, ensuring the generation of reports with sufficient detail to facilitate the understanding of exposures and the decision-making process.

To measure exposure, Grupo Santander follows two methodologies: mark-to-market (MtM or replacement value in derivatives) plus potential future exposure (add-on), and Monte Carlo simulation for calculating exposure for some countries and products. Additionally, Santander calculates capital at risk or unexpected loss, which is the loss that constitutes economic capital net of guarantees and recoveries, after deducting the expected loss.

After market close, Grupo Santander recalculates exposures by adjusting all operations to their new time horizon, adapting the potential future exposure and applying mitigation measures (netting, collateral, among others), so that exposures can be controlled daily against the limits approved by senior management within the risk appetite. Santander performs risk control through a real-time integrated system, which allows the Group to know at any moment the available exposure limit with any counterparty, in any product and term, and across all subsidiaries.

Grupo Santander runs monthly stress tests on derivatives portfolios and securities financing transactions (SFT). These exercises form an integral part of the counterparty credit risk management process. They allow us to assess the resilience of exposures under adverse scenarios and support appropriate identification, measurement and control of the associated risks.

4.2. Concentration risk

Concentration risk control is an essential aspect of Grupo Santander's management. The Group continuously monitors the level of concentration in its credit risk portfolios applying various criteria: geographic areas and countries, economic sectors and groups of customers.

The board, via the risk appetite framework, determines the maximum levels of concentration.

In line with these maximum levels and limits, the executive risk committee establishes the risk policies and reviews the appropriate exposure levels for the effective management of the degree of concentration in Santander's credit risk portfolios.

Grupo Santander must adhere to the regulation on large risks contained in the CRR, according to which the exposure contracted by an entity with a customer or group of associated customers will be considered a large exposure when its value is equal to or greater than 10% of eligible capital.

In addition, in order to limit large exposures, no entity may assume exposures exceeding 25% of its eligible capital with a single customer or group of associated customers, having factored in the credit risk mitigation effect contained in the regulation.

At the end of December, after applying risk mitigation techniques, no group reaches the above-mentioned thresholds.

Regulatory credit exposure with the 20 largest groups within the scope of large risks represented 5.3% of the outstanding credit risk with customers (lending to customers plus off-balance sheet risks) as of December 2025. While the regulatory credit exposure with the 40 largest groups represents 8.4% of the credit risk.

The detail, by activity and geographical area of the Group's risk concentration at 31 December 2025 is as follows:

EUR million

	2025[A]				
	Total	**Spain**	**Other EU countries**	**America**	**Rest of the world**

Other purposes	*17,630*	*7,000*	*1,562*	*8,464*	*604*
Total	**1,792,549**	**352,126**	**378,314**	**660,879**	**401,230**

A. For the purposes of this table, the definition of risk includes the following items in the public balance sheet: 'Loans and advances to credit institutions', 'Loans and advances to Central Banks', 'Loans and advances to Customers', 'Debt securities', 'Equity Instruments', 'Trading Derivatives', 'Hedging derivatives', 'Investments and financial guarantees given'.

4.3 Sectors identification and management

Grupo Santander conducts a quarterly review of exposure to customers operating in sectors that could be more affected by macroeconomic conditions (energy consumption, commodity prices, and key macroeconomic variables). This monitoring is complemented by the use of internal tools that allow projecting the behaviour and evolution of clients in each sector under different macroeconomic scenarios. Additionally, this process considers, among other things, the following information at the sector level:

- Market information: Industries' stock market performance.
- Analysts' EBITDA forecasts for the coming years.
- Internal information: Changes in credit exposure, defaults (in different timelines) and stagings.
- Our industry experts' opinion, based on specific details about our exposures and our relationships with customers

Grupo Santander continued to strengthen our ability to analyse potential losses at the highest possible level of granularity by enhancing the methodology and sector projection tools, based on the resilience of each company's financial statements under different macroeconomic scenarios.

4.4. Sovereign risk and exposure to other public sector entities

Sovereign risk arises from central bank transactions (including regulatory cash reserves), government bonds issued by the Treasury or equivalent bodies (public debt portfolio), and transactions with public-sector entities funded exclusively by a state's budget revenues and with no commercial activity.

The standard historically applied by Grupo Santander differs from the one used by the EBA in its periodic stress tests. The most significant differences are that the EBA's approach does not include deposits with central banks, exposures held in insurance companies, or indirect exposures through guarantees or other instruments. By contrast, it does include public administrations more broadly (including regional and local authorities), and not only those of the central government.

Santander continues to track and manage transactions with sovereign risk based on available information, such as reports by rating agencies and international organizations. Grupo Santander monitors each country where the Group has cross-border[1] and sovereign risk. Santander analyses events that could affect the country's political or institutional stability and assign its government or central bank a credit rating. This helps us set limits for transactions with sovereign risk.

Over recent years, total sovereign risk exposure has remained in line with regulatory requirements and the strategy defined for managing this portfolio. Changes in exposure across countries reflect the liquidity management strategy and hedging of interest rate and foreign exchange risk. International exposure is diversified across countries with different macroeconomic expectations and, consequently, different growth, interest rate and exchange rate scenarios..

At the end of December 2025, Grupo Santander´s local sovereign exposure, in currencies other than the official currency of the country of issuance, is not significant (EUR 4,908 million, 1.2% of total sovereign risk) according to our management criteria. Furthermore, exposure to non-local sovereign issuers involving cross-border risk is even less significant[2] (EUR 17,002 million, 4.0% of total sovereign risk). Sovereign exposure in Latin America is mostly in local currency, and is recognised in the local accounts and concentrated in short- term maturities.

Our investment strategy for sovereign risk considers country's credit quality to set the maximum exposure limits. The following table shows the percentage of exposure by rating[A]:

Exposure distribution by rating

	2025	2024	2023
AAA	18%	21%	18%
AA	17%	18%	19%
A	43%	41%	41%
BBB	14%	11%	12%
Less than BBB	9%	9%	10%

A. Internal ratings are applied.

Sovereign exposure at the end of December 2025 is shown in the table below (data in million euros):

	2025					2024

[2] Countries that are not considered low risk by Banco de España.

5. Forborne loan portfolio

The customer debt redirection policy incorporates the regulatory requirements of the EBA guidelines on the management of non-performing exposures, refinancing and restructuring. This policy acts as a reference for the transposition in our subsidiaries and shares the applicable supervisory expectations.

This policy also sets down rigorous criteria for evaluating, classifying and monitoring forbearances to support the strictest possible care and diligence in recovering due amounts. Thus, it dictates that Santander must adapt payment obligations to customers' current circumstances. Our forbearance policy also defines classification criteria to support Grupo Santander recognizes risks appropriately.

Forbearances must remain classified as non-performing or in watch-list for a prudential period for reasonable certainty of repayment. In no case will repayments be used to delay the immediate recognition of losses or so that their use distorts the timely recognition of the risk of non-payment.

At 31 December 2025, forbearance stock fell again and stood at EUR 25,235 million, due to the good payment behaviour in the main geographies. In terms of credit quality, 53% of the loans is classified as credit impaired, with a coverage ratio of 41%. In addition, 47% of the portfolio is classified as performing.

The following terms are used with the meanings specified below:

- Refinancing transaction: transaction that is granted or used, for reasons relating to current or foreseeable financial difficulties of the borrower, to repay one or more of the transactions granted to it, or through which the payments on such transactions are brought fully or partially up to date, in order to enable the borrowers of the cancelled or refinanced transactions to repay their debt (principal and interest) because they are unable, or might foreseeably become unable, to comply with the conditions there of in due time and form.
- Restructured transaction: transaction with respect to which, for economic or legal reasons relating to current or foreseeable financial difficulties of the borrower, the financial terms and conditions are modified in order to facilitate the payment of the debt (principal and interest) because the borrower is unable, or might foreseeably become unable, to comply with the aforementioned terms and conditions in due time and form, even if such modification is envisaged in the agreement.

In 2025, the amortised cost of financial assets whose contractual cash flows were modified during the year when the corresponding loss adjustment was valued at an amount equal to the expected credit losses over the life of the asset amounted to EUR 3,031 million (3,940 million in 2024), without these modifications having a material impact on the income statement. Also, during 2025, the total of financial assets that have been modified since the initial recognition, and whose correction for expected loss has gone from being valued during the entire life of the asset to the following twelve months, amounts to EUR 2,092 million (2,950 million in 2024).

The transactions presented in the foregoing tables were classified at 31 December 2025 by nature, as follows:

- Credit impaired: Operations that rest on an inadequate payment scheme will be classified within the non-performing category, regardless they include contract clauses that delay the repayment of the operation throughout regular payments or present amounts written off the balance sheet for being considered irrecoverable.
- Performing: Operations not classifiable as non-performing will be classified within this category. Operations will also be classified as normal if they have been reclassified from the non-performing category for complying with the specific criteria detailed below:
  - A period of a year must have passed from the refinancing or restructuring date.
  - The owner must have paid for the accrued amounts of the capital and interests, thus reducing the rearranged capital amount, from the date when the restructuring of refinancing operation was formalised.
  - The owner must not have any other operation with amounts past due by more than 90 consecutive days of material delay on the date of the reclassification to the normal risk category.

Attending to the credit attention 47% of the forborne loan transactions are classified as other than non-performing. Particularly noteworthy are the level of existing guarantees (47% of transactions are secured by collateral) and the coverage provided by specific allowances (representing 26% of the total forborne loan portfolio and 41% of the non-performing portfolio).

c) Market, structural and liquidity risk

1. Activities subject to market risk and types of market risk

Activities exposed to market risk encompass transactions where risk is assumed as a consequence of potential changes in interest rates, inflation rates, exchange rates, stock prices, credit spreads, commodity prices, volatility and other market factors; the liquidity risk from our products and markets, and the balance-sheet liquidity risk. Therefore, they include trading risks and structural risks.

- **Interest rate risk** arises from movements in interest rates that reduce the value of a financial instrument, a portfolio or the Grupo Santander. It can affect loans, deposits, debt securities, most assets and liabilities held for trading, and derivatives.
- **Inflation rate risk** arises from movements in inflation that can reduce the value of a financial instrument, a portfolio or the entire group. It can affect loans, debt securities and derivatives (e.g. inflation swaps and futures) whose profitability is linked to inflation.
- **Exchange rate risk** is the possibility of loss because the currency of a long or open position will depreciate against the base currency. It can affect debt in subsidiaries whose local currency is not the euro, as well as loans denominated in a foreign currency.
- **Equity risk** is the possibility of loss from open positions in securities if their market price or expected future dividends fall. It affects shares, stock market indices, convertible bonds and derivatives with shares as the underlying asset (put, call, equity swaps, etc.).
- **Credit spread risk** is the possibility of loss from open positions in fixed-income securities or credit derivatives if their yield curve, or the recovery rate of their issuer or type change. A spread is the yield difference between financial instruments against a benchmark (e.g. the internal rate of return (IRR) of government bonds and interbank interest rates).
- **Commodity price risk** is the possibility of loss from movements in commodity prices. Grupo Santander's commodity exposure is minor and stems mainly from commodity derivatives.
- **Volatility risk** is the possibility of loss caused by movements in interest rates, exchange rates, the stock market, credit spreads and other risk factors affecting portfolio value. It is inherent to all financial instruments whose value considers volatility (especially options contracts).

Derivative contracts (such as options, futures, forwards and swaps) can mitigate market risks partially or fully.

Additionally, other more complex coverage market risks are considered, such as correlation risk, market liquidity risk, prepayment or cancellation risk and subscription risk.

- Correlation risk is the possibility of loss due to an adverse correlation between risk variables that affect portfolio value. Risk variables could be the same (e.g. two FX rates) or different (e.g. an interest rate and a commodity price).
- Market liquidity risk is the possibility that fewer market makers or institutional investors, a large number of transactions, market instability and other factors will cause the Group or a subsidiary to exit a position at a worse market price or trade cost. Exposure to different products and currencies can also increase this risk.
- Pre-payment or cancellation risk originates when mortgages, deposits and other on-balance-sheet instruments give holders the option to buy or sell them, thus altering future cash flows. Potential mismatches on the balance sheet pose a risk since cash flows may have to be reinvested at an interest rate that is potentially lower (assets) or higher (liabilities).
- Underwriting risk is the possibility that the bank will have to hold part of a debt issue it has underwritten or agreed to place if it cannot all be placed among potential buyers.

Balance sheet liquidity risk (unlike market liquidity risk) is the possibility of loss caused by forced disposal of assets or cash flow imbalance if the bank meets its payment obligations late or at excessive cost. It can cause losses by forced asset sales or impacts on margins due to the mismatch between expected cash inflows and outflows.

Pension and actuarial risks (explained at the end of this section) also depend on market variables.

Grupo Santander aim to comply with the Basel Committee's Fundamental Review of the Trading Book (FRTB) and the EBA's Guidelines on the management of interest rate risk arising from non-trading book activities. The purpose of several projects Grupo Santander runs is to provide risk control managers and teams with the best market risk management tools under the right governance framework for the models Grupo Santander uses for metric reporting; and to comply with regulation on the risks mentioned above.

2. Trading market risk management

Setting market risk limits in a dynamic process according to the risk appetite in the annual limits plan prepared by senior management and extended to all subsidiaries.

The standard methodology for risk management and control in trading, measures the maximum expected loss with a specific level of confidence and time frame. The standard for historical simulation is a confidence level of 99% over one day.

Grupo Santander applies statistical adjustments efficiently to incorporate recent developments affecting our levels of risk. Our time frame is two years or at least 520 days from the reference date of the VaR calculation.

The balance sheet items in the Group's consolidated position that are subject to market risk are shown below, distinguishing those positions for which the main risk metric is VaR from those for which risk monitoring is carried out using other metrics:

Risk metric values on the consolidated balance sheet

EUR million

		Main market risk metric		
	Balance sheet amount	VaR	Other	Main risk factor for 'Other' balance
Assets subject to market risk				
Cash, cash balances at central banks and other deposits on demand	152,281		152,281	Interest rate
Financial assets held for trading	252,318	252,318		
Non-trading financial assets mandatorily at fair value through profit or loss	7,761	5,815	1,946	Interest rate, spread
Financial assets designated at fair value through profit or loss	8,046	—	8,046	Interest rate, spread
Financial assets designated at fair value through other comprehensive income	74,612	2,281	72,331	Interest rate, spread

Commodities	0.1	2.5	7.0	1.8	1.3	3.2	5.1	1.6	2.6

A. In South and North America, VaR levels of credit spreads and commodities are not shown separately due to their low or null materiality.

VaR at the end of December (EUR 18.7 million) was only EUR 0.03 million lower compared to the end of 2024, reflecting sustained high market volatility, ongoing geopolitical risk and concerns over inflation trends, which could pick up again as a result of new US trade policies.

By risk factor, average VaR (EUR 17.6 million) higher across several risk factors, especially for foreign exchange, with high market volatility for certain currencies such as the US dollar and the Argentine peso. Temporary spikes in VaR across the different factors generally reflect isolated increases in market price volatility rather than significant changes in positions.

By region, average VaR was higher than the 2024 average in Europe, mainly due to interest rate and foreign exchange risk factors, while it was lower in North America and South America.

Backtesting

Actual losses can differ from predicted losses because of the VaR's limitations. Grupo Santander measures the accuracy of the VaR calculation model to make sure it is reliable. The most important tests Grupo Santander runs involve backtesting:

- In hypothetical P&L backtesting and for the total portfolio, two exceptions (a daily loss higher than VaR or a daily gain higher than VaE) were observed in 2025 for VaR at a 99% confidence level, on 9 and 11 April, as a result of high market volatility, mainly driven by uncertainty over the potential impact of new US trade policies.
- The exceptions observed in the past year are consistent with the assumptions of the VaR calculation model.

3. Structural balance sheet risks

3.1. Main aggregates and variations

Consistent with previous years, the market risk profile of Grupo Santander's balance sheet remained moderate in 2025 in terms of asset, shareholders' equity and NII volumes.

Each subsidiary's finance division manages interest rate risk from commercial banking and is responsible for handling structural risk from interest rate fluctuations.

To measure interest rate risk, Grupo Santander uses statistical models based on strategies to mitigate structural risk with interest-rate instruments (such as bonds and derivatives) to keep risk profile within risk appetite.

The NII and EVE sensitivities below are based on scenarios of parallel interest rate movements from -100 to +100 basis points.

Structural VaR

With such a homogeneous metric as VaR, Grupo Santander can fully monitor market risk in the banking book (excluding CIB trading activity). The Bank differentiates fixed income based on interest rates and credit spreads in ALCO portfolios, FX rates and shares.

In general, the structural VaR of Grupo Santander total assets and equity is minor.

Structural VaR

EUR million. Structural VaR 99% with a temporary horizon of one day.

Structural interest rate risk

- **Europe**

At the end of December, net interest income (NII) for our main balance sheets showed positive sensitivity to interest rate increases. As of the same date, the economic value of equity (EVE) showed negative sensitivity to interest rate increases.

At the end of December 2025, under the scenarios previously described, the most significant NII sensitivity risk was concentrated in the euro, at EUR 561 million; the pound sterling, EUR 169 million; the Polish złotyr, EUR 51 million; and the US dollar, EUR 50 million, all linked to interest rate cut risk.

The most significant risk to the economic value of equity was concentrated in the euro yield curve, at EUR 1,087 million; in pound sterling, at EUR 614 million; the Polish złoty, at EUR 275 million euros; and the US dollar, at EUR 104 million euros, all linked to interest rate rise risk.

Exposure was moderate in relation to annual budget and capital levels in 2025.

- **North America**

At the end of December, net interest income (NII) for our North America balance sheets showed positive sensitivity to interest rate increases in the United States, while showing negative sensitivity to the same scenario in Mexico. In both cases, the economic value of equity (EVE) showed negative sensitivity to interest rate increases.

Exposure was moderate in relation to annual budget and capital levels in 2025.

At the end of December 2025, significant risk to NII was mainly in the US and amounted to EUR 49 million.

The most significant risk to EVE was in the US and amounted to EUR 570 million.

- **South America**

EVE and NII on our main South American balance sheets are generally positioned for interest rate cuts.

In 2025, exposure across all countries remained moderate in relation to the annual budget and capital levels.

At the end of December, the most significant risk to NII was mainly in Brazil (EUR 57 million).

Most significant risk to EVE was recorded in Brazil (EUR 257 million) and in Chile (EUR 225 million).

Structural foreign currency rate risk/results hedging

Grupo Santander's structural FX risk stems mainly from the income and hedging of foreign currency transactions for permanent financial investments. In the dynamic management of this risk, Grupo Santander aims to limit the impact of FX rate movements on the core capital ratio. In 2025, the hedged of the different currencies that have an impact on our core capital ratio was close to 100%.

In December 2025, the largest permanent exposures (with their potential impact on equity) were, in this order, in pound sterling, US dollars, Brazilian reais, Mexican pesos, Polish zlotys and Chilean pesos.

Grupo Santander uses FX derivatives to hedge part of those permanent positions. The Finance division manages FX risk and hedging for the expected profits and dividends of subsidiaries whose base currency is not the euro.

Structural equity risk

Grupo Santander holds equity positions in its banking and trading books. They are either equity instruments or stock, depending on the share of ownership or control.

At the end of December 2025, the equities and shareholdings in the banking book were diversified among Spain, China, Morocco, Poland and other countries. Most of them invest in the financial and insurance sectors. Grupo Santander has minor equity exposure to property and other sectors.

Structural equity positions are exposed to market risk. The Group calculates its VaR with a set of market prices and proxies. At the end of the year 2025, VaR at a 99% confidence level over a one-day horizon was EUR 147 million (EUR 127 million and EUR 171 million in 2024 and 2023, respectively).

3.2. Methodologies

Structural interest rate risk

Grupo Santander measures the potential impact of interest rate movements on EVE and NII. Because changing rates may generate impacts, Grupo Santander must manage and control many subtypes of interest rate risk, such as repricing risk, curve risk, basis risk and option risk (e.g. behavioural or automatic).

Interest rate risk in the balance sheet and market conditions and outlooks could necessitate certain financial measures to achieve Grupo Santander's desired risk profile (such as selling positions or setting interest rates on products Grupo Santander markets).

The metrics Grupo Santander uses to monitor IRRBB include NII and EVE sensitivity to interest rate movements.

- **Net interest income sensitivity**

Net interest income (NII) is the difference between interest income from assets and the interest cost of liabilities in the banking book over a typical one- to three-year horizon (one year being standard in Grupo Santander). Because NII sensitivity is the difference in income between a selected scenario and the base scenario, its values can be as many as considered scenarios. It enables us to see short-term risks and supplement economic value of equity (EVE) sensitivity.

- **Economic value of equity sensitivity**

Economic value of equity (EVE) is the difference between the current value of all assets minus the current value of all liabilities in the banking book. It does not include shareholders' equity and non-interest-bearing instruments. The sensitivity of the economic value of own funds is obtained as the difference between said economic value calculated with a selected scenario and that calculated with a base scenario.

Because EVE sensitivity is the difference in EVE between a selected scenario and the base scenario, it can have as many values as considered scenarios. It enables us to see long-term risks and supplement NII sensitivity.

Structural exchange-rate risk/hedging of results

Every day, Grupo Santander measures FX positions, VaR and P/L.

Structural equity risk

Grupo Santander measures equity positions, VaR and P/L.

4. Liquidity risk

Structural liquidity management aims to fund the Group's recurring activity optimising maturities and costs, while avoiding taking on undesired liquidity risks.

Santander's liquidity management is based on the following principles:

- Define liquidity risk and provide detailed assessments of current and emerging material liquidity risks.
- Define liquidity risk metrics, review and challenge liquidity risk appetite and limits on first line of defence proposals.
- Evaluates and challenges commercial/business proposals; It provides senior management and business units with the necessary elements to understand the liquidity risk of Santander's businesses and operations.
- Supervise the liquidity risk management of the first line of defence and assess the permanence of businesses within the limits of liquidity risk.
- Reports on compliance with risk appetite limits and exceptions, if any, to governing bodies.
- Provides a consolidated view of liquidity risk exposures and liquidity risk profile.
- Confirms the existence of adequate liquidity procedures to manage the business within the limits of risk appetite.

The effective application of these principles by all institutions comprising the Group required the development of a unique management framework built upon three fundamental pillars:

- A solid organisational and governance model that supports the involvement of the subsidiaries' senior management in decision-taking and its integration into the Group's global strategy. The decision-making process for all structural risks, including liquidity and funding risk, is carried out by local Asset and Liability Committees (ALCOs) in coordination with the global ALCO, which is the body empowered by the Bank's board in accordance with the corporate Asset and Liability Management (ALM) framework.

  This governance model has been reinforced as it has been included within Santander's Risk Appetite Framework. This framework meets demands from regulators and market players emanating from the financial crisis to strengthen banks' risk management and control systems.

- In-depth balance sheet analysis and measurement of liquidity risk, supporting decision-taking and its control. The Group objective is to maintains adequate liquidity levels necessary to cover its short- and long-term needs with stable funding sources, optimising the impact of their costs on the income statement. Grupo Santander's liquidity risk management processes are contained within a conservative risk appetite framework established in each geographic area in accordance with its commercial strategy. This risk appetite establishes the limits within which the subsidiaries can operate in order to achieve their strategic objectives.

- Management adapted in practice to the liquidity needs of each business. Every year, based on business needs, a liquidity plan is developed which seeks to achieve:

  - a solid balance sheet structure, with a diversified presence in the wholesale markets;
  - the use of liquidity buffers and limited encumbrance of assets;
  - compliance with both regulatory metrics and other metrics included in each entity's risk appetite statement.

Over the course of the year, all dimensions of the plan are monitored.

Grupo Santander continues to develop the ILAAP (Internal Liquidity Adequacy Assessment Process), an internal self-assessment of liquidity adequacy which must be integrated into the Group's other risk management and strategic processes. It focuses on both quantitative and qualitative matters and is used as an input to the SREP (Supervisory Review and Evaluation Process). The ILAAP evaluates the liquidity position both in ordinary and stressed scenarios.

i. Liquidity risk measurement

Grupo Santander uses the Basel regulatory definition and calculates a set of metrics and stress scenarios in relation to intraday liquidity risk to maintain a high level of management and control. On the one hand, the regulatory liquidity metrics (LCR, NSFR) are prepared following the regulatory criteria established in the CRR 2 and CRD IV. Regarding internal metrics, liquidity scenarios are determined using a combination of behavioral observation in actual liquidity crises occurred at other banks, regulatory assumptions and expert judgment.

a) Liquidity Coverage Ratio (LCR)

The liquidity coverage ratio (LCR) is a regulatory metric. Its purpose is to promote the short-term resilience of a bank's liquidity profile and make sure it has enough high-quality liquid assets to withstand a considerable idiosyncratic or market stress scenario over 30 calendar days.

b) Net Stable Funding Ratio (NSFR)

The net stable funding ratio (NSFR) is a regulatory metric we use to measure long-term liquidity risk. It is the ratio of available stable funding to required stable funding. It requires banks to keep a robust balance sheet, with off-balance-sheet assets and operations financed by stable liabilities.

c) Liquidity buffer

The liquidity buffer is the total liquid assets a bank has to cope with cash outflows during periods of stress. The assets are free of encumbrances and can be used immediately to generate liquidity without losses or excessive discounts. The liquidity buffer is a tool for calculating most liquidity metrics. It is also a metric with defined limits for each subsidiary.

d) Wholesale liquidity metric

The wholesale liquidity metric measures the number of days Grupo Santander would survive if it used liquid assets to cover lost liquidity from a wholesale deposit run-off (without possible renewal) over a set time horizon. Grupo Santander also uses it as an internal short-term liquidity metric to reduce risk from dependence on wholesale funding.

e) Asset Encumbrance metrics

Grupo Santander calculates two metrics to measure asset encumbrance risk. On the one hand, the asset encumbrance ratio gives the proportion of encumbered assets to total assets; on the other, the structural asset encumbrance ratio gives the proportion of encumbered assets by structural funding transaction (namely long-term collateralized issues and credit transactions with central banks).

f) Other additional liquidity indicators

In addition to traditional tools to measure short and long-term liquidity and funding risk, Grupo Santander has a set of additional liquidity indicators to complement those and to measure other non-covered liquidity risk factors. These include concentration metrics, such as the main and the five largest funding counterparties, or the distribution of funding by maturity.

In this sense, deposits do not show a tendency towards concentration, maintaining a stable structure at 31 December 2024, where approximately 75% are transactional and more than 80% of retail deposits are insured by deposit guarantee systems of the different countries.

g) Liquidity scenario analysis

As liquidity stress tests, five standard scenarios have been defined:

i. An idiosyncratic scenario of events detrimental only to Santander;

ii. a local market scenario of events highly detrimental to a base country's financial system or real economy;

iii. a global market scenario of events highly detrimental to the global financial system; and

iv. combined scenario consisting of a combination of more severe idiosyncratic and market events (local and global) occurring simultaneously and interactively.

v. climate scenarios where different stress cases derived from the effects that climate change could have on the economy are collected.

Grupo Santander uses these stress test outcomes as tools to determine risk appetite and support business decision-making.

h) Liquidity early warning indicators

Early warning indicator system consists of quantitative and qualitative liquidity indicators that help predict stress situations and weaknesses in the funding and liquidity structure of Grupo Santander entities. External indicators relate to market-based financial variables; internal indicators relate to our own performance.

i) Intraday liquidity metrics

Grupo Santander follows Basel regulation and calculates several metrics and stress scenarios for intraday liquidity risk to maintain a high level of control.

ii. Liquidity coverage ratio and net stable financing ratio

The regulatory requirement for the LCR ratio has been set at 100% since 2018.

Below is a breakdown of the Group's liquid assets composition according to the criteria established in the supervisory prudential information (Commission Implementing Regulation (EU) 2017/2114 of 9 November 2017) for the determination of high-quality liquid assets for the calculation of the LCR ratio (HQLA):

EUR million

	2025	2024	2023
	Amount weighted applicable	Amount weighted applicable	Amount weighted applicable
High-quality liquid assets-HQLAs			
Cash and reserves available at central banks	*150,883*	*188,745*	*217,935*
Marketable assets Level 1	*173,744*	*150,912*	*119,043*
Marketable assets Level 2A	*5,726*	*4,696*	*4,236*
Marketable assets Level 2B	*7,584*	*6,951*	*6,814*
Total high-quality liquid assets	**337,937**	**351,304**	**348,028**

EUR million

	2025	2024	2023
High-quality liquid assets-HQLAs (numerator)	301,618	315,524	348,028
Total net cash outflows (denominator)	208,388	206,889	209,892
Cash outflows	*287,044*	*278,760*	*282,982*
Cash inflows	*78,656*	*71,871*	*73,090*
Consolidated LCR ratio (%)	**145%**	**153%**	**166%**
Group LCR ratio (%)	**155%**	**168%**	
NSFR ratio (%)	**126%**	**126%**	**123%**

Since 2024, the calculation of the consolidated LCR ratio has been updated to comply with a series of requirements regarding asset transferability restrictions in third countries. This new consolidated ratio includes an adjustment whereby any excess liquidity above 100% of LCR outflows, which is subject to transferability restrictions (legal or operational) in third countries, is not taken into account. This applies even if the surplus liquidity can be used to cover additional outflows within the country itself, which is not subject to any restrictions.

The total high-quality liquid assets differ from the high-quality liquid assets (HQLAs) considered as the numerator within the consolidated LCR ratio, due to the aforementioned adjustment.

In addition, since 2024, we have been calculating a Group LCR ratio using an internal methodology that determines the minimum common coverage percentage simultaneously across all the Group's markets and considers all existing restrictions on liquidity transfers in third countries. This methodology reflects the Group's resilience to liquidity risk more accurately and the internal ratio presents a level that is consistent with what would be achieved by applying the criteria followed until mid-2024, which did not include restrictions on liquidity transfers between subsidiaries.

Regarding the net stable funding ratio (NSFR), its definition was approved by the Basel Committee in October 2014. The transposition of this requirement into European regulation took place in June 2019 with the publication in the Official Journal of the European Union of Regulation (EU) 2019/876 of the European Parliament and of the Council of 20 May 2019. The Regulation establishes that entities must have a net stable funding ratio, as defined in the Regulation, above 100% from June 2021.

As for the funding structure, given the inherently commercial nature of the Group's balance sheet, the loan portfolio is mainly financed by customer deposits. In note 22, 'Debt securities,' the composition of these liabilities is presented based on their nature and classification, the movements and maturity profile of the debt securities issued by the Group, reflecting the strategy of diversification by products, markets, issuers, and terms followed by the Group in its approach to wholesale markets.

iii. Asset encumbrance

Finally, the moderate use of assets by Grupo Santander as collateral in the sources of structural financing of the balance sheet should be highlighted.

In accordance with the guidelines established by the European Banking Authority (EBA) in 2014 on committed and uncommitted assets, the concept of assets committed in financing transactions (asset encumbrance) includes both on-balance sheet assets provided as collateral in transactions to obtain liquidity and off-balance sheet assets that have been received and reused for similar purposes, as well as other assets associated with liabilities for reasons other than financing.

The residual maturities of the liabilities associated with the assets and guarantees received and committed are presented below, as of 31 of December of 2025 (EUR billion):

Residual maturities of the liabilities	Unmatured	<=1month	>1 month <=3 months	>3 months <=12 months	>1 year <=2 years	>2 years <=3 years	3 years <=5 years	5 years <=10 years	>10 years	Total
Committed assets	24.2	50.7	14.1	38.4	38.8	29.5	37.7	36.3	36.6	306.4
Guarantees received committed	2.2	85.2	28.2	61.8	4.0	0.8	1.9	1.1	—	185.2

The reported Group information as required by the EBA at 2025 year-end is as follows:

On-balance-sheet encumbered assets

EUR billion

	Carrying amount of encumbered assets	Fair value of encumbered assets	Carrying amount of unencumbered assets	Fair value of unencumbered assets
Loans and advances	152.5		1,149.4	
Equity instruments	11.4	11.4	18.7	—
Debt securities	117.9	118.5	182.2	180.7
Other assets	23.1		212.4	
Total assets	**304.9**		**1,562.7**	

Encumbrance of collateral received

EUR billion

	Fair value of encumbered collateral received or own debt securities issued	Fair value of collateral received or own debt securities issued available for encumbrance
Collateral received	185.2	70.3
Loans and advances	0.5	—
Equity instruments	12.2	7.1
Debt securities	172.5	63.1
Other collateral received	—	0.1
Own debt securities issued other than own covered bonds or ABSs	**1.4**	**1.1**

Encumbered assets and collateral received and matching liabilities

EUR billion

	Matching liabilities, contingent liabilities or securities lent	Assets, collateral received and own debt securities issued other than covered bonds and ABSs encumbered
Total sources of encumbrance (carrying amount)	**472.0**	**491.5**

On-balance-sheet encumbered assets amounted to EUR 304,923 million, of which close to 50% are loans (mortgage loans, corporate loans, etc.). Guarantees received committed amounted to EUR 185,160 million, relating mostly to debt securities received as security in asset purchase transactions and re-used.

Taken together, these two categories represent a total of EUR 491,519 million of encumbered assets, which give rise to EUR 472,045 million matching liabilities.

As of December 2025, total asset encumbrance in funding operations represented 23.1% of the Group's extended balance sheet under EBA criteria (total assets plus guarantees received: EUR 2,122,932 million), similar to December 2024.

d) Capital risk

The second line of defence can independently challenge business and first-line activities by:

- Supervising capital planning and adequacy exercises through a review of the main components affecting the capital ratios.
- Identifying key metrics to calculate the Group's regulatory capital, setting tolerance levels and analysing significant variations, as well as single transactions with impact on capital.

- Reviewing and challenging the execution of capital actions proposed in line with capital planning and risk appetite.

Grupo Santander commands a sound solvency position, above the levels required by regulators and by the European Central bank.

Regulatory capital

At 31 December 2025, at a consolidated level, the Group must maintain a minimum capital ratio of 9.84% of CET1 (4.50% being the requirement for Pillar I, 0.98% being the requirement for Pillar 2R (requirement), 2.50% being the requirement for capital conservation buffer, 1.25% being the requirement for global systemically entity (D-SIB), 0.55% being the requirement for anti-cyclical capital buffer) and a systemic risk requirement of 0.05%

Grupo Santander must also maintain a minimum capital ratio of 11.66% of tier 1 and a minimum total ratio of 14.10%.

In 2025, the solvency target set was achieved. Santander's CET1 ratio stood at 13.46%[1] at the close of the year, demonstrating its organic capacity to generate capital. The key regulatory capital figures are indicated below:

Reconciliation of accounting capital with regulatory capital

EUR million

	2025	2024	2023

Note: Banco Santander, S.A. and its affiliates had not taken part in any State aid programmes.

Leverage ratio

Basel III established the leverage ratio as a non-risk sensitive measure aimed at limiting excessive balance sheet growth relative to available capital.

The Group performs the calculation in accordance with Regulation (EU) 2019/876 of 20 May 2019 amending Regulation (EU) No 575/2013 as regards the leverage ratio.

This ratio is calculated as tier 1 capital divided by leverage exposure. Exposure is calculated as the sum of the following items:

- Accounting assets, excluding derivatives and items treated as deductions from tier 1 capital (for example, the balance of loans is included, but not that of goodwill) further excluding the exposures referred to in Article 429.a (1) of the regulation.
- Off-balance-sheet items (mainly guarantees, unused credit limits granted and documentary credits) weighted using credit conversion factors.
- Inclusion of net value of derivatives (gains and losses are netted with the same counterparty, minus collaterals if they comply with certain criteria) plus a charge for the future potential exposure.
- A charge for the potential risk of security funding transactions.
- Lastly, it includes a charge for the risk of credit derivative swaps (CDS).

With the publication of Regulation (EU) 2019/876 of 20 May, 2019, amending Regulation (EU) n.º 575/2013 as regards the leverage ratio, the final calibration of the ratio is set at 3% for all entities and, for systemic entities G-SIB, is established an additional surcharge which would be 50% of the cushion ratio applicable to the EISM, applicable from January 2023. In addition, modifications are included in its calculation, including the exclusion of certain exposures from the total exposure measure: public loans when exceptional circumstances arise, public loans, transfer loans and officially guaranteed export credits, transfer loans and officially guaranteed export credits.

EUR million

	2025	2024	2023
Leverage			
Level 1 Capital	94,385	90,170	85,742
Exposure	1,924,349	1,885,572	1,826,922
Leverage Ratio	4.90%	4.78%	4.69%

Global systemically important banks

Grupo Santander is one of 29 banks designated as global systemically important banks (G-SIBs).

The designation as a globally systemic entity comes from a measurement established by the regulators (FSB and BCBS) that they have implemented based on five indicators (size, interjurisdictional activity, interconnection with other financial entities, substitutability and complexity). The list uses data as of the end of 2024 and is based on a methodology agreed in July 2018 and implemented for the first time in the assessment of G-SIBs as of the end of 2021, incorporating, among other things, an additional score considering the Member States of the SRM as a single jurisdiction.

This definition means it has to fulfil certain additional requirements, which consist mainly of a capital buffer (1%), in TLAC requirements (total loss absorbing capacity), that Grupo Santander has to publish relevant information more frequently than other banks, greater regulatory requirements for internal control bodies, special supervision and drawing up of special reports to be submitted to supervisors.

Additionally, Grupo Santander appears both on the list of global systemic entities and on the list of domestic systemic entities. Bank of Spain, based on rule 23 of Circular 2/2016, requires the application of the highest of the two corresponding buffers, in the case of Grupo Santander being the domestic one, 1.25%, a surcharge payable by 2025.

The fact that Grupo Santander has to comply with these requirements makes it a more solid bank than its domestic rivals.

55. Explanation added for translation to English

These accompanying Consolidated Financial Statements, translation of the Consolidated Financial Statements originally issued in Spanish, are presented on the basis of the regulatory financial reporting framework applicable to the Group in Spain (see note 1.b).

a. Amount according to the provisional books of each company as of the date of publication of these annexes, generally referring to 31 December 2025 without considering, where appropriate, interim dividends that have been made during the year. In the book value (net provision cost), the percentage of ownership of the Group has been applied to the figure of each of the holding companies, without considering the impairment of goodwill made in the consolidation process. The data for foreign companies are converted into euros at the exchange rate at the end of the year.
b. Companies over which effective control is maintained.
c. Data as at 31 December 2024, latest available accounts.
d. Data as at 31 March 2025, latest accounts available.
e. Accounting merged company, Pending registration.
f. Data as at 30 September 2025, last accounts available.
g. Data as at 30 April 2025, last accounts available.
h. Data as at 31 July 2025, last accounts available.
i. Companies in liquidation. Pending registration.
j. Company in liquidation as at 31 December 2025.
k. Pursuant to Article 3 of Royal Decree 1159/ 2010, of 17 September, approving the rules for the preparation of consolidated annual accounts, in order to determine the voting rights, voting rights held directly by the parent company have been added to those held by companies controlled by the parent company or by other persons acting in their own name but on behalf of a Group company. For these purposes, the number of votes corresponding to the parent company, in relation to the companies indirectly dependent on it, is that corresponding to the dependent company that directly participates in the share capital of the latter.
l. Company resident for tax purposes in Spain.
m. Data as at 30 June 2021, latest available accounts.
n. Company resident for tax purposes in the United Kingdom.
o. Data as at 28 February 2025, latest available accounts.

(1) Companies issuing preference shares are listed in Annex III, together with other relevant information.

Appendix II

a. Amount according to the provisional books at the date of publication of these annexes of each company, generally referring to 31 December 2025, except where otherwise indicated due to the fact that the annual accounts are pending formulation. The data for foreign companies are converted into euros at the exchange rate at the end of the year.
b. Data as at 31 December 2024, latest available accounts.
c. Data as at 31 December 2019, latest available accounts.
d. Data as at 30 November 2021, latest available accounts.
e. Company in liquidation as at 31 December 2025.
f. Pursuant to Article 3 of Royal Decree 1159/ 2010, of 17 September, approving the rules for the preparation of consolidated annual accounts, in order to determine the voting rights, voting rights held directly by the parent company have been added to those held by companies controlled by the parent company or by other persons acting in their own name but on behalf of a group company. For these purposes, the number of votes corresponding to the parent company, in relation to the companies indirectly dependent on it, is that corresponding to the dependent company that directly participates in the share capital of the latter.
g. Excluding the Group companies listed in Appendix I, as well as those which are of negligible interest with respect to the true and fair view that the consolidated financial statements must give (in accordance with articles 48 of the Commercial Code and 260 of the Spanish Companies Act).
h. Companies over which joint control is maintained.
i. Data as at 31 October 2024, latest available accounts.
j. Data as at 30 June 2025, latest available accounts.
k. Company with no financial information available.
l. Data as 31 December 2023, latest available account.
m. Data as at 30 September 2025, latest available accounts.
n. Investment managed discretionally by a manager outside the Santander Group, the voting rights not being, in this case, decisive in determining control of the entity.
o. Data as 30 April 2025, latest available accounts.
p. Company over which effective control has been lost.
q. Data as 31 January 2025, latest available accounts.

Appendix IV

Notifications of acquisitions and disposals of investments in 2025

(Art. 155 of the Corporate Enterprises Act and Art. 105 of the Securities Market Law).

Regarding compliance with Art. 125 of the Securities Market Law, no required notifications were submitted during 2025.

In relation to the information required by 155 of the Corporate Enterprises Act, on the shareholdings in which Grupo Santander owns more than 10% of the capital of another company, and the successive acquisitions of more than 5% of the share capital, see appendices I, II and III.

Appendix V

Other information on the Group's banks

Following is certain information on the share capital of the Group's main banks based on their total assets.

1. Santander UK plc

a) Number of financial equity instruments held by the Group.

At 31 December 2025, the Company was a subsidiary of Banco Santander, S.A. and Santusa Holding, S.L.

On 12 November 2004 Banco Santander, S.A. acquired the then entire issued ordinary share capital of 1,485,893,636 Ordinary shares of 10p. each. On 12 October 2008 a further 10 billion Ordinary shares of 10p. each were issued to Banco Santander, S.A. and an additional 12,631,375,230 Ordinary shares of 10p. each were issued to Banco Santander, S.A. on 9 January on 2009. On 3 August 2010, 6,934,500,000 Ordinary shares of 10p. each were issued to Santusa Holding, S.L.. With effect from 10 January 2014, Santander UK Group Holdings Limited, a subsidiary of Banco Santander, S.A. and Santusa Holding, S.L., became the beneficial owner of 31,051,768,866 Ordinary shares of 10p. each, being the entire issued ordinary share capital of the Company, by virtue of a share exchange agreement between Santander UK Group Holdings Limited, Banco Santander, S.A. and Santusa Holding, S.L.. Santander UK Group Holdings Limited became the legal owner of the entire issued Ordinary share capital of the Company on 1 April 2014 and on 25 March 2015 became a public limited company and changed its name from Santander UK Group Holdings Limited to Santander UK Group Holdings plc. In addition to this, there are 325,000,000 Non-Cumulative Non-Redeemable 10.375% and 8.625% Sterling Preference Shares of GBP 1.00 each. In addition to this there were 13,780 Series A Fixed (6.222%)/Floating Rate Non-Cumulative Callable Preference Shares of GBP 1.00 each which were redeemed and cancelled in their entirety on 24 May 2019. The legal and beneficial title to the entire issued Preference share capital is held by third parties and is not held by Banco Santander, S.A.

b) Capital increases in progress

At 31 December 2025, there were no approved capital increases.

c) Share capital authorised by the shareholders at the general meeting

The shareholders resolved at the Annual General Meeting held on 30 June 2025, to authorise unconditionally, the company to carry out the following repurchases of the share capital:

(1) To buy back its own 8.625% Sterling Preference shares on the following terms:

(a) The Company may buy back up to 125,000,000 8.625% Sterling Preference shar**es;**

(b) The lowest price which the Company can pay for 8.625% Sterling Preference shares is 75% of the average of the market values of the preference shares for five business days before the purchase is made; and

(c) The highest price (not including expenses) which the Company can pay for each 8.625% Sterling Preference share is 125% of the average of the market values of the preference shares for five business days before the purchase is made.

This authority shall begin on the date of the passing of this resolution and end on the conclusion of the next Annual General Meeting of the Company. The Company may agree, before this authorisation ends, to buy back its own 8.625% preference shares even though the purchase may be completed after this authorisation ends.

(2) To buy back its own 10.375% Sterling Preference shares on the following terms:

(a) The Company may buy up to 200,000,000 10.375% Sterling Preference shares;

(b) The lowest price which the Company can pay for 10.375% Sterling Preference shares is 75% of the average of the market values of the preference shares for five business days before the purchase is made; and

(c) The highest price (not including expenses) which the Company can pay for each 10.375% Sterling Preference share is 125% of the average of the market values of the preference shares for five business days before the purchase is made.

This authority shall begin on the date of the passing of this resolution and end on the conclusion of the next Annual General Meeting of the Company. The Company may agree, before this authorisation ends, to buy back its own 10.375% preference shares even though the purchase may be completed after this authorisation ends.

d) Rights on founder's shares, 'rights' bonds, convertible debentures and similar securities or rights

Not applicable.

e) Specific circumstances that restrict the availability of reserves

Not applicable.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading

The preference share capital of Santander UK plc is traded on the London Stock Exchange under the following details:

- 10.375% Sterling Preference - ISIN: GB0000064393
- 8.625% Sterling Preference - ISIN: GB0000044221

2. Santander Financial Services plc

a) Number of financial equity instruments held by the Group

The Group holds ordinary shares amounting to GBP 249,998,000 through Santander UK Group Holdings plc (249,998,000 ordinary shares with a par value of GBP 1 each).

The Group also holds 1,000 tracker shares (shares without voting rights but with preferential dividend rights) amounting to GBP 1,000 and 1,000 B tracker shares amounting to GBP 1,000 through Santander UK Group Holdings plc, both with a par value of GBP 1 each.

Additionally, the company issued GBP 50 million additional tier 1 (AT) capital securities to Santander UK Group Holdings plc on 19 December 2022.

b) Capital increases in progress

No approved capital increases are in progress.

c) Capital authorised by the shareholders at the general meeting

Not applicable.

d) Rights on founder's shares, 'rights' bonds, convertible debentures and similar securities or rights

Not applicable.

e) Specific circumstances that restrict the availability of reserves

Not applicable.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading

Not applicable.

3. Banco Santander (Brasil) S.A.

a) Number of financial equity instruments held by the Group

The Group holds 3,440,170,512 ordinary shares and 3,273,507,089 preference shares through Banco Santander, S.A. and its subsidiaries Sterrebeeck B.V. and Grupo Empresarial Santander, S.L.

The shares composing the share capital of Banco Santander (Brasil) S.A. have no par value and there are no pending payments. At 2025 year-end, the bank's treasury shares consisted of 13,666,460 ordinary shares and 13,666,460 preferred shares, with a total of 27,332,920 shares.

In accordance with current Bylaws (Article 5.7), the preference shares do not confer voting rights on their holders, except under the following circumstances:

a) In the event of transformation, merger, consolidation or spin-off of the company.

b) In the event of approval of agreements between the company and the shareholders, either directly, through third parties or other companies in which the shareholders hold a stake, provided that, due to legal or Bylaws provisions, they are submitted to a general meeting.

c) In the event of an assessment of the assets used to increase the company's share capital.

The General Assembly may, at any moment decide to convert the preference shares into ordinary shares, establishing a reason for the conversion.

However, the preference shares do have the following advantages (Article 5.6):

a) Their dividends are 10% higher than those distributed to ordinary shares.

b) Priority in the dividends distribution.

c) Participation, on the same terms as ordinary shares, in capital increases resulting from the reserves and profits capitalization and in the distribution of bonus shares arising from the capitalization of retained earnings, reserves or any other funds.

d) Priority in the reimbursement of capital in the event company's dissolution.

e) In the event of a public offering due to a change in control of the company, the holders of preferred shares are guaranteed the right to sell the shares at the same price paid for the block of shares transferred as part of the change of control, i.e. they are treated the same as shareholders with voting rights.

b) Capital increases in progress

No approved capital increases are in progress.

c) Capital authorised by the shareholders at the general meeting

The company is authorised to increase share capital, subject to approval by the board of directors, up to a limit of 9,090,909,090 ordinary shares or preferred shares, and without need to maintain any ratio between any of the different classes of shares, provided they remain within the limits of the maximum number of preferred shares provided in Law.

As of 31 December 2025, the share capital consists of 7,498,531,051 shares (3,818,695,031 ordinary shares and 3,679,836,020 preferred shares).

d) Rights on founder's shares, 'rights' bonds, convertible debentures and similar securities or rights

At the general meeting held on 21 December 2016 the shareholders approved the rules relating to the deferred remuneration plans for the directors, management and other employees of the company and of companies under its control. Shares delivery is linked to achievement of certain targets. At the general meeting held on April 26, 2024, the shareholders approved an adjustment to the relevant regulations for the calculation of the average period of daily quotations for the purposes of bonus payments.

e) Specific circumstances that restrict reserves availability

The only restriction on the availability of Banco Santander (Brasil) S.A.'s reserves is connected to the requirement for the legal reserve formation (restricted reserves), which can only be used to offset losses or to increase capital.

The legal reserve requirement is set-forth in Article 193 of the Brazilian Corporations Law, which establishes that before allocating profits to any other purpose, 5% of profits must be transferred to the legal reserve, which must not exceed 20% of the company's share capital.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading

All the shares are listed on the São Paulo Stock Exchange (B3 - Brasil, Bolsa, Balcão) and the shares deposit certificates (American Depositary Receipts - ADR) are listed on the New York Stock Exchange (NYSE).

4. Santander Bank, National Association

a) Number of financial equity instruments held by the Group

At 31 December, 2025, the Group held 530,391,043 ordinary shares that carry the same voting and dividend acquisition rights over Santander Holdings USA, Inc. (SHUSA). This *holding* company holds 1,237 ordinary shares of Santander Bank, National Association (SBNA) with a par value of USD 1 each, which carry the same voting rights and constitute all the share capital of SBNA.

Prior to 1 December, 2025, SHUSA held an 80.84% ownership interest in SBNA, and the remaining 19.16 % was held by Independence Community Bank Corp. (ICBC), a wholly owned subsidiary of SHUSA. ICBC was dissolved and its ownership interest in SBNA was distributed in liquidation to SHUSA on 1 December, 2025.

There is no shareholders' meeting for the ordinary shares of SBNA.

b) Capital increases in progress

At 31 December 2025 there were no approved capital increases.

c) Capital authorised by the shareholders at the general meeting

Not applicable.

d) Rights on founder's shares, 'rights' bonds, convertible debentures and similar securities or rights

Not applicable.

e) Specific circumstances that restrict the availability of reserves

Not applicable.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading

Not applicable.

5. Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México

a) Number of financial instruments of capital held by the group.

Grupo Financiero Santander México, S.A. de C.V. ('Grupo Financiero') and Gesban México Servicios Administrativos Globales, S.A. de C.V. (México), hold 5,088,000,736 shares which represent the 74.97% of the capital stock of Banco Santander México and Banco Santander, S.A. holds 1,691,806,903 shares which represent the 24.92% of such capital stock.

On November 30, 2022, an Extraordinary Shareholders' Meeting of Banco Santander México, was held at which it was approved (a) to cancel the registration of all of the shares representing the capital stock of the Company in the National Securities Registry (RNV) maintained by the National Banking and Securities Commission and to delist them from the Mexican Stock Exchange (Bolsa Mexicana de Valores, S.A.B. de C.V.), and (b) delist the American Depositary Shares (each representing five series 'B' shares of the Company) from the New York Stock Exchange and delist the Company's series 'B' shares and such American Depositary Shares from registration with the US Securities and Exchange Commission; and (c) to conduct certain tender offers for the series 'B' shares representing the capital stock of the Company and the American Depositary Shares.

Tender offers for the acquisition of shares were carried out from February 7 to April 10, 2023, where Banco Santander, S.A. acquired a total of 244,306,313 series 'B' shares.

Once the offers were finalized and in accordance with the Mexican regulation, on May 8, 2023, a trust was established for a period of 6 months, to carry out the acquisition of shares of Banco Santander México, including those represented by American Depositary Shares listed on the New York Stock Exchange (which were not owned at that time by Banco Santander, S.A. or its subsidiaries) owned by shareholders who did not participate in the tender offers made by Banco Santander, S.A.

On May 4 and 12, 2023, respectively, Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México, was delisted from the New York Stock Exchange, LLC and the RNV .

On November 8, 2023, the trust ended; as a result, Banco Santander, S.A. repurchased 9,243,880 series 'B' shares from shareholders who did not participate in the tender offers, leaving a total of 1,714,399 shares of the series 'B' in the hands of minority shareholders.

On February 13, 2024, an Extraordinary Shareholders' Meeting of Banco Santander México, S.A. was held, at which it was approved to amend the Bylaws of the Institution to remove the obligations established by the Securities Market Law as a public company.

b) Ongoing capital stock increases.

To this date there are not ongoing capital stock increases.

c) Authorized Capital by the Shareholders Meeting.

On April 20, 2021, the Company held an Extraordinary General Shareholders' Meeting, at which, among other items, it was approved an increase in the authorized capital stock of the Company to 6,825,447,481.00 Mexican pesos represented by 1,805,300,000 unsubscribed and unpaid shares, which are held in treasury so that the Company may issue Capital Instruments representing non-preferred subordinated debt, perpetual nature and convertible into ordinary shares, together with the corresponding amendment to the Company's Bylaws. This increase was approved by the National Banking and Securities Commission (CNBV) through official communication number 312-3/10039041/2021 dated November 8, 2021.

As a result of said agreement, the Company requested the update of the registration of the shares representing the capital stock of Banco Santander Mexico, S.A. in the RNV, which was authorized by the CNBV through official communication number 153/2800/2022 dated May 20, 2022.In the aforementioned official communication, it was requested that the Company adjusted the amounts in pesos corresponding to the capital stock to include cents, and therefore, through an Extraordinary General Stockholders' Meeting held on July 19, 2022, the corresponding adjustment was made, which was authorized by the CNBV through official communication number 312-3/93573/2023 dated January 3, 2023.

The capital stock of the Bank is 32,485,600,109.44 Mexican pesos represented by a total of 8,592,294,357 shares with a nominal value of 3.780782962 Mexican pesos each one; divided in 4,385,824,012 stocks 'F' series and 4,206,470,345 shares 'B' series. The capital stock is constituted as follows:

- Subscribed and paid-in capital of the Bank is 25,660,152,628.14 Mexican pesos represented by a total of 6,786,994,357 shares with a nominal value of 3.780782962 Mexican pesos each one; divided in 3,464,309,145 shares 'F' series and 3,322,685,212 shares series.
- The authorized capital stock for the conversion of obligations into shares of the Company is 6,825,447,481.30 Mexican pesos, represented by a total of 1,805,300,000 shares with a nominal value of 3,780782962 Mexican pesos each; divided into 921,514,867 series 'F' shares and 883,785,133 series 'B shares'.

d) Rights incorporated into parts of founder, bonds or debt, convertible obligations and securities or similar rights.

On September 20, 2018, Banco Santander México, issued and placed equity instruments, subordinated, preferential, and not convertible into shares, governed by foreign law, representative of the complementary part of the net capital of Banco Santander Mexico (*tier 2* subordinated preferred capital notes), for the amount of 1,300 million American dollars (the 'Instruments'), whose resources were used mainly for the acquisition of the 94.07% of the Subordinated Notes 2013.

On June 15, 2020, the Bank's Shareholders' Meeting was held, which approved to increase the debt securities issuance in order to be settled in the amount of 10,000 million American dollars, to be used considering the following, among others: i) issuance of debt securities in local and international markets; ii) senior or subordinated debt, including in both cases preferred and not preferred securities, and debt securities classified as capital on a regulatory point of view. The board of directors on its meeting held on June 18, 2020, ratified the 10,000 million American dollars limit approved by the above mentioned Shareholders Meeting.

On April 20, 2021, a General Extraordinary Shareholders' Meeting of Banco Santander México was held, where among other issues, it was approved that the Bank may issue subordinated non preferential perpetual and convertible capital notes, to be placed abroad, in accordance with the Banco de Mexico authorization.

On September 15, 2021, Banco Santander Mexico issued abroad the 'Perpetual Subordinated Non-Preferred Contingent Convertible Additional Tier 1 Notes', up to an amount of 700 million American dollars. On the same date, the Bank paid the '2016 Obligations' issued by the Bank, on a fixed initial rate of 4.625% up to an amount of 700 million American dollars.

On January 25, 2024, the Bank's board of directors approved, among others, the issuance of preferred subordinated Notes *tier 2* abroad, up to 1,500 million American dollars. Subsequently, the General Shareholders Meeting dated February 27, 2024, approved the issuance of capital instruments as part of the complementary capital (*tier 2*), to be placed abroad, up to an amount of 1,030 million American dollars (900 million American dollars were effectively placed).

On October 17, 2024, the Bank's board of directors approved, among others, the issuance of a Senior Note abroad up to an amount of 700 million American dollars.

On April 24, 2025, the Bank's board of directors approved, among others, the issuance of Subordinated Preferred *tier2* Notes to be placed abroad, for the amount of 1,200 million American dollars during 2025. Subsequently, the Bank's General Shareholders Meeting dated June 17, 2025, approved the issuance of capital instruments as part of the complementary capital (*tier 2*), to be placed abroad, up to an amount of 1,200 million US dollars (the total amount was effectively placed).

The approved debt issuance of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México is currently composed as follows:

Instrument	Type	Term	Amount	Available

A. The issuance of the structured private banking bonds is not revolving. Once placed the amount laid down in the corresponding brochure a new certificate will be issued on the authorized amount.

e) Specific circumstances restricting the availability of reserves.

According to the Law of Financial Institutions, general dispositions applicable to financial institutions, General Corporations law and the Bylaws, the Bank has to constitute or increase its capital reserves to ensure the solvency to protect the payments system and the public savings.

The Bank increases its legal reserve annually accordingly to the results obtained in the fiscal year (benefits).

The Bank must constitute the different reserves established in the legal provisions applicable to financial institutions, which are determined accordingly to the qualification granted to credits and they are released when the credit rating improves, or when it is settled.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading.

Not applicable.

6. Banco Santander Totta, S.A

a) Number of equity instruments held by the Group

Banco Santander, S.A. owns 1,383,690,177 shares of Banco Santander Totta, S.A..

Banco Santander Totta, S.A. own 6.326.736 treasury shares, all of which have a par value of EUR 1 each and identical voting and dividend rights and are subscribed and paid in full.

Banco Santander, S.A. direct participation at Banco Santander Totta, S.A. arise as result of the incorporation by merger of its majority shareholder, Santander Totta, SGPS, S.A. and Taxagest – Sociedade Gestora de Participações Sociais, S.A. in Banco Santander Totta, S.A. occurred at February 28, 2025.

b) Capital increases in progress

At 31 December 2025, there were no equity increases in progress.

c) Capital authorised by the shareholders at the general meeting

Not applicable.

d) Rights on founder's shares, 'rights' bonds, convertible debentures and similar securities or rights

Not applicable.

e) Specific circumstances that restrict the availability of reserves

Under Article 296 of the Portuguese Companies' Code, the legal and merger reserves can only be used to offset losses or to increase capital.

Non-current asset revaluation reserves are regulated by Decree-Law 31/98, under which losses can be offset or capital increased by the amounts for which the underlying asset is depreciated, amortised or sold.

f) Entities outside the Group which own, directly or through subsidiaries, a stake equal to or greater than 10% of the equity.

Not applicable.

g) Equity instruments admitted to trading

Not applicable.

7. Santander Consumer Bank AG

a) Number of financial equity instruments held by the Group

Not applicable.

g) Equity instruments admitted to trading

All the shares of Santander Bank Polska S.A. are listed on the Warsaw Stock Exchange.

Appendix VI

Annual banking report

Grupo Santander's total tax contribution (taxes incurred directly and by third parties, generated in the course of business) is around EUR 22.1 billion, including more than EUR 9.5 billion in taxes incurred directly (corporate income tax, non-recoverable value added tax (VAT) and other indirect taxes, employer Social Security contributions, payroll taxes and other taxes and levies).

This report complies with Article 89 of Directive 2013/36/EU of the European Parliament and of the Council of 26 June 2013 on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, and its transposition into Spanish law pursuant to Article 87 of Act 10/2014 of 26 June on the regulation, supervision and capital adequacy of credit institutions.

The criteria used to prepare this report were:

a) Name(s), activities and location

Appendices I to III to the consolidated financial statements contain details of the companies operating in each jurisdiction, including their name(s), location and activities.

Santander main activity in the jurisdictions where operate is commercial banking. The Group primarily operates in ten markets through subsidiaries that are autonomous in capital and liquidity. This has clear strategic and regulatory advantages, since it limits the risk of contagion between units, imposes a double layer of global and local oversight, and facilitates crisis management and resolution.

b) Turnover and profit or loss before tax

Turnover in this report is Total income, and profit or loss before tax, Operating profit/(loss) before tax, both as defined and presented in the consolidated income statement that forms part of the consolidated financial statements.

c) Number of full-time equivalent employees

The data on full-time equivalent employees stem from the average headcount of each jurisdiction.

d) Tax on profit or loss

In the absence of specific criteria, we have included the amount effectively paid (EUR 4,954 million in 2025, with an effective tax rate of 24.0%) in respect of taxes whose effect is recognized under Income tax in the consolidated income statement.

Taxes effectively paid by the companies in each jurisdiction include:

- Supplementary payments relating to income tax returns, usually for prior years.
- Advances, prepayments, withholdings made or borne in respect of tax on profit or loss for the year. We included taxes borne abroad in the jurisdiction of the company that bore them.
- Refunds received with respect to prior years' returns.
- Where appropriate, the amount payable from assessments and litigation relating to these taxes.

The foregoing form part of the cash flow statement and differ from the corporate income tax expense recognized in the consolidated income statement (EUR 5,131 million in 2025, representing an effective rate of 24.9%, see note 27). This is because each country's tax regulations establish:

- when taxes must be paid. There is often a mismatch between the payment dates and the generation of the income bearing the tax.
- their own calculation criteria to define temporary or permanent restrictions on expense deduction, exemptions and relief or deferrals of certain income, generating the differences between the accounting profit (or loss) and taxable profit (or tax loss) which is ultimately taxed; tax loss carry forwards from prior years, tax credits and/or relief, etc., must also be added. In certain cases, special regimes such as the tax consolidation of companies in the same jurisdiction are established.

e) Public subsidies

In the context of the legally-required disclosures, this was interpreted as any aid or subsidy in line with the European Commission's Guidance on the notion of State aid. Grupo Santander did not receive significant public subsidies in 2025.

The breakdown of information is as follows:

	2025			
Jurisdiction	**Turnover (EUR million)**	**Full-time equivalent employees**	**Gross profit or loss before tax (EUR million)**	**Tax on profit or loss (EUR million)**

1. Including the information relating to a branch in the Cayman Islands, the profits of which are taxed in full in Brazil. The contribution of this branch profit before tax from continuing operations is EUR 488 million.
2. Includes the Corporate Centre.
3. Including information associated with the business subject to the Poland disposal reported under a single line in the consolidated income statement — 'profit/(loss) after tax from discontinued operations' (see note 52.c).

At 31 December 2025, the Group's return on assets (ROA) was 0.84%.

Pursuant to Article 253, section 1 of the revised Spanish Companies Act (*Ley de Sociedades de Capital*), the board of directors of Banco Santander, S.A. draws up the consolidated financial statements (comprising the consolidated balance sheet, income statement, statement of recognized income and expense, statement of changes in total equity, statement of cash flows and the notes to the consolidated financial statements) and the consolidated directors' report for the 2025 fiscal year in eXtensible HyperText Markup Language (XHTML) format and, with respect to the main consolidated financial statements and the notes to the consolidated financial statements, with tags in the standard eXtensible Business Reporting Language (XBRL), all of which conforms to the single electronic reporting format required under Directive 2004/109/EC and Delegated Regulation (EU) 2019/815.

The directors of Banco Santander, S.A., listed below with an indication of their respective positions, declare that, to the best of their knowledge, the company's consolidated financial statements for the 2025 financial year were drawn up in accordance with the applicable accounting principles and give a true and fair view of the assets, liabilities, financial position and profit or loss of Banco Santander, S.A. and of the undertakings included in the consolidation taken as a whole, and that the consolidated directors' report includes a fair review of the development, performance and position of the company and of the undertakings included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties that they face.

General information

Corporate information

Banco Santander, S.A. is a Spanish bank, incorporated as sociedad anónima in Spain and is the parent company of Grupo Santander. Banco Santander, S.A. operates under the commercial name Santander.

The Bank's Legal Entity Identifier (LEI) is 5493006QMFDDMYWIAM13 and its Spanish tax identification number is A-39000013. The Bank is registered with the Companies Registry of Cantabria, and its Bylaws have been adapted to the Spanish Companies Act by means of the notarial deed instrument executed in Santander on 29 July 2011 before the notary Juan de Dios Valenzuela García, under number 1209 of his book and filed with the Companies Registry of Cantabria in volume 1006 of the archive, folio 28, page number S-1960, entry 2038.

The Bank is also registered in the Official registry of entities of Bank of Spain with code number 0049.

The Bank's registered office is at:

Paseo de Pereda, 9-12
39004 Santander
Spain

The Bank's principal executive offices are located at:

Santander Group City
Avda. de Cantabria s/n
28660 Boadilla del Monte
Madrid
Spain
Telephone: (+34) 91 276 92 90

Corporate history

The Bank was established in the city of Santander by public deed before the notary José Dou Martínez on 3 March 1856, which was later ratified and amended in part by a second public deed dated 21 March 1857 executed before the notary José María Olarán. The Bank commenced operations upon incorporation on 20 August 1857 and, according to article 4 of the Bylaws, its duration shall be for an indefinite period. It was transformed into a credit corporation (sociedad anónima de crédito) by public deed, executed before notary Ignacio Pérez, on 14 January 1875 and registered in the Companies Registry Book of the Government's Trade Promotion Section in the province of Santander. The Bank amended its Bylaws to conform to the Spanish public companies act of 1989 by means of a public deed executed in Santander on 8 June 1992 before the notary José María de Prada Díez and recorded in his notarial record book under number 1316.

On 15 January 1999, the boards of directors of Santander and Banco Central Hispanoamericano, S.A. agreed to merge Banco Central Hispanoamericano, S.A. into Santander, and to change Banco Santander's name to Banco Santander Central Hispano, S.A. The shareholders of Santander and Banco Central Hispanoamericano, S.A. approved the merger on 6 March 1999, at their respective general meetings and the merger became effective in April 1999.

The Bank's general shareholders' meeting held on 23 June 2007 approved the proposal to change back the name of the Bank to Banco Santander, S.A.

As indicated above, the Bank brought its Bylaws into line with the Spanish Companies Act by means of a public deed executed in Santander on 29 July 2011.

The Bank's general shareholders' meeting held on 22 March 2013 approved the merger by absorption of Banco Español de Crédito, S.A.

On 7 June 2017, Santander acquired the entire share capital of Banco Popular Español, S.A. in an auction in connection with a resolution plan adopted by the European Single Resolution Board (the European banking resolution authority) and executed by the FROB (the Spanish banking resolution authority) following a determination by the European Central Bank that Banco Popular was failing or likely to fail, in accordance with Regulation (EU) 806/2014 establishing a framework for the recovery and resolution of credit institutions and investment firms. On 24 April 2018, the Bank announced that the boards of directors of Banco Santander, S.A. and Banco Popular Español, S.A.U. had agreed to an absorption of Banco Popular by Banco Santander. The legal absorption was effective on 28 September 2018.

1. Supplemental information to the consolidated directors' report

1.1. Corporate governance code

The CNMV's Good Governance Code for Listed Companies (Spanish Corporate Governance Code), referred to in section 9 of the 'Corporate governance' chapter and to which Banco Santander is subject, is publicly available on the website of the CNMV (Comisión Nacional del Mercado de Valores), https://www.cnmv.es/DocPortal/Publicaciones/CodigoGov/CBG_2020_ENen.PDF.

1.2. Branches

Details of Santander's branches are set out in note 3 to the consolidated annual accounts.

1.3. Statement on diversity

The disclosures below are made pursuant to the FCA's Listing Rule 14.3.30R as Banco Santander shares are listed on the London Stock Exchange and classified under the 'Equity shares (international commercial companies secondary listing)' category of the FCA's Official List. It is worth noting however that Banco Santander is a Spanish-incorporated company whose home securities market is in Spain and that there is no equivalent requirement under Spanish law regarding directors' ethnic background nor any requirement under which at least one of the following roles (Chair, Chief Executive, Senior Independent Director or Chief Financial Officer) is to be held by a woman.

In accordance with the disclosure requirements under the FCA's Listing Rule 14.3.30R, as at 31 December 2025: (i) 40% of the members of the board of Banco Santander were women; (ii) the role of Chair of the board was held by a woman; and (iii) at least one individual on the board was from a minority ethnic background. There have been no changes to the board between 31 December 2025 and the date of filing this report.

Further information can be found in section 4.2 'Board composition' in the 'Corporate governance' chapter of our 2025 annual report.

The following tables set out the information required to be disclosed by Banco Santander pursuant to the FCA's UK Listing Rule 14.3.30R(2):

Table for reporting on gender identity or sex (UKLR 14 Annex 1R(1)):

	Number of board members	Percentage of the board	Number of senior positions on the board (CEO, CFO[1], SID and Chair)	Number in executive management[2]	Percentage of executive management
Men	9	60%	2	3	60%
Women	6	40%	1	2	40%
Not specified/prefer not to say	0	0%	0	0	0%

1. Note that Banco Santander's CFO is not a member of the board of directors.
2. We refer to the members of Banco Santander's Board Executive Committee (please see page 297 of our 2025 Annual Report).

Table for reporting on ethnic background (UKLR 14 Annex 1R(2)):

	Number of board members	Percentage of the board	Number of senior positions on the board (CEO, CFO, SID and Chair)[1]	Number in executive management	Percentage of executive management
White British or other White (including minority-white groups)	11	73.3%	—	3	60.0%
Mixed/Multiple Ethnic Groups	1	6.7%	—	1	20%
Asian/Asian British	0	0%	—	0	0%
Black/African/ Caribbean/ Black British	0	0%	—	0	0%
Other ethnic group, including Arab	0	0%	—	0	0%
Not specified/prefer not to say	3	20%	—	1	20%

1. Consent to the reporting on ethnic background has been given by each director on a no-names basis. Since the identity of the three individuals holding senior positions on the board is publicly available, the publication of numerical data in this column would risk identifying the ethnic background of these individuals, as well as those on the board more generally. In accordance with UKLR 14.3.31R and applicable data protection laws in Spain, we have therefore chosen not to complete this column so as to prevent ethnic background data from being publicly attributed to specific individuals without their consent.

Board diversity data is accurate as at the date of filing this report. Data on ethnic background has been supplied by each director and data on gender diversity has been approved unanimously by all board members as included in the annual report of Banco Santander for the year ended 31 December 2025.

1.4. Important events

The following events occurred from 1 January 2026 to 24 February 2026, being the date on which the consolidated financial statements were authorized for issue (see note 1.g to the consolidated financial statements).

On 9 January 2026, after obtaining the necessary regulatory approvals and fulfilling the conditions for closing, the Group completed the sale of 49% of the share capital of Santander Bank Polska S.A. and 50% of the share capital of Santander Towarzystwo Funduszy Inwestycyjnych S.A. (TFI, the asset management business in Poland) to Erste Group Bank AG for a total cash amount of approximately EUR 7,000 million. The transaction generated a net capital gain of approximately EUR 1,900 million, which will be recognized in the consolidated income statement for the 2026 financial year. Santander holds the 9.7% of Santander Polska's share capital.

The transaction resulted in the loss of effective control over the entity, and therefore, effective as of 9 January 2026, Santander Bank Polska S.A. will cease to be consolidated using the global integration method in the Group's consolidated financial statements from that date forward.

Additionally, on 3 February 2026, Banco Santander, S.A. ('Santander') announced that it had reached an agreement to acquire Webster Financial Corporation ('Webster'), the parent company of Webster Bank, N.A., for approximately USD 12,200 million (around EUR 10,300 million). Webster shareholders will receive USD 48.75 in cash and 2.0548 Santander shares for each Webster share, resulting in a total consideration of USD 75 per Webster share. Completion of the transaction is expected to take place in the second half of 2026 subject to the customary conditions for this type of operations, including obtaining the relevant regulatory approvals and the approvals of both Webster's and Santander's shareholders.

2. Financial statements of Banco Santander, S.A.

Banco Santander, S.A.

Auditor's report, Annual accounts and director's report for the year ended 31 December 2025

Translation of annual accounts originally issued in Spanish and prepared in accordance with the regulatory financial reporting framework applicable to Banco Santander in Spain (see notes 1 to 50). In the event of a discrepancy, the Spanish-language version prevails.

Independent auditor's report on the annual accounts

To the shareholders of Banco Santander, S.A.

Report on the annual accounts

Opinion

We have audited the annual accounts of Banco Santander, S.A. (the Bank), which comprise the balance sheet as at 31 December 2025, and the income statement, statement of recognised income and expense, statement of changes in total equity, statement of cash flows and related notes for the year then ended.

In our opinion, the accompanying annual accounts present fairly, in all material respects, the equity and financial position of the Bank as at 31 December 2025, as well as its financial performance and cash flows for the year then ended, in accordance with the applicable financial reporting framework (as identified in note 1 of the notes to the annual accounts), and in particular, with the accounting principles and criteria included therein.

Basis for opinion

We conducted our audit in accordance with legislation governing the audit practice in Spain. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the annual accounts* section of our report.

We are independent of the Bank in accordance with the ethical requirements, including those relating to independence, that are relevant to our audit of the annual accounts in Spain, in accordance with legislation governing the audit practice. In this regard, we have not rendered services other than those relating to the audit of the accounts, and situations or circumstances have not arisen that, in accordance with the provisions of the aforementioned legislation, have affected our necessary independence such that it has been compromised.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the annual accounts of the current period. These matters were addressed in the context of our audit of the annual accounts as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key audit matters	How our audit addressed the key audit matters

Estimation of impairment of financial assets at amortised cost - loans and advances to customers – for credit risk

The models used to estimate the expected credit losses, especially the updates made to consider the current macroeconomic environment, entail a high complexity by incorporating estimates and judgments.

These estimates require an elevated component of judgement by management and are one of the most significant and complex estimates in the preparation of the annual accounts as at December 31, 2025 included herein, therefore they have been considered one of the key audit matters.

The main judgements and assumptions used by management are the following:

- The estimation of the Probability of Default (PD) and Loss Given Default (LGD) parameters.
- Identification and classification of the staging criteria of loans and advances to customers.
- The definition and evaluation of updates and adjustments to the expected credit loss models to adapt the parameters estimated to the conditions and current environment.
- The main assumptions used in the determination of the coverage over expected credit losses estimated individually.

The Bank's business is focused on lending loans and advances to customers.

As a result, for the year ended 2025 the Bank has recognised an amount of EUR 1,137 million of impairment of financial assets at amortised cost.

Please refer to Notes 2, 6, 10 and 49 of the annual accounts as at December 31, 2025.

We have obtained, in collaboration with our credit risk and economic forecasting experts, an understanding of management's process to estimate the impairment of financial assets at amortised cost - loans and advances to customers - over the estimation of impairment of financial assets assessed collectively and individually, including the potential climate and geopolitical risk impact, on which we have made inquiries to management as part of our understanding audit procedures.

In regards with the internal control, we have focused on testing the design and operating effectiveness of key controls over the following processes:

- Calculation methodologies, calibrations, monitoring and back-testing of the expected credit loss models performed by management.
- Compliance with regulation and internal policies, and the functionality of the internal expected credit loss models approved by management, including the review process of models performed by the Internal Validation Team.
- Reliability of the data sources used in the calculations and the suitability of the expected credit loss models taking into account the conditions and current environment.
- Review process and approval of the macroeconomic variables used in the projections for the calculation of expected credit losses, as well as the updates to the models made by management derived from the conditions and current macroeconomic environment.
- Periodic review process of borrowers to determine the proper staging criteria.
- Review process of the expected credit loss coverage calculation derived from the principal models and portfolios, as well as any adjustments deemed necessary, where applicable.

- Loan collateral assignment and valuation process associated with mortgage collateral operations, including collateral recovery process.

In addition, in collaboration with our credit risk, economic forecasting and real estate valuation experts we performed the following tests of details:

- Tests of principal models with respect to: i) calculation and segmentation methods; ii) methodology used for the estimation of the expected credit loss parameters; iii) retrospective review of the model's performance; iv) data and main assumptions used, v) staging criteria and vi) information related to scenarios and their assumptions.

- Evaluation of the updates to the expected credit loss models made by management due to the conditions and current macroeconomic environment.

- Verification of the correct consideration of the collaterals in the estimate of the impairment of loans, especially those that are classified as doubtful.

- Reperformance of the collective provision calculation based on the expected credit loss models parameters, as well as any adjustments deemed necessary, where applicable.

- Obtaining a sample of individual credit files to determine the adequacy of their accounting and classification, expected loss estimation methodologies, and, where appropriate, corresponding impairment.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Litigation provisions and contingencies

The Bank is party to a range of tax and legal proceedings - administrative and judicial - which primarily arise in the ordinary course of its operations. Also, there are other situations not yet subject to any judicial process that, however, have required the recognition of provisions, such as aspects of conduct with clients and the possible compensations that could be derived.

We have obtained, in collaboration with our experts in legal and tax matters, an understanding of the estimation process performed by management for litigation provisions and contingencies.

These procedures generally take a long period of time to run their course, giving rise to complex processes in accordance with the applicable legislation. In addition, the estimate of provisions requires the use of judgements by management, which are subject to uncertainty regarding the outcome of the proceedings. For these reasons, it has been considered one of the key audit matters.

Management decides when to recognize a provision for these contingent liabilities, based on an estimate using certain procedures consistent with the nature of the uncertainty of the obligations.

Among these provisions, some of the most significant are those for customer compensation for the sale of certain products; these estimates are based on the number of claims expected to be received, the number expected to be accepted, and the estimated average pay out per case.

The amount of the litigation provisions and contingencies as at December 31, 2025 is EUR 815 million.

Please refer to Notes 2 and 23 of the annual accounts as at December 31, 2025.

In regards with the internal control, we have focused on testing the design and operating effectiveness of key controls over the following processes:

- Additions, logs and updates over the completeness of the legal matters in the systems.
- Accuracy of the key data, maintained in the systems, used in the calculation of the litigations provisions and contingencies.
- Assessment of the criteria used to estimate the expected losses from litigation provisions and contingencies and evaluation of the adequacy over the calculation of the provisions for legal or tax procedures and their recognition.
- Major minutes reconciliation of the tax inspections and the amounts accounted for.

In addition, we have performed the following tests of details:

- Analysis for reasonableness of the expected outcomes of the most significant tax and legal proceedings.
- Assessment of possible contingencies relating to compliance with the tax obligations for all the years open to inspection, of the communications with the regulatory bodies and analysis of the ongoing regulatory inspections.
- Sending, obtaining and analysing, if any, audit confirmation letters from external and internal lawyers and external tax advisors who work with the Bank or performing alternative procedures if confirmations are not received.
- Analysis of the recognition and reasonableness of the provisions recorded.
- Verifying the adequacy of the information disclosed in the annual accounts in accordance with applicable regulations.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Impairment of investments in subsidiaries

As indicated in Note 13 of the accompanying annual accounts, Banco Santander, S.A. is the parent company of a group of entities, whose fundamental activities are in the financial services sector. The carrying value of the investments in subsidiaries as at December 31, 2025 is EUR 98,316 million.

Management performs an analysis of the potential losses in investments in subsidiaries that it has registered in its accounting records. This analysis is performed using different parameters such as the market price or the net equity adjusted for the unrealised gains existing at the valuation date, including implicit goodwill net of its corresponding impairment, if any.

The valuation or analysis of the impairment of some of these investments require an elevated component of judgment, principally for those investments measured using the net equity adjusted for the unrealised gains existing at the valuation date including its implicit goodwill, therefore it has been considered one of the key audit matters.

This valuation, performed by Bank's management, is based on the analysis performed as part of the implicit goodwill impairment assessment, where assumptions such as financial projections, discount rates, perpetual growth rates and market quotes (if available).

Please refer to Note 13 of the annual accounts as at December 31, 2025.

We have obtained an understanding of the valuation process of the investment in subsidiaries. In addition, where the valuation of investment requires the use of an elevated component of judgment, we have relied on the assistance of our valuation experts.

With respect to internal controls, we have focused on the design and operating effectiveness of the controls in the valuation process and over the methodology, inputs and relevant assumptions used by management for the year-end estimates, including the controls performed to supervise the process and the related approvals.

Additionally, we have performed tests of details consisting of the following:

- Verify the valuation performed by the Bank, using as a reference the recoverable balance of the investments in subsidiaries.
- Verify that management's valuation methodology is in line with the applicable accounting standards, market practice and the specific expectations of the sector.
- For investments whose valuation is calculated considering implicit goodwill, we evaluated the reasonableness of the valuation models based on projected discounted cash flows.
- Verifying the adequacy of the information disclosed in the annual accounts in accordance with applicable regulations.

In the procedures described above, no exceptions were identified outside of a reasonable range.

Information systems

The Bank's financial information is highly dependent on information technology (IT) systems in the geographies where it operates, therefore an adequate control of these systems is crucial to ensuring correct data processing.

We have evaluated, in collaboration with our IT system specialists, the internal controls over the IT systems, databases and applications that support the Bank's financial reporting.

For this purpose, we have performed procedures over the design and operating effectiveness of key controls and test of details related to:

- The function of the IT governance framework.

In this context, it is vital to evaluate aspects such as the organization of the Bank's Technology and Operations department, controls over software maintenance and development, physical and logical security controls, controls over computer operations and the management's response to cybersecurity risks, therefore it has been considered one of the key audit matters.

In this respect, management continues monitoring the internal controls over IT systems, including third-party services and the access controls that support the Bank's technology processes.

- Access and logical security controls over the applications, operating systems and databases that support the relevant financial information.
- Application development and change management.
- Maintenance of computer operations, including obtaining an understanding of management's response to cybersecurity risks.

In addition, considering the monitoring carried out by management over its internal controls over IT systems, our approach and audit plan included the following aspects:

- Evaluation of the monitoring made by management as part of its internal control environment of the Bank, including third-party services internal control.
- Testing of the design and operating effectiveness of the controls implemented by management, including access controls.

In the procedures described above, no relevant exceptions were identified related to this matter.

Other information: Director's report

Other information comprises only the director's report for the 2025 financial year, the formulation of which is the responsibility of the Bank's directors and does not form an integral part of the annual accounts.

Our audit opinion on the annual accounts does not cover the director's report. Our responsibility regarding the director's report, in accordance with legislation governing the audit practice, is to:

a) Verify only that the statement of non-financial information, certain information included in the Annual Corporate Governance Report and the Annual Report on Directors' Remuneration, as referred to in the Auditing Act, have been provided in the manner required by applicable legislation and, if not, we are obliged to disclose that fact.

b) Evaluate and report on the consistency between the rest of the information included in the director's report and the annual accounts as a result of our knowledge of the Company obtained during the audit of the aforementioned financial statements, as well as to evaluate and report on whether the content and presentation of this part of the director's report is in accordance with applicable regulations. If, based on the work we have performed, we conclude that material misstatements exist, we are required to report that fact.

On the basis of the work performed, as described above, we have verified that the information mentioned in section a) above has been provided in the manner required by applicable legislation and that the rest of the information contained in the director's report is consistent with that contained in the annual accounts for the 2025 financial year, and its content and presentation are in accordance with applicable regulations.

Responsibility of the directors and the audit committee for the annual accounts

The directors are responsible for the preparation of the accompanying annual accounts, such that they fairly present the equity, financial position and financial performance of the Bank, in accordance with the financial reporting framework applicable to the entity in Spain, and for such internal control as the aforementioned directors determine is necessary to enable the preparation of annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts, the directors are responsible for assessing the Bank's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the Bank or to cease operations, or have no realistic alternative but to do so.

The audit committee is responsible for overseeing the process of preparation and presentation of the annual accounts.

Auditor's responsibilities for the audit of the annual accounts

Our objectives are to obtain reasonable assurance about whether the annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with legislation governing the audit practice in Spain will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts.

As part of an audit in accordance with legislation governing the audit practice in Spain, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the directors.

- Conclude on the appropriateness of the directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Bank's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the annual accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Bank to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the annual accounts, including the disclosures, and whether the annual accounts represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with the entity's audit committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the entity's audit committee with a statement that we have complied with ethical requirements relating to independence and we communicate with the aforementioned those matters that may reasonably be considered to threaten our independence and, where applicable, the safeguards adopted to eliminate or reduce such threat.

From the matters communicated with the entity's audit committee, we determine those matters that were of most significance in the audit of the annual accounts of the current period and are therefore the key audit matters.

We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter.

Report on other legal and regulatory requirements

European single electronic format

We have examined the digital file of the European single electronic format (ESEF) of Banco Santander, S.A. for the 2025 financial year that comprises an XHTML file of the annual accounts for the financial year, which will form part of the annual financial report.

The directors of Banco Santander, S.A. are responsible for presenting the annual financial report for the 2025 financial year in accordance with the formatting requirements established in the Delegated Regulation (EU) 2019/815 of 17 December 2018 of the European Commission (hereinafter the ESEF Regulation). In this regard, the Annual Corporate Governance Report and the Annual Report on Directors' Remuneration have been incorporated by reference in the director's report.

Our responsibility is to examine the digital file prepared by the Bank's directors, in accordance with legislation governing the audit practice in Spain. This legislation requires that we plan and execute our audit procedures in order to verify whether the content of the annual accounts included in the aforementioned file completely agrees with that of the annual accounts that we have audited, and whether the format of these accounts has been effected, in all material respects, in accordance with the requirements established in the ESEF Regulation.

In our opinion, the digital file examined completely agrees with the audited annual accounts, and these are presented, in all material respects, in accordance with the requirements established in the ESEF Regulation.

Report to the audit committee

The opinion expressed in this report is consistent with the content of our additional report to the audit committee of the Bank dated 24 February 2026.

Appointment period

The General Ordinary Shareholders' Meeting held on 4 April 2025 appointed us as auditors for a period of one year, for the year ended 31 December 2025.

Previously, we were appointed by resolution of the General Ordinary Shareholders' Meeting for a period of three years and we have audited the accounts continuously since the year ended 31 December 2016.

Services provided

Services provided to the audited entity and its subsidiaries for services other than the audit of the accounts are disclosed in note 43 to the annual accounts.

Banco Santander, S.A.

Notes to the financial statements (annual accounts) for the year ended 31 December 2025

1. Introduction, basis of presentation of the financial statements (annual accounts) and other information

a) Introduction

Banco Santander, S.A. ('the Bank' or 'Banco Santander'), is a private-law entity subject to the rules and regulations applicable to banks operating in Spain, where it was constituted and currently maintains its legal domicile, which is paseo de Pereda, numbers 9 to 12, 39004, Santander, Spain.

The principal headquarters of Banco Santander are located in Ciudad Grupo Santander, Avenida Cantabria s/n, 28660, Boadilla del Monte, Madrid, Spain.

The corporate purpose of Banco Santander, S.A. mainly entails carrying out all kinds of activities, operations and services inherent to the banking business in general and permitted by current legislation, and the acquisition, holding, enjoyment and disposal of all kinds of securities.

In addition to the operations carried on directly by it, Banco Santander is the head of a group of subsidiaries that engage in various business activities and which compose, together with it, Grupo Santander ('Grupo Santander' or 'the Group'). Therefore, Banco Santander is obliged to prepare, in addition to its own separate financial statements, the Group's consolidated financial statements, which also include the interests in joint ventures and investments in associates.

Banco Santander financial statements for 2024 were approved by the shareholders at the group´s annual general meeting on 4 April 2025. The Group's 2025 consolidated financial statements, the financial statements of Banco Santander and of substantially all the Group companies have not been approved yet by their shareholders at the respective annual general meetings. However, Banco Santander board of directors considers that the aforementioned financial statements will be approved without any significant changes.

Appendix VII includes the list of agents that assist Banco Santander on the performance of its business activities in Spain.

b) Basis of presentation of the financial statements (annual accounts)

Banco Santander financial statements for the year ended 2025 have been authorised by the Bank's directors (at the Board of Directors meeting on 24 February, 2026) in accordance with Bank of Spain Circular 4/2017 and subsequent amendments, and Spanish corporate and commercial law applicable to the Bank, using the accounting policies and measurement criteria applied by the Bank as set forth in note 2, accordingly, they present fairly the Bank's equity and financial position at 31 December 2025 and 2024, results of its operations, recognized revenue and expense, changes in total equity and cash flows pertaining 2025 and 2024. These annual accounts have been prepared on the basis of the accounting records held by Banco Santander.

The notes to the financial statements contain additional information to that presented in the balance sheet, income statement, statement of recognised income and expense, statement of changes in total equity and statement of cash flows. The notes provide, in a clear, relevant, reliable and comparable manner, narrative descriptions and breakdowns of these statements.

The figures of the annual accounts are presented in millions of euros unless another alternative monetary unit is indicated, rounded to the nearest million unit.

Adoption of new standards and related interpretations

The following is a summary of the main Bank of Spain Circulars issued that became applicable to Banco Santander in financial year 2025:

On 29 December, Circular 1/2025, dated 19 December, issued by the Bank of Spain, was published. This Circular amends Circular 4/2017, of 27 November, addressed to credit institutions, on public and confidential financial reporting rules and financial statement templates, and Circular 1/2013, of 24 May, concerning the information provided through the Central Credit Register.

This Circular amends Circular 4/2017, of 27 November, in order to maintain appropriate alignment with the International Financial Reporting Standards as adopted by the European Union (EU IFRSs), in accordance with the provisions of the Spanish Commercial Code, thereby avoiding the application of divergent accounting criteria between the separate and consolidated financial statements, with a phased entry into force starting in 2026.

Furthermore, the Circular revises the requirements relating to credit risk coverage for country risk, introduces minor clarifications and technical corrections, and updates the confidential financial statement templates in order to adapt them to the supervisory and information needs of the Bank of Spain.

No significant effects on the Bank's annual financial statements have arisen from the application of this Circular, as its adoptions will become effective from 1 January 2026.

c) Use of accounting estimates

The results and the determination of equity are sensitive to the accounting policies, measurement bases and estimates used by Banco Santander in preparing the financial statements.

The main accounting policies and measurement bases are set forth in note 2.

In the financial statements estimates were occasionally made by the senior management of Banco Santander in order to quantify certain of the assets, liabilities, income, expenses and obligations reported herein. These estimates, which were made on the basis of the best information available, relate basically to the following:

- The impairment losses on certain assets: it applies to financial assets at fair value through other comprehensive income, financial assets at amortised cost, non-current assets held for sale, investments, tangible assets and intangible assets (see notes 6, 7, 10, 12, 13, 15, 16 and 50).
- The assumptions used in the actuarial calculation of the post-employment benefit liabilities and commitments and other obligations (see note 23).
- The useful life of the tangible and intangible assets (see notes 15 and 16).
- Assessment of the impairment of investments in group, joint venture and associated entities (see note 13).
- The measurement of the impairment in goodwill (see note 16).
- The calculation of provisions and the consideration of contingent liabilities (see note 23).
- The fair value of certain unquoted assets and liabilities (see notes 6, 7, 8, 9, 10, 11, 18, 19 and 20).
- The recoverability of deferred tax assets (see note 24).
- The fair value of the identifiable assets acquired and the liabilities assumed in business combinations (see note 3).

To update the previous estimates, the Bank's management has taken into account the current macroeconomic scenario, characterized by persistent geopolitical tensions and changing financial conditions, as well as the evolution of monetary and fiscal policies in major economies. The analysis also considers developments in interest rates, credit spreads, and currency movements, along with labor market trends in the geographies where the Bank operates.

The Bank´s management has evaluated in particular the uncertainties caused by the current environment in relation to credit risk, maintaining active oversight of clients in geographies and sectors more exposed to international trade tensions, global geopolitical uncertainty and the impact of public debt containment policies or fiscal stimulus measures, liquidity and market risks, taking into account the best available information, to estimate the impact on the credit portfolio's impairment provision, and in the debt instruments' interest rates and valuation, developing in the notes the main estimates made during the period ended December 31, 2025 (see notes 10, 13, 48 and 50).

Although these estimates have been made on the basis of the best information available at the end of the year 2025, and considering information updated at the date of preparation of these annual accounts, it is possible that events that may take place in the future may make it necessary to modify them (upwards or downwards) in the coming years, which would be done, if appropriate, in a prospective manner, recognising the effects of the change in estimate in the corresponding income statement.

d) Comparative information

The information contained in the 2025 annual accounts for the 2024 financial year is presented, solely and exclusively, for comparison with the information relating to 2025.

The information in the income statement from 2024 has been restated, as a result of the agreement for the sale of Santander Bank Polska S.A. by the Bank, as required by IFRS 5(see notes 3 and 12, as well as the rest of the notes of the profit and loss account).

e) Capital management

i. Regulatory and economic capital

Credit institutions must comply with a set of minimum capital and liquidity requirements. These minimum requirements are regulated by the European Capital Requirements Regulation (CRR), which is directly applicable within the Spanish legal framework, and by the Capital Requirements Directive (CRD).

On 19 June 2024, the final texts of the update to the banking package were published in the Official Journal of the European Union: Regulation (EU) 2024/1623 (hereinafter, CRR 3), which amends the CRR with regard to requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the floor on risk-weighted assets (known as the output floor), as well as Directive (EU) 2024/1619 (hereinafter, CRD VI), which amends the CRD as regards supervisory powers, sanctions, third-country branches, and environmental, social and governance risks.

The update to the banking package aims, on the one hand, to implement the final Basel III reforms and, on the other, to strengthen the harmonisation of banking supervision within the European Union (EU).

CRR 3, applicable since 1 January 2025, introduce greater risk sensitivity into standardised approaches, reduce the variability of risk-weighted assets among banks using internal models to calculate capital requirements, and enhance comparability across banks.

Under CRD VI, the ambition to achieve more robust supervision and to safeguard financial stability is reflected in a set of rules affecting fit-and-proper requirements, an extended scope resulting from the revision of certain definitions, and new provisions regarding the establishment of third-country branches in the EU, with the aim of achieving greater regulatory harmonisation and improved supervision of this type of entity.

Although most CRR 3 provisions apply since 1 January 2025, for certain provisions the regulator has established a gradual implementation (phase-in) period until 2030 in order to give the industry sufficient time to build up the capital required to meet the requirements on a fully loaded basis.

Regarding Market Risk, the European Commission and the European Parliament have approved an additional 12-month delay to the entry into force of the new market risk capital framework, or FRTB, until 1 January 2027. Beyond this date, the CRR 3 does not allow for any further delay, as postponements are limited to two years. This delay also covers other provisions, such as the separation between the trading book and the banking book, the internal risk transfer regime, etc.

The CRR 3/CRD VI package contains 140 mandates for the EBA to develop Level 2 or Level 3 legislation (regulatory technical standards, implementing technical standards and guidelines—RTS, ITS and GL, for their acronyms) and to issue opinions and reports to further specify certain aspects of the regulation. In this context, the EBA published its roadmap (EBA Roadmap) at the end of 2023, structuring the implementation of the banking package around four sequential phases, under which the authority will address the various mandates in an orderly manner based on their latest legal application dates (up to four years after the entry into force of CRR 3 and CRD VI). In addition, at the end of 2024, the EBA published its 2025 work programme, setting out the guidelines for addressing these mandates during the year. This has resulted in the publication of various consultations throughout the year on RTS, ITS and Guidelines, such as, for example:

- Regulatory Technical Standards (RTS) on off-balance-sheet exposures and unconditionally cancellable commitments
- Regulatory Technical Standards (RTS) on material changes to IRB models and model extensions
- Revision of the Guidelines on the revised definition of default
- Regulatory Technical Standards (RTS) and Implementing Technical Standards (ITS) on operational risk

In its 2025 Work Programme, the EBA undertook, among other initiatives, the revision of the SREP Guidelines, the consultation for which was published on 24 October, with the aim of updating them based on three pillars: legislative changes (CRR 3 and CRD VI, IRRBB/CSRBB, DORA, etc.), lessons learned, and structural changes intended to improve the usability of the Guidelines. The consultation period was set to run until early February 2026, and following the conclusion of the consultation process, the Guidelines are expected to enter into force on 1 January 2027.

On 28 July 2025, the ECB published a revised version of its Guide to Internal Models, with the objective of reflecting the regulatory changes introduced by CRR 3 in relation to internal models for credit, counterparty credit and market risk; clarifying supervisory expectations for internal models that make use of machine learning; and enhancing transparency and supervisory harmonisation. This revision builds on the experience accumulated by the ECB since the first publication of the Guide in 2019.

On 25 July 2025, the ECB also published the final Guide on Options and Discretions, following a consultation process launched in November 2024. The Guide introduces clarifications and adjustments to the treatment of market risk and operational risk, as well as to the conditions under which minority interests may be included in group capital, among other aspects.

Regarding resolution regulation, institutions are required to maintain an adequate funding structure to ensure that, in the event of financial distress, they hold sufficient liabilities to absorb losses and either restore viability or be resolved while safeguarding depositor protection and financial stability. To this end, global systemically important institutions are subject to minimum loss-absorbing capacity requirements, namely Total Loss-Absorbing Capacity (TLAC) and the Minimum Requirement for own funds and Eligible Liabilities (MREL), as regulated under CRR 3 and the Bank Recovery and Resolution Directive (BRRD).

On 25 October 2022, a regulation on the prudential treatment of global systemically important institutions was published, amending both the CRR and the BRRD with respect to the prudential treatment of G-SIBs with a multiple point of entry (MPE) resolution strategy, as well as the methods for the indirect subscription of eligible instruments (daisy chains) for the purpose of meeting MREL requirements. This regulation, known as the Resolution 'Quick Fix', pursues two main objectives:

- The inclusion in the BRRD and CRR 3 of references to third-country subsidiaries allowing for adjustments to the deduction for holdings of TLAC instruments issued by such subsidiaries, based on excess TLAC/MREL at subsidiary level, as well as adjustments in cases where the aggregate own funds and eligible liabilities requirements of a G-SIB under an MPE strategy exceed the theoretical requirements of the same group under a single point of entry (SPE) strategy. This adjustment is therefore based on a comparison between the two possible resolution strategies.
- The introduction of a deduction regime for holdings of MREL instruments through entities within the same resolution group other than the resolution entity. The Regulation establishes a deduction at the level of the intermediate entity within the daisy chain that repurchases the instruments. As a result, the intermediate entity is required to issue an equivalent amount, thereby transferring internal MREL needs to the resolution entity, which will cover them with external MREL.

In this context, in 2025 the EBA published the Final Report on the draft Implementing Technical Standards (ITS) on resolution planning, aimed at further harmonising reporting requirements.

Regarding Deposit Guarantee Schemes (DGS), these are regulated under the Deposit Guarantee Schemes Directive (DGSD), which has not undergone substantial amendments since its publication in 2014. The Directive aims to harmonise DGS across Member States to ensure stability and consistency across countries. It establishes an appropriate framework to improve depositor access to DGS through a clear scope of coverage, short repayment periods, enhanced information, and robust funding requirements. The Directive has been transposed into Spanish law through Royal Decree 2606/1996, as amended by Royal Decree 1041/2021.

To ensure the protection of depositors, DGS collect financial resources through contributions from their members, which must be paid at least annually. These annual contributions are determined based on the number of covered deposits and the risk profile of the institutions affiliated with the DGS. The methodology for calculating contributions is set out in the EBA Guidelines (EBA/GL/2023/02).

In June 2025, the Council and the European Parliament reached a political agreement, which still needs to be finalized at a technical level as a prerequisite for its final formal approval.

Within the sustainability field from a prudential perspective, the implementation of the CRR 3/CRD VI package has progressed, introducing specific requirements to integrate environmental, social and governance (ESG) risks into the prudential framework. With the aim of assessing whether a specific prudential treatment is warranted, the CRR establishes three mandates: to assess the availability of ESG risk data; to evaluate the effective risk profile of exposures affected by environmental or social factors; and to analyse the potential effects on financial stability of differentiated prudential treatment, with a view to possible legislative proposals by 31 December 2026.

In addition, the CRR 3/CRD VI package introduces disclosure requirements on ESG risks, reporting of ESG risk exposures to competent authorities, and an obligation for institutions to develop specific plans for managing financial risks arising from ESG factors, including those related to transition trends.

In this context, the EBA published in January 2025 the Guidelines on the Management of ESG Risks, fulfilling the CRD VI mandate to structurally integrate ESG risks into the European prudential framework. These Guidelines set out minimum standards and reference methodologies for the identification, measurement, management and monitoring of ESG risks, as well as their proper integration into internal governance processes, risk appetite frameworks and strategic planning. The Guidelines also specify minimum requirements for the development of transition plans, which must include metrics, quantifiable targets and time-bound milestones aligned with institutions' sustainability strategies and prudential requirements. Their application will be mandatory from 11 January 2026, consolidating a prudential framework that strengthens the systematic consideration of ESG risks in supervisory and risk management processes.

At the international level, the Basel Committee on Banking Supervision (BCBS) has continued to advance work on ESG-related standards. In June 2025, the Committee published a voluntary framework for the disclosure of climate-related financial risks, aimed at guiding internationally active banks in the provision of qualitative and quantitative information on their exposures to physical and transition risks. The framework acknowledges the still nascent state of climate data availability, consistency and quality, and therefore adopts a flexible approach that allows for the use of different metrics and methodologies. While its adoption will depend on jurisdictional decisions, the Committee considers this framework an important step towards enhancing transparency and international comparability of climate risk disclosures and intends to monitor its implementation with a view to potential future revisions.

In the digital field, due to the increase in international crypto assets activities, the EU is moving forward with the integration of Basel standards on crypto-assets through the mandate set out in CRR 3, which will enable the establishment of a harmonised prudential treatment once the legislative process is completed. In fulfilment of the CRR 3 mandate, the EBA has finalised and published the draft Regulatory Technical Standards (RTS) applicable to the calculation of own funds requirements for crypto-asset exposures.

At 31 December 2025 the Bank met the minimum capital requirements established by current legislation (see note 50.d). Additionally, it should be noted that the Group has filed an appeal with the Court of Justice of the European Union (CJEU) requesting the annulment of a decision by the European Central Bank (ECB) related to the treatment of deferred tax assets generated at Banco Santander Brasil, which, if resolved favourably, would have a positive impact of approximately 20 basis points on the Group's CET1, using the amounts at the end of the year.

f) Environmental impact

In view of the business activities carried on by the Group entities, and therefore the Bank, do not have any environmental liability, expenses, assets, provisions or contingencies that might be material with respect to its financial position or results (see note 50.a).

g) Customer Care Service Annual Report

As required by the Article 17 of Ministry of Economy Order ECO/734/2004, of 11 March, on the services and departments of Customer Service and the Customer Ombudsmen of Financial Institutions, the annual report will be submitted by the Head of the department to the board meeting held on March 2026 is summarised in the directors' report.

h) Deposit Guarantee Fund, National Resolution Fund and Single Resolution Fund

i. Deposit Guarantee Fund

Banco Santander participates in the Deposit Guarantee Fund (DGF). The annual contribution to be made by the entities to this fund, established by Royal Decree - Law 16/2011 of October 14, by which the DGF is created in accordance with the wording given by the Tenth Final Disposition of Law 11/2015 of June 18 on Recovery and Resolution of credit institutions and investment services companies (in force since June 20, 2015), is determined by the Management Committee of the DGF and is established based on the guaranteed deposits of each entity and their risk profile. The annual contribution to be made by the entities to this fund is determined by the Management Committee of the FGD, and consists of the contribution based on the guaranteed deposits of each entity corrected for their risk profile, which includes the phase of the economic cycle and the impact of pro-cyclical contributions, according to section 3 of article 6 of the Royal Decree-Law 16/2011.

The purpose of the FGD is to guarantee deposits, both monetary and in securities, in credit institutions up to the limit set forth in the mentioned Royal Decree-Law. The expense incurred by the contributions accrued to this organism in the year 2025 has amounted to EUR 14 million (EUR 16 million in the year 2024), after the required amount by the current legislation has been reached, which are recorded under 'Other operating expenses' in the profit and loss account attached (see note 41).

ii. National Resolution Fund

Law 11/2015 regulates the creation of the National Resolution Fund, whose financial resources should reach, by 31 December 2024, at least 1% of the amount of secured deposits, through contributions from credit institutions and investment firms established in Spain. The details of the calculation of contributions to this Fund is regulated by Commission Delegated Regulation (EU) 2015/63 of 21 October 2014 and is calculated by the Orderly Banking Resolution Fund, on the basis of the information provided by each entity.

iii. Single Resolution Fund

On January 1, 2016, the Single Resolution Fund (SRF), which was implemented by Regulation (EU) No. 806/2014 of the European Parliament and of the Council, became operational. The rules governing the banking union provide that banks will pay contributions to the SRF over eight years.

The Single Resolution Board (SRB) is responsible for calculating the contributions to be made by credit institutions and investment firms to the SRF. These contributions are based, as of fiscal year 2016, on: (a) a flat-rate contribution (or base annual contribution), pro rata with respect to the total liabilities, excluding own funds, guaranteed deposits of all institutions authorized in the territory of the participating member states; and (b) a risk-adjusted contribution, which will be based on the criteria set out in Article 103(7) of Directive 2014/59/EU, taking into account the principle of proportionality, without creating distortions between structures of the banking sector of the member states. The amount of this contribution will accrue from the 2016 financial year, on an annual basis.

During 2025 it was confirmed that no call for contributions to the SRF would be issued for this year, so there has been no expenditure incurred in 2025 for contributions made to the National Resolution Fund and the Single Resolution Fund (as was also the case in 2024).

Likewise, in 2023 Banco Santander acquired an Irrevocable Payment Commitment (IPC) in favor of the Single Resolution Fund for EUR 120 million. This commitment is guaranteed by constituting a cash deposit of the same amount, delivered as a guarantee that was recorded in the Balance Sheet Assets for which, in accordance with the standard, no provision has been recorded.

i) Merger by absorption

On 24 June 2025, the boards of directors of Banco Santander, S.A. (as the absorbing company) and of URO Property Holdings, S.A., Blecno Investments, S.L.U., Emisora Santander España, S.A.U. and Elevate Tech Platforms, S.L.U. (as the absorbed companies) drew up and executed the common draft terms of merger by absorption.

On 12 September 2025, the Extraordinary General Meeting of Shareholders of URO Property Holdings, S.A. approved the merger on the terms and conditions set out in the draft merger. Pursuant to the provisions of Articles 53.1, 54 and 55 of Royal Decree-Law 5/2023 of 28 June, transposing European Union Directives on structural modifications of commercial companies ("RDLME"), approval of this merger by the general meetings (or, where applicable, by the sole partner or sole shareholder) of the remaining absorbed companies was not required, as they were wholly owned by Banco Santander, S.A. Likewise, approval by the shareholders' meeting of Banco Santander, S.A. was not required, as it was not requested by shareholders representing at least 1% of the share capital, in accordance with Article 55.1 of the RDLME. Consequently, the board of directors of Banco Santander, S.A., at its meeting of 24 June 2025, approved the common draft terms of merger, as well as the merger contemplated therein.

Once the requisite authorisations had been obtained, on 28 January 2026 the corresponding merger deed was executed and, upon its registration with the Commercial Registers of Madrid and Cantabria, URO Property Holdings, S.A., Blecno Investments, S.L.U., Emisora Santander España, S.A.U. and Elevate Tech Platforms, S.L.U. were dissolved and wound up without liquidation, and the entirety of their respective assets and liabilities was transferred en bloc, by universal succession, to Banco Santander, S.A., which acquired them by universal succession and without interruption. It should be noted that, for accounting purposes, the merger was recognised by Banco Santander, S.A. in the 2025 financial year.

As the absorbed companies were wholly owned by Banco Santander, S.A., directly or, in the case of URO Property Holdings, S.A., with an ownership interest of more than 90%, in accordance with Articles 53 and 54 of the RDLME, the Bank did not increase its share capital. Upon the merger becoming effective on 28 January 2026, all the shares and equity interests of the absorbed companies were fully redeemed, extinguished and cancelled.

The merger balance sheets were deemed to be those included in the annual accounts for the financial year ended 31 December 2024, drawn up by the management bodies of each of the companies participating in the merger. The merger balance sheets of Banco Santander, S.A., URO Property Holdings, S.A., Blecno Investments, S.L.U. and Emisora Santander España, S.A.U. were duly verified by their respective auditors.

In accordance with the applicable accounting regulations, for accounting purposes 1 January 2025 was set as the date from which the operations of the absorbed companies were deemed to have been carried out by Banco Santander, S.A.

Furthermore, the transaction constitutes a merger as regulated in Article 76.1(c) of Law 27/2014 of 27 November on Corporate Income Tax ("LIS"). In accordance with Article 89.1 of the LIS, the merger was subject to the tax regime set out in Chapter VII of Title VII and in the Second Additional Provision of the LIS, as well as in Articles 19.2.1 and 45, paragraph I.B.10, of the Consolidated Text of the Law on Transfer Tax and Stamp Duty, approved by Royal Legislative Decree 1/1993 of 24 September. The information required under Article 86.1 of the aforementioned Law in relation to the merger is included in these annual accounts (Annex VI).

Set out below are the balance sheets of the absorbed companies as at 31 December 2024:

URO PROPERTY HOLDINGS, S.A. - (Thousand euros)

ASSETS	2024	EQUITY AND LIABILITIES	2024
NON-CURRENT ASSETS	**1,402,337**	**EQUITY**	**108,063**

Short-term investments in group companies and associates	2		
Cash and cash equivalents	28		
TOTAL ASSETS	**1,024**	**TOTAL EQUITY AND LIABILITIES**	**1,024**

In accordance with the provisions of the applicable regulations, as a result of the accounting record of the aforementioned merger by absorption transaction carried out by the Bank in the financial year 2024, an increase in the Bank's voluntary reserves in that year amounted to 166 million euros was evident due to the decline in the participation of the companies acquired (see note 29).

j) Events after the reporting period

On 9 January 2026, after obtaining the necessary regulatory approvals and fulfilling the conditions for closing, the Group completed the sale of 49% of the share capital of Santander Bank Polska S.A. and 50% of the share capital of Santander Towarzystwo Funduszy Inwestycyjnych S.A. (TFI, the asset management business in Poland) to Erste Group Bank AG for a total cash amount of approximately EUR 7,000 million. Santander holds the 9.7% of Santander Polska's share capital.

The transaction resulted in the loss of effective control over the entity, and therefore, effective as of 9 January 2026, Santander Bank Polska S.A. has been reclassified to the portfolio of equity instruments measured at fair value through other comprehensive income as from that date.

Additionally, on 3 February 2026, Banco Santander, S.A. ('Santander') announced that it had reached an agreement to acquire Webster Financial Corporation ('Webster'), the parent company of Webster Bank, N.A., for approximately USD 12,200 million (around EUR 10,300 million). Webster shareholders will receive USD 48.75 in cash and 2.0548 Santander shares for each Webster share, resulting in a total consideration of USD 75 per Webster share. Completion of the transaction is expected to take place in the second half of 2026 subject to the customary conditions for this type of operations, including obtaining the relevant regulatory approvals and the approvals of both Webster's and Santander's shareholders.

2. Accounting policies

The following accounting principles, policies and measurement criteria have been applied in the preparation of the financial statements:

a) Foreign currency transactions

Banco Santander's functional and presentation currency is the euro. Therefore, all balances and transactions denominated in currencies other than the euro are deemed to be denominated in foreign currency.

The balances in the financial statements whose functional currency is not the euro are translated to euros as follows:

- Assets and liabilities, at the closing rates.
- Income and expenses, at the average exchange rates for the year.
- Equity items, at the historical exchange rates.

In general, balances denominated in foreign currencies, including those branches in countries outside the Monetary Union, have been converted to euros using the official average exchange rates of the Spanish spot currency market (through the US dollar's quotation on local markets, for non-monetary currencies listed on the Spanish market) at the end of each fiscal year.

The exchange differences arising on the translation of foreign currency balances to the functional currency are generally recognised at their net amount under 'Exchange differences, net' in the income statement, except for exchange differences arising on financial instruments at fair value through profit or loss, which are recognised in the income statement without distinguishing them from other changes in fair value, and for exchange differences arising on non-monetary items measured at fair value through equity, which are recognised under 'Other comprehensive income–Items that may be reclassified to profit or loss–Exchange differences' except for exchange differences on equity instruments, where the option to irrevocably elect to be measured at fair value through changes in accumulated other comprehensive income, which are recognised in accumulated 'Other Comprehensive Income - Items not to be reclassified to profit or loss - Changes in fair value of equity instruments measured at fair value' through other comprehensive income (see note 25).

b) Investments in subsidiaries, joint ventures and associates

Group entities are those over which the Bank has the capacity to exercise control; capacity which is generally but not exclusively manifested by the direct or indirect ownership of at least 50% of the voting rights of the investees or, even if this percentage is lower or zero, if, as in the case of agreements with their shareholders, the Bank is granted such control.

Control is understood to be the power to direct the financial and operating policies, by law, by statute or by agreement, of an entity in order to obtain benefits from its activities.

Joint ventures are deemed to be entities that are not subsidiaries but which are jointly controlled by two or more unrelated entities. This is evidenced by contractual arrangements whereby two or more parties have interests in entities so that decisions about the relevant activities require the unanimous consent of all the parties sharing control.

Associates are entities over which Banco Santander is in a position to exercise significant influence, but not control or joint control. It is presumed that Banco Santander exercises significant influence if it holds 20% or more of the voting power of the investee.

The shareholdings in group, multi-group and associated entities, are presented on the balance sheet at their net acquisition cost of any impairments that, where relevant, those shares may have suffered.

Where there is evidence of impairment of these shares, the amount of such deterioration is equivalent to the difference between their recoverable amount and their book value. Impairment losses are recorded under the heading 'Impairment or reversal of impairment of investments in subsidiaries, joint ventures and associates' in the profit and loss account.

Appendices I and II contain significant information on these companies. In addition, note 13 provides information on the most significant acquisitions and disposals in 2025 and 2024.

c) Classification of financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or an equity instrument of another entity.

The following transactions are not treated for accounting purposes as financial instruments:

- Investments in subsidiaries, associates and joint venture when accounted for using the equity method in accordance with IAS 28 (see note 13).
- Rights and obligations under employee benefit plans recognized in accordance with IAS 19 (see note 23).
- Contracts and obligations relating to employee remuneration based on own equity instruments accounted for in accordance with IFRS 2 (see note 30).

i. Classification of financial assets for measurement purposes

Financial assets are classified into the various categories used for management and measurement purposes, unless they have to be presented as 'Non-current assets held for sale' or they relate to 'Cash, cash balances at central banks and other deposits on demand', 'Changes in the fair value of hedged items in portfolio hedges of interest rate risk (asset side)', 'Hedging derivatives and Investments', which are reported separately.

Classification of financial instruments: the classification criteria for financial assets depends on the business model for their management and the characteristics of their contractual flows.

Banco Santander´s business models refer to the way in which it manages its financial assets to generate cash flows. In defining these models, the Bank takes into account the following factors:

- How key entity staff are assessed and reported on the performance of the business model and the financial assets held in the business model.
- The risks that affect the performance of the business model (and the financial assets held in the business model) and, specifically, the way in which these risks are managed.
- The way in which business managers are remunerated.
- The frequency, the calendar and volume of sales in previous years, as well as expectations of future sales and the reasons of the sales.

The analysis of the characteristics of the contractual cash flows of financial assets requires an assessment of the congruence of these flows with a basic loan agreement. Banco Santander determines if the contractual cash flows of its financial assets that are only principal and interest payments on the outstanding principal amount at the beginning of the transaction. This analysis takes into consideration four factors (performance, contractual clauses, contractually linked products and currencies). Furthermore, among the most significant judgements used by Banco Santander in carrying out this analysis, the following ones are included:

- The return on the financial asset, in particular in cases of periodic interest rate adjustments where the term of the reference rate does not coincide with the frequency of the adjustment. In these cases, an assessment is made to determine whether or not the contractual cash flows differ significantly from the flows without this change in the time value of money, establishing a tolerance level of 5%.
- When contractual clauses that may modify the cash flows of the financial asset exist, the structure of the cash flows before and after the activation of such clauses is analysed, regardless of the probability of occurrence of the contingent event. The evaluation of contractual flows of financial assets with characteristics associated with ESG (Environmental, Social and Governance) is included in this analysis.
- Financial assets whose cash flows have different priority for payment due to a contractual link to underlying assets (e.g. securitization instruments or similar structures) require a look-through analysis by the Bank so as to review that both the financial asset and the underlying assets are only principal and interest payments and that the exposure to credit risk of analyzed segment does not exceed the average exposure of the underlying assets of the instrument.

Depending on these factors, the financial assets classify for measurement as: (i) at amortised cost, (ii) at fair value with changes in other comprehensive income or (iii) at fair value with changes through profit and loss. Bank of Spain Circular 4/2017 also establishes an option to irrevocably designate an instrument at fair value with changes in profit or loss, when doing so eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as 'accounting asymmetry') that would otherwise arise from measuring assets or liabilities or recognising gains and losses on different bases.

Banco Santander uses the following criteria for the classification of the financial debt instruments:

- Amortised cost: financial instruments managed under a business model whose objective is to hold the financial assets to collect contractual principal and interest flows. This category includes instruments for which there are no frequent or significant unjustified sales and fair value is not a key element in the management of these assets and contractual conditions they give rise to cash flows on specific dates, which are only payments of principal and interest on the outstanding principal amount. In this sense, justified sales are considered to be those related to an (i) increase in the credit risk of the asset, (ii) unanticipated funding needs (stress case scenarios) and (iii) those close to maturity . Additionally, the characteristics of its contractual flows represent substantially a 'basic financing agreement'.
- Fair value with changes in other comprehensive income: financial instruments held in a business model whose objective is to collect principal and interest cash flows and the sale of these assets, where fair value is a relevant factor in their management. Additionally, the contractual cash flow characteristics substantially represent a 'basic financing agreement'.
- Fair value with changes in profit or loss: financial instruments included in a business model different from the above, where fair value is a key element in the management of these assets, and the contractual flows of the financial instruments do not substantially represent a 'basic financing agreement'. In this section it can be enclosed the portfolios classified under 'Financial assets held for trading', 'Non-trading financial assets mandatorily at fair value through profit or loss' and 'Financial assets at fair value through profit or loss'. In this regard, most of the financial assets presented in the category of 'Financial assets designated at value reasonable with change in results' are instruments financial services that, not being part of the portfolio of negotiation, are contracted jointly with other financial instruments that are recorded in the category of 'held for trading', and that by both are recorded at fair value with changes in results, so your record in any other category would produce accounting asymmetries.

Equity instruments will be classified at fair value under Bank of Spain Circular 4/2017 with changes in profit or loss, unless the Bank, decides, for non-trading assets, to classify them at fair value with changes in other comprehensive income (irrevocably) at initial recognition.

ii. Classification of financial assets for presentation purposes

Financial assets are classified by nature into the following items in the balance sheet:

- Cash, cash balances at Central Banks and other deposits on demand: cash balances and balances receivable on demand relating to deposits with central banks and other credit institutions.
- Loans and advances: includes the debit balances of all credit and loans granted by the Bank, other than those represented by securities or securitized, as well as the finance lease receivables and other debit balances of a financial nature in favour of the Bank, such as cheques drawn on credit institutions, balances receivable from clearing houses and settlement agencies for transactions on the stock exchange and organised markets, bonds given in cash, capital calls, fees and commissions receivable for financial guarantees and debit balances arising from transactions not originating in banking transactions and services, such as the collection of rentals and similar items. They are classified, on the basis of the institutional sector to which the debtor belongs, into:
  - Central banks: credit of any nature, including deposits and money market transactions received from the Bank of Spain or other central banks.
  - Credit institutions: credit of any nature, including deposits and money market transactions, in the name of credit institutions.
  - Customers: includes the remaining credit, including money market transactions through central counterparties.
- Debt securities: bonds and other securities that represent a debt for their issuer, that that accrue interest or equivalent returns implemented in securities or in book entries.
- Equity instruments: financial instruments issued by other entities, such as shares, which have the nature of equity instruments for the issuer, other than investments in subsidiaries, joint ventures or associates. Investment fund units are included in this item.
- Derivatives: includes the fair value in favour of the Bank of derivatives which do not form part of hedge accounting, including embedded derivatives separated from hybrid financial instruments.
- Repurchase agreements and reverse repurchase agreements: Purchases of financial instruments under a non-optional resale (repurchase) agreement at a fixed price (repos) are recognised in the consolidated balance sheet as financing granted, based on the nature of the debtor, under 'Loans and advances with central banks', 'Loans and advances to credit institutions' or 'Loans and advances to customers. Differences between the purchase and sale prices are recognised as interest over the contract term.
- Changes in the fair value of hedged items in portfolio hedges of interest rate risk: this item is the balancing entry for the amounts credited to the income statement in respect of the measurement of the portfolios of financial instruments which are effectively hedged against interest rate risk through fair value hedging derivatives.
- Hedging derivatives: Includes the fair value in favour of the Bank derivatives, including embedded derivatives separated from hybrid financial instruments, designated as hedging instruments in hedge accounting.

iii. Classification of financial liabilities for measurement purposes

Financial liabilities are initially classified into the various categories used for management and measurement purposes, unless they have to be presented as 'Liabilities associated with non-current assets held for sale' or they relate to 'Hedging derivatives' or the changes in the fair value of hedged items in portfolio hedges of interest rate risk (liability side), which are reported separately.

In most cases, changes in the fair value of financial liabilities designated at fair value through profit or loss, caused by the entity's credit risk, are recognized in other comprehensive income, unless this treatment results in an accounting asymmetry, in which case the full effect is recognized in the profit or loss for the period.

Financial liabilities are included for measurement purposes in one of the following categories:

- Financial liabilities held for trading (at fair value through profit or loss): this category includes financial liabilities incurred for the purpose of generating a profit in the near term from fluctuations in their prices, financial derivatives not designated in accounting hedging relationships, and financial liabilities arising from the outright sale of financial assets temporarily acquired or received on loan (short positions).

- Financial liabilities designated at fair value through profit or loss: financial liabilities are included in this category when they provide more relevant information, either because this eliminates or significantly reduces recognition or measurement inconsistencies (accounting mismatches) that would otherwise arise from measuring assets or liabilities or recognising the gains or losses on them on different bases, or because a group of financial liabilities or financial assets and liabilities is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information about the group is provided on that basis to the Bank's key management personnel.

  Liabilities may only be included in this category on the date when they are incurred or originated.

- Financial liabilities at amortised cost: financial liabilities, irrespective of their instrumentation and maturity, not included in any of the above-mentioned categories which arise from the ordinary borrowing activities carried on by financial institutions.

iv. Classification of financial liabilities for presentation purposes

Financial liabilities are classified by nature into the following items in the balance sheet:

- Deposits: includes all repayable balances received in cash by the Bank, other than those instrumented as marketable securities and those having the substance of subordinated liabilities (amount of the loans received, which for credit priority purposes are after common creditors), except for the debt instruments issued. This item also includes cash bonds and cash consignments received the amount of which may be invested without restriction. Deposits are classified on the basis of the creditor's institutional sector into:

  - Central banks: deposits of any nature, including credit received and money market transactions received from the Bank of Spain or other central banks.

  - Credit institutions: deposits of any nature, including credit received and money market transactions in the name of credit institutions.

  - Customer: includes the remaining deposits, including money market transactions through central counterparties.

- Marketable debt securities: includes the amount of bonds, debentures and other debt represented by marketable securities, other than those having the substance of subordinated liabilities (amount of the loans received, which for credit priority purposes are after common creditors, and includes the amount of the financial instruments issued by the Bank which, having the legal nature of capital, do not meet the requirements to qualify as equity, such as certain preferred shares issued). This item includes the component that has the consideration of financial liability of the securities issued that are compound financial instruments.

- Derivatives: includes the fair value, with a negative balance for Banco Santander, separated from the host contract, which do not form part of hedge accounting.

- Short positions: includes the amount of financial liabilities arising from the outright sale of financial assets acquired under reverse repurchase agreements or borrowed.

- Other financial liabilities: includes the amount of payment obligations having the nature of financial liabilities not included in other items (includes, among others, the balance of lease liabilities recognized in accordance with IFRS 16), and liabilities under financial guarantee contracts, unless they have been classified as non-performing.

- Repurchase agreements and reverse repurchase agreements: Sales of financial instruments under a non-optional resale (repurchase) agreement at a fixed price (repos) are recognised in the consolidated balance sheet as financing received, based on the nature of the creditor, under 'Deposits from central banks', 'Deposits from credit institutions' or 'Customer deposits'. Differences between the purchase and sale prices is recorded as interest accrued over the life of the contract, using the effective interest rate method..

- Changes in the fair value of hedged items in portfolio hedges of interest rate risk: this item is the balancing entry for the amounts charged to the income statement in respect of the measurement of the portfolios of financial instruments which are effectively hedged against interest rate risk through fair value hedging derivatives.

- Hedging derivatives: includes the fair value of the Bank's liability in respect of derivatives, including embedded derivatives separated from hybrid financial instruments, designated as hedging instruments in hedge accounting.

- The preference shares contingently convertible into ordinary shares eligible as Additional Tier 1 capital (PPCC) -perpetual shares, which may be repurchased by the issuer in certain circumstances, the interest on which is discretionary, and would convert into variable number of newly issued ordinary shares if the capital ratio of the Bank or its consolidated group falls below a given percentage (trigger event), as those two terms are defined in the related issue prospectuses are recognised for accounting purposes by the Bank as compound instruments in accordance with IAS 32. The liability component reflects the issuer's obligation to deliver a variable number of shares and the equity component reflects the issuer's discretion in relation to the payment of the related coupons. In order to effect the initial allocation, the Bank estimates the fair value of the liability as the amount that would have to be delivered if the trigger event were to occur immediately and, accordingly, the equity component, calculated as the residual amount, is zero. In view of the aforementioned discretionary nature of the payment of the coupons, they are deducted directly from equity.
- Capital perpetual preference shares (PPCA), with the possibility of purchase by the issuer in certain circumstances, whose remuneration is discretionary, and which will be amortised permanently, totally or partially, in the event that the bank or its consolidated group submits a capital ratio lesser than a certain percentage (trigger event), as defined in the corresponding prospectuses, are accounted for by the Bank as equity instruments.
- Derivatives embedded in other financial instruments or in other host contracts are accounted for separately as derivatives if their risks and characteristics are not closely related to those of the host contracts, provided that the host contracts are not classified as financial assets/liabilities designated at fair value through profit or loss or as 'Financial assets/liabilities held for trading'.

d) Measurement of financial assets and liabilities and recognition of fair value changes

In general, financial assets and liabilities are initially recognised at fair value which, in the absence of evidence to the contrary, is deemed to be the transaction price.

In this regard, Bank of Spain Circular 4/2017 states that regular way purchases or sales of financial assets shall be recognised and derecognised on the trade date or on the settlement date. Banco Santander has opted to make such recognition on the trading date or settlement date, depending on the convention of each of the markets in which the transactions are carried out. For example, in relation to the purchase or sale of debt securities or equity instruments traded in the Spanish market, securities market regulations stipulate their effective transfer at the time of settlement and, therefore, the same time has been established for the accounting record to be made.

The fair value of instruments not measured at fair value through profit and loss is adjusted by transaction costs. Subsequently, and on the occasion of each accounting close, they are valued in accordance with the following criteria:

i. Measurement of financial assets

Financial assets are measured at fair value are valued mainly at their fair value without deducting any transaction cost for their sale.

The fair value of a financial instrument on a given date is taken to be the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. The most objective and common reference for the fair value of a financial instrument is the price that would be paid for it on an active, transparent and deep market (quoted price or market price). At 31 December 2025, there were no significant investments in quoted financial instruments that had ceased to be recognised at their quoted price because their market could not be deemed to be active.

If there is no market price for a given financial instrument, its fair value is estimated on the basis of the price established in recent transactions involving similar instruments and, in the absence thereof, of valuation techniques commonly used by the international financial community, taking into account the specific features of the instrument to be measured and, particularly, the various types of risk associated with it.

All derivatives are recognised in the balance sheet at fair value from the trade date. If the fair value is positive, they are recognised as an asset and if the fair value is negative, they are recognised as a liability. The fair value on the trade date is deemed, in the absence of evidence to the contrary, to be the transaction price. The changes in the fair value of derivatives from the trade date are recorded in the income statement. Specifically, the fair value of financial derivatives traded in organised markets included in the portfolios of financial assets or liabilities held for trading is deemed to be their daily quoted price and if, for exceptional reasons, the quoted price cannot be determined on a given date, these financial derivatives are measured using methods similar to those used to measure derivatives.

The fair value of derivatives is taken to be the sum of the future cash flows arising from the instrument, discounted to present value at the date of measurement (present value or theoretical close) using valuation techniques commonly used by the financial markets: net present value, option pricing models and other methods.

The amount of debt securities and loans and advances under a business model whose objective is to collect the principal and interest flows are valued at their amortised cost, as long as they comply with the 'SPPI' (Solely Payments of Principal and Interest) test, using the effective interest rate method in their determination. Amortised cost refers to the acquisition cost of a corrected financial asset or liability (more or less, as the case may be) for repayments of principal and the part systematically charged to the income statement of the difference between the initial cost and the corresponding reimbursement value at expiration. In the case of financial assets, the amortised cost includes, in addition, the corrections to their value due to the impairment. In the loans and advances covered in fair value hedging transactions, the changes that occur in their fair value related to the risk or the risks covered in these hedging transactions are recorded.

The effective interest rate is the discount rate that exactly matches the carrying amount of a financial instrument to all its estimated cash flows of all kinds over its remaining life.

For fixed rate financial instruments, the effective interest rate coincides with the contractual interest rate established on the acquisition date plus, where applicable, the fees and transaction costs that, because of their nature, form part of their financial return. In the case of floating rate financial instruments, the effective interest rate coincides with the rate of return prevailing in all connections until the next benchmark interest reset date.

Equity instruments and contracts related with these instruments are measured at fair value. However, in certain circumstances the Bank estimates cost value as a suitable estimate of the fair value. This can happen if the recent event available information is not enough to measure the fair value or if there is a broad range of possible measures and the cost value represents the best estimates of fair value within this range.

The amounts at which the financial assets are recognised represent, in all material respects, the Bank´s maximum exposure to credit risk at each reporting date. Also Banco Santander has received collateral and other credit enhancements to mitigate its exposure to credit risk, which consist mainly of mortgage guarantees, cash collateral, equity instruments and personal security, assets leased out under finance lease and full-service lease agreements, assets acquired under repurchase agreements, securities loans and credit derivatives.

ii. Measurement of financial liabilities

In general, financial liabilities are measured at amortised cost, as defined above, except for those included under 'Financial liabilities held for trading' and 'Financial liabilities designated at fair value through profit or loss' and financial liabilities designated as hedged items (or hedging instruments) in fair value hedges, which are measured at fair value. The changes in credit risk arising from financial liabilities designated at fair value through profit or loss are recognised in accumulated other comprehensive income, unless they generate or increase an accounting mismatch, in which case changes in the fair value of the financial liability in all respects are recognised in the income statement.

iii. Valuation techniques

The financial instruments at fair value determined on the basis of published price quotations in active markets (level 1) include government debt securities, private-sector debt securities, derivatives traded in organised markets, securitised assets, shares, short positions and fixed-income securities issued.

In cases where price quotations cannot be observed, management makes its best estimate of the price that the market would set, using its own internal models, described in note 48. In most cases, these internal models use data based on observable market parameters as significant inputs (level 2) and, in cases, they use significant inputs not observable in market data (level 3). In order to make these estimates, various techniques are employed, including the extrapolation of observable market data. The best evidence of the fair value of a financial instrument on initial recognition is the transaction price, unless the fair value of the instrument can be obtained from other market transactions performed with the same or similar instruments or can be measured by using a valuation technique in which the variables used include only observable market data, mainly interest rates.

iv. Recognition of fair value changes

As a general rule, changes in the carrying amount of financial assets and liabilities are recognised in the income statement. A distinction is made between the changes resulting from the accrual of interest and similar items, (which are recognised under Interest income or Interest expense, as appropriate), and those arising for other reasons, which are recognised at their net amount under 'Gains/losses on financial assets and liabilities'.

Adjustments due to changes in fair value arising from:

- 'Financial assets at fair value with changes in other comprehensive income' are recorded temporarily, in the case of debt instruments in 'Other comprehensive income - Elements that can be reclassified to profit or loss - Financial assets at fair value with changes in other comprehensive income', while in the case of equity instruments are recorded in 'other comprehensive income - Elements that will not be reclassified to line item - Changes in the fair value of equity instruments valued at fair value with changes in other comprehensive income'.

  Exchange differences on debt instruments measured at fair value with changes in other comprehensive income are recognised under 'Exchange Differences, net' of the income statement. Exchange differences on equity instruments, in which the irrevocable option of being measured at fair value with changes in other comprehensive income has been chosen, are recognised in 'Other comprehensive income - Items that will not be reclassified to profit or loss - Changes in the fair value of equity instruments measured at fair value with changes in other comprehensive income'.

- Items charged or credited to 'Items that may be reclassified to profit or loss – Financial assets at fair value through other comprehensive income' and 'Other comprehensive income – Items that may be reclassified to profit or loss – Exchange differences in equity' remain in the Bank´s equity until the asset giving rise to them is impaired or derecognised, at which time they are recognised in the income statement.

- Unrealized capital gains on financial assets at fair value through other comprehensive income classified as 'Non-current assets held for sale' because they form part of a disposal group or a discontinued operation that are recorded in the equity balancing entry 'Other accumulated comprehensive income - Items that can be reclassified in income - Non-current assets as held for sale.

v. Hedging transactions

The objective of hedge accounting is to represent in the financial statements the effect of an entity's risk management activities when it uses financial instruments to manage exposures arising from specific risks that could affect profit or loss or other comprehensive income (in the case of investments in equity instruments for which the entity has opted to represent changes in the fair value of other comprehensive income).

As described in Note 1.b, the Group has adopted IFRS 9 for hedge accounting prospectively, while continuing to apply IAS 39 for fair value hedges in portfolios where the hedged risk is interest rate risk. This change has not resulted in any modifications to the accounting treatment of hedges designated under IAS 39, which remain unchanged in both their designation and accounting treatment

For a hedging relationship to meet the requirements set out in Bank of Spain Circular 4/2017, it must meet the following conditions:

1. Instruments that can be designated as hedging instruments include all derivative financial instruments or non-derivative financial instruments measured at fair value through profit or loss, or a combination thereof. In the case of foreign exchange risk hedges, any type of non-derivative financial instrument can also be designated, regardless of its measurement method.

2. Items that can be designated as covered items are all those that are recognized assets or liabilities, firm commitments, highly probable anticipated transactions, and net investments abroad.

3. At the start of coverage, a formal designation and documentation of the hedging relationship must be made, which will include the entity's risk management strategy and objective, identification of the hedging instrument and the covered item, the nature of the covered risk, the methodology for measuring effectiveness, which includes an analysis of the sources of ineffectiveness, and the coverage ratio.

   The main sources of ineffectiveness based on the risk covered are:

   a. Interest rate risk: mismatches in time horizons, principal, repricing and payment dates, time value of options, modifications in the hedged item or the hedging instrument.

   b. Exchange rate risk: in addition to the above, the difference between the interest rates of the two currencies that represents the net cost or benefit of switching cash flows between two currencies with different interest rates.

4. The hedging relationship must be effective, for which there must be an economic relationship between the hedged item and the hedging instrument, credit risk must not have a dominant effect on changes in the value of the economic relationship between the hedging instrument and the hedged item, and the hedging ratio must coincide with that used by the entity in its management.

The Group assesses these effectiveness requirements, at the time of designation and on each submission date, through:

- The economic relationship between the hedged item and the hedging instrument is demonstrated through a qualitative test, and in the event of non-compliance, through quantitative tests that compare the market value of the hedged items—corresponding to the hedged risk—and the hedging instruments. Likewise, a quantitative analysis of variations in the market values of the hedging instrument and the hedged item is performed prospectively.
- The hedge ratio is determined based on the proportion between the amount of the hedged item and the amount of the instrument actually designated by the Group in each hedging relationship.
- The credit risk domain assessment is performed through an analysis of the credit exposure of the hedged items and the hedging instruments.

Accounting hedges are classified and recorded according to the type of risk they cover, based on the following criteria:

- Fair value hedges: These are hedges against exposure to changes in the fair value of the hedged item, attributable to a specific risk.

  The differences arising from both the hedging instruments and the hedged items (due to the hedged risk) are recognized directly in the profit and loss account.

When the fair value hedge is discontinued, the adjustments previously recorded in the hedged item are charged to profit or loss using the effective interest rate method recalculated at the date the hedge ceases to be covered, and must be fully amortized at maturity.

In fair value hedges of interest rate risk of a portfolio of financial instruments (macro hedges), regulated by IAS 39, the gains or losses arising from the valuation of the hedging instruments are recognized directly in the profit and loss account, while the gains or losses due to changes in the fair value of the hedged amount (attributable to the hedged risk) are recognized in the profit and loss account using as a counterpart the headings 'Changes in the fair value of hedged items' of a portfolio with interest rate risk hedge (asset or liability), as appropriate.

- Cash flow hedges: These are hedges against exposure to changes in cash flows attributable to a specific risk associated with the hedged item.

  The effective portion of the change in the value of the hedging instrument is temporarily recorded in the equity account 'Other accumulated comprehensive income - Items that may be reclassified in profit or loss - Hedging derivatives. Cash flow hedges (effective portion)' until the hedged item affects profit or loss. From that point onward, it will be recorded in the profit or loss account for the same period as the hedged item, except in cases where it is required to be included in the cost of the non-financial asset or liability, or the anticipated transactions are ultimately recognized as non-financial assets or liabilities.

  When cash flow hedges are discontinued, the accumulated result of the hedging instrument recognized in the equity heading 'Other accumulated global result' (while the hedge was effective) will continue to be recognized in that heading until the hedged transaction occurs, at which time it will be recorded in profit or loss, unless it is expected that the transaction will not take place, in which case it is recorded immediately in profit or loss.

- Net investment hedges of a foreign operation: This is a hedge of the amount corresponding to the reporting entity's share of the net assets of said operation.

  The effective portion of the hedging instrument is temporarily recorded in the equity account 'Other accumulated comprehensive income - Items that may be reclassified in profit or loss - Net investment hedges' in foreign operations until the gains or losses on the hedged item are recognized in profit or loss.

To measure ineffectiveness,the Bank compares the valuation of the hedging instrument with the valuation of the hedged item based on the hedged risk, using different methodologies such as the proxy method or the hypothetical derivative method. The ineffective portion of the cash flow and net investment hedge relationships in foreign operations is recorded directly in the profit and loss account, under the heading 'Net gains or losses from hedge accounting'.

The Bank discontinues accounting for hedging relationships when the hedging instrument expires, is sold, or when the hedging relationship becomes ineffective because it is no longer aligned with the risk management objective. In that case, the derivative is then treated as a trading derivative.

If a hedging relationship ceases to meet the effectiveness requirements, but the risk management objective remains, the Bank will assess whether to rebalance or adjust the hedging ratio to meet the effectiveness requirements again without discontinuing the hedging relationship.

A hedging instrument is generally designated in its entirety, as the factors contributing to its fair value are interdependent. However, IFRS 9 allows certain parts of a hedging instrument to be excluded from its fair value:

a. Separating the intrinsic value and the time value of an option and designating only the intrinsic element as the hedging instrument, which is mandatory if the intrinsic value is designated;

b. Separating the forward and spot elements of a forward contract and designating only the spot element as the hedging instrument, which will be determined for each hedging relationship. and

c. Separate the foreign currency basis spread of a currency derivative and exclude it from the designation of the hedging instrument, as determined for each hedging relationship.

Separating these components will improve the effectiveness of the hedge and allows for alternative accounting treatment for the excluded component. This treatment consists of recording the changes in value under the heading 'Other accumulated comprehensive income – Undesignated items' and recording this component in the profit or loss statement, depending on the nature of the hedged item, either over a period of time or at the time the hedged transaction occurs.

Additionally, if the entity manages the credit risk of all or part of a financial instrument through the use of credit derivatives, there is the option of designating a fair value credit exposure through profit or loss, provided that the derivative matches the name and priority of the financial instrument being hedged. This designation may be made at the initial recognition of the designated financial instrument or subsequently, with the designation being documented. From its designation, fair value variations (for all its risks, not exclusively credit risk) will be recorded in the profit and loss account.

e) Derecognition of financial assets and liabilities

The accounting treatment of transfers of financial assets depends on the extent to which the risks and rewards associated with the transferred assets are transferred to third parties:

1. If the Bank transfers substantially all the risks and rewards to third parties unconditional -sale of financial assets, sale of financial assets under an agreement to repurchase them at their fair value at the date of repurchase, sale of financial assets with a purchased call option or written put option that is deeply out of the money, securitisation of assets in which the transferor does not retain a subordinated debt or grant any credit enhancement to the new holders, and other similar cases-, the transferred financial asset is derecognised and any rights or obligations retained or created in the transfer are recognised simultaneously.

2. If the Bank retains substantially all the risks and rewards associated with the transferred financial asset -sale of financial assets under an agreement to repurchase them at a fixed price or at the sale price plus interest, a securities lending agreement in which the borrower undertakes to return the same or similar assets, and other similar cases-, the transferred financial asset is not derecognised and continues to be measured by the same criteria as those used before the transfer. In this case, the following items are recognised:

   a. An associated financial liability, which is recognised for an amount equal to the consideration received and is subsequently measured at amortised cost, unless it meets the requirements for classification under 'Financial liabilities designated at fair value through profit or loss'.

   b. The income from the transferred financial asset not derecognised and any expense incurred on the new financial liability, without offsetting.

3. If the Bank neither transfers nor retains substantially all the risks and rewards associated with the transferred financial asset -sale of financial assets with a purchased call option or written put option that is not deeply in or out of the money, securitisation of assets in which the transferor retains a subordinated debt or other type of credit enhancement for a portion of the transferred asset, and other similar cases- the following distinction is made:

   a. If the transferor does not retain control of the transferred financial asset, the asset is derecognised and any rights or obligations retained or created in the transfer are recognised.

   b. If the transferor retains control of the transferred financial asset, it continues to recognise it for an amount equal to its exposure to changes in value and recognises a financial liability associated with the transferred financial asset. The net carrying amount of the transferred asset and the associated liability is the amortised cost of the rights and obligations retained, if the transferred asset is measured at amortised cost, or the fair value of the rights and obligations retained, if the transferred asset is measured at fair value.

Accordingly, financial assets are only derecognised when the rights to the cash flows they generate have expired or when substantially all the inherent risks and rewards have been transferred to third parties. Similarly, financial liabilities are only derecognised when the obligations they generate have been extinguished or when they are acquired with the intention either to cancel them or to resell them.

Regarding contractual modifications of financial assets, the Bank distinguishes two main categories depending on whether the new conditions result in the disposal of the asset (and recognition of a new one) or imply the continuation of the original instrument with the new modified terms:

- Contractual modifications for commercial or market reasons, which are generally carried out at the request of the debtor to apply current market conditions to the debt. The new contract is considered a new transaction and, consequently, it is necessary to derecognize the original financial asset and recognize a new financial asset subject to the classification and measurement requirements established by Bank of Spain Circular 4/2017. The new financial asset will be recorded at fair value and, if applicable, the difference between the carrying amount of the asset derecognized and the fair value of the new asset will be recognized in profit or loss.
- Modifications due to refinancing or restructuring, in which the payment conditions are modified to allow a customer that is experiencing financial difficulties (current or foreseeable) to meet its payment obligations and that, if such modification had not been made, it would be reasonably certain that it would not be able to meet such payment obligations. In this case, the modification does not result in the derecognition of the financial asset, but rather the original financial asset is maintained and does not require a new assessment of its classification and measurement. When assessing credit impairment, the current credit risk (considering the modified cash flows) should be compared with the credit risk at initial recognition. The gross carrying amount of the financial asset (the present value of the renegotiated or modified contractual cash flows that are discounted at the original effective interest rate of the financial asset) should be recalculated, with a gain or loss recognized in profit or loss for the difference.

f) Offsetting of financial instruments

Financial asset and liability balances are offset, i.e. reported in the balance sheet at their net amount, only if the Banco Santander currently have a legally enforceable right to set off the recognised amounts and intend either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

g) Impairment of financial assets

i. Definition

Banco Santander associates an impairment in the value to financial assets measured at amortised cost, debt instruments measured at fair value with changes in other comprehensive income, lease receivables, assets from contracts and loan commitments and the financial guarantees issued that are not measured at fair value through profit or loss.

The impairment for expected credit losses is recorded with a charge to the income statement for the period in which the impairment arises. In the event of occurrence, the recoveries of previously recognised impairment losses are recorded in the income statement for the period in which the impairment no longer exists or is reduced.

In the case of purchased or originated credit-impaired assets, the Bank only recognizes at the reporting date the changes in the expected credit losses during the life of the asset since the initial recognition as a credit loss. In the case of assets measured at fair value with changes in other comprehensive income, the changes in the fair value due to expected credit losses are charged in the income statement of the year where the change happened, reflecting the rest of the valuation in other comprehensive income.

As a rule, the expected credit loss is estimated as the difference between the contractual cash flows to be recovered and the expected cash flows discounted using the original effective interest rate. In the case of purchased or originated credit-impaired assets, this difference is discounted using the effective interest rate adjusted by credit rating.

Depending on the classification of financial instruments, which is mentioned in the following sections, the expected credit losses may be along 12 months or during the life of the financial instrument:

- 12-month expected credit losses: arising from the potential default events, as defined in the following sections that are estimated to be likely to occur within the 12 months following the reporting date. These losses will be associated with financial assets classified as 'normal risk' as defined in the following sections.
- Expected credit losses over the life of the financial instrument: arising from the potential default events that are estimated to be likely to occur throughout the life of the financial instruments. These losses are associated with financial assets classified as 'normal risk under watchlist' or 'doubtful risk'.

With the purpose of estimating the expected life of the financial instrument all the contractual terms have been taken into account (e.g. prepayments, duration, purchase options, etc.), being the contractual period (including extension options) the maximum period considered to measure the expected credit losses. In the case of financial instruments with an uncertain maturity period and a component of undrawn commitment (e.g.: credit cards), the expected life is estimated through quantitative analyses to determine the period during which the entity is exposed to credit risk, also considering the effectiveness of management procedures that mitigate such exposure (e.g. the ability to unilaterally cancel such financial instruments, etc.).

The following constitute effective guarantees:

a. Mortgage guarantees on housing as long as they are first duly constituted and registered in favour of the entity. The properties include:

    i. Buildings and building elements, distinguishing among:

        – Houses.

        – Offices, stores and multi-purpose premises.

        – Rest of buildings such as non-multi-purpose premises and hotels.

    ii. Urban and developable ordered land.

    iii. Rest of properties that classify as: buildings and building elements under construction, such as property development in progress and halted development, and the rest of land types, such as rustic lands.

b. Collateral guarantees on financial instruments in the form of cash deposits, debt securities or equity instruments issued by creditworthy issuers.

c. Other types of real guarantees, including properties received in guarantee and second and subsequent mortgages on properties, as long as the entity demonstrates its effectiveness. When assessing the effectiveness of the second and subsequent mortgages on properties the entity will implement particularly restrictive criteria. It will take into account, among others, whether the previous charges are in favour of the entity itself or not and the relationship between the risk guaranteed by them and the property value.

d. Personal guarantees, as well as the incorporation of new owners, covering the entire amount of the financial instruments and implying direct and joint liability to the entity of persons or other entities whose solvency is sufficiently proven to ensure the repayment of the loan on the agreed terms.

The different aspects that the Bank considers for the evaluation of effective guarantees are set out below in relation to the individual analysis.

ii. Financial instruments presentation

For the purposes of estimating the impairment amount, and in accordance with its internal policies, the Bank classifies its financial instruments (financial assets, commitments and guarantees) measured at amortised cost or fair value through other comprehensive income in one of the following categories:

- Normal Risk ('stage 1'): includes all instruments that do not meet the requirements to be classified in the rest of the categories.
- Normal risk under watchlist ('stage 2'): includes all instruments that, without meeting the criteria for classification as doubtful or default risk, have experienced significant increases in credit risk since initial recognition.

In order to determine whether a financial instrument has increased its credit risk since initial recognition and is to be classified in stage 2, the Group and the Bank consider the following criteria:

Quantitative criteria	Changes in the risk of a default occurring through the expected life of the financial instrument are analysed and quantified with respect to its credit level in its initial recognition. With the purpose of determining if such changes are considered as significant, with the consequent classification into stage 2, each Group, and therefore the Bank, unit has defined the quantitative thresholds to consider in each of its portfolios taking into account corporate guidelines ensuring a consistent interpretation in all units. Within the quantitative thresholds, two types are considered: A relative threshold is those that compare current credit quality with credit quality at the time of origination in percentage terms of change. In addition, an absolute threshold compares both references in total terms, calculating the difference between the two. These absolute/relative concepts are used homogeneously (with different values) in all geographies. The use of one type of threshold or another (or both) is determined in accordance with the process described in note 50, below, and is marked by the type of portfolio and characteristics such as the starting point of the average credit quality of the portfolio.
Qualitative criteria	In addition to the quantitative criteria indicated, various indicators are used that are aligned with those used by the Bank in the normal management of credit risk. Irregular positions of more than 30 days and renewals are common criteria applied by the Bank and common to all the Group's units. Also, each unit can define other qualitative indicators, for each of its portfolios, according to the particularities and normal management practices in line with the policies currently in force (i.e. use of management alerts, etc.). The use of these qualitative criteria is complemented with the use of an expert judgement, under the corresponding governance.

In the case of forbearances, instruments classified as 'normal risk under watchlist' may be generally reclassified to 'normal risk' in the following circumstances: at least two years have elapsed from the date of reclassification to that category or from its forbearance date, the client has paid the accrued principal and interest balance, and the client has no other instruments with more than 30 days past due balances.

- Doubtful Risk ('stage 3'): includes financial instruments, overdue or not, in which, without meeting the circumstances to classify them in the category of default risk, there are reasonable doubts about their total repayment (principal and interests) by the client in the terms contractually agreed. Likewise, off-balance-sheet exposures whose payment is probable and their recovery doubtful are considered in stage 3. Within this category, two situations are differentiated:

  – Doubtful risk for non-performing loans: financial instruments, irrespective of the client and guarantee, with balances more than 90 consecutive days on material arrears for principal, interest or expenses contractually agreed.

    This category also includes all loan balances for a client when the operations with more than 90 consecutive days on material arrears are greater than 20% of the amounts pending collection.

    These instruments may be reclassified to other categories if, as a result of the collection of part of the past due balances, the reasons for their classification in this category do not remain and the client does not have balances more than 90 consecutive days on material arrears in other loans.

  – Doubtful risk for reasons other than non-performing loans: this category includes doubtful recovery financial instruments that are not more than 90 consecutive days on material arrears.

Banco Santander considers that a financial instrument to be doubtful for reasons other than delinquency when one or more combined events have occurred with a negative impact on the estimated future cash flows of the financial instrument. To this end, the following indicators, among others, are considered:

a) Negative net equity or decrease because of losses of the client's net equity by at least 50% during the last financial year.

b) Continued losses or significant decrease in revenue or, in general, in the client's recurring cash flows.

c) Generalised delay in payments or insufficient cash flows to service debts.

d) Significantly inadequate economic or financial structure or inability to obtain additional financing by the client.

e) Existence of an internal or external credit rating showing that the client is in default.

f) Existence of overdue customer commitments with a significant amount to public institutions or employees.

These financial instruments may be reclassified to other categories if, as a result of an individualised study, reasonable doubts do not remain about the total repayment under the contractually agreed terms and the client does not have balances of 90 days on material arrears.

In the case of forbearances, instruments classified as doubtful risk may be reclassified to the category of 'normal risk under watchlist' when the following circumstances are present: a minimum period of one year has elapsed from the forbearance date, the client has paid the accrued principal and interest amounts, and the client has no other loan balances of 90 days on material arrears.

- Default Risk: includes all financial assets, or part of them, for which, after an individualised analysis, their recovery is considered remote due to a notorious and irrecoverable deterioration of their solvency.

In any case, except in the case of operations with real guarantees that cover more than 10% of the amount of the operation, in general the Bank considers as remote recovery: the operations of holders that are in the liquidation phase of the insolvency creditors, doubtful operations due to delinquency that have been in this category for more than 4 years and doubtful operations due to delinquency whose part not covered by real guarantees has been maintained with 100% credit risk coverage for more than two years.

A financial asset amount is maintained in the balance sheet until they are considered as a 'default risk', either all or a part of it, and the write-off is registered against the balance sheet.

In the case of operations that have only been partially derecognised, for forgiveness reasons or because part of the total balance is considered unrecoverable, the remaining amount shall be fully classified in the category of 'doubtful risk', except where duly justified.

The classification of a financial asset, or part of it, as a 'default risk' does not involve the disruption of negotiations and legal proceedings to recover the amount.

iii. Impairment valuation assessment

Banco Santander has policies, methods and procedures in place to hedge its credit risk, both due to the insolvency attributable to counterparties and its residence in a specific country.

These policies, methods and procedures are applied in the concession, study and documentation of financial assets, commitments and guarantees, as well as in the identification of their impairment and in the calculation of the amounts needed to cover their credit risk.

The impairment represents the best estimation of the financial assets expected credit losses at the balance sheet date, assessed both individually and collectively.

- Individually: for the purposes of estimating the provisions for credit risk arising from the insolvency of a financial instrument, the Bank individually assesses impairment by estimating the expected credit losses on those financial instruments that are considered to be significant and with sufficient information to make such an estimate.

  Therefore, this classification mostly includes wholesale banking customers —Corporations, specialised financing— as well as some of the largest companies —Chartered and real estate developers— from retail banking. The determination of the perimeter in which the individualised estimate is applied is detailed in a later section.

  The individually assessed impairment estimate is equal to the difference between the gross carrying amount of the financial instrument and the estimated value of the expected cash flows receivable discounted using the original effective interest rate of the transaction. The estimate of these cash flows takes into account all available information on the financial asset and the effective guarantees associated with that asset. This estimation process is detailed below.

- Collectively: the Bank also assesses impairment by estimating the expected credit losses collectively in cases where they are not assessed on an individual basis. This includes, for example, loans with individuals, sole proprietors or businesses in retail banking subject to a standardised risk management.

  For the purposes of the collective assessment of expected credit losses, the Bank has consistent and reliable internal models. For the development of these models, instruments with similar credit risk characteristics that are indicative of the debtors' capacity to pay are considered.

  The credit risk characteristics used to group the instruments are, among others: type of instrument, debtor's sector of activity, geographical area of activity, type of guarantee, aging of past due balances and any other factor relevant to estimating the future cash flows.

Banco Santander performs retrospective and monitoring tests to evaluate the reasonableness of the collective estimate.

On the other hand, the methodology required to estimate the expected credit loss due to credit events is based on an unbiased and weighted consideration by the probability of occurrence of a series of scenarios, considering a range of three to five possible future scenarios, which could have an impact on the collection of contractual cash flows, always taking into account the time value of money, as well as all available, reasonable and sustainable information on past events, current conditions and forecasts of the evolution of macroeconomic scenarios that are shown to be relevant for the estimation of this amount (for example: GDP (Gross Domestic Product), housing price, unemployment rate, etc.).

The estimation of expected losses requires expert judgment and the support of historical, current and future information. The probability of loss is measured considering past events, the present situation and future trends of macroeconomic scenarios.

Banco Santander uses forward-looking information in both internal risk management and prudential regulation processes, so that for the calculation of the impairment loss allowance, various scenarios are incorporated that take advantage of the experience with such information, thus ensuring consistency in obtaining the expected loss.

The complexity of the estimation in this exercise has been derived from the current macroeconomic scenario as a consequence of the complex geopolitical situation, as well changes in inflations levels and interest rates, which has generated uncertainty in economic evolution.

Banco Santander has internally ensured the criteria to be followed for guarantees received from government bodies, both through credit lines and other public guarantees, so that when they are adequately reflected in each of the contracts, they are recognised as mitigating factors of the potential expected losses, and therefore of the provisions to be recognised, based on the provisions of the applicable standard. Furthermore, where applicable, these guarantees are appropriately reflected in the mitigation of the significant increase in risk, considering their nature as personal guarantees.

For the estimation of the parameters used in the estimation of impairment provisions -EAD (exposure at default), PD (probability of default), LGD (loss given default)-, the Bank based their experience in developing internal models for the estimation of parameters both in the regulatory area and for management purposes, adapting the development of the impairment provision models under Bank of Spain Circular 4/2017 and subsequent modifications.

- Exposure at default: is the amount of estimated risk incurred at the time of the counterparty's analysis.

- Probability of default: is the estimated probability that the counterparty will default on its principal and/or interest payment obligations.
- Loss given default: is the estimate of the severity of the loss incurred in the event of non-compliance. It depends mainly on the updating of the guarantees associated with the operation and the future cash flows that are expected to be recovered.

In any case, when estimating the flows expected to be recovered, portfolio sales are included. It should be noted that due to the Bank's recovery policy and the experience observed in relation to the prices of past sales of assets classified as stage 3 and/or default risk, there is no substantial divergence between the flows obtained from recoveries after performing recovery management of the assets with those obtained from the sale of portfolios of assets discounting structural expenses and other costs incurred.

The definition of default implemented by the Bank for the purpose of calculating the impairment provision models is based on the definition in Article 178 of Regulation 575/2013 of the European Union (CRR), which is fully aligned with the requirements of Bank of Spain Circular 4/2017, which considers that a 'default' exists in relation to a specific customer/contract when at least one of the following circumstances exists: the entity considers that there are reasonable doubts about the payment of all its credit obligations or that the customer/contract is in an irregular situation for more than 90 consecutive days past due material balances with respect to any significant credit obligation.

Banco Santander aligned partially and voluntarily during 2022 the accounting definition of Stage 3, as well as the calculation of impairment provision models, to the New Definition of Default, incorporating the criteria defined by the EBA in its implementation guide of the definition of default, capturing the economic deterioration of the operations (days in default - on a daily basis - and materiality thresholds - minimum amount in arrears). The alignment of criteria was done taking into account the criteria of IFRS 9 as well as the accounting principles of unbiased presentation of financial information. Banco Santander registered an increase in the default rate at around 19 basis points, with no material impact on the provision figures for credit risk.

In addition, the Bank considers the risk generated in all cross-border transactions due to circumstances other than the usual commercial risk of insolvency (sovereign risk, transfer risk or risks arising from international financial activity, such as wars, natural catastrophes, balance of payments crisis, etc.).

Bank of Spain Circular 4/2017 includes a series of practical solutions that can be implemented by entities, with the aim of facilitating its implementation. In order to achieve a complete and high-level implementation of the standard, and following the best practices of the industry, the Bank these practical solutions adapting them to their own characteristics and circumstances:

- Rebuttable presumption that the credit risk has increased significantly, when payments are more than 30 days past due: this threshold is used as an additional, but not primary, indicator of significant risk increase.
- Assets with low credit risk at the reporting date: the Bank adopts this practice prioritizing its reduced and punctual use and its systematic and periodic justification through quantitative evidence.

This information is provided in more detail in note 50.b.

iv. Detail of individual estimate of impairment

For the individual estimate of the assessment for impairment of the financial asset, the Bank has a specific methodology to estimate the value of the cash flows expected to be collected:

- Recovery through the debtor's ordinary activities (going approach).
- Recovery through the execution and sale of the collateral guaranteeing the operations (gone approach).

Gone approach:

a.Evaluation of the effectiveness of guarantees

Banco Santander assesses the effectiveness of all the guarantees associated considering the following:

- The time required to execute these guarantees.
- Banco Santander's ability to enforce or assert these guarantees in its favour.
- The existence of limitations imposed by each local unit ´s regulation on the foreclosure of collateral.

Under no circumstances the Bank considers that a guarantee is effective if its effectiveness depends substantially on the solvency of the debtor, as could be the case:

- Promises of shares or other securities of the debtor himself when their valuation may be significantly affected by a debtor's default.
- Personal cross-collateralisation: when the guarantor of a transaction is, at the same time, guaranteed by the holder of that transaction.

The different types of effective guarantees have been detailed in section i. Definition

b. Valuation of guarantees

Banco Santander assesses the guarantees on the basis of their nature in accordance with the following:

- Mortgage guarantees on properties associated with financial instruments, using complete individual valuations carried out by independent valuation experts and under generally accepted valuation standards. If this is not possible, alternative valuations are used with duly documented and approved internal valuation models.
- Personal guarantees are valued individually on the basis of the guarantor´s updated information.
- The rest of the guarantees are valued based on current market values.

c. Adjustments to the value of guarantees and estimation of future cash flow inflows and outflows.

Banco Santander applies a series of adjustments to the value of the guarantees in order to improve the reference values:

- Adjustments based on the historical sales experience for certain types of assets.
- Individual expert adjustments based on additional management information.

Likewise, to adjust the value of the guarantees, the time value of money is taken into account based on the historical experience , estimating:

- Period of adjudication.
- Estimated time of sale of the asset.

In addition, the Bank takes into account all those cash inflows and outflows linked to that guarantee until it is sold:

- Possible future income commitments in favour of the borrower which will available after the asset is awarded.
- Estimated foreclosure costs.
- Asset maintenance costs, taxes and community costs.
- Estimated marketing or sales costs.

Finally, since it is considered that the guarantee will be sold in the future, the Bank applies an additional adjustment ('index forward') in order to adjust the value of the guarantees to future valuation expectations.

v. Impairment individual assessment scope

Banco Santander determines the perimeter over which it makes an estimate of the assessment for impairment on an individual basis based on a relevance threshold and the stage in which the operations are located. In general, the Bank applies the individualised calculation of expected losses to the significant exposures classified in stage 3, although Banco Santander, S.A. has also extended its analyses to some of the exposures classified in stage 2.

It should be noted that, in any case and irrespective of the stage in which their transactions are carried out, for customers who do not receive standardised treatment, a relational risk management model is applied, with individualised treatment and monitoring by the assigned risk analyst. In addition to wholesale customers (Santander Corporate & Investment Banking or SCIB) and large companies, this relational management model also includes other segments of smaller companies for which there is information and capacity for more personalised and expert analysis and monitoring. As indicated in the Bank's wholesale credit model, the individual treatment of the client facilitates the continuous updating of information. The risk assumed must be followed and monitored throughout its life cycle, enabling anticipation and action to be taken in the event of possible impairments. In this way, the customer's credit quality is analysed individually, taking into account specific aspects such as his competitive position, financial performance, management, etc. In the wholesale risk management model, every customer with a credit risk position is assigned a rating, which has an associated probability of customer default.

Thus, individual analysis of the debtor triggers a specific rating for each customer, which determines the appropriate parameters for calculating the expected loss, so that it is the rating itself that initially modulates the necessary coverage, adjusting the severity of the possible loss to the guarantees and other mitigating factors that the customer may have available. In addition, if as a result of this individualised monitoring of the customer, the analyst finally considers that his coverage is not sufficient, he has the necessary mechanisms to adjust it under his expert judgement, always under the appropriate governance.

h) 'Non-current assets' and 'liabilities associated with non-current assets held for sale'

Non-current assets held for sale' includes the carrying amount of individual items, disposal groups or items forming part of a business unit earmarked for disposal (discontinued operations), whose sale in their present condition is highly likely to be completed within one year from the reporting date. Therefore, the recovery of the carrying amount of these items -which can be of a financial nature or otherwise- will foreseeably be effected through the proceeds from their disposal.

Specifically, property or other non-current assets received by Banco Santander as total or partial settlement of their debtors' payment obligations to them are deemed to be 'Non-current assets held for sale', unless the Bank has decided to make continuing use of these assets.'Liabilities associated with non-current assets held for sale' includes the balances payable arising from the assets held for sale or disposal groups and from discontinued operations.

'Non-current assets and disposal groups of items that have been classified as held for sale' are generally recognised at the date of their allocation to this category and are subsequently valued at the lower of their fair value less costs to sell or its book value. 'Non-current assets and disposal groups of items that are classified as held for sale' are not amortised as long as they remain in this category.

The valuation of the portfolio of non-current assets held for sale has been made in compliance with the requirements of Bank of Spain Circular 4/2017, and subsequent amendments, in relation to the estimate of the fair value of tangible assets and the value-in-use of financial assets.

The value of the portfolio is determined as the sum of the values of the individual elements that compose the portfolio, without considering any total or batch grouping in order to correct the individual values.

For the purposes of its consideration in initial recognition, the Bank obtains, at the time of award, the fair value of the corresponding asset by requesting an appraisal from external valuation agencies.

Banco Santander has in place a corporate policy that ensures the professional competence and the independence and objectivity of the external appraisal agencies, in accordance with the regulations, which require appraisal agencies to meet independence, neutrality and credibility requirements, so that the use of their estimates does not reduce the reliability of its valuations.

This policy establishes that all the appraisal companies and agencies with which the Bank works in Spain should be registered in the Official Register of the Bank of Spain and that the appraisals performed by them should follow the methodology established in Order ECO/805/2003, of 27 March. The main appraisal companies and agencies with which the Bank worked in 2025 are as follows: Tinsa Tasaciones Inmobiliarias, S.A.U., Sociedad de Tasación, S.A., Global Valuation, S.A.U., Instituto de Valoraciones, S.A., Euroevaluaciones, S.A. and Valoraciones Mediterráneo, S.A.

At 31 December 2025 the fair value minus the costs to sell of non-current assets held for sale exceeded their carrying amount by EUR 172 million (EUR 161 million in 2024); however, in accordance with the applicable legislation, this unrealised gain could not be recognised.

Banco Santander, in compliance with Bank of Spain Circular 4/2017, and subsequent amendments, on public and private financial reporting standards and financial statement models, has developed a methodology that enables it to estimate the fair value and costs of sale of assets foreclosed or received in payment of debts. This methodology is based on the classification of the portfolio of foreclosed assets into different segments. Segmentation enables the intrinsic characteristics of Banco Santander's portfolio of foreclosed assets to be differentiated, so that assets with homogeneous characteristics are grouped by segment.

Thus, the portfolio is segmented into (i) finished assets of a residential and tertiary nature, (ii) developments in progress and (iii) land[1].

In determining the critical segments in the overall portfolio, assets are classified on the basis of the nature of the asset and its stage of development. This segmentation is made in order to seek the liquidation of the asset (which should be carried out in the shortest possible time).

When making decisions, the situation and/or characteristics of the asset are fundamentally taken into account, as well as the evaluation of all the determining factors that favour the recovery of the debt. For them, the following aspects are analyzed, among others:

- The time that has elapsed since the adjudication.
- The transferability and contingencies of the foreclosed asset.
- The economic viability from the real estate point of view with the necessary investment estimate.
- The expenses that may arise from the marketing process.
- The offers received, as well as the difficulties in finding buyers.

[1] The assets in a situation of 'stopped development' are included under 'land.

In the case of real estate assets foreclosed in Spain, which represent 76% of the Group's total non-current assets held for sale, the valuation of the portfolio is carried out by applying the following models:

- Market Value Model used in the valuation of finished properties of a residential nature (mainly homes and car parks) and properties of a tertiary nature (offices, commercial premises and multipurpose buildings). For the valuation of finished assets whose availability for sale is immediate, a market sale value provided by a third party external to Banco Santander is considered, calculated under the AVM methodology by the comparable properties method adjusted by our experience in selling similar assets, given the term, price, volume, trend in the value of these assets and the time elapsing until their sale and discounting the estimated costs of sale.

  The market value is determined on the basis of the definition established by the International Valuation Standards drawn up by the IVSC (International Valuation Standards Council), understood as the estimated amount for which an asset or a liability should be exchanged on the measurement date between a willing buyer and a willing seller, in an arm's length transaction, after appropriate marketing, and in which the parties have acted with sufficient information, prudently and without coercion.

  The current market value of the properties is estimated on the basis of automated valuations obtained by taking comparable properties as a reference; simulating the procedure carried out by an appraiser in a physical valuation according to Order ECO 805/2003: selection of properties and obtaining the unit value by applying homogenisation adjustments. The selection of the properties is carried out by location within the same real estate cluster and according to the characteristics of the properties, filtering by type[2], surface area range and age. The model enables a distinction to be made within the municipality under study as to which areas are similar and comparable and therefore have a similar value in the property market, discriminating between which properties are good comparators and which are not.

  Adjustments to homogenize the properties are made according to: (i) the age of the property according to the age of the property to be valued, (ii) the deviation of the built area from the common area with respect to the property to be valued and (iii) by age of the date of capture of the property according to the price evolution index of the real estate market.

  In addition, for individually significant assets, complete individual valuations are carried out, including a visit to the asset, market analysis (data relating to supply, demand, current sale or rental price ranges and supply-demand and revaluation expectations) and an estimate of expected income and costs.

  For this segmentation of assets, when they are completed, the real costs are known and the actual expenses for the marketing and sale of the asset must be taken into account. Therefore, Banco Santander uses the actual costs in its calculation engine or, failing that, those estimated on the basis of its observed experience.

- Market Value Model according to Evolution of Market Values used to update the valuation of developments in progress. The valuation model estimates the current market value of the properties based on complete individual valuations by third parties, calculated from the values of the feasibility studies and development costs of the promotion, as well as the selling costs, distinguishing by location, size and type of property. The inputs used in the valuation model for residential assets under construction are actual revenues and costs.

  For this purpose, in order to calculate the investment flows, Banco Santander considers, on the basis of the feasibility studies, the expenditure required for construction, the professional fees relating to the project and to project management, the premiums for mandatory building insurance, the developer's administrative expenses, licenses, taxes on new construction and fees, and urban development charges.

  With respect to the calculation of income flows, Banco Santander takes into account the square metres built, the number of homes under construction and the estimated selling price over 1.5 years.

  The market value will be the result of the difference between the income flows and the investment flows estimated at each moment.

- Land Valuation model. The methodology followed by the Bank regarding land valuation consists of updating the individual reference valuation of each of the land on an annual basis, through updated valuation valuations carried out by independent professionals and following the methodology established in the Order ECO/805/2003, of 27 March, whose main verifications in the case of land valuation, regardless of the degree of urbanisation of the land, correspond to:

  - Visual verification of the assessed property.
  - Registry description.

[2] Assets qualified as protected housing are taken into account. The maximum legal value of these assets is determined by the VPO module, obtained from the result of multiplying the State Basic Module (MBE) by a zone coefficient determined by each autonomous community. To carry out the valuation of a protected property, the useful surface area is used in accordance with current regulations.

- Urban planning.
- Visible easements.
- Visible state of occupation, possession, use and exploitation.
- Protection regime.
- Apparent state of preservation.
- Correspondence with cadastral property.
- Existence of expropriation procedure, expropriation plan or project, administrative resolution or file that may lead to expropriation.
- Expiry of the urbanization or building deadlines.
- Existence of a procedure for failure to comply with obligations.
- Verification of surfaces.

For the purposes of valuation, the land will be classified in the following levels:

- Level I: It will include all the lands that do not belong to level II.
- Level II: It shall include land classified as undeveloped where building is not allowed for uses other than agriculture, forestry, livestock or linked to an economic exploitation permitted by the regulations in force. Also included are lands classified as developable that are not included in a development area of urban planning or that, in such an area, the conditions for its development have not been defined.

In those cases where Banco Santander does not have an updated reference value through an ECO valuation for the current year, we use as a reference value the latest available ECO valuation reduced or corrected by the average annual coverage ratio of the land on which we have obtained an updated reference value, through an ECO valuation.

Banco Santander applies a discount to the aforementioned reference values that takes into account both the discount on the reference value in the sales process and the estimated costs of marketing or selling the land; discount on reference value = % discount on sales + % marketing costs being:

- % discount on Sales: = 100 - (sales price / updated appraisal value).
- marketing costs: calculated on the basis of our historical experience in sales and in accordance with the marketing management fees negotiated with our suppliers of this type of service.

In this way Banco Santander obtains the corrected market value, an amount that we compare with the net cost of each piece of land to determine its correct valuation and conclude with our valuation process.

In addition, in relation to the previously mentioned valuations, less costs to sell, are contrasted with the sales experience of each type of asset in order to confirm that there is no significant difference between the sale price and the valuation.

Impairment losses on an asset or disposal group arising from a reduction in its carrying amount to its fair value (less costs to sell) are recognised under 'Gains or (losses) on non-current assets held for sale not classified as discontinued operations' in the income statement.

The gains on a non-current asset held for sale resulting from subsequent increases in fair value (less costs to sell) increase its carrying amount and are recognised in the consolidated income statement up to an amount equal to the impairment losses previously recognised.

i) Insurance contracts linked to pensions

The item 'Insurance contracts linked to pensions', included within the heading 'Other assets' (see note 2.m), will include the fair value of the insurance policies to cover pension commitments that must be recorded as a separate asset for not meeting the requirements established in regulation 35 of Bank of Spain Circular 4/2017 and subsequent modifications, to be considered plan assets.

j) Tangible assets

Tangible assets includes the amount of buildings, land, furniture, vehicles, computer hardware and other fixtures owned by Banco Santander or acquired under finance leases. Tangible assets are classified by use as follows:

i. Property, plant and equipment for own use

Property, plant and equipment for own use – including tangible assets received by the Bank in full or partial satisfaction of financial assets representing receivables from third parties which are intended to be held for continuing use and tangible assets acquired under finance leases– are presented at acquisition cost, less the related accumulated depreciation and any estimated impairment losses (carrying amount higher than recoverable amount).

Depreciation is calculated, using the straight-line method, on the basis of the acquisition cost of the assets less their residual value. The land on which the buildings and other structures stand has an indefinite life and, therefore, is not depreciated.

The annual tangible asset depreciation charge is recognised in the income statement and are essentially equivalent to the following amortization percentages (determined based on the years of estimated useful life, on average, of the different elements):

	Average annual rate
Buildings for own use	2.00 %
Furniture	10.00 %
Fixtures	5.00 %
IT equipment	25.00 %
Vehicles	16.00 %
Other	5.00 %
Lease use rights	Less than the lease term or the useful life of the underlying asset

At the end of each reporting period, Banco Santander assesses whether there is any indication that the carrying amount of an asset exceeds its recoverable amount, in which case they write down the carrying amount of the asset to its recoverable amount and adjust future depreciation charges in proportion to its adjusted carrying amount and to its new remaining useful life, if the useful life needs to be re-estimated.

Similarly, if there is an indication of a recovery in the value of a tangible asset, Banco Santander recognises the reversal of the impairment loss recognised in prior periods and adjust the future depreciation charges accordingly. In no circumstances may the reversal of an impairment loss on an asset raise its carrying amount above that which it would have if no impairment losses had been recognised in prior years.

The estimated useful lives of the items of property, plant and equipment for own use are reviewed at least at the end of the reporting period with a view to detecting significant changes therein. If changes are detected, the useful lives of the assets are adjusted by correcting the depreciation charge to be recognised in the income statement in future years on the basis of the new useful lives.

Upkeep and maintenance expenses relating to property, plant and equipment for own use are recognised as an expense in the period in which they are incurred, since they do not increase the useful lives of the assets.

ii. Investment property

'Investment property' reflects the net values of the land, buildings and other structures held either to earn rentals or for obtaining profits by sales due to future increase in market prices.

The criteria used to recognise the acquisition cost of investment property, to calculate its depreciation and its estimated useful life and to recognise any impairment losses thereon are consistent with those described in relation to property, plant and equipment for own use.

In the case of investment properties that support obligations to pay a return directly linked to fair value, or to the returns of certain assets including the investment property itself, such properties are measured using the fair value model.

In order to evaluate the possible impairment Banco Santander determines periodically the fair value of its investment property so that, at the end of the reporting period, the fair value reflects the market conditions of the investment property at that date. This fair value is determined annually, taking as benchmarks the valuations performed by independent experts. The methodology used to determine the fair value of investment property is selected based on the status of the asset in question; thus, for properties earmarked for lease, the valuations are performed using the sales comparison approach, whereas for leased properties the valuations are made primarily using the income capitalisation approach and, exceptionally, the sales comparison approach.

In the sales comparison approach, the property market segment for comparable properties is analysed, inter alia, and, based on specific information on actual transactions and firm offers, current prices are obtained for cash sales of those properties. The valuations performed using this approach are considered as Level 2 valuations.

In the income capitalisation approach, the cash flows estimated to be obtained over the useful life of the property are discounted taking into account factors that may influence the amount and actual obtainment thereof, such as: (i) the payments that are normally received on comparable properties; (ii) current and probable future occupancy; (iii) the current or foreseeable default rate on payments. The valuations performed using this approach are considered as Level 3 valuations, since significant unobservable inputs are used, such as current and probable future occupancy and/or the current or foreseeable default rate on payments.

iii. Assets leased out under an operating lease

'Property, plant and equipment' - Leased out under an operating lease reflects the amount of the tangible assets, other than land and buildings, leased out by the Bank under an operating lease.

The criteria used to recognise the acquisition cost of assets leased out under operating leases, to calculate their depreciation and their respective estimated useful lives and to recognise the impairment losses thereon are consistent with those described in relation to property, plant and equipment for own use.

k) Accounting for leases

The main aspects contained in the regulation Bank of Spain Circular 2/2018 adopted by the Bank are included below:

When the Bank acts as lessee, it recognises a right-of-use asset representing its right to use the underlying leased asset with a corresponding lease liability on the date on which the leased asset is available for use by the Bank.

Each lease payment is allocated between liability and finance charge. The finance charge is allocated to the income statement during the term of the lease in such a way as to produce a constant periodic interest rate on the remaining balance of the liability for each year.

The right-of-use asset is depreciated over the useful life of the asset or the lease term, whichever is shorter, on a straight-line basis. If the Bank is reasonably certain to exercise a purchase option, the right-of-use asset is amortized over the useful life of the underlying asset.

Assets and liabilities arising from a lease are initially measured at present value. Lease liabilities include the net present value of the following lease payments:

- Fixed payments (including inflation-linked payments), less any lease incentive receivable.
- Variable lease payments that depend on an index or rate.
- The amounts expected to be paid by the lessee under residual value guarantees.
- The exercise price of a purchase option if the lessee is reasonably certain that it will exercise that option.
- Lease termination penalty payments, if the term of the lease reflects the lessee's exercise of that option.

Lease payments are discounted using the interest rate implicit in the lease. When this interest rate cannot be obtained, the interest rate used in these cases, is the lessee's incremental borrowing rate at the related date. For this purpose, the entity has calculated this incremental borrowing rate taking as reference the listed debt instruments issued by the Bank; in this regard, the Bank has estimated different interest rate curves depending on the currency and economic environment in which the contracts are located.

In order to construct the incremental borrowing rate, a methodology has been developed at the corporate level. This methodology is based on the need for each entity to consider its economic and financial situation, for which the following factors must be considered:

- Economic and political situation (country risk).
- Credit risk of the company.
- Monetary policy.
- Volume and seniority of the company's debt instrument issues.

The incremental borrowing rate is defined as the interest rate that a lessee would have to pay for borrowing, given a similar period to the duration of the lease and with similar security, the funds necessary to obtain an asset of similar value to the right-of-use asset in a similar economic environment. The Group entities have a wide stock and variety of financing instruments issued in different currencies to that of the euro (pound, dollar, etc.) that provide sufficient information to be able to determine an 'all in rate' (reference rate plus adjustment for credit spread at different terms and in different currencies). In circumstances, where the Bank, has its own financing, this has been used as the starting point for determining the incremental borrowing rate.

Right-of-use assets are valued at cost which includes the following:

- The amount of the initial measurement of the lease liability.
- Any lease payment made at or before the commencement date less any lease incentive received.
- Any initial direct costs.
- Restoration costs.

Banco Santander recognises the payments associated with short-term leases and leases of low-value assets on a straight-line basis as an expense in the income statement. Short-term leases are leases with a lease term less than or equal to 12 months (a lease that contains a purchase option is not a short term lease).

l) Intangible assets

Intangible assets are identifiable non-monetary assets (separable from other assets) without physical substance which arise as a result of a legal transaction or which are developed internally by Banco Santander.

Only assets whose cost can be measured reliably and it is likely that the Bank obtains future economic benefits are recognised.

Intangible assets are recognised initially at acquisition or production cost and are subsequently measured at cost less any accumulated amortisation and any accumulated impairment losses.

i. Goodwill

Any excess of the cost of the investments in the subsidiaries, joint ventures and associates accounted for using the equity method over the corresponding underlying carrying amounts acquired, adjusted at the date of first-time consolidation, is allocated as follows:

a. If it is attributable to specific assets and liabilities of the companies acquired, by increasing the value of the assets (or reducing the value of the liabilities) whose fair values were higher (lower) than the carrying amounts at which they had been recognised in the acquired entities' balance sheets.

b. If it is attributable to specific intangible assets, by recognising it explicitly in the balance sheet provided that the fair value of these assets within twelve months following the date of acquisition can be measured reliably.

c. The remaining amount is recognised as goodwill, which is allocated to one or more cash-generating units (CGU) (a cash-generating unit is the smallest identifiable group of assets that, as a result of continuing operation, generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets). The cash-generating units represent the Bank's geographical and/or business segments.

Goodwill (only recognised when it has been acquired by consideration) represents, therefore, a payment made by the acquirer in anticipation of future economic benefits from assets of the acquired entity that are not capable of being individually identified and separately recognised.Goodwill, in accordance with Bank of Spain Circular 4/2017, is to be amortized over a 10-year period unless otherwise stated. The debits to the income statements for the amortisation of these assets are recorded under the section 'Amortisation' in the income statement.

At the end of each annual reporting period or whenever there is any indication of impairment goodwill is reviewed for impairment (i.e. a reduction in its recoverable amount to below its carrying amount) and, if there is any impairment, the goodwill is written down with a charge to 'Impairment or reversal of impairment on non-financial assets, net - Intangible assets' in the income statement.

An impairment loss recognised for goodwill is not reversed in a subsequent period.

In the event of sale or departure of an activity that is part of a CGU, the part of the goodwill that can be assigned to said activity would be written-off, taking as a reference the relative value of the same over the total of the CGU at the time of sale or abandonment. If applicable, the distribution by currency of the remaining goodwill will be performed based on the relative values of the remaining activities.

ii. Other intangible assets

Other intangible assets includes the amount of identifiable intangible assets, such as purchased customer lists and computer software.

In accordance with Rule Twenty Eight of Bank of Spain Circular 4/2017, for the financial statements (individual and consolidated) not subject to the framework of International Financial Reporting Standards, intangible assets will be considered assets with a limited useful life.

An intangible assets useful life may not exceed the period during which the entity is entitled to use the asset. If the right of use is for a limited period that can be renewed, the useful life will include the renewal period only when there is evidence that the renewal will be carried out without significant cost.

Intangible assets shall be amortized in accordance with their useful life. Banco Santander reviews, at least at the end of each year, the amortisation period and the amortisation method of each of its intangible assets and, if it considers that they are not appropriate, the impact will be treated as a change in its accounting estimates.

The intangible asset amortisation charge is recognised under 'Depreciation and amortisation' in the income statement.

In both cases Banco Santander recognises any impairment loss on the carrying amount of these assets with a charge to 'Impairment or reversal of impairment on non-financial assets, net - Intangible assets in the income statement.

The criteria used to recognise the impairment losses on these assets and, where applicable, the reversal of impairment losses recognised in prior years are similar to those used for tangible assets (see note 2.j).

Internally developed computer software

Internally developed computer software is recognised as an intangible asset if, among other requisites (basically the Bank's ability to use or sell it), it can be identified and its ability to generate future economic benefits can be demonstrated.

Expenditure on research activities is recognised as an expense in the year in which it is incurred and cannot be subsequently capitalised into the carrying amount of the intangible asset.

m) Other assets

Other assets' in the balance sheet includes the amount of assets not recorded in other items, the breakdown being as follows:

- Inventories: this item includes the amount of assets, other than financial instruments, that are held for sale in the ordinary course of business, that are in the process of production, construction or development for such purpose, or that are to be consumed in the production process or in the provision of services. Inventories include land and other property held for sale in the property development business.

  Inventories are measured at the lower of cost and net realisable value, which is the estimated selling price of the inventories in the ordinary course of business, less the estimated costs of completion and the estimated costs required to make the sale.

Any write-downs of inventories -such as those due to damage, obsolescence or reduction of selling price- to net realisable value and other impairment losses are recognised as expenses for the year in which the impairment or loss occurs. Subsequent reversals are recognised in the income statement for the year in which they occur.

The carrying amount of inventories is derecognised and recognised as an expense in the period in which the revenue from their sale is recognised.

- Other: this item includes the balance of all prepayments and accrued income (excluding accrued interest, fees and commissions), the net amount of the difference between pension plan obligations and the value of the plan assets with a balance in the entity's favour, when this net amount is to be reported in the balance sheet, and the amount of any other assets not included in other items.

n) Other liabilities

'Other liabilities' includes the balance of all accrued expenses and deferred income, excluding those related to interests and fees on financial instruments, as well as the amount of any other liabilities not included in other categories.

o) Provisions and contingent liabilities (assets)

When preparing the financial statements of the Bank, Banco Santander makes a distinction between:

- Provisions: credit balances covering present obligations at the reporting date arising from past events which could give rise to a loss for the Banco Santander, which is considered to be likely to occur and certain as to its nature but uncertain as to its amount and/or timing.
- Contingent liabilities: possible obligations that arise from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more future events not wholly within the control of the Bank. They include the present obligations of the Bank when it is not probable that an outflow of resources embodying economic benefits will be required to settle them. Banco Santander does not recognise the contingent liability. The Bank will disclose a contingent liability, unless the possibility of an outflow of resources embodying economic benefits is remote.

Irrevocable contingent payments (ICPs), corresponding to payment facilities allowed under the annual contributions of certain levies, are recorded in accordance with the definitions mentioned above. In this regard, on 14 November 2025, the Group learned that the CJEU had definitively resolved the dispute concerning the CPI contributions made by a financial institution to the Single Resolution Fund, upholding the judgment of the General Court of 25 October 2023, which ruled against said financial institution regarding its request for the return of guarantees linked to irrevocable payment commitments for a Group entity whose license had been withdrawn. In light of this ruling, it was concluded that it was not necessary to modify the accounting entries that the Santander Group has made when using these facilities to make contributions corresponding to this levy or to other similar levies that also allow for such contributions.

- Contingent assets: possible assets that arise from past events and whose existence is conditional on, and will be confirmed only by, the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the Bank. Contingent assets are not recognised in the balance sheet or in the income statement, but rather are disclosed in the notes, provided that it is probable that these assets will give rise to an increase in resources embodying economic benefits.

Banco Santander´s financial statements include all the material provisions with respect to which it is considered that it is more likely than not the obligation will have to be settled. In accordance with accounting standards, contingent liabilities must not be recognised in the consolidated financial statements, but must rather be disclosed in the Notes.

Provisions (which are quantified on the basis of the best information available on the consequences of the event giving rise to them and are reviewed and adjusted at the end of each year) are used to cater for the specific obligations for which they were originally recognised. Provisions are fully or partially reversed when such obligations cease to exist or are reduced.

Provisions are classified according to the obligations covered as follows (see note 23):

- Provision for pensions and similar obligations: includes the amount of all the provisions made to cover post-employment benefits, including obligations to pre-retirees and similar obligations.

- Provisions for contingent liabilities and commitments: include the amount of the provisions made to cover contingent liabilities -defined as those transactions in which the Bank guarantees the obligations of a third party, arising as a result of financial guarantees granted or contracts of another kind- and contingent commitments -defined as irrevocable commitments that may give rise to the recognition of financial assets.
- Provisions for taxes and other legal contingencies and Other provisions: include the amount of the provisions recognised to cover tax and legal contingencies and litigation and the other provisions recognised by Banco Santander. Other provisions includes, inter alia, any provisions for restructuring costs and environmental measures.

p) Own equity instruments

Own equity instruments are those meeting both of the following conditions:

- The instruments do not include any contractual obligation for the issuer (i) to deliver cash or another financial asset to a third party; or (ii) to exchange financial assets or financial liabilities with a third party under conditions that are potentially unfavourable to the issuer.
- The instruments will or may be settled in the issuer's own equity instruments and are: (i) a non-derivative that includes no contractual obligation for the issuer to deliver a variable number of its own equity instruments; or (ii) a derivative that will be settled by the issuer through the exchange of a fixed amount of cash or another financial asset for a fixed number of its own equity instruments.

Transactions involving own equity instruments, including their issuance and cancellation, are charged directly to equity.

Changes in the value of instruments classified as own equity instruments are not recognised in the financial statements. Consideration received or paid in exchange for such instruments, including the coupons on preference shares contingently convertible into ordinary shares and the coupons associated with CCPP, is directly added to or deducted from equity.

q) Equity-instrument-based employee remuneration

Own equity instruments delivered to employees in consideration for their services, if the instruments are delivered once the specific period of service has ended, are recognised as an expense for services (with the corresponding increase in equity) as the services are rendered by employees during the service period. At the grant date the services received (and the related increase in equity) are measured at the fair value of the equity instruments granted. If the equity instruments granted are vested immediately, Banco Santander recognises in full, at the grant date, the expense for the services received.

When the requirements stipulated in the remuneration agreement include external market conditions (such as equity instruments reaching a certain quoted price), the amount ultimately to be recognised in equity will depend on the other conditions being met by the employees (normally length of service requirements), irrespective of whether the market conditions are satisfied.

If the conditions of the agreement are met but the external market conditions are not satisfied, the amounts previously recognised in equity are not reversed, even if the employees do not exercise their right to receive the equity instruments.

r) Recognition of income and expenses

The most significant criteria used by Banco Santander to recognise its income and expenses are summarised as follows:

i. Interest income, interest expenses and similar items

Interest income, interest expenses and similar items are generally recognised on an accrual basis using the effective interest method. Dividends received from other companies are recognised as income when the Banco Santander right to receive them arises.

ii. Commissions, fees and similar items

Fee and commission income and expenses are recognised in the income statement using criteria that vary according to their nature. The main criteria are as follows:

- Fee and commission income and expenses relating to financial assets and financial liabilities measured at fair value through profit or loss are recognised when paid.
- Those arising from transactions or services that are performed over a period of time are recognised over the life of these transactions or services.
- Those relating to services provided in a single act are recognised when the single act is carried out.

iii. Non-finance income and expenses

They are recognised for accounting purposes when the good is delivered or the non-financial service is rendered. To determine the amount and timing of recognition, a five-step model is followed: identification of the contract with the customer, identification of the separate obligations of the contract, determination of the transaction price, distribution of the transaction price among the identified obligations and finally recording of income as the obligations are satisfied.

iv. Deferred collections and payments

These are recognised for accounting purposes at the amount resulting from discounting the expected cash flows at market rates.

v. Loan arrangement fees

Loan arrangement fees, mainly loan origination, application and information fees, are accrued and recognised in income over the term of the loan.

s) Financial guarantees

Financial guarantees are considered contracts that require the issuer to make specific payments to reimburse the creditor for the loss it incurs when a specific debtor defaults on its due date payment obligation in accordance with the original or modified conditions of debt instrument, regardless of its legal form, which may be, among others, a deposit, financial guarantee, insurance contract or credit derivative.

Banco Santander initially recognises the financial guarantees provided on the liability side of the balance sheet at fair value, which is generally the present value of the fees, commissions and interest receivable from these contracts over the term thereof, and simultaneously the Bank recognises the amount of the fees, commissions and similar interest received at the inception of the transactions and a credit on the asset side of the balance sheet for the present value of the fees, commissions and interest outstanding.

Financial guarantees, regardless of the guarantor, instrumentation or other circumstances, are reviewed periodically so as to determine the credit risk to which they are exposed and, if appropriate, to consider whether a provision is required. The credit risk is determined by application of criteria similar to those established for quantifying impairment losses on debt instruments carried at amortised cost (described in note 2.g above).

The provisions made for these transactions are recognised under 'Provisions - Provisions for commitments and guarantees given in the consolidated balance sheet' (see note 23). These provisions are recognised and reversed with a charge or credit, respectively, to 'Provisions or reversal of provisions', net, in the income statement.

t) Post-employment benefits

Under the collective agreements currently in force and other arrangements, the Spanish banks included in the Group and certain other Spanish and foreign consolidated entities have undertaken to supplement the public social security system benefits accruing to certain employees, and to their beneficiary right holders, for retirement, permanent disability or death, and the post-employment welfare benefits.

Banco Santander's post-employment obligations to its employees are deemed to be defined contribution plans when the Bank makes pre-determined contributions (recognised under Personnel expenses in the income statement) to a separate entity and will have no legal or effective obligation to make further contributions if the separate entity cannot pay the employee benefits relating to the service rendered in the current and prior periods. Post-employment obligations that do not meet the aforementioned conditions are classified as defined benefit plans (see note 23).

Defined contribution plans

The contributions made in this connection in each year are recognised under 'Personnel expenses' in the income statement.

The amounts not yet contributed at each year-end are recognised, at their present value, under 'Provisions - Provision for pensions' and similar obligations on the liability side of the balance sheet.

Defined benefit plans

Banco Santander recognises under 'Provisions - Provision for pensions and similar obligations on the liability side of the balance sheet' (or under 'Other assets' on the asset side, as appropriate) the present value of its defined benefit post-employment obligations, net of the fair value of the plan assets.

Plan assets are defined as those that will be directly used to settle obligations and that meet the following conditions:

- They are not owned by Banco Santander, but by a legally separate third party that is not a party related to the Bank.
- They are only available to pay or fund post-employment benefits and they cannot be returned to the Bank unless the assets remaining in the plan are sufficient to meet all the benefit obligations of the plan and of the entity to current and former employees, or they are returned to reimburse employee benefits already paid by the Bank.

If Banco Santander can look to an insurer to pay part or all of the expenditure required to settle a defined benefit obligation, and it is practically certain that said insurer will reimburse some or all of the expenditure required to settle that obligation, but the insurance policy does not qualify as a plan asset, the Bank recognises its right to reimbursement -which, in all other respects, is treated as a plan asset- under 'Insurance contracts linked to pensions' on the asset side of the balance sheet.

Banco Santander will recognise the following items in the income statement:

- Current service cost, (the increase in the present value of the obligations resulting from employee service in the current period), is recognised under 'Staff costs'.
- The past service cost, which arises from changes to existing post-employment benefits or from the introduction of new benefits and includes the cost of reductions, is recognised under 'Provisions or reversal of provisions'.
- Any gain or loss arising from a liquidation of the plan is included in the 'Provisions or reversion of provisions'.
- Net interest on the net defined benefit liability (asset), i.e. the change during the period in the net defined benefit liability (asset) that arises from the passage of time, is recognised under 'Interest expense' and similar charges ('Interest and similar income' if it constitutes income) in the income statement.

The remeasurement of the net defined benefit liability (asset) is recognised in 'Other comprehensive income' under Items not reclassified to profit or loss and includes:

- Actuarial gains and losses generated in the year, arising from the differences between the previous actuarial assumptions and what has actually occurred and from the effects of changes in actuarial assumptions.
- The return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset).
- Any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).

u) Other long-term employee benefits

Other long-term employee benefits, defined as obligations to pre-retirees -taken to be those who have ceased to render services at the entity but who, without being legally retired, continue to have economic rights vis-à-vis the entity until they acquire the legal status of retiree-, long-service bonuses, obligations for death of spouse or disability before retirement that depend on the employee's length of service at the entity and other similar items, are treated for accounting purposes, where applicable, as established above for defined benefit post-employment plans, except that actuarial gains and losses are recognised under 'Provisions or reversal of provisions', net, in the income statement (see note 23).

v) Termination benefits

Termination benefits are recognised when there is a detailed formal plan identifying the basic changes to be made, provided that implementation of the plan has begun, its main features have been publicly announced or objective facts concerning its implementation have been disclosed.

w) Income tax

The income tax expense is recognised in the income statement, except when they arise from a transaction whose results are recognised directly in equity.

The current income tax expense is calculated as the sum of the current tax resulting from application of the appropriate tax rate to the taxable profit for the year (net of any deductions allowable for tax purposes), and of the changes in deferred tax assets and liabilities recognised in the income statement.

'Deferred tax assets' and liabilities include temporary differences, which are identified as the amounts expected to be payable or recoverable on differences between the carrying amounts of assets and liabilities and their related tax bases, and tax loss and tax credit carryforwards. These amounts are measured at the tax rates that are expected to apply in the period when the asset is realised or the liability is settled.

'Tax assets' include the amount of all tax assets, which are broken down into current -amounts of tax to be recovered within the next twelve months- and deferred -amounts of tax to be recovered in future years, including those arising from tax loss or tax credit carryforwards.

Tax liabilities' includes the amount of all tax liabilities (except provisions for taxes), which are broken down into current -the amount payable in respect of the income tax on the taxable profit for the year and other taxes in the next twelve months- and deferred -the amount of income tax payable in future years.

Deferred tax liabilities are recognised in respect of taxable temporary differences associated with investments in subsidiaries, associates or joint ventures, except when the Bank is able to control the timing of the reversal of the temporary difference and, in addition, it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred tax assets are only recognised for temporary differences to the extent that it is considered probable that the Bank will have sufficient future taxable profits against which the deferred tax assets can be utilised, and the deferred tax assets do not arise from, in its initial recognition of (i)a business combination, (ii) an operation that does not affect either the tax result or the accounting result or (iii) on the date of the transaction, does not generate deductible and taxable temporary differences for the same amount (in which case assets and deferred tax liabilities). Other deferred tax assets (tax loss and tax credit carryforwards) are only recognised if it is considered probable that the Bank entities will have sufficient future taxable profits against which they can be utilised.

Differences generated by the different accounting and tax treatment of any of the income and expenses recorded directly in equity to be paid or recovered in the future are accounted for as temporary differences.

The deferred tax assets and liabilities are reassessed at the reporting date in order to ascertain whether any adjustments need to be made on the basis of the findings of the analyses performed.

Regarding taxes on profits arising from the application of tax laws for the implementation of the Pillar Two model rules, including those related to national minimum complementary taxes, the Group applies the mandatory and temporary exception to the recognition of deferred tax assets and liabilities derived from said tax laws (see note 24.f).

x) Residual maturity periods

In note 49 it is provided on analysis of the maturities of the balances of certain items in the balance sheet.

Grupo and Banco Santander have recorded as 'time liabilities' those recognised financial liabilities in which the counterparty may require payments.

Likewise, when Grupo and Banco Santander have committed to having amounts available at different maturity periods, these amounts have been recorded in the first year in which they may be required.

Additionally, for the financial guarantee contracts issued, the Group and the Bank have recorded the maximum amount of the financial guarantee issued in the first year in which the guarantee can be executed.

y) Statement of recognised income and expenses

This statement presents the income and expenses generated by the Bank as a result of its business activity in the year, and a distinction is made between the income and expenses recognised in the income statement for the year and the other income and expenses recognised directly in equity.

Accordingly, this statement presents:

a. The profit for the year.

b. The net amount of the income and expenses recognised in 'Other comprehensive income' under items that will not be reclassified to profit or loss.

c. The net amount of the income and expenses recognised in Other comprehensive income under items that may be reclassified subsequently to profit or loss.

d. The income tax incurred in respect of the items indicated in b and c above, except for the valuation adjustments arising from investments in associates or joint ventures accounted for using the equity method, which are presented net.

e. Total recognised income and expense, calculated as the sum of a) to d) above, presenting separately the amount attributable to the parent company and the amount relating to non-controlling interests.

The statement presents the items separately by nature, grouping together items that, in accordance with the applicable accounting standards, will not be reclassified subsequently to profit and loss since the requirements established by the corresponding accounting standards are met.

z) Statement of changes in total equity

This statement presents all the changes in equity, including those arising from changes in accounting policies and from the correction of errors. Accordingly, this statement presents a reconciliation of the carrying amount at the beginning and end of the year of all the equity items, and the changes are grouped together on the basis of their nature into the following items:

a. Adjustments due to changes in accounting policies and to errors: include the changes in equity arising as a result of the retrospective restatement of the balances in the financial statements, distinguishing between those resulting from changes in accounting policies and those relating to the correction of errors.

b. Income and expense recognised in the year: includes, in aggregate form, the total of the aforementioned items recognised in the statement of recognised 'Income and expense'.

c. Other changes in equity: includes the remaining items recognised in equity, including, inter alia, increases and decreases in capital, distribution of profit, transactions involving own equity instruments, equity-instrument-based payments, transfers between equity items and any other increases or decreases in equity.

aa) Statement of cash flows

The following terms are used in the statements of cash flows with the meanings specified:

- Cash flows: inflows and outflows of cash and cash equivalents, which are short-term, highly liquid investments that are subject to an insignificant risk of changes in value, irrespective of the portfolio in which they are classified.

  Banco Santander classifies as cash and cash equivalents the balances recognised under 'Cash, cash balances at central banks' and 'Other deposits on demand' in the balance sheet.

- Operating activities: the principal revenue-producing activities of credit institutions and other activities that are not investing or financing activities.

- Investing activities: the acquisition or disposal of long-term assets and other investments not included in cash and cash equivalents.

- Financing activities: activities that result in changes in the size and composition of the equity and liabilities that are not operating activities.

During 2025, Banco Santander received interest amounting to EUR 24,964 million and paid interest amount to EUR 19,244 million (EUR 27,005 and 20,122 million, respectively, in 2024).

Also, the dividends received and paid by Banco Santander are detailed in notes 4 and 36.

3. Grupo Santander

a) Banco Santander, S.A. and international Group structure

The growth of Grupo Santander in the last decades has led Banco Santander to also act, in practice, as a holding entity of the shares of the various companies in its Group, and its results are becoming progressively less representative of the performance and earnings of the Group. Therefore, each year the bank determines the amount of the dividends to be distributed to its shareholders on the basis of the consolidated net profit, while maintaining the Group's objectives of capitalisation and taking into account that the transactions of the Bank and of the rest of the Group are managed on a consolidated basis (notwithstanding the allocation to each company of the related net worth effect).

At the international level, the various banks and other subsidiaries, joint ventures and associates of the Group are integrated in a corporate structure comprising various holding companies which are the ultimate shareholders of the banks and subsidiaries abroad.

The purpose of this structure, all of which is controlled Banco Santander, is to optimise the international organisation from the strategic, economic, financial and tax standpoints, since it makes it possible to define the most appropriate units to be entrusted with acquiring, selling or holding stakes in other international entities, the most appropriate financing method for these transactions and the most appropriate means of remitting the profits obtained by the group's various operating units to Spain.

The Appendices provide relevant data on the consolidated group companies and on the companies accounted for using the equity method.

b) Acquisitions and disposals

Following is a summary of the main acquisitions and disposals of ownership interests in the share capital of other entities and other significant corporate transactions performed in the last two years or pending to be completed:

i. Agreement for the sale of 49% of Santander Bank Polska S.A. and accelerated placement of ordinary shares

On 5 May 2025, Banco Santander announced an agreement to sell approximately 49% of the share capital of Santander Bank Polska S.A. (Santander Polska) to Erste Group Bank AG at a price of 584 zlotys per share, as well as the 50% of Santander Towarzystwo Funduszy Inwestycyjnych S.A. (TFI, the asset management business in Poland) owned directly by Banco Santander, S.A., for a total amount of approximately EUR 7,000 million. Following the transaction and the accelerated placement of ordinary shares announced on 2 December 2025, of 3,576,626 ordinary shares of Santander Polska, representing approximately 3.5% of its share capital, for a total import of EUR 407 million, Santander will hold 9.7% of Santander Polska's share capital (58.7% as of 31 December 2025). The transaction was completed on 9 January 2026 (see Note 1.g. Introduction, basis of presentation of the consolidated annual accounts, and other information, subsequent events).

As a result of the agreement, the Group has reclassified the assets of Santander Polska and TFI in the consolidated balance sheet as of 31 December 2025, to the heading 'Non-current assets held for sale', and their liabilities to the heading 'Liabilities associated with non-current assets held for sale'. Furthermore, the effect of these businesses on the profit and loss account for the 2025 financial year has been classified under the heading 'Profit/(loss) after tax from discontinued operations' (see Note 12), with the same classification being applied for comparative purposes in the profit and loss accounts for the 2024 and 2023 financial years.

As part of this transaction, on 23 December 2025, Santander Consumer, S.A. acquired 60% of Santander Consumer Bank Polska, which was owned by Santander Polska, for PLN 3,105 million (EUR 726 million). This transaction had no significant impact on the Group's consolidated financial statements.

ii. Agreement for the acquisition of TSB Banking Group plc

On 1 July 2025, Banco Santander announced an agreement with Banco de Sabadell, S.A. for the acquisition of TSB Banking Group plc for approximately GBP 2,650 million (EUR 3,100 million) plus the results generated by this business between 31 March 2025, and the closing of the transaction.

The completion of the transaction is subject to the usual conditions for this type of deal, including obtaining the relevant regulatory authorizations.

iii. Agreement for the sale of the stake in Caceis

On 19 December 2024, Grupo Santander signed an agreement with Crédit Agricole S.A. for the sale of its 30.5% stake in the share capital of CACEIS. As a result of the above, as of 31 December 2024, this participation was reclassified, at its carrying value, from the line item 'investments' to the line item 'Non-current assets held for sale' in the balance sheet (see Note 6). The transaction was formalized in 2025 after obtaining the relevant regulatory approvals, generating a profit before taxes of EUR 231 million registered in the line item 'Gains or losses on non-current assets held for sale not classified as discontinued operations' of the income statement. Following the completion of the planned transaction, Crédit Agricole S.A. holds the 100% of CACEIS's share capital.

The joint depositary, custody and related asset servicing services of Santander and CACEIS in Latin America is not included in the scope of the transaction and continues to be jointly controlled by Santander and CACEIS.

iv.Accelerated placement of ordinary shares of Santander Bank Polska

On 10 September 2024, Banco Santander, S.A. announced an accelerated placement of 5,320,000 ordinary shares of its subsidiary Santander Bank Polska S.A., representing approximately 5.2% of its share capital, at a price of PLN 463 (EUR 108) per ordinary share. The transaction was settled on September 13, with the total transaction amounting to PLN 2,463 million (EUR 575 million). Banco Santander will continue to hold a majority stake in Santander Bank Polska S.A. of 62.2% of the share capital (prior to this transaction, the percentage of participation was 67.4%).

This sale has resulted in an increase in reserves and valuation adjustments of EUR 158 million and EUR 57 million, respectively, and an increase in minority equity of EUR 360 million.

v.Tender offers for shares of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México

On 21 October 2022, Banco Santander, S.A. ('Banco Santander') announced that it intends to make concurrent cash tender offers to acquire all of the shares of Banco Santander México, S.A., Institución de Banca Múltiple, Grupo Financiero Santander México ('Santander Mexico') in Mexico (Shares) and United States (American Depositary Shares ('ADSs')) which were not owned by Grupo Santander, which amount to approximately 3.76% of Santander Mexico's share capital.

The offers were launched on 7 February 2023 and were originally scheduled to close on 8 March 2023. On 1 March 2023, Banco Santander announced its decision to extend the expiration date of the offers so that they could be concluded on 10 April 2023. Finally, after the offers' closing, 3.6% of the capital accepted the offer, which raised the Group's stake in Santander México from 96.2% to 99.8%will be settled on 13 March 2023.

Shareholders who participated in the offerings received 24.52 Mexican pesos (approximately EUR 1.20) per Share and USD 6.6876 in cash for each ADS (i.e., the equivalent in United States dollars of122.6 Mexican pesos in cash for each ADS at the US dollar/Mexican peso exchange rate on the expiration date of 10 April 2023),which corresponded to the book value of the Santander México share according to the quarterly report of Santander México corresponding to the fourth quarter of the year 2022 in accordance with applicable legislation, with a total disbursement by Banco Santander of approximately EUR 300 million.

The operation led to an increase of EUR 13 million in Reserves and a decrease of EUR 313 million in minority interests of the consolidated balance sheet.

Once the offers were concluded and settled, Banco Santander proceeded to: (i) withdraw the ADSs from the listing on the New York Stock Exchange ('NYSE') and the Shares from the registry before the Securities and Exchange Commission ('SEC') in the United States and; (ii) cancel the registration of the Shares in the National Securities Registry of the National Banking and Securities Commission ('CNBV') and withdraw the listing of the Shares in the Mexican Stock Exchange, S.A.B. de C.V. ('BMV'). Said cancellation was approved by the extraordinary general shareholders' meeting of Santander México held on 30 November 2022, with the favourable vote of the holders of the shares that represent more than 95% of the shares of Santander Mexico, as required by the Mexican Securities Market Law.

Pursuant to Mexican law, on 12 May 2023, Banco Santander and Santander México established a trust (the 'Repurchase Trust'), to which the holders of the Shares that remain outstanding after the conclusion of the offers, to sell said Shares to the repurchase trust, at the same cash price that would have been paid to them in the Mexican offer with respect to the same. At the end of the year, said trust was liquidated and the Group's effective participation amounts to 99.98%.

c) Offshore entities

Spanish regulation

According to current Spanish regulation (Law 11/2021, of 9 July; Royal Decree 1080/1991, of 5 July; and Order HFP/115/2023, of 9 February), at year-end 2025 Grupo Santander has three branches in the non-cooperative jurisdictions of Jersey, the Isle of Man and the Cayman Islands (offshore entities). The Group also has a subsidiary in Guernsey, which is in the process of being wound up and is tax resident in the United Kingdom, and is therefore subject to its tax regime.

i. Offshore branches

As previously mentioned, Grupo Santander has three offshore branches in the non-cooperative jurisdictions of the Cayman Islands, the Isle of Man and Jersey. They report to, and consolidate balance sheets and income statements with, their respective foreign headquarters. They are taxed either with their headquarters (the Cayman Islands branch in Brazil) or in the territories they are located (Jersey and the Isle of Man, pertain to the UK)

These three offshore branches have a total of 147 employees as of December 2025.

ii. Subsidiaries in non-cooperative jurisdictions that are tax resident in the United Kingdom (UK)

Grupo Santander also has a subsidiary incorporated in the non-cooperative jurisdiction of Guernsey, which is not deemed an offshore entity because it operated exclusively from the UK and is tax resident there, and is therefore subject to UK tax law. This subsidiary is in the process of being liquidated as of December 31, 2025.Additionally, during 2025 a subsidiary incorporated in Bermuda and tax resident in the United Kingdom, was liquidated.

iii. Other offshore holdings

From Brazil, Grupo Santander manages Santander Brazil Global Investment Fund SPC, a segregated portfolio company located in the Cayman Islands. The Group also holds minority, non-controlling financial interests in entities located in non-cooperative jurisdictions, including, among others, Klar Holdings Limited in the Cayman Islands.

The European Union (EU)

Santander has no presence in any of the 11 jurisdictions included on the EU Council's blacklist of non-cooperative jurisdictions for tax purposes as of 31 December 2025. Additionally, the EU grey list comprises another 11 jurisdictions which have sufficiently committed to fully adapting their legislation to international tax standards, subject to monitoring by the EU. Within these grey-list jurisdictions, Santander operates only in Morocco through one subsidiary and holds a minority interest in a financial institution tax resident in that jurisdiction.

Organization for Economic Cooperation and Development (OECD)

Grupo Santander has no presence in any jurisdictions non-compliant with both OECD standards on transparency and exchange of information for tax purposes (the automatic exchange of information AEOI standard and the exchange of information on request EOIR standard), according to the last annual reports of the OECD Global Forum on Transparency and Exchange of Information for Tax Purposes, released on 2 December 2025.

However, Vietnam —a jurisdiction where Santander has a subsidiary— does not comply with the EOIR standard. Meanwhile, The Bahamas and Chile —jurisdictions where Santander is also present—, although they have complete legal and regulatory frameworks in place for the implementation of the AEOI standard, they still need to improve the effectiveness of this standard.

Santander presence in offshore territories at the end of 2025 is as follows:**Group presence in non-cooperative jurisdictions**

	Group presence in non-cooperative jurisdictions	
Regulatory framework	Subsidiaries	Branches
Spanish legislation[a]	—	3[b]
Council of the EU blacklist	—	—
OECD[c]	—	—
2025	**—**	**3**
2024[c]	**—**	**3**

a. Additionally, there is one subsidiary constituted in Guernsey (in the process of winding up), but resident for tax purposes in the UK.

b. The Group has three branches in Jersey, the Isle of Man and the Cayman Islands. These jurisdictions are not included in the European Union's October 2025 blacklist and fully comply with both OECD international standards on transparency and exchange of information for tax purposes (AEOI and EOIR).

c. Jurisdictions non-compliant with both OECD standards (AEOI and EOIR).

Grupo Santander has the right mechanisms (risk management, supervision, verification and review plans, and regular reporting) to prevent reputational, tax and legal risks in entities resident in non-cooperative jurisdictions. Grupo Santander also maintains its policy of limiting and reducing its presence in non-cooperative jurisdictions when possible.

PwC member firms audited the financial statements of Grupo Santander's offshore entities in 2025 and 2024.

d) Consolidated balance sheet, income statement, statement of recognized income and expenses, statement of changes in total equity and cash-flow statement

Presented below are the Group´s consolidated balance sheets as of December 31, 2025 and 2024, and the consolidated income statements, statements of recognized income and expense, statements of changes in total equity and statements of cash flows for the years ended on those dates.

4. Distribution of Banco Santander's profit, shareholder remuneration scheme and earnings per share

a) Distribution of Banco Santander's profit and shareholder remuneration scheme

The distribution of the Bank's current annual results that the board of directors will propose for approval by the shareholders at the annual general meeting is as follows:

EUR million	
To dividends	3,520
Dividend paid at 31 December[A]	*1,699*
Complementary dividend[B]	*1,821*
To voluntary reserves[C]	*7,593*
Net profit for the year	**11,113**

A. Total amount paid as interim dividend, at the rate of EUR 11.5 fixed cents per eligible share (recorded in 'Shareholders' equity - Interim dividends').

B. Fixed complementary dividend of EUR 12.5 gross cents per eligible share, payable in cash as from 5 May 2026. The total amount has been estimated on the assumption that, as a result of the partial implementation of the buyback program announced on February 3, 2026, the number of the Bank's outstanding shares eligible for the dividend will be 14,568,470,446 and that, as envisaged, the capital increase submitted to the 2026 general meeting under item 6.C of the agenda will not be executed before 5 May 2026. Therefore, the total amount of the complementary dividend may be lower if more shares than initially envisaged are acquired under the buy-back programme, or higher if fewer shares are acquired under the buy-back programme or if the capital increase submitted to this general meeting under item 6.C of the agenda is executed before 5 May 2026.

C. Estimated amount corresponding to a complementary dividend of EUR 1,821,058,805.75. To be increased or reduced by the same amount by which the total amount of the final dividend is lower or higher, respectively, than its estimated amount.

The transcribed proposal comprises the part of the 2025 shareholder remuneration policy that is implemented through cash dividends (the interim dividend paid in November 2025 of EUR 11.5 cents per share with dividend entitlement, approved by the board of directors on September 30, 2025, and the complementary dividend expected to be paid as of 5 May 2026, of EUR 12.5 cents per share with the dividend entitlement, proposed by the board of directors on 24 February 2026, and therefore subject to approval by the general meeting).

The remuneration policy also provides for shareholder remuneration through the implementation of share buyback programmes, to which an amount equivalent to 25% of the Group's underlying profit will be allocated. The first programme charged to 2025 results, amounting to approximately amount of EUR 1,700 million, was completed between August 2025 and December 2025. In addition, in 2025 Banco Santander announced its objective of allocating at least EUR 10,000 million to share buybacks in respect of 2025 and 2026 results and expected excess capital. As part of this objective, on 4 February 2026 a second buyback programme was launched for a maximum total amount of EUR 5,030 million, of which EUR 1,830 million corresponds to an amount equivalent to approximately 25% of the Group's underlying profit in the second half of 2025, and the remaining EUR 3,200 million corresponds to approximately 50% of the capital released following completion of the sale of the 49% stake in Santander Bank Polska. A capital reduction resolution is also being submitted to the general meeting to enable the cancellation of the treasury shares acquired under this second buyback programme.

The accounting statement, prepared by the Bank pursuant to legal requirements, evidencing the existence of sufficient liquidity for the payment of the interim dividend on the date and for the amount mentioned above, was as follows:

EUR million	
	31 August 2025
Profit before taxes	6,193
Tax expense	*635*
Dividends paid in cash	—
Distributable maximum amount	**5,558**
Available liquidity	96,923

Finally, and although it does not form part of the remuneration charged to the 2025 financial year, it is hereby stated that, in execution of the resolution of the general meeting held on 4 April 2025, on 2 May 2025 the Bank paid a final cash dividend of EUR 11 cents per share charged to 2024 results. Lastly, also charged to 2024 results, the Bank implemented two share buyback programmes. The first of these programmes, for a maximum amount of EUR 1,525 million, was completed in December 2024, and the second, for a maximum amount of EUR 1,587 million, was completed in June 2025.

b) Earnings/loss per share from continuing and discontinued operations

i. Basic earnings / loss per share

Basic earnings/loss per share are calculated by dividing the net profit attributable to the Group, adjusted by the after-tax amount of the remuneration of contingently convertible preference shares (PPCC) recognised in equity and the capital perpetual preference shares (PPCA) (see note 21), if applicable, by the weighted average number of ordinary shares outstanding during that period, excluding the average number of own shares held through that period.

Accordingly:

	2025	2024
Profit (Loss) attributable to the Parent (EUR million)	14,101	12,574
Remuneration of PPCC and PPCA (EUR million) (note 21)	(622)	(620)
	13,479	**11,954**
Of which:		
Profit (Loss) from discontinued operations (non controlling interest net) (EUR million)	*962*	*822*
Profit (Loss) from continuing operations (non-controlling interest and PPCC and PPCA net) (EUR million)	*12,517*	*11,132*
Weighted average number of shares outstanding	14,890.30484	15,497.607269
Basic earnings (Loss) per share (euros)	**0.905**	**0.771**
Of which, from discounted operations (euros)	**0.065**	**0.053**
Basic earnings (Loss) per share from continuing operations (euros)	**0.840**	**0.718**

ii. Diluted earnings / loss per share

Diluted earnings/loss per share are calculated by dividing the net profit attributable to the Group, adjusted by the after-tax amount of the remuneration of contingently convertible preference shares recognised in equity (PPCC) recognised in equity and the capital perpetual preference shares (PPCA) (see note 21), by the weighted average number of ordinary shares outstanding during the year, excluding the average number of treasury shares and adjusted for all the dilutive effects inherent to potential ordinary shares (share options, and convertible debt securities).

Accordingly, diluted earnings/loss per share were determined as follows:

	2025	2024
Profit (Loss) attributable to the Parent (EUR million)	14,101	12,574
Remuneration of PPCC and PPCA (EUR million) (note 21)	(622)	(620)
Dilutive effect of changes in profit for the period arising from potential conversion of ordinary shares	—	—
	13,479	**11,954**
Of which:		
Profit (Loss) from discontinued operations (net of non-controlling interests) (EUR million)	*962*	*822*
Profit (Loss) from continuing operations (net of non-controlling interests and PPCC and PPCA) (EUR million)	*12,517*	*11,132*
Weighted average number of shares outstanding	14,890,304,840	15,497,607,269
Dilutive effect of options/rights on shares	85,269,647	70,110,570
Adjusted number of shares	14,975,574,487	15,567,717,839
Diluted earnings (Loss) per share (euros)	**0.900**	**0.768**
Of which, from discounted operations (euros)	**0.064**	**0.053**
Diluted earnings (Loss) per share from continuing operations (euros)	**0.836**	**0.715**

Santander

5. Remuneration and other benefits paid to the Bank's directors and senior managers

The following section contains qualitative and quantitative disclosures on the remuneration paid to the members of the board of directors —both executive and non-executive directors— and senior managers for 2025 and 2024.

a) Remuneration of Directors

i. Bylaw-stipulated emoluments

The annual general meeting held on 22 March 2013 approved an amendment to the Bylaws, whereby the remuneration of directors in their capacity as board members became an annual fixed amount determined by the annual general meeting. This amount shall remain in effect unless the shareholders resolve to change it at a general meeting. However, the board of directors may elect to reduce the amount in any years in which it deems such action justified.

The maximum remuneration established by the annual general meeting was EUR 6 million in 2025 (EUR 6 million in 2024), with two components: (a) an annual emolument and (b) attendance fees.

The specific amount payable for the above-mentioned items to each of the directors is determined by the board of directors. For such purpose, it takes into consideration the positions held by each director on the board, their membership of the board and the board committees and their attendance to the meetings thereof, and any other objective circumstances considered by the board.

The total Bylaw-stipulated emoluments earned by the directors in 2025 amounted to EUR 5.3 million (EUR 5.4 million in 2024).

Annual allotment

For 2025, the board of directors, upon recommendation of the remuneration committee, approved a 3% increase in the annual allotments payable to the chair and members of the board and its committees (including the executive committee), as well as to the lead independent director and the non-executive Vice Chair .Accordingly, each director received, in respect of 2024 and 2025, the amounts corresponding to their service on the board and its committees, with such amounts determined by the specific position held, as detailed in the table below.

Amount per director in euros	2025	2024
Members of the board of directors	100,940	98,000
Members of the executive committee	175,100	170,000
Members of the audit committee	44,290	43,000
Members of the appointments committee	28,840	28,000
Members of the remuneration committee	28,840	28,000
Members of the risk supervision, regulation and compliance committee	44,290	43,000
Members of the responsible banking, sustainability and culture committee	28,840	28,000
Members of the innovation and technology committee	28,840	28,000
Chair of the audit committee	72,100	70,000
Chair of the appointments committee	51,500	50,000
Chair of the remuneration committee	51,500	50,000
Chair of the risk supervision, regulation and compliance committee	72,100	70,000
Chair of the responsible banking, sustainability and culture committee	51,500	50,000
Chair of the innovation and technology committee	72,100	70,000
Lead independent director[A]	113,300	110,000
Non-executive Vice Chair	30,900	30,000

A. Glenn Hutchins has been allocated EUR 700,000 (including annual allowances and attendance fees) in minimum total annual pay set for the required time and dedication to perform his roles.

Attendance fees

The directors receive fees for attending board and committee meetings, excluding executive committee meetings, where no attendace fees are received.

In line with the adjustment to the annual allotments, the board of directors approved a 3% increase for 2025 in attendance fees compared with 2024.

Accordingly, attendance fees for meetings of the board and its committees (with the exception of the Executive Committee, for which no attendance fees are payable) amounted, for the last two years, to the totals set out in the table below:

Attendance fees per director per meeting in euros

	2025	2024
Board of directors	2,785	2,704
Audit committee and risk supervision, regulation and compliance committee	1,821	1,768
Other committees (excluding executive committee)	1,606	1,560

ii. Salaries

The executive directors receive salaries. In accordance with the policy approved by the annual general meeting, salaries are composed of a fixed annual remuneration and a variable one, which consists in a unique incentive, which is a deferred variable remuneration plan linked to multi-year objectives, which establishes the following payment scheme:

- 40% of the variable remuneration amount, determined at year-end on the basis of the achievement of the established objectives, is paid immediately.
- The remaining 60% is deferred over five years provided that the conditions of permanence in the Group and non-concurrence of the malus clauses are met, and subject to long term metrics, taking into account the following accrual scheme:
  - The accrual of the first and second portion (20% of total variable compensation, paid in 2027 and 2028) will be conditional on none of the malus clauses being triggered.
  - The accrual of the third, fourth and fifth portion (40% of total variable compensation and paid in 2029, 2030 and 2031), is linked to objectives related to the period 2025—2027 and the metrics and scales associated with these objectives. The fulfilment of the objectives determines the percentage to be paid of the deferred amount in these three annuities, and these targets can reduce these amounts and the number of deferred instruments, or increase them up to a maximum achievement ratio of 125%, so executives have the incentive to exceed their targets.

In accordance with current remuneration policies, the amounts already paid will be subject to a possible recovery (clawback) by the Bank during the period set out in the policy in force at each moment.

Payment of the approved incentive is paid 40% in cash and the remaining 60% in instruments, consisting of Banco Santander shares and restricted stock units (RSUs) of PagoNxt, split as:

- the amount of PagoNxt RSUs set for each year; and
- the rest, all in shares of Banco Santander.

Comparative of executive remuneration (Chair and CEO)

The target bonus of the Executive Chair and the CEO for 2025 remains unchanged compared to 2024.

Variable contributions to pensions were not modified in 2025, so the amounts are the 22% of the 30% of the last three assigned bonus' average.

In assessing individual performance, the Board considered the Grupo Santander's strong results for 2025, reflecting continued delivery of our strategic plan. Attributable profit reached EUR 14,101 million in 2025, up 12% year-on-year (or + 16% in constant euros), with a TSR during the year of 132% (+60% in relative terms vs. our peer group).

The Board also evaluated the leadership of the Executive Chair and the Chief Executive Officer in delivering these results and advancing the Group's strategic priorities. Taking these factors into account, it determined that both executives achieved an 'Exceptional' level of performance and approved the corresponding variable remuneration.

Moreover, the ratio of executive directors' total remuneration to underlying attributable profit fell to 0.17% from 0.18% in 2024.

iii. Detail by director

The detail, by bank director, of the short-term (immediate) and deferred (not subject to long-term goals) remuneration for 2025 and 2024 is provided below:

EUR thousand

	2025																		2024

A. All amounts received were reimbursed to Fundación Botín.
B. Director and member of the nomination committee, responsible banking, sustainability and culture committee and innovation and technology committee since 27 June 2024.
C. Director since 27 June 2024.
D. Stepped down as director on 22 March 2024.
E. Stepped down as director on 27 June 2024.
F. Also includes emoluments for other roles in the board.

Other remuneration includes EUR 1,000 thousand for the role as non-executive Chair of the Santander España business unit and for attending its board and committee meetings for Luis Isasi. For José Antonio Álvarez, this amount includes remuneration as strategic advisor of Grupo Santander, life and health insurance contributions (EUR 678 thousand) and part of the former supplement for having waived the death and disability policy (EUR 12 thousand).

Changes in the chairship or membership of the committees:
1. Antonio Weiss was appointed member of the remuneration committee on 1 January 2025.
2. José Antonio Álvarez was appointed member of the risk supervision, regulation and compliance oversight committee on 1 January 2025.

Following is the detail by executive director of the salaries linked to multi-year objectives at their fair Value, which will only be received if the conditions of permanence in the Group, non-applicability of malus clauses and achievement of the established objectives are met (or, as the case may be, of the minimum thresholds thereof, with the consequent reduction of amount agreed-upon at the end of the year) in the terms described in note 42.

EUR thousand

	2025				2024
	Variable subject to Long-term objectives[1]				
	In cash	In shares	In RSUs	Total	Total
Ana Botín	701	1,893	210	2,804	2,332
Héctor Grisi	484	1,277	176	1,938	1,611
Total	**1,185**	**3,170**	**386**	**4,742**	**3,943**

1. Corresponds with the fair value of the maximum amount they are entitled to in a total of 3 years: 2029, 2030 and 2031 subject to conditions of continued service, with the exceptions provided, and to the non-applicability of malus clauses and achievement of the objectives established The face value of the three aforementioned deferred amounts is EUR 6,774 thousand for 2025 (EUR 4,006 thousand for Ana Botín and EUR 2,768 thousand for Héctor Grisi)

The fair value has been determined at the grant date based on the valuation report of an independent expert, Willis Towers Watson. Based on the design of the plan for 2025 and the levels of achievement of similar plans in comparable entities, the fair value considered is 70% of the variable remuneration subject to long-term objectives (see note 42).

Note 5.e below includes disclosures on the shares delivered from the deferred remuneration schemes in place in previous years and for which delivery conditions were met, as well as on the maximum number of shares that may be received in future years in connection with the aforementioned 2025 and 2024 variable remuneration plans.

b) Remuneration of the board members as representatives of the Bank

By resolution of the executive committee, all the remuneration received by the Bank's directors who represent the Bank on the boards of directors of listed companies in which the Bank has a stake, paid by those companies and relating to appointments made on or after 18 March 2002, accrues to the Group. In 2025 and 2024 the Bank's directors did not receive any remuneration in respect of these representative duties.

On the other hand, in their personal capacity, in 2025 Homaira Akbari was paid USD 100 thousand (EUR 85 thousand) as member of the board of Santander Consumer USA Holdings, Inc. and EUR 200 thousand as member of the board of PagoNxt S.L., and José Antonio Álvarez and Henrique de Castro were each paid the same EUR 200 thousand as members of the board of PagoNxt S.L. (Henrique de Castro also received EUR 15 thousand as member of the nomination committee of PagoNxt, S.L.). Likewise, Pamela Walkden was paid GBP 100 thousand (EUR 115 thousand) as member of Santander UK plc and Santander UK Group Holdings; and Belén Romana EUR 157 thousand as member of the Board of Santander Insurance, S.L.

Likewise, Luis Isasi was paid EUR 1,000 thousand as non-executive Chair of the Santander España business unit and for attending its board and committee meetings (amounts paid by Banco Santander, S.A.).

And finally, José Antonio Álvarez, as strategic adviser of Grupo Santander, received fixed remuneration of EUR 1,750 thousand. In addition, he received the life and health insurance contributions and the part of the former supplement for having waived the death and disability policy.

c) Post-employment and other long-term benefits

In 2012, the contracts of Ana Botín and other members of the Bank's senior management with defined benefit pension commitments were modified to transform these commitments into a defined contribution system, which covers the contingencies of retirement, disability and death. From that moment on, the Bank makes annual contributions to their pension system for their benefit.

This system gives them the right to receive benefits upon retirement, regardless of whether or not they are active at the Bank at such time, based on contributions to the system, and replaced their previous right to receive a pension supplement in the event of retirement.

The initial balance for Ana Botín in the new defined benefits system corresponded to the market value of the assets from which the provisions corresponding to the respective accrued obligations had materialised on the date on which the old pension commitments were transferred into the new benefits system.

Since 2013, the Bank has made annual contributions to the benefits system for executive directors and other members of executive team, in proportion to their respective pensionable bases, until they leave Grupo Santander or until their retirement within the Group, death, or disability.

The benefit plan system is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A., and the economic rights of the foregoing directors under this plan belong to them regardless of whether or not they are active at the Bank at the time of their retirement, death or disability.

In accordance with the provisions of the remuneration regulations, contributions made calculated on variable remuneration are subject to the discretionary pension benefits regime. Under this regime, contributions are subject to malus clauses and clawback according to the policy in force at any given time and during the same period in which the variable remuneration is deferred.

Furthermore, they must be invested in bank shares for a period of five years from the date when the executive director leaves the Group, regardless of whether or not they leave to retire. Once that period has elapsed, the amount invested in shares will be reinvested, along with the remainder of the cumulative balance corresponding to the executive director, or it will be paid to the executive director or to their beneficiaries in the event of a contingency covered by the benefits system.

As per the director´s remuneration policy approved at the 23 March 2018 general shareholder´s meeting, the system was changed with a focus on:

- Aligning the annual contributions with practices of comparable institutions.
- Reducing future liabilities by eliminating the supplementary benefits scheme in the event of death (death of spouse or parent) and permanent disability of serving directors.
- Not increasing total costs for the Bank.

The changes to the system were the following:

- Fixed and variable pension contributions were reduced to 22% of the respective pensionable bases. The gross annual salaries and the benchmark variable remuneration were increased in the corresponding amount with no increase in total costs for the Bank. The pensionable base for the purposes of the annual contributions for the executive directors is the sum of fixed remuneration plus 30% of the average of their last three variable remuneration amounts. This means complying with Circular 2/2016 of the Bank of Spain, standard 41, on pension benefits, by which a part of not less than 15% of the total contribution must be based on variable components.
- The death and disability supplementary benefits were eliminated since 1 April 2018. A fixed remuneration supplement (included in other remuneration in section a.iii in this note) was implemented the same date. During 2025, this fixed remuneration supplement has expired both for Ana Botín and José Antonio Álvarez, in line with the age of 65 initially set at the time this remuneration component was approved.
- The total amount insured for life and accident insurance was increased.

The provisions recognised in 2025 and 2024 for retirement pensions were as follows:

EUR thousand		
	2025	2024
Ana Botín	1,341	1,339
Héctor Grisi	1,120	1,105
Total	**2,461**	**2,445**

Following is a detail of the balances relating to each of the directors under the welfare system as of 31 December 2025 and 2024:

EUR thousand		
	2025	2024
Ana Botín	65,027	54,731
Héctor Grisi	2,033	1,299
José Antonio Álvarez	23,178	20,326
Total	**90,238**	**76,356**

d) Insurance

The Group pays for life insurance policies for the Bank's directors, who will be entitled to receive benefits if they are declared disabled. In the event of death, the benefits will be payable to their heirs. The premiums paid by the Group are included in the 'Other remuneration' column of the table shown in Note 5.a.iii above. Also, the following table provides information on the sums insured for the Bank's directors:

Insured capital		
EUR thousand		
	2025	2024
Ana Botín	20,659	21,525
Héctor Grisi	12,600	12,600
José Antonio Álvarez	10,500	11,215
Total	**43,759**	**45,340**

The insured capital has been modified in 2018 for Ana Botín as part of the pension systems transformation set out in note 5.c) above, which has encompassed the elimination of the supplementary benefits systems (death of spouse and death of parent) and the increase of the life and accident insurance annuities.

During 2025 and 2024, the Group has disbursed a total amount of EUR 8.3 million and EUR 13.5 million, respectively, for the payment of civil-liability insurance premiums. These premiums correspond to several civil-liability insurance policies that hedge, among others, directors, senior management and other managers and employees of the Group and the Bank itself, as well as its subsidiaries, in light of certain types of potential claims of third parties. For this reason, it is not possible to disaggregate or individualize the amount that correspond to the directors and executives.

As of 31 December 2025 and 2024, no life insurance commitments exist for the Group in respect of any other directors.

e) Deferred variable remuneration systems

The following information relates to the maximum number of shares to which the executive directors are entitled at the beginning and end of 2025 and 2024 due to their participation in the deferred variable remuneration systems, which instrumented a portion of their variable remuneration relating to 2025 and prior years, as well as on the deliveries, in shares or in cash, made to them in 2025 and 2024 once the conditions for the receipt thereof had been met (see note 42):

i. Deferred variable compensation plan linked to multiannual objectives

In the annual shareholders meeting of 18 March 2016, with the aim of simplifying the remuneration structure, improving the ex-ante risk adjustment and increasing the incidence of long-term objectives, the bonus plan (deferred and conditioned variable compensation plan) and ILP were replaced by one single plan.

The variable remuneration of executive directors and certain executives (including senior management) corresponding to 2025 has been approved by the board of directors and implemented through the tenth cycle of the deferred variable remuneration plan linked to multi-year objectives. The application of the plan was authorised by the annual general meeting of shareholders, as it entails the delivery of shares to the beneficiaries.

As indicated in section a.ii of this note, 60% of the variable remuneration amount is deferred over five years for executive directors, to be paid, where appropriate, provided that the conditions of permanence in the Group, according to the following accrual scheme:

- The accrual of the first and second parts (instalments in 2027 and 2028) is conditional on none of the malus clauses being triggered.
- The accrual of the third, fourth and fifth parts (instalments in 2029, 2030 and 2031) is linked to non-concurrence of malus clauses and the fulfilment of certain objectives related to the 2024- 2027 period. These objectives and their respective weights are:
  - Banco Santander's consolidated Return on tangible equity (RoTE) target in 2027 (weight of 30%).
  - Relative performance of Banco Santander's total shareholder return (TSR) in 2025-2027 in respect of the weighted TSR of a peer group comprising 9 credit institutions, with the appropriate TSR ratio based on the group's TSR among its peers (weight of 50%).
  - Four sustainability metrics which have different weighting (with a total weight of 20%).

  The degree of compliance with the above objectives determines the percentage to be applied to the deferred amount in these three annuities, with a maximum achievement ratio of 125%, so executives have the incentive to exceed their targets.

  Both the immediate payment and the two first deferrals (short-term part) are paid 50% in cash and the remaining 50% in instruments. The last three deferrals (conditioned to long-term metrics) are paid 25% in cash and 75% in instruments.

  The accrual of deferred amounts (whether or not subject to performance measures) is conditioned, in addition to the permanence of the beneficiary in the Group, to non-occurrence, during the period prior to each of the deliveries, of any the circumstances giving rise to the application of malus as set out in the Group's remuneration policy in its chapter related to malus and clawback. Likewise, the amounts already paid of the incentive will be subject to clawback by the Bank in the cases and during the term foreseen in said policy, and in accordance with the terms and conditions foreseen in it.

  Malus and clawback clauses are triggered by poor financial performance of Banco Santander, a division or area, or exposures from staff as a result of an executive(s)'s management of, at least, one of these factors:

i. Significant failures in risk management committed by the entity, or by a business unit or risk control.

ii. The increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures.

iii. Regulatory sanctions or judicial sentences from events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity.

iv. Irregular conduct, whether individual or collective. In this regard, the negative effects derived from the marketing of inappropriate products and the responsibilities of the people or bodies that made those decisions will be specially considered.

In addition to the existing policy on malus and clawback clauses of our remuneration policy, the addendum to our remuneration policy entitled 'Financial Statement Restatement Compensation' regulates the recoupment of compensation received by the executive directors of Banco Santander, S.A., and senior management, in the event of a financial restatement (according to the regulation) resulting from material noncompliance with financial reporting requirements under US federal securities laws.

The maximum amount of shares to be delivered under the plan is within the maximum amount of the award to be delivered in shares (EUR 11.5 million) approved at the 2025 AGM for executive directors. At its meeting on 25 November 2025 and pursuant to the powers granted by shareholders at the 2025 AGM, the board agreed to amend the calculation period used to determine the number of shares to be delivered from 50 to 30 trading sessions (under no circumstances may the number of shares exceed the maximum approved at the AGM), as the board considered that this better reflects market practice and enables us to offset share price volatility. Thus, the number of shares to be delivered under the 2025 policy has been calculated with the weighted average daily volume of weighted average listing prices of Banco Santander shares in the 30 trading sessions prior to the Friday (not inclusive) before 4 February 2025 (the date on which the board approved the 2025 bonus for executive directors), which was EUR 10.261 per share. According to an independent experts' valuation, the price per PagoNxt, S.L. RSU equals EUR 61.07.

ii. Shares assigned by deferred variable remuneration plans

The following table shows the number of Santander shares assigned to each director already in service and pending delivery as of 1 January 2024, 31 December 2024 and 31 December 2025, as well as the gross shares that were delivered to them in 2024 and 2025, either in the form of an immediate payment or a deferred payment. In this case after having been appraised by the board, at the proposal of the remuneration committee, that the corresponding one-fifth of each plan had accrued. They come from the deferred conditional and linked to multi-year objectives in 2019, 2020, 2021, 2022, 2023, 2024 and 2025 were formalized.

2.The levels of achievement of the multi-year metrics of the long-term variable remuneration plans:

1) Seventh cycle of the deferred multi-year objectives variable remuneration plan (2022): 115.2% of achievement for the period 2022-2024.
a. RoTE metric for 2024 year-end period at 150%. Weight of 40.0%.
b. Relative TSR metric in 2022-2024 period at 83% of achievement. Weight of 40.0%.
c. Sustainability metrics at 25% of achievement. Weight of 20.0%.

2) Sixth cycle of the deferred multi-year objectives variable remuneration plan (2021): 91.6% of achievement for the period 2021-2023.
a. CET1 metric at 100% of achievement for 2023 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 100%). Weight of 33.3%.
c. TSR metric at 25% of achievement (target of 33 to 66 percentile). Weight of 33.3%.

3) Fifth cycle of the deferred multi-year objectives variable remuneration plan (2020): 83.0% of achievement for the period 2020-2022.
a. CET1 metric at 100% of achievement for 2022 year-end period (target 12.00%). Weight of 33.3%.
b. Underlying BPA growth at 150% of achievement (target growth of 10%). Weight of 33.3%.
c. TSR metric at 0% of achievement (minimum target of 33% not reached). Weight of 33.3%.

Furthermore, the maximum number of RSUs of PagoNxt, S.L. to be delivered under the current plan (and subject to regulatory ratio compliance) is 9,415 and 7,909 units for Ana Botín and Héctor Grisi, respectively.

In addition, the table below shows the cash delivered in 2025 and 2024, by way of either immediate payment or deferred payment, in the latter case once the Board had determined, at the proposal of the remuneration committee, that one deferral relating to each plan had accrued:

EUR thousand

	2025		2024	
	Cash paid (immediate payment 2024 variable remuneration)	Cash paid (deferred payments from 2023, 2022, 2021 and 2020 variable remuneration)	Cash paid (immediate payment 2023 variable remuneration)	Cash paid (deferred payments from 2022, 2021, 2020 and 2019 variable remuneration)
Ana Botín	1,851	1,759	1,780	1,419
Héctor Grisi	1,279	366	1,220	863
José Antonio Álvarez	—	815	—	945
Total	**3,130**	**2,940**	**3,000**	**3,228**

iii. Information on former members of the board of directors

The chart below includes information on the maximum number of shares to which former members of the board of directors, are entitled for their participation in the various deferred variable remuneration systems, which instrumented a portion of their variable remuneration relating to the years in which they were executive directors. Also set forth below is information on the deliveries, whether in shares or in cash, made in 2025 and 2024 to former board members, upon achievement of the conditions for the receipt thereof (see note 42):

Maximum number of shares to be delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2019)	—	24,490
Deferred conditional variable remuneration plan and linked to objectives (2020)	35,511	71,024
Deferred conditional variable remuneration plan and linked to objectives (2021)	137,400	206,100
Deferred conditional variable remuneration plan and linked to objectives (2022)	—	—
Deferred conditional variable remuneration plan and linked to objectives (2023)	—	—
Deferred conditional variable remuneration plan and linked to objectives (2024)	—	—

Number of shares delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2018)	—	29,860
Deferred conditional variable remuneration plan and linked to objectives (2019)	24,490	24,490
Deferred conditional variable remuneration plan and linked to objectives (2020)	35,512	35,512
Deferred conditional variable remuneration plan and linked to objectives (2021)	68,700	12,911
Deferred conditional variable remuneration plan and linked to objectives (2022)	—	—
Deferred conditional variable remuneration plan and linked to objectives (2023)	—	—
Deferred conditional variable remuneration plan and linked to objectives (2024)	—	—

In addition, EUR 724 thousand and EUR 650 thousand relating to the deferred portion payable in cash of the aforementioned plans were paid each in 2025 and 2024.

f) Loans

Grupo Santander's direct risk exposure to the bank's directors and the guarantees provided for them are detailed below. These transactions were made on terms equivalent to those that prevail in arm's-length transactions or the related compensation in kind was recognized:

EUR thousand

C. Director since 27 June 2024.
D. Ceased as director of Banco Santander, S.A. on 27 June 2024.

g) Senior management

The table below includes the amounts relating to the short-term remuneration of the members of senior management at 31 December 2025 and those at 31 December 2024, excluding the remuneration of the executive directors, which is detailed above.

EUR thousand

		Short-term salaries and deferred remuneration							
			Variable remuneration (bonus) - Immediate payment		Deferred variable remuneration				
Year	Number of persons	Fixed	In cash	In instruments[2]	In cash	In instruments[3]	Pensions	Other remuneration[1]	Total
2025	15	19,255	9,179	9,180	4,306	4,306	4,910	6,456	57,592
2024	14	16,466	7,376	7,377	3,319	3,320	4,520	7,153	49,531

1. Includes other remuneration items such as life and medical insurance premiums and localization aids and lastly RSUs from PagoNxt S.L., for the work of one director in said entity.
2. The amount of immediate payment for 2024 is 894,587 shares(1,611,965 Santander shares in 2024).
3. The deferred amount in instruments not linked to long-term objectives for 2024 is 416,410 shares (725,399 Santander shares in 2024).

In addition to the amounts reflected in the table, salary remunerations amounting to EUR 4,118 thousand were granted in the form of buyouts and sign-on awards, related to the recruitment of new members who joined this employee group during the year.

In 2025, the ratio of variable to fixed pay components was 134% of the total for senior managers, well within the maximum limit of 200% set by 2024 AGM.

Also, the detail of the breakdown of the remuneration linked to long-term objectives of the members of senior management at 31 December 2025 and 31 December 2024 is provided below. These remuneration payments shall be received, as the case may be, in the corresponding deferral periods, upon achievement of the conditions stipulated for each payment (see note 42):

EUR thousand

		Variable remuneration subject to long-term objectives[1]		
Year	Number of people	Cash payment	Instrument payment	Total
2025	15	4,521	4,522	9,043
2024	14	3,485	3,486	6,971

1. Relates to the fair value of the maximum annual amounts for years 2029, 2030 and 2031 of the tenth cycle of the deferred conditional variable remuneration plan (2028, 2029 and 2030 for the ninth cycle of the deferred variable compensation plan linked to annual objectives for the year 2024). The face value of the three aforementioned deferred amounts is EUR 12,919 thousand for 2025

Additionally, members of senior management who stepped down from their roles in 2025 consolidated salary remuneration and other remuneration for a total amount of EUR 2,905 thousand (EUR 12,303 thousand in 2024). In 2025 rights regarding variable pay subject to long-term objectives amounted to EUR 342 (thousand (EUR 633 thousand were generated in 2024 for this collective.

The maximum number of Santander shares that the members of senior management at each plan grant date (excluding executive directors) were entitled to receive as of 31 December 2025 and 31 December 2024 relating to the deferred portion under the various plans then in force is the following (see note 42):

Maximum number of shares to be delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2019)	—	71,294
Deferred conditional variable remuneration plan and linked to objectives (2020)	145,704	370,522
Deferred conditional variable remuneration plan and linked to objectives (2021)	486,863	966,680
Deferred conditional variable remuneration plan and linked to objectives (2022)	891,305	1,430,464
Deferred conditional variable remuneration plan and linked to objectives (2023)	934,609	1,395,815
Deferred conditional variable remuneration plan and linked to objectives (2024)	1,601,213	—

Since the conditions established in the corresponding deferred share-based remuneration schemes for prior years had been met, the following number of Santander shares was delivered in 2025 and 2024 to the senior management, in addition to the payment of the related cash amounts:

Number of shares delivered

	2025	2024
Deferred conditional variable remuneration plan and linked to objectives (2018)	—	57,730
Deferred conditional variable remuneration plan and linked to objectives (2019)	54,249	71,294
Deferred conditional variable remuneration plan and linked to objectives (2020)	145,704	185,261
Deferred conditional variable remuneration plan and linked to objectives (2021)	243,433	351,777
Deferred conditional variable remuneration plan and linked to objectives (2022)	266,390	357,615
Deferred conditional variable remuneration plan and linked to objectives (2023)	233,652	1,212,984
Deferred conditional variable remuneration plan and linked to objectives (2024)	1,399,679	—

As indicated in note 5.c above, senior management participate in the benefit system created in 2012, which covers the contingencies of retirement, disability and death. Banco Santander makes annual contributions to the benefit plans of its senior managers. In 2012, the contracts of the senior managers with benefit pension commitments were amended to transform them into a contribution system. The system, which is outsourced to Santander Seguros y Reaseguros, Compañía Aseguradora, S.A., gives senior managers the right to receive benefits upon retirement, regardless of whether or not they are active at Banco Santander at such time, based on contributions to the system. This new system replaced their previous right to receive a pension supplement in the event of retirement. In the event of pre-retirement, and up to the retirement date, senior managers appointed prior to September 2015 are entitled to receive an annual allowance.

In addition, further to applicable remuneration regulations, from 2016 (inclusive), a discretionary pension benefit component of at least 15% of total remuneration in contributions to the pension system has been included. Under the regime corresponding to these discretionary benefits, the contributions that are calculated on variable remunerations are subject to malus and clawback clauses, subject to policies applicable at each time, and during the same period in which the variable remuneration is deferred.

Likewise, the annual contributions calculated on variable remunerations must be invested in Bank shares for a period of five years from the date that the senior manager leaves the Group, regardless of whether or not they leave to retire. Once that period has elapsed, the amount invested in shares will be reinvested, along with the remainder of the cumulative balance corresponding to the senior manager, or it will be paid to the senior manager or to their beneficiaries in the event of a contingency covered by the benefits system.

The contracts of some members of senior management were modified at the beginning of 2018 with the same objective and changes indicated in section c of this note for Ana Botín. The modifications, which are aimed at aligning the annual contributions with the practices of comparable institutions and reducing the risk of future obligations by eliminating the supplementary scheme for death (widowhood and orphanhood) and permanent disability in service without increasing the costs to the bank, are as follows:

- Contributions to the pensionable bases were reduced. Gross annual salaries were increased in the corresponding amount.
- The death and disability supplementary benefits were eliminated since 1 January 2018 for some members of senior management and since 1 April 2018 for executive directors. A fixed remuneration supplement reflected in other remuneration in the table above was implemented on the same date.
- The amounts insured for life and accident insurance were increased.

All of the above was done without an increase in total cost for the Bank.

The balance as of 31 December 2025 in the pension system for those who were part of senior management at year end amounted to EUR 51 million (EUR 51 million at 31 December 2024).

The net charge to income corresponding to pension amounted to EUR 4.9 million in 2025 (EUR 4.5 million in 31 December 2024).

In 2025 and 2024 there have been no payments in the form of a single payment of the annual voluntary pre-retirement allowance.

Additionally, the capital insured by life and accident insurance at 31 December 2025 of this group amounts to EUR 78 million (EUR 83 million at 31 December 2024).

h) Post-employment benefits to former Directors and former senior executive vice presidents

The post-employment benefits and settlements paid in 2025 to former directors of the Bank, other than those detailed in note 5.c amounted to EUR 5.6 million and EUR 5.6 million in 2024, respectively. Also, the post-employment benefits and settlements paid in 2025 to former executive vice presidents amounted to EUR 16 million and EUR 12.7 million in 2024, respectively.

Contributions to insurance policies that hedge pensions to previous members of the Bank's board of directors, amounted to EUR 0.17 million in 2025 (EUR 0.17 million in 2024). Likewise, contributions to insurance policies that hedge pensions for previous senior managers amounted to EUR 1.3 million in 2025 (EUR 2.3 million in 2024).

No releases or charges were recorded in the consolidated income statement for pension commitments and similar obligations held by the Group with previous former members of the bank's board of directors or former members of senior management in 2025 and 2024.

In addition, 'Provisions - Pension Fund and similar obligations' in the consolidated balance sheet as at 31 December 2025 included EUR 43 million in respect of the post-employment benefit obligations to former Directors of the Bank (EUR 46 million at 31 December 2024) and EUR 108 million corresponding to former members of senior management (EUR 96 million at 31 December 2024).

i) Pre-retirement and retirement

The board of directors approved an amendment to the contracts of executive directors whereby they ceased to have the right to pre-retire in case of termination of his contract.

j) Contract termination

The executive directors and members of senior management have indefinite-term employment contracts. Executive directors or senior managers whose contracts are terminated voluntarily or due to breach of duties are not entitled to receive any economic compensation. If Banco Santander terminates the contract for any other reason, they will be entitled to the corresponding legally-stipulated termination benefit, without prejudice to any compensation that may for non-competition obligations, as detailed in the directors' remuneration policy.

If Banco Santander were to terminate her contract, Ana Botín would have to remain at Banco Santander's disposal for a period of 4 months in order to ensure an adequate transition, and would receive her fixed salary during that period.

k) Information on investments held by the directors in other companies and conflicts of interest

None of the members of the board of directors have declared that they or persons related to them may have a direct or indirect conflict of interest with the interests of Banco Santander, S.A., as set forth in article 229 of the Corporate Enterprises Act.

Santander

6. Loans and advances to central banks and credit institutions

The detail by classification, type and currency, of loans and advances to central banks and credit institutions in the balance sheet is as follows:

The loans and advances classified in the "Financial assets held for trading" portfolio correspond, mainly, to temporary acquisitions of assets from Spanish and foreign institutions.

Deposits in credit institutions classified as "Financial assets at amortized cost" are mainly term accounts and guarantees given in cash to credit institutions.

In addition, at 31 December 2025, there were outstanding balances with central banks and credit institutions of EUR 72,163 million and EUR 1,345 million, respectively (EUR 94,612 million and EUR 1,526 million at 31 December 2024). These balances are included under 'Cash, cash balances at central banks and other deposits on demand'.

Note 49 shows the details of the maturity terms of "Financial assets at amortized cost" and "Cash, cash balances at central banks and other deposits on demand".

The breakdown at 31 December 2025 of the exposure and the provision fund for financial assets subject to impaired is EUR 41,946 million and EUR 2 million, respectively, all in Phase 1 (EUR 34,963 million and EUR 1 million, also Phase 1, in 2024).

7. Debt securities

The detail, by classification, sector and currency, of 'Debt instruments' in the accompanying balance sheets is as follows:

EUR millon

	2025	2024
Classification		
Financial assets held for trading	55,736	43,315
Non-trading financial assets mandatorily at fair value through profit or loss	42	204

Brazilian real	3,886	1,584
Other currencies	4,487	2,686
	144,712	**118,309**

The increase in the year of the debt securities portfolio under the heading 'Financial assets at fair value with changes in other comprehensive income' is mainly due to the increase in exposure to sovereign debt, as a result of greater activity in the markets business, both its own and for distribution to clients.

At 31 December 2025, the nominal amount of the debt securities subject to own obligations, mostly as collateral for financing lines received by the Bank, amounts to EUR 61,963 million (EUR 35,603 million at 31 December 2024), of which EUR 15,001 million correspond to Spanish Public Debt (EUR 5,893 million at 31 December, 2024).

The breakdown at 31 December 2025 of the exposure, by stage of impairment, of assets subject to impairment is EUR 88,657 million in Stage 1, EUR 306 million in Stage 2 and there is no exposue in Stage 3. In 2024, it was EUR 74,704 million in Stage 1, EUR 51 million in Stage 2 and EUR 164 million in Stage 3.

The breakdown at 31 December 2025 of the provision fund by stage of impairment of assets subject to impairment is EUR 26 million in Stage 1, EUR 3 million in Stage 2 and there is no exposure or provision fund in Stage 3. In 2024 it was EUR 9 million in Stage 1, EUR 2 million in Stage 2 and EUR 118 million in Stage 3.

Note 25.e) shows the details of 'Other comprehensive income' recognized in Equity for the 'Financial Assets designated at fair value through other comprehensive income'.

Note 49 contains details of the maturity periods of 'Debt securities' classified in the 'financial assets at fair value through other comprehensive income' and 'financial assets at amortized cost' portfolios.

8. Equity instruments

a) Breakdown

The detail, by classification and type, of Equity instruments in the accompanying balance sheets is as follows:

EUR million

	2025	2024
Classification		
Financial assets held for trading	21,196	16,225
Non-trading financial assets mandatorily at fair value through profit or loss	958	991
Financial assets designated at fair value through other comprehensive income	1,283	1,245
	23,437	**18,461**
Type		
Shares of Spanish companies	4,623	3,682
Shares of foreign companies	18,022	14,280
Shares of investments funds	792	499
	23,437	**18,461**

Note 25.c) contains a detail of the 'Other comprehensive income', recognized in equity, on 'Financial assets designated at fair value through other comprehensive income'.

b) Changes

The changes in 'Non-trading financial assets mandatorily at fair value through profit or loss' and 'Financial assets at fair value through other comprehensive income' during 2025 and 2024 were as follows:

EUR million

	2025	2024
Balance at beginning of the year	**1,245**	**983**
Purchases and capital increases	15	3
Disposals and capital reductions	(3)	(2)
Other comprehensive income and other concepts[A]	26	261
Balance at end of the year	**1,283**	**1,245**

A. In 2024 there were significant changes in value due, among others, to the increase in the prices of listed companies included in this heading.

The main changes in fair value recognised in Other Comprehensive Income relate to the change in value of Bank of Shanghai Co. Ltd. (increase of EUR 19 million and EUR 414 million in 2025 and 2024 respectively) and the decrease in the fair value of the stake in Project Quasar Investments 2017, S.L. in 2024, by EUR 155 million.

c) Notifications of acquisitions of investments

The notifications of the acquisitions and disposals of holdings in investees made by the Bank in 2025, in compliance with Article 155 of the Spanish Limited Liability Companies Law and Article 105 of Spanish Securities Market Law 24/1998, are listed in appendix IV.

9. Trading Derivatives (assets and liabilities) and short positions

a) Trading derivatives

The detail, by type of inherent risk, of the fair value of the trading derivatives arranged by Banco Santander at 31 December 2025 and 2024 is as follows:

EUR million

	2025		2024	
	Debit balance	Credit balance	Debit balance	Credit balance
Interest rate	28,296	20,294	30,265	23,347

Credit	1,378	4,701	1,124	1,447
Commodities	—	—	98	97
Others	7	126	26	101
Total	**46,583**	**41,524**	**52,462**	**46,121**

b) Short positions

The following is a breakdown of short positions (liabilities):

EUR million

	2025	2024
Borrowed Securities		
Equity instruments	429	358
Representative values of debt	1,555	1,347
Short sales		
Debt instruments	28,710	23,813
Total	**30,694**	**25,518**

10. Loans and advances to customers

a) Detail

The detail, by classification, of 'Loans and advances to customers' on the balance sheets is as follows:

EUR million

	2025	2024
Financial assets held for trading	31,423	23,756
Non-trading financial assets mandatorily at fair value through profit or loss	923	932
Financial assets designated at fair value through profit or loss	4,341	4,246
Financial assets at fair value through other comprehensive income	8,249	5,162
Financial assets at amortized cost	309,739	291,597
Loans and advances to customers (carrying amount)	**354,675**	**325,693**
Of which		
Impairment losses	*(3,188)*	*(3,959)*
Cumulative negative changes in fair value due to credit risk from doubtful exposures	*(5)*	*(24)*
Loans and advances to customers (gross amount)	**357,868**	**329,676**

'Note 49 shows the details of the maturity periods of financial assets at amortized cost.'

At 31 December 2025 and 2024, there were no loans and advances to customers for material amounts without fixed maturity dates.

b) Breakdown

The following is a breakdown of the loans and advances granted to Banco Santander´s customers, which, reflect the bank´s exposure to credit task in it´s main activity without considering the balance of impairment losses taking into account the type and situation of the transactions, the geographical area of their residence and type of interest rate on the transactions:

EUR million

Floating rate	173,910	168,584
	357,868	**329,676**

At 31 December 2025 and 2024 the Bank had EUR 17,387 million and EUR 15,837 million, respectively, of loans and advances granted to Spanish public administrations whose rating at 31 December 2025 is A (rating at 31 December 2024 was A) and with EUR 6,715 million and EUR 4,719 million, respectively, granted to the Public Sector of other countries (at 31 December 2025 this amount was composed, based on the rating of the issuer as follows: 7% AAA, 38% AA, 7% A, 23% BBB and 25% lower than BBB).

The above-mentioned ratings were obtained by converting the internal ratings awarded to customers by Banco Santander (see note 50) into the external ratings classification established by Standard & Poor's, in order to make them more readily comparable.

Without considering Public Administrations, the amount of loans and advances at 31 December 2025 amounts to EUR 333,766 million, of which EUR 328,538 million are in a non-doubtful situation (at 31 December 2024, they amounted to EUR 309,120 million and EUR 302,068 million respectively).

The following is a detail, by activity, of the loans to customers at 31 December 2025, net of impairment losses:

EUR million

			Secured loans

Write-offs	—	—	(1,385)	(1,385)
Differences in change and other movements	—	—	—	—
Balance at end of the year	**276,440**	**17,226**	**7,052**	**300,718**

A. The movement of Phase 3 includes portfolio sales for EUR 952 million.

At 31 December 2025, the total net exposure of loans and advances to the Bank's customers is EUR 317,988 million, of which EUR 298,561 million correspond to phase 1, EUR 16,381 million to phase 2 and EUR 3,046 million to phase 3 (EUR 296,760 million, EUR 276,057 million, EUR 16,635 million and EUR 4,067 million respectively at 31 December, 2024).

This exposure includes EUR 15 million (EUR 31 million at 31 December 2024) in impaired assets purchased with impairment, classified in phase 3, which correspond mainly to the business combination carried out by the Bank.

c) Impairment losses on loans and advances to customers at amortized cost and at fair value through other comprehensive income

The changes in the impairment losses on the assets making up the balances of financial assets at amortized cost and at fair value through other comprehensive income 'Loans and advances to customers':

EUR million

	2025	2024
Balance at beginning of the year	3,959	3,982
Net impairment losses charged to income for the year	1,435	1,445
Of which		
Impairment losses charged to profit or loss	*2,622*	*2,764*
Impairment losses reversed with a credit to profit or loss	*(1,187)*	*(1,319)*
Write-off of impaired balances against recorded impairment allowance	(2,446)	(1,385)
Exchange differences and other changes	240	(83)
Balance at end of the year	**3,188**	**3,959**
Of which		
By status of the asset		
Impaired assets	*2,182*	*2,985*
Of which, due to country risk	—	*8*
Other assets	*1,006*	*966*
Balance at end of the year	**3,188**	**3,959**
Of which		
Individually calculated	*705*	*783*
Collective calculated	*2,483*	*3,176*

The net provision that has an impact on the results for the year includes provisions for renegotiation or contractual modification of EUR 14 million (EUR 21 million at 31 December 2024).

Taking into account the assets in suspense recovered, which amount to EUR 174 million at 31 December, 2025 (EUR 95 million at 31 December, 2024) and adding to the net provision of the previous table, the impairment of 'Credit Entities and Debt Securities' (see notes 6 and 7), the amount recorded under the heading 'Impairment or reversal of impairment of financial assets not measured at fair value through profit or loss and net gains or losses' , due to changes in 'Financial assets at fair value with changes in other comprehensive income' and 'Financial assets at amortized cost', amounts to EUR 1,162 million at 31 December, 2025 (EUR 1,334 million at 31 December, 2024).

The following is the movement of impairment losses broken down by impairment stage of loans and advances to customers, during 2025 and 2024:

2025

EUR million

	Stage 1	Stage 2	Stage 3	Total
Balance at beginning of the year	**383**	**591**	**2,985**	**3,959**
Transfers				
Transfer to Stage 2 from Stage 1	(105)	265		160
Transfer to Stage 3 from Stage 1	(7)		262	255
Transfer to Stage 3 from Stage 2		(54)	191	137
Transfer to Stage 1 from Stage 2	7	(83)		(76)
Transfer to Stage 2 from Stage 3		31	(80)	(49)
Transfer to Stage 1 from Stage 3	—		(10)	(10)
Net changes of the exposure and modifications in the credit risk	142	(165)	1,041	1,018
Changes due to update in the methodology of estimates of the entity				
Write-offs	—	—	(2,446)	(2,446)
FX and other movements	1	—	239	240
Gross carrying amount at end of the year	**421**	**585**	**2,182**	**3,188**

2024

EUR million

	Stage 1	Stage 2	Stage 3	Total
Balance at beginning of the year	**397**	**625**	**2,960**	**3,982**
Transfers				
Transfer to Stage 2 from Stage 1	(124)	191		67
Transfer to Stage 3 from Stage 1	(8)		318	310
Transfer to Stage 3 from Stage 2		(161)	485	324

Transfer to Stage 1 from Stage 3	2		(9)	(7)
Net changes of the exposure and modifications in the credit risk	109	(21)	825	913
Changes due to update in the methodology of estimates of the entity				
Write-offs	—	—	(1,385)	(1,385)
FX and other movements	(8)	—	(75)	(83)
Gross carrying amount at end of the year	**383**	**591**	**2,985**	**3,959**

d) Impaired assets

The detail of the movement in the balance of financial assets classified as 'Loans and advances to customers' and considered to be impaired by reason of their credit risk during 2025 and 2024 is:

EUR million

	2025	2024
Balance at beginning of the year	7,052	7,597
Net additions	622	840
Written-off assets	(2,446)	(1,385)
Other changes	—	—
Balance at end of the year	**5,228**	**7,052**

This amount, once the corresponding provisions have been deducted, is Banco Santander´s best estimate of the discounted value of the cashflows that are expected to be recovered from impaired assets.

At 31 December 2025, the balance of the assets written-off amounted to EUR 6,333 million (6,043 millon EUR at 31 of december 2024).

The following are the credit impaired financial assets and related guarantees maintained to mitigate potential losses as of 31 December, 2025:

EUR million

	Gross amount	Allowance recognized	Estimated collateral value[A]
Without associated real collateral	2,775	1,198	—
With associated real collateral	1,723	727	962
With other collateral	730	257	282
Total	**5,228**	**2,182**	**1,244**

A. Collects the maximum value of the collateral associated with each loan, limited to the net carrying amount. Consequently, it does not include any other cash flow that could be obtained, such as those from the personal guarantees of the accredited.

When classifying assets in the previous table, the main factors considered by Banco Santander to determine whether an asset has become impaired are the existence of amounts past due -assets impaired due to arrears- or other circumstances may be arise which will not result in all contractual cash flow being recovered, such as a deterioration of the borrower's financial situation, the worsening of its capacity to generate funds or difficulties experienced by it in accessing credit.

e) Transferred credits

The heading "Loans and advances to customers" includes, among other items, loans transferred to third parties through traditional securitisation for which the Group retains, in whole or in part, the associated risks and rewards. Consequently, and in accordance with the applicable accounting standards, these loans cannot be derecognised from the balance sheet. They mainly comprise mortgage loans, corporate loans and consumer loans. The breakdown of securitised loans recognised on the balance sheet, by type of underlying financial instrument, is set out below:

EUR million

	2025	2024
Retained on the balance sheet[A]	11,579	12,250
Of which, mortgage assets are securitized through:		
Mortgage transfer certificates	*5,765*	*7,277*
Total[A]	**11,579**	**12,250**

A. Note 19 reports the liabilities associated with securitization operations, discounting the bonds of the securitization funds repurchased by the Bank.

The evolution of this activity responds to its use as a regulatory capital management tool and as a resource for the diversification of Banco Santander's liquidity sources. During 2025 and 2024 the Bank didn't derecognized any of the securitizations carried out in years mentioned before, and the balance derecognized at those dates corresponds to securitizations carried out in previous years and portfolio sales.

On the other hand, at 31 December 2025, Banco Santander has credits derecognized from the balance sheet and on which the administration maintains for an amount of EUR 4,742 million. (EUR 4,000 millon at 31 December 2024). Within the total loans written off the balance sheet, at 31 December 2025, there are EUR 427 million (EUR 497 million in 2024) of securitized assets.

11. Trading derivatives

The detail of the notional and/or contractual amounts and the market values of the trading derivatives held by the Bank in 2025 and 2024 is as follows:

EUR million

	2025		2024	
	Notional value	Market value	Notional value	Market value
Held for trading:				
Interest rate	8,680,921	8,002	8,170,664	6,918
Options	*200,197*	*(233)*	*201,120*	*(361)*
Other	*8,480,724*	*8,235*	*7,969,544*	*7,279*
Equity instruments	73,309	(322)	61,185	(9)
Options	*49,001*	*(871)*	*44,286*	*(805)*
Other	*24,308*	*549*	*16,899*	*796*
Currency and gold	1,216,133	821	1,093,647	(171)
Options	*102,284*	*75*	*115,216*	*337*
Other	*1,113,849*	*746*	*978,431*	*(508)*
Credit	74,407	(3,323)	46,923	(323)
Hedging default derivative and total through out	*74,407*	*(3,323)*	*46,923*	*(323)*
Securities and commodities derivatives and other	4,916	(119)	5,288	(74)
Total	**10,049,686**	**5,059**	**9,377,707**	**6,341**

12. Non-current assets and liabilities held for sale

The detail of non-current assets held for sale in the balance sheets is as follows:

EUR million

	2025	2024
Foreclosed assets	146	237
Other assets leased out under an operating lease	127	29
Investments - Subsidiaries, Joint venture and Associated entities [A]	4,222	—
Total	**4,495**	**266**

A. Transfer to non-current assets held for sale from the stake in Santander Bank Polska following the agreement for its sale (see note 3).

At 31 December 2025, reducing the balance of this heading (excluding investments in subsidiaries, joint venture and associated entities), there were EUR 358 million corresponding to value adjustments due to impairment of those assets, which entails a coverage of 57% of them (EUR 365 million, with a coverage of 58%, in the 2024 financial year) of which EUR 38 million have been recorded during the 2025 financial year (EUR 61 million in the 2024 financial year) under the heading 'Gains or losses from non-current assets and groups disposal of items classified as held for sale not eligible as discontinued operations' (see note 46).

At 31 December 2025 there are no liabilities associated in disposable groups of items that have been classified as held for sale associated with other 'non-current assets and alienable groups of items that have been classified as held for sale'.

13. Investments

a) Subsidiaries

'Investments - Subsidiaries' includes the equity instruments owned by Banco Santander and issued by subsidiaries belonging to Grupo Santander.

Relevant information on these companies is provided in Appendix I.

i. Breakdown

The detail, by currency and listing status, of 'Investments - Subsidiaries' on the balance sheets at 31 December 2025 and 2024 is as follows:

EUR million

	2025	2024
Currency:		
Euro	54,596	53,197
Pound Sterling	15,708	14,338
Other currencies	25,763	30,139

Balance at end of the year	**106,440**	**109,911**

In February 2025, a corporate reorganisation was carried out in Portugal aimed at simplifying the Group's structure, through the reverse merger by absorption of Santander Totta, SGPS, S.A. by Banco Santander Totta, S.A. The cost of the investment in Banco Santander amounted to EUR 4,949 million.

In February 2025, the purchase and sale of the company Santander Consumer Bank, S.A. (formerly called Crediscotia Financiera, S.A.) was completed for an amount in Peruvian soles equivalent to EUR 166 million.

In August 2025, a participating loan was granted to Santander Insurance Services UK Limited for GBP 677 million (EUR 776 million). In September, the loan, together with accrued interest, was capitalised for GBP 680 million (EUR 780 million).

During financial year 2025, contributions were made to Tresmares Santander Direct Lending, SICC, S.A. for a total amount of EUR 678 million, corresponding to the various capital calls made throughout the year. The company also made distributions amounting to EUR 469 million. In addition, during the year, contributions were made to Andromeda Principal Investment, S.L.U. for a total amount of EUR 250 million, corresponding to the various capital calls made throughout the year. The company also made distributions amounting to EUR 178 million.

On January 28, 2026, the deed of merger by absorption of Blecno Investment, S.L. Unipersonal, Uro Property Holdings, S.A., Elevate Tech Platforms, S.L. Unipersonal and Emisora Santander España, S.A. Unipersonal (acquired companies) by Banco Santander, S.A. (acquiring company) was executed as a public deed. The net amount derecognised under this heading as a result of the transaction was EUR 394 million, with a reserve payment of EUR 196 million (see Note 1.i).

Throughout financial year 2025, Banco Santander subscribed capital increases and made partner contributions in other companies, the most significant being: EUR 391 million in Deva Capital Holding Company, S.L. Unipersonal, EUR 230 million in Santander Global Technology and Operations, S.L. Unipersonal, EUR 104 million in Santander Asset Finance Opportunities, Sub-Fund, EUR 97 million in PagoNxt, S.L., and EUR 52 million in Santander Group Properties, S.L. Unipersonal. Additionally, the most significant premium refunds being: EUR 333 million of Investment Holdings 1857, S.L., EUR 247 million of Santander Insurance, S.L. and EUR 233 million of SAM Investment Holdings, S.L.

In December 2025, Banco Santander, S.A. sold 3.5% of its stake in Santander Bank Polska S.A. for an amount of EUR 407 million. This resulted in a reduction in the cost of the investment of EUR 241 million and a net gain of EUR 166 million, recognised under the heading "Profit or (-) loss after tax from discontinued operations".

The "Transfers" item in the above breakdown includes EUR 4,440 million corresponding to the stakes in Santander Bank Polska S.A. and Santander Towarzystwo Funduszy Inwestycyjnych, S.A., which were reclassified under the heading "Non-current assets and disposal groups classified as held for sale" (see Note 12), and EUR 205 million corresponding to stakes in the venture capital companies Tresmares Growth Fund, which were reclassified from the heading "Non-trading financial assets mandatorily measured at fair value through profit or loss".

In February 2024, members of the company MOON GC&P Investments, S.L.U were bought and contributed for an amount of EUR 300 million, with the aim of acquiring an indirect majority stake in Adprotel Strand (hotel investment). Throughout the year, the company has made a premium refund of EUR 209 million.

In March 2024, as part of the reorganization process of several companies of the Santander Group, the holding company called Santander Group Properties, S.L.U. Was established, which will act as the head entity of the real estate companies that own the Group's corporate buildings. In addition, 26 March 2024 the Bank made a capital increase in the company from non-cash contributions consisting of the participation of the company Santander Facility Management España, S.L.U, amounting to EUR 413 million. The reduction of the participation was made for the amount of EUR 393 million and there has been a payment in reserves for the amount of EUR 19 million (see note 29). With the same date, a capital increase of the same characteristics was made, consisting of the contribution of its participation in Santander Global Services, S.L. Unipersonal, amounting to EUR 373 million. The reduction of the participation was made for EUR 550 million (since previously the company made a refund of EUR 20 million) and there has been a use of the impairment fund of EUR 178 million (see note 13.a.iii).

On July 16, 2024 the Bank made another capital increase in this company of the same characteristics, consisting of the contribution of the participation in Santander UK Investments amounting to EUR 114 million. The reduction of the participation has been made by the value in euros at the date of the contribution of GBP 100 million. On October 22, 2024 a contribution of partners was made, in kind, consisting of the participation of Santander Global Sport, S.A, amounting to EUR 15 million. The reduction of the portfolio has been made in the amount of EUR 42 million, which has meant a release of the impairment fund of EUR 27 million (see note 13.a.iii). In addition, the Bank has also made a monetary contribution to this company amounting to EUR 147 million.

The 11 July 2024 signed the merger by absorption of Cántabro Catalana de Inversiones, S.A. (acquiring company) and Cántabra de Inversiones, S.A. Unipersonal (acquired company), with the dissolution without liquidation of the company acquired and the transfer of its assets in block to the acquiring company, As part of the process of streamlining the corporate structure within the Group, with the aim of simplifying its management, facilitating the efficient allocation of resources and reducing administrative costs.

In September 2024, Banco Santander, S.A sold 5.21% of its stake in Santander Bank Polska S.A for an amount of EUR 575 million. This has resulted in a reduction in the cost of participation of EUR 357 million and a net profit of EUR 209 million (see note 45).

On December 4, 2024 raised to the public the deed of merger by cross-border non-European absorption of the companies SIB Besaya, S.L.U. and Parasant SA (companies acquired) by Banco Santander, S.A. (Acquiring company), including among other assets, the companies Banco Santander International SA, Santander Bank & Trust Ltd, Santander Investments Chile Limitada and Santander Inversiones, S.A., the net amount registered under this heading for this operation was EUR 1,065 million, with a reserve payment of EUR 166 million (see note 1).

In December 2024, carried out the liquidation of the company Consulteam Consultores de Gestão, Unipessoal, Lda. for an amount of EUR 209 million, which has meant a use of the fund endowed with the same amount (see Note 13.a.iii).

Throughout 2024, Banco Santander subscribed capital increases and made contributions from partners in other companies, the most relevant being: EUR 254 million in Deva Capital Holding Company, S.L. Unipersonal, EUR 110 million in Grupo Financiero Santander México, S.A. de C.V., 174 million in Tresmares Santander Direct Lending, SICC, S.A. and EUR 170 million in PagoNxt, S.L (of which EUR 48 million is contribution in kind). Additionally, the company Santander Insurance, S.L. made premium refunds of EUR 443 million.

iii. Impairment losses

The changes in the balance of this item were as follows:

EUR million

	2025	2024
Balance at beginning of the year	12,237	12,423
Net impairment losses (reversals) (note 44)	(1,548)	171
Other changes	(316)	(357)
Balance at end of the year	**10,373**	**12,237**

The Management carries out an analysis of the potential loss of value of the investments in subsidiaries, joint ventures and associates that it has registered with respect to their book value. Said analysis is carried out using different parameters, such as equity value, listed value and recoverable value, which is obtained from estimates of expected cash flows or net worth corrected by tacit capital gains existing on the date of the valuation.

In line with the above, Banco Santander carried out an assessment of its investees in December 2025. The impairment reversals recognised by the Bank during financial year 2025 include EUR 1,335 million in relation to Santander UK Group Holdings Plc. and EUR 537 million in relation to PagoNxt, S.L. The "Other movements" balance in the above breakdown includes EUR 161 million corresponding to Santander Towarzystwo Funduszy Inwestycyjnych S.A., reclassified under the heading "Non-current assets and disposal groups classified as held for sale" (see Note 12); EUR 37 million corresponding to Munduspar Participações, reclassified under the heading "Associates" (see Note 13.c); and EUR 116 million corresponding to the companies merged with the Bank (see Note 1.i).

Following the same criteria, Banco Santander carried out in December 2024 the evaluation of its investees. The impairment charges made by the Bank in 2024 included EUR 94 million from Altamira Santander Real Estate, S.A and EUR 70 million from Uro Properties Holdings, S.A.

b) Joint venture entities

The cost of the investees recorded under this Caption at December 31, 2025 amounted to EUR 651 million, while the impairment recorded at that date was EUR 368 million (EUR 640 million and EUR 318 million, respectively, in 2024).

In October 2024, UCI, S.A. approved a capital increase through the contribution of perpetual subordinated obligations contingently convertible into shares, corresponding to Banco Santander EUR 41 million.

During 2025, Banco Santander has provided impairment for a net amount of EUR 49 million (EUR 55 million in 2024) for the entities recorded under this caption, mainly for UCI, S.A.

c) Associated entities

'Investments - Associated' in the accompanying balance sheets includes Banco Santander`s ownership interests in associates (see note 2.b).

Appendix II contains a detail of these companies, indicating the percentages of direct or indirect ownership and other relevant information.

At 31 December 2025, there were no capital increases in progress at any associated company.

i. Breakdown

The detail of the balance of this heading of the attached balances, based on the contracting currency and the admission or non-listing of the securities, is as follows:

EUR million

	2025	2024
Currency:		
Euro	1,950	2,049
Foreign Currency	16	—
	1,966	**2,049**
Listing status:		
Listed	1,905	1,988
Unlisted	61	61
	1,966	**2,049**

ii. Changes

The changes in 2025 and 2024 in 'Investments - Associates'', disregarding impairment losses, were as follows, (see note 13.c.iii):

EUR million

	2025	2024
Balance at the beginning of the year	**2,333**	**2,134**
Purchases, capital increases and mergers	75	246
Of which		
Waycarbon Soluções Ambientais e Projetos de Carbono, S.A.	*75*	—

Merlín Properties, SOCIMI, S.A.	(23)	—
Transfers	—	—
Other changes (net)	—	—
Balance at end of the year	**2,241**	**2,333**

In May 2025, the reverse merger of Munduspar Participações, S.A. (subsidiary) into Waycarbon Soluções Ambientais e Projetos de Carbono, S.A. was completed. The cost of the investment held by the Bank amounted to EUR 75 million. As a result of this merger and a subsequent capital reduction by the company with reimbursement to the Bank for an amount of EUR 40 million, the Bank ceased to exercise control over the company, which was reclassified as an associate.

In April and December 2025, Metrovacesa, S.A. made two dividend distributions charged against the freely distributable reserve (share premium), with Banco Santander receiving two payments of EUR 22 million and EUR 54 million, respectively. These transactions resulted in a reduction in the cost of the investment of EUR 104 million and the recognition of an impairment charge of EUR 28 million (see Note 13.c.iii).

In July 2024, the Board of Directors of Merlin Properties, SOCIMI, S.A. approved a share capital increase through cash contributions, as part of an accelerated bookbuilding process. Banco Santander subscribed shares for an amount of EUR 226 million.

In April and December 2024, Metrovacesa, S.A. made two dividend distributions charged against the freely distributable reserve (share premium), with Banco Santander receiving two payments of EUR 17 million and EUR 16 million, respectively. These transactions resulted in a reduction in the cost of the investment of EUR 47 million and the recognition of an impairment charge of EUR 13 million (see Note 13.c.iii).

iii. Impairment losses

The changes in the balance of this item were as follows:

EUR million

	2025	2024
Balance at the beginning of the year	**284**	**286**
Net impairment losses (reversals) (note 44)	1	11
Other changes	(10)	(13)

b) Property, plant and equipment - for own use

The detail, by class of asset, of 'Property, plant and equipment - For own use' on the balance sheets in 2025 and 2024 is as follows:

EUR million

	Cost	Accumulated depreciation	Impairment losses	Carrying amount	*Of which, right-of-use for operating lease*
Land and buildings	5,610	(1,290)	(64)	4,256	*2,166*
Furniture, fixtures and vehicles	968	(241)	—	727	—
Computer hardware	249	(155)	—	94	—
Other	67	—	—	67	—
Balance at 31 December 2024	**6,894**	**(1,686)**	**(64)**	**5,144**	***2,166***
Land and buildings	5,060	(1,368)	(32)	3,660	*422*
Furniture, fixtures and vehicles	945	(253)	—	692	—
Computer hardware	270	(174)	—	96	—
Other	89	—	—	89	—
Balance at 31 December 2025	**6,364**	**(1,795)**	**(32)**	**4,537**	***422***

The carrying amount at 31 December 2025 in the table above includes the following approximate amounts:

- EUR 6 million (EUR 5 million at 31 december 2024) relating to property, plant and equipment owned by Banco Santander's branches located abroad.
- EUR 181 million (EUR 217 million at 31 December 2024) relating to property, plant and equipment held under finance leases by Banco Santander, of which EUR 170 million related to leases in effect as of 31 December 2025 (EUR 205 million at 31 December 2024).

c) Tangible assets - Leased out under an operating lease

Banco Santander has assets assigned under operating lease where the company is the lessor and they do not meet the accounting requirements to be classified as financial leases. The net cost of these leases is recorded as an asset and is depreciated on a straight-line basis over the contractual term of the lease up to the expected residual value.

The expected residual value and, consequently, the monthly depreciation expense may change during the term of the lease. The Bank estimates expected residual values using independent data sources and internal statistical models. Likewise, it evaluates the estimate of the residual value of said leases and adjusts the depreciation rate based on the change in the expected value of the asset at the end of the lease.

Banco Santander periodically evaluates its investment in operating leases and whenever there are indications of impairment, such as a systemic and material decrease in the values of the assigned assets. If assets leased under operating leases are considered to be impaired, impairment is measured as the amount by which the assets' carrying amount exceeds fair value as estimated by discounted cash flows. During the years 2025 and 2024, the Bank has not recorded any material impairment for this concept.

During the years 2025 and 2024, no significant variable payments have been made not included in the valuation of lease assets.

d) Tangible assets - Investment property

The fair value of the investment property at 31 December 2025 and 2024 amounts to EUR 492 million and EUR 259 million, respectively. A comparison of the fair value of investment property at 31 December 2025 and 2024 with the net book value results in gross unrealised gains of EUR 97 million and EUR 86 million for each of these years, respectively, attributed to the Bank in full.

Rental income from investment properties and direct expenses related to both investment properties that generated income during 2025 and 2024 and those investment properties that did not generate income during 2025 and 2024 are not material in the context of the entity's annual accounts.

16. Intangible assets

a) Goodwill

The detail of the 'Goodwill', on the balance sheets is as follows:

EUR million

	2025	2024
Santander España	623	623
Amortization charge	(476)	(414)
Balance at end of year	**147**	**209**

The movement during the years 2025 and 2024 has been as follows:

EUR million

	2025	2024
Balance at beginning of the year	**209**	**271**
Additions (note 3)		—
Amortization charge	(62)	(62)
Impairment losses	—	—
Disposals or changes in scope	—	—
Balance at end of year	**147**	**209**

Neither in 2025, nor in 2024 has goodwill been generated.

All of the goodwill recorded at the end of the 2025 and 2024 financial years comes from the following corporate operations that were carried out in the 2018 financial year:

- Merger by absorption of Banco Popular Español, S.A.U. On June 7, 2017, Banco Santander acquired 100% of the share capital of Banco Popular Español, S.A.U. Subsequently, on September 28, 2018, the deed of merger by absorption of Banco Popular Español, S.A.U. was registered in the Mercantile Registry of Cantabria by Banco Santander, S.A. with accounting effects January 1, 2018, transferring to the books of Banco Santander a gross goodwill of EUR 248 million.
- Repurchase of the credit and debit card business marketed by Grupo Banco Popular in Spain and Portugal generating the business combination a goodwill of EUR 375 million.

In accordance with Bank of Spain Circular 4/2017, the goodwill is amortized within a period of ten years. In addition, the Bank periodically reviews the term and method of amortization and, if deemed inappropriate, the impact will be treated as a change in accounting estimates.

As of 31 December 2025 and 2024 the amount of goodwill recorded by Banco Santander, net of accumulated depreciation, amounted to EUR 147 million and EUR 209 million, respectively.

Banco Santander, at least annually and whenever there are signs of impairment, conducts an analysis of the potential loss of value of the trade funds it has recorded in respect of their recoverable value.

The first step in carrying out this analysis requires the identification of the cash-generating units, which are the smallest identifiable groups of assets in Banco Santander that generate cash inflows and are largely independent of the cash flows of other assets or asset groups.

For the purposes of those mentioned in the preceding paragraph, the Bank's administrators have identified the commercialbanking business in Spain as the cash-generating unit to which to allocate goodwill arising both by the acquisition and subsequent merger by absorption of Banco Popular Español, S.A.U. and by the repurchase of the credit and debit cards from Grupo Banco Popular.

Its carrying value is determined taking into account the book value of all the assets and liabilities that make up the commercial banking business in Spain, together with the corresponding goodwill. Said book value is compared with its recoverable amount in order to determine if there is impairment.

The recoverable amount of Santander España cash-generating unit has been determined as the fair value of such cash-generating unit obtained using quotes, market references (multiples) or internal estimates. At the end of the fiscal year said value exceeded the book value.

Based on previous data, and in accordance with the estimates of the Bank's administrators, during the years 2025 and 2024 the Bank has not recorded any amount under the heading 'Impairment in value or reversal of impairment in value of non-financial assets - intangible assets' in concept of impairment of goodwill.

b) Other intangible assets

i. Breakdown

The detail of Intangible assets 'Other intangible assets' on the balance sheets is as follows:

Pound Sterling	2,236	2,947	1,952	4.10 %
Hong Kong dollar	495	605	4,528	3.36 %
Chinese Yuan	216	76	1,774	2.14 %
Balance at end of the year	**16,043**	**9,633**		

A. Average interest rates for different issue based on their nominal values.

i. Changes

The changes in certificate of deposit on the balance sheet for the years 2025 and 2024 are as follows:

EUR million

	2025	2024
Balance at end of the prior year	9,633	10,820
Issues	26,447	17,184
Redemptions	(19,043)	(18,965)
Exchange differences and other changes	(994)	594
Balance at end of the year	**16,043**	**9,633**

At 31 December 2025, the Bank issued certificates of deposit amounting to EUR 26,447 million (EUR 17,184 million as at 31 December 2024), with an average maturity of 6 months (7 months during the 2024 financial year), of which EUR 19,043 million have been amortized (EUR 18,965 million at December 2024).

c) Marketable Mortgage- backed securities

The detail by currency of issuance, of 'Marketable mortgage-backed securities' is as follows:

	EUR million		2025
Currency of issuance	2025	2024	Annual interest rate[A]
Euros	45,004	39,903	1.69 %
Balance at end of the year	**45,004**	**39,903**	

A. Average interest rate of the various issues based on their nominal values.

The issuing entity may repay the mortgage bonds early, if this has been expressly established in the final conditions of the issue in question and in the conditions established there.

None of the mortgage bonds issued by Banco Santander have replacement assets involved.

During 2023, the Bank of Spain has published Circular 1/2023 of 4 February , which modifies Circular 4/2017, repealing the breakdown in the annual accounts and the information related to internal accounting development and management control.

d) Other mortgage bonds and guaranteed bonds

The balance of 'Other mortgage bonds and guaranteed bonds' relates to the rest of covered bonds and certificates. The breakdown, by issue currency and interest rate, is as follows:

	EUR million		2025
Currency of issuance	2025	2024	Annual interest rate[A]
Euro	5,296	4,807	2.30 %
US dollar	5,572	6,064	5.07 %
Balance at end of the year	**10,868**	**10,871**	

A. Average interest rate of the various securities at 31 December 2025 based on their nominal amounts.

e) Guarantee

The mortgage-backed bonds ('*cédulas hipotecarias*') are secured by mortgage loans with average maturities of more than ten years. In order to calculate the amount of the qualifying assets in accordance with Royal Decree-Law 24/2021 transposing the European Union directive on covered bonds, the following transactions are excluded from the total base of the unsecuritized mortgage portfolio:

- Transactions classified as at pre-action stage and procedural stage.
- Transactions without appraisal by a specialist valuer.
- Transactions exceeding 80% of the appraized value in residential financing and 60% in the case of other assets.
- Second mortgages or mortgages with insufficient collateral.
- Transactions without insurance or with insufficient insurance.

The asset-backed securities, including asset-backed securities and notes issued by special-purpose vehicles (SPVs), are secured by:

- Mortgage loans to individuals to finance the acquisition and refurbishment of homes with an average maturity of more than ten years.
- Personal consumer finance loans with no specific guarantee and unsecured loans with an average maturity of five years.

- Loans to SMEs (non-financial small and medium-sized enterprises) secured by State guarantees, and loans to companies (SMEs -self-employed, microbusinesses, small and medium-sized enterprises- and large companies) secured by property mortgages, the borrower's personal guarantee, guarantees and other collateral other than property mortgages, with an average maturity of 7 years.
- Mortgage and non-mortgage loans to finance municipalities, autonomous communities and subsidiaries with an average maturity of more than 10 years.
- Commercial credit of Banco Santander (ordinary and occasional invoice discounting and advances to customers on legitimate receivables) with an average maturity of 45 days.

Additionally, Banco Santander, issues internationalization certificates, which are securities whose capital and interest are guaranteed by loans and credits that are linked to the financing of export contracts or the internationalization of companies. These internationalization bonds have been repurchased in their entirety by Banco Santander.

The fair value of the guarantees received by Banco Santander (financial and non-financial assets) which the Group is authorised to sell or pledge even if the owner of the guarantee has not defaulted is scantly material taking into account the Bank's financial statements as a whole.

21. Other issuances

a) Breakdown

The following is a breakdown of the balance under this heading on the attached balance sheets, taking into account their nature and currency of the transactions:

EUR million[A]	2025	2024
Type		
Other issuances	100,288	114,982
Of which, subordinated liabilities	*21,774*	*28,142*
	100,288	**114,982**
Currency		
Euro	52,112	59,999
US dollar	36,359	43,616
Pound Sterling	5,076	5,360
Other currencies[B]	6,741	6,007
	100,228	**114,982**

A. This amount includes the principal, in other currencies.
B. At 31 December 2025, the most significant currencies are: Swiss franc (EUR 2,845 million), Australian dollar (EUR 2,156 million) and Norwegian krone (EUR 469 million). At 31 December 2024, the most significant currencies were: Swiss franc (EUR 2,476 million), Australian dollar (EUR 1,895 million) and Norwegian krone (EUR 401 million).

b) Changes

The changes in 'Other issuances ' in the foregoing table for the years 2025 and 2024 are as follows:

EUR million	2025	2024
Balance at the end of prior year	114,982	105,185
Issues	24,537	40,824
Redemptions	(34,020)	(33,871)
Exchange differences	(5,211)	2,844
Balance at end of the year	**100,288**	**114,982**

Within the sub-heading 'Other issuances' there are commercial paper issues as well as other issuances made by Banco Santander.

- Commercial paper

On March 14, 2025, Banco Santander approved the annueal renewal of the "European Comercial Paper Issuance Program" for an overall maximum nominal amount up to EUR 20,000 million. On November 14, 2025, the "American Commercial Paper Issuance Program" was renewed for an aggregate nominal amount of up to USD 25,000 million.

As at 31 December 2025, the average nominal interest rate for European Commercial Paper stood at 2.73% per annum, while that for American Commercial Paper was 4.26% per annum. At year-end 2024, the average nominal interest rate was 4.47% per annum.

As regards renewals in 2024, on March 14, 2024, Banco Santander approved the annueal renewal of the "European Comercial Paper Issuance Program" for an overall maximum nominal amount up to EUR 20,000 million. On November 15, 2024, the "American Commercial Paper Issuance Program" was renewed for an aggregate nominal amount of up to USD 25,000 million.

- Remaining emissions

During financial year 2025, Banco Santander, S.A. carried out 48 issuances of "Other non-convertible securities" for a nominal amount of EUR 9,569 million (no perpetual issuances were carried out in 2025, see Note 21.c), of which the Bank repurchased a nominal amount of EUR 34 million. The average yield on these issuances was 4.47% per annum.

During financial year 2024, Banco Santander, S.A. carried out 76 issuances of "Other non-convertible securities" for a nominal amount of EUR 20,253 million (no perpetual issuances were carried out in 2024; see Note 21.c), of which the Bank repurchased a nominal amount of EUR 370 million. The average yield on these issuances was 4.53% per annum.

c) Other disclosures

This caption includes contingent convertible or redeemable preferred participations, as well as other subordinated financial instruments issued, which do not qualify as equity (preferred shares).

Preferred shares do not have voting rights and are non-cumulative. They have been subscribed by third parties outside the Group and are redeemable by decision of the issuer, according to the terms of each issue.

Banco Santander's contingently convertible preferred participations are subordinated debentures and rank after common creditors and any other subordinated credit that by law and/or by their terms, to the extent permitted by Spanish law, ranks higher than the contingently convertible preferred participations. Their remuneration is conditioned to the obtainment of sufficient distributable profits, and to the limitations imposed by the regulations on shareholders' equity, and they have no voting rights. The other issues of Banco Santander, S.A. mentioned in this caption are also subordinated debentures and, for credit ranking purposes, they rank behind all the common creditors of the issuing entities and ahead of any other subordinated credit that ranks pari passu with the Bank's contingently convertible preferred participations.

The main issuances of subordinated debt securities, broken down by company, are detailed below:

Issuances by Banco Santander, S.A.

On 1 December 2025, Banco Santander, S.A. has proceeded to redeem in advance all the issued subordinated obligations: 'EUR 60,000,000, with original maturity date on December 2026 and with ISIN code XS1492669509.

On 8 February 2018, a ten-year subordinated debenture issuance of EUR 1,250 million was carried out. The issue accrues annual interest of 2.125% payable annually.

22. Other financial liabilities

a) Breakdown

The following is a detail of 'Other financial liabilities' on the accompanying balance sheets:

EUR million		
	2025	2024
Trade payables	824	780
Payment obligations	1,188	2,693
Public agency revenue collection accounts	5,224	4,864
Unsettled financial transactions	878	3,199
Other accounts	1,941	1,711
Total	**10,055**	**13,247**

b) Average payment period to suppliers

Set forth below are the disclosures required by Additional Provision Three of Law 15/2010, of 5 July (amended by Final Provision Two of Law 31/2014, of 3 December), prepared in accordance with the Spanish Accounting and Audit Institute (ICAC) Resolution of 29 January 2016 on the disclosures to be included in notes to financial statements in relation to the average period of payment to suppliers in commercial transactions.

	2025	2024
	Days	
Average period of payment to suppliers	10	11
Ratio of transactions paid	10	11
Ratio of transactions pending payments	39	19
	EUR million	
Total payments made	3,548	3,840
Total payments outstanding	1	10

Additionally, the data for Grupo Santander in Spain, in the financial year 2025, are as follows:

	2025
	Days
Average period of payment to suppliers	11
Ratio of transactions paid	11
Ratio of transactions pending payments	65
	EUR million
Total payments made	8,081
Total payments outstanding	6

In accordance with the ICAC Resolution, the average period of payment to suppliers was calculated by taking into account commercial transactions relating to the supply of goods or services for which payment has accrued since the date of issuance of Law 31/2014, of December, 3.

Additionally, in accordance with Law 18/2022 of September 28, listed commercial companies must report the average payment period to suppliers, the monetary volume and number of invoices paid in a period less than the maximum established in the delinquency regulations. and the percentage that it represents over the total number of invoices and over the total monetary payments to its suppliers.

Payments to suppliers made sooner than maximum period established by the regulations	2025	2024
Average payment period to suppliers (days)	10	9
Number of invoices paid	459,587	523,490
Invoices paid in a period sooner than the maximum established over the total number of invoices paid	99,94%	99,81%
Total payments made (EUR million)	3,545	3,755
Invoices paid in a period less than the maximum on the total amount of invoices paid	99,92%	97,79%

Additionally, the data for Grupo Santander in Spain, in the financial year 2025, are as follows:

Payments to suppliers made sooner than maximum period established by the regulations	2025
Average payment period to suppliers (days)	8
Number of invoices paid	630,135
Invoices paid in a period sooner than the maximum established over the total number of invoices paid	98,11%
Total payments made (EUR million)	7,691
Invoices paid in a period less than the maximum on the total amount of invoices paid	95,17%

For the sole purpose of the disclosures provided in the Resolution, suppliers are considered to be commercial creditors for debts with suppliers of good and services.

"Average period of payment to suppliers" is taken to be the period that elapses from the delivery of the goods of the provision of the services by the supplier to the effective payment of the operation.

Note 49 contains a detail of the maturity periods of 'Other financial liabilities' at each year-end.

c) Lease liabilities

The cash outflow of leases in 2025 was EUR 142 million (in 2024 it was EUR 293 million). The analysis of the maturities corresponding to the lease liabilities at 31 December 2025 and 2024, is as follows:

EUR million

	2025	2024
Maturity Analysis – Discounted payments		
Within 1 year	123	273
Between 1 and 3 years	185	472
Between 3 and 5 years	72	342
Later than 5 years[A]	78	1,255
Total Discounted payments at 31 December 2023	**458**	**2,342**

A. The change is due to the merger by absorption in 2025 of URO Property Holdings, S.A. and Blecno Investments, S.L.U. (see Note 1.i)

During 2025 and 2024, no significant variable payments have been made not included in the valuation of lease liabilities.

Santander

23. Provisions

a) Breakdown

The detail of 'Provisions' in the balance sheets at 31 December 2025 and 2024 is as follows:

c) Provision for pensions and similar obligations

The detail of 'Provision for pensions and similar obligations' at 31 December 2025 and 2024 is as follows:

EUR million

	2025	2024
Provisions for pensions and similar defined benefit plan obligations	1,322	1,346
Of which		
Provisions for pensions	*578*	*647*
Provisions for similar obligations	*744*	*699*
Of which, pre-retirements	*733*	*688*
Provisions for pensions and similar defined contribution plan obligations	—	—
Total provisions for pensions and similar obligations	**1,322**	**1,346**

i. Defined contribution plans

At the end of 2012, Banco Santander reached an agreement with workers' representatives to transform the defined benefit commitments derived from the collective agreement into defined contribution plans. Similarly, the contracts for senior management staff with pension commitments in the defined benefit modality were amended to transform them into a defined contribution provision system.

Almost all of the pension commitments with active personnel correspond to defined contribution plans. The total contributions made to these plans during 2025 amounted to EUR 111 million (EUR 108 million during 2024) (see note 42).

ii. Defined Benefit Plans

In addition to the previous defined contribution plans, at 31 December 2025, Banco Santander maintained definite service commitments. Below is the present value of the Bank`s commitments in post-employment remuneration for defined benefit programs, as well as the value of the reimbursement entitlements for insurance contracts linked to those obligations at 31 December 2025 and preceding year:

EUR million

	2025	2024
Present value of the obligations		
To current employees	22	26
To retired employees	1,594	1,840
Other	—	—
	1,616	**1,866**
Fair value of plan assets	(1,052)	(1,226)
Assets not recognized	3	3
Provisioned assets on the balance sheet	11	4
Provisions - Provisions for pensions	**578**	**647**
Of which		
Internal provisions for pensions	*338*	*380*
Insurance contracts linked to pensions (note 14)	*240*	*267*
Of which		
Group insurance entities	*173*	*186*
Other insurers	*67*	*81*

The amount of the defined benefit obligations was determined on the basis of the work performed by independent actuaries using the following actuarial techniques:

1. Valuation method: projected unit credit method, which sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately.

2. Actuarial assumptions used: unbiased and mutually compatible. Specifically, the most significant actuarial assumptions used in the calculations were as follows:

EUR million

	2025	2024
Annual discount rate	3.75 %	3.00 %
Expected return on plan assets rate	3.75 %	3.00 %
Mortality tables	PE2020 M/F Col. Orden 1	PER2020 M/F Col. Orden 1
Cumulative annual CPI growth	2.00 %	2.00 %
Annual salary increase rate	1.25 %	1.25 %
Annual pension increase rate	2.00 %	2.12 %

3. The discount rate used for the flows was determined referencing to high-quality corporate bonds.

4. The estimated retirement age of each employee is the first at which the employee is entitled to retire or the agreed-upon age, as appropriate.
5. The fair value of insurance contracts was determined as the present value of the related payment obligations, taking into account the following assumptions:

EUR million

	2025	2024
Expected rate of return on plan assets	3.75 %	3.00 %
Expected rate of return on reimbursement rights	3.75 %	3.00 %

The amounts recognized in the accompanying income statements in relation to the aforementioned defined benefit obligations are as follows:

EUR million

	2025	2024
Service cost:		
Current service cost (note 42)	1	1
Past service cost (including reductions)	—	3
Pre-retirement cost	—	—
Reductions/liquidations	(15)	(9)
Net interest (note 35)	25	27
Expected return on insurance contracts linked to pensions (note 34)	(13)	(14)
Total	**(2)**	**8**

In addition, in 2025 'Other comprehensive income – items not reclassified to profit or loss - Actuarial gains or (-) losses on defined benefit pension plans', resulted in an actuarial gain of EUR 30 million in relation to defined benefit obligations (an actuarial loss of EUR 15 million in 2024).

The changes in 2025 and 2024 of the present value of the accrued defined benefit obligations were as follows:

EUR million

	2025	2024
Present value of the obligations at beginning of the year	1,866	1,955
Current service cost (note 42)	1	1
Interest cost	65	69
Pre-retirement cost	—	—
Reductions/liquidations	(7)	(9)
Benefits paid for settlements	(29)	—
Other benefits paid	(174)	(200)
Past service cost	—	3
Actuarial (gains)/losses[A]	(104)	42
Exchanges rate differences and others	(2)	5
Present value of the obligations at end of the year	**1,616**	**1,866**

A. In 2025, actuarial losses due to demographic assumptions and experience totalled EUR 18 million, while actuarial gains due to financial assumptions amounted to EUR 86 million (2024: actuarial losses due to demographic assumptions of EUR 1 million and actuarial losses due to financial assumptions of EUR 41 million).

The changes in 2025 and 2024 in the fair value of the plan assets are as follows:

EUR million

	2025	2024
Fair value of plan assets at beginning of year	1,226	1,224
Expected return on plan assets	40	42
Benefits paid	(141)	(121)
Contributions payable by the employer	(7)	58
Settlements gains/(losses)	8	—
Exchange rate differences and others	(9)	(5)
Actuarial gains/(losses)	(65)	28
Fair value of plan assets at end of year	**1,052**	**1,226**

The changes in 2025 and 2024 in the fair value of the insurance contracts linked to pensions are as follows:

EUR million

	2025	2024
Fair value of insurance contracts linked to pensions at beginning of the year	267	288
Expected return on insurance contracts (note 34)	13	14
Actuarial gains/(losses)	(9)	(1)
Premiums paid/(surrenders)	—	—
Benefits paid	(31)	(34)
Exchange rate differences and others	—	—
Fair value of insurance contracts linked to pensions at end of the year (note 14)	**240**	**267**

Plan assets and pension insurance contracts linked to pensions are mainly based in insurance policies.

iii. Other long-term employee benefits

In various years, Banco Santander offered to some certain of its employees, the possibility of leaving its employ prior to their retirement. Therefore, provisions are recognized to cover the obligations to pre-retirees -in terms of salaries and other employee benefit costs- from the date of their pre-retirement to the date of their effective retirement.

The present value of the aforementioned obligations and the fair value of the assets arising from insurance contracts linked to these obligations at 31 December 2025 and for the previous exercises are as follows:

EUR million

	2025	2024
Present value of the obligations:		
Early retirement	736	693
Long-service bonuses and other benefits	11	11
	747	**704**
Fair value of plan assets	(3)	(5)
Provisions - Provisions for pensions	744	699
Insurance plans linked to pensions	—	—
Group insurers	—	—
Other insurance entities	—	—

In 2024, the provisions made to cover commitments to 603 employees under early retirements and voluntary redundancy plans amounted to EUR 237 million.

In 2025, the provisions made to cover commitments to 962 employees under early retirements and voluntary redundancy plans amounted to EUR 315 million.

The amount of the other long-term remuneration commitments defined benefit has been determined on the basis of work performed by independent actuaries, applying the following criteria to quantify them:

1. Valuation method: projected unit credit method.
2. Actuarial assumptions used: unbiased and mutually compatible. Specifically, the most significant actuarial assumptions used in the calculations were as follows:

EUR million

	2025	2024
Annual discount rate	3.75 %	3.00 %
Expected return on plan assets rate	3.75 %	3.00 %
Mortality tables	PE2020 M/F Col. Orden 1	PE2020 M/F Col. Orden 1
Cumulative annual CPI growth	2.00 %	2.00 %
Annual benefit increase rate	Between 0% and 1.5%	Between 0% and 1.5%

3. The discount rate used for the flows was determined by reference to high-quality corporate bonds.
4. The estimated retirement age of each employee is the first at which the employee is entitled to retire or the agreed-upon age, as appropriate.
5. The amounts recognised in the income statement in relation to the aforementioned defined benefit obligations are as follows:

EUR million

	2025	2024
Service cost:		
Current service cost (note 42)	1	1
Interest cost (note 35)	23	22
Extraordinary charges	—	—
Past service cost		
Actuarial (gains)/losses recognized in the year	(19)	1
Pre-retirement cost	315	237
Other	(1)	(5)
Total	**319**	**256**

The changes in 2025 and 2024 in the present value of the accrued obligations for other long-term benefits were as follows:

EUR million

	2025	2024
Present value of the obligations at beginning of the year	**704**	**703**
Current service cost	1	1
Cost per interest (note 35)	23	22
Past service cost	—	—
Pre-retirement cost	315	237
Effect of curtailment/settlement	—	(4)
Benefits paid	(276)	(255)
Actuarial (gains)/losses	(19)	1
Other	(1)	(1)
Present value of the obligations at end of the year	**747**	**704**

The movement that has occurred, during the years 2025 and 2024, in the fair value of the assets of the plan, has been as follows:

EUR million	2025	2024
Fair value of plan assets at the beginning of the year	5	7
Expected return on plan assets	—	—
Benefits paid	(2)	(2)
Contributions by the employer	—	—
Contributions by the employee and others	—	—
Actuarial gains / (losses)	—	—
Present value of the obligations at end of the year	**3**	**5**

iv. Sensitivity analysis

Variations in the main assumptions may affect the calculation of commitments. At 31 December 2025, in the event that the discount interest rate had decreased or increased by 50 basis points, there would have been an increase or decrease in the current value of post-employment obligations of 4.02% and -3.75% respectively, and an increase or decrease in the current value of long-term obligations of 1.15% and -1.15%. These variations would be partially offset by increases or decreases in the fair value of assets and insurance contracts linked to pensions.

The following table shows the estimate of benefits to be paid as of December 31, 2025 for the next ten years:

EUR Million	
2026	405
2027	349
2028	297
2029	248
2030	205
2031 to 2035	646

d) Provisions for taxes and other legal contingencies and Other provisions

'Provisions - Provisions for taxes and other legal contingencies' and 'Provisions - Other provisions', which include, inter alia, provisions for restructuring costs and tax-related and non-tax-related proceedings, were estimated using prudent calculation procedures in keeping with the uncertainty inherent to the obligations covered. The definitive date of the outflow of resources embodying economic benefits for the Bank depends on each obligation. In certain cases, these obligations have no fixed settlement period and, in other cases, depend on the legal proceedings in progress.

'Provisions for taxes and other legal contingencies' include proceedings and other legal proceedings such as judicial, arbitral or administrative proceedings initiated against Banco Santander. Qualitative information on the main disputes is provided in note 23.e. For their part, the provisions for restructuring include only costs arising from restructuring processes incurred at Banco Santander.

The Bank general policy is to record provisions for tax and legal proceedings in which the Group assesses the chances of loss to be probable and the Group does not record provisions when the chances of loss are possible or remote. Banco Santander determines the amounts to be provided for as its best estimate of the expenditure required to settle the corresponding claim based, among other factors, on a case-by-case analysis of the facts and the legal opinion of internal and external counsel or by considering the historical average amount of the loss incurred in claims of the same nature. The definitive date of the outflow of resources embodying economic benefits for the Bank depends on each obligation. In certain cases, the obligations do not have a fixed settlement term and, in others, they depend on legal proceedings in progress.

As for the 'Other provisions' contains very atomized and individually insignificant provisions, such as the provisions corresponding to cover other operational risks of the Bank.

e) Litigation and other matters

i. Tax-related litigation

At 31 December 2025 the main tax-related proceedings concerning the Bank were as follows:

- Legal actions filed by Banco Santander (Brasil) S.A. and other Group entities to avoid the application of Law 9.718/98, which modifies the basis to calculate Programa de Integraçao Social (PIS) and Contribuição para Financiamento da Seguridade Social (COFINS), extending it to all the entities income, and not only to the income from the provision of services. In relation of Banco Santander (Brasil) S.A. process, in 2015 the Federal Supreme Court (FSC) admitted the extraordinary appeal filed by the Federal Union regarding PIS, and dismissed the extraordinary appeal lodged by the Brazilian Public Prosecutor's Office regarding COFINS contribution, confirming the decision of Federal Regional Court favourable to Banco Santander (Brasil) S.A. of August 2007. The Federal Supreme Court also admitted the appeals related to the other Group entities both for PIS and COFINS. On June 13, 2023, the Federal Supreme Court ruled unfavorably 2 cases through General Repercussion (Theme 372), including Banco Santander (Brasil) S.A. case. The Bank has filed a new appeal, considering the possible loss as a contingent liability. The cases of the other Group entities are no longer susceptible of appeal and a provision has been recognized for the amount of the estimated loss.
- Banco Santander (Brasil) S.A. and other Group companies in Brazil have appealed against the assessments issued by the Brazilian tax authorities questioning the deduction of loan losses in their income tax returns (Imposto sobre a Renda das Pessoas Jurídicas - IRPJ - and Contribuçao Social sobre o Lucro Liquido -CSLL-) in relation to different administrative processes of various years on the ground that the requirements under the applicable legislation were not met. The appeals, which involves several cases, are pending decision in different administrative and judicial instances. No provision was recognised in connection with the amount considered to be a contingent liability.
- Banco Santander (Brasil) S.A. and other Group companies in Brazil are involved in administrative and legal proceedings against several municipalities that demand payment of the Service Tax on certain items of income from transactions not classified as provisions of services. There are several cases in different judicial instances. A provision was recognised in connection with the amount of the estimated loss.
- Banco Santander (Brasil) S.A. and other Group companies in Brazil are involved in administrative and legal proceedings against the tax authorities in connection with the taxation for social security purposes of certain items which are not considered to be employee remuneration. There are several cases in different judicial instances. A provision was recognised in connection with the amount of the estimated loss.
- In May 2003 the Brazilian tax authorities issued separate infringement notices against Santander Distribuidora de Títulos e Valores Mobiliarios, Ltda. (DTVM, actually Santander Brasil Tecnología S.A.) and Banco Santander (Brasil) S.A. in relation to the Provisional Tax on Financial Movements (Contribuição Provisória sobre Movimentação Financeira) of the years 2000 to 2002. The administrative discussion ended unfavourably for both companies, and on July 3, 2015, filed a lawsuit requesting the cancellation of both tax assessments. The lawsuit was judged unfavourably in first instance. Therefore, both plaintiffs appealed to the court of second instance. In December 2020, the appeal was decided unfavourably and the judgement was appealed before the higher courts. This case fell within the scope of the Comprehensive Transaction Programme (Programa de Transaçao Integral) established by the Ministry of Finance, and in 2025 a final settlement was reached. The amounts paid under the terms of the Transaction were fully provisioned.
- In December 2010 the Brazilian tax authorities issued an infringement notice against Santander Seguros S.A. (Brasil), (currently Zurich Santander Brasil Seguros e Previdência S.A.), as the successor by merger to ABN AMRO Brasil dois Participações S.A., in relation to income tax (IRPJ and CSLL) for 2005, questioning the tax treatment applied to a sale of shares of Real Seguros, S.A. The administrative discussion ended unfavourably, and the CARF decision has been appealed at the Federal Justice. As the former parent of Santander Seguros S.A. (Brasil) (currently Zurich Santander Brasil Seguros e Previdência S.A.), Banco Santander (Brasil) S.A. is liable in the event of any adverse outcome of this proceeding. No provision was recognised in connection with this proceeding as it is considered to be a contingent liability.

- In November 2014 the Brazilian tax authorities issued an infringement notice against Banco Santander (Brasil) S.A. in relation to corporate income tax (IRPJ and CSLL) for 2009 questioning the tax-deductibility of the amortisation of the goodwill of Banco ABN AMRO Real S.A. performed prior to the absorption of this bank by Banco Santander (Brasil) S.A., but accepting the amortisation performed after the merger. The Bank appealed before the Higher Chamber of CARF, and a final favourable decision was obtained in April 2024. No provision was recognised in connection with this proceeding as it was considered to be a contingent liability.
- Banco Santander (Brasil) S.A. has also appealed against infringement notices issued by the tax authorities questioning the tax deductibility of the amortisation of the goodwill arising on the acquisition of Banco Comercial e de Investimento Sudameris S.A from years 2007 to 2012. In May and October 2024, the appeal related to period 2009 to 2012 was finally rejected by the CARF and the resolution was appealed at the Federal Justice. No provision was recognised in connection with this matter as it was considered to be a contingent liability.
- Banco Santander (Brasil) S.A. and other companies of the Group in Brazil are undergoing administrative and judicial procedures against Brazilian tax authorities for not admitting tax compensation with credits derived from other tax concepts, not having registered a provision for the amount considered to be a contingent liability.
- Banco Santander (Brasil) S.A. is involved in appeals in relation to infringement notices initiated by tax authorities regarding the offsetting of tax losses in the CSLL of year 2009 and 2019. The appeals are pending decision at the administrative level. No provision was recognised in connection with this matter as it is considered to be a contingent liability.
- Banco Santander (Brasil) S.A. filed a suspensive judicial measure aiming to avoid the withholding income tax (Imposto sobre a Renda Retido na Fonte - IRRF), on payments derived from technology services provided by Group foreign entities. A favorable decision was handed down and an appeal was filed by the tax authority at the Federal Regional Court, where it awaits judgment. No provision was recognized as it is considered to be a contingent liability.
- Brazilian tax authorities have issued infringement notices against Getnet Adquirência e Serviços para Meios de Pagamento S.A and Banco Santander (Brasil) S.A. as jointly liable in relation to corporate income tax (IRPJ and CSLL) for 2014 to 2018 questioning the tax-deductibility of the amortization of the goodwill from the acquisition of Getnet Tecnologia Proces S.A., considering that the company would not have complied with the legal requirements for such amortization. The tax assessment notices were appealed to the CARF. In 2024, the CARF issued a favourable partial decision on both infraction notices. In December 2024, the tax authorities issued a new infringement notice for 2019 and 2020. No provision was recognized as it is considered to be a contingent liability.

The total amount for the aforementioned Brazil lawsuits that are fully provisioned is EUR 553 million, and for lawsuits that qualify as contingent liabilities is EUR 5,040 million.

At the date of approval of these annual accounts, there are other less significant tax disputes.

ii. Non-tax-related proceedings

At 31 December 2025 the main non-tax-related proceedings concerning the Group and the Bank were as follows:

- Payment Protection Insurance (PPI): AXA France IARD and AXA France Vie (former GE Capital Corporation Group entities, known as Financial Insurance Company Ltd (FICL) and Financial Assurance Company Ltd (FACL), acquired by AXA SA in 2015) (together, AXA France) brought a claim against (i) Santander Cards UK Limited (formerly known as GE Capital Bank Limited (GECB), which was acquired by Banco Santander, S.A. in 2008 and subsequently transferred to Santander UK plc); and (ii) Santander Insurance Services UK Limited (a Banco Santander, S.A. subsidiary) (SISUK and together with GECB the Santander Entities). The claim relates to the allocation of liability for compensation and associated costs in respect of a large number of PPI policies distributed by GECB pre-2005, which were underwritten by FICL and FACL.

  On 25 July 2025, the Commercial Court of England and Wales handed down its judgment in relation to the claim brought by AXA France (the Judgment). It found against SISUK in relation to AXA France's claim pursuant to an indemnity in an agency agreement entered into between GECB, FICL and FACL in 2000 and novated by GECB to SISUK in 2010. It also found GECB negligent in the sale of PPI policies, but this element of the claim was time barred to PPI policies sold in the period between 2002 and 2005 and overlaps with the indemnity claim. The Judgment required the Santander Entities to pay GBP 515 millionplus interest of GBP162 million.

In October 2025 the Santander Entities obtained permission to appeal the findings in the Judgment relating to the application of the indemnity arising from PPI sales occurring before the indemnity had been agreed in December 2000 (Santander Appeal). In January 2026, AXA France obtained permission to cross-appeal the Commercial Court's rejection of AXA France's contribution claim made under the Civil Liability (Contribution) Act 1978 (the AXA France's cross appeal). A decision on the Santander Appeal and AXA France's cross appeal is expected in the second half of 2026.

With respect to the Santander Appeal and AXA France's cross-appeal, there are points of legal interpretation to be resolved and, in the case of the cross-appeal, factual points to be determined. The significant uncertainties make it difficult to predict the timing or the final impact of the resolution of the appeals for the Group.

No customers have suffered loss as a consequence of the claim brought by AXA France or the Judgment, nor does it impact upon past redress paid to customers for PPI complaints.

- Motor Finance Broker Commissions: following the Financial Conduct Authority's (FCA) Motor Market review in 2019 which resulted in a change in rules in January 2021, Santander Consumer (UK) plc (SCUK) has received several of county court claims and complaints in respect of its historical use of discretionary commission arrangements (DCAs) prior to the 2021 rule changes. In January 2024, the FCA commenced a review of the use of DCAs between lenders and credit brokers (the FCA Review). Pending the conclusion of its review, the FCA paused the handling of motor finance commission related complaints. The pause is currently in place until 31 May 2026, reflecting the extended timeline of the FCA's Review and subsequent Consultation (see below).

After the Court of Appeal's decision rendered on 25 October 2024 within the judicial proceedings followed against DCAs of other financial entities, as of 31 December 2024, the Santander UK group Holdings recognised a provision of GBP 293.0 million (EUR 353.3 million) This provision was determined based upon the information then available. It included estimates for operational and legal costs and potential awards based on various scenarios and used a range of assumptions, including the possible outcome of the appeal to the Supreme Court in 2025 of the Court of Appeal's decision. On 1 August 2025, the Supreme Court handed down its judgment stating that motor dealers acting as credit brokers do not owe fiduciary or disinterested duties to their customers and, as a consequence, commission payments by lenders to motor dealers would not be unlawful on that basis. In addition, the Supreme Court held that an unfair relationship under s.140A of the Consumer Credit Act 1974 had arisen in one of the cases on its facts and awarded the amount of the commission paid by the lender plus interest at a commercial rate as the remedy. It also confirmed that the test for unfairness of the relationship with borrower was highly fact sensitive and it outlined a series of non-exhaustive factors to consider in assessing unfair relationships in this context (indicating that no or partial disclosure was not necessarily enough on its own to constitute an unfair relationship).

Following the Supreme Court's judgment, on 3 August 2025, the FCA announced that it aimed to publish a consultation on an industry wide redress scheme in early October (the Consultation). Further to the publication of the FCA's Consultation on 7 October 2025, the Santander UK group submitted its comments on 12 December 2025 and continues to engage constructively with the FCA. The FCA has stated that its intention is to publish the industry wide redress scheme no later than in March 2026.

In light of the proposed sectoral scheme and taking into account the objections raised and the uncertainty surrounding both the final decision to be adopted by the FCA and the outcome of any potential legal challenges, the Santander UK group has reviewed the potential impact on SCUK in relation to the vehicle finance market. The range of scenarios has been updated, which has resulted in an additional estimated charge of GBP 183 million (EUR 213.6 million). As of 31 December 2025, the total provision amounts to GBP 461 million (EUR 528.1 million). This continues to include estimates for operational and legal costs and potential awards reflecting an increased likelihood of a higher number of cases than had previously been predicted as eligible for redress as well as an increased possibility that a remedy is sought to be imposed which extends beyond reversing any damaging financial consequences caused by any unfair relationships. The provision is based on various scenarios using a range of assumptions, including potential changes to the proposed scheme following responses to the Consultation or publication of the FCA's final scheme rules.

There continue to be significant uncertainties as to the nature, extent and timing of redress payments. Therefore, while the ultimate financial impact of this matter could materially differ from the amount of the provision as of this date, such impact is not expected to be material for the Group as of the date of these financial statements.

- Delforca: dispute arising from equity swaps entered into by Gaesco (now Delforca 2008, S.A. (Delforca)) on shares of Inmobiliaria Colonial, S.A. Banco Santander, S.A. is claiming to Delforca before the Court of Barcelona in charge of the bankruptcy proceedings, a total of EUR 66 million from the liquidation resulting from the early termination of financial transactions due to Delforca's non-payment of the equity swaps. In the same bankruptcy proceedings, Delforca and Mobiliaria Monesa, S.A., parent of Delforca (Monesa) have in turn claimed the Bank to repay EUR 57 million, which the Bank received for the enforcement of the agreed guarantee, as a result of the aforementioned liquidation. On 16 September 2021 the Commercial Court Number 10 of Barcelona has ordered Delforca to pay the Bank EUR 66 million plus EUR 11 million in interest and has dismissed the claims filed by Delforca. This decision was appealed by Delforca, Monesa and the bankruptcy administrator. On 15 November 2023 the Provincial Court of Barcelona rendered a judgment dismissing the appeals filed by Delforca, Monesa and the bankruptcy administrator. Delforca and Monesa (not the bankruptcy administrator) filed an appeal in cassation, that was rejected in November 2025 by the First Chamber of Supreme Court and, as a result, the appeal and first instance judgments in favor of the Bank have been confirmed.

  Separately, Monesa, filed in 2009 a civil procedure with the Courts of Santander against the Bank claiming damages that have not been specified to date. The procedure is suspended.

- Planos Económicos': like the rest of the banking system in Brazil, Santander Brazil has been the target of customer complaints and collective civil suits stemming mainly from legislative changes and its application to the retribution of bank deposits (economic plans). At the end of 2017, an agreement was reached between regulatory entities and the Brazilian Federation of Banks (Febraban) with the purpose of closing the lawsuits and was approved by the Supremo Tribunal Federal (the STF and the Collective Agreement). Discussions focused on specifying the amount to be paid to each affected client according to the balance in their notebook at the time of the application of the plan. Finally, the total value of the payments will depend on the number of adhesions there may be and the number of savers who have proved the existence of the account and its balance on the date the indexes were changed. In November 2018, the STF ordered the suspension of all economic plan proceedings for two years from May 2018. On 29 May 2020, STF approved the extension of the Collective Agreement for 5 additional years starting from 3 June 2020. Condition for this extension was to include in the Collective Agreement actions related to the 'Collor I Plan'. On May 2025, the STF issued the judgment recognizing the constitutionality of the Bresser, Verão, Collor I and II plans, guaranteeing savers the receipt of the amounts established in the Collective Agreement and setting a deadline of 24 months for new adhesions. As of 31 December 2025, the provision recorded for the economic plan proceedings amounts to EUR 155.3 million.

- Banco Popular´s acquisition: after the declaration of the resolution of Banco Popular, some investors filed claims against the EU's Single Resolution Board decision, and the FROB's resolution executed in accordance with the aforementioned decision. Likewise, numerous civil lawsuits were filed against Banco Santander, S.A. alleging that the information provided by Banco Popular was erroneous and requesting from Banco Santander, S.A. the restitution of the price paid for the acquisition of the investment instruments or, where appropriate, the corresponding compensation.

  In relation to the direct appeals filed before the General Court of the European Union (EGC) and the Court of Justice of the European Union (CJEU), all appeals were either dismissed or discontinued. Currently there are no ongoing appeals. On 4 February 2026, the National Court issued its first rulings dismissing the actions brought against the FROB's decision, in application of the judgments of the EGC and the CJEU.

In the civil proceedings, several Spanish judges referred to the CJEU a number of preliminary questions that have already been resolved. In particular, in the judgments of 5 May 2022 (C-410/20) and 5 September 2024 (C-775/22, C-779/22, C-794/22), the CJEU stated that Directive 2014/59/EU on bank resolution prevents shareholders, subordinated debt holders, and holders of equity instruments converted into shares bringing actions against a financial institution subject to a resolution proceeding or against its successor after the resolution, claiming liability for the information contained in the prospectus, under Directive 2003/71/EC, or actions seeking the nullity of the contract of subscription of capital instruments, which, given its retroactive effects, would result in the refund of the value of such securities, plus the interest accrued as of the date of execution of the contract. In its 11 September 2025 resolution (C-687/23), the CJEU declared that the above referred TJUE resolutions do not apply to actions pursued prior to the entity's resolution. There are currently no other preliminary questions under consideration.

On 4 March 2024, in the context of preliminary proceedings 42/2017, the Central Court of Instruction No. 4 issued a ruling transforming the proceedings into Summary Proceedings and terminating the investigation phase. This ruling considers that the circumstantial evidence resulting from the investigation which could constitute a crime is basically the following: (i) an alleged misrepresentation in the prospectus of the 2016 capital increase of Banco Popular; (ii) an alleged misrepresentation in the annual accounts of Banco Popular for 2015, the interim financial statements for 2016 and the annual accounts for 2016; and (iii) the offer to the market of a distorted amount of regulatory capital, after the capital increase of 2016 (for allegedly having been granted by Banco Popular financing to clients for the subscription of shares in the aforementioned capital increase, without discounting it from the regulatory capital). According to the aforementioned ruling, these facts could constitute the crimes of fraud of investors (art. 282 of the Criminal Code) and accounting falsehood (art. 290 of the Criminal Code). All appeals filed against the ruling have been dismissed.

The accusing parties, including the Public Prosecutor's Office, filed their indictment briefs on 28 October 2024, which included requests for compensation for civil liability and the request that not only the defendants but also several entities are held liable for such compensation, including Banco Santander, S.A., the auditing firm and several insurance companies. Following the filing of the indictment briefs, on 22 November 2024, the Court (Investigating Judge) issued an order for the opening of the oral trial against the defendants and civil liability parties, including Banco Santander, S.A. as a possible civil liable party. However, in line with what was determined by the Spanish National Court and confirmed by the Supreme Court concerning the hypothetical succession of Banco Popular by Banco Santander, S.A., the oral trial has not been opened against the Bank as possible direct civil liable party.

The order to open the oral trial states that the plaintiffs have requested compensation for civil liability for a total amount of EUR 2,277.65. Additionally, the order rejects the imposition of the guarantee requested by several of the accusing parties, considering that it is unnecessary to secure the outcome of the trial. The defendants and potential civil liable parties submitted their defense writs on 4 February 2025. After that, the proceedings will be forwarded to the Criminal Chamber of the National Court for the oral trial.

Regarding civil liability, the Bank considers that it has no subsidiary civil liability in light of the CJEU's judgments of 5 May 2022 (C-410/20), 5 September 2024 (C-775/22, C-779/22, C-794/22) and 11 September 2025 (C-687/23 and C-447/23). Notwithstanding the foregoing, the Spanish National Court has stated that this issue shall be resolved within the ongoing proceedings.

The estimated cost of any compensation to shareholders and bondholders of Banco Popular recognized in the 2017 accounts amounted to EUR 680 million, of which EUR 535 million were applied to the commercial loyalty program. On 15 December 2024, Banco Santander, S.A., proceeded to redeem in advance voluntarily all bonds in circulation regarding such commercial action. The CJEU judgements of 5 May 2022 (C-410/20), 5 September 2024 (C-775/22, C-779/22, C-794/22) and 11 September 2025 (C-687/23 and C-447/23) referred above, represented a very significant reduction in the risk associated with these claims.

- German shares investigation: the Cologne Public Prosecution Office is conducting an investigation against the Bank and other group entities based in the UK - Santander UK plc, Santander Financial Services Plc and Cater Allen International Limited -, in relation to a particular type of tax dividend linked transactions known as cum-ex transactions.

  The Group is cooperating with the German authorities. According to the state of the investigations, the result, and the effects for the Group, which may potentially include the imposition of material financial consequences (penalties, and/or disgorgement of proceeds) cannot be anticipated. For this reason, the Bank has not recognized any provisions in relation to the potential imposition of financial liabilities.

- Banco Santander, S.A. was sued in a legal proceeding in which the plaintiff alleges that the Bank breached his contract as CEO of the institution: in the lawsuit, the claimant mainly requested a declaratory ruling upholding the existence, validity and effectiveness of such contract and its enforcement together with the payment of certain amounts. For the case that the main request is not granted, the claimant sought a compensation for a total amount of approximately EUR 112 million or, an alternative relief for other minor amounts. Banco Santander, S.A. answered to the legal action stating that the conditions to which the appointment of that position was subject to were not met; that the executive services contract required by law was not concluded; and that in any case, the parties could terminate the contract without any justified cause. On 17 May 2021, the plaintiff reduced his claims for compensation to EUR 61.9 million.

  On 9 December 2021, the Court upheld the claim and ordered the Bank to compensate the claimant in the amount of EUR 67.8 million. By court order of 13 January 2022, the Court corrected and supplemented its judgment, reducing the total amount to be paid by the Bank to EUR 51.4 million and clarifying that part of this amount (buy out) was to be paid under the terms of the offer letter, i.e., entirely in Banco Santander shares, within the deferral period for this type of remuneration at the plaintiff's former employer and subject to the performance metrics or parameters of the plan in force at the Bank, which was that of 2018. As explained in note 5 of the report of the consolidated annual accounts of the year 2022, the degree of performance of these objectives was 33.3%.

  The Bank filed an appeal against the judgment before the Madrid Court of Appeal, which was opposed by the plaintiff. At the same time, the plaintiff filed an application for provisional enforcement of the judgment in the First Instance Court. A court order was issued ordering enforcement of the judgment, and the Bank deposited in the court bank account the full amount provisionally awarded to the claimant, including interest, for an approximate sum of EUR 35.5 million, within the voluntary compliance period.

  On 6 February 2023, Banco Santander was notified with the judgment of 20 January 2023 by which the Madrid Court of Appeal partially upheld the appeal filed by the Bank. The judgment has reduced the amount to be paid by EUR 8 million, which, to the extent that this amount was already paid in the provisional partial enforcement of the judgement of First Instance Court, must be returned to the Bank together with other amounts for interest, which the appeal judgement also rejects. The plaintiff deposited circa EUR 9.6 million. This amount was received by the Bank on 11 July 2023.

  On 11 April 2023, the Bank filed an extraordinary appeal for procedural infringement and an appeal in cassation against the Madrid Court of Appeal's judgment before Spanish Supreme Court. The extraordinary and cassation appeals submitted by the Bank were accepted on 26 March 2025 and are pending to be resolved. Existing provisions cover the estimated risk of loss.

- CHF Polish Mortgage Loans: In October 2019, the CJEU rendered its decision in relation to the effects of the potential unfairness of certain contractual clauses in CHF-Indexed loan agreements. The CJEU established that it for the national courts to determine the invalidity of a contract where it cannot be maintained without the clause declared unfair and where no supplementary provisions exist that would allow the contract to be maintained.

  In April 2024, the Civil Chamber of the Polish Supreme Court issued a judgment confirming that clauses relating to the mechanism for determining the exchange rate declared abusive cannot be replaced by alternative provisions and that, in the absence of a binding exchange rate, the contract is not enforceable for the parties. With regard to the effects of invalidity, the Supreme Court confirmed the existence of independent restitution claims for each party and ruled out the possibility of claiming interest or other amounts for the use of the funds. Nevertheless, certain aspects of this judgment have been subject to internal debate within the Supreme Court itself, reflecting the complexity and evolving nature of the jurisprudential framework

In this context, Santander Bank Polska S.A. and Santander Consumer Bank S.A. estimate legal risk using a model that considers different possible outcomes and regularly review court rulings on this matter in order to assess changes in case law, including the impact of the aforementioned Supreme Court judgment. Settlements are being reached both with customers who have already initiated legal proceedings and with customers who have not yet filed a claim. The model used to calculate provisions for legal risks considers the evolution and expected development of such settlements.

As of 31 December 2025, the total amount adjusted against the gross carrying amount of loans in accordance with IFRS 9, together with the provisions recognised under IAS 37, amounts to PLN 5,874.3 million (EUR 1,391.9 million)of which PLN3,191.7 million (EUR 756.3 million) corresponds to adjustments to the gross carrying amount under IFRS 9 and PLN 2,682.6 million (EUR 635.6 million) to provisions recognised under IAS 37. The adjustment to gross carrying amount in accordance with IFRS9 during 2025 amounted to PLN 99.7 million (EUR 23.6 million), and the additional provisions recognised under IAS 37 amounted to PLN 1245.3 million (EUR 293.8 million). Other costs related to the dispute amounted to PLN 730.5 million (EUR 172.4 million). IAS 37.

As of the same date, Santander Bank Polska S.A. held a portfolio of mortgages denominated in or indexed to CHF amounting to approximately PLN 2,642.0 million (EUR 626.0 million) and recognised provisions of PLN 4,766.4 million (EUR 1,129.4 million) to cover the CHF mortgage portfolio. Santander Consumer Bank S.A. (Poland), in turn, held a portfolio of mortgages denominated in or indexed to CHF amounting to approximately PLN 735.9 million (EUR 174.4 million) and recognised provisions of PLN 1,107.9 million (EUR 262.5 million) to cover this portfolio.

Notwithstanding the above, as detailed in Note 3 b), in January 2026 the Group sold a 49% stake in Santander Bank Polska S.A., which ceased to be consolidated within the Group's perimeter as of that date.

The Group continues to monitor the evolution of legal proceedings and to periodically review the adequacy of the provisions recognised, which represent the best estimate of the risk existing as of the reporting date.

- Banco Santander Mexico: dispute regarding a testamentary trust constituted in 1994 by Mr. Roberto Garza Sada in Banca Serfin (currently Santander Mexico) in favor of his four sons in which he affected shares of Alfa, S.A.B. de C.V. (respectively, Alfa and the Trust). During 1999, Mr. Roberto Garza Sada instructed Santander México in its capacity as trustee to transfer 36,700,000 shares from the Trust's assets to his sons and daughters and himself. These instructions were ratified in 2004 by Mr. Roberto Garza Sada before a Notary Public.

  Mr. Roberto Garza Sada passed away on 14 August 2010 and subsequently, in 2012, his daughters filed a complaint against Santander Mexico alleging it had been negligent in its trustee role. The lawsuit was dismissed at first instance in April 2017 and on appeal in 2018. In May 2018, the plaintiffs filed an appeal (recurso de amparo) before the First Collegiate Court of the Fourth Circuit based in Nuevo León, which ruled in favor of the plaintiffs on 7 May 2021, annulling the 2018 appeal judgment and condemning Santander Mexico to the petitions claimed, consisting of the recovery of the amount of 36,700,000 Alfa shares, together with dividends, interest and damages.

  Since 2021, Santander Mexico has filed before the Supreme Court of Justice of the Nation a constitutional review challenge (recurso de revisión constitucional) against the referred decision which was initially rejected by the Supreme Court; and several appeals (recursos de reclamación) against such rejection. On 25 June 2025, one of the appeals filed by the Bank was accepted, and this decision was extended to a remaining one, which will now be resolved. In case that these appeals are resolved favorably to the Bank, the Supreme Court will decide on the merits of the constitutional review against the judgment which condemned the Bank.

  In parallel to the foregoing, the Bank also filed an amparo against the judgment favorable to the plaintiffs rendered by the First District Court in the State of Nuevo León before the Collegiate Courts if such State, and in 2024, the Bank requested the Supreme Court of Justice of the Nation to take up and resolve the matter through the faculty of attraction, what is pending.

  The challenges and appeals filed by the Bank imply that the judgment rendered in favour of the plaintiffs is not final, and Santander México believes that the actions taken should prevail and reverse the decision against it. The impact of a potential unfavorable resolution for Santander México will be determined in a subsequent proceeding and will also depend on the additional actions that Santander México may take in its defense, so it is not possible to determine it at this time. At the current stage of the proceedings, the provisions recorded are considered sufficient to cover the risks deriving from this claim.

- Mortgage Expenses: in December 2015 the Spanish Supreme Court ruled that mortgage clauses relating to the payment of fees associated to formalizing the mortgage were abusive. On 27 November 2018, the Supreme Court agreed that the taxpayer of the documented legal acts stamp duty tax (IAJD) on the mortgage loans should be the borrower. On 9 November 2018, RDL 17/2018 came into force and modified the Law of the IAJD, establishing that the taxpayer is the Bank. On 23 January 2019, the Supreme Court ruled the distribution of the same must be 50% between the Bank and the borrower in public notary expenses and agency expenses. The Supreme Court also ruled that the Bank must pay 100% of the Registry. On 26 October 2020, the Supreme Court ruled that the Bank is fully responsible for the management expenses; and on 27 January 2021, the Supreme Court ruled that the Bank is also responsible for the valuation expenses.

  In relation to the statute of limitations, on 25 April 2024, two judgments were rendered (cases C-561/21 and C-484/21) in which the Court of Justice of the European Union (CJEU) stated that the commencement of the statute of limitations for the reimbursement action of the mortgage expenses derived from the annulment of the clause, shall be fixed on the moment when the consumer has an effective knowledge of the abusive nature of the clause and its effects and that this date must not be fixed (a) on the date of payment of such expense nor of the execution of the agreement; (b) when the Supreme Court has handed down judgments stating the abusive nature of a clause similar to the one included in the consumer contract; nor (c) when the CJEU has handed down judgments confirming that the statute of limitations for the reimbursement action of the amounts derived from the annulment of contractual provisions is valid subject to its compliance with the principles of equivalence and effectiveness.

  The Supreme Court has confirmed this criterion in its 14 June 2024 judgment, establishing that the public dissemination of case-law declaring the abusive nature of a clause does not necessarily give rise to the limitation period of the reimbursement action derived from similar clauses. However, the 4 July 2024 judgment, rendered in the case C-450/22, the CJEU has established that it cannot be excluded a priori that, as a consequence of the occurrence of an objective event or of a notorious event, such as the amendment of the applicable legislation or a widely disseminated and debated development of jurisprudence, the court considers that the average consumer's overall perception of the floor clause has changed during the reference period and has enabled him to become aware of the potentially significant economic consequences arising from such clause. A further preliminary question concerning the statute of limitations of the reimbursement action derived from the annulment of mortgage expenses has been raised before the CJEU by the First Instance Court No 8 of La Coruña.

  In December in 2024, the Supreme Court handed down two additional judgments regarding statute of limitations, in which it determines that the date to be considered for the purposes of the application of Directive 93/1994 and, consequently, the statute of limitations detailed in its previous judgments, is 31 December 1994 (i.e. the date when the deadline for its transposition ended). This is based on the principle of interpretation in accordance with directives not transposed (applicable once their transposition period has expired). The recorded provision includes the best estimate of Group's liability for this matter.

  Banco Santander and the other Group companies are subject to claims and, therefore, are party to certain judicial and administrative proceedings incidental to the normal course of their business including those in connection with lending activities, relationships with employees and other commercial or tax matters additional to those referred to here.

  With the information available to it, the Bank considers that, at 31 December 2025, it had reliably estimated the obligations associated with each proceeding and had recognized, where necessary, sufficient provisions to cover reasonably any liabilities that may arise as a result of these tax and legal risks. Disputes in which risk and/or provisions have been registered but are not disclosed is justified on the basis that it would be prejudicial to the proper defense of the Bank. Subject to the qualifications made, it also believes that any liability arising from such claims and proceedings will not have, overall, a material adverse effect on the Bank's business, financial position, or results of operations.

24. Tax matters

a) Consolidated Tax Group

According to current Spanish regulation, the Tax Consolidated Group includes Banco Santander, S.A. as the parent company and, as subsidiaries, those Spanish subsidiaries that meet the requirements established by the regulations on the taxation of consolidated groups.

b) Years open for review by the tax authorities

In connection with the partial review of Corporate Income Tax for the 2020 financial year and Value Added Tax for the 2020 to 2022 financial years, initiated in April 2024, in December 2025 the Spanish tax authorities issued an assessment for Corporate Income Tax, which has been appealed before the Central Economic-Administrative Court, while at the year-end the statements relating to Value Added Tax remained pending.

The main appeals filed against the assessments issued in previous reviews remain pending before the Central Economic-Administrative Court (Corporate Income Tax and Value Added Tax for the 2017 to 2019 financial years) and before the National High Court (Corporate Income Tax for the 2003 to 2015 financial years). Banco Santander, S.A., as the parent company of the Consolidated Tax Group, considers, based on the advice of its external legal advisers, that the adjustments made should not have a significant impact on these annual accounts, and there are solid grounds for defence in the appeals filed against these assessments. Consequently, no provision has been recognised for these matters. In addition, where considered appropriate, the mechanisms provided for the avoidance of international double taxation have been applied.

As at the date of authorisation of these annual accounts, subsequent financial years up to and including 2025 remain subject to review.

Due to potential different interpretations that may be given to tax legislation, the results of tax inspections by the authorities for the remaining years under review may give rise to contingent tax liabilities whose amount cannot be objectively quantified. However, in the opinion of the Bank's tax advisers, the likelihood of such tax liabilities materialising is remote and, in any case, any tax liability arising would not have a significant effect on the Bank's annual accounts.

c) Reconciliation

The reconciliation between the Corporate Income Tax expense calculated at the applicable tax rate (30%) and the expense recognised for this tax is shown below (amounts in millions of euros):

EUR million

	2025	2024
Profit before tax	12,186	11,192
From continuing operations	*11,165*	*10,257*
From discontinued operations	*1,021*	*935*
Income tax at tax rate applicable in Spain (30%)	3,656	3,358
Dividends and capital gains	*(2,081)*	(2,354)
Impairment losses	*(494)*	*(8)*
Global Minimum Tax Pillar Two	4	8
Remaining permanent differences and others	(12)	71
Tax expense or income from continuing operations	**1,073**	**1,091**

d) Tax recognized in equity

Independently of taxes on profit charged to the income statement, the Bank has charged the following amounts to equity for the items indicated below during 2025 and 2024:

EUR million

	Amounts receivable/ (Amounts payable)	
	2025	2024
Fair value changes of debt instruments measured at fair value with changes in other comprehensive income	12	(9)
Equity instruments valued at fair value with changes in other comprehensive income	(6)	2
Cash flow hedges	30	(123)
Other valuation adjustments (note 25)	(102)	(209)
Total	**(66)**	**(339)**

e) Deferred taxes

The balance of the Deferred tax assets caption in the balance sheet includes debit balances with the Tax Authorities corresponding to anticipated corporate tax. Likewise, the balance of the Deferred tax liabilities caption includes the liability corresponding to the different deferred taxes of the Bank.

In accordance with Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms (CRR), as subsequently amended by Regulation (EU) 2019/876 of the European Parliament and of the Council, deferred tax assets the utilisation of which does not depend on the generation of future profits (hereinafter referred to as monetisable deferred tax assets) that meet certain conditions shall not be deducted from regulatory capital nor be risk-weighted at 250% in accordance with the thresholds established in Article 48 of that Regulation, but shall consume risk-weighted assets at 100% in accordance with Article 39.

The following is a breakdown of deferred tax assets and liabilities as at 31 December 2025 and 2024:

EUR million

	2025	2024
Tax assets:	**10,148**	**10,353**
Current	4,392	4,332
Deferred	5,756	6,021
Of which		
Relating to pensions[A]	2,205	*2,384*
Relating to allowances for loan losses[A]	2,007	*2,007*
Relating to deductions and negative tax bases	*681*	*681*
Tax liabilities:	**2,672**	**2,168**
Of which, deferred tax liabilities	*2,039*	*1,978*

A. These tax assets are considered realizable.In 2023, the Spanish Economic Administrative Court ruled that in 2017 the requirements for the conversion of part of the monetizable assets of Popular Group into a credit against the Tax Administration were met, allowing the conversion to EUR 995 million. Banco Santander was refunded without impact on results. The favourable Economic Administrative Court decision was declared harmful to the public interests and challenged at the National Appellate Court by the Tax Administration. The estimation of this appeal, which is pending at the National Appellate Court, would imply that Grupo Santander should repay the amount refunded and would, once again, credit these monetizable assets with no impact on results except for late payment interests. However, it is considered that there are strong defense arguments in relation to this appeal.

At the accounting close, deferred taxes, both assets and liabilities, are reviewed in order to determine whether any adjustments to them are necessary in accordance with the results of such analyses.

These analyses take into account all positive and negative evidence of the recoverability of such assets, including, among others, (i) results generated in prior years, (ii) projections of results, (iii) the estimated reversal of the different temporary differences according to their nature, and (iv) the period and limits established in current legislation for the recovery of the different deferred tax assets, thereby concluding on the Bank's ability to recover its recognised deferred tax assets.

The result projections used in this analysis are based on the financial planning approved both by the local management of the corresponding units and by the administrators of Banco Santander. The Group's planning process is common to all units, including the Bank. Group management prepares its financial budgets based on the following key assumptions:

a. Microeconomic variables of the entities forming the tax group in each location: the existing balance-sheet structure, the product mix offered and the commercial strategy at any given time defined by local management are taken into account in this respect, based on the competitive, regulatory and market environment.

b. Macroeconomic variables: the estimated growth rates are supported by the expected evolution of the economic environment, taking into account the expected behaviour of GDP in each location and forecasts for interest rates, inflation and exchange rates. Such data are provided by the Group's Economic Research Department.

In addition, the Group conducts backtesting of the variables projected in the past. The differential behaviour of those variables compared to the actual market data is taken into consideration in the projections estimated for each year. Thus, in relation to Spain, deviations identified by Management in recent past years are due to a combination of exogenous elements, mainly the changing effect of the macroeconomic and competitive environment, and management actions, such as the acceleration of restructuring plans, investment in digitalisation, and optimisation of capital and shareholder returns.

Finally, given the degree of uncertainty of these assumptions regarding the aforementioned variables, the Group performs a sensitivity analysis of the most significant ones used in the recoverability assessment of deferred tax assets, considering reasonable changes in the key assumptions on which the profit projections of each entity or tax group and the estimated reversal of the different temporary differences are based.

In relation to Spain, the sensitivity analysis consisted of applying reasonable changes to the key assumptions, including adjusting growth (GDP) by 50 basis points and inflation by 50 basis points. After this analysis, the maximum recoverability period of the deferred tax assets recognised at 31 December 2025 remains at 15 years.

In addition, the Tax Group in Spain, of which Banco Santander, S.A. is the parent company, has not recognised deferred tax assets of approximately EUR 11,030 million, of which EUR 6,280 million correspond to tax loss carryforwards, EUR 3,370 million to tax credits and EUR 1,380 million to other items.

f) Global Minimum Tax (Pillar II of the OECD Inclusive Framework)

The model rules for the Global Minimum Tax, known as Pillar Two and approved in 2021 by the OECD Inclusive Framework, require multinational groups with revenue exceeding EUR 750 million to pay a minimum rate of 15% on adjusted accounting profit, calculated on a jurisdiction-by-jurisdiction basis. The OECD has completed these rules by approving administrative guidance and a document on transitional safe harbours applicable during the first three years. In January 2026 the transitional safe harbours were extended for one further year and new definitive safe harbours were approved with the aim of simplifying the application of the model rules and implementing the 'side-by-side' coexistence agreement reached in June 2025 within the G7, which will be applicable from 2026 to multinational groups with a US parent entity.

In the European Union, in December 2022 the Council approved Directive 2022/2523 on ensuring a global minimum level of taxation for multinational enterprise groups and large domestic groups in the Union, establishing 1 January 2024 as the effective date for the new minimum taxation. The Directive implements the Pillar Two rules of the OECD Inclusive Framework within the European Union, although its scope also extends to large domestic groups.

In Spain, on 20 December 2024 Law 7/2024 was approved, establishing a Complementary Tax to ensure a global minimum level of taxation for multinational groups and large domestic groups, with effect from 1 January 2024. This Law transposes Directive 2022/2523 and also establishes a national complementary tax aligned with the Pillar Two rules. In April 2025, Royal Decree 252/2025 was published approving the implementing Regulation of the Law. Regarding other jurisdictions, the rules of the new global minimum taxation are already in force in most of the main geographies in which the Group operates, with the exception of Mexico, Chile and Argentina.

The Pillar Two rules require the calculation, in each jurisdiction in which the Group operates, of the rate resulting from relating tax expense to accounting profit, both with certain adjustments. If that rate in a jurisdiction is below 15%, Banco Santander, as ultimate parent entity, must pay the difference as a top-up tax to the Spanish Tax Authorities, unless a qualified domestic minimum top-up tax has been enacted in that jurisdiction, in which case the top-up tax is paid to the local Tax Authorities.

Both Banco Santander, S.A., as ultimate parent, and the subsidiaries resident in jurisdictions that have enacted a qualified domestic minimum top-up tax, have estimated the accrued top-up taxes taking into account the application of the transitional safe harbours for the 2024 and 2025 financial years. These safe harbours mean that the top-up tax, whether in the parent entity or in jurisdictions that have enacted a qualified domestic minimum top-up tax, is not due provided that any of the following circumstances apply: (i) the effective rate calculated from the country-by-country report data exceeds 15% in 2024, 16% in 2025 and 17% in 2026, (ii) the Group's presence in a jurisdiction is not significant, understood as revenue below €10 million and profit before tax below €1 million, or (iii) profit before tax is less than the sum of tangible assets and payroll costs weighted by a percentage that varies annually.

The top-up tax expense recognised by Banco Santander has not been significant, since the effective tax rates calculated under the Pillar Two rules in the majority of the jurisdictions in which the Group operates are above 15%. Nevertheless, the new rules require the provision of a large amount of information to the Tax Authorities in the different jurisdictions in which the Group operates, broken down by entity, which represents a significant administrative burden.

g) Regulatory changes

The following significant tax reforms have been approved in 2025 and prior financial years:

In Spain, in 2022 Law 38/2022 was approved, which established a temporary levy applicable to credit institutions and financial credit establishments for the 2023 and 2024 financial years, the amount of which was 4.8% of the sum of net interest margin and net fees of the previous year derived from activity carried out in Spain. The obligation to pay arose on the first day of each financial year. The charge recognised for this temporary levy amounted to €189 million in 2023 and €290 million in 2024, although the Tax Authorities have audited both years and consider that an additional amount may be payable as a result of discrepancies in the criteria applied in determining the tax base, which are being discussed by the Bank. In addition, that law established for 2023 the 50% limitation on the consolidation of negative individual tax bases into the tax base of the Consolidated Tax Group, setting a 10-year period for the reversal of this positive adjustment.

On 20 December 2024 Law 7/2024 was approved which, among other tax measures, established a tax on the margin of interest and fees of certain financial entities obtained in Spanish territory with accrual on 1 January of the 2025, 2026 and 2027 financial years. The tax base, with some modifications compared with the temporary levy, is now calculated at an individual level for each financial entity and the rate is determined according to a scale of rates between 1% and 7%, applying certain deductions. On 24 December 2024 Royal Decree-Law 9/2024 was published in the Official State Gazette, which amended certain technical aspects of the tax, postponing its accrual to 31 January of those years. This Royal Decree-Law was repealed on 22 January 2025, so no charge was recognised for the new tax corresponding to 2024 revenues in accordance with the legislation in force at that time (during the year €390 million was paid). In 2025, the expense corresponding to income accrued during the year, recognised as income tax, amounts to EUR 351 million and will be paid in 2026. Banco Santander considers that both the temporary levy and the tax on the margin of interest and fees are contrary to constitutional principles and European Union law and has challenged the corresponding self-assessments, requesting the refund of the amounts paid.

In addition, Law 7/2024 again establishes for the 2024 and 2025 financial years the 50% limitation on the consolidation of negative individual tax bases into the tax base of the Consolidated Tax Group, setting a 10-year period for the reversal of this positive adjustment. Likewise, this Law reintroduces the limits provided for in Royal Decree-Law 3/2016 (which was declared unconstitutional by judgment of the Constitutional Court of 18 January 2024) for the consolidation of monetisable deferred tax assets and the offsetting of tax loss carryforwards (the limit is reduced from 70% to 25%) and the application of deductions to avoid double taxation (50%), as well as the obligation to reverse impairments of investments that were deductible in past years by third parties, irrespective of the recovery of value of the investees.

h) Other information

In compliance with the disclosure requirement set out in the Listing Rules Instrument 2005 issued by the UK Financial Conduct Authority, it is stated that shareholders of the Bank who are resident in the United Kingdom will have the right to claim a tax credit for foreign tax paid in respect of the withholdings the Bank is required to operate on dividends to be paid to such shareholders if the total dividend income exceeds the exempt amount of £500 for the 2025/2026 financial year (£500 for the 2024/2025 financial year). Shareholders of the Bank resident in the United Kingdom who hold their interest in the Bank through Santander Nominee Service will be provided directly with information on the amount withheld, as well as any other information they may need to complete their UK tax returns. Other shareholders of the Bank resident in the United Kingdom should contact their bank or stockbroker.

Banco Santander, S.A. is a member of the Forum of Large Companies and has adhered to the Code of Good Tax Practices in Spain since 2010, actively participating in the cooperative compliance programmes being developed by the Tax Authorities in both cases.

25. Other comprehensive income

The balances of 'Other comprehensive income' include the amounts, net of the related tax effect, of the adjustments to assets and liabilities recognised in equity through the statement of recognised income and expense.

Respect to items that may be reclassified to profit or loss, the statement of recognised income and expense includes changes in other comprehensive income as follows:

- Revaluation gains (losses): includes the amount of the income, net of the expenses incurred in the year, recognised directly in equity. The amounts recognised in equity in the year remain under this item, even if in the same year they are transferred to the income statement or to the initial carrying amount of the assets or liabilities or are reclassified to another line item.

- Amounts transferred to income statement: includes the amount of the revaluation gains and losses previously recognised in equity, even in the same year, which are recognised in the income statement.
- Amounts transferred to initial carrying amount of hedged items: includes the amount of the revaluation gains and losses previously recognised in equity, even in the same year, which are recognised in the initial carrying amount of assets or liabilities as a result of cash flow hedges.
- Other reclassifications: includes the amount of the transfers made in the year between the different 'Other comprehensive income' items.

a) Breakdown of Other accumulated comprehensive income - Items that will not be reclassified in results and Items that can be classified in results

EUR million

	2025	2024
Other accumulated comprehensive income	**(1,311)**	**(1,555)**
Items that will not be reclassified in results	**(1,325)**	**(1,669)**
Actuarial gains and losses on defined benefit pension plans	(484)	(827)
Non-current assets held for sale	—	—
Changes in the fair value of equity instruments measured at fair value through other comprehensive income	(822)	(919)
Ineffectiveness of fair value hedges of equity instruments measured at fair value with changes in other comprehensive income	—	—
Changes in the fair value of equity instruments measured at fair value through other comprehensive income (hedged item)	203	279
Changes in the fair value of equity instruments measured at fair value through other comprehensive income (hedging instrument)	(203)	(279)
Changes in the fair value of financial liabilities at fair value through profit or loss attributable to changes in credit risk	(19)	77
Items that can be classified in results	**14**	**114**
Hedges of net investments in foreign operations (effective portion)	283	—
Exchange differences	(299)	—
Cash flow hedges (effective portion)	35	104
Changes in the fair value of debt instruments measured at fair value through changes in other comprehensive income	(5)	10
Hedging instruments (items not designated)	—	—
Non-current assets held for sale	—	—

b) Other accumulated comprehensive income- Items not reclassified to profit or loss – Actuarial gains or losses on defined benefit pension plans

'Other comprehensive income —Items not reclassified to profit or loss— Actuarial gains or losses on defined benefit pension plans' include the actuarial gains and losses and the return on plan assets, less the administrative expenses and taxes inherent to the plan, and any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset), attributed to the group net of taxes.

Its variation is shown in the statement of recognised income and expense.

c) Other accumulated comprehensive income - Items that will not be reclassified in results - Changes in the fair value of equity instruments measured at fair value with changes in other comprehensive income.

Includes the net amount of unrealized fair value changes of equity instruments at fair value with changes in other comprehensive income.

The following is a breakdown of the composition of the balance as of 31 December 2025 and 2024 under 'Other accumulated comprehensive income - Items that will not be reclassified to profit or loss - Changes in the fair value of equity instruments measured at fair value with changes in other global result' (see note 8):

EUR million

	2025				2024			
	Capital gains by valuation	Capital losses by valuation	Net gains/ losses by valuation	Fair value	Capital gains by valuation	Capital losses by valuation	Net gains/ losses by valuation	Fair value
Equity instruments	475	(1,297)	(822)	1,283	382	(1,301)	(919)	1,245

Since the entry into force of Bank of Spain Circular 4/2017, no impairment analysis is performed on equity instruments measured at fair value through other comprehensive income. Bank of Spain Circular 4/2017 eliminates the need to estimate the impairment of this type of equity instruments and the reclassification to profit or loss of gains and losses on derecognition of these assets, which are recognised at fair value through equity.

d) Other accumulated comprehensive income - Items that may be reclassified to profit or loss - Hedging derivatives – Cash flow hedges (Effective portion)

'Other comprehensive income – Items that may be reclassified to profit or loss - Cash flow hedges' includes the gains or losses attributable to hedging instruments that qualify as effective hedges. These amounts will remain under this heading until they are recognized in the income statement in the periods in which the hedged items affect it (see note 11).

e) Other accumulated comprehensive income - Items that may be reclassified to profit or loss – Changes in the fair value of debt instruments measured at fair value with changes in other comprehensive income

Includes the net amount of unrealized changes in the fair value of assets classified as items than can be reclassified in results 'Changes in the fair value of debt instruments measured at fair value with changes in other comprehensive income' (see note 7).

Below is a breakdown of the balance composition as of December 31, 2025 and 2024 of 'Other accumulated global income - Items that can be reclassified in results - Changes in the fair value of the instruments of debt valued at fair value with changes in other comprehensive income' depending on the type of instrument:

EUR million

	2025				2024			
	Revaluation gains	Revaluation losses	Net revaluation gains/ (losses)	Fair value	Revaluation gains	Revaluation losses	Net revaluation gains/ (losses)	Fair value
Debt instruments	57	(62)	(5)	5,349	52	(42)	10	8,873

As of December 31, 2025 and 2024, the handicaps recorded in the 'Other cumulative comprehensive income - Elements that can be reclassified into profit or loss - Changes in the fair value of debt instruments measured at fair value through other comprehensive income' are not significant.

26. Shareholders' equity

The changes in 'Shareholders' equity' are presented in the statement of changes in total equity. Significant information on certain items of 'Shareholders' equity' and the changes therein in 2025 are set forth below.

27. Issued capital

a) Changes

At 31 December 2022, Banco Santander's share capital consisted of EUR 8,397 million, represented by 16,794,401,584 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

On 21 March 2023, there was a capital reduction amounting EUR 170,203,286 through the redemption of 340,406,572 shares, corresponding to the share buyback programme carried out in 2022 and ended in January 2023.

Likewise, on 30 June 2023, there was a capital reduction of EUR 134,924,476.50 through the redemption of 269,848,953 shares, corresponding to the share buyback programme during the first half of 2023.

Therefore, Banco Santander's share capital at 31 December 2023 consisted of EUR 8,092 million, represented by 16,184,146,059 shares of EUR 0.50 of nominal value each and all of them of a unique class and series; including 286,842,316 shares corresponding to the first buyback programme of 2023 (see note 1.g.).

On 5 February 2024, a capital reduction of EUR 179,283,743.50 took place through the redemption of 358,567,487 shares, corresponding to the share buyback programme carried out in 2023 and ended in January 2024.

On 1 July 2024, a capital reduction of EUR 165,652,500 took place through the redemption of 331,305,000 shares, corresponding to he share buyback programme carried out between February and June 2024.

On 20 December 2024, a capital reduction of EUR 170,890,625 took place through the redemption of 341,781,250 shares, corresponding to he share buyback programme carried out during the second semester of 2024.

Therefore, Banco Santander's share capital at 31 December 2024 consisted of EUR 7,576 million, represented by 15,152,492,322 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

On 3 June 2025, there was a capital reduction amounting to EUR 133,583,475 through the redemption of 267,166,950 shares, corresponding to the share buyback programme carried out between February and June 2025.

On 23 December 2025, a capital reduction of EUR 98,002,935 took place through the redemption of 196,005,870 shares, corresponding to the share buyback programme carried out during the second semester of 2025.

Aforementioned operations have not entailed the return of contributions to the shareholders as Banco Santander was the owner of the redeemed shares.

Therefore, Banco Santander's share capital at 31 December 2025 consisted of EUR 7,345 million, represented by 14,689,319,502 shares of EUR 0.50 of nominal value each and all of them of a unique class and series.

Banco Santander's shares are listed on the Spanish Stock Market Interconnection System and on the New York, London, Mexico and Warsaw Stock Exchanges, and all of them have the same features and rights. Santander shares are listed on the London Stock Exchange under Crest Depository Interest (CDI), each CDI representing one Bank's share. They are also listed on the New York Stock Exchange under American Depositary Shares (ADS), each ADS representing one share. Additionally, Banco Santander's shares were listed on the traditional listing of the Mexican Stock Exchange (BMV) and since 29 December 2023, they were listed only in the International Quotation System of said stock exchange.

As of 31 December 2025, no Banco Santander shareholder individually held more than 3% of its total share capital (which is the threshold generally provided for in Spanish regulations for mandatory notification of a significant participation in a listed company). Even though at 31 December 2025, certain custodians appeared in our shareholder registry as holding more than 3% of our share capital, we understand that those shares were held in custody on behalf of other investors, none of whom exceeded that threshold individually. These custodians were State Street Bank 13.90%), Chase Nominees Limited7.50%), The Bank of New York Mellon Corporation (7.18%),Citibank (6.40%), BNP Paribas 3.74%), Caceis Bank 3.57%) y The Northern Trust (3.06%).

At 31 December 2025, neither Banco Santander's shareholder registry nor the CNMV's registry showed any shareholder residing in a non-cooperative jurisdiction with a shareholding equal to, or greater than, 1% of our share capital (which is the other threshold applicable under Spanish regulations).

b) Other considerations

Under Spanish law, only shareholders at the general meeting have the authority to increase share capital. However, they may delegate the authority to approve or execute capital increases to the board of directors. Banco Santander´s Bylaws are fully aligned with Spanish law and do not establish any different conditions for share capital increases.

At 31 December 2025 the shares of the following companies were listed on official stock markets: Banco Santander - Chile; Banco Santander (Brasil) S.A. and Santander Bank Polska S.A.

At 31 December 2025 the number of Banco Santander shares owned by third parties and managed by Group management companies (mainly portfolio, collective investment undertaking and pension fund managers) or jointly managed was33 million shares, which represented 0.22% of Banco Santander's share capital (40 million shares, representing 0.26% of the share capital in 2024).In addition, the number of Banco Santander shares owned by third parties and received as security was 28 million shares (equal to 0.19% of the Bank's share capital).

28. Share premium

Share premium includes the amount paid up by the Bank's shareholders in capital issues in excess of the par value.

The Corporate Enterprises Act expressly permits the use of the share premium account balance to increase capital at the entities at which it is recognised and does not establish any specific restrictions as to its use.

The change in the balance of share premium corresponds to the capital reductions detailed in (note 27.a).

The decrease produced in 2024 by an amount of EUR 3,778 million was the consequence of the difference between the purchase value of the redeemed shares (EUR 4,294 million) and the par value of said shares (EUR 516 million) (see note 4.a and statements of changes in total equity) as a consequence of the capital decreases described in note 27.a.

The decrease produced in 2025 by an amount of EUR 3,055 million has been the consequence of the difference between the purchase value of the redeemed shares (EUR 3,287 million) and the par value of said shares (EUR 231 million) (see note 4.a and consolidated statements of changes in total equity) as a consequence of the capital decreases described in note 27.a.

Likewise, in accordance with the applicable legislation, a reserve has been provided in 2024 for amortized capital charged to the issue premium for an amount equal to the nominal value of said amortized shares ascending to EUR 231 million (EUR 516 million euros in 2024).

29. Accumulated retained earnings

a) Definitions

The balance of 'Equity - Accumulated gains and Other reserves' includes the net amount of the accumulated results (profits or losses) recognised in previous years through the income statement which in the profit distribution were allocated in equity, the expenses of own equity instrument issues, the differences between the amount for which the treasury shares are sold and their acquisition price, as well as the net amount of the results accumulated in previous years, generated by the result of non-current assets held for sale, recognised through the income statement.

b) Breakdown

The detail of 'Shareholders' equity - reserves' at 31 December 2025 and 2024 is as follows:

EUR million

	2025	2024
Restricted reserves	**3,328**	**3,084**
Legal reserve[A]	1,469	1,515
Own shares	480	421
Revaluation reserve Royal Decree-Law 7/1996	43	43
Reserve for retired capital	1,336	1,105
Unrestricted reserves	**26,357**	**20,362**
Voluntary reserves	**26,357**	**20,362**
Total	**29,685**	**23,446**

A. The board of directors has proposed to the general shareholders' meeting the reclassification of the excess that the amount of the balance of the legal reserve account shows over the figure that is equivalent to 20% of the resulting share capital after the executed capital reductions, to be included in the voluntary reserves account.

i. Legal reserve

Under the Consolidated Spanish Corporate Enterprises Act, 10% of net profit for each year must be transferred to the legal reserve. These transfers must be made until the balance of this reserve reaches 20% of the share capital. The legal reserve can be used to increase capital provided that the remaining reserve balance does not fall below 10% of the increased share capital amount.

During 2024, Banco Santander reduced the legal reserve by EUR 103 million.

During 2025, the legal reserve has been reduced by EUR 46 million to adjust that the amount of the legal reserve is equivalent to 20% of the share capital, after the executions of the capital reductions made in the year. This amount has been incorporated into the voluntary reserves account.

The amount of the legal reserve amounted to 20% of the share capital figure on December 31, 2025.

ii. Reserve for equity shares

According to the Corporate Enterprises Act, an unavailable reserve equivalent to the amount for which Banco Santander's shares owned by subsidiaries are recorded. This reservation shall be freely available when the circumstances which have obliged its constitution disappear. In addition, this reserve covers the outstanding balance of loans granted by the Group with Banco Santander's share guarantee and the amount equivalent to the credits granted by the Group companies to third parties for the acquisition of own shares.

iii. Revaluation reserve Royal Decree Law 7/1996, of 7 June

The balance of Revaluation reserve Royal Decree-Law 7/1996 can be used, free of tax, to increase share capital. From 1 January 2007, the balance of this account can be taken to unrestricted reserves, provided that the monetary surplus has been realised. The surplus will be deemed to have been realised in respect of the portion on which depreciation has been taken for accounting purposes or when the revalued assets have been transferred or derecognised.

If the balance of this reserve were used in a manner other than that provided for in Royal Decree law 7/1996, of 7 June, it would be subject to taxation.

iv. Voluntary Reserve

During the financial year 2025 there was an increase in voluntary reserves of EUR 5,995 million, which is explained by the application of the result of the financial year 2024, amounting to EUR 6,927 million; an increase of EUR 46 million due to the reclassification of the excess legal reserve; a decrease of EUR 622 million for the interest of the PPCCs; an increase of EUR 196 million for the merger reserve with URO Prperty Holdings, S.A., Blecno Investments, S.L.U., Emisora Santander España, S.A.U. y Elevate Tech Platforms, S.L.U.; an decrease of EUR 3 million in lost on sale of equity instruments measured at fair value from other cumulative comprehensive income and a decrease of EUR 549 million in transfers between equity items and other items.

30. Other equity instruments and own shares

a) Equity instruments issued not capital and other equity instruments

Other equity instruments includes the equity component of compound financial instruments, the increase in equity due to personnel remuneration, and other items not recognised in other 'Shareholders' equity' items.

On 8 September 2017, Banco Santander, S.A. issued contingent redeemable perpetual bonds (the fidelity bonds) amounting to EUR 981 milliom nominal value (EUR 686 million fair value).

On 15 December 2024, Banco Santander, S.A., proceeded to redeem in advance voluntarily all of said bonds in circulation.

Additionally, at 31 December 2025 the Bank had other equity instruments amounting to EUR 417 million.

b) Own shares

'Shareholders' equity - Own shares' includes the amount of equity instruments held by Banco Santander.

Transactions involving own equity instruments, including their issuance and cancellation, are recognised directly in equity, and no profit or loss may be recognised on these transactions. The costs of any transaction involving own equity instruments are deducted directly from equity, net of any related tax effect.

The Bank's shares owned by the consolidated companies accounted for 0.07% of issued share capital at 31 December 2025 (December 31, 2024 0.10%).

During financial year 2025, Banco Santander acquired 551,762,443 own shares at an average price of EUR 7.01 per share, of which 267,166,950 shares were acquired under the eighth share buy-back programme launched on 6 February 2025, and 196,005,870 shares under the ninth buy-back programme launched on 31 July 2025. In addition, 463,172,820 shares were cancelled and 88,589,623 shares were sold at an average price of EUR 6.53 per share.

31. Memorandum items

Memorandum items relate to balances representing rights, obligations and other legal situations that in the future may have an impact on net assets, as well as any other balances needed to reflect all transactions even though they may not impinge on its net assets.

a) Guarantees and contingent commitments granted

Guarantees include transactions for which an entity secures obligations of a third party arising from financial guarantees granted by the entity or other types of contracts. 'Contingent liabilities' include all transactions under which an entity guarantees the obligations of a third party and which result from financial guarantees granted by the entity or from other types of contract. The detail is as follows:

EUR million

	2025	2024
Loans commitment granted	**149,881**	**141,976**
Available in lines of credit	149,881	141,976
Deposits in the future	—	—
Financial guarantees granted	**22,138**	**18,888**
Financial guarantees	74	82
Credit derivatives sold	22,064	18,806
Other commitments granted	**121,415**	**108,829**
Irrevocable documentary credits	5,826	4,320
Other guarantees and guarantees granted	47,496	47,211
Other	68,093	57,298
Of which:		
Subscribed securities pending disbursement	*1*	*1*
Conventional asset acquisition contracts	*39,551*	*35,617*
Other contingent commitments	*28,541*	*21,680*
Total Other guarantees and commitments	**293,434**	**269,693**

The breakdown at December 31, 2025 of off-balance sheet exposures and allowance fund (see note 23) by impairment phase under Bank of Spain Circular 4/2017 are EUR 284,838 million and EUR 78 million in Stage 1, EUR 7,983 million and EUR 53 million in Stage 2 and EUR 613 million and EUR 48 million in Stage 3, respectively. In addition, the breakdown at December 31, 2024 of exposures and the allowance fund were EUR 261,861 million and EUR 61 million in Stage 1, EUR 7,232 million and EUR 44 million in Stage 2 and EUR 600 million and EUR 70 million in Stage 3, respectively.

A significant part of these amounts will mature without any payment obligation material for the Bank; therefore, the aggregate balance of these commitments cannot be considered as a real future need for financing or liquidity to be granted to third parties by Banco Santander.

Income from guarantee instruments is recognized under 'Fee and commission income' in the income statements and is calculated by applying the rate established in the related contract to the nominal amount of the guarantee.

i. Loan commitments granted

Firm commitments to provide credit under pre-established conditions and terms, except for those that meet the definition of derivatives because they may be settled in cash or through the delivery or issuance of another financial instrument. They include those available in lines of credit and forward deposits.

ii. Financial guarantees granted

Include financial guarantee contracts such as financial guarantees, credit derivatives sold, derivative risks contracted on behalf of third parties and others.

iii. Other commitments granted

Other contingent liabilities include all commitments that could give rise to the recognition of financial assets not included in the above items, such as technical guarantees and guarantees for the import and export of goods and services.

b) Other information

i. Assets advanced as collateral

In addition to collateral assets, there are assets owned by Banco Santander which guarantee both transactions carried out by the Bank or by third parties and various contingent liabilities and liabilities over which the assignee has the right, by contract or custom, to re-transfer and pledge them.

The carrying value of Banco Santander's financial assets delivered as collateral for such contingent and assimilated liabilities or liabilities is the following:

EUR million

	2025	2024
Financial assets held for trading	55,600	27,581
Of which		
Public debt Public Sector Agencies	*7,215*	*4,236*
Fix rent instruments	*41,580*	*19,970*
Equity instruments	*6,805*	*3,375*
Non-trading financial assets mandatorily at fair value through profit or loss	—	30
Financial assets at fair value through other comprehensive income	2,154	2,148
Financial assets at amortized cost	30,025	15,277
Total	**87,779**	**45,036**

32. Hedging derivatives

Banco Santander, within its financial risk management strategy, and in order to reduce asymmetries in the accounting treatment of its operations, enters into hedging derivatives on interest, exchange rate, credit risk or variation of stock prices, depending on the nature of the risk covered.

Based on its objective, Banco Santander classifies its hedges in the following categories:

- Cash flow hedges: cover the exposure to the variation of the cash flows associated with an asset, liability or a highly probable forecast transaction. This cover the variable-rate issues in foreign currencies, fixed-rate issues in non-local currency, variable-rate interbank financing and variable-rate assets (bonds, commercial loans, mortgages, etc.).
- Fair value hedges: cover the exposure to the variation in the fair value of assets or liabilities, attributable to an identified and hedged risk. This covers the interest risk of assets or liabilities (bonds, loans, bills, issues, deposits, etc.) with coupons or fixed interest rates, interests in entities, issues in foreign currencies and deposits or other fixed rate liabilities.
- Hedging of net investments abroad: cover the exchange rate risk of the investments in subsidiaries domiciled in a country with a different currency from the functional one of the Bank.

The details of the coverage derivatives of Banco Santander, S.A. according to the type of coverage, the risk they cover and the product, can be found in the following table:

EUR million

	31 December 2025				
	Notional Value	Carrying amount		Changes in fair value used for calculating hedge ineffectiveness	Balance sheet items
		Assets	Liabilities		
Fair Value Hedges	**69,954**	**1,176**	**(1,739)**	**335**

Banco Santander covers the risks of its balance sheet in a variety of ways. On the one hand, documented as fair value hedges, it covers the interest rate and foreign exchange risk of fixed-income portfolios at a fixed rate (REPOs are included in this category). Resulting, in an exposure to changes in their fair value due to variations in market conditions based on the various risks hedged, which has an impact on Banco Santander's income statement.

To mitigate these risks, Banco Santander contracts derivatives, mainly Interest Rate Swaps, Cross Currency Swaps, Cap&floors and Forex Forward.

On the other hand, the interest and exchange rate risk of loans granted to corporate clients at a fixed rate or variable rate is covered. These hedges, are carried out through interest rate swaps, cross currency swaps and exchange rate derivatives (forex swaps and forex forward).

In addition, Banco Santander, S.A. manages the interest and exchange risk of debt issues in its various categories (issuing covered bonds, perpetual, subordinated and senior bond) and in different currencies, denominated at fixed rates, and therefore subject to changes in their fair value. These issues are covered through interest rate swaps and cross currency swaps.

The methodology used by Banco Santander to measure the effectiveness of fair value hedges is based on comparing the market values of the hedged items (based on the objective risk of the hedge) and of the hedging instruments in order to analyse whether the changes in the market value of the hedged items are offset by the market value of the hedging instruments, thereby mitigating the hedged risk and minimizing volatility in the income statement.

Prospectively, the same analysis is performed, measuring the theoretical market values in the event of parallel variations in the market curves of a positive basis point.

There is a macro hedge of structured loans in which the interest rate risk of fixed-rate loans (mortgage, personal or with other guarantees) granted to legal entities in commercial or corporate banking and wealth clients in the medium-long term is hedged. This hedge is instrumented as a macro hedge of fair value, the main hedging instruments being Interest Rate Swap and Cap&floors. In case of total or partial cancellation or early repayment, the customer is obliged to pay/receive the cost/income of the cancellation of the interest rate risk hedge managed by the Bank.

Regarding cash flow hedges, the objective is to hedge the cash flow exposure to changes in interest rates and exchange rates.

For retrospective purposes, the hypothetical derivative methodology is used to measure effectiveness. By means of this methodology, the hedged risk is modelled as a derivative instrument -not real-, created exclusively for the purpose of measuring the effectiveness of the hedge, and which must comply with the fact that its main characteristics coincide with the critical terms of the hedged item throughout the period for which the hedging relationship is designated. This hypothetical derivative does not incorporate characteristics that are exclusive to the hedging instrument. Additionally, it is worth mentioning that any risk component not associated with the hedged objective risk and effectively documented at the beginning of the hedge is excluded for the purpose of calculating the effectiveness. The market value of the hypothetical derivative that replicates the hedged item is compared with the market value of the hedging instrument, verifying that the hedged risk is effectively mitigated and that the impact on the income statement due to potential ineffectiveness is residual.

Prospectively, the variations in the market values of the hedging instrument and the hedged item (represented by the hypothetical derivative) are measured in the event of parallel shifts of a positive basis point in the affected market curves.

There is another macro-hedge, this time of cash flows, the purpose of which is to actively manage the risk-free interest rate risk (excluding credit risk) of a portion of the floating rate assets of Banco Santander, S.A., through the arrangement of interest rate derivatives whereby the bank exchanges floating rate interest flows for others at a fixed rate agreed at the time the transactions are arranged. The items affected by the Macro-hedging have been designated as those in which their cash flows are exposed to interest rate risk, specifically the floating rate mortgages of the Banco Santander, S.A. network referenced to Euribor 12 Months or Euribor Mortgage, with annual renewal of rates, classified as sound risk and which do not have a contractual floor (or, if not, this floor is not activated). The hedged position affecting the Macro Cash Flow Hedge at the present time is near to EUR 5,000 million.

Regarding net foreign investments hedges, basically, they are allocated in Banco Santander, S.A. Grupo Santander assumes as a priority risk management objective to minimize -to the limit determined by the Group's Financial Management- the impact on the calculation of the capital ratio of its permanent investments included within the Group's consolidation perimeter, and whose shares or equity interests are legally denominated in a currency other than that of the Group's parent company. For this purpose, financial instruments (generally derivatives) are contracted to hedge the impact on the capital ratio of changes in forward exchange rates. Grupo Santander mainly hedges the risk for the following currencies: BRL, CLP, MXN, CAD, COP, CNY, GBP, CHF, NOK, USD, PLN, UYU and PEN. The instruments used to hedge the risk of these investments are forex swaps, forex forward and spot currency purchases/sales.

For this type of hedges, ineffectiveness scenarios are considered to be of low probability, given that the hedging instrument is designated considering the position determined and the spot rate at which the position is located.

Additionally, the profile information of maturities and the price/average rate for Banco Santander is shown:

Changes in equity by discharge at P&L	—	—
Remains of equity movements	*1*	—
Taxes	31	(123)
Balance at year end	**35**	**104**

33. Off-balance-sheet funds under management

As of 31 December 2025, Banco Santander held off-balance-sheet funds under management, namely investment funds and assets under management, amounting to EUR 121,071 million (31 December 2024, EUR 108,663 million). Marketed but not held under management amounted to EUR 38,185 million (31 December 2024, EUR 28,971 million).

34. Interest income

Interest and similar income in the accompanying income statements comprises the interest accruing in the year on all financial assets with an implicit or explicit return, calculated by applying the effective interest method, irrespective of measurement at fair value, and the rectifications of income as a result of hedge accounting. Interest is recognized gross, without deducting any tax withheld originally.

The detail of the main items of interest and similar income earned in 2025 and 2024 is as follows:

EUR million

	2025	2024
Derivatives - Trading	**59**	**57**
Of which: Interest income derived from economic hedges	59	57
Debt instruments	**4,565**	**4,100**
Central Banks	68	80
Public sector	2,868	2,258
Credit entities	763	832
Other financial companies	738	845
Non-financial companies	128	85
Loans and advances	**17,105**	**19,247**
Central Banks	48	45
Public sector	519	526
Credit entities	2,494	3,137
Other financial companies	5,429	5,403
Non-financial companies	5,842	7,022
Households	2,773	3,114
Other assets	**2,551**	**3,489**
Of which, insurance contracts linked to pensions (note 23.c)	*13*	*14*
Deposits	**31**	**73**
Central Banks	—	—
Public sector	—	12
Credit entities	2	7
Other financial companies	28	51
Non-financial companies	1	3
Households	—	—
Hedging derivatives - Interest rate risk	**359**	**61**
Other financial liabilities	**2**	**—**
Debt securities issued	**—**	**—**
Total	**24,672**	**27,027**

Most of the interest and similar income was generated by Banco Santander's financial assets that are measured either at amortized cost or at fair value through Other comprehensive income.

35. Interest expense

Interest expense and similar charges in the accompanying income statements includes the interest accruing in the year on all financial liabilities with an implicit or explicit return, including remuneration in kind, calculated by applying the effective interest method, irrespective of measurement at fair value; the rectifications of cost as a result of hedge accounting; and the interest cost attributable to provisions recorded for pensions.

The detail of the main items of interest expense and similar charges accrued in 2025 and 2024 is as follows:

EUR million

	2025	2024
Derivatives - Trading	**277**	**77**
Of which: interest income from derivatives in economic hedges	*277*	*77*
Debt securities Issued	**4,567**	**4,948**
Debt securities	**40**	**30**
Central Banks	—	—

Deposits	**11,015**	**12,901**
Central Banks	466	695
Public sector	1,139	1,205
Credit entities	2,652	2,697
Other financial companies	4,067	4,672
Non-financial companies	2,237	2,871
Households	454	761
Other financial liabilities	**1,008**	**785**
Hedging derivatives - Interest rate risk	**1,204**	**1,309**
Pensions and other obligations of defined post-employment benefits (note 23)	**48**	**49**
Others	**—**	**—**
Total	**18,170**	**20,112**

Most of the interest expense and similar charges was generated by Banco Santander's financial liabilities that are measured at amortized cost.

36. Dividend income

'Dividend income' includes the dividends and payments on equity instruments out of profits generated by investees after the acquisition of the equity interest.

The detail of income from equity instruments is as follows:

EUR million

	2025	2024
Financial assets held for trading	550	513
Non-trading financial assets mandatorily at fair value through profit or loss	9	9
Financial assets at fair value through other comprehensive income	62	90
Investments in subsidiaries, jointly controlled entities and associates	6,070	7,113

Total	**4,148**	**3,791**

38. Commission expense

Fee and commission expense show the amount of all fees and commissions paid or payable by Banco Santander in the year, except those that form an integral part of the effective interest rate on financial instruments.

The detail of fee and commission expense in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Clearing and settlement	85	69
Loan commitments received	—	—
Financial guarantees received	206	180
Custody	1	1
Other [A]	716	616
Total	**1,008**	**866**

A. Other Includes mainly commissions paid for financial and mediation services, as well as credit cards.

39. Gains or losses on financial assets and liabilities

The following information is presented below regarding the gains or losses on financial assets or liabilities:

a) Breakdown

The detail, by classification of the related instrument, of Gains/losses on financial assets and liabilities in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Gains or losses on financial assets and liabilities not measured at fair value through profit or loss, net	100	(97)
Financial assets at amortized cost	(34)	(47)
Other financial assets and liabilities	134	(50)
Of which, debt instruments	*110*	*(61)*
Of which, equity instruments	—	—
Gains or losses on financial assets and liabilities held for trading, net [A]	494	704
Gains or losses on non-trading financial assets and liabilities mandatory at fair value through profit or loss	80	73
Gains or losses on financial assets and liabilities measured at fair value through profit or loss, net [A]	(2)	350
Gains or losses from hedge accounting, net	(16)	(6)
Total	**656**	**1,024**

A. Includes the net income obtained from transactions with debt securities, capital instruments, derivatives and short positions included in this portfolio when the Banco Santander jointly manages its risk in those instruments.

b) Financial assets and liabilities at fair value through profit or loss

The detail of the amount of the asset balances is as follows:

EUR million

	2025	2024
Loans and receivables	64,250	54,181
Central Banks	657	1,239
Credit institutions	26,906	24,008
Customers	36,687	28,934
Debt instruments[A]	55,778	43,519
Equity instruments	22,154	17,216
Derivatives	46,583	52,462
Total	**188,765**	**167,378**

A. Include EUR 46,640 million related to Spanish and foreign government debt securities at 31 December 2025 (31 December 2024, EUR 36,497 million).

The foregoing table shows the maximum credit risk exposure of these assets at 31 December 2025 and 2024, respectively. Banco Santander mitigates and reduces this exposure as follows.

With respect to derivatives, Banco Santander has entered into framework agreements with a large number of credit institutions and customers for the netting-off of asset positions and the provision of collateral for non-payment.

'Loans and receivable' to credit institutions and loans and receivable to 'customers' included reverse repos amounting to EUR 95,381 million at 31 December 2025 (31 December 2024: EUR 80,003 million).

In addition, assets amounting to EUR 416 million have a mortgage guarantee at 31 December 2025 (31 December 2024: EUR 578 million).

At 31 December 2025 and 2024, the amount of the change in the year in the fair value of financial assets at fair value through profit or loss attributable to variations in their credit risk (spread) was not material.

The detail of the amount of the liability balances is as follows:

EUR million

	2025	2024
Deposits	101,789	79,698
Central Banks	8,551	10,897
Credit Institutions	32,123	26,991
Customers	61,115	41,810
Marketable debt instruments	1,587	1,069
Short positions	30,694	25,518
Derivatives	41,524	46,121
Total	**175,594**	**152,406**

At 31 December 2025 and 2024, the amount of the change in the fair value of financial liabilities at fair value through profit or loss attributable to changes in their credit risk during the year is not material.

40. Exchange differences, net

This chapter basically includes the results obtained in the purchase and sale of currencies, the differences that arise when converting monetary items in foreign currency to functional currency and those from non-monetary assets in foreign currency at the time of disposal.

The detail of 'Exchange differences (net)' in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Foreign currency purchases and sales	**217**	**(106)**

Banco Santander manages the currencies to which it is exposed together with the arrangement of derivative instruments and, accordingly, the changes in this line item should be analyzed together with those recognized under Gains or losses on financial assets and liabilities (see note 39).

41. Other operating income and other operating expenses

The detail of 'Other operating income' in the accompanying income statements for 2025 and 2024, is as follows:

EUR million

	2025	2024
Exploitation of real estate investments and operating leases	138	277
Others	296	298
Total	**434**	**575**

The detail of 'Other operating expenses' in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Contribution to Deposit Guarantee Fund and Resolution Fund (note 1.h)[A]	(14)	(16)
Other operating expenses[B]	(220)	(609)
Total	**(234)**	**(625)**

A. Includes the expense incurred by contribution to the National Resolution Fund and to the Single Resolution Fund.
B. It included, at 31 December 2024, EUR 290 million for the temporary tax on credit institutions (Law 38/2022).c

In the 2025 and 2024 financial years, it was decided that there will not be contribution in Spain to the Single Resolution Fund, as well as a decrease in the contribution to the Deposit Guarantee Fund, by the Single Resolution Board (SRB) and the Deposit Guarantee Fund Management Committee, respectively.

42. Staff costs

a) Breakdown

The detail of 'Staff costs' in 2025 and 2024 is as follows:

EUR million

	2025			2024		
	Of which, in Spain	Of which, foreign branches	Total	Of which, in Spain	Of which, foreign branches	Total
Wages and salaries	1,932	664	2,596	1,862	638	2,500
Social security costs	379	69	448	378	63	441
Additions to provisions for defined benefit pension plans (note 23)	2	—	2	2	—	2
Contributions to defined contribution pension funds (note 23)	84	27	111	82	26	108
Equity-instrument-based remuneration	—	—	—	—	—	—
Other staff costs	133	34	167	124	35	159
Total	**2,530**	**794**	**3,324**	**2,448**	**762**	**3,210**

b) Headcount

The average number of employees at the Bank, by professional category, is as follows:

Average number of employees

	2025	2024
Executive directors and Senior management	17	15
Other employees	20,963	21,642
Branches abroad	2,227	2,182
Total	**23,207**	**23,839**

The number of employees, as of December 31, 2025 and December 31, 2024, is 22,856 and 23,569, respectively.

The functional breakdown, by gender, at 31 December 2025, is as follows:

	Breakdown by gender			
	Executives		Other line personnel	
	Men	Women	Men	Women
Breakdown by gender	82 %	18 %	49 %	51 %

The labour relations between employees and the various Group companies and, therefore, the Bank are governed by the related collective agreements or similar regulations.

The number of employees with disabilities greater than or equal to 33%, distributed by professional categories at December 31, 2025 and 2024, is as follows:

	2025	2024
Senior executives	—	—
Other executives	29	27
Other employees	384	405
Total	**413**	**432**

The average number of employees of Banco Santander with a disability greater than or equal to 33%, during the year 2025 was 419 (435 at 2024).

c) Share-based payments

The main share-based payments granted by the Group in force at 31 December, 2025 and 2024 are described below.

i. Bank

The variable remuneration policy for the Bank's executive directors and certain executive personnel of the Bank and of other Group companies includes Bank share-based payments, the implementation of which requires, in conformity with the law and the Bank's Bylaws, specific resolutions to be adopted by the general meeting.

Were it necessary or advisable for legal, regulatory or other similar reasons, the delivery mechanisms described below may be adapted in specific cases without altering the maximum number of shares linked to the plan or the essential conditions to which the delivery thereof is subject.

These adaptations may involve replacing the delivery of shares with the delivery of cash amounts of an equal value.

The plans that include share-based payments are as follows: (i) Deferred and Conditional Variable Remuneration Plan; (ii) Deferred Multiyear Objectives Variable Remuneration Plan; (iii) Digital Transformation Award, (iv) Digital Transformation Award 2022, Digital Transformation Award 2023 and (vi) PagoNxt incentive Plan 2024 and 2025 for Santander executives. The characteristics of the plans are set forth below:

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(i) Deferred and conditional variable remuneration plan (2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 and 2025)	The purpose of these cycles is to defer a portion of the variable remuneration of the beneficiaries over a period of three years for the sixth cycles, over three or five years for the fifth, seventh, eighth, ninth, tenth and eleventh cycles, and over four or five years for the twelfth cycle, for it to be paid, where appropriate, in cash and in Santander shares. The other portion of the variable remuneration is also to be paid in cash and Santander shares, upon commencement of the cycles, in accordance with the rules set forth below. **Beneficiaries:** • Executive directors and certain executives (including senior management) and employees who assume risk, who perform control functions or receive an overall remuneration which puts them on the same remuneration level as executives and employees who assume risks (fifth cycle) • In the case of the sixth, seventh, eighth, ninth, tenth, eleventh twelfth and thirteenth, fourteenth and fifteenth cycle the beneficiaries are Material Risk Takers (Identified staff) that are not beneficiaries of the Deferred Multiyear Objectives Variable Remuneration Plan.	For the fifth and sixth cycles (2015 to 2016), the accrual of the deferred compensation is conditioned, in addition to the requirement that the beneficiary remains in the Group's employ, with the exceptions included in the plan regulations on none of the following circumstances existing during the period prior to each delivery, pursuant to the provisions set forth in each case in the plan regulations: • Poor financial performance of the Group. • Breach by the beneficiary of internal regulations, including, in particular, those relating to risks. • Material restatement of the Group's consolidated financial statements, except when it is required pursuant to a change in accounting standards. • Significant changes in the Group's economic capital or risk profile. In the case of the seventh, eighth, ninth, tenth, eleventh, twelfth, thirteenth, fourteenth and fifteenth cycles, the accrual of deferred compensation is conditioned, in addition to the permanence of the beneficiary in the Bank, with the exceptions contained in the plan's regulations, to non-occurrence of a poor performance of the entity as a whole or of a specific division or area of the entity or of the exposures generated by the personnel: i. significant failures in risk management by the entity , or by a business unit or risk control unit. ii. the increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures. iii. Regulatory sanctions or judicial sentences for events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity. iv. Irregular behaviours, whether individual or collective, considering in particular the negative effects derived from the marketing of inappropriate products and the responsibilities of the persons or bodies that made those decisions.	Fifth cycle (2015): • Executive directors and members of the Identified Staff with total variable remuneration higher than 2.6 million euros: 40% paid immediately and 60% deferred over 5 years deferral period. • Division managers, country heads (of countries which represent at least 1% of Group's economic capital), other executives of the Group with a similar profile and members of the Identified Staff with total variable remuneration between 1.7 million euros (1.8 million in fourth cycle) and 2.6 million euros: 50% paid immediately and 50% deferred over 5 years (fifth cycle) • Other beneficiaries: 60% paid immediately and 40% deferred over 3 years. Sixth cycle (2016): • 60% of bonus will be paid immediately and 40% deferred over a three years period. Seventh, eighth, ninth, tenth and eleventh cycle (2017, 2018, 2019, 2020 and 2021): • Beneficiaries of these plans with target total variable remuneration higher or equal to 2.7 million euros: 40% paid immediately and 60% deferred over 5 years • Beneficiaries of these plans with target total variable remuneration between 1.7 million euros and 2.7 million euros: 50% paid immediately and 50%paid over 5 years • Other beneficiaries of these plans: 60% paid immediately and 40% deferred over 3 years. Twelfth (2022),thirteenth (2023), fourteenth (2024) and fifteenth (2025) cycle: • Beneficiaries of these plans with target total variable remuneration higher or equal to 2.7 million euros: 40% paid immediately and 60% deferred over 5 years • Beneficiaries of these plans with target total variable remuneration between 1.7 million euros and 2.7 million euros: 50% paid immediately and 50% paid over 5 years • Other beneficiaries of these plans: 60% paid immediately and 40% deferred over 4 years .

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(ii)Deferred Multiyear Objectives Variable Remuneration Plan (2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 and 2025)	The aim is simplifying the remuneration structure, improving the ex ante risk adjustment and increasing the impact of the long-term objectives on the Group's most relevant roles. The purpose of these cycles is to defer a portion of the variable remuneration of the beneficiaries over a period of three or five years (four or five years for the seventh cycle) for it to be paid, where appropriate, in cash and in Santander shares; the other portion of the variable remuneration is also to be paid in cash and Santander shares (regarding the instruments part, executive directors in the seventh cycle have the opportunity to choose all in share options or half in share options and half in shares), upon commencement of the cycles, in accordance with the rules set forth below. The accrual of the last third of the deferral (in the case of 3 years deferral), the last 2 fourths (in the case of 4 years deferral) and the last three fifths (in the case of 5 years deferral) is also subject to long-term objectives. **Beneficiaries** Executive directors, senior management and certain executives of the Group's first lines of responsibility.	In 2016 the accrual is conditioned, in addition to the permanence of the beneficiary in the Group, with the exceptions contained in the plan's regulations, to non-occurrence of the following circumstances during the period prior to each of the deliveries in the terms set forth in each case in the plan's regulations: i. Poor performance of the Group. ii. Breach by the beneficiary of the internal regulations, including in particular that relating to risks. iii. Material restatement of the Group's consolidated financial statements, except when appropriate under a change in accounting regulations. iv. Significant changes in the Group's economic capital or risk profile. In 2017, 2018, 2019, 2020 and 2021 the accrual is conditioned, in addition to the beneficiary' permanence in the Group, with the exceptions contained in the plan's regulations, to the non-occurrence of poor financial performance from the entity as a whole or of a specific division or area thereof or of the exposures generated by the personnel, taking into account the following factors: v. Significant failures in risk management committed by the entity, or by a business unit or risk control unit. vi. the increase suffered by the entity or by a business unit of its capital needs, not foreseen at the time of generation of the exposures. vii. Regulatory sanctions or court rulings for events that could be attributable to the unit or the personnel responsible for those. Also, the breach of internal codes of conduct of the entity. viii. Irregular behaviours, whether individual or collective, considering in particular negative effects derived from the marketing of inappropriate products and responsibilities of persons or bodies that made those decisions. Paid half in cash and half in shares. In the seventh cycle, and only for executive directors: half in cash and 25% in share options and 25% in shares (unless the director chooses to receive options only). The maximum number of shares to be delivered is calculated by taking into account the weighted average daily volume of weighted average prices for the fifteen trading sessions prior to the previous Friday (excluding) on the date on which the board decides the bonus for the Executive directors of the Bank. In the eighth cycle, and for all Identified Staff: half in cash and 25% in shares and 25% in share options, or half in cash and half in shares, according to each executive´s choice. In the ninth and tenth cycle, half in cash and half in shares.	First cycle (2016): Executive directors and members of the Identified Staff with total variable remuneration higher than or equal to 2.7 million euros: 40% paid immediately and 60% deferred over a 5 years period. Senior managers, country heads of countries representing at least 1% of the Group´s capital and other members of the identified staff whose total variable remuneration is between 1.7 million and 2.7 million euros: 50% paid immediately and 50% deferred over a 5 years period. Other beneficiaries: 60% paid immediately and 40% deferred over a 3 years period. The second, third, fourth, fifth and sixth cycles (2017, 2018, 2019,2020 and 2021 respectively) are under the aforementioned deferral rules, except that the variable remuneration considered is the target for each executive and not the actual award. In 2016 the metrics for the deferred portion subject to long-term objectives (last third or last three fifths, respectively, for the cases of three years and five years deferrals) are: Earnings per share (EPS) growth in 2018 over 2015. Relative Total Shareholder Return (TSR) in the 2016-2018 period measured against a group of credit institutions. Compliance with the fully-loaded common equity tier 1 ("CET1") ratio target for financial year 2018. Compliance with Grupo Santander's underlying return on risk-weighted assets ("RoRWA") growth target for financial year 2018 compared to financial year 2015. In the second, third, fourth, fifth and sixth cycle (2017, 2018, 2019, 2020 and 2021) the metrics for the deferred portion subject to long-term objectives (last third or last three fifths, respectively, for the cases of three years and five years deferrals) are: EPS growth in 2019, 2020, 2021, 2022 and 2023 (over 2016, 2017, 2018, 2019 and 2020, for each respective cycle) Relative Total Shareholder Return (TSR) measured against a group of 17 credit institutions (second and third cycles) in the periods 2017-2019 and 2018-2019, respectively, and against a group of 9 entities (fourth, fifth and sixth cycle) for the 2019-2021, 2020-2022 and 2010-2023 period. Compliance with the fully-loaded common equity tier 1 ("CET1") ratio target for financial years 2019, 2020, 2021,2022 and 2023, respectively. In the seventh (2022), eighth cycle (2023), ninth (2025) and tenth cycle (2025), the metrics for the deferred portion subject to long-term objectives (two last fourths and last three fifths, for the cases of four years and five years deferrals) are: • Banco Santander's consolidated Return on tangible equity (RoTE) target in 2024 (7th cycle) and 2025 (8th cycle) and 2026 (9th cycle). • Relative Total Shareholder Return (TSR) measured against a group of 9 credit institutions for the period 2022-2024 (7th cycle), 2023-2025 (8th cycle) and 2024-2026 (9th cycle). • Progress level in the public targets of our Sustainability agenda.

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation Base
(iii) Digital Transformation Award (2019, 2020 and 2021)	The 2019, 2020 and 2021 Digital Transformation Incentive (the "Digital Incentive") is a variable remuneration system that includes the delivery of Santander shares and share options. The aim of the Digital Incentive is to attract and retain the critical skill sets to support and accelerate the digital transformation of the Group. By means of this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent. The number of beneficiaries is limited to a maximum of 250 employees and the total amount of the incentive is limited to 30 million euros.	The funding of this incentive is subject to meeting important milestones that are aligned with the Group´s digital roadmap and have been approved by the board of directors, taking into account the digitalization strategy of the Group, with the aim of becoming the best open, responsible global financial services platform. Performance of 2019 incentive was measured based on achievement of the following milestones: (i) Launch of a Global Trade Services (GTS) platform; (ii) launch of a Global Merchant Services (GMS) platform; (iii) migration of our fully digital bank, OpenBank, to a "next generation" platform and launch in 3 markets; (iv) extension of SuperDigital in Brazil to at least one other country; (v) and launch of our international payments app based on blockchain Pago FX to non-Santander customers. The milestones for the 2020 Digital Transformation Award were: (i) rolling out the global merchant services (GMS) platform in 3 new geographies, enhancing the platform functionality and achieving volume targets for transactions and participating merchants; (ii) doing the commercial rollout of the global trade services (GTS) platform in 8 new geographies, enhancing platform functionality, and achieving volume targets for on-boarded clients and monthly active users; (iii) launching OpenBank in a new market and migrating the retail banking infrastructure to "new-mode" bank; (iv) launch the global platform SuperDigital in at least 4 countries, driving target active user growth; (v) deploying machine learning across pre-defined markets for 4 priority use cases, rolling out Conversion Rate Optimization (Digital marketing) for at least 40 sales programs, delivering profit targets, and driving reduction of agent handled calls in contact centers; (vi) successfully implementing initiatives related to on-board and identity services, common API (application programming interface) layer, payment hubs, mobile app for SMEs and virtual assistant services; and (vii) launching the PagoFX global platform in at least 4 countries. The milestones for 2021 were: (i)in relation to Pago Nxt Consumer payment platform: implementation of Superdigital platform in seven countries, acquisition of over 1.5 million active customer base and accelerating growth through B2B (business to business) and B2B2C (business to business to customer) partnerships, acquiring more than 50% of the new customers through these channels, which are more cost-effective; (ii)in relation to Digital Consumer Bank: launching online API for checkout lending in the European Union and completion of controllable items for Openbank launch in USA; (iii)in relation to One Santander strategy: implementation in Europe of One Common Mobile Experience and, specifically, implementation of Europe ONE app for individual customers in at least three of the four countries by December 2021; and be among the three-top rated entities in terms of Mobile NetPromoter Score (Mobile NPS) in at least two of the four countries by December 2021; (iv) In relation to cloud adoption: host 75% of migratable virtual machines on cloud technology (either public cloud or OHE) by December 2021. For these purposes, mainframes, physical servers and servers with non-x86 operating systems will be considered non-migratable.	The Digital Incentive is structured 50% in Santander shares and 50% in options over Santander shares, taking into account the fair value of the option at the moment in which they are granted. For Material Risk Takers subject to five years deferrals, the Digital Incentive (shares and options over shares) shall be delivered in thirds, on the third, fourth and fifth anniversary from their granting. For Material Risk Takers subject to three years deferrals and employees not subject to deferrals, delivery shall be done on the third anniversary from their granting. Any delivery of shares, either directly or via exercise of options overs shares, will be subject generally to the Group's general *malus* & *clawback* provisions as described in the Group's remuneration policy and to the continuity of the beneficiary within the Group Santander. In this regard, the board may define specific rules for non-Identified Staff. Vested share options can be exercised until maturity, with all options lapsing after ten years (for granting the 2019 incentive) and eight years (for granting the 2020 and 2021 incentive). The total achievement for 2021 Digital Incentive was 77.5% (85% en 2020 and 83% en 2019).

Deferred variable remuneration systems	Description and plan beneficiaries	Conditions	Calculation base
(iv) Digital Transformation Award (2022)	The board of directors approved the 2022 Digital Transformation Incentive. It is a variable remuneration scheme splits in two different blocks: • The first one, with the same mechanism than previous years, that delivers Santander shares and share options if the group hits major milestones on its digital roadmap. This is aimed at a group of up to 250 (is limited to 30 million euros)employees whose functions are deemed essential to Santander's growth. • And the second one, which delivers PagoNxt, S.L. RSUs and premium prices options (PPOs), and is aimed at up to 50 employees (and limited to 15 million euros) whose roles are considered key to PagoNxt's success. The aim of the Digital Incentive is to attract and retain the critical skill sets to support and accelerate the digital transformation of the Group. By means of this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	Performance of the first block of the incentive shall be measured based on achievement of the following milestones: i. Edelweiss: Our Santander future retail architecture EDELWEISS will mean moving from our current Core centric banking architecture towards a Customer and Data-Centric Core supported by lean Record Processing engines. ii. Simplification: Speed up the simplification of our technology platform and business model by Reducing the total number of applications in production and reducing number of products in the regions. iii. Agile: Agile ways of working enable a better and faster reaction to customers' needs and is based on a value-driven delivery that increases efficiency by reducing time-to-market and development costs, and increasing quality. People working in Agile are more collaborative, engaged, empowered and creative. iv. In Digital Consumer Bank: a) To create the BNPL platform connected to at least one merchant in Netherlands and Germany, and to make sure the platform is ready to connect in Spain. b) To support the definition of Openbank US's IT digital strategy and achieve 2022 milestones in it. c) To have the new leasing platform connected to dealers in Italy. d) To expand the Wabi B2B online business to Germany. To execute the first B2B deal with an Original Equipment Manufacturer or mobility player in at least one country. To expand coches.com business and platform to Portugal. And in regard to the second block of digital incentive: the consolidation of PagoNxt Core Perimeter.	The first block of thee Digital Incentive is structured 50% in Santander shares and 50% in options over Santander shares, taking into account the fair value of the option at the moment in which they are granted. For Material Risk Takers subject to five years deferrals, the Digital Incentive (shares and options over shares) shall be delivered in thirds, on the third, fourth and fifth anniversary from their granting. For Material Risk Takers subject to three years deferrals and employees not subject to deferrals, delivery shall be done on the third anniversary from their granting. Any delivery of shares, either directly or via exercise of options overs shares, will be subject generally to the Group's general *malus* & *clawback* provisions as described in the Group's remuneration policy and to the continuity of the beneficiary within the Grupo Santander. In this regard, the board may define specific rules for non-Identified Staff. Vested share options can be exercised until maturity, with all options lapsing after ten years . The total achievement for 2022 Digital Incentive was 96.5%. The second block of Digital Incentive is structures in restricted stock units (RSUs) and premium priced Options (PPOs) of PagoNxt, S.L. in a percentage determined by the internal category of the beneficiary. The total achievement for 2022 was 100%.
(v) Digital Transformation Award (2023)	The board of directors approved the 2023 Digital Transformation Incentive. It is a variable remuneration scheme which delivers PagoNxt, S.L. RSUs and premium prices options (PPOs), and is aimed at up to 50 employees (and limited to 15 million euros) whose roles are considered key to PagoNxt's success. With this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	And the performance conditions were focus on key digital projects related with PagoNxt's main businesses (Trade, Merchant and Payments) in its core geographies.	This incentive is structures in restricted stock units (RSUs) and premium priced Options (PPOs) of PagoNxt S.L. in a percentage determined by the internal category of the beneficiary. The average achievement for 2023 was 88%.
(vi) PagoNxt incentive Plan 2024 and 2025 for Santander executives	The board of directors approved the PagoNxt incentive Plan 2024 and 2025 Incentive. It is a variable remuneration scheme which delivers PagoNxt, S.L. RSUs, and is aimed at approximately to 50 - 60 employees whose roles are considered key to PagoNxt's success. With this program, the Group offers a remuneration element which is competitive with the remuneration systems offered by other market operators who also compete for digital talent.	And the performance conditions were focus on key digital projects related with PagoNxt's main businesses (Trade, Merchant and Payments) in its core geographies.	This incentive is structures in restricted stock units (RSUs) of PagoNxt S.L. in a percentage determined by the internal category of the beneficiary. The average achievement for 2024 was 77% and 85% in 2025.

ii. Fair value

The fair value of the performance share plans was calculated as follows:

– **Deferred variable compensation plan linked to multi-year objectives 2024 and 2025:**

The Group calculates at the grant date the fair value of the plan based on the valuation report of an independent expert, Willis Towers Watson. According to the design of the plan for 2024 and 2025 and the levels of achievement of similar plans in comparable entities, it has been considered that the fair value is 70%.

43. Other general administrative expenses

a) Breakdown

The detail of Other general administrative expenses in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Technology and systems	802	761
Fixtures and supplies	102	124
Other administrative expenses	717	734
Technical reports	165	148
Advertising	99	98
Per diems and travel expenses	68	66
Surveillance and cash courier services	40	39
Communications	39	33
Taxes other than income tax	47	61
Insurance premiums	16	19
Total	**2,095**	**2,083**

b) Technical reports and other

Technical reports include the fees from the various Group companies (detailed in the accompanying appendices) for the services provided by their respective auditors, with the following detail:

EUR million

	2025[A]	2024[A]
Audit	118.5	122.3
Audit-related services	15.0	13.6
Tax services	0.1	0.9
All other	7.1	7.4
Total	**140.7**	**144.2**

A. Of those corresponding to Banco Santander, S.A. EUR 35.1 million, EUR 2.9 million , EUR 0 million and EUR 1.5 million, respectively, as of December 31, 2025 (EUR 32.3 million, EUR 3.6 million , EUR 0.1 million and EUR 1.1 million, respectively, as of December 31, 2024); and Branches of Banco Santander, S.A., EUR 1.0 million, EUR 1.2 million, EUR 0 million and EUR 0 million, respectively, as of December 31, 2025 (EUR 0.7 million, EUR 1.9 million, EUR 0 million and EUR 0 million, respectively, as of December 31, 2024).

Additionally, the firm BDO has performed audit and audit-related services totaling 1.9 million. The audit services and main non-audit services included for each item in the above breakdown are detailed as follows:

- Audit services: audit of the individual and consolidated financial statements of Banco Santander and its subsidiaries (of which PwC or another network firm is the external auditor); audit of the interim consolidated financial statements of Banco Santander; integrated audits prepared in order to file the Form 20-F with the SEC and the internal control audits (SOx) for required Group's entities; limited reviews of financial statements; and regulatory reports required to the external auditors regarding several Grupo Santander entities.
- Audit-related services: issuance of comfort letters, verification services of financial and non-financial information required by regulators, and other reviews of documentation to be submitted to domestic or foreign authorities that, due to their nature, the external auditor typically provides.
- Tax services: tax compliance and advisory services provided to Group companies outside Spain, which have no direct effect on the audited financial statements and are permitted in accordance with the applicable independence regulations.
- Other services: agreed-upon procedure reports, assurance reports and special reports performed under the accepted profession's standards; as well as other reports required by the regulators.

The 'Audit' heading includes the fees for the year's audit, regardless of the date the audit was completed. Any subsequent adjustments, which are not significant, are shown in this note for each year for comparison purposes. The fees corresponding to the rest of the services are shown by reference to when the audit committee approved them.

The services commissioned from the Group's auditors meet the independence requirements under applicable European and Spanish law, the SEC rules and the Public Company Accounting Oversight Board (PCAOB), applicable to the Group, and did not involve in any case the performance of any work that is incompatible with the auditor's role.

Lastly, the Group commissioned services from audit firms other than PwC amounting to EUR 155.9 million in 2025 (EUR 206.2 million in 2024).

c) Number of branches

The number of offices according to their geographical location at 31 December 2025 and 2024 is as follows:

Number of branches

	Group	
	2025	2024
Spain	1,674	1,877
Group	5,450	6,209
	7,124	**8,086**

Number of branches

	Of which, Banco Santander	
	2025	2024
Spain	1,630	1,800
International	11	10
Total	**1,641**	**1,810**

44. Impairment or reversal of the impairment of investments in subsidiaries, joint ventures and associates or non-financial assets

The detail of 'Impairment losses on other assets (net)' in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Investments in subsidiaries, joint ventures or associates (note 13)	1,498	(241)
Non-financial assets (notes 15 and 16)	(13)	(3)
Total	**1,485**	**(244)**

45. Gains or losses on non-financial assets and investments, net

The detail of 'Gains/(losses) on disposal of assets not classified as non-current assets held for sale' in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
On disposal of tangible assets	—	5
On disposal of investments in subsidiaries, jointly controlled entities and associates	11	5
Total	**11**	**10**

46. Gains or losses on non-current assets held for sale not classified as discontinued operations

The detail of 'Gains/(losses) on non-current assets held for sale not classified as discontinued operations' in the accompanying income statements for 2025 and 2024 is as follows:

EUR million

	2025	2024
Impairment of non-current assets held for sale (note 12)	(38)	(61)
Gain / (loss) on disposal	4	3
Total	**(34)**	**(58)**

47. Related parties

The parties related to Banco Santander are deemed to include, in addition to its subsidiaries, associates and jointly controlled entities, Banco Santander's key management personnel (the members of its Board of Directors and the executive vice presidents, together with their close family members) and the entities over which the key management personnel may exercise significant influence or control.

Following is a detail of the transactions performed by Banco Santander with its related parties at 31 December 2025 and 2024, distinguishing between subsidiaries, joint venture entities and associated entities, members of Banco Santander's board of directors, Banco Santander's executive vice presidents, and other related parties, Related party transactions were made on terms equivalent to those that prevail in arm's-length transactions or, when this was not the case, the related compensation in kind was recognized.

Financial liabilities held for trading	31,512	105,372	136,884	26,037	93,112	119,149
Financial liabilities designated at fair value through profit or loss	—	38,710	38,710	—	33,257	33,257
Hedging derivatives (liabilities)	—	2,284	2,284	—	2,516	2,516

Grupo Santander has developed a formal process for the systematic valuation and management of financial instruments, which has been implemented worldwide across all the Group´s units. The governance scheme for this process, applicable to the Bank, distributes responsibilities between two independent divisions: Treasury (development, marketing and daily management of financial products) and Risk (on a periodic basis, validation of pricing models and daily risk certification of market data, computation of risk metrics, new transaction approval policies, management control of market risk and implementation of fair value adjustment policies).

The approval of new products follows a sequence of steps (request, development, validation, integration in corporate systems and quality assurance) before the product is brought into production. This process ensures that pricing systems have been properly reviewed and are stable before they are used.

The following subsections set forth the most important products and families of derivatives, and the related valuation techniques and inputs, by asset class:

Interest rate and inflation

The fixed income asset class includes basic instruments such as interest rate forwards, interest rate swaps and cross currency swaps, which are valued using the net present value of the estimated future cash flows discounted taking into account basis (swap and cross currency spreads) determined on the basis of the payment frequency and currency of each leg of the derivative. Vanilla options, including caps, floors and swaptions, are priced using the Black-Scholes model, which is one of the benchmark industry models. More exotic derivatives are priced using more complex models which are generally accepted as standard across institutions.

These pricing models are fed with observable market data such as deposit interest rates, futures rates, cross currency swap and constant maturity swap rates, and basis spreads, on the basis of which different yield curves, depending on the payment frequency, and discounting curves are calculated for each currency. In the case of options, implied volatilities are also used as model inputs. These volatilities are observable in the market for cap and floor options and swaptions, and interpolation and extrapolation of volatilities from the quoted ranges are carried out using generally accepted industry models. The pricing of more exotic derivatives may require the use of non-observable data or parameters, such as correlation (among interest rates and cross-asset), mean reversion rates and prepayment rates, which are usually defined from historical data or through calibration.

Inflation-related assets include zero-coupon or year-on-year inflation-linked bonds and swaps, valued with the present value method using forward estimation and discounting. Derivatives on inflation indices are priced using standard or more complex internal models. Valuation inputs of these models consider inflation-linked swap spreads observable in the market and estimations of inflation seasonality, on the basis of which a forward inflation curve is calculated. Also, implied volatilities taken from zero-coupon and year-on-year inflation options are also inputs for the pricing of more complex derivatives.

Equity and foreign exchange

The most important products in these asset classes are forward and futures contracts; they also include vanilla, listed and OTC (Over-The-Counter) derivatives on single underlying assets and baskets of assets. Vanilla options are priced using the standard Black-Scholes model and more exotic derivatives involving forward returns, average performance, or digital, barrier or callable features are priced using generally accepted industry models or internal models, as appropriate. For derivatives on illiquid stocks, hedging takes into account the liquidity constraints in models.

The inputs of equity models consider yield curves, spot prices, dividends, asset funding costs (repo margin spreads), implied volatilities, correlation among equity stocks and indices, and cross-asset correlation. Implied volatilities are obtained from market quotes of European and American-style vanilla call and put options. Various interpolation and extrapolation techniques are used to obtain continuous volatility for illiquid stocks. Dividends are usually estimated for the mid and long term. Correlations are implied, when possible, from market quotes of correlation-dependent products. In all other cases, proxies are used for correlations between benchmark underlyings or correlations are obtained from historical data.

The inputs of foreign exchange models include the yield curve for each currency, the spot foreign exchange rate, the implied volatilities and the correlation among assets of this class. Volatilities are obtained from European call and put options which are quoted in markets as of-the-money, risk reversal or butterfly options. Illiquid currency pairs are usually handled by using the data of the liquid pairs from which the illiquid currency can be derived. For more exotic products, unobservable model parameters may be estimated by fitting to reference prices provided by other non-quoted market sources.

Credit

The most common instrument in this asset class is the credit default swap (CDS), which is used to hedge credit exposure to third parties. In addition, models for first-to-default (FTD), n-to-default (NTD) and single-tranche collateralised debt obligation (CDO) products are also available. These products are valued with standard industry models, which estimate the probability of default of a single issuer (for CDS) or the joint probability of default of more than one issuer for FTD, NTD and CDO.

Valuation inputs are the yield curve, the CDS spread curve and the recovery rate. For indices and important individual issuers, the CDS spread curve is obtained in the market. For less liquid issuers, this spread curve is estimated using proxies or other credit-dependent instruments. Recovery rates are usually set to standard values. For listed single-tranche CDO, the correlation of joint default of several issuers is implied from the market. For FTD, NTD and internal CDO, the correlation is estimated from proxies or historical data when no other option is available.

Valuation adjustment for counterparty risk or default risk

The Credit valuation adjustment (CVA) is a valuation adjustment to over-the-counter (OTC) derivatives as a result of the risk associated with the credit exposure assumed to each counterparty.

The CVA is calculated taking into account potential exposure to each counterparty in each future period. The CVA for a specific counterparty is equal to the sum of the CVA for all the periods. The following inputs are used to calculate the CVA:

- Expected exposure: including for each transaction the mark-to-market (MtM) value plus an add-on for the potential future exposure for each period. Mitigating factors such as collateral and netting agreements are taken into account, as well as a temporary impairment factor for derivatives with interim payments.

- Severity: percentage of final loss assumed in a counterparty credit event/default.
- Probability of default: for cases where there is no market information (the CDS quoted spread curve, etc.), proxies based on companies holding exchange-listed CDS, in the same industry and with the same external rating as the counterparty, are used.
- Discount factor curve.

The Debit Valuation Adjustment (DVA) is a valuation adjustment similar to the CVA but, in this case, it arises as a result of the Bank's own risk assumed by its counterparties in OTC derivatives.

The CVA at 31 December 2025, at a consolidated level, amounted to EUR 224 million (resulting in a decrease of 17.6% compared to 31 December 2024) and DVA amounted to EUR 285 million (resulting in a decrease of 10.1% compared to 31 December 2024). These decreases are primarily due to the performance of credit markets, with lower spreads compared to December 2024, and secondarily to changes in the composition of certain derivatives portfolios. Furthermore, the observed reduction in CVA is influenced by changes in the calculation models applicable to certain clients.

Regarding the Bank, At the end of December 2025, CVA amounted to EUR 130 million (EUR 180 million to 31 December 2024) and DVA amounted to EUR 134 million (EUR 134 million to 31 December 2024).

In addition, the Group amounts the funding fair value adjustment (FFVA) is calculated by applying future market funding spreads to the expected future funding exposure of any uncollateralised component of the OTC derivative portfolio. This includes the uncollateralised component of collateralised derivatives in addition to derivatives that are fully uncollateralised. The expected future funding exposure is calculated by a simulation methodology, where available. The FFVA impact is not material for the annual accounts as of 31 December 2025 and 2024.

During 2025, the Group has continued to apply the criteria for classifying financial instruments within the levels of the fair value hierarchy established to comply with regulatory expectations. These criteria, based on information from the price contributors and real market transactions, represent a significant reduction in the use of expert judgement to determine observability and allow the measurement of the significance of non-observable valuation inputs based on objective criteria.

There has been an increase in instruments classified as Level 3, especially during the last quarter of the year. This increase is due to higher holding volumes of some of these instruments in the portfolio due to new trading activity. No significant reclassifications were detected due to changes in the market observability of the valuation inputs for the remaining positions. The main increases include long-term repo/reverse repo transactions, illiquid equities in non-trading portfolios, and syndicated loans with an HTC&S business model for which there is no observable market price based on the criteria used.

In 2025, the amount reclassified to Level 3 by Banco Santander totalled EUR 266 million (EUR 754 million in 2024). This was mainly due to reclassifications to Level 3 of loan positions for which there was reduced access to price contributors and actual market transactions demonstrating their observability, and, to a lesser extent, to certain debt instruments which, based on the Bank's criteria, do not meet the requirements to be considered observable instruments.

Valuation adjustments due to model risk

The valuation models described above do not involve a significant level of subjectivity, since they can be adjusted and recalibrated, where appropriate, through internal calculation of the fair value and subsequent comparison with the related actively traded price. However, valuation adjustments may be necessary when market quoted prices are not available for comparison purposes.

The sources of risk are associated with uncertain model parameters, illiquid underlying issuers, and poor quality market data or missing risk factors (sometimes the best available option is to use limited models with controllable risk). In these situations, the Group and the Bank calculate and apply valuation adjustments in accordance with common industry practice. The main sources of model risk are described below:

- In the interest rate markets, the sources of model risk include interest rate indexes correlations, basis spread modelling, the risk of calibrating model parameters and the treatment of near-zero or negative interest rates. Other sources of risk arise from the estimation of market data, such as volatilities or yield curves, whether used for estimation or cash flow discounting purposes.
- In the stock markets, the sources of model risk include forward skew modelling, the impact of stochastic interest rates, correlation and multi-curve modelling. Other sources of risk arise from managing hedges of digital callable and barrier option payments. Also worthy of consideration as sources of risk are the estimation of market data such as dividends and correlation for quanto and composite basket options.

- For specific financial instruments relating to home mortgage loans secured by financial institutions in the UK (which are regulated and partially financed by the Government) and property asset derivatives, the main input is the Halifax House Price Index (HPI). In these cases, risk assumptions include estimations of the future growth and the volatility of the HPI, the mortality rate and the implied credit spreads.
- Inflation markets are exposed to model risk resulting from uncertainty around modelling the correlation structure among various Consumer Price Index (CPI) rates. Another source of risk may arise from the bid-offer spread of inflation-linked swaps.
- The currency markets are exposed to model risk resulting from forward skew modelling and the impact of stochastic interest rate and correlation modelling for multi-asset instruments. Risk may also arise from market data, due to the existence of specific illiquid foreign exchange pairs.
- The most important source of model risk for credit derivatives relates to the estimation of the correlation between the probabilities of default of different underlying issuers. For illiquid underlying issuers, the CDS spread may not be well defined.

Set forth below are the financial instruments of Grupo Santander at fair value whose measurement was based on internal models (levels 2 and 3) at 31 December 2025 and 2024 :

D. Includes, mainly, short-term deposits that are managed based on their fair

b) Financial Instruments (level 3)

Financial Instruments (level 3)

Set forth below are the Group and the Bank´s main financial instruments measured using unobservable market data as significant inputs of the internal models (level 3):

- HTC&S (Held to collect and sale) syndicated loans classified in the fair value category with changes in other comprehensive income, where the cost of liquidity is not directly observable in the market, as well as the prepayment option in favour of the borrower.
- Repos and reverse repos classified as financial assets held for trading, whose valuation uses significant unobservable inputs, mainly associated with credit adjustments, liquidity and certain specific characteristics of the counterparty and the collateral.
- Illiquid equity in non-trading portfolios, classified at fair value through profit or loss and at fair value through equity.
- Instruments in Santander UK's portfolio (loans, debt securities and derivatives) linked to the House Price Index (HPI). Even if the valuation techniques used for these instruments may be the same as those used to value similar products (present value in the case of loans and debt securities, and the Black-Scholes model for derivatives), the main factors used in the valuation of these instruments are the HPI spot rate, the growth and volatility thereof, and the mortality rates, which are not always observable in the market and, accordingly, these instruments are considered illiquid.
- Callable interest rate derivatives (Bermudan-style options) where the main unobservable input is mean reversion of interest rates.
- Trading derivatives on interest rates, taking as an underlying asset titling and with the amortization rate (CPR, Conditional prepayment rate) as unobservable main entry.
- Derivatives from trading on inflation in Spain, where volatility is not observable in the market.
- Equity volatility derivatives, specifically indices and equities, where volatility is not observable in the long term.
- Derivatives on long-term interest rate and FX in some units (mainly South America) where for certain underlyings it is not possible to demonstrate observability to these terms.
- Debt instruments referenced to certain illiquid interest rates, for which there is no reasonable market observability.The measurements obtained using the internal models might have been different if other methods or assumptions had been used with respect to interest rate risk, to credit risk, market risk and foreign currency risk spreads, or to their related correlations and volatilities. Nevertheless, the Banco Santander considers that the fair value of the financial assets and liabilities recognised in the balance sheet and the gains and losses arising from these financial instruments are reasonable.

The net amount recognised in profit or loss for 2025 arising from valuation models whose significant inputs are unobservable market data (Level 3) amounted to a profit of EUR 75 million for the Bank. In 2024, the net amount recognised in profit or loss was a profit of EUR 471 million.

The table below shows the effect, at 31 December 2025 and 2024 on the fair value of the main financial instruments classified as level 3 of a reasonable change in the assumptions used in the valuation. This effect was determined by applying the probable valuation ranges of the main unobservable inputs detailed in the following table:

2025

Portfolio/Instrument (Level 3)	Valuation technique	Main unobservable inputs	Range	Weighted average	Impacts (EUR million)	
					Unfavourable scenario	Favourable scenario
Financial assets held for trading						
Loans and advances to customers						
Repos/Reverse repos	Market proxy	Price / Credit spread	n.a.	n.a.	(10.50)	10.50
Debt securities

1. For each instrument, the valuation technique, the unobservable inputs are shown in the 'Main observable inputs' column under probable scenarios, variation range, average value and impact resulting from valuing the position in the established maximum and minimum range.
2. The breakdown of impacts is shown by type of instrument and unobservable inputs.
3. The estimation of the range of variation of the unobservable inputs has been carried out taking into account plausible movements of said parameters depending on the type of instrument.
4. Zero impacts from fully hedged or back-to-back transactions have not been included in this exercise.

Liabilities associated with non-current assets held-for-sale	—	—

c) Fair value of financial assets and liabilities not measured at fair value

Financial assets are measured at fair value in the accompanying balance sheets, except for loans and receivables under a business model whose objective is to collect the flows of principal and interest , equity instruments whose market value cannot be estimated reliably and derivatives that have these instruments as their underlying and are settled by delivery thereof.

Similarly, financial liabilities except for financial liabilities held for trading, those measured at fair value and derivatives having equity instruments whose market value cannot be estimated reliably as their underlying- are measured at amortized cost in the accompanying balance sheets.

The following is a comparison between the value of Grupo Santander's financial instruments valued using other criteria rather than fair value and their corresponding fair value at year-end:

Financial assets and liabilities measured at other than fair value

The fair value of financial instruments measured at amortized cost as of 31 December 2025 was as follows:

a. The fair value of debt securities is 0.71% higher than their carrying amount.

b. The fair value of loans and advances is 0.52% lower than their carrying amount.

c. The fair value of deposits is 0.06% lower than their carrying amount.

d. The fair value of the issued debt securities is 0.17% higher than their carrying amount.

Set forth below are the main valuation methods and inputs used in the estimates made at 31 December 2025 to determine the fair values of the financial assets and liabilities recognized at cost detailed above:

- Loans and receivables: The fair value has been estimated using the present cost method, the estimation has considered factors such as the expected maturity of the portfolio, market interest rates, spreads of new concession of operations, or market spreads – If these were available.
- Held to maturity portfolio: The fair value has been determined based on market prices for those instruments.
- Financial liabilities at amortized cost:
  a. The fair value of deposits at Central Banks has been assimilated to their carrying amount because they are mainly short-term balances.
  b. Credit Institutions: Fair value has been obtained using the present value technique by applying interest rates and market spreads.
  c. Customer deposits: Fair value has been estimated using the present value technique. The estimation has considered factors such as the expected maturity of the operations and the current financing cost of Grupo Santander in similar operations. On demand accounts are not valued.
  d. Marketable debt securities: Fair value has been determined based on market prices for these instruments, when available, or using the present value technique, by applying interest rates and market spreads.

Additionally, the fair value of Cash, Cash Balances at central banks and other deposits on demand has been assimilated to its carrying amount, mainly because of short-term balances.

d) Offsetting of financial instruments

On the table below is the detail of financial assets and liabilities that were offset on the balance sheet as of 31 December 2025 and 2024:

EUR million

	2025		
Assets	Gross amount of financial assets	Gross amount of financial assets offset on the balance sheet	Net amount of financial assets presented on the balance sheet
Derivatives	103,644	(55,702)	47,942
Repos	147,735	(52,354)	95,381
Total	**251,379**	**(108,056)**	**143,323**

EUR million

	2024		
Assets	Gross amount of financial assets	Gross amount of financial assets offset on the balance sheet	Net amount of financial assets presented on the balance sheet
Derivatives	133,335	(78,956)	54,379
Repos	112,443	(32,440)	80,003
Total	**245,778**	**(111,396)**	**134,382**

EUR million

	2025		
Liabilities	Gross amount of financial liabilities	Gross amount of financial liabilities offset on the balance sheet	Net amount of financial liabilities presented on the balance sheet
Derivatives	99,510	(55,702)	43,808
Repos	156,990	(52,354)	104,636
Total	**256,500**	**(108,056)**	**148,444**

EUR million

	2024		
Liabilities	Gross amount of financial liabilities	Gross amount of financial liabilities offset on the balance sheet	Net amount of financial liabilities presented on the balance sheet
Derivatives	127,593	(78,956)	48,637
Repos	120,653	(32,440)	88,213
Total	**248,246**	**(111,396)**	**136,850**

At December 31, 2025 the balance sheet amounts EUR 142,143 million on derivatives and temporary acquisition of assets and EUR 144,713 million on derivatives and repos as liabilities that are subject to netting and collateral arrangements (EUR 133,139 million and EUR 136,037 million in 2024, respectively).

50. Risk management

a) Risk principles and culture

The principles on which Grupo and Banco Santander's risk management and control are based are detailed below. They take into account regulatory requirements, best market practices and are mandatory:

1. **All employees are responsible for risk management**. They must understand the risks arising from their activities and take ownership for managing them.
2. **Senior management involvement.** Through conduct, actions and communications, senior management promotes consistent risk management, fosters our risk culture, and oversees that the risk profile remains within the appetite set.
3. **Independence:** Risk management and control functions operate independently according to our three-lines-of-defence model, with clearly defined roles and responsibilities.
4. **Holistic, forward-looking approach:** We take a comprehensive approach to risk management and control that extends to all businesses and risk types that could have a material impact. This approach is forward-looking and considers trends across several time horizons and scenarios.
5. **Corporate oversight of subsidiaries:** Banco Santander sets minimum risk management and control standards through reference documents. Subsidiaries are responsible for translating these standards into their own internal policies and procedures.

1. Key risk types

Grupo and Banco Santander's risks categorization allows effective risk management, control and reporting, and includes, among others the following risk types:

- **Credit risk** is the risk of loss arising from the failure of a customer or counterparty to meet its obligations to which the Santander Group has provided financing or entered into a contractual commitment, or from the deterioration of their credit quality.
- **Market risk** is the risk incurred as a result of the effect of changes in market factors interest rates, exchange rates, equities and commodities, among others, may have on profits or capital.
- **Liquidity risk** is the risk incurred because of adverse movements in the factors that determine the market value of financial instruments, such as interest rates, exchange rates, equity prices and commodities, among others.
- **Structural Risk** is the risk of changes in the value or margin generation of the assets or liabilities in the banking book resulting from changes in market and behavioural factors. It also includes risks associated with insurance and pension activities, as well as the risk of not having an adequate amount or quality of capital to meet internal business objectives, regulatory requirements, or market expectations.
- **Capital risk**, included within the scope of structural risk, is the risk that arises from the possibility of having an inadequate quantity or quality of capital to meet internal business objectives, regulatory requirements or market expectations.

Grupo and Banco Santander also take into account, on an ongoing basis in its risk management, operational (includes fraud, technological, cyber, legal and conduct risks), financial crime (includes, among others, money laundering, terrorism financing, violation of international sanctions, corruption, bribery and tax evasion), model, reputational and strategic risks.

These risks may be affected by a range of factors that we identify and assess in line with regulatory requirements and industry practice, including: geopolitical developments (international conflicts, economic and monetary decisions, new regulations or trade tensions); digital and transformation initiatives linked to technological change or shifts in business models; and sustainability factors — environmental (natural and climate-related, including extreme events and resource scarcity, as well as those arising from the transition to a more sustainable economy), social (relating to people's rights, welfare and interests) and governance, both within Grupo and Banco Santander and among our counterparties.

In particular, from an environmental and climate perspective, the relevant elements cover, on the one hand, those stemming from the physical effects of climate change and, on the other, those linked to the transition towards a more sustainable economy, including legislative and regulatory, technological or behavioural changes among economic agents.

Given the nature of its operations, the Group and Bank have no environment-related liabilities, expenses, assets or contingencies that may be material to its consolidated equity, financial situation and results.

According to market consensus and our materiality assessment, exposure in the sectors where environmental factors may have the most impact mainly relate to wholesale customers. Our management of these customers considers environmental aspects in the preliminary assessment, credit origination and the preparation and review of their credit ratings, which influence the parameters we use to calculate their probability of default (PD). Thus, we embed the most material climate factors in our assessments and in capital loss and provisions calculations.

Moreover, to cover and anticipate potential future losses from severe climate events, such as the Valencia DANA or Hurricane Milton in Florida, we have set overlays whose amount to date has not been material to the Group's total loan loss reserves.

Grupo Santander has enhanced its methodological framework to quantify and assess transition and physical risks in credit losses for climate impacts that are not specifically captured through the forward-looking component implemented under the IFRS 9 framework. We assess these risks under several scenarios published by the NGFS, which explore varying assumptions on shifts in climate policies, emissions, temperatures and physical risk impacts. We take a proportionality approach by assessing the impact on the Group's core markets and portfolios, especially non-financial entities and mortgage products.

Regarding impact on companies' credit quality, the model assesses the transmission of customers' physical and transition climate risk through defined channels (sector GVA, GHG emissions, carbon price, regional GDP, or collateral valuations).

For mortgage products, climate risk appears mainly through a deterioration in collateral values, as reflected in the loan-to-value ratio, which is the main transmission channel into LGD.

These methodologies enable us to embed potential climate-event impacts on credit losses in credit risk management. Against this backdrop, we carried out both internal capital self-assessment exercises and regulatory stress tests.

In light of the above and based on the best information available at the date of these consolidated annual financial statements, we also assessed the potential additional impact of climate and environmental risks on the Group's equity, financial situation and results in 2025. We did not identify any significant or material impacts. .

2. Risk and compliance governance

Grupo and Banco Santander robust risk and compliance governance structure allows us to conduct effective oversight in line with our risk appetite. Grupo and Banco Santander stand on three lines of defence, a structure of committees and strong Group-subsidiary relations, guided by our risk culture, Risk Pro.

2.1 Lines of defence

Grupo and Banco Santander's model of three lines of defence effectively manages and controls risks:

- **First line**: formed business functions, as well as all other functions that generate risk, constitute the first line of defence. They must establish an appropriate environment to manage all risks associated with the business and support compliance with internal policies and regulation. Risk management must operate within the approved risk appetite and associated limits. The first line executes mitigation plans for risks where weaknesses are identified in its control environment.
- **Second line:** formed by the risk and compliance functions, independently oversees and challenges the risk management activities that the first line carries out. Its role is to help verify that we manage risks in line with the established risk appetite and to promote a strong risk culture across the organization.
- **Third line:** formed by Internal Audit is a permanent function, independent of any other functions or units, whose objective is to provide the Management Body and the senior management with independent assurance on the quality and effectiveness of internal control, risk management (current or emerging) and governance processes and systems, thereby helping to protect the company's value, solvency, and reputation.

Risk, Compliance and Internal Audit are sufficiently separate and autonomous functions, with direct access to the board and its committees. The risk and compliance functions report to the risk supervision, regulation and compliance committee and the internal audit function reports to the audit committee.

2.2 Risk committee structure

The **board of directors** has final oversight of risk and compliance management and control to promote a sound risk culture and review and approve risk appetite and frameworks, with support from its risk, regulation and compliance committee (RSRCC) and its executive committee.The Group and the Bank's risk governance keeps risk control and risk-taking areas separate.

Our governance structure also includes key roles and executive committees that strengthen oversight and support the effective performance of the control function.

The **Group chief risk officer (CRO)**, who leads the application and execution of risk strategy and promotes proper risk culture, is in charge of overseeing all risks and challenging and advising business lines on risk management.

The **Group chief compliance officer (CCO)** leads the application and execution of the compliance and conduct risk strategy and reports the status of risks being monitored in order to provide the Chief Risk Officer with a comprehensive view of all risks.

The CRO and the CCO report directly to both the risk supervision, regulation and compliance committee and the board of directors.

The executive risk, risk control and compliance and conduct committees are executive committees with powers delegated from the board.

Furthermore, the executive-level committees delegate part of their responsibilities to forums and/or standing meetings to manage and control each risk type.

Their responsibilities include:

- Inform the CRO, the CCO, the risk control committee and the compliance and conduct committee if risks are being managed within risk appetite;
- Conduct regular follow-ups for each key risk type; and
- Overseeing the measures adopted to meet supervisor's and auditor's expectations.

Besides, Grupo and Banco Santander, in order to establish an adequate control environment for the management of each risk types, the risk and compliance functions have effective internal regulation to create the right environment to manage and control all risks.

Grupo and Banco Santander may introduce additional governance measures for special situations to reinforce the monitoring of all risks, with particular focus on trends in key macroeconomic indicators and liquidity, the identification of vulnerable sectors/customers, and the strengthening of cybersecurity, among other aspects. Activating these special-situations forums helps the Group address the effects of the geopolitical and macroeconomic environment with resilience.

2.3 The Group's relationship with subsidiaries

Grupo Santander subsidiaries' risk and compliance management and control model is consistent with the frameworks approved by the Group board of directors. Subsidiaries adhere to the frameworks through their own boards and can only adapt to higher standards according to local law and regulation.

As part of Santander's aggregated risk oversight, we challenge and review subsidiaries' internal regulations and activities. This enables us to maintain a common risk management and control model across the Group.

The risk and compliance functions support the businesses and oversee risks at both global and local levels. In addition, over the year we continued to strengthen the Group–subsidiary relationship model, leveraging our global scale to identify synergies under a common operating model and shared platforms. The model promotes process simplification and the reinforcement of control mechanisms to support the growth of our businesses.

Santander's Group–subsidiary governance model (GSGM) sets out the principles that govern the relationship between Group key roles and the subsidiaries, which helps safeguard the independence of local second lines. The CRO and CCO take part in the appointment, objectives, performance reviews and remuneration of their local counterparts, which helps confirm that they are controlling risks appropriately.

We continue to strengthen the relationship between the Group and its subsidiaries through close cooperation among our subsidiaries to develop common initiatives more efficiently, such as:

- Transformation of organizational structures, sharing benchmarks across countries and contributing to the function's strategic vision to promote the rollout of more advanced risk-management infrastructures and practices.
- Exchange of best practices to strengthen processes and drive innovation.
- Promotion of internal talent and mobility, both geographic and functional, as well as fostering diversity within teams to reflect the diversity of the environments in which we operate.
- Developing our risk professionals, improving innovation, the quality of decisions, and fostering a global mindset is key to enhance organizational resilience and reinforcing a global mindset.

The GSGM model also applies to the Group's global businesses. This gives us a global-local organization in which countries ultimately remain responsible for delivering the budget, the business and customer strategy, and financial management, while the global businesses lead shared initiatives through common

operating models and shared technologies, improving local performance.

3. Management processes and tools

Grupo and Banco Santander have these effective risk management processes and tools:

3.1 Risk appetite and structure of limits

Risk appetite is the aggregate level and types of risk that Grupo Santander deems prudent for our business strategy, even in unforeseen circumstances. Risk appetite is governed throughout the Group by the following principles:

- **Risk appetite is part of the board's duties**. The board prepares the risk appetite statement (RAS) for the whole Group every year. Through a cascading-down process, each subsidiary's board also sets its own risk appetite.
- **Comprehensiveness and forward-looking approach**. Our appetite includes all material risks to which we are exposed and defines our target risk profile for the current and medium term, with a forward-looking view that considers stress scenarios.
- **Common standards embedded in the day-to-day risk management**. The Group shares the same risk appetite model, which sets common requirements for processes, metrics, governance bodies, controls and standards. This facilitates effective and traceable embedding of risk appetite into more granular management policies and limits across our subsidiaries..
- **Continuous monitoring and adaptation**. Risk appetite is regularly monitored, reviewed and updated to reflect changes in market conditions, regulatory requirements and supervisory expectations. Compliance with risk appetite limits is monitored on a regular basis through dedicated reporting to senior management and the board and its committees. Breaches or potential breaches are subject to predefined escalation, remediation and follow-up processes, with oversight proportionate to their materiality through senior management and the Group's governing bodies.
- **Alignment with strategy and business plans**. Before approving the three-year strategic plans, annual budget, and capital and liquidity plans, the Group verifies their consistency with the limits set in the Risk Appetite Statement. We promote the alignment of strategic and business plans with our risk appetite by:
  - considering the risk appetite, long-term strategic view and the risk culture when drafting strategic and business plans.
  - challenging business and strategic plans against the risk appetite. Misalignments trigger a review of either the three-year strategic plan (to make sure we stay within RAS limits) or risk appetite limits, with independent governance.
  - continuous monitoring of risk appetite compliance through the three lines of defence model.

The main elements underpinning Grupo and Banco Santander's risk appetite and defining the business model are:

- a medium-low, predictable target risk profile, customer focus, internationally diversified operations and a significant market share;
- stable, recurrent earnings and shareholder remuneration, sustained by a sound base of capital, liquidity and sources of funding;
- autonomous subsidiaries that are self-sufficient in terms of capital and liquidity to safeguard their risk profiles against compromising the Group and the Bank's risk profile;
- an independent risk function and a senior management actively engaged in supporting a robust control environment and risk culture; and
- a conduct model that protects our customers and our Simple, Personal and Fair culture.

The risk appetite is expressed through qualitative statements and limits on metrics representative of the bank's risk profile at present and under stress. Those metrics cover all risk types according to our corporate risk framework. Grupo Santander articulates them in five axes that provide the Bank with a holistic view of all risks it incurs in the development of its business model. These five axes are applicable to all Santander's key risk types, and comprise:

- P&L volatility: control of P&L volatility of business plan under baseline and stressed conditions (under normal and stressed conditions).
- Solvency: control of capital ratios under baseline and stressed scenarios (aligned with ICAAP).
- Liquidity: control of liquidity ratios under base and stress scenarios (aligned with ILAAP).
- Concentration: control of credit concentration on top clients, portfolios and industries.
- Non financial risk and control environment: robust control on non financial risks aimed to minimize events which could lead to financial loss, operative, technological, legal and regulatory breaches, conduct issues or reputational damage.

b) Credit risk

1. Introduction to the credit risk treatment

Grupo and Banco Santander take a holistic view of the credit risk cycle, including the transaction, the customer and the portfolio, in order to identify, analyse, control and decide on credit risk.

Credit risk identification facilitates active and effective portfolio management and control. Grupo and Banco Santander classify external and internal risk in each business to adopt any corrective or mitigating measures through:

1.1. Planning

Planning allows to set business objectives and define concrete action plans, integrating the risk appetite statement into portfolio management.

Strategic commercial plans (SCPs) are the management and control tool that the Business and Risk areas define for credit portfolios, with support from the other functions involved (Finance, Management Control, among others). They set out the commercial strategy, risk policies, and the resources and infrastructure required, providing a holistic view of portfolio management.

They also provide an up-to-date view of portfolio credit quality, enable risk measurement, support the execution of internal controls over the defined strategy, allow for periodic monitoring, and help detect material deviations or potential impacts, facilitating the adoption of corrective measures when necessary.

SCPs are aligned with subsidiaries' risk appetite and capital objectives, as well as those of the Group, and are approved and overseen by local senior management before being reviewed and ratified at Group and Bank level.

1.2. Risk assessment and credit rating

Credit risk approval criteria focus on borrowers' ability to meet their financial obligations. The assessment uses statistical models and an analysis of the net funds or cash flows generated by economic activity, or of regular income, to determine customers' repayment capacity in a consistent and sustainable manner.

Some statistical credit quality assessment models feed into decision engines to deliver a credit risk assessment quickly and in a consistent, standardised way. These engines support faster and more uniform decision-making, reduce manual errors, apply the same assessment criteria to all customers, and provide traceability and support regulatory compliance. These ratings have multiple uses in risk management, including the origination process (application of limits and pre-approvals), risk monitoring, and as an input to transaction pricing.

These credit rating models may be:

- Rating: from mathematical algorithms that have a quantitative model based on balance sheet ratios or macroeconomic variables or behavioural information, and a qualitative module supplemented by the credit analyst's expert judgement. It is used for large corporates, corporates, institutional and SME segments (with individualised treatment).
- Scoring: an automated system that assesses credit applications based on the information provided (admission scoring) or customers' credit profiles based on their relationship with the institution (behavioural scoring). Both are complemented by other available information (for example, from external databases). The system automatically assigns each customer an individual score, which then supports the subsequent decision. It is used for individuals and small businesses with no assigned analyst.

The Group and the Bank´s parameter estimation models rely on econometric models built on historical default and loss data from the portfolios. The Group, and therefore the Bank, use them to calculate economic and regulatory capital, and IFRS 9 and Bank of Spain Circular 4/2017 provisions, at operation, customer and portfolio level.

A rigorous governance framework covers the ongoing monitoring and continuous calibration of these models to assess their suitability, predictive power, performance and granularity, as well as compliance with credit policies.

In addition, the Group and the Bank review ratings using the latest available financial information and other relevant data.

Grupo and Banco Santander´s limits, pre-classifications and pre-approvals processes determine the level of risk the Group can take on with each customer. Automated processes approve and monitor these decisions. Approved limits must align with expected profitability. To support this, we use profitability estimation and risk-based pricing tools that contribute to sustainable portfolio growth.

Grupo and Banco Santander apply various limits models to each segment:

- Large corporate groups are subject to a pre-classification model based on a system for measuring and monitoring economic capital. Pre-classification models express the level of risk Grupo and Banco Santander are willing to assume in transactions with customers/groups.
- In the corporate segment, for customers that meet certain predefined criteria (including internal rating and profitability), the Group applies a pre-classification model for the main products related to the customer's recurring business. The model operates through the setting of internal nominal limits, which define the level of risk to take on with each customer based, among other factors, on their repayment capacity and leverage.

Corporate transactions that exceed certain limits or have specific features must be handled through the approval process for an ad hoc proposal.

- For individual customers and SMEs with low turnover, Grupo Santander manages large volumes of credit transactions using automated decision models that assess each case and assign a limit per customer and transaction.

1.3. Scenario analysis

Grupo and Banco Santander's scenario analyses determine the potential risks in its credit portfolios and provide a better understanding of our portfolios' performance under various macroeconomic conditions. They allow us to anticipate management strategies that will avoid future deviations from defined plans and targets.

They simulate the impact of alternative scenarios in portfolios' credit parameters (PD, LGD) and expected credit losses. Grupo Santander compares findings with portfolios' credit profile indicators to find the right measures for managers to take. Credit risk management of portfolios and SCPs incorporate scenario analyses.

1.4. Monitoring

Regular, holistic monitoring of customers and portfolios is an essential element of the Group's credit risk management, as it enables continuous monitoring of credit quality, early identification of potential impairment and analysis of business performance against predefined plans and objectives.

The monitoring process systematically analyses changes in credit exposures, customers' financial and qualitative characteristics, and any relevant changes in their risk classification. This preventive approach draws on transactional information, behavioural indicators and advanced analytics tools, including early-warning engines, which support early identification of potential deterioration and the implementation of specific actions at both customer and portfolio level, based on the assigned monitoring level.

Monitoring adapts to customer segmentation and the applicable management approach:

- in the large corporate segment, monitoring is carried out jointly by the commercial managers and the risk analysts, which provides an up-to-date, comprehensive view of the customer's credit quality at all times and supports the early identification of any potential deterioration.
- In the commercial banking, institutions and SMEs with an assigned a credit analyst, he teams carry out enhanced monitoring of customers whose risk profile or specific circumstances require it. This includes the periodic review of their internal ratings based on relevant financial, behavioural and environmental indicators.
- Monitoring of individual customers, businesses and smaller SMEs follows a system of automatic alerts to detect shifts in portfolios' performance.

The Group, and therefore the Bank, structure this process for customers with an assigned analyst through the SCAN (Santander Customer Assessment Note) monitoring framework. SCAN assigns a specific monitoring level to each customer, sets the related operating policies, defines concrete management actions, identifies accountable owners and establishes a review frequency aligned with the customer's risk profile and relevance.

In addition, the Group and therefore the Bank have aggregated control and analysis procedures that track portfolio performance, identify material deviations from strategic plans or defined alert thresholds, and help prioritise management focus areas. The process is complemented by contingency plans (risk playbooks), which support the early identification and management of impacts from external factors — such as macroeconomic, sector or market changes — and, where appropriate, trigger corrective measures, including adjustments to risk policies.

1.5. Credit risk mitigation techniques

Grupo and Banco Santander Risk approval criteria generally focus on borrowers' ability to meet their financial obligations, without prejudice to any collateral that the Bank may require. Collateral and guarantees provided by the obligor in favour of the Bank aim to modulate the level of exposure.

To determine ability to pay, the Group and the Bank analyses funds or cash flows from businesses or other regular income, not including guarantors or loan collateral which are always considered at credit approval as a secondary means of recourse.

A guarantee is an additional protection mechanism in a credit transaction, intended to mitigate loss in the event of a failure to meet the payment obligation. The Group applies different credit risk mitigation techniques depending, among other factors, on the customer and product type. Some are specific to an individual transaction (e.g., real estate guarantees), while others apply to a set of transactions (e.g., derivatives netting or collateral arrangements). These techniques may be grouped into personal guarantees, real guarantees and hedges using credit derivatives.

The correct acceptance of these mitigation techniques is established by verifying their legal enforceability in all jurisdictions. The entire process is subject to internal control and effective monitoring of the valuation of the guarantees, especially real estate guarantees.

1.6. Collections & recoveries management

Recovery activity is a relevant function within Grupo Santander's risk management and control framework, as it contributes to portfolio quality as one of the key pillars supporting the Bank's development, growth and business sustainability. Collections and debt recovery management is a specific, ongoing focus to keep portfolio quality within the expected levels.

The Collections and Recoveries area defines a global management strategy, based on an end-to-end approach and general lines of action for subsidiaries. Recovery management operates under policies and an independent control environment defined by the risk function, aligned with regulatory requirements and with the Group Santander conduct risk management model. The Group carries out this activity in line with strategies defined by the recovery function, in coordination with the Risk areas.

The recovery strategy combines advanced customer segmentation and the intensive use of digital tools. This supports the optimisation of mass portfolio management and provides tailored support for customers who require individual treatment. The customer remains the focus, and recovery strategies are defined in the context of the relationship with the customer, prioritising the customer's viability. As a result, teams manage the customer holistically across all phases of the cycle.

The function's approach covers the entire credit cycle, prioritising solutions that support customer viability. Even after the asset is written off (failed risk), the Group continues to carry out the necessary actions to maximise recovery. The failed risk category includes debt instruments, whether past due or not, for which, following an individual assessment, recovery is considered remote due to a significant and irreversible deterioration in the solvency of the exposure or the holder. Classification in this category entails the full or partial cancellation of the exposure's gross carrying amount and its derecognition from the balance sheet, without implying that the Group stops negotiations and legal proceedings to recover the amount.

2. Main aggregates and variations

Below are the main aggregates relating to credit risk from our activities with customers:

Main credit risk performance metrics from activity with customers[A]

December data

	Credit risk with customers (EUR million)[B]		Credit impaired loans (EUR million)		NPL ratio (%)	
	2025	2024	2025	2024	2025	2024
Spain	302,271	285,883	5,915	7,672	1.96	2.68
UK	244,303	248,061	2,645	3,299	1.08	1.33

A. Management perimeter according to the reported segments.
B. Includes gross loans and advances to customers, guarantees and documentary credits.
C. Post write-off recoveries (EUR 1,795 million).
D. Provisions to cover losses due to impairment of loans in the last 12 months / average customer loans and advances of the last 12 months.

Information on the estimation of impairment losses

The calculation of provisions for credit risk losses is performed at financial asset level, estimating potential credit losses through the difference between the contractual cash flows and the expected cash flows, ensuring that the results are adequate considering the status of the transaction, economic conditions and available forward-looking information.

The Bank of Spain circular 4/2017 impairment model applies to financial assets valued at amortized cost; debt instruments valued at fair value with changes in other comprehensive income; leasing receivables; and commitments and guarantees not valued at fair value.

The portfolio of financial instruments subject to the Bank of Spain circular 4/2017 has three credit risk categories (or stages) according to the status of each instrument in relation to its level of credit risk:

- Stage 1: financial instruments with no significant increase in risk since initial recognition – the impairment provision reflects expected credit losses from defaults over the 12 months from the reporting date.
- Stage 2: financial instruments with a significant credit risk increase since initial recognition but no materialized impairment event – the impairment provision reflects expected losses from defaults over the financial instrument's residual life.
- Stage 3: financial instruments with true signs of impairment as a result of one or more events resulting in a loss – the impairment provision reflects expected losses for credit risk over the instrument's expected residual life.

The classification of financial instrument in the Bank of Spain circular 4/2017 stages is carried out in accordance with the guidelines through the risk management policies of the Bank, which are consistent with the Group's policies.

Estimation of expected loss

The Group and the Bank use parameters (mainly EAD, PD, LGD and the discount rate) to calculate impairment provisions. These parameters build on the infrastructure of internal models used to calculate regulatory capital and on regulatory and management expertise, and they also reflect each financial asset's stage classification.

However, these parameters are not a simple adaptation of existing models. We designed and validated them specifically in line with IFRS 9 requirements and guidance from bodies such as the EBA, , National Competent Authority (NCA), Bank for International Settlements (BIS) or Global Public Policy Committee (GPPC). Their development incorporates forward-looking information, a point-in-time (PIT) approach, multiple scenarios and lifetime loss estimation through lifetime PD, among other elements.

Determination of significant increase in credit risk (SICR)

To determine classification in Stage 2, the Group assesses whether a SICR has occurred since the initial recognition of the exposures. The Group performs this assessment under common principles applicable across the Group, reviewing all financial instruments subject to this analysis and taking into account the specific features of each portfolio and product type through a range of quantitative and qualitative indicators.

Expert judgement from analysts supports the SICR assessment. Analysts set the thresholds within an integrated management framework and in line with the approved corporate governance. The principles are as follows:

- Universality: all financial instruments subject to a credit rating must be assessed for their possible SICR.
- Proportionality: the definition of the SICR must take into account the particularities of each portfolio.
- Materiality: its implementation must be also consistent with the relevance of each portfolio so as not to incur in unnecessary costs or efforts.
- Holistic vision: the approach selected must be a combination of the most relevant credit risk aspects (e.g. quantitative and qualitative).
- Application of IFRS 9 and Bank of Spain Circular 4/2017: the approach must take into consideration IFRS 9 and Bank of Spain Circular 4/2017 characteristics, focusing on a comparison with credit risk at initial recognition, as well as considering forward-looking information.
- Risk management integration: the criteria must be consistent with those metrics considered in the day-to-day risk management.
- Documentation: appropriate documentation must be prepared.

The techniques are summarised below:

- Stability of stage 2: in the absence of significant changes in the portfolios credit quality, the volume of assets in stage 2 should maintain a certain stability as a whole.
- Economic reasonableness: at transaction level, stage 2 is expected to be a transitional rating for exposures that could eventually move to a deteriorating credit status at some point or stage 3, as well as for exposures that have suffered credit deterioration and whose credit quality is improving and returns to stage 1.
- Predictive power: it is expected that the SICR definition avoids, as far as possible, direct migrations from stage 1 to stage 3 without having been previously classified in stage 2.
- Time in stage 2: it is expected that the exposures do not remain categorized as stage 2 for an excessive time.

The application of the aforementioned techniques, conclude in the setting of one or several thresholds for each portfolio in each geography. Likewise, these thresholds are subject to a regular review by means of calibration tests, which may entail updating the thresholds types or their values.

Identifying a significant increase in credit risk: when classifying financial instruments under stage 2, Banco Santander considers:

- Quantitative criteria: Grupo and Banco Santander review and quantify changes in the risk of default during their expected life based on their credit risk level on initial recognition.

  For the purposes of assessing significant changes when financial instruments are classified in Stage 2, each subsidiary has set quantitative thresholds for its portfolios in line with Group guidelines, seeking a consistent interpretation across all our geographies. The calibration principles for these thresholds are set out in the previous paragraph and may result in two types of thresholds:

  - Relative. Thresholds that compare current credit quality with credit quality at origination, expressed as a percentage change.
  - Absolute. Thresholds that compare current credit quality with credit quality at origination, expressed as an absolute change..

  In addition, in line with the ECB's supervisory expectations, the Group has set a 200% cap on the relative threshold, known as the 'threefold increase'. As a result, exposures whose credit quality has deteriorated by more than 200% in relative terms — using an approach analogous to the relative threshold described in the previous paragraph — transfer from Stage 1 to Stage 2.

  Meeting any of the absolute thresholds, the relative thresholds or the 200% cap on the relative threshold (threefold increase) on an individual basis results in the transfer of the financial instrument exposure from Stage 1 to Stage 2.

  In addition, the Group may apply the Low Credit Risk Exemption at the reporting date, so that certain exposures that continue to meet this condition may remain in Stage 1. This exemption applies only to quantitative significant increase in credit risk criteria; therefore, qualitative criteria are not eligible for exemption. The Group uses it on a limited basis, documents it and reviews it periodically. When an exposure no longer meets the low credit risk condition, it transfers to Stage 2 in line with the criteria above.

- Qualitative criteria: several indicators aligned with ordinary credit risk management indicators (e.g. past due for over 30 days, forbearance, early warning indicators system, etc.). Each subsidiary has defined these indicators for their portfolios, with special attention to reinforcing these qualitative criteria through expert judgment and aligning them to the criteria used in management.

  When the presumption of a significant deterioration of credit risk is removed, due to a sufficient improvement of the credit quality, the obligor can be re-classified to stage 1, without any probationary period in stage 2.

- Definition of default: Grupo and Banco Santander incorporated the new definition to provisions calculation according to the EBA's guidelines; the Group and the Bank are also considering applying it to prudential framework. In addition, the default definition and stage 3 have been aligned.

  This definition considers the following criteria to classify exposures as stage 3: financial instruments with one or more payments more than 90 consecutive days past due, representing at least 1% of the client's total exposure or the identification of other criteria demonstrating, even in the absence of defaults, that it is unlikely that the counterparty is unlikely to meet all of its financial obligations.

  The Group and the Bank apply the default criteria to all exposures of the impaired client. Where an obligor belongs to a group, the default criteria may also be applied to all exposures of the group.

  The default classification is maintained during the 3-month test period following the disappearance of all default indicators described above, and this period is extended to one year for forbearances that have been classified as default.

- Expected life of financial instruments: Grupo and Banco Santander estimate the expected life of financial instruments according to their contractual terms (e.g. prepayments, duration, purchase options, etc.).

  The contractual period (including extension options) is the maximum time frame for measuring the expected credit loss. If financial instruments have an undefined maturity period and undrawn amounts (e.g. credit cards), the Group and the Bank estimate their expected life based on the total exposure period and effective management practices to mitigate exposure.

1. Forward-looking vision

Estimating expected credit losses (ECL) requires significant expert judgement and the incorporation of historical, current and forward-looking information. Expected loss estimates are therefore based on an unbiased, probability-weighted likelihood of up to five possible future scenarios that could affect the collection of contractual cash flows. These scenarios consider the time value of money, relevant information available on past events, current conditions and forecasts of the macroeconomic factors considered important in estimating this amount (e.g. GDP, house prices and the unemployment rate, among others).

Grupo and Banco Santander use forward-looking information in internal management and regulatory processes under several scenarios. The Group and the Bank's guidelines and governance seek synergy and consistency between these different processes.

2. Additional elements

Additional elements will be required when necessary because they have not been captured under the two previous elements. This has included, among others, the analysis of sectors most affected if their impacts are not sufficiently captured by the macroeconomic scenarios. Also collective analysis techniques, when the potential impairment in a group of clients cannot be identified individually.

With the elements indicated above, Grupo and Banco Santander have evaluated the evolution of the credit quality of its customers, for the purposes of classifying them into stages and consequently calculating expected loss.

Management overlays

During 2025, the Group strengthened coverage across its portfolios by implementing overlays, mainly in Brazil, Chile and Mexico, where it increased the PMA buffer to anticipate the impact of the year's model recalibrations, as well as other potential deviations.

In addition, the Group gradually released the adjustments related to climate events, such as the Valencia dana experienced in late October 2024, in the case of Santander Spain and the Spanish DCB office.

Overall, the amount of overlays at year-end 2025 remains immaterial compared with the Group's total allowance for credit losses.

Exposure and loan-loss reserves

Then, considering the most relevant units of the Group (United Kingdom, Spain, United States, Brazil, also Chile, Mexico, Portugal, Poland, Argentina and Santander Consumer Finance), which represent approximately 96% of the total Group's provisions. The table below shows the loan-loss reserves associated with each stage as of 31 December 2025 and 2024. In addition, depending on the transactions credit quality, the exposure is divided into four categories according to Standard & Poor's rating scale:

Exposure and impairment losses by stage

EUR million

	2025			
Credit quality[A]	Stage 1	Stage 2	Stage 3	Total
From AAA to AA-	121,023	2,295	—	123,318
From A+ to BB	383,494	15,188	—	398,682
From BB- to B-	300,108	47,292	—	347,400
CCC and below	8,146	17,733	32,664	58,543
Total exposure [B]	**812,771**	**82,508**	**32,664**	**927,943**
Impairment losses[C]	**3,147**	**4,915**	**13,900**	**21,962**

Exposure and impairment losses by stage

EUR million

	2024			
Credit quality[A]	Stage 1	Stage 2	Stage 3	Total
From AAA to AA-	108,977	2,599	—	111,576
From A+ to BB	431,544	16,600	—	448,144
From BB- to B-	288,302	45,129	—	333,431
CCC and below	10,431	17,088	32,901	60,420
Total exposure[B]	**839,254**	**81,416**	**32,901**	**953,571**
Impairment losses[C]	**3,276**	**4,715**	**13,669**	**21,660**

A. Detail of credit quality ratings calculated for Group management purposes.
B. Total exposure includes loan balances (drawn amounts) and off balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (loan commitments).

The remaining units that form the totality of the Group exposure, account for EUR 93,731 million EUR 89,094 million in stage 1; EUR 3,528 million in stage 2; and EUR 1,109 million in stage 3 (in 2024 EUR 80,541 million in stage 1; EUR 2,534 million in stage 2, and EUR 874 million in stage 3.

The remaining exposure, including all financial instruments not included before, amounts to EUR 834,911 million (EUR 665,476 million in 2024), and it includes all undrawn authorized lines (loan commitments).

As of 31 December 2025, the Group had EUR 334 million net of provisions (EUR 559 million at 31 December 2024) of purchased credit-impaired assets, which relate mainly to the business combinations carried out by the Group.

In relation to the evolution of credit risk provisions, the Group, together with its main geographies, monitors them through sensitivity analyses that assess the impact of changes in macroeconomic scenarios and their key variables on the allocation of financial assets across stages and on the measurement of credit risk provisions.

Additionally, based on consistent macroeconomic scenarios, Grupo and Banco Santander also perform stress tests and sensitivity analysis in a regular basis, such as ICAAP, strategic plans, budgets and recovery and resolution plans. In this sense, a prospective view of the sensitivity of each of the Group's loan portfolio is created in relation to the possible deviation from the base scenario, considering both the macroeconomic developments in different scenarios and the three year evolution of the business. These tests include potentially adverse and favourable scenarios.

3. Credit risk management

Following is the risk information relating to the geography of Grupo España portfolio in terms of exposure and risk allowances.

This information includes sensitivity analysis, consisting on simulations of +/-100 bp in the main macroeconomic variables. A set of specific and complete scenarios is used in each geography, where different shocks that affect both the reference macroeconomic variable as well as the rest of the parameters is simulated, with different intensities. These shocks collect mainly the most relevant risks and may be originated by productivity, tax, wages or exchange and interest rates factors.

Sensitivity is measured as the average variation on expected loss corresponding to the aforementioned movement of +/-100 bp. Following a conservative approach, the negative movements take into account one additional standard deviation in order to reflect the potential higher variability of losses.

3.1. Credit portfolio in Spain

Portfolio overview

Santander España's credit risk totalled EUR 302,271 million (26% of Grupo Santander's total). It is appropriately diversified among products and customer segments.

The NPL ratio was 1.96%, 73 bps lower than in December 2024. This decrease was driven by the portfolio's strong performance, supported by the execution of the NPL reduction plan.

The NPL coverage ratio increased slightly to 55%(+2 p.p. year-on-year). The cost of risk decreased to 0.44% (-7 bps vs. December 2024), driven by the strong performance of the SME and corporate portfolios, partly offset by the performance of the individuals portfolio.

Macroeconomic projections suggest the economy will moderate its growth pace slightly, but will remain dynamic and well above the eurozone average, as the Spanish economy has largely been supported by stronger domestic demand amid a weaker-than-expected external sector.

Residential mortgage portfolio

Residential mortgages in Spain, including Santander Consumer Finance business, amounted to EUR 60,002 million in 2025 (EUR 59,316 millions in 2024), 99.64% of which have a mortgage guarantee (99.65% in 2024).

EUR million

	2025			
	Santander Group Spain		Of Which, Banco Santander, S.A.	
	Gross amount	Of which: impaired	Gross amount	Of which: Non-performing
Home purchase loans to families	60,002	625	59,809	620
Without mortgage collateral	*215*	*7*	*215*	*7*
With mortgage collateral	*59,787*	*618*	*59,594*	*613*

EUR million

	2024			
	Santander Group Spain		Of Which, Banco Santander, S.A.	
	Gross amount	Of which: impaired	Gross amount	Of which: Non-performing
Home purchase loans to families	59,316	789	59,113	785
Without mortgage collateral	*208*	*11*	*209*	*11*
With mortgage collateral	*59,108*	*778*	*58,904*	*774*

The NPL ratio for the residential mortgages portfolio stood at 1.03%, with a reduction of 29 bps, compared to 31 December 2024, mainly due to by portfolio sales, although credit risk registered an increase of 1.2% compared to December 2024.

The mortgage portfolio for the acquisition of homes in Spain is characterised by its medium-low risk profile, which limits expectations of any potential additional impairment:

- Principal is repaid on all mortgages from the start.
- Early repayment is common so the average life of the transaction is well below that of the contract.
- High quality of collateral, concentrated almost exclusively in financing for first homes.
- The average affordability rate at 22% (24% in2024).
- The 94% of the portfolio has a LTV below 80% calculated as total risk/latest available house appraisal.
- All customers applying for a residential mortgage are subject to a rigorous credit risk and viability assessment, analysing whether their income is sufficient to meet all repayments and will remain stable over the term of the loan.

Breakdown of the credit with mortgage guarantee to households for house acquisition, according to the percentage that the total risk represents on the amount of the latest available valuation (loan to value):

EUR million

	2025					
	Loan to value ratio					
	Less than or equal to 40%	More than 40% and less than 60%	More than 60% and less than 80%	More than 80% and less than or equal to 100%	More than 100%	Total

In November 2022, Royal Decree-Law 19/2022 was published, which establishes a Code of Good Practices in response to the rise in interest rates on mortgage loans for primary residences and Royal Decree-Law 6/2012 of protection measures for mortgage debtors without resources. The code of good practices is focused on granting capital grace periods and extending the term of the operations. The requests made have not been significant.

Corporate & SME financing

Credit risk with SME and corporates in commercial banking amounted to EUR 99,395 million, lower than December 2024, mainly due to the fall in the portfolio of SMEs of 10.1%. This portfolio accounting for 33% of the total, compared to 41% of CIB's portfolio, which from 2022 includes branches in Europe.

Most of the portfolio corresponds to clients who have been assigned a credit analyst, who performs continuous management of said clients during all phases of the risk cycle.The portfolio is broadly diversified and not concentrated by sector of activity.

The ICO loans that were granted as a result of the pandemic (25,428 million euros) are being repaid normally and there is a balance of EUR 10.857 billion, so they now represent only around 3.6% of Santander Spain's total portfolio. During 2025, Santander Spain maintained its support and close engagement with SMEs and the self-employed through the various support lines, which were significantly less material than the post-pandemic programmes (Líneas ICO Empresas y Emprendedores, Línea ICO Internacional y Rehabilitación de vivienda).

In the case of delinquent operations with ICO guarantee, the transfer of the overdue guaranteed amounts will take place as the guarantee is executed, regardless of whether the guarantor is subrogated to the right to receive said amounts, according to the regulation of these guarantees. The de-recognition of the transferred guaranteed amounts will entail the recognition, at its fair value, of a collection right against the guarantor.

The portfolio's NPL ratio stood at 4.10% in December 2025. The NPL ratio decreased by 97 bps compared to December 2024, largely due to a proactive effort to reduce the stock of NPLs in the SME portfolio, through proactive management of non-performing exposures supported by portfolio sales and the management of specific cases.

Real estate activity

Santander has specialized teams that are in charge of managing real estate business production and risk areas that cover the entire life cycle of these operations.

The changes in gross property development loans to customers were as follows:

EUR million

	2025	2024
Balance at beginning of year	2,545	2,433
Foreclosed assets	—	—
Net variation	441	112
Written-off assets	(2)	0
Balance at end of year	**2,984**	**2,545**

The NPL ratio of this portfolio (considering only the on balance amount) ended the year at 1.04% (compared with 2.28% at December 2024). The table below shows the distribution of the portfolio. The coverage ratio of the real estate doubtful exposure in Spain stands at 36.21% in 2024).

In addition, the Group has shareholdings in entities holding foreclosed assets amounting to EUR 36 million and equity instruments foreclosed or received in payment of debts amounting to EUR 10 million.

In recent years, the Group and the Bank have considered foreclosure to be an option to resolve cases of default instead of legal proceedings. The Group and the Bank initially recognise foreclosed assets at the lower of the carrying amount of the debt (net of provisions) and the fair value of the foreclosed asset (less estimated costs to sell). Subsequent to initial recognition, the assets are measured at the lower of fair value (less costs to sell) and the amount initially recognised.

The fair value of this type of assets is determined by the market value (appraisal) adjusted with discounts obtained according to internal valuation methodologies based on the entity's sales experience in goods with similar characteristics.

The management of real estate assets on the balance sheet is carried out through companies specializing in the sale of real estate that is complemented by the structure of the commercial network. The sale is realised with at prices in accordance with the market situation and the offer of wholesale buyers.

The gross movement in foreclosed properties were as follows (EUR billion):

	2025	2024
Gross additions	0.1	0.1
Disposals	(0.7)	(0.8)
Difference	(0.6)	(0.7)

Information on the estimation of impairment losses

The detail of Santander Spain exposure and loan-loss reserves associated with each of the stages at 31 December, 2025 and 2024 is shown below. In addition, the exposure is divided in four tranches of the Standard & Poor's rating scale, according to their current credit quality:

Exposure and loan-loss reserves by stage

EUR million

	2025			
Credit quality[A]	Stage 1	Stage 2	Stage 3	Total
From AAA to AA-	35,407	171	—	35,578
From A+ to BB	109,001	1,453	—	110,454
From BB- to B-	37,089	8,262	—	45,351
CCC and below	2,189	1,680	5,761	9,630
Total exposure[B]	**183,686**	**11,566**	**5,761**	**201,013**
Impairment losses[C]	**382**	**483**	**2,204**	**3,069**

Exposure and loan-loss reserves by stage

EUR million

	2024			
Credit quality[A]	Stage 1	Stage 2	Stage 3	Total
From AAA to AA-	35,347	110	—	35,457
From A+ to BB	104,197	1,124	—	105,321
From BB- to B-	37,413	8,844	—	46,257
CCC and below	2,084	3,199	6,618	11,901
Total exposure[B]	**179,041**	**13,277**	**6,618**	**198,936**
Impairment losses[C]	**340**	**570**	**2,953**	**3,863**

A. Detail of credit quality ratings calculated for Group management purposes. Excluding the SCIB branches business
B. Total exposure includes loan balances (drawn amounts) and off balance (letters of credit + guarantees) and excludes REPOs, FV portfolio, trading portfolio and undrawn commitments.
C. Includes provisions for undrawn authorized lines (*loan commitments*).

From the information detailed above, Banco Santander, S.A. reaches a total gross exposure of EUR 353,957 million in the heading of financial assets at amortized cost (see note 6 and 10) and EUR 149,881 million in loan commitments granted for off-balance sheet exposures (see note 31) Impairment losses amount to EUR 3,113 and EUR 179 million, respectively. (The amount of losses due to impairment of off-balance sheet exposures includes the coverage of financial guarantees and other commitments granted in addition to the aforementioned loan commitments).

For the estimation of the expected losses, the prospective information is taken into account. Specifically, Santander Spain considers three macroeconomic scenarios, which are updated periodically. The projected evolution for a period of five years of the main macroeconomic indicators used by Santander Spain for estimating expected losses as of 2025, is presented below:

	2026-2030		
Variables	Pessimistic scenario	Base scenario	Optimistic scenario
Interest rate	2.7 %	2.5 %	2.3 %
Unemployment rate	12.1 %	9.7 %	8.2 %
Housing price change	3.3 %	4.1 %	4.7 %
GDP growth	0.2 %	1.6 %	2.4 %

Each macroeconomic scenarios is associated with a given weight. As for its allocation, Santander Spain associates the Base scenario with the highest weight, while associating the lower weights to the most extreme scenarios:

	2025	2024
Pessimistic scenario	30%	30%
Base scenario	40%	40%
Optimistic scenario 1	30%	30%

The sensitivity analysis of the main portfolios expected loss to variations of +/-100 bp for the macroeconomic variables used in the construction of the scenarios, at December 31 2025, is as follows:

	Change in Provision		
	Mortgages	Corporates	Others
GDP Growth			
-100 bps	8.5 %	1.1 %	2.1 %
+100 bps	(3.6)%	(0.9)%	(1.9)%
Housing price change			
-100 bps	8.4 %	1.5 %	3.4 %
+100 bps	(6.7)%	(0.7)%	(1.8)%
Unemployment rate			
-100 bps	(6.0)%	(1.5)%	(3.7)%
+100 bps	14.7 %	1.8 %	4.7 %

To determine Stage 2 classification, Santander Spain applies quantitative criteria based on identifying increases in the lifetime PD of an exposure above a relative or absolute threshold. The threshold differs by portfolio depending on the characteristics of the exposures, and an exposure is considered to exceed the threshold when its lifetime PD increases by a set amount compared with the PD at initial recognition. Santander Spain calibrates these thresholds periodically, as described in previous paragraphs. In addition, Santander Spain applies a backstop to the relative threshold across all portfolios. As a result, Santander Spain classifies contracts as Stage 2 when their current PD has increased by more than two times compared with the PD at origination.

Santander Spain also considers specific qualitative criteria that indicate a significant increase in credit risk, regardless of how the PD has evolved since initial recognition. Among other criteria, Santander Spain considers that an exposure shows a significant increase in credit risk when it is more than 30 days past due or when its early warning system so determines.

4. Other credit risk aspects

4.1. Credit risk by activity in the financial markets

This section covers credit risk from treasury, with money market financing and counterparty risk products to satisfy the needs of customers (especially credit institutions) and the Group and the Bank.

Counterparty credit risk is defined as the risk that could arise from a total or partial failure to meet the financial obligations entered into with the entity, because a customer may default before the final settlement of the transaction's cash flows. This risk usually increases the longer the period between the trade date and the settlement date. It is a bilateral credit risk that can affect both parties to the transaction, and its magnitude is uncertain, as it depends on volatile market factors.

Within counterparty credit risk exposure, an additional risk known as wrong-way risk may arise. It occurs when exposure to a portfolio or counterparty increases at the same time as its credit quality deteriorates. In other words, wrong-way risk exists when default risk increases and, as a result, the exposure to the counterparty also increases. Santander has specific models to measure and control this risk.

Settlement risk arises when the settlement of a transaction involves a bilateral exchange of flows or assets between two counterparties. For example, when a counterparty buys dollars in exchange for euros, settlement involves one party delivering euros and receiving an equivalent amount of dollars from the other. Settlement risk is the risk that one of the parties fails to meet its settlement obligations. We have also developed a global infrastructure and specific models to measure this risk.

To manage and control counterparty risk, it is essential to have an infrastructure that allows measuring current and potential exposure at different levels of aggregation and granularity in an agile and dynamic way, ensuring the generation of reports with sufficient detail to facilitate the understanding of exposures and the decision-making process.

To measure exposure, Grupo Santander follows two methodologies: mark-to-market (MtM or replacement value in derivatives) plus potential future exposure (add-on), and Monte Carlo simulation for calculating exposure for some countries and products. Additionally, Santander calculates capital at risk or unexpected loss, which is the loss that constitutes economic capital net of guarantees and recoveries, after deducting the expected loss.

After market close, Grupo Santander recalculates exposures by adjusting all operations to their new time horizon, adapting the potential future exposure and applying mitigation measures (netting, collateral, among others), so that exposures can be controlled daily against the limits approved by senior management within the risk appetite. Santander performs risk control through a real-time integrated system, which allows the Group to know at any moment the available exposure limit with any counterparty, in any product and term, and across all subsidiaries.

Grupo Santander runs monthly stress tests on derivatives portfolios and securities financing transactions (SFT). These exercises form an integral part of the counterparty credit risk management process. They allow us to assess the resilience of exposures under adverse scenarios and support appropriate identification, measurement and control of the associated risks.

4.2. Concentration risk

Concentration risk control is an essential aspect of Grupo and Banco Santander's management. The Group and the Bank continuously monitors the level of concentration in its credit risk portfolios applying various criteria: geographic areas and countries, economic sectors and groups of customers.

The board, via the risk appetite framework, determines the maximum levels of concentration.

In line with these maximum levels and limits, the executive risk committee establishes the risk policies and reviews the appropriate exposure levels for the effective management of the degree of concentration in Santander's credit risk portfolios.

Grupo and Banco Santander must adhere to the regulation on large risks contained in the CRR, according to which the exposure contracted by an entity with a customer or group of associated customers will be considered a large exposure when its value is equal to or greater than 10% of eligible capital.

In addition, in order to limit large exposures, no entity may assume exposures exceeding 25% of its eligible capital with a single customer or group of associated customers, having factored in the credit risk mitigation effect contained in the regulation.

At the end of December, after applying risk mitigation techniques, no group reaches the above-mentioned thresholds.

Regulatory credit exposure with the 20 largest groups within the scope of large risks represented 5.3% of the outstanding credit risk with customers (lending to customers plus off-balance sheet risks) as of December 2025. While the regulatory credit exposure with the 40 largest groups represents 8.4% of the credit risk.

The detail, by activity and geographical area of the Group's risk concentration at 31 December 2025 is as follows:

EUR million

	2025[A]

A. For the purposes of this table, the definition of risk includes the following items in the public balance sheet: 'Loans and advances to credit institutions', 'Loans and advances to Central Banks', 'Loans and advances to Customers', 'Debt securities', 'Equity Instruments', 'Trading Derivatives', 'Hedging derivatives', 'Investments and financial guarantees given'.

4.3 Sectors identification and management

Grupo and Banco Santander conduct a quarterly review of exposure to customers operating in sectors that could be more affected by macroeconomic conditions (energy consumption, commodity prices, and key macroeconomic variables). This monitoring is complemented by the use of internal tools that allow projecting the behaviour and evolution of clients in each sector under different macroeconomic scenarios. Additionally, this process considers, among other things, the following information at the sector level:

- Market information: Industries' stock market performance.
- Analysts' EBITDA forecasts for the coming years.
- Internal information: Changes in credit exposure, defaults (in different timelines) and stagings.
- Our industry experts' opinion, based on specific details about our exposures and our relationships with customers.

The Group, and therefore the Bank, continued to strengthen our ability to analyse potential losses at the highest possible level of granularity by enhancing the methodology and sector projection tools, based on the resilience of each company's financial statements under different macroeconomic scenarios.

4.4. Sovereign risk and exposure to other public sector entities

Sovereign risk arises from central bank transactions (including regulatory cash reserves), government bonds issued by the Treasury or equivalent bodies (public debt portfolio), and transactions with public-sector entities funded exclusively by a state's budget revenues and with no commercial activity.

Grupo and Banco Santander's The standard historically applied by Grupo Santander differs from the one used by the EBA in its periodic stress tests. The most significant differences are that the EBA's approach does not include deposits with central banks, exposures held in insurance companies, or indirect exposures through guarantees or other instruments. By contrast, it does include public administrations more broadly (including regional and local authorities), and not only those of the central government.

Grupo and Banco Santander continue to track and manage transactions with sovereign risk based on available information, such as reports by rating agencies and international organizations. Grupo and Banco Santander monitor each country where the Group and the Bank have cross-border[1] and sovereign risk. The Group and the Bank analyse events that could affect the country's political or institutional stability and assign its government or central bank a credit rating. This helps us set limits for transactions with sovereign risk.

Over recent years, total sovereign risk exposure has remained in line with regulatory requirements and the strategy defined for managing this portfolio. Changes in exposure across countries reflect the liquidity management strategy and hedging of interest rate and foreign exchange risk. International exposure is diversified across countries with different macroeconomic expectations and, consequently, different growth, interest rate and exchange rate scenarios..

At the end of December 2025, Grupo and Banco Santander´s local sovereign exposure, in currencies other than the official currency of the country of issuance, is not significant (EUR 4,908 million, 1.2% of total sovereign risk) according to our management criteria. Furthermore, exposure to non-local sovereign issuers involving cross-border risk is even less significant[2]EUR 17,002 million, 4.0% of total sovereign risk).

Sovereign exposure in Latin America is mostly in local currency, and is recognised in the local accounts and concentrated in short- term maturities.

Our investment strategy for sovereign risk considers country's credit quality to set the maximum exposure limits. The following table shows the percentage of exposure by rating[A]:

	2025	2024
AAA	18 %	21 %
AA	17 %	18 %
A	43 %	41 %
BBB	14 %	11 %
Less than BBB	9 %	9 %

A. Internal ratings are applied.

[1] Risks with domestic public or private borrowers in foreign currency and originated outside the country.
[2] Countries that are not considered low risk by Banco de España.

Sovereign exposure at the end of December 2025 is shown in the table below (data in million euros):

	2025					2024
	Portfolio					
Country	Financial assets held for trading and Financial assets designated as FV with changes in results	Financial assets at fair value through other comprehensive income	Financial assets at amortised cost	Non-trading financial assets mandatorillly at fair value through profit or loss	Total net direct exposure	Total net direct exposure

5. Forborne loan portfolio

The customer debt redirection policy incorporates the regulatory requirements of the EBA guidelines on the management of non-performing exposures, refinancing and restructuring. This policy acts as a reference for the transposition in our subsidiaries and shares the applicable supervisory expectations.

This policy also sets down rigorous criteria for evaluating, classifying and monitoring forbearances to support the strictest possible care and diligence in recovering due amounts. Thus, it dictates that Grupo and Banco Santander must adapt payment obligations to customers' current circumstances. Our forbearance policy also defines classification criteria to support Grupo and Banco Santander recognize risks appropriately.

Forbearances must remain classified as non-performing or in watch-list for a prudential period for reasonable certainty of repayment. In no case will repayments be used to delay the immediate recognition of losses or so that their use distorts the timely recognition of the risk of non-payment.

At 31 December 2025, forbearance stock fell again and stood at EUR 25,235 million, due to the good payment behaviour in the main geographies. In terms of credit quality, 53% of the loans is classified as credit impaired, with a coverage ratio of 41%. In addition, 47% of the portfolio is classified as performing.

The following terms are used with the meanings specified below:

- Refinancing transaction: transaction that is granted or used, for reasons relating to current or foreseeable financial difficulties of the borrower, to repay one or more of the transactions granted to it, or through which the payments on such transactions are brought fully or partially up to date, in order to enable the borrowers of the cancelled or refinanced transactions to repay their debt (principal and interest) because they are unable, or might foreseeably become unable, to comply with the conditions there of in due time and form.
- Restructured transaction: transaction with respect to which, for economic or legal reasons relating to current or foreseeable financial difficulties of the borrower, the financial terms and conditions are modified in order to facilitate the payment of the debt (principal and interest) because the borrower is unable, or might foreseeably become unable, to comply with the aforementioned terms and conditions in due time and form, even if such modification is envisaged in the agreement.

Financing classified as non-current assets and disposable groups of items that have been classified as held for sale	—	—	—	—	—	—	—	—	—	—	—	—	—	—

In 2025, the amortised cost of financial assets owned by the Bank whose contractual cash flows were modified during the year when the corresponding loss adjustment was valued at an amount equal to the expected credit losses over the life of the asset amounted to EUR 178 million (EUR 291 million in 2024), without these modifications having a material impact on the income statement. Also, during 2025, the total of financial assets owned by the Bank that have been modified since the initial recognition, and whose correction for expected loss has gone from being valued during the entire life of the asset to the following twelve months, amounts to EUR 966 million (EUR 1,746 million in 2024).

The transactions presented in the foregoing tables were classified at 31 December 2025 by nature, as follows:

- Credit impaired: Operations that rest on an inadequate payment scheme will be classified within the non-performing category, regardless they include contract clauses that delay the repayment of the operation throughout regular payments or present amounts written off the balance sheet for being considered irrecoverable.
- Performing: Operations not classifiable as non-performing will be classified within this category. Operations will also be classified as normal if they have been reclassified from the non-performing category for complying with the specific criteria detailed below:
  - a A period of a year must have passed from the refinancing or restructuring date.
  - b The owner must have paid for the accrued amounts of the capital and interests, thus reducing the rearranged capital amount, from the date when the restructuring of refinancing operation was formalised.
  - c The owner must not have any other operation with amounts past due by more than 90 consecutive days of material delay on the date of the reclassification to the normal risk category.

Attending to the credit attention 47% of the forborne loan transactions are classified as other than non-performing. Particularly noteworthy are the level of existing guarantees (47% of transactions are secured by collateral) and the coverage provided by specific allowances (representing 26% of the total forborne loan portfolio and 41% of the non-performing portfolio).

c) Market, structural and liquidity risk

1. Activities subject to market risk and types of market risk

Activities exposed to market risk encompass transactions where risk is assumed as a consequence of potential changes in interest rates, inflation rates, exchange rates, stock prices, credit spreads, commodity prices, volatility and other market factors; the liquidity risk from our products and markets, and the balance-sheet liquidity risk. Therefore, they include trading risks and structural risks.

- **Interest rate risk** arises from movements in interest rates that reduce the value of a financial instrument, a portfolio or the Group or the Bank. It can affect loans, deposits, debt securities, most assets and liabilities held for trading, and derivatives.
- **Inflation rate risk** arises from movements in inflation that can reduce the value of a financial instrument, a portfolio or the Group or the Bank. It can affect loans, debt securities and derivatives (e.g. inflation swaps and futures) whose profitability is linked to inflation.
- **Exchange rate risk** is the possibility of loss because the currency of a long or open position will depreciate against the base currency. It can affect debt in subsidiaries whose local currency is not the euro, as well as loans denominated in a foreign currency.
- **Equity risk** is the possibility of loss from open positions in securities if their market price or expected future dividends fall. It affects shares, stock market indices, convertible bonds and derivatives with shares as the underlying asset (put, call, equity swaps, etc.).
- **Credit spread risk** is the possibility of loss from open positions in fixed-income securities or credit derivatives if their yield curve, or the recovery rate of their issuer or type change. A spread is the yield difference between financial instruments against a benchmark (e.g. the internal rate of return (IRR) of government bonds and interbank interest rates).
- **Commodity price risk** is the possibility of loss from movements in commodity prices. Grupo and Banco Santander's commodity exposure is minor and stems mainly from commodity derivatives.
- **Volatility risk** is the possibility of loss caused by movements in interest rates, exchange rates, the stock market, credit spreads and other risk factors affecting portfolio value. It is inherent to all financial instruments whose value considers volatility (especially options contracts).

Derivative contracts (such as options, futures, forwards and swaps) can mitigate market risks partially or fully.

Additionally, other more complex coverage market risks are considered, such as correlation risk, market liquidity risk, prepayment or cancellation risk and subscription risk.

- Correlation risk is the possibility of loss due to an adverse correlation between risk variables that affect portfolio value. Risk variables could be the same (e.g. two FX rates) or different (e.g. an interest rate and a commodity price).
- Market liquidity risk is the possibility that fewer market makers or institutional investors, a large number of transactions, market instability and other factors will cause the Group or a subsidiary to exit a position at a worse market price or trade cost. Exposure to different products and currencies can also increase this risk.
- Pre-payment or cancellation risk originates when mortgages, deposits and other on-balance-sheet instruments give holders the option to buy or sell them, thus altering future cash flows. Potential mismatches on the balance sheet pose a risk since cash flows may have to be reinvested at an interest rate that is potentially lower (assets) or higher (liabilities).
- Underwriting risk is the possibility that the bank will have to hold part of a debt issue it has underwritten or agreed to place if it cannot all be placed among potential buyers.

Balance sheet liquidity risk (unlike market liquidity risk) is the possibility of loss caused by forced disposal of assets or cash flow imbalance if the bank meets its payment obligations late or at excessive cost. It can cause losses by forced asset sales or impacts on margins due to the mismatch between expected cash inflows and outflows.

Pension and actuarial risks (explained at the end of this section) also depend on market variables.

Grupo and Banco Santander aim to comply with the Basel Committee's Fundamental Review of the Trading Book (FRTB) and the EBA's Guidelines on the management of interest rate risk arising from non-trading book activities. The purpose of several projects Grupo Santander runs is to provide risk control managers and teams with the best market risk management tools under the right governance framework for the models Grupo Santander uses for metric reporting; and to comply with regulation on the risks mentioned above.

2. Trading market risk management

Setting market risk limits in a dynamic process according to the risk appetite in the annual limits plan prepared by senior management and extended to all subsidiaries.

The standard methodology for risk management and control in trading, measures the maximum expected loss with a specific level of confidence and time frame. The standard for historical simulation is a confidence level of 99% over one day.

Grupo and Banco Santander apply statistical adjustments efficiently to incorporate recent developments affecting our levels of risk. Our time frame is two years or at least 520 days from the reference date of the VaR calculation.

The balance sheet items in the Group's consolidated position that are subject to market risk are shown below, distinguishing those positions for which the main risk metric is VaR from those for which risk monitoring is carried out using other metrics:

EUR million

	Balance sheet amount	Main market risk metric		Main risk factor for 'Other' balance
		VaR	Other	
Assets subject to market risk				
Cash, cash balances at central banks and other deposits on demand	152,281		152,281	Interest rate
Financial assets held for trading	252,318	252,318		
Non-trading financial assets mandatorily at fair value through profit or loss	7,761	5,815	1,946	Interest rate, spread
Financial assets designated at fair value through profit or loss	8,046	—	8,046	Interest rate, spread
Financial assets designated at fair value through other comprehensive income	74,612	2,281	72,331	Interest rate, spread
Financial assets at amortized cost	1,202,689		1,202,689	Interest rate, spread
Hedging derivatives	3,931		3,931	Interest rate, exchange rate
Changes in the fair value of hedged items in portfolio hedges of interest risk	50		50	Interest rate
Other assets	165,827			
Total assets	**1,867,515**			
Liabilities subject to market risk				
Financial liabilities held for trading	171,546	171,546		
Financial liabilities designated at fair value through profit or loss	42,148	—	42,148	Interest rate, spread
Financial liabilities at amortized cost	1,421,184		1,421,184	Interest rate, spread
Hedging derivatives	4,248		4,248	Interest rate, exchange rate
Changes in the fair value of hedged items in portfolio hedges of interest rate risk	49		49	Interest rate
Other liabilities	115,592			
Total liabilities	**1,754,767**			
Equity	**112,748**			

The following table displays the latest and average VaR values at 99% by risk factor over the last three years. It also shows the minimum and maximum VaR values in 2025 and 97.5% ES at the end of December 2025:

VaR statistics and expected shortfall by risk factor[A]

Commodities	0.1	2.5	7.0	1.8	1.3	3.2	5.1

A. In South and North America, VaR levels of credit spreads and commodities are not shown separately due to their low or null materiality.

VaR at the end of December (EUR 18.7 million was only EUR 0.03 million compared to the end of 2024, reflecting sustained high market volatility, ongoing geopolitical risk and concerns over inflation trends, which could pick up again as a result of new US trade policies.

By risk factor, average VaR (EUR 17.6 million was higher across several risk factors, especially for foreign exchange, with high market volatility for certain currencies such as the US dollar and the Argentine peso. Temporary spikes in VaR across the different factors generally reflect isolated increases in market price volatility rather than significant changes in positions.

By region, average VaR was higher than the 2024 average in Europe, mainly due to interest rate and foreign exchange risk factors, while it was lower in North America and South America.

Backtesting

Actual losses can differ from predicted losses because of the VaR's limitations. The Bank and the Group measures the accuracy of the VaR calculation model to make sure it is reliable. The most important tests Grupo Santander and Banco run involve backtesting:

- In hypothetical P&L backtesting and for the total portfolio, two exceptions (a daily loss higher than VaR or a daily gain higher than VaE) were observed in 2025 for VaR at a 99% confidence level, on 9 and 11 April, as a result of high market volatility, mainly driven by uncertainty over the potential impact of new US trade policies
- The exceptions observed in the past year are consistent with the assumptions of the VaR calculation model.

3. Structural balance sheet risks

3.1. Main aggregates and variations

Consistent with previous years, the market risk profile of Grupo and Banco Santander's balance sheet remained moderate in 2025 in terms of asset, shareholders' equity and NII volumes, each subsidiaries.

Each subsidiary's finance division manages interest rate risk from commercial banking and is responsible for handling structural risk from interest rate fluctuations.

To measure interest rate risk, Grupo Santander uses statistical models based on strategies to mitigate structural risk with interest-rate instruments (such as bonds and derivatives) to keep risk profile within risk appetite.

The NII and EVE sensitivities below are based on scenarios of parallel interest rate movements from -100 to +100 basis points.

Structural VaR

With such a homogeneous metric as VaR, Grupo Santander can fully monitor market risk in the banking book (excluding CIB trading activity). The Bank differentiates fixed income based on interest rates and credit spreads in ALCO portfolios, FX rates and shares.

In general, the structural VaR of Grupo and Banco Santander total assets and equity is minor.

Structural VaR

EUR million. Structural VaR 99% with a temporary horizon of one day.

	2025			2024		
	Minimum	Average	Maximum	Latest	Average	Latest
Structural VaR	**598.5**	**662.9**	**751.9**	**690.1**	**747.7**	**687.5**
Diversification effect	(155.9)	(258.4)	(265.6)	(206.6)	(386.4)	(268.6)
VaR Interest Rate[A]	158.3	177.3	205.8	177.6	412.0	235.2
VaR Exchange Rate	486.0	597.7	648.7	572.4	571.7	594.4
VaR Equities	110.1	146.3	163.0	146.7	150.4	126.5

A. Includes credit spread VaR on ALCO portfolios.

Structural interest rate risk:

– Europe

At the end of December, net interest income (NII) for our main balance sheets showed positive sensitivity to interest rate increases. As of the same date, the economic value of equity (EVE) showed negative sensitivity to interest rate increases.

At the end of December 2025, under the scenarios previously described, the most significant NII sensitivity risk was concentrated in the euro, at EUR 561 million; the pound sterling, EUR 169 million; the Polish złotyr, EUR 51 million; and the US dollar, EUR 50 million, all linked to interest rate cut risk.

The most significant risk to the economic value of equity was concentrated in the euro yield curve, at EUR 1,087 million; in pound sterling, at EUR 614 million; the Polish złoty, at EUR 275 million euros; and the US dollar, at EUR 104 million euros, all linked to interest rate rise risk.

Exposure was moderate in relation to annual budget and capital levels in 2025.

– North America

At the end of December, net interest income (NII) for our North America balance sheets showed positive sensitivity to interest rate increases in the United States, while showing negative sensitivity to the same scenario in Mexico. In both cases, the economic value of equity (EVE) showed negative sensitivity to interest rate increases.

Exposure was moderate in relation to annual budget and capital levels in 2025.

At the end of December 2025, significant risk to NII was mainly in the US and amounted to EUR 49 million.

The most significant risk to EVE was in the US and amounted to EUR 570 million.

– South America

EVE and NII on our main South American balance sheets are generally positioned for interest rate cuts.

In 2025, exposure across all countries remained moderate in relation to the annual budget and capital levels.

At the end of December, the most significant risk to NII was mainly in Brazil (EUR 57 million).

Most significant risk to EVE was recorded in Brazil (EUR 257 million) and in Chile (EUR 225 million).

Structural foreign currency rate risk/results hedging

Grupo Santander's structural FX risk stems mainly from the income and hedging of foreign currency transactions for permanent financial investments. In the dynamic management of this risk, Grupo Santander aims to limit the impact of FX rate movements on the core capital ratio. In 2025, the hedged of the different currencies that have an impact on our core capital ratio was close to 100%.

In December 2025, the largest permanent exposures (with their potential impact on equity) were, in this order, in pound sterling, US dollars, Brazilian reais, Mexican pesos, Polish zlotys and Chilean pesos.

Grupo and Banco Santander use FX derivatives to hedge part of those permanent positions. The Finance division manages FX risk and hedging for the expected profits and dividends of subsidiaries whose base currency is not the euro.

Structural equity risk

Grupo Santander holds equity positions in its banking and trading books. They are either equity instruments or stock, depending on the share of ownership or control.

At the end of December 2025, the equities and shareholdings in the banking book were diversified among Spain, China, Morocco, Poland and other countries. Most of them invest in the financial and insurance sectors. Grupo Santander has minor equity exposure to property and other sectors.

Structural equity positions are exposed to market risk. The Group calculates its VaR with a set of market prices and proxies. At the end of the year 2025, VaR at a 99% confidence level over a one-day horizon was EUR 147 million (EUR 127 million in 2024).

3.2.Methodologies

Structural interest rate risk

The Group and the Bank measure the potential impact of interest rate movements on EVE and NII. Because changing rates may generate impacts, Grupo Santander must manage and control many subtypes of interest rate risk, such as repricing risk, curve risk, basis risk and option risk (e.g. behavioural or automatic).

Interest rate risk in the balance sheet and market conditions and outlooks could necessitate certain financial measures to achieve Group and Bank's desired risk profile (such as selling positions or setting interest rates on products markets).

The metrics uses to monitor IRRBB include NII and EVE sensitivity to interest rate movements.

- **Net interest income sensitivity**

Net interest income (NII) is the difference between interest income from assets and the interest cost of liabilities in the banking book over a typical one- to three-year horizon (one year being standard in Grupo Santander). Because NII sensitivity is the difference in income between a selected scenario and the base scenario, its values can be as many as considered scenarios. It enables us to see short-term risks and supplement economic value of equity (EVE) sensitivity.

- **Economic value of equity sensitivity**

Economic value of equity (EVE) is the difference between the current value of all assets minus the current value of all liabilities in the banking book. It does not include shareholders' equity and non-interest-bearing instruments. The sensitivity of the economic value of own funds is obtained as the difference between said economic value calculated with a selected scenario and that calculated with a base scenario.

Because EVE sensitivity is the difference in EVE between a selected scenario and the base scenario, it can have as many values as considered scenarios. It enables us to see long-term risks and supplement NII sensitivity.

Structural exchange-rate risk/hedging of results

Every day, Grupo Santander measures FX positions, VaR and P/L.

Structural equity risk

Grupo Santander measures equity positions, VaR and P/L.

4. Liquidity risk

Structural liquidity management aims to fund the Group and the Bank's recurring activity optimising maturities and costs, while avoiding taking on undesired liquidity risks.

Grupo and Banco Santander's liquidity management is based on the following principles:

- Define liquidity risk and provide detailed assessments of current and emerging material liquidity risks.
- Define liquidity risk metrics, review and challenge liquidity risk appetite and limits on first line of defence proposals.
- Evaluates and challenges commercial/business proposals; It provides senior management and business units with the necessary elements to understand the liquidity risk of Santander's businesses and operations.
- Supervise the liquidity risk management of the first line of defence and assess the permanence of businesses within the limits of liquidity risk.
- Reports on compliance with risk appetite limits and exceptions, if any, to governing bodies.
- Provides a consolidated view of liquidity risk exposures and liquidity risk profile.
- Confirms the existence of adequate liquidity procedures to manage the business within the limits of risk appetite.

The effective application of these principles by all institutions comprising the Group required the development of a unique management framework built upon three fundamental pillars:

- A solid organisational and governance model that supports the involvement of the subsidiaries' senior management in decision-taking and its integration into the Group's global strategy. The decision-making process for all structural risks, including liquidity and funding risk, is carried out by local Asset and Liability Committees (ALCOs) in coordination with the global ALCO, which is the body empowered by the Bank's board in accordance with the corporate Asset and Liability Management (ALM) framework.

  This governance model has been reinforced as it has been included within Santander's Risk Appetite Framework. This framework meets demands from regulators and market players emanating from the financial crisis to strengthen banks' risk management and control systems.

- In-depth balance sheet analysis and measurement of liquidity risk, supporting decision-taking and its control. The Group and Bank's objective is to maintain adequate liquidity levels necessary to cover its short- and long-term needs with stable funding sources, optimising the impact of their costs on the income statement. Grupo and Banco Santander's liquidity risk management processes are contained within a conservative risk appetite framework established in each geographic area in accordance with its commercial strategy. This risk appetite establishes the limits within which the subsidiaries and, therefore, the Bank can operate in order to achieve their strategic objectives.

- Management adapted in practice to the liquidity needs of each business. Every year, based on business needs, a liquidity plan is developed which seeks to achieve:

  - a solid balance sheet structure, with a diversified presence in the wholesale markets;
  - the use of liquidity buffers and limited encumbrance of assets;
  - compliance with both regulatory metrics and other metrics included in each entity's risk appetite statement.

Over the course of the year, all dimensions of the plan are monitored.

Grupo Santander continues to develop the ILAAP (Internal Liquidity Adequacy Assessment Process), an internal self-assessment of liquidity adequacy which must be integrated into the Group's other risk management and strategic processes. It focuses on both quantitative and qualitative matters and is used as an input to the SREP (Supervisory Review and Evaluation Process). The ILAAP evaluates the liquidity position both in ordinary and stressed scenarios.

i. Liquidity risk measurement

Grupo Santander uses the Basel regulatory definition and calculates a set of metrics and stress scenarios in relation to intraday liquidity risk to maintain a high level of management and control. On the one hand, the regulatory liquidity metrics (LCR, NSFR) are prepared following the regulatory criteria established in the CRR 2 and CRD IV. Regarding internal metrics, liquidity scenarios are determined using a combination of behavioral observation in actual liquidity crises occurred at other banks, regulatory assumptions and expert judgment.

a) Liquidity Coverage Ratio (LCR)

The liquidity coverage ratio (LCR) is a regulatory metric. Its purpose is to promote the short-term resilience of a bank's liquidity profile and make sure it has enough high-quality liquid assets to withstand a considerable idiosyncratic or market stress scenario over 30 calendar days.

b) Net Stable Funding Ratio (NSFR)

The net stable funding ratio (NSFR) is a regulatory metric we use to measure long-term liquidity risk. It is the ratio of available stable funding to required stable funding. It requires banks to keep a robust balance sheet, with off-balance-sheet assets and operations financed by stable liabilities.

c) Liquidity buffer

The liquidity buffer is the total liquid assets a bank has to cope with cash outflows during periods of stress. The assets are free of encumbrances and can be used immediately to generate liquidity without losses or excessive discounts. The liquidity buffer is a tool for calculating most liquidity metrics. It is also a metric with defined limits for each subsidiary.

d) Wholesale liquidity metric

The wholesale liquidity metric measures the number of days Grupo and Banco Santander would survive if it used liquid assets to cover lost liquidity from a wholesale deposit run-off (without possible renewal) over a set time horizon. Grupo and Banco Santander also uses it as an internal short-term liquidity metric to reduce risk from dependence on wholesale funding.

e) Asset Encumbrance metrics

Grupo and Banco Santander calculate two metrics to measure asset encumbrance risk. On the one hand, the asset encumbrance ratio gives the proportion of encumbered assets to total assets; on the other, the structural asset encumbrance ratio gives the proportion of encumbered assets by structural funding transaction (namely long-term collateralized issues and credit transactions with central banks).

f) Other additional liquidity indicators

In addition to traditional tools to measure short and long-term liquidity and funding risk, Grupo and Banco Santander have a set of additional liquidity indicators to complement those and to measure other non-covered liquidity risk factors. These include concentration metrics, such as the main and the five largest funding counterparties, or the distribution of funding by maturity.

In this sense, deposits do not show a tendency towards concentration, maintaining a stable structure at 31 December 2024, where approximately 75% are transactional and more than 80% of retail deposits are insured by deposit guarantee systems of the different countries.

g) Liquidity scenario analysis

As liquidity stress tests, Grupo and Banco Santander have five standard scenarios have been defined:

i. An idiosyncratic scenario of events detrimental only to the Group and the Bank;

ii. a local market scenario of events highly detrimental to a base country's financial system or real economy;

iii. a global market scenario of events highly detrimental to the global financial system; and

iv. combined scenario consisting of a combination of more severe idiosyncratic and market events (local and global) occurring simultaneously and interactively.

v. climate scenarios where different stress cases derived from the effects that climate change could have on the economy are collected.

Grupo and Banco Santander use these stress test outcomes as tools to determine risk appetite and support business decision-making.

h) Liquidity early warning indicators

Early warning indicator system consists of quantitative and qualitative liquidity indicators that help predict stress situations and weaknesses in the funding and liquidity structure of Grupo, and therefore, Banco Santander entities. External indicators relate to market-based financial variables; internal indicators relate to our own performance.

i) Intraday liquidity metrics

Grupo and Banco Santander follow Basel regulation and calculates several metrics and stress scenarios for intraday liquidity risk to maintain a high level of control.

ii. Liquidity coverage ratio and net stable financing ratio

The regulatory requirement for the LCR ratio has been set at 100% since 2018.

Below is a breakdown of the Group's liquid assets composition according to the criteria established in the supervisory prudential information (Commission Implementing Regulation (EU) 2017/2114 of 9 November 2017) for the determination of high-quality liquid assets for the calculation of the LCR ratio (HQLA):

EUR million

	2025	2024
	Amount weighted applicable	Amount weighted applicable
High-quality liquid assets-HQLAs		
Cash and reserves available at central banks	*150,883*	*188,745*
Marketable assets Level 1	*173,744*	*150,912*
Marketable assets Level 2A	*5,726*	*4,696*
Marketable assets Level 2B	*7,584*	*6,951*
Total high-quality liquid assets	**337,937**	**351,304**

EUR million

	2025	2024
High-quality liquid assets-HQLAs (numerator)	301,618	315,524
Total net cash outflows (denominator)	*208,388*	*206,889*
Cash outflows	*287,044*	*278,760*
Cash inflows	*78,656*	*71,871*
Consolidated LCR ratio (%)	**145%**	**153%**
NSFR ratio (%)	**126%**	**126%**

Since 2024, the calculation of the consolidated LCR ratio has been updated to comply with a series of requirements regarding asset transferability restrictions in third countries. This new consolidated ratio includes an adjustment whereby any excess liquidity above 100% of LCR outflows, which is subject to transferability restrictions (legal or operational) in third countries, is not taken into account. This applies even if the surplus liquidity can be used to cover additional outflows within the country itself, which is not subject to any restrictions.

The total high-quality liquid assets differ from the high-quality liquid assets (HQLAs) considered as the numerator within the consolidated LCR ratio, due to the aforementioned adjustment.

In addition, since 2024, we have been calculating a Group LCR ratio using an internal methodology that determines the minimum common coverage percentage simultaneously across all the Group's markets and considers all existing restrictions on liquidity transfers in third countries. This methodology reflects the Group's resilience to liquidity risk more accurately and the internal ratio presents a level that is consistent with what would be achieved by applying the criteria followed until mid-2024, which did not include restrictions on liquidity transfers between subsidiaries.

Regarding the net stable funding ratio (NSFR), its definition was approved by the Basel Committee in October 2014. The transposition of this requirement into European regulation took place in June 2019 with the publication in the Official Journal of the European Union of Regulation (EU) 2019/876 of the European Parliament and of the Council of 20 May 2019. The Regulation establishes that entities must have a net stable funding ratio, as defined in the Regulation, above 100% from June 2021.

As for the funding structure, given the inherently commercial nature of the Group's balance sheet, the loan portfolio is mainly financed by customer deposits. In note 22, 'Debt securities,' the composition of these liabilities is presented based on their nature and classification, the movements and maturity profile of the debt securities issued by the Group, reflecting the strategy of diversification by products, markets, issuers, and terms followed by the Group in its approach to wholesale markets.

iii.Asset encumbrance

Finally, the moderate use of assets by Grupo Santander as collateral in the sources of structural financing of the balance sheet should be highlighted.

In accordance with the guidelines established by the European Banking Authority (EBA) in 2014 on committed and uncommitted assets, the concept of assets committed in financing transactions (asset encumbrance) includes both on-balance sheet assets provided as collateral in transactions to obtain liquidity and off-balance sheet assets that have been received and reused for similar purposes, as well as other assets associated with liabilities for reasons other than financing.

The residual maturities of the liabilities associated with the assets and guarantees received and committed are presented below, as of 31 of December of 2025 (EUR billion):

Residual maturities of the liabilities	Unmatured	<=1month	>1 month <=3 months	>3 months <=12 months	>1 year <=2 years	>2 years <=3 years	3 years <=5 years	5 years <=10 years	>10 years	Total
Committed assets	24.2	50.7	14.1	38.4	38.8	29.5	37.7	36.3	36.6	306.4
Guarantees received committed	2.2	85.2	28.2	61.8	4.0	0.8	1.9	1.1	—	185.2

The reported Group information as required by the EBA at 2025 year-end is as follows:

On-balance-sheet encumbered assets

EUR billion

	Carrying amount of encumbered assets	Fair value of encumbered assets	Carrying amount of unencumbered assets	Fair value of unencumbered assets
Loans and advances	152.5		1,149.4	
Equity instruments	11.4	11.4	18.7	—
Debt securities	117.9	118.5	182.2	180.7
Other assets	23.1		212.4	
Total assets	**304.9**		**1,562.7**	

Encumbrance of collateral received

EUR billion

	Fair value of encumbered collateral received or own debt securities issued	Fair value of collateral received or own debt securities issued available for encumbrance
Collateral received	**185.2**	**70.3**
Loans and advances	0.5	—
Equity instruments	12.2	7.1
Debt securities	172.5	63.1
Other collateral received	—	0.1
Own debt securities issued other than own covered bonds or ABSs	**1.4**	**1.1**

Encumbered assets and collateral received and matching liabilities

EUR billion

	Matching liabilities, contingent liabilities or securities lent	Assets, collateral received and own debt securities issued other than covered bonds and ABSs encumbered
Total sources of encumbrance (carrying amount)	472.0	491.5

On-balance-sheet encumbered assets amounted to EUR304,923 million, of which 50% are loans (mortgage loans, corporate loans, etc.). Guarantees received committed amounted to EUR 185,160 million, relating mostly to debt securities received as security in asset purchase transactions and re-used.

Taken together, these two categories represent a total of EUR 491,519 million of encumbered assets, which give rise to EUR 472,045 million matching liabilities.

As of December 2025, total asset encumbrance in funding operations represented 23.10% of the Group's extended balance sheet under EBA criteria (total assets plus guarantees received: EUR 2,122,932 million), similar to December 2024.

d) Capital risk

The second line of defence can independently challenge business and first-line activities by:

- Supervising capital planning and adequacy exercises through a review of the main components affecting the capital ratios.
- Identifying key metrics to calculate the Group's regulatory capital, setting tolerance levels and analysing significant variations, as well as single transactions with impact on capital.
- Reviewing and challenging the execution of capital actions proposed in line with capital planning and risk appetite.

Grupo Santander commands a sound solvency position, above the levels required by regulators and by the European Central bank.

Regulatory capital

At 31 December 2025, at a consolidated level, the Group must maintain a minimum capital ratio of 9.84% of CET1 (4.50% being the requirement for Pillar I, 0.98% being the requirement for Pillar 2R (requirement), 2.50% being the requirement for capital conservation buffer, 1.25% being the requirement for global systemically entity (D-SIB), 0.55% being the requirement for anti-cyclical capital buffer) and a systemic risk requirement of 0.05%.

Grupo Santander must also maintain a minimum capital ratio of 11.66% of tier 1 and a minimum total ratio of 14.10%.

In 2025, the solvency target set was achieved. Santander's CET1 ratio stood at 13.46%[1] at the close of the year, demonstrating its organic capacity to generate capital. The key regulatory capital figures are indicated below:

Reconciliation of accounting capital with regulatory capital

EUR million

	2025	2024
Subscribed capital	7,345	7,576
Share premium account	36,792	40,079
Reserves	84,700	76,568
Treasury shares	(96)	(68)
Attributable profit	14,101	12,574
Approved dividend	(1,698)	(1,532)
Shareholders' equity on public balance sheet	**141,144**	**135,197**
Valuation adjustments	(37,973)	(36,596)
Non-controlling interests	9,578	8,726
Total Equity on public balance sheet	**112,748**	**107,327**
Goodwill and intangible assets	(15,037)	(16,098)
Eligible preference shares and participating securities	9,645	10,371
Accrued dividend[C]	(1,827)	(1,611)
Other adjustments[A]	(11,146)	(9,817)
Tier 1[B]	**94,383**	**90,172**

A. Fundamentally for non-computable non-controlling interests and deductions and reasonable filters in compliance with CRR.
B. Figures calculated by applying the transitional provisions of CRR 3 IFRS 9.
C. Assumes 25% of underlying profit, see note 4.a for proposed distribution of results.

Note: Certain figures presented in this capital note have been rounded for ease of presentation. Consequently, the amounts corresponding to the rows or columns of totals in the tables presented in this note may not coincide with the arithmetic sum of the concepts or items that make up the total.

[1] Data calculated applying the transitional provisions of CRR 3.

The following table shows the capital coefficients and a detail of the eligible internal resources of the Group:

Capital coefficients

	2025	2024
Level 1 ordinary eligible capital (EUR million)	84,739	79,800
Level 1 additional eligible capital (EUR million)	9,645	10,371
Level 2 eligible capital (EUR million)	17,460	18,418
Risk-weighted assets (EUR million)	629,430	624,503
Level 1 ordinary capital coefficient (CET 1)	13.46 %	12.78 %
Level 1 additional capital coefficient (AT1)	1.53 %	1.66 %
Level 1 capital coefficient (TIER1)	15.00 %	14.44 %
Level 2 capital coefficient (TIER 2)	2.77 %	2.95 %
Total capital coefficient	**17.77 %**	**17.39 %**

Total eligible capital	**111,845**	**108,589**

Note: Banco Santander, S.A. and its affiliates had not taken part in any State aid programmes.

Leverage ratio

Basel III established the leverage ratio as a non-risk sensitive measure aimed at limiting excessive balance sheet growth relative to available capital.

The Group performs the calculation in accordance with Regulation (EU) 2019/876 of 20 May 2019 amending Regulation (EU) No 575/2013 as regards the leverage ratio.

This ratio is calculated as tier 1 capital divided by leverage exposure. Exposure is calculated as the sum of the following items:

- Accounting assets, excluding derivatives and items treated as deductions from tier 1 capital (for example, the balance of loans is included, but not that of goodwill) further excluding the exposures referred to in Article 429.a (1) of the regulation.
- Off-balance-sheet items (mainly guarantees, unused credit limits granted and documentary credits) weighted using credit conversion factors.
- Inclusion of net value of derivatives (gains and losses are netted with the same counterparty, minus collaterals if they comply with certain criteria) plus a charge for the future potential exposure.
- A charge for the potential risk of security funding transactions.
- Lastly, it includes a charge for the risk of credit derivative swaps (CDS).

With the publication of Regulation (EU) 2019/876 of 20 May, 2019, amending Regulation (EU) n.º 575/2013 as regards the leverage ratio, the final calibration of the ratio is set at 3% for all entities and, for systemic entities G-SIB, is established an additional surcharge which would be 50% of the cushion ratio applicable to the EISM, applicable from January 2023. In addition, modifications are included in its calculation, including the exclusion of certain exposures from the total exposure measure: public loans when exceptional circumstances arise, public loans, transfer loans and officially guaranteed export credits, transfer loans and officially guaranteed export credits.

EUR million

	2025	2024
Leverage		
Level 1 Capital	94,385	90,170
Exposure	1,924,349	1,885,572
Leverage Ratio	**4.90 %**	**4.78 %**

Global systemically important banks

Grupo Santander is one of 29 banks designated as global systemically important banks (G-SIBs).

The designation as a globally systemic entity comes from a measurement established by the regulators (FSB and BCBS) that they have implemented based on five indicators (size, interjurisdictional activity, interconnection with other financial entities, substitutability and complexity). The list uses data as of the end of 2024 and is based on a methodology agreed in July 2018 and implemented for the first time in the assessment of G-SIBs as of the end of 2021, incorporating, among other things, an additional score considering the Member States of the SRM as a single jurisdiction.

This definition means it has to fulfil certain additional requirements, which consist mainly of a capital buffer (1%), in TLAC requirements (total loss absorbing capacity), that Grupo Santander has to publish relevant information more frequently than other banks, greater regulatory requirements for internal control bodies, special supervision and drawing up of special reports to be submitted to supervisors.

Additionally, Grupo Santander appears both on the list of global systemic entities and on the list of domestic systemic entities. Bank of Spain, based on rule 23 of Circular 2/2016, requires the application of the highest of the two corresponding buffers, in the case of Grupo Santander being the domestic one, 1.25%, a surcharge payable by 2025.

The fact that Grupo Santander has to comply with these requirements makes it a more solid bank than its domestic rivals.

a. Amount according to the provisional books of each company as of the date of publication of these annexes, generally referring to 31 December 2025 without considering, where appropriate, interim dividends that have been made during the year. In the book value (net provision cost), the percentage of ownership of the Group has been applied to the figure of each of the holding companies, without considering the impairment of goodwill made in the consolidation process. The data for foreign companies are converted into euros at the exchange rate at the end of the year.
b. Companies over which effective control is maintained.
c. Data as at 31 December 2024, latest available accounts.
d. Data as at 31 March 2025, latest accounts available.
e. Accounting merged company, Pending registration.
f. Data as at 30 September 2025, last accounts available.
g. Data as at 30 April 2025, last accounts available.
h. Data as at 31 July 2025, last accounts available.
i. Companies in liquidation. Pending registration.
j. Company in liquidation as at 31 December 2025.
k. Pursuant to Article 3 of Royal Decree 1159/ 2010, of 17 September, approving the rules for the preparation of consolidated annual accounts, in order to determine the voting rights, voting rights held directly by the parent company have been added to those held by companies controlled by the parent company or by other persons acting in their own name but on behalf of a Group company. For these purposes, the number of votes corresponding to the parent company, in relation to the companies indirectly dependent on it, is that corresponding to the dependent company that directly participates in the share capital of the latter.
l. Company resident for tax purposes in Spain.
m. Data as at 30 June 2021, latest available accounts.
n. Company resident for tax purposes in the United Kingdom.
o. Data as at 28 February 2025, latest available accounts.

(1) Companies issuing preference shares are listed in Annex III, together with other relevant information.

Santander

a. Amount according to the provisional books at the date of publication of these annexes of each company, generally referring to 31 December 2025, except where otherwise indicated due to the fact that the annual accounts are pending formulation. The data for foreign companies are converted into euros at the exchange rate at the end of the year.
b. Data as at 31 December 2024, latest available accounts.
c. Data as at 31 December 2019, latest available accounts.
d. Data as at 30 November 2021, latest available accounts.
e. Company in liquidation as at 31 December 2025.
f. Pursuant to Article 3 of Royal Decree 1159/ 2010, of 17 September, approving the rules for the preparation of consolidated annual accounts, in order to determine the voting rights, voting rights held directly by the parent company have been added to those held by companies controlled by the parent company or by other persons acting in their own name but on behalf of a group company. For these purposes, the number of votes corresponding to the parent company, in relation to the companies indirectly dependent on it, is that corresponding to the dependent company that directly participates in the share capital of the latter.
g. Excluding the Group companies listed in Appendix I, as well as those which are of negligible interest with respect to the true and fair view that the consolidated financial statements must give (in accordance with articles 48 of the Commercial Code and 260 of the Spanish Companies Act).
h. Companies over which joint control is maintained.
i. Data as at 31 October 2024, latest available accounts.
j. Data as at 30 June 2025, latest available accounts.
k. Company with no financial information available.
l. Data as 31 December 2023, latest available account.
m. Data as at 30 September 2025, latest available accounts.
n. Investment managed discretionally by a manager outside the Santander Group, the voting rights not being, in this case, decisive in determining control of the entity.
o. Data as 30 April 2025, latest available accounts.
p. Company over which effective control has been lost.
q. Data as 31 January 2025, latest available accounts.

Appendix III

Issuing subsidiaries of shares and preference shares

		% of ownership held by Banco Santander			EUR million (a)

a. Amount according to the books of each interim company as at 31 December 2025, converted into euro (in the case of foreign companies) at the year-end exchange rate.
b. Company with tax residence in Spain.
c. Accounting merged company. Pending registration.

Appendix IV

Notifications of acquisitions and disposals of investments in 2025

(Article 155 of the Capital Companies Law and Article 105 of the Securities Market Law)

Regarding compliance with Article 125 of the Securities Market Law, no notifications required under said article were made during financial year 2025.

Regarding the information required under Article 155 of the Capital Companies Law, concerning holdings in which Santander Group owns more than 10% of the share capital of another company, and any subsequent acquisitions exceeding 5% of the share capital, see Annexes I, II and III.

Appendix V

List of Transactions subject to the Special Regime for Mergers, Divisions, Assets Contributions, Exchange of Securities and corporate domicile change of a European Company or a European Cooperative Society from one Member State to another Member State of the European Union in which the company has acted as an Acquiring Entity or Partner

In compliance with the disclosure obligations set out in Article 86 of Law 27/2014, of 27 November, on Corporate Income Tax (the "CIT Law"), the following information is provided in relation to transactions subject to the special tax regime for mergers, spin-offs, contributions of assets, exchanges of shares and transfers of registered office of a European Company or a European Cooperative Society from one Member State to another within the European Union, as provided for in Chapter VII of Title VII of the CIT Law, in which BANCO SANTANDER, S.A. participated during the 2025 financial year:

I. Pursuant to the provisions of Article 86(1) of the CIT Law, it is hereby reported that BANCO SANTANDER, S.A. participated as the acquiring company in the following transaction, which was registered with the Mercantile Registry on 28 January 2026:

- Merger by absorption of EMISORA SANTANDER ESPAÑA, S.A.U., URO PROPERTY HOLDINGS, S.A., BLECNO INVESTMENTS, S.L.U. and ELEVATE TECH PLATFORMS, S.L.U. (the absorbed companies) by BANCO SANTANDER, S.A. (the absorbing company), which held all of the share capital of the absorbed entities. This transaction constitutes a merger within the meaning of Article 76.1(c) of the CIT Law. The information required under Article 86(1) of the CIT Law is included in these financial statements.

II. Pursuant to the provisions of Article 86(2) of the CIT Law, it is hereby reported that BANCO SANTANDER, S.A. participated as a shareholder in the following transactions:

- Reverse merger whereby WAYCARBON SOLUÇÕES AMBIENTAIS E PROJETOS DE CARBONO S.A. (a Brazilian company) absorbed its parent company, MUNDUSPAR PARTICIPAÇÕES S.A. (a Brazilian company). This transaction constitutes a merger within the meaning of Article 76.1(a) of the CIT Law. BANCO SANTANDER, S.A. held 80% of the share capital and voting rights of MUNDUSPAR PARTICIPAÇÕES S.A. Following the transaction, it holds 68.749% of the share capital and 49.9% of the voting rights of WAYCARBON SOLUÇÕES AMBIENTAIS E PROJETOS DE CARBONO S.A. The carrying amount of the shares delivered in MUNDUSPAR PARTICIPAÇÕES S.A. was EUR 36,344,382, while their tax value amounted to EUR 73,814,747. The amount at which BANCO SANTANDER, S.A. has recognised the new investment in WAYCARBON SOLUÇÕES AMBIENTAIS E PROJETOS DE CARBONO S.A. is EUR 36,344,382.

- Exchange of shares, regulated in Articles 76.5 and 80 of the CIT Law, whereby SAM INVESTMENT HOLDINGS, S.L. acquired a 100% interest in the share capital and voting rights of the Spanish entity SANTANDER PRIVATE BANKING GESTIÓN, S.A., S.G.I.I.C. (single shareholder company). This transaction is executed as a contribution from shareholders, recognised in account 118 "Contribution from shareholders" (included under heading 11 "Reserves and other equity instruments"in the chart of accounts of the Spanish General Chart of Accounts, approved by Royal Decree 1514/2007, of 16 November). It consisted of a non-cash contribution made by BANCO SANTANDER, S.A. of the shares in SANTANDER PRIVATE BANKING GESTIÓN, S.A., S.G.I.I.C. (single shareholder company), which was subject to obtaining the non-objection of the CNMV. The carrying amount at which BANCO SANTANDER, S.A. had recognised the shares delivered in SANTANDER PRIVATE BANKING GESTIÓN, S.A., S.G.I.I.C. was EUR 35,460,052, while their tax value amounted to EUR 25,950,993. The amount at which BANCO SANTANDER, S.A. has recognised the shares received in SAM INVESTMENT HOLDINGS, S.L. is EUR 79,318,507.

- Non-cash contribution of real estate assets owned by BLECNO INVESTMENTS, S.L.U. and BANCO SANTANDER, S.A. to RETAILCOMPANY 2021, S.L.U. This transaction constitutes a non-cash contribution within the meaning of Article 87 of the CIT Law and did not qualify for the special tax regime provided for in Article 77.1 thereof. The net value of the real estate assets contributed by both companies amounted to EUR 10,532,070. The amount at which BANCO SANTANDER, S.A. has recognised the shares received in RETAILCOMPANY 2021, S.L.U. is EUR 10,532,070 (see Note 1.i).

III. In compliance with the provisions of Article 86(3) of the CIT Law, it is hereby stated that the disclosures required under paragraphs 1 and 2 of Article 86, relating to transactions subject to the special tax regime for mergers, spin-offs, contributions of assets, exchanges of shares and transfers of registered office of a European Company or a European Cooperative Society from one Member State to another within the European Union, as provided for in Chapter VII of Title VII of the CIT Law, in which BANCO SANTANDER, S.A. participated as acquiring company or shareholder in prior financial years, are included in the first annual financial statements approved by the acquiring entities following each of the aforementioned transactions.

Appendix VI

Information regarding to the merger by absorption between Banco Santander, S.A. (absorbing company) and Uro Property Holdings, S.A., Blecno Investments, S.L.U. (absorbed companies), according to Article 86.1 of Law 27/2014 of the Corporate Tax Act.

a) Fiscal year in which the transferor entity acquired the transferred assets that are subject to depreciation.

There are no depreciable assets in Emisora Santander España, S.A.U. and Elevate Tech Platforms, S.L.U. The assets subject to depreciation in Uro Property Holdings, S.A. and Blecno Investments, S.L.U. are those recorded under the "investment property" line item in their merger balance sheets (see Note 1.i), acquired in 2007 and 2015, respectively.

b) Latest balance sheet closed by the transferor entities.

The latest balance sheets of the transferor entities can be found in Note 1.i.

c) List of acquired assets that have been incorporated in the accounting books at a value different from that at which they were recorded in the transferor entity prior to the transaction, stating both values, as well as the valuation adjustments made in the accounting books of the two entities.

Below is the detail of those asset line items of the transferor entity´s balance sheet that have been recognized at a different carrying amount in the acquiring entity:

Amounts in million of euros:

Financial Statement Line	Book value Elevate Tech Platforms, S.L.U.	Merged adjustment value	Book value Banco Santander
Investments in subsidiaries, joint ventures and associates	1	0,1	0,9

Amounts in million of euros:

Financial Statement Line	Book value Blecno Investments, S.L.U.	Merged adjustment value	Book value Banco Santander
Real state investments	224	(40)	184

d) List of tax benefits enjoyed by the transferring entity, for which the acquiring entity must assume compliance with certain requirements.

There are no tax benefits in the transferring entity for which Banco Santander, S.A. must assume compliance with certain requirements.

Directors' report

Banco Santander, S.A.

1. Introduction

Banco Santander, S.A. ('the Bank' or 'Banco Santander') is a Spanish bank, incorporated as a sociedad anónima in Spain and is the parent company of Grupo Santander or Santander. Banco Santander, S.A. operates under the commercial name Santander.

Banco Santander operates through a branch network distributed in Spain and abroad.

On 7 June 2017, Banco Santander acquired the entire share capital of Banco Popular Español, S.A.U. ('Banco Popular') in an auction in connection with a resolution plan adopted by the European Single Resolution Board (the European banking resolution authority) and executed by the FROB (the Spanish banking resolution authority) following a determination by the European Central Bank that Banco Popular was failing or likely to fail, in accordance with Regulation (EU) 806/2014 establishing a framework for the recovery and resolution of credit institutions and investment firms. On 24 April 2018, Banco Santander announced that the boards of directors of Banco Santander, S.A. and Banco Popular Español, S.A.U. had agreed to an absorption of Banco Popular by Banco Santander. The legal absorption was effective on 28 September 2018.

The directors' report has been prepared based on the accounting and Management records of Banco Santander, S.A.

The financial information included in this directors' report has been prepared in conformity with the Bank of Spain Circular 4/2017 of 27 November on Public and Reserved Financial Information Regulations and Financial Statements Forms, and subsequent modifications.

2. Situation of Banco Santander

Santander is a Retail and Consumer global powerhouse and one of the largest banks in the eurozone. At 2025 year end, we had EUR 1,867,515 million in assets, ranking first in the euro zone by market capitalization in the eurozone EUR 147,921 million as of 31 December 2025.

The Santander Way.

Our Purpose is to help people and businesses prosper. Our Aim is to be the best open financial services platform, by acting responsibly and earning the lasting loyalty of our stakeholders by being Simple, Personal and Fair in all we do.

Thanks to the advantages provided by our network effect, our geographic and business diversification and our scale, over the past four years we have succeeded in surpassing our record results year after year through our global business model and ONE Transformation. This has enabled us to operate more efficiently through the operational leverage delivered by our transformation strategy.

Within the Group, we engage in a wide range of typical banking activities, operations and services in order to meet all our customers' needs. We do not merely meet our legal and regulatory obligations but we also aim to exceed the expectations of our stakeholders: employees, customers, shareholders and communities. In detail:

We are committed to continuously improving the experience of the 198,403 **employees** who are part of Santander. Our goal is to attract and retain the best talent by offering an attractive value proposition that prioritizes personal growth, an inspiring culture and working conditions that ensure the health and well-being of our people through initiatives that help improve work-life balance. Furthermore, we promote an environment that prioritizes inclusion, where all voices are valued and individuals feel safe and free to express their identity, ideas and opinions.

We continue to use our listening channel, Your Voice, to periodically assess the engagement and experience of our professionals, which once again showed excellent results in 2025.

Customer focus is an essential part our strategy. We are a Retail and Consumer global powerhouse with 180 million customers. We continue building a digital bank with branches to be the number one bank for our customers. By listening to our customers' needs, we are boosting Santander's position as their trusted financial partner.

We continue to change and adapt to our customers' evolving needs to offer the best products, an agile and frictionless customer experience for daily needs and competitive prices.

Throughout 2025, we undertook significant initiatives to transform customer experience and strengthen our value proposition. This was reflected in our customer growth rates and Net Promoter Score (NPS) improvement where we are one of the top three banks in nine of our markets.

In addition, in the digital space, we enhanced self-service capabilities and user experiences, by incorporating AI to simplify and streamline processes and remove operational burdens from our employees, enabling them to focus on advising customers while delivering a more personalized service.

At year end, we had 7,124 branches, including traditional ones and other specialized centres for businesses, private banking, universities and other customer segments.

These physical spaces have evolved to integrate traditional services with digital facilities. With this approach, we continue to expand our Work Café branch concept, through which we seek to establish collaborative spaces, which enable native digital customers to have a better experience and integrate their financial transactions into their daily lives.

At the same time, customer interactions continued their structural shift towards digital and remote services with high user experience standards. As at 31 December 2025, we had more than 63 million digital customers (6% more than in 2024) and 70% of our products services are now digitally available (up from 62% in 2024).

At Santander, we appreciate the value of the human connection that our branch network provides and are mindful of our most vulnerable customers' needs, responding with tailored offers, thereby increasing customer loyalty and improving customer experience.

We are committed to creating products and services tailored to our customers' needs. We have adapted our branches, products, services and channels to ensure universal physical and digital access for people with disabilities and older adults. In the countries where we operate, we offer value propositions specifically aimed at senior customers. For example, we provide tailored products for retirees in Mexico and Argentina, services such as SuperLinha Senior in Portugal to support older people with limited digital skills, and third-party access initiatives in the UK to assist older individuals who require carers. In Spain, we provide customers in limited access (or sparsely populated) areas access to credit and help combat social exclusion in communities with less than 10,000 inhabitants, maintaining our Correos Cash agreement to provide access to cash in areas that might otherwise have been left unattended with a non-digital solution through rural letter carriers. In Argentina, we have financial inclusion branches and remote agents operating in vulnerable communities. In Uruguay, mobile branches have been deployed across the country since 2020 to reach areas with low levels of financial inclusion.

Additionally, within our financial inclusion programmes, we continue to expand initiatives such as our microfinance programmes in Latin America (Prospera in Brazil and Colombia, Tuiio in Mexico and Surgir in Peru). We also complement our support for financial inclusion with financial education programmes and financial health solutions for customers. In Spain, for example, Santander participates in the Social Housing Fund, which facilitates rental access for low-income individuals and families, and we have initiatives to support groups facing difficulties in accessing credit. In the US, we provide loans to small businesses operating in low- and moderate-income communities.

Thanks to all our efforts in financial inclusion, we have achieved our goal of reaching 5 million people who benefited from one of our financial inclusion initiatives over the 2023–2025 period.

We also support our **communities**. The Group has continued to develop programmes in the communities where it operates to help address existing social needs. Our support for communities focuses on education, employability and entrepreneurship, and is complemented by the provision of targeted financial education and assistance for vulnerable individuals. Moreover, we have a strong track record of backing cultural and other social initiatives.

For our **shareholders**, we delivered solid financial results in the year and met all our targets we had set for 2025.

Grupo Santander is diversified in three geographies well balanced between mature and emerging markets, and operates mainly in 10 core units, where it has significant market shares. Our activities are organized under five global businesses: Retail & Commercial Banking, Digital Consumer Bank, Corporate & Investment Banking, Wealth Management & Insurance and Payments.

3. Financial performance

3.1 Economic outlook:

In 2025, Santander operated in an environment characterized by gradual reductions in interest rates by the majority of central banks, as a result of declining inflation. This occurred in a context marked by continuing geopolitical and trade tensions. However, despite some slowdown, the world's major economies maintained a good rate of economic growth. In turn, labour markets were resilient, with unemployment rates remaining low in more than half of the countries in which Santander operates.

Our core regions' economies performed as follows:

Eurozone (GDP in 2025: +1.5%). The economy resisted tariff hikes imposed by the US, as the services sector compensated weaker manufacturing. Household consumption improved and, after a weak start to the year, investment showed signs of recovery in the second half, particularly investment in intangibles. Performance was mixed by country, with most of the momentum coming from Ireland, which grew by more than 10%, compared to Germany, among others, whose economy only increased 0.4%. Inflation fell within the European Central Bank's (ECB) target, which led to reductions in interest rates to 2% in June, a level estimated to be within the neutral range for the economy.

Spain (GDP in 2025: +2.8%). Spain recorded growth well above that of the eurozone driven by domestic demand. Household consumption remained robust, supported by strong job creation and population growth resulting from immigration. The investment component grew the most in the year, especially in equipment. On the other hand, foreign trade hindered growth: goods exports rose slightly and services exports moderated while imports grew well above. Inflation ended the year at 2.9%, with service prices accelerating at the end of the year and growing above 3.5%.

To complete the information with the performance indicators of the rest of geographies where the Group is present, see the Consolidated Directors' Report.

3.2 Balance sheet and results:

Banco Santander, S.A. is the Parent Bank of a financial group that operates in different countries through different businesses therefore its financial statements not only reflect its commercial activity in Spain, but also the activity derived from being the head of the Group. This last aspect makes it difficult to analyse its evolution without distinguishing the results obtained from the commercial activity from those more directly related to its holding nature.

In 2025, commercial activity remained solid, supported by strong new customer acquisition during the year, improved customer engagement and higher digital adoption, with 78% of our products and services digitally available. We also increased our market share in payrolls, pensions and Bizum registrations.

With regard to the statement of financial position, as at 31 December 2025 the Bank's **total assets** amounted to €836,783 million, representing an increase of 5.28% compared with the previous financial year.

Loans and advances to customers stood at EUR 354,675 million at year-end, representing an increase of 8.90% compared with the previous year, driven by growth in consumer lending, corporate loans and wholesale banking.

Customer deposits stood at EUR 437,657 million at year-end, reflecting an increase of 12.01% compared with the previous financial year. Demand deposits rose by 5.14%, while time deposits increased by 25.16%, showing growth in both individual and corporate customers.

Net interest income amounted to EUR 6,502 million in 2025, 5.97% lower than in the previous financial year, negatively impacted by interest rate developments. This was partially offset by the strong pace of activity, which led to growth in the loan and customer deposit balance sheet, as well as by the increase in the portfolio of debt securities.

Income from equity instruments totalled EUR 6,691 million in 2025. This line includes **dividends** received from the Group's subsidiaries.

Net fee and commission income increased by 7.35% compared with 2024, reaching EUR 3,140 million, with growth in investment fund fees standing out.

Net gains on financial transactions (including exchange differences) amounted to a profit of EUR 873 million, compared with EUR 918 million in the previous financial year, reflecting higher market results in wholesale banking.

General administrative expenses (personnel expenses and other administrative expenses) amounted to EUR 5,419 million, an increase of 2.38%, with increases arising from inflation and the collective labour

agreement mitigated by efficiency measures in the retail banking business.

Net impairment losses on financial assets amounted to EUR 1,162 million in 2025, representing 0.26% of financial assets at fair value through other comprehensive income plus financial assets at amortised cost.

Impairment of investments in joint ventures or associates and of non-financial assets totalled EUR 1,485 million in 2025, while **losses on non-current assets held for sale** amounted to EUR 34 million.

Distribution proposal of the Bank's profit

The board applied the current shareholder remuneration policy to the 2025 results. This policy sets a target to distribute approximately 50% of the Group's net reported profit (excluding non-cash, non-capital ratios impact items) split almost evenly between cash dividends and share buybacks.

Additionally, on 5 February 2025, Banco Santander signalled its objective to allocate up to EUR 10 billion to share buybacks in relation to the 2025 and 2026 results, as well as expected capital excess. As part of this target, on 5 May 2025 Banco Santander announced its intention to distribute approximately 50% of the capital that will be released upon completion of the sale of its 49% stake in Santander Bank Polska S.A., through a share buyback of approximately EUR 3.2 billion in early 2026 and that, as a result, it could exceed the EUR 10 billion target. Upon announcing the agreements to acquire TSB and Webster on 1 July 2025 and 3 February 2026 respectively, Banco Santander confirmed its goal to distribute at least EUR 10 billion in share buybacks with regard to the 2025 and 2026 results and excess capital.

Interim remuneration.

On 30 July 2025, the board resolved to execute the First 2025 Buyback Programme worth up to EUR 1,700 million (equivalent to approximately 25% of the Group's net reported profit in H1'25).

On 30 September 2025, the board resolved to pay an interim cash dividend against the 2025 results of 11.5 euro cents per share entitled to the dividend (equivalent to approximately 25% of the Group's net reported profit in H1'25), which was paid from 3 November 2025.

Final remuneration.

Under the 2025 shareholder remuneration policy:

On 3 February 2026, the board of directors resolved to implement the Second 2025 Buyback Programme worth up to EUR 5,030 million and for which the required regulatory authorization had been obtained. The programme started on 4 February 2026. Under the shareholder remuneration policy in relation to the 2025 results, 1,830 million euros of the Second Buyback Programme correspond to c. 25% of the Group's underlying profit for the second half of 2025. The remaining amount corresponds to an extraordinary buyback of 3,200 million euros, equivalent to approximately 50% of the CET1 capital generated in January 2026 following completion of the sale of 49% of Santander Bank Polska to Erste Group.

On 24 February 2026, the board of directors resolved to submit to the 2026 AGM the approval of a final cash dividend in the gross amount of 12.5 euro cents per share entitled to dividend. Subject to AGM approval, the dividend will be payable from 5 May 2026.

Once these actions are completed, total shareholder remuneration in relation to the 2025 results will be EUR 7,050 million (approximately 50% of the Group's 2025 net reported profit, excluding non-cash, non-capital ratios impact items), split almost evenly between cash dividends (EUR 3,520 million) and share buybacks (EUR 3,530 million). We have estimated these amounts on the assumption that, as a result of the partial execution of the Second 2025 Buyback Programme, the number of outstanding shares entitled to receive the final cash dividend will be 14,568,470,446. Therefore, the final amount may be higher if fewer shares than planned are acquired in the Second 2025 Buyback Programme; otherwise, it will be lower.

See more information in section 9.2 Dividends and shareholder remuneration.

4. Trend information

This directors' report contains prospective information on the directors' plans, forecasts and estimates, which are based on what they consider to be reasonable hypotheses. Readers of this report should take into account that such prospective information must not be considered a guarantee of our future performance as the plans, forecasts and estimates are subject to numerous risks and uncertainties, our future performance may not match initial expectations. These risks and uncertainties are described in note 50 of the financial statements.

We expect a mixed performance in 2026, depending on the region or country. A slight economic slowdown is expected in Brazil and the UK, while the US, the eurozone and Mexico are expected to recover moderately. The global outlook is uncertain due to geopolitical and trade tensions. Inflation is expected to continue to slow in most countries, converging towards the central banks' targets, although it is likely to do so at different rates between regions. Central banks such as the Fed are expected to complete their rate-cutting cycle in 2026. Significant changes in the unemployment rates are not expected, with most labour markets remaining resilient.

Our **macroeconomic forecast for 2026** by country/ region is as follows:

Eurozone

The eurozone is expected to experience a cyclical recovery in 2026, supported by the ECB's interest rate cuts since mid-2024 and fiscal policy initiatives, particularly increased spending on infrastructure and defence in Germany. Inflation is expected to remain in line with the ECB's 2% target, underpinned by wage moderation, leading to a gradual reduction in service inflation, which was more persistent in 2025. In the medium term, the euro area faces the challenge of achieving sustainable economic growth, through policies that boost the domestic market, regulatory simplification and the strengthening of capital markets.

Spain

We expect economic growth to remain dynamic, although at a slightly lower rate than in 2025. Domestic demand will continue to be a main driver, supported by strong household consumption, while investment, the sector that grew the most in 2025, will benefit from the allocation of European funds before August 2026. Growth in external demand is expected continue to slow as imports, boosted by strong domestic demand, are expected to outpace exports. We expect job creation to continue, with the unemployment rate declining further towards 10%, despite the rise in active population. Inflation is expected to gradually converge towards the ECB's target, as the services sector is proving to be sticky.

See more information in the Consolidated Directors' Report.

5. Sustainability information

This Statement of Non-Financial Disclosures of Banco Santander, S.A., which is part of the Individual Directors' Report, contains the non-financial disclosures set out in the Consolidated Directors' Report of Grupo Santander together with other material, pertinent, useful and comparative information on Banco Santander, S.A. that is appropriate to aid the an understanding of the trends, results, status and impact of the activities of Banco Santander, S.A., including information on matters of the environment, society, human rights, the fight against corruption and bribery, and personnel.

When drawing up the non-financial information contained in this Statement of Non-Financial Disclosures, we considered the double materiality assessment that the Group conducts, based on the Corporate Sustainability Reporting Directive (CSRD).

General information

Banco Santander, S.A.'s purpose is to help people and businesses prosper. Our five sustainability pillars are:

1. Help our customers in meeting their goals in their transition to a low-carbon economy while also managing climate-related risks and impacts.
2. Help our employees develop by promoting an inclusive culture and learning and providing fair working conditions.
3. Contribute to the economic, financial and social development of our communities, with a special focus on education, employability and entrepreneurship.
4. Be a trusted partner to our customers, with products and services that adapt to their needs, while applying responsible practices, supporting their financial inclusion, and protecting their information.
5. Act responsibly through a strong culture, governance and conduct.

The Group's board of directors is responsible, among other things, for approving the sustainability agenda and setting the sustainability strategy.

The responsible banking, sustainability and cultural committee (RBSCC) assists, among other matters, in the development and implementation of the Group's sustainability strategy and responsible business policies, in support of the board of directors, through monitoring, supervision and evaluation of these.

Additionally, other committees analyse specific sustainability matters. The audit committee is responsible for overseeing and assessing the financial and non-financial reporting process, as well as the internal control systems. The Group has implemented an Internal Control System that complies with the most demanding international standards.

The main internal regulations that support the integration of ESG criteria into our business model are:

Responsible banking framework

Establishes responsible banking as a strategic issue for Santander and is directly applicable in all local units.

Corporate financial, management and sustainability accounting and reporting framework

Sets out the principles, guidelines and actions to prepare accounting, financial and management information, as well as sustainability information, that must be applied to all the Group's entities as a fundamental element for their good governance.

Responsible banking policy and sustainability

Describes our sustainability principles, objectives and strategy to generate long-term value for our stakeholders, including the protection of human rights.

Responsible banking model

Establishes the roles and responsibilities of the first, second and third line of defence for all sustainability activities to progress the sustainability agenda, embed ESG standards and achieve our objectives.

In addition to these rules, which apply to all the Group's units and businesses, we have policies on responsible employee practice, responsible customer practice, donations, and business conduct.

With regard to risk management, the identification of non-financial risks associated with our activity is a priority for Banco Santander. The bank has implemented processes for their identification, analysis and assessment in those transactions subject to the Bank's policies and to external commitments such as the Equator Principles, an initiative to which Banco Santander has been a signatory since 2009.

In Spain, we are a member of Forética, the Spanish Association of Sustainable Growth, and Fundación SERES.

In 2025, we maintained our position in MSCI (AA) and Leadership level in CDP (score changing from A to A-). We scored 9.9 points in Sustainalytics, improving to 'Negligible Risk' category, and remained in the C+ category in the bi-annual ISS assessment.

Information on environmental matters

Strategy

Santander's climate strategy is based on three fundamental pillars:

1) Supporting our customers in their transition goals. We are making headway with our target of raising or

facilitating EUR 220 billion in green finance between 2019 and 2030, after having achieved our EUR 120 billion target eighteen months early. By year end this figure reached a total of EUR 174 billion. We offer our customers guidance, advice and specific solutions, as well as a wide range of products to invest in according to their sustainability preferences. Additionally, in March 2025, we reached our target of EUR 100 billion in assets under management (AUM) in socially responsible investment (SRI) nine months early. By year end this figure reached a total of EUR 129.9 billion.

2) Embedding ESG in risk management. We embed climate, environmental and social aspects in risk management from a regulatory and control perspective, including a materiality assessment that feeds into our double materiality assessment and sustainability strategy.

3) Aiming to align our activity with the Paris Agreement Goals. We work aiming to align our portfolio with the Paris Agreement goals to help limit global warming. We either set sector portfolio alignment targets or portfolios under monitoring. We closed 2025 with six targets in five sectors, additional portfolios under monitoring and an alignment approach for our asset management activity. The management of these targets and portfolios under monitoring, in line with the rest of the IROs, is carried out in accordance with local law and regulation in the markets where we operate. Their update and evolution reflect the present and expected performance of the economies and customers we serve. In our own operations we continue to reduce our impact on the environment by implementing efficiency measures, achieving in 2025 our target of 100% renewable electricity in our main markets.

Our 2025 highlights are:

- Grupo Santander has been a leader in renewable energy financing for more than 10 years. In 2025, we were among the top banks in number of transactions and value of business globally, with 100 transactions closed and a market share of 5.6% according to Infralogic. In Retail & Commercial Banking in Spain, sustainable finance value and services offering includes green and social loans, sustainability-linked loans, public programmes such as ICO Green Recovery and Resilience Mechanism (preferential financing for renewables, energy efficiency, electric transport, circular economy or social housing) or agreements with MDBs (EIB, EIF). We have also expanded our non-financial ESG services: carbon footprint offsetting tools, sustainability reporting guide, advisory for decarbonize real estate assets, new partnerships to support customers monetizing energy saving certificates (CAEs), and new ESG advisory service for SMEs. For individuals, we offer UPLs for sustainable purposes (vehicles, retrofitting works, among others) at a discount rate and an energy efficiency simulator.
- Santander in Spain embedded sustainability culture across its commercial networks through dedicated training and sustainability ambassadors.
- Santander Consumer Finance (SCF) continued increasing electric vehicle lending, with a market share in Europe of 10% (above the total Auto market share off 8%).
- In 2025, 97% of the cards we purchased at Group level were manufactured with sustainable materials (recycled PVC/PLA) and we continued to make progress in offering solutions to our customers to calculate their carbon footprint based on the payments they make with their cards, as well as initiatives to offset it. Santander España offers its customers the option to deposit expired or damaged cards at an ATM, triggering a recycling process through which the cards are transformed into urban street furniture benches. Since its launch in 2023, Santander has donated 167 benches made from recycled cards to various public institutions in cities such as Valencia, Malaga, Seville, Santander and Astorga. In 2025, Santander España delivered these benches to the municipalities of Paiporta, Catarroja and Aldaia, demonstrating its commitment to the recovery of areas affected by flooding caused by the DANA weather event.

Climate risk management

Managing climate and environmental risk factors is fundamental to strengthening the resilience of our strategy and business model to climate change.

To improve resilience, we embed climate and environmental risk factors in the phases of the risk management cycle where we analyse our own facilities and customer financing. We also include the risks associated with these factors in our policies, procedures, tools, metrics, governance and culture.

We embed climate and environmental factors in risk management based on defined climate scenarios and time horizons and though a process that covers identification, planning, assessment, monitoring, mitigation and reporting.

Paris Agreement alignment

Our 2025 highlights are:

- We continue working to align our key portfolios; we also disclosed emissions for our mortgages and commercial real estate portfolios in Portugal, in addition to those of Spain and the UK.
- We continued managing our own operations' scope 1 and 2 emissions', with reductions plans and offsetting remaining ones; and we kept our offices and buildings in our core markets free of single-use plastics to meet our target.

We continue working towards our ambition of net zero carbon emissions by 2050 by progressively setting

specific actions regarding the footprint of our own operations and to support our customers in their climate objectives, prioritising the high-emitting sectors - which also bear high and very high transition risk according to our climate heatmap. We also focus on energy security and affordability.

We set targets for the wholesale segment in the power generation, thermal coal, oil & gas, steel and on the automotive sector from two perspectives: auto manufacturing (wholesale segment) and auto lending (consumer loans for the purchase of passenger cars in Europe).

We update our strategy and targets to incorporate the latest scientific insights and changes in local regulation. During 2025, Santander updated its climate alignment targets. We wanted to ensure these remain credible and consistent, while reflecting the real pace of transition across the economies in which the Group operates. Five years after establishing our first targets (all the details described on the following pages), this update refined the scope, metrics and scenarios to reflect better our role as a facilitator of the transition, as well as how external factors (especially public policy) determine the pace of the transition.

In addition to alignment targets, we monitor other climate-relevant portfolios such as the commercial real estate (CRE) and mortgages in Spain. Santander España has been monitoring financed emissions in residential mortgages since 2021 and in CRE since 2022.

As at December 2024, our residential mortgage portfolio, which amounts to EUR 59.37 billion, had an emissions intensity of 21.03 $kgCO_2e/m^2$ and a PCAF score of 4.0. Our CRE portfolio, with a scope of EUR 7.18 bn, had an emissions intensity of 21.58 $kgCO_2e/m^2$ and a PCAF Score of 4.1.

In Spain, the national energy and renovation plans, together with the revision of energy performance certificates (EPCs), aim to boost private investment in the energy refurbishment of buildings. In this context, Santander Spain supports its residential and commercial customers through preferential financing (including EIB, EIF, InvestEU, EIB and MRR Verde lines), loans for energy refurbishment, support for homeowners' associations, simulation tools and specialist advice (such as agreements with CBRE and CAE management), while maintaining an active dialogue agenda with national and European authorities to promote reliable data, centralised registries and support mechanisms that ensure a just transition.

Regarding our own operations, we publicly report data on our direct and indirect emissions (scopes 1, 2 and 3), as well as other climate-relevant metrics such as energy consumption. In 2025 for the first time, Grupo Santander has achieved 100% renewable electricity.

Collaboration and global engagement

Initiatives with other companies and governments can help us share best practices and accelerate progress. Santander Group takes part in various organisations, alliances and working groups; we collaborate with international and local stakeholders (sector associations, think tanks, universities, peers and others) to advance global and corporate objectives, in line with SDG 17 (Partnerships for the Goals).

We also work with leading organisations to strengthen the role of banks in managing climate change and nature, such as the World Economic Forum, UNEP FI, the Banking Environment Initiative, the Partnership for Carbon Accounting Financials (PCAF), the TNFD Forum, the Energy Efficiency Financing Coalition and Carbon Measures. In Spain, we advocate for public policy that supports climate transition (MITECO, MIVAU, Energy Efficiency Coalition, or other European bodies) and our financial institution's role as enablers.

Information on social and employee-related matters

We attract and retain the best talent by:

I. offering an attractive employee value proposition that offers real opportunities to grow and harness potential; innovative ways of working; projects that inspire; and a shared culture;

II. providing optimal conditions that safeguard employee health and well-being, with fair and competitive remuneration and initiatives that afford a better work-life balance; and

III. promoting an inclusive and meritocratic culture where everyone feels valued.

In Spain we were recognized as best bank to work in Spain by Top Employers Institute, being the 3rd company at national level.

Talent and skills development

As at 31 December 2025, Banco Santander had 34,142 employees in Spain, of which 46% are women and 54% are men. 99.4% of contracts are permanent, the gender pay gap at the end of 2025 was 26%, and pay equity remains below 1%, achieving our 2025 target two years early. In Spain, the percentage of employees with some type of disability stands at 1.7%.

Attracting talent

Our talent attraction strategy focuses on positioning ourselves as an employer of choice. In 2025, we welcomed 27,872 new employees to the Group.

We launched several automation and artificial intelligence projects as part of our talent attraction and selection. They aim to boost operational efficiency and optimize the candidate experience, while reducing human bias and basing pre-screening primarily on skills and experience.

We also launched new editions of three global graduate programmes through which over 330 early-career professionals joined our global businesses: Corporate & Investment Banking, Wealth Management & Insurance, and Retail & Commercial Banking.

These initiatives seek to attract and develop talent globally, highlight the Group's digital transformation, foster entry into the labour market through internship and first-employment programmes for graduates, and strengthen our employee value proposition.

Talent management

We offer programmes and experiences for our employees' personal and career development:

- Development programmes adapted to different levels and businesses within the organization.
- Temporary and permanent domestic and international mobility and functional experiences.
- Training based on lifelong learning.

Developing talent potential

Our review model enables us to delve deep into the skills, expertise and aspirations of some 110,756 employees. It also means we can draw up personal development plans based on each person's needs.

We developed a leadership profile and a common leadership assessment methodology to foster transformational and collaborative leadership that aligns with our strategy; and to gain deep, objective and comparable knowledge of our leaders. This also enables us to support their development and make key decisions for the Group.

Mobility matters

Our global international mobility policy, which the human resources committee approved (by decision of the Group board), is an essential employee development tool, with the objective of contributing to the development of talent in the Group; strengthen succession plans; attract external talent; encourage a global mentality; facilitate international movement to satisfy business needs; and share — in a transparent manner — mobility standards with our workforce.

Learning and development

At Santander, developing our people's capabilities is key to executing our strategy and accelerating the transformation of Grupo Santander. Our global learning and development policy establishes the framework governing all our actions in this area. Our goal is to ensure that all employees are future-ready by providing access to high-quality, relevant and personalised learning experiences, while fostering a culture of accountability and continuous learning.

During 2025, our digital learning ecosystem, Dojo, continued to grow at a global level. That year 176,010 employees accessed our global learning systems, with content aligned to their profiles, roles and development needs. Powered by artificial intelligence, Dojo enables each employee to progress at their own pace in developing critical skills, promoting individual growth, and supporting the Group's strategic priorities.

Global learning community for leaders

The aim of Elevate is to equip our senior directors with the means to lead their teams and achieve their strategic objectives.

Its fully digital format enables directors to sign up to development programmes that are organized into Learning Paths (People, Tech, Strategy and Change) that address the critical skills needed to lead the Group's transformation.

Future-ready talent

In 2025, 170,360 employees received training in technology, banking, human and other key skills, which are essential for a sustainable, diverse and high-performing organization.

In line with our global learning strategy, we aim to maintain a balance between scalability and adaptation to the specific needs of each profile and market. We embed common frameworks with adaptable solutions, foster a culture of continuous learning, and promote the translation of acquired knowledge into real impact.

Mandatory training and promotion of sustainability and responsible banking

Mandatory training continues to prove a key lever for strengthening our corporate culture and ensuring regulatory compliance in every market. In 2025, our employees completed training in 13 topics that the global compliance committee approved, including sustainability, code of conduct, cybersecurity, financial crime prevention, data protection, and inclusion. Each subsidiary supplemented this training with content tailored to local legislation and business needs. In Spain, we count with certificates in Sustainability (intermediate or advanced level), specific training in sustainable finance, ESG investment trends, or sector-focused ESG risk analysis. As well, there is a specific site available in the employee portal with further sustainability-related training. In addition, training is provided on serving vulnerable groups and on digital accessibility.

We also continue to make progress in sustainability-related training. Our Retail & Commercial Banking teams took part in sustainable finance learning pathways that country-specific modules complemented. Moreover, employees completed training on the practical integration of ESG standards in their day to day. The Board of Directors received specific training on recent regulatory developments in sustainability, including the implementation of the Corporate Sustainability

Reporting Directive (CSRD) and the European Banking Authority (EBA) guidelines on the management of ESG risks.

We will continue to invest in developing our employees' skills, curiosity and growth so they can lead Santander's transformation and contribute to a more responsible, sustainable and future-ready organization.

Working conditions

Employee health and well-being

Our support for employees' health is embedded in our culture and corporate strategy, under which our people and senior managers work together to protect and promote each other's health, safety and well-being.

Based on our strategy, we:

- implemented safety and prevention systems;
- launched proactive initiatives to boost the overall well-being of employees;
- fostered a safe and supportive working environment when it comes to health; and
- offered flexible work alternatives to enhance work-life balance.

Our General health, safety and well-being policy aims to promote a healthy lifestyle and create long-term value for employees and society. It applies to all our subsidiaries and follows local laws in the markets where we operate to the letter.

a) Occupational health

The sector-level collective agreements that we sign up to consider employee health and occupational risk prevention.

We offer regular medical check-ups and tests after extended absences in every market where we operate. We also work with local public health authorities, employees' legal representatives and occupational risk insurers. Employees in our main countries are covered under occupational health and safety systems and policies in compliance with local risk prevention standards and best practices.[3]

We revised our occupational risk prevention plans with employees' councils through:

- regular assessments of risk factors and preventative measures to handle or mitigate them;
- prevention through design in new workspaces and tools;
- procedures regarding safe and quality working conditions and certifications;
- emergency and evacuation plans to protect employees, customers, suppliers and visitors to our facilities, including emergency response; first aid training;
- measures to detect and minimize risk due to postural hygiene;
- accident investigation to avoid reoccurrence; and active participation of employee accident prevention delegates in health and safety committees

b) Well-being

We aim to raise awareness about health and well-being through our global BeHealthy programme, which celebrated its ninth year in 2025.

In 2025, we updated this programme to align it with best practices in health and well-being; and with the concept of circular health. The programme is now structured around four pillars: physical, mental, social and financial well-being. Over 50,000 employees took part in local BeHealthy initiatives across the Group during the year.

In 2025, Santander Spain assumed the Presidency of the Fundamentales Alliance, promoting mental health and psychological safety in the workplace through cross-company collaboration and the strengthening of inclusive and responsible leadership

c) Work-life balance

Santander promotes employee work-life balance. Employees across all companies are entitled to parental, adoption and newborn care leave, and leave to care for family members is also widely available. In 2025, 8,208 employees took paternity, maternity or adoption leave and 1,778 took other family care-related leave.[4]

In recent years, in line with digital transformation and societal change, Santander has maintained policies and arrangements that support flexi-work for its employees. Currently, a high percentage of corporate centre employees can now adapt their working hours and location to fit with their personal circumstances. This includes working remotely or adjusting their entry and exit times. These measures are continuously reviewed at team level, taking into account customer needs, productivity, and employee engagement and experience.

d) Social protection

At Santander we offer our employees protection against a loss of income due to sickness, accidents at work, acquired disability and paternal leave.

[3] Adherence to global policies is monitored in 18 of the countries with the largest number of employees, which account for 98.5% of Santander's Group workforce.

[4] In total 9,834 unique employees (4.8% of Santander's total workforce) exercised their right to parental or family care leave in 2025. By gender, this accounted for 5.92% of our women employees and 3.62% of our male employees.

Our employees have public or private protection for loss of income due to sickness or acquired disability according to local regulation. On top of public health services, we offer additional private cover in our core markets, under which employees usually receive full pay during periods of sickness.

Because employee care and respect for their rights are important to Santander, 98% of our workforce have a permanent contract. In every market, employees have coverage against loss of income due to unemployment, in compliance with applicable local laws and regulations.

Our employees have appropriate pay protection in the event of an occupational accident. In Spain and other countries, we supplement the financial benefit they receive up to their entire salary in situations of temporary disability.

The Group has a minimum standard in each unit of fully paid parental leave. All employees are entitled to a minimum of 14 and up to 52 weeks of paid maternity or adoption leave for the primary caregiver. The secondary caregiver is generally entitled to a minimum of 4 weeks of fully paid paternity or adoption leave. As a result of these inclusion measures and flexible return-to-work arrangements, 74% of women continue working at Santander 12 months after returning from birth, adoption or pregnancy-related leave.

Our employees have retirement coverage through public or private pension schemes in every market where we operate. Santander supplements this with defined contribution pension plans for our employees in our core markets.

e) Collective bargaining and social dialogue

Santander promotes respect for the rights of employees. including freedom of association and the right to collective bargaining. Our Responsible banking and sustainability policy considers forming or joining unions and other representative bodies a basic right of workers, in accordance with Article 10 of our General Code of Conduct.

We also encourage respect for freedom of association, trade unions, collective bargaining and protection for employees' representatives under the laws of each market where we operate[5]. At 2025 year end, 129,875 employees worked at premises or in companies with union representation.

We continued to promote and comply with the International Labour Organization's Fundamental Conventions and have a European business council that meets regularly — Group senior managers and employees' legal representatives in Italy, Poland, Portugal, Spain, the UK and other European countries attend. At the meeting held in May 2025, participants shared information on the Group's economic and financial situation, outlook and overall results in the European Union, as well as other current topics related to sustainability, compliance, cybersecurity and artificial intelligence.

We also remained in constant dialogue with employees' legal representatives in bilateral and special committee meetings in our markets where all parties could discuss reporting, queries and negotiations about working conditions and employee benefits. We reached key agreements in our core markets in 2025, including committees on occupational health and safety, monitoring of gender balance plans in alignment with local regulations,, control of pension plans, training, updates to collective bargaining agreements, and also other bilateral meetings with union representatives. Notable outcomes of collective bargaining include the signing of equality plans, such as the equality plan for Santander Global Technology and Operations, and the Group equality plan that applies to 15 companies in Spain. Moreover, the collective procedures carried out during the year were conducted by consensus with employees' legal representatives.

Remuneration and corporate benefits

a) Appropriate remuneration

Our remuneration framework combines fixed and variable pay schemes based on the performance of employees and the Group.

Our remuneration and performance policies, as well as our General Code of Conduct, forbid differential treatment that is not based on a review of performance and corporate behaviours. It also promotes appropriate pay.

Specifically, the remuneration policy lays the foundations for non-discriminatory practices (related to performance and internal consistency), as well as the principles, processes and criteria for granting fixed and variable remuneration to create long-term value through risk management.

To set pay, we strictly abide by the practices, regulations and collective agreements in force in each market where we operate.

All Santander employees receive a salary equal to or higher than the legally established minimum in each of our markets and we comply with all local legislations and applicable collective agreements. Almost all employees (96%) receive other forms of remuneration[6] that supplement their salary. This demonstrates our pledge to provide fair, competitive remuneration and the appropriate combination of fixed and variable pay.

[5] These rules are monitored in 18 countries, which account for 98% of employees in locations where trade union representation may exist in accordance with local rules (by company, location or individual membership). In those countries except for the UK, where data on trade union membership cannot be disclosed, 65% of our employees have union representation.

[6] Other remuneration that complements our employees' salary: benefits, pensions, other fixed pay, incentives, and short or long-term variable remuneration.

All our businesses and subsidiaries have short-term variable remuneration schemes to reflect what we have accomplished and how, according to Group-wide quantitative and qualitative goals as well as individual and team goals, behaviour, leadership, sustainability, commitment, growth and risk management. These schemes promote meritocracy, recognize individual and team contributions, and promote employee growth and well-being. Our executive directors' variable pay, which aligns with our sustainability goals, includes achieving our sustainability and climate targets as part of its weighting[7].

In 2025, we paid EUR 13.6 billion in employee wages and benefits.

Reflecting EU regulation on remuneration and to manage risk correctly, we identified 1.336 employees who are subject to a deferred variable pay scheme because their decisions can have a material impact on Santander's results. The majority of them are subject to a deferral policy of a significant portion of their variable pay (ranging from 40% to 60% depending on their level of responsibility) for four to five years, which is paid out at least 50% in shares and the rest in cash, and is subject to possible reduction (malus) or recovery (clawback).

b) Equal pay

Our remuneration practices promote non-discriminatory salary management in terms of gender and equivalent remuneration, especially in cases where employees perform the same or similar work (equally remunerated for equal work or work of equal value).

The gender pay gap between women and men who perform similar functions remains below 1%, in line with market remuneration practices and consistent with the trend observed in recent years[8]. In certain units we continue to review the pay equity regularly and make adjustments where necessary.

We also analysed the overall gender pay gap (GPG), which compares median remuneration for all men and women, and which stood at 26% in 2025 (up 4.5 pp in the past three years).

To measure the suitability and acceptance of our policies, we consult employees across the Group, whose perceptions of recognition and meritocracy are consistent with recent levels of employee acceptance and the competitiveness of our remuneration plans.

c) MyContribution

MyContribution is our global performance management model.

In the last financial year, 155,249 (78%)[9] of the employees had their performance reviewed under this model in 2025.

Inclusive culture

An inclusive culture is an essential pillar of our strategy and corporate culture, as well as a cross-cutting principle in the Group's management.

Through this approach, we promote merit, equal opportunity and inclusion, driving the best diverse talent and ensuring compliance with local regulations, in line with international standards of conduct and responsible business practices.

Gender

Women account for 52% of our total workforce at Group level (46% in Spain), a figure that has remained stable. In 2025, 51% of new hires at Group level were women.

40% of Banco Santander's board of directors are women, in line with our objective to maintain a balanced representation between 40% and 60%, which will also become a legal requirement in some jurisdictions from 2026.

With this approach, we expect to progress gradually and sustainably towards gender balance, moving closer to c.40% of our senior leaders being women by 2030[10]. In 2025 38.5% of our senior leaders were women and 61.5% were men.

Persons with disabilities

We strive for the successful inclusion of our 4,854 employees with disabilities in the Group, which represents in Spain a total of 1.7%[11].

In at least eight of our markets where we operate, and with over 1,000 employees, legislation requires the inclusion of people with disabilities. We comply with these regulations and reinforce them through active inclusion, accessibility and awareness policies.

Diversity in other groups

[7] Climate targets account for 2% of executive directors' total remuneration, while sustainability targets account for 7%.

[8] Measured with the EPG - equal pay gap ratio, which compares the average remuneration between men and women who perform similar tasks. 2025 result for the entire Group.

[9] Employees who did not take part in MyContribution were new hires, employees of joint ventures, and employees in some customer service, debt recovery and contact centre roles who are subject to similar performance management schemes but with shorter and more continuous cycles due to the nature of their work. Among employees at year-end, 78,076 women (76% of the total number of women in our workforce at year-end) and 77,165 men (81% of the total number of men). Due to statistical significance, we don't inform other gender percentages. In 2024, the employees with performance review was 177,081.

[10] Including Group Sr.Executive VP, Executive VP, VP, Director, Manager, Expert and Branch Manager. Joint ventures are not included in this ratio due to their temporary nature and joint management (they represent only 1.7% of our workforce).

[11] At year-end 2024, the Group employed 4,828 people with disabilities, representing 2.3% of the total workforce. As in previous years, we follow local regulations for the calculation and recognition of employees with disabilities. In most countries, disabilities are recorded at the employee's request with the support of a certificate issued by social services (e.g. degree and date of disability).

We monitor the representation of ethnic groups in four of our core markets, where this topic is material and regulated (United Kingdom, United States, Brazil and Chile). Employees who identify themselves as part of these groups account for over 32.2% of the total workforce, which is consistent with the ethnic and racial make-up of those markets.

Among employees who have voluntarily chosen to share information related to their identity or sexual orientation, 2.2% identify as part of the LGTBIQ+ community. [12]

Building an increasingly inclusive and engaged environment

We promote an inclusive working environment that is free from harassment and discrimination[13] and where every individual is valued and respected. In 2025, 60,126 employees completed trainings on harassment prevention and 87,004 in unconscious bias, which we updated in line with the Global protocol against discrimination and the General Code of Conduct, which provide a common framework for respect, fairness and ethical behaviour. When we ask our employees whether they feel they can be themselves at Santander, the results are consistently high across different groups, confirming an inclusive environment.

Information on upholding human rights

Santander seeks to respect and protect the human rights of stakeholders in the operations and countries where it operates, and these are reflected in management and governance practices.

- The responsible banking and sustainability policy approved by the board of directors incorporates defence of human rights.
- looking after our employees' health and promoting decent employment, the preservation of freedom of association and collective bargaining and the prohibition of slavery and child labour.
- protecting our customers' human rights through responsible business practices and the protection of their data.
- assessing the human rights impact on transactions with customers through environmental and social (E&S) analysis.
- embedding environmental and social aspects, including human rights, in our supply chain management.
- Canal Abierto is a key tool to identify, manage and resolve potential human rights-related incidents or violations to protect our customers, employees, suppliers and the communities we serve.

The results of the human rights due diligence exercise informed the 2024 double materiality assessment. This exercise was carried out in line with international standards[14], including measures related to labour rights, customer protection and responsible business conduct in relevant activities. For more details on our human rights due diligence, visit the website santander.com/en/our-approach/policies.

Information on anti-corruption

Grupo Santander is firmly committed to the fight against financial crime and compliance with financial crime prevention regulation in every market where we operate.

Our Group board-approved and unit-ratified Corporate financial crime compliance (FCC) framework sets out the key principles for preventing financial crime, which underpin these programmes: the anti-money laundering and terrorism financing prevention programme (CFT); the sanctions programme; and, since 2023, the anti-bribery and anti-corruption programme (ABC). This framework is available to all employees and interested third parties.

This framework is available to all employees and interested third parties. Moreover, we use information channels to raise awareness of the importance of financial crime compliance. We reach out to all our stakeholders through annual training programmes, communications channels (corporate and unit Intranet sites), awareness campaigns, internal newsletters and best practices so that they can learn about and understand their responsibilities across the Group's entire operations.

We draw up the policies that build on this framework (including customer due diligence — CDD — procedures) according to domestic and international financial crime regulation to manage and mitigate the impacts and risks related to FCC and protect the Group's integrity in all our businesses and operations. We constantly review and update our policies to remain consistent with regulatory amendments and new and ever-changing external threats.

Moreover, we have a common oversight methodology that enables us to verify that all our operations comply with this framework under the most demanding, standardized criteria that the centralized and technical FCC function in our markets endorse. This function also

[12] LGBTIQ+: Lesbian, gay, bisexual, transgender, intersex, and other identities. In 12 of the countries in which we operate, employees have the right to report their gender identity, subject to applicable confidentiality rules and appropriate handling of information.
[13] Consider race and ethnicity, colour, sex, sexual orientation, gender identity, disability, age, religion, political opinion, national or social origin, among others.
[14] The Universal Declaration of Human Rights, the International Labour Organisation Declaration on Fundamental Principles and Rights at Work, the United Nations Guiding Principles on Business and Human Rights, the OECD (Organization for Economic Cooperation and Development) Due Diligence Guidance for Responsible Business Conduct, and others.

plays a crucial role in promoting FCC culture and awareness to all Grupo Santander employees.

Canal Abierto

Canal Abierto is an anonymous and confidential Grupo Santander channel to report alleged unethical conduct. It protects whistleblowers by expressly prohibiting reprisals or any negative consequence against them. Every unit in the Group administers its own ethical channel according to the common standards set out in the *Canal Abierto* policy.

In 2025, we received 56 reports in Spain, 11 of which were from third parties (all of whom from customers).

As in 2024, the Group has not record of any judicial proceedings initiated by employees or their representatives in relation to incidents of discrimination or breaches of fundamental rights, nor of any employee-related cases referring to serious human rights incidents that would be considered material to the Group.

All reports submitted on Canal Abierto are handled appropriately, whether they are found to be substantiated or not.

Community support

Support for education, employability and entrepreneurship

Santander has supported education, employability and entrepreneurship for nearly 30 years.

During this period, we have invested over EUR 2.5 billion in partnership with more than 1,000 universities and entities from 13 countries, and helped over 8.3 million people and organizations.

In 2025 alone, we allocated EUR 102.1 million to promote education, employability and entrepreneurship, and helped 4.6 million people and organizations.

This enables us to make headway with our target of contributing EUR 400 million to community support initiatives in these three pillars between 2023 and 2026. So far, we have contributed EUR 311 million between 2023 and 2025.

We sign agreements with prestigious international higher education institutions to strengthen the university ecosystem. We provide scholarships and economic grants to adults so they can access and complete higher education.

We also encourage lifelong learning through the acquisition and continuous updating of skills that provide better professional opportunities. We offer training, resources and access to benefits for SMEs, startups, scaleups and entrepreneurial projects to help them grow and strengthen their businesses.

Other community support actions

We bolster our support for education, employability and entrepreneurship with financial education and helping vulnerable people.

On top of direct community action, we cooperate with, and channel our support through, local non-governmental organization (NGOs), social charities, and corporate volunteering. In some cases, cooperation is through foundations that the bank runs in several markets, including Argentina, Mexico, Poland, Portugal, Spain, and the UK.

We target our support to different groups depending on their needs. Our support for vulnerable people focuses on sensitive groups (due to gender, disability, age, lack of digital skills, financial difficulty, and other reasons). We usually target cultural activities at the general public, though we also include vulnerable groups to facilitate their access to events and programmes.

In Spain, we focus on education, employability and entrepreneurship through Santander Universities (partnerships with universities, training resources, grants and scholarships, SOA, Santander X). In 2025, Santander Spain delivered +1.8k financial education sessions (+10% YoY, >45k participants) through Finanzas para Mortales, consolidating our long-lasting commitment with financial education. We continue supporting our communities through social investment, providing technical support and networking to NGOs ("Red Solidaria") and corporate volunteering (4k participations in different programmes including probono activities, international volunteering with Fundación Santander -BEST Africa-, Santander Natura (to preserve environment), solidarity teambuildings and Finanzas para Mortales. In 2025, we keep contributing to the recovery of communities affected by DANA storms in Valencia. SRI funds include our solidarity investment funds that donate part of their management fee to NGOs projects in the communities in which we operate. Meanwhile, Santander Compromiso Solidario fund won, for the third year in a row, the Expansión-Allfunds award as 'Best solidarity fund'.

In 2025, Banco Santander invested EUR 61.7 million in these initiatives, of which EUR 5.7 million accounted for social programmes in Spain, helping over 216 thousand people.

Fundación Banco Santander, which is based in Spain, works to build a fair, inclusive and sustainable society by financing and running several cultural, educational, social and environmental projects.

Subcontracting and suppliers

Our outsourcing and third-party management model and outsourcing strategy policy (which apply in all our markets) provide a methodology for our suppliers to comply with the Group's minimum standards and with regulation to avoid risks that stem from substandard operational resilience, solvency, reputational control and regulatory compliance.

Moreover, to promote responsible practices in our supply chain, we have a supplier ESG certification methodology that aims to identify the suppliers that pose the greatest risk in terms of sustainability. This methodology also helps us determine which controls to adopt according to the risk identified.

As at 2025 year-end, we had assessed 876 suppliers identified with ESG risk.

Consumers

At 2025 year end, the Group had 15 million customers in Spain and 180 million globally.

Our customer conduct risk model promotes transparency, fairness, and responsibility in all customer engagement, including product design, pricing, complaint handling, and financial education, while preventing over-indebtedness and protecting vulnerable customers.

This model outlines the governance, key processes and instruments that enable us to mitigate and manage customer conduct risk at every stage of our relationship with them.

Our conduct risk identification and assessment seeks to proactively identify behaviours or practices that may lead to regulatory breaches, customer detriment, or reputational harm. Ensuring fair customer outcomes takes a coordinated approach that involves the first and second lines of defence to ensure a comprehensive risk assessment.

Through the continuous monitoring of risks, indicators and mitigation tools, the Group ensures early detection and effective response to situations that may compromise customer protection.

The Group has strengthened complaints handling through further monitoring of the customer voice by analysing complaints and conduct events through key metrics, enabling early identification of risks and trends and supporting timely mitigation actions.

The Approval of products and services policy regulates the product approval process at local and Group level by defining roles and responsibilities and setting criteria for product assessment, approval and monitoring, which builds on the conduct risk with customers management model. Santander has a well-established, robust and consistent product governance, that the Group Compliance team owns and manages. It is an end-to-end cycle that regulates the approval and monitoring of products and services, covering their design, sale, and post-sale stages and ensuring approval of proposals according to regulatory requirements, ethical principles and market conduct, both at local and Group level.

Product governance forums are responsible for implementing this policy when approving products and services, as well as defining approval requirements and coordinating validation, which includes monitoring and reporting to senior management. We only approve products and services once we have assessed all risks have been assessed, and forum members are unanimously in favour.

Training is key to boosting knowledge to foster consumer protection. The Compliance function, with the support of People & Culture, draws up mandatory refresher training for all employees on managing and mitigating customer conduct risk.

All units ensure strict compliance with local requirements; supported by robust training.

Quality and conduct metrics in sales teams' remuneration

The Group establishes requirements to ensure we link variable pay to service quality and conduct metrics. This approach promotes greater awareness and proactive management of customer relationships, encourages high levels of transparency, and supports the identification of appropriate target audiences.

The Group has mechanisms to monitor products and services throughout their life cycle. These enable us to detect and manage (as early as possible) potential deterioration, failures in marketing, and non-compliance with the terms and conditions under which they were approved. We analyse and monitor:

- Customer voice: Queries, complaints and surveys are a key source of information to identify deficiencies in marketing and customer engagement, and to draw up improvement plans; and
- Sales metrics and controls: Monitoring the percentage of product or service cancellations shortly after sign-up.

The Customer service and dissatisfaction management policy outlines the principle of making multiple channels available to avoid the potential impact of not having suitable means for customers to convey their issues or dissatisfaction and to promote the fact that we have channels that adapt to our customers' needs and preferences.

Additionally, customers can escalate complaints through external channels when they are in place, such as the Financial Ombudsman, regulatory bodies, and consumer agencies, if they are not satisfied with how we have handled the complaint.

Units continue investing in digital channels to speed up case resolution and help customers self-manage certain queries. Root-cause analysis and mitigation plans are an essential component of complaints handling that is continuously being strengthened.

In 2025, the total number of formal complaints received was 772,780 from all Group customers.

Regarding complaints management, we take a proactive approach to addressing customer issues and complaints, analysing root causes and applying lessons learned. In 2025, Banco Santander received a total of 82,650 complaints in Spain, a (47)% decrease compared with 2024[15].

Financial health and inclusion

Financial health and inclusion are a priority for Santander in contributing to social progress and promoting prosperity and entrepreneurship.

We use the World Bank's Global Findex Database to calculate the number of unbanked, underbanked and financially distressed people due to access and financing issues in the markets where we operate as a retail bank. In particular, we:

- consider several components of financial exclusion and aggregate indicators to cover all our target audiences;
- define an inclusive financial system as one that maximizes the use of financial products and services, access and financing;
- measure involuntary financial exclusion through barriers that people who do not participate in the formal financial system perceive; and
- apply a correction factor that matches our business penetration rate in the markets where we operate.

Thanks to our financial inclusion efforts, we achieved our objective of reaching five million people with at least one financial inclusion measure during the period 2023-2025. This ambition aligns with our market penetration levels and the gaps identified in our exclusion analysis.

Our processes pinpoint the needs of customers facing financial difficulty so we can develop products and services and train our teams.[16]

In 2025, Santander Spain reached a landmark by becoming the 1st IBEX-listed company to certify a 360º accessibility commitment by AENOR, covering physical and digital channels and ensuring that all our products, services and relationship channels are accessible for all our customers, regardless their diverse physical, sensory, cognitive, or age-related abilities . We have also reinforced fraud prevention and financial protection for older customers, including dedicated workshops on economic abuse and patrimonial fraud.

These processes are consistent with our customer conduct model, vulnerable customer policy, and responsible banking and sustainability policy.

In 2025, we updated our Corporate Financial Inclusion guide to reflect best practice. We also changed how we monitor and measure progress, differentiating between financial inclusion and financial health. The updated guide continues to enable the homogeneous measurement of access and financing initiatives across markets and sets out these common definitions:

- Unbanked: People who do not have a bank account or access to any banking services.
- Underbanked: People who, despite having a bank account, have difficulty accessing basic services (e.g. making deposits and withdrawals) or who source financing informally.
- People in financial distress: People who earn less than their country's legal minimum wage or who are unable to cover basic living expenses.

The guide also provides a consistent metrics system for monitoring and managing access and financing initiatives. Though we have achieved our ambition, we will continue working to increase access, improve the use of financial services, and strengthen our support for vulnerable individuals and communities.

In 2025, we financially included nearly 1 million people through access initiatives; and 1 million people through finance initiatives. In Spain, we focus on guaranteeing access to basic financial services by waiving fees for vulnerable customers or thanks to Correos Cash in remote areas (non-digital solution that covers 100% national territory) while financing underbanked SMEs and entrepreneurs or low-income households.

In 2025, we continued to strengthen a common financial health approach in all the Group's markets. We define financial health as individuals' ability to manage their finances in a way that enables them to meet short-term needs while planning for and achieving long-term goals, generating stability, and reducing the risk of financial hardship.

Throughout the year, we made headway with identifying and building on initiatives that help customers' develop financial skills. We combined global tools — such as goal-setting solutions and planning resources within our banking app in certain countries — with local action, including tailored financial education content and practical guidance that align with market-specific needs.

As part of this, we came up with a common financial health definition and measurement guide that will enable homogeneous and comparable progress assessment across markets. Our framework directly complements our financial education and inclusion efforts and ensures that individuals not only gain access

[15] Spain shows a decrease following the 2024 Supreme Court ruling on mortgage arrangement fees.
[16] For more details, visit our website santander.com/informe-inclusion-financiera.

to the financial system but also acquire the knowledge and tools needed to use it responsibly and effectively.

Tax information

The principles that guide the Group's tax practices are consistent with its purpose and aligned with business strategy. The board of directors approves our tax strategy and revises it regularly.

The Group's tax risk management and control, which draws on our internal control model, sets out the actions to follow our tax strategy and the principles that underpin it.

We participate in cooperative compliance initiatives that tax authorities run. Since 2010, we've adhered to the Spanish Code of Good Tax Practices and the UK Code of Practice on Taxation for Banks and, more recently, to the Portuguese Code of Good Tax Practices in 2022. Since 2015, we have voluntarily submitted an annual tax transparency report to Spain's tax authority.

The principles of Grupo Santander's tax strategy must enable us to make appropriate contributions according to the value creation in each of the markets where we operate, as well as to comply with local laws.

In 2025, Banco Santander, S.A. and its Group in Spain collected and paid EUR 4,183 million in taxes, of which EUR 2,028 million were own taxes and EUR 2,155 million third party taxes.

6. Data and Artificial Intelligence, Technology and the Fintech Ecosystem

Technological innovation is one of the fundamental pillars underpinning the Group's strategy. In an environment of constant disruption, technology, data and artificial intelligence (AI) are essential to anticipate customer needs, drive operational efficiency and generate new opportunities for sustainable growth. We continue to evolve from a traditional banking model towards a digital ecosystem, with the aim of becoming the best financial services platform.

The adoption of AI, the rollout of a robust and efficient technological infrastructure, the continuous strengthening of cybersecurity and collaboration within the fintech ecosystem act as key levers to enhance customer experience, promote operational excellence and simplify the ecosystem, contributing to the creation of sustainable long-term value.

This approach reinforces our commitment to innovation, technical excellence and global collaboration, aligned with the highest standards of security and compliance, to offer secure and personalized experiences for both customers and Group professionals.

During 2025, Santander took a decisive step with the creation of the Global Data and Artificial Intelligence (Data & AI) function, aimed at extracting maximum value from data and accelerating transformation by using AI as a lever. It is a cross-cutting function across all global businesses and countries, enabling us to scale capabilities, strengthen collaboration and accelerate the impact of innovation.

EUR 1,713 million was allocated during the year to digital transformation activities demonstrating the Group's firm and ongoing commitment to investment in technology and innovation.

1. Data and Artificial Intelligence

The global Data and Artificial Intelligence function is structured around three fundamental pillars:

- Transform customer experience and operations, by integrating artificial intelligence and advanced automation capabilities into key processes.
- Improve decision-making with reliable data, based on common standards of quality, traceability, and governance.
- Accelerate the impact on business, driving the development of analytical models and scalable solutions that generate tangible and sustainable results.

To make this transformation possible, we continued to implement data governance from its point of origin and throughout its entire lifecycle, while progressing towards a unified data architecture. This eliminates silos, facilitates the efficient and global reutilization of data and enables the secure scaling of AI capabilities across the organization.

The rollout of the Data & AI function is structured under a business-led model: each initiative stems from a specific business need and is supported by a global network of Data & AI leaders across businesses and countries. We have a unique portfolio with more than 1,000 initiatives, prioritizing projects with the greatest impacts on efficiency, automation and customer experience thereby focusing development on a limited set of global, reusable and scalable capabilities.

This is carried out by multidisciplinary teams working under agile methodology, combining business, data, advanced analytics, technology, risk and compliance capabilities. Our approach ensures that each solution is designed under criteria covering security, responsibility and value-creation from the outset, while promoting technical consistency and reusability across countries.

The Group internally develops strategic capabilities but also works with external partners when they provide speed or specialization, always under strict governance and data protection standards, within the framework of a secure and ethical global ecosystem. Specifically, we develop solutions that incorporate machine learning and advanced analytics techniques, which contribute directly to revenue growth and improvements in operational efficiency. Their application spans areas such as process simplification, enhanced customer acquisition and retention, fraud prevention, and the strengthening of the cards business throughout its entire life cycle.

The governance of Data and Artificial Intelligence within the Group is based on a robust global model that ensures the security, proper lifecycle management and ethical use of these technologies. This model is included in the corporate data and AI framework, approved by the Board of Directors, and is complemented by the AI management and governance policy,_which regulates the full lifecycle of the Group´s AI use cases.

The governance framework ranges from data quality to model control and supervision is based on a structure of three lines of defence that ensures independent oversight proportionate to the level of risk.

It also incorporates the principles of responsible AI, which guide the design and delivery of all solutions: transparency, fairness and reduction of biases, accountability, privacy and security, as well as contributing to value creation which guide the design and operation of solutions. As part of the Group's firm

commitment to the responsible use of AI, we implemented mandatory training.

We apply these principles across common processes for identifying, classifying, inventorying and controlling AI use cases, which makes it possible to assess their potential impact and establish appropriate controls at each stage. This approach ensures a centralized view, comprehensive follow-up and regulatory compliance across all Group units and countries.

Advances in the use of data and artificial intelligence require the development of new capabilities and a profound cultural shift. To this end, the Group promotes a global talent strategy that combines the strengthening of internal capabilities, the attraction of specialized profiles and the consolidation of a culture based on controlled experimentation, rigorous analysis and the responsible use of technology.

In 2025, we completed the formation of the Data & AI team, strengthening the second line of defence and the function's operating model with end-to-end execution capabilities. In addition, we improved upskilling and reskilling programmes on AI, data science and data governance and we integrated specialized profiles in data engineering, advanced analytics and AI operations, driving the execution of key initiatives.

Furthermore, a structured AI training programme was launched to foster adoption and maximize the value derived from employees' use of these tools.

In 2025, we significantly accelerated the adoption of AI among our employees, driving improvements in productivity, operational efficiency and service quality. Implementation was carried out safely and progressively, prioritizing use cases with tangible impacts and guaranteeing data protection and traceability of the models at all times. The most important applications were the following:

- AI Assistants: approximately 30,000 employees are using advanced AI tools and over 7,000 active agents have improved document writing, information analysis and automation of lower value-added tasks.

- Intelligent automation: the Group has built more than 100 agents for processes automation and trained more than 800 engineers in automation tools, resulting in faster, more reliable and scalable operations.

- Software lifecycle: more than 30 use cases (for example, functional testing, documentation and code maintenance) have been delivered, used by over 6,000 developers through coding agents to reduce delivery times and improve software quality.

- Customer service: the Group is moving towards a new generation of experiences based on conversational AI. The first AI-based voice solutions are currently in the testing phase and represent a significant leap from traditional systems, designed to enable faster and more efficient interactions.

Looking ahead to the next stages, the Group will accelerate its comprehensive AI strategy to transform the financial services of the future in a secure and responsible manner. The objective is to scale capabilities, differentiate ourselves and capture value by combining in-house development, strategic partnerships and investment.

Research and experimentation capabilities will be strengthened by intensifying the exploration of emerging technologies, the early validation of use cases and the monitoring of global trends. In addition, partnerships with leading technology companies will continue to establish co-design and deploy high-impact solutions, combining their scale with the Group's business expertise, data assets and regulatory experience.

The Group will expand collaboration with specialized startups and will continue with its investment strategy, with more than 20 deals completed to date, to accelerate capabilities, incorporate differentiated innovation and reduce time to market.

In parallel, we will move forward with the creation of our own AI Studio to develop, train and adapt models based on specific data and needs, thereby strengthening technological autonomy and personalization.

All of this will be underpinned by a global network of academic partnerships to foster cutting-edge research, talent development and the generation of advanced knowledge in AI and data. Through this approach, we will consolidate the responsible adoption of AI on the basis of evidence, impact and sustainable value creation.

2. Technological infrastructure

Santander has migrated more than 97% of its technological infrastructure to the cloud, with the aim of boosting standardization, maximizing scalability and strengthening service availability. It has also accelerated the deployment of next-generation infrastructure based on the on-premise private cloud, supported by an architecture with greater capacity, resilience and efficiency. All of this contributes to reducing energy consumption and advancing the Group's sustainability goals achieving an estimated reduction in its carbon footprint of 49.5 tonnes of CO_2.

The Group has a network of paired, high-quality data processing centres (CPDs), interconnected through a redundant communications system and distributed in strategic locations to support and ensure the continuity of the Group's activity.

These centres combine traditional IT systems with on-premise private cloud capabilities, enabling the integration of technological management across business areas, accelerating digitalization and achieving significant efficiencies through the standardization and simplification of operations.

3. Cybersecurity

Cybersecurity remains one of the Group's priorities. During 2025, we faced a dynamic and increasingly sophisticated threat landscape, including more ransomware attacks, intensified hacktivism and supply chain threats, together with the growing use of social engineering and AI techniques by attackers.

To face these challenges, Santander has continued to evolve its defences in line with the cybersecurity strategy, centred on three pillars:

- Shift-left. The principles of security by design were strengthened, incorporating risk management and the definition of security architectures from the early stages of each initiative. Among the most important advances were: i) the strengthening of controls related to critical environments and identification of people who interact with our banks' systems; ii) the strengthening of security controls to mitigate risks associated with supply chains; and iii) the consolidation of the Cyber Pro culture, that reinforces employee training, with special attention to groups with the greatest exposure to risk.

- Increased cyber defence. Santander continued to harness the potential of AI and automation to strengthen threat prevention, detection and response. We implemented new solutions that improved threat detection and response times. Likewise, we significantly increased the early detection of online scams and fraud by analysing user behaviour in real time, enabling us to distinguish legitimate from fraudulent activities.

- Operational resilience. The Group strengthened its capacity to anticipate, resist and recover from potential cyber scenarios, strengthening response preparedness and continuity of essential services. Among the main improvements are the global expansion of the Cyber Emergency Response Team, which is permanently operational and the expansion of resilience and recovery tests in line with the DORA Regulation.

The Santander Fusion Centre, which integrates the Cybersecurity and IT Monitoring teams, performs detection, monitoring and response functions to operational failures and cybersecurity events for Group entities.

Information systems are reviewed regularly through internal and external audits. The Group identifies IT assets, systems and information (including those managed by third parties) and periodically assesses the associated risks and protection levels. Additionally, it has a permanent testing ecosystem, including (vulnerability analysis, penetration testing, red teaming exercises and cyberattack simulations) which enable potential weaknesses to be identified and proactively mitigated, prioritizing remediation according to criticality and potential impacts on the business.

Independent entities review and certify critical cybersecurity processes. Certifications include ISO 27001:2022 and ISO 27017, SSAE 18 and Payment Card Industry Data Security Standard (PCI DSS) 4.0, which are reviewed and updated regularly, incorporating new processes and controls every year.

4. Fintech ecosystem

Santander actively participates in the fintech ecosystem across all global businesses and countries in which it operates, and with all the global units.

As part of our efforts to foster and channel innovation while improving customer experience and efficiency, we partner with technology companies.

Through our Fintech Station programme, we work with startups and scale-ups in pilot programmes and implement or co-create new products and services with them.

In 2025, Santander Fintech Station worked on eight proofs of concept (PoC) and also collaborated on the implementation of six production initiatives. The Group also provided banking services to these fintech companies, such as advice on financing rounds, buying and selling processes and IPOs.

We are an active investor in the fintech sector, sometimes directly, through our programme focused on investments in startups with high strategic value for the Group or through funds promoted by the Group, such as Mouro Capital, a global venture capital fund that invests in fintechs, and has already launched a second fund. To date, the programme focused on investments in strategically valuable startups has invested directly in more than 20 companies globally, and Mouro has a portfolio of more than 40 investments in technology companies across Europe, North America and South America.

These investments, together with commercial collaboration with participating companies, continue to be a key tool for driving innovation within the Group. Santander works with companies in these portfolios, for example with Colektia, an AI solution for automated recovery services in Latin America; Elliptic, in blockchain analytics and regulatory compliance for digital assets; and Drive Revel, to provide a flexible, digital vehicle leasing offering in Spain.

In addition, the Group invests in the field of cybersecurity through Forgepoint Capital International, a venture capital manager that is raising its first fund outside the US and which, with the Group's support, has already made six investments.

See more information in the Consolidated Directors' Report.

7. Customer service and customer defence

Customer Service Annual Report

In accordance with article 17 of order ECO / 734/2004 of March 11 of the Ministry of Economy on the departments and services of Customer Service and the Customer Ombudsman of Financial Institutions, the directors' report summarizes the Annual Report to be presented by the holder of the Service on the Board of Directors in March 2026.

Customer service and customer defence service

In compliance with Law 44/2002 on Measures for the Reform of the Financial System of the 734/2004 Order of the Ministry of Economy on Departments and Services of Customer Service and the Customer Ombudsman of Financial Institutions and in accordance with Article 37 Of the Regulations of the Customer Claims and Attention and Defence Service in Grupo Santander, below is a summary of the activity developed by the said Service during 2025, in relation to the management of complaints and claims.

This complaints and customer service unit handled complaints from 18 Group companies in Spain during 2025, following the integration of Santander Private Banking Gestión SGIIC into Santander Asset Management on 17 November 2025.

Global evolution of complaints and claims received by Banco Santander in 2024

In 2025, 95,298 claims were accepted in the complaint and customer service department. Of these, 181 came through the Customer Ombudsman, 1,464 through the Bank of Spain, 137 through the National Securities Market Commission (CNMV) and 112 through the General Directorate of Insurance and Pension Funds (DGSFP).

Analysis of claims by affected products

The following is the classification of complaints received in 2025 according to the type of product:

Number of complaints	2025	2024
Assets	40,564	120,627
Liabilities	10,085	10,968
Services	16,569	13,871
Insurances	1,369	1,237
Funds and Plans	849	702
Payment methods	20,953	15,676
Securities / Capital Markets / Treasury	1,048	1,031
Others	3,861	2,264
	95,298	**166,376**

Resolution of claims and complaints

As of 31 December 2025, 94,600 claims had been resolved, of which 18,237 came from files received in 2024. This figure represents 81% of the claims and complaints received in the year.

The average resolution time in 2025 was 76 calendar days. 81% of the complaints and claims resolved have required a processing time of more than 15 calendar days.

In 36% of cases, the resolutions have been favourable to customers.

Entities

The following are the companies adhering to the Regulation of the Customer Service of Complaints, Care and Defence of Grupo Santander and their corresponding number of complaints and claims received.

The network of branches and the different channels of relationship solve, in the first instance, the requests, disconformities or incidents that the clients communicate to Banco Santander, trying to avoid that they become complaints to other instances.

8. Risk management, solvency and capital

See notes 50 and 1.e) on risk and capital to the Bank Annual Accounts. See more information in the Consolidated Directors' Report.

9. Other relevant information

9.1 Treasury shares:

See note 30 to the Bank Annual Accounts.

The acquisition of treasury shares was last authorized at our 2023 AGM, for five years and subject to these provisions:

- The treasury shares held cannot exceed 10% of Banco Santander's share capital at any time, which is the legal limit set under Spain's Corporate Enterprises Act.
- The acquisition price may not be lower than the par value of the shares, nor exceed by more than 3% the highest of the last independent purchase or the highest independent offer at that time at the trading venue where the purchase is made.

- The purpose of acquiring treasury shares will be discretionary treasury share management, the execution of share buyback programmes, the delivery of these shares under the framework of the employee and director remuneration policy or any other purpose that the board deems pertinent at any given time.

On 26 February 2024, the board updated the current treasury shares policy, which dictates that Banco Santander may carry out treasury share transactions for these purposes:

- Provide liquidity or the supply of securities in the market for Banco Santander shares, which gives this market depth and minimizes any potential temporary imbalances in supply and demand.
- Take advantage, for the benefit of all shareholders, of weakness in the share price due to its medium-term outlook.
- Meet Grupo Santander's obligations to deliver shares to our employees and directors.
- Serve any other purpose authorized by the board within the legal limits and those set at the general meeting.

Among other things, the policy also provides for:

- The **principles** to uphold in treasury share trades, which include protecting financial markets' integrity and prohibiting market manipulation and insider trading.
- The **operational criteria** for carrying out treasury share trades, unless in exceptional circumstances as per the policy or carried out through mechanisms, such as buyback programmes, with regulation of their own. These criteria include rules on:
  - **Responsibility for execution of these trades**, which falls on the Investments and Holdings department, which is kept separate from the rest of Banco Santander.
  - **Venues**. Trades must generally be carried out in regulated markets and in the multilateral trading facilities stipulated in the policy.
  - **Volume limits**. Trades must generally not exceed 15% of the average daily trading volume for Banco Santander shares in the previous 30 sessions on the relevant trading venue.
  - **Price limits**. In general, (a) buy orders should not exceed by more than 3% the highest of (i) the price of the last independent transaction prior to the relevant acquisition or (ii) the highest independent bid at that time on the trading venue where the purchase is made; and (b) sell orders should not be lower than the lowest of the price of the last trade in the market by independent parties and the lowest sell order price in the order book.
  - **Time limits**, including a black-out period that applies (a) during the 15 calendar days prior to the publication of quarterly financial information and (b) if Banco Santander has decided to delay the disclosure of inside information according to market abuse regulations, until such information is disclosed. In the case of buyback programmes, the specific regulations establish a black-out period of 30 calendar days prior to the publication of annual and semi-annual results, which, however, will not apply when the buyback programme is managed by a third party or when the issuer has a temporary buyback programme in place.
- **Disclosure to the markets** of treasury shares trading.

The policy applies to the discretionary trading of treasury shares irrespective of whether they are carried out in regulated markets, in multilateral trading facilities, outside the orders market, either through blocks or through special transactions, or under buyback programmes. Furthermore, buyback programmes shall comply with all the applicable specific regulations, such as those on market abuse and their relevant implementing rules. The policy does not apply to transactions on Banco Santander's shares carried out to hedge market risks or provide brokerage or hedging for customers.

The full treasury shares policy is available on Banco Santander's corporate website.

Execution of the buyback programmes charged against 2024 results

We executed two buyback programmes under the 2024 shareholder remuneration policy:

In the first buyback programme, executed from 27 August to 3 December 2024, we acquired 341,781,250 treasury shares (approximately 2.21% of share capital). Under the authorization of the 2024 AGM, on 17 December 2024 the board resolved to reduce Banco Santander's share capital through the cancellation of the repurchased shares.

In the second buyback programme, executed from 6 February to 2 June 2025, we acquired 267,166,950 treasury shares (approximately 1.76% of share capital). Under the terms agreed at the 2025 AGM, on 25 June 2025 the executive committee, by delegation of the board, resolved to reduce Banco Santander's share capital through the cancellation of the repurchased shares.

First 2025 Buyback Programme

Under the authorization of the 2023 AGM, and according to the 2025 shareholder remuneration policy, on 29 July 2025 the board resolved to execute a new share buyback programme for a maximum amount of EUR 1,700 million, equivalent to approximately 25% of the Group's net reported profit (excluding non-cash, non-capital ratios impact items) for the first half of 2025 and for which we have already obtained the required regulatory authorization of the European Central Bank (ECB).

In the First 2025 Buyback Programme (executed from 31 July to 22 December 2025), we acquired 196,005,870 treasury shares (accounting for approximately 1.32% of Banco Santander's share capital), at a weighted average price per share of EUR 8.67.

On 23 December 2025, the executive committee, by delegation of the board, resolved to reduce the share capital in the amount of EUR 98,002,935 by cancelling the 196,005,870 repurchased shares.

Second 2025 Buyback Programme

Under the same AGM approval, on 3 February 2026 the board resolved to execute the Second 2025 Buyback Programme, for a maximum amount of EUR 5,030 million. The appropriate regulatory authorization had already been obtained and the execution of the programme began on 4 February 2026. Under the shareholder remuneration policy in relation to the 2025 results, 1,830 million euros correspond to c. 25% of the Group's underlying profit for the second half of 2025. The remaining amount corresponds to an extraordinary buyback of 3,200 million euros, equivalent to approximately 50% of the CET1 capital generated in January 2026 following completion of the sale of 49% of Santander Bank Polska to Erste Group.

The board submitted the resolution on the share capital reduction through the cancellation of the shares repurchased under the Second 2025 Buyback Programme to vote at the 2026 AGM.

As at 31 December 2025, Banco Santander and its subsidiaries held 11,077,291 shares, accounting for c. 0.08% of Banco Santander's share capital (compared to 15,529,459 shares, accounting for 0.10% of the share capital as at 31 December 2024).

9.2 Dividends and shareholder remuneration:

As required in Banco Santander's by-laws, each year the shareholder remuneration policy is submitted for approval by the AGM.

Distribution charged against 2025 results and excess capital

The board applied the current shareholder remuneration policy to the 2025 results. This policy sets a target to distribute approximately 50% of the Group's net reported profit (excluding non-cash, non-capital ratios impact items) split almost evenly between cash dividends and share buybacks.

Additionally, on 5 February 2025, Banco Santander signalled its objective to allocate up to EUR 10 billion to share buybacks in relation to the 2025 and 2026 results, as well as expected capital excess. As part of this target, on 5 May 2025 Banco Santander announced its intention to distribute approximately 50% of the capital that will be released upon completion of the sale of its 49% stake in Santander Bank Polska S.A., through a share buyback of approximately EUR 3.2 billion in early 2026 and that, as a result, it could exceed the EUR 10 billion target. Upon announcing the agreements to acquire TSB and Webster on 1 July 2025 and 3 February 2026 respectively, Banco Santander confirmed its goal to distribute at least EUR 10 billion in share buybacks with regard to the 2025 and 2026 results and excess capital.

Interim remuneration.

On 30 July 2025, the board resolved to execute the First 2025 Buyback Programme worth up to EUR 1,700 million (equivalent to approximately 25% of the Group's net reported profit in H1'25).

On 30 September 2025, the board resolved to pay an interim cash dividend against the 2025 results of 11.5 euro cents per share entitled to the dividend (equivalent to approximately 25% of the Group's net reported profit in H1'25), which was paid from 3 November 2025.

Final remuneration.

Under the 2025 shareholder remuneration policy:

On 3 February 2026, the board of directors resolved to implement the Second 2025 Buyback Programme worth up to EUR 5,030 million and for which the required regulatory authorization had been obtained. The programme started on 4 February 2026. Under the shareholder remuneration policy in relation to the 2025 results, 1,830 million euros of the Second Buyback Programme correspond to c. 25% of the Group's underlying profit for the second half of 2025. The remaining amount corresponds to an extraordinary buyback of 3,200 million euros, equivalent to approximately 50% of the CET1 capital generated in January 2026 following completion of the sale of 49% of Santander Bank Polska to Erste Group.

On 24 February 2026, the board of directors resolved to submit to the 2026 AGM the approval of a final cash dividend in the gross amount of 12.5 euro cents per share entitled to dividend. Subject to AGM approval, the dividend will be payable from 5 May 2026.

Once these actions are completed, total shareholder remuneration in relation to the 2025 results will be EUR 7,050 million (approximately 50% of the Group's 2025 net reported profit, excluding non-cash, non-capital ratios impact items), split almost evenly between cash dividends (EUR 3,520 million) and share buybacks (EUR 3,530 million). We have estimated these amounts on the assumption that, as a result of the partial execution of the Second 2025 Buyback Programme, the number of outstanding shares entitled to receive the final cash dividend will be 14,568,470,446. Therefore, the final amount may be higher if fewer shares than planned are acquired in the Second 2025 Buyback Programme; otherwise, it will be lower.

Shareholder remuneration policy

The board of directors intends (1) to apply an ordinary shareholder remuneration policy for 2026 to 2028 results that entails allocating approximately 50% of the Group's underlying profit* (excluding non-cash, non-capital ratios impact items), split approximately evenly between cash dividends and share buybacks for 2026 results, and (2) to distribute to shareholders any excess capital at the end of the 2026-2028 period. From 2027 results, the ordinary shareholder remuneration policy is expected to comprise around 35% of the Group's underlying profit (on the same basis) in cash dividends and around 15% in share buybacks.

The execution of the ordinary shareholder remuneration policy and the distribution to shareholders of any excess capital at the end of the 2026-2028 period is subject to corporate and regulatory decision and approval.

* Therefore excluding extraordinary results, such as those arising from the sale of 49% of Santander Bank Polska to Erste Group, the positive capital impact of which we considered for the purposes of the Second 2025 Buyback Programme.

9.3 Stock market information:

Banco Santander shares are listed on Spanish stock exchanges (Madrid, Barcelona, Bilbao and Valencia), the New York Stock Exchange as American Depositary Shares (ADS), the London Stock Exchange as Crest Depositary Interests (CDI), the Warsaw Stock Exchange and in the International Quotation System (SIC) of the Mexican Stock Exchange (BMV).

As at 31 December 2025, Banco Santander occupies the first position in the eurozone and 14th in the world by market value among financial institutions, with a market capitalization of EUR 147,921 million.

7,573 million Banco Santander shares traded in the year for an effective value of EUR 53,296.1 million and an annualized liquidity ratio of 51%.

The Santander share closed 2024 at 10.070 euros.

9.4 Average period of payment to suppliers:

The average period of payment to suppliers during 2025 is 10 days, term which is below the maximum established in applicable regulations.

10. Events after the reporting period

No significant events occurred from 1 January 2026 to the date on which these financial statements were authorized for issue, other than those described in these annual accounts.

11. Annual corporate governance report and Annual report on directors' remuneration

According to articles 540 and 541 of the Spanish Companies Act, Banco Santander, S.A. has prepared the annual corporate governance report and the annual report on directors' remuneration for the year ended 31 December 2025 (that are part of the directors' report of that financial year) with the contents determined by Order ECC/461/2013, of 20 March, and by Circular 3/2021, of 28 September, of the National Securities Market Commission (CNMV), that modifies Circular 5/2013, of 12 June, that defines the annual corporate governance report model for listed companies, and Circular 4/2013, of 12 June, that defines the annual report on directors' remuneration model for listed companies.

The annual corporate governance report includes a section that refers to the compliance of the corporate governance recommendations in Spain.

The annual corporate governance report and the annual report on directors' remuneration are included, as a separate section, in the individual directors' report in accordance with the provisions of article 538 of the Spanish Companies Act. The aforementioned reports are sent individually, as other relevant information, to the CNMV, and are included in the consolidated directors' report as a separate section. They are available on the Bank's corporate website (www.santander.com) and on the CNMV website (www.cnmv.es).

Pursuant to Article 253, section 1 of the revised Spanish Companies Act *(Ley de Sociedades de Capital*), the board of directors of Banco Santander, S.A. draws up the individual financial statements (comprising the balance sheet, the income statement, the statement of recognized income and expense, the statement of changes in total equity, the statement of cash flows and the notes to the individual financial statements) and the individual directors' report for the 2025 fiscal year in eXtensible HyperText Markup Language (XHTML) format, which conforms to the single electronic reporting format required under Directive 2004/109/EC and Delegated Regulation (EU) 2019/815.

The directors of Banco Santander, S.A., listed below with an indication of their respective positions, declare that, to the best of their knowledge, the company's individual financial statements for the 2025 financial year were drawn up in accordance with the applicable accounting principles and give a true and fair view of the assets, liabilities, financial position and profit or loss of the company, and that the directors' report includes a fair review of the development, performance and position of the company, together with a description of the principal risks and uncertainties that it faces.
