

Jenson Button and Santander accelerate female engineering career prospects with the launch of stemships

- Santander Universities launches inaugural STEMships programme dedicated to supporting aspiring women engineers.
- Jenson Button joined Santander UK CEO Nathan Bostock at the 2019 Formula Student global competition at Silverstone to announce the first-ever STEMship beneficiaries.
- Two-year engineering support initiative aims to address the lack of diversity within the UK engineering industry.

Madrid, 26 de julio de 2019.- Santander UK has launched its inaugural STEMships programme dedicated to supporting female engineering students at universities across the country. The new initiative aims to support and incentivise more women to embark on a career in the UK engineering industry and responds to the skills shortage challenge currently facing the country's engineering sector(1).

Thirty up-and-coming women engineers were announced (2) as the first-ever beneficiaries of the Santander Universities STEMships initiative by Santander UK's CEO Nathan Bostock and ambassador Jenson Button at the 2019 Formula Student global competition at Silverstone this weekend.

Recent qualitative research by Santander Universities identified a number of barriers cited by female students as deterring them from considering engineering as a degree and a career path. These include: difficulties with funding an engineering degree; a shortage of engineering networks and communities designed to support women; and a lack of women engineer role models – with a recent report by the Women's Engineering Society(3) revealing that just 12.37% of all engineers in the UK are female.

Santander Universities' inaugural STEMships programme aims to break down the barriers for women entering the engineering industry by providing aspiring female engineer students with the dedicated tools, resources and opportunities needed to succeed in the industry post university.

The thirty students will embark on a two-year support programme which offers: a £1,500 scholarship; an overseas experience at a leading engineering institution; unique networking events with prominent female leaders in the industry; membership to the Women's Engineering Society; and mentorship and internship schemes through Santander's wider networks.

Matt Hutnell, Director of Santander Universities UK commented: *"We're thrilled to be launching our unique STEMships to support and inspire the next generation of women engineers from across the UK. Having worked closely with Formula Student teams across our partner universities, we recognise the challenges facing female engineering students as they look to embark on careers in the industry. We hope the programme will support them with their career ambitions."*

Jenson Button commented: *"Getting more women into engineering is vital for the future of the industry so I'm really pleased to be supporting the launch of the Santander Universities STEMships"*

programme. I've worked with amazing female engineers in my career, but we need many more to enter the field if the UK is to continue to be a leader on the world stage."

Ahead of the announcement of the STEMship beneficiaries, Jenson took part in a discussion panel hosted by the face of Formula E, Nicki Shields on the topic of women in engineering and how to cultivate the next generation of female engineering talent. Joining Jenson on the panel was Nikki Rimmington, Vice President and Chief Planning Officer for Aston Martin, Professor Karen Holford CBE, Deputy Vice-Chancellor at Cardiff University and Clare Sibley, Head of Materials Science at the Williams F1 Team.

Santander Universities also welcomed its newest and youngest ambassador, 12-year old Female British Cadet Karting Champion, Ella Stevens. Through Santander's university partner network, Ella will benefit from bespoke support as she progresses her motor racing dreams.

Santander Universities funds eleven of the Formula Student teams competing teams as part of its overall initiatives to inspire the next generation of engineers and encourage the study of STEM subjects. Since 2007, Santander Universities has invested £80m in supporting UK students and universities.

Notes to Editors

1) *In 2017, a Report on the State of Engineering in the UK concluded that we still have an estimated annual skills shortfall of up to 60,000, meaning that we need to at least double the number of UK university engineering students in order to meet industry demands. According to a Women's Engineering Society's WES Statistics, engineering is very important to the UK - it contributes 26% of our GDP or £127,580,000,000 to our economy – [if women were to participate more fully in STEM employment, it could contribute an additional £2 billion to the economy].*

2) *Professor Karen Holford CBE, Deputy Vice-Chancellor at Cardiff University, alongside two academics from partner universities, selected the thirty winners from a total of 81 applications from those studying either Mechanical or Electrical engineering at UK partner universities. Winners were chosen based on those who had demonstrated excellence in their first year studying Engineering and who had shown the greatest determination to succeed in an engineering career.*

3) *Research from the Engineering UK report 2018 report highlighted only 12.37% of all engineers are women in the UK.*

About Us

Santander Universities

Banco Santander is the only European bank included in the 'Change the World' 2018 ranking of companies that are contributing to improving the world (Fortune magazine) for its positive impact on society. Our firm commitment to higher education also distinguished us as the company that invests most in Education in the world (Varkey Report / UNESCO / Fortune 500), which materialises through Santander Universities, one of our hallmarks. For 20 years, the Bank has been collaborating with more than 1,200 universities around the world in a unique initiative. Since 2002, the bank allocates more than 77% of its Social Investment budget to Santander Universities, which has meant an accumulated investment of more than EUR 1,500 million in support for higher education to date, a total of EUR 121 million in 2018.
